Mr. Lundrigan: No, I will not, Mr. Chairman. I asked the question and I want a yes or a no answer. I am not interested in the witness's respect for the Minister of Fisheries. I ask him if he is in agreement with this position or is he against the contention that young seals have drowned as a result of taking to the water prematurely and perhaps the adult seal pupping in the water. Are you in agreement with this or do you think it is a fabrication? That is my question, it does not have anything to do with the respect you have for the Minister.

Mr. Davies: I have no opinion.

Mr. Lundrigan: That is fine.

The Chairman: Mr. Crouse, on a supplementary and then Mr. Anderson.

Mr. Crouse: I have one or two questions, Mr. Chairman.

It is evident that the witness has given Canada a black eye throughout Europe by his actions and by the film which he has prepared and arranged to have shown. He has caused a loss, by his own statement, of income of \$500,000 in an area of Canada that can ill afford to lose this amount of money, and of course this seemingly is of no concern of his.

Now we have tabled a report before us by Mr. Forbes MacLeod, who is also a veterinarian, under date March of 1967 on the Gulf of St. Lawrence Seal Hunt. I submit what we are trying to do here is to establish the validity or otherwise of the film which the witness arranged to have shown and

[Interpretation]

même s'il semble apte à le faire. J'aimerais lui poser une autre question sur le même sujet. Avec la vaste connaissance et l'étude approfondie qu'il a, en est-il certain ou pas que des jeunes phoques se sont noyés au cours de cette saison?

M. Davies: Je n'en ai pas la preuve.

M. Lundrigan: Par conséquent, diriez-vous que la déclaration du ministre et des fonctionnaires du Ministère ne sont peut-être pas exactes?

M. Davies: Je ne voudrais pas, car tout d'abord, j'ai le plus grand respect pour le ministre.

M. Lundrigan: Nous connaissons tous votre grand respect pour le ministre.

M. Davies: Me laissez-vous répondre?

M. Lundrigan: Non, monsieur le président. J'ai posé une question et je voudrais qu'on me réponde par un oui ou un non. Je ne suis pas intéressé par le fait que le témoin a le plus grand respect pour le ministre des Pêcheries. Je lui demande s'il est d'accord avec cette position ou s'il est contre l'affirmation voulant que de jeunes phoques se noient parce qu'ils sont entraînés à l'eau trop tôt et que des mères mettent bas dans l'eau. Êtes-vous d'accord ou croyez-vous que cela a été fabriqué de toute pièce? Voilà ma question, cela n'a rien à voir avec le respect que vous portez au ministre.

M. Davies: Je n'ai aucune opinion à ce sujet.

M. Lundrigan: Très bien.

Le président: Monsieur Crouse, une question complémentaire, et monsieur Anderson.

M. Crouse: Une ou deux questions à poser, monsieur le président.

Il est évident que le témoin a fait une très mauvaise réputation au Canada et en Europe par ses actions et par le film qu'il a préparé et qu'il s'est occupé de distribuer. Il a entraîné une perte de revenus de \$500,000 dans une région du Canada qui ne peut guère se permettre de perdre une telle somme et naturellement, cela ne le préoccupe nullement.

Nous avons déposé le rapport de M. Forbes MacLeod, qui est vétérinaire, daté du mois de mars 1967, sur la chasse aux phoques dans le golfe du Saint-Laurent. J'estime que ce que nous essayons de faire ici c'est de montrer la validité ou autre du film que le témoin s'est occupé de distribuer et qui a causé tellement

[Texte]

which has been so detrimental to our economy and to our people.

In the report made out by Mr. MacLeod it states on page 2:

In any case, blood stains on the snow proved to my satisfaction that the animals had not moved around following the blow and prior to or during the skinning operation.

Yet on the film we just saw shown for the second time we saw a whitecoat in a pool of blood, not properly killed. I ask the witness in view of the fact that he told me in earlier questioning that the film was not staged, how did this happen? Was this not staged?

Mr. Davies: You have asked me three questions, sir. I would like to answer them one at a time.

Mr. Crouse: As you wish.

Mr. Davies: Thank you very much. First of all I did not state categorically that the seal hunt has dropped in value \$500,000. I suggested that might be so. I am concerned very deeply by the loss of income to the fishermen. I think that our motion passed at the meeting, if I recollect correctly, suggests that this hunt be stopped and that the Government of Canada take steps to find alternative modes of income for these people—and I wish you would do that very soon.

• 2110

Mr. Crouse: A motion passed by what meeting?

Mr. Davies: The New Brunswick SPCA. As far as the staging of the film is concerned, I would ask you sir, as a reasonable man. Some 50,000 seals are killed by several hundred men; it is not unreasonable to suggest that there is a relatively wide variety of killing and types of killing. You have already had testimony or reports that suggest there is a great deal of postmortem reflex action. The seal in the film that is wriggling with its stomach cut open—I have no idea whether it was alive or dead. In fact I have seen many seals moving like that that in fact are dead—their skull is crushed.

An hon. Member: Mr. Chairman, on a point of order.

Mr. Crouse: I just have one or two more questions.

The film, Mr. Chairman, also showed that the men stepped aside to show this whitecoat

[Interprétation]

de torts à notre économie et à la population. Dans le rapport de M. Forbes, il est indiqué qu'à la page 2, qu'en tout cas, les taches de sang sur la neige indiquent à mon avis que les bêtes ne se sont pas déplacées après le coup et avant ou pendant l'écorchement. Dans le film que nous avons vu pour la seconde fois, nous avons vu un jeune phoque dans une mare de sang qui n'était pas encore mort. Je demande au témoin, d'après ce qu'il m'a dit plus tôt, que le film n'avait pas été tourné en studio, comment cela s'est-il produit? Cela n'a-t-il pas été monté?

M. Davies: Vous m'avez posé trois questions. J'aimerais y répondre une après l'autre.

M. Crouse: Si vous le voulez bien.

M. Davies: Merci. Tout d'abord je n'ai pas dit de manière catégorique que la chasse aux phoques avait accusé une perte d'un demi-million de dollars. J'ai dit que cela pourrait être le cas. Je me préoccupe beaucoup des pertes de revenu des pêcheurs. J'estime que la motion qui a été adoptée lors de la réunion, si je me rappelle bien, propose qu'on arrête la chasse et que le gouvernement prenne des mesures pour trouver d'autres modes de revenus pour ces gens, et j'espère que cela se fera très bientôt.

M. Crouse: Une motion adoptée à quelle réunion?

M. Davies: De la SPA du Nouveau-Brunswick.

En ce qui concerne le film, je m'adresse à vous en tant qu'homme sensé. Quelque 50,000 phoques ont été tués par plusieurs centaines d'hommes: il n'est pas farfelu de dire qu'il y a une variété assez grande de tuerie et de types de tuerie. Vous avez déjà entendu des témoignages et des rapports indiquant qu'il y avait beaucoup de reflexes d'après la mort. J'ignore si le phoque que vous voyez dans le film et qui remue encore après qu'on lui ait ouvert le ventre, était mort ou vivant. En réalité, j'ai vu plusieurs phoques au crâne écrasé qui bougeaient comme celui-là, qui étaient mort.

Une voix: Monsieur le président, un appel au règlement.

M. Crouse: Je n'ai qu'une ou deux autres questions.

Le film, monsieur le président, montre aussi que les hommes se sont écartés pour

[Text]

alive, still wiggling, while the man stood there with his foot on it.

Now we are concerned with the truth, which we did not get here this morning, this afternoon and we are not getting this evening—the truth of the method by which seals are killed. I submit that from sunup until sundown these men have a task—they must kill as many seals as possible in order to provide for their livelihood, and they have not any time, Mr. Chairman, to stand around and watch a seal wiggle while they stand there with their foot on it.

Does the witness still insist that this film was not faked?

Mr. Davies: Yes, of course.

Mr. Crouse: Despite all the evidence of other veterinarians and other people, one of whom I quoted, namely Mr. Forbes MacLeod you still feel that this is not a faked film?

Mr. Davies: The seal hunt may have a defence but the charge that the seal hunt is okay because films are faked is no real defence. That film, I believe, is not faked.

If I may go on and explain the particular sequence that you describe there, I would suggest that what you see there—though I do not know for sure, it is a suggestion that I am giving to you—is that the seal hunter is aware that a camera is trained on him and he is extremely anxious that that animal should be dead before he starts cutting into it. He is anxious, I would think, that there is no movement as he cuts into it. You see him feeling the head of the seal. I think he is feeling the head of the seal to try and ensure that the skull is crushed. As far as that particular sequence is concerned, there is no doubt in my mind that the man has delivered heavy enough blows to that animal right from the start to ensure that it was dead and in fact what you are seeing is reflex movement—which you see in many, many of these animals.

Mr. Crouse: Well, Mr. Chairman, I detected, when the witness gave testimony earlier today, that his heart was starting to bleed a bit for the people of the Atlantic Provinces. He has just now restated his feelings that he is sorry the economy is hurt, which would lead us now to believe that he is really interested in protecting the poor sealers. Is he aware that during the last two or three years for working approximately a month and a half these men have made anywhere from \$2,000 to \$2,450. Why this sympathy for the

[Interpretation]

montrer le jeune phoque qui remuait encore, alors que l'homme avait le pied posé sur le cadavre.

Nous voudrions connaître la vérité que nous n'avons pu obtenir ce matin, cet après-midi et présentement. De quelle manière tue-t-on les phoques. Et j'estime que du lever jusqu'au coucher du soleil, ces hommes doivent tuer autant de phoques que possible pour assurer leur subsistance et ils n'ont pas le temps d'attendre, le pied sur le phoque pour regarder un phoque qui remue encore.

Est-ce que le témoin insiste encore pour dire que le film n'était pas truqué?

M. Davies: Oui, évidemment.

M. Crouse: En dépit de tous les témoignages des vétérinaires et d'autres personnes qui disent le contraire dont un, M. Forbes MacLeod, estimez-vous encore que ce n'est pas un film truqué?

M. Davies: On peut prendre la défense de la chasse au phoque mais dire que la chasse au phoque est sauvée parce que les films sont truqués, n'est pas une vraie plaidoirie. J'estime que ce film n'est pas truqué.

Si je peux continuer et vous expliquer la séquence que vous décrivez. Ce que vous voyez, bien que je n'en sois pas certain, c'est une simple suggestion que je vous fais, c'est que le chasseur se rend compte que la caméra est braquée sur lui et qu'il faut absolument être certain que l'animal est mort avant qu'il ne lui touche. Il désire qu'il n'y ait aucun mouvement quand il l'écorchera. Vous le voyez tâter la tête du phoque. Je pense qu'il y touche pour être certain que le crâne est bien enfoncé. Et certainement dans cette séquence, il ne fait aucun doute que l'homme a frappé la tête de coups assez durs pour s'assurer que la bête est morte et en fait, nous voyons un mouvement de réflexe que l'on voit chez plusieurs animaux.

M. Crouse: Eh bien, quand le témoin a déclaré plus tôt, qu'il commençait à avoir un peu de compassion pour les gens des provinces de l'Atlantique. Il vient tout juste de formuler à nouveau le sentiment qu'il regrette que l'économie de l'endroit en souffre, ce qui voudrait dire maintenant qu'il est intéressé à protéger les pauvres chasseurs. Se rend-il compte que pendant les deux ou trois dernières années où ils ont travaillé environ un mois et demi, ces hommes ont gagné entre \$2,000 et \$2,500. Pourquoi éprouve-t-il mainte-

[Texte]

sealers now? Is the witness now a self-appointed protector for the sealers?

Mr. Davies: I maintain the right to be concerned about my fellow Canadians without having to ask you if that is permissible?

Mr. Crouse: You indicated earlier that you were offered a flying course valued at approximately \$650—

Mr. Davies: I was not offered a flying course valued at \$650.

Mr. Crouse:—if you could deliver \$6,000 to \$7,000 worth of helicopter flying time during the 1967 sealing season to Fredericton Aviation Ltd. But your deftness limited you to approximately \$100—\$1 worth of flying time. Since SPCA funds are raised for a specific purpose how do you justify diverting any portions of these funds for your own use?

Mr. Davies: I did not divert any portion of these funds for my own use. If I may go on and explain again, as I have already done, I went to this flying club, Fredericton Aviation, and said, "This is the SPCA; we would like to rent a helicopter; how much will it cost?" I was given a figure. I said, "Will you give us a reduction in this figure because we are a charitable organization?" They said, "No, that is not possible because the DOT regulations do not permit that". I then thought, well, I fly a great deal both on the seal hunt and around the province and it would be of value to the SPCA for me to be able to fly myself. We would save money this way because we would not have to hire pilots. I then asked this company if they would consider training me to fly at no cost to the SPCA. Originally they said "yes" and then they changed their mind and said "no", for reasons best known to themselves.

• 2115

Mr. Hogarth: Was that proposal which was never carried out authorized by the board of SPCA?

Mr. Davies: Had it been carried out it would have been authorized by the board of the SPCA. It was discussed with the board of the SPCA.

Mr. Hogarth: Was there a resolution to the effect that you could go ahead?

Mr. Davies: It never reached that stage.

Mr. Hogarth: Well you took a 100 hours, did you not?

[Interprétation]

nant cette sympathie pour ces gens? Est-ce que le témoin se ferait protecteur des chasseurs de phoque?

M. Davies: Je possède encore le droit de m'intéresser à mes compatriotes sans vous en demander la permission.

M. Crouse: Vous avez indiqué plus tôt qu'on vous a offert un cours de pilote d'une valeur approximative de \$650.

M. Davies: On ne m'a pas offert un cours de pilote d'une valeur de \$650.

M. Crouse: Si vous avez donné \$6,000 à \$7,000 pour le temps de vol d'un hélicoptère au cours de la saison de chasse de 1967, à la compagnie Fredericton Aviation Ltd., mais votre adresse vous a limité à environ \$100, \$1 de valeur de temps de vol. Étant donné que les fonds de la SPA ont été recueillis à une fin spécifique, comment pouvez-vous vous accaparer d'une partie de ces fonds pour votre propre usage?

M. Davies: Je n'ai pas détourné une partie des fonds à mon usage personnel. Si je puis poursuivre et expliquer encore ce que j'ai fait. Je suis allé à un aéroclub, Fredericton Aviation, et j'ai dit que c'était pour la SPA et que nous voudrions louer un hélicoptère. J'ai demandé le prix. On m'a donné un chiffre. J'ai répondu: «Est-ce que vous nous accorderiez une réduction? C'est une organisation de bienfaisance». Ils m'ont répondu «Non. C'est impossible parce que les règlements du ministère des Transports l'interdisent.» J'ai alors pensé que je pourrais apprendre à piloter, et que je pourrais ensuite me déplacer très souvent pour la chasse au phoque et autour de la province. Cela serait avantageux pour la SPA. Nous épargnerions de l'argent parce que nous n'aurions pas à engager de pilotes. J'ai alors demandé à la compagnie s'ils ne pouvaient pas me donner gratuitement des cours de pilotage. Au début, on m'a répondu «oui» et ensuite, ils ont changé d'avis et m'ont répondu «non» pour des raisons qu'ils préféreraient taire.

M. Hogarth: Est-ce que cette proposition qui n'a pas eu de résultat était autorisée par le Conseil de la SPA?

M. Davies: Oui, si nous avions pu mener la chose à bonne fin, le Conseil l'aurait autorisé. On en discutait.

M. Hogarth: Y a-t-il eu une résolution à l'effet que vous pourriez le faire?

M. Davies: Cela n'a jamais atteint ce stade.

M. Hogarth: Vous avez pris 100 heures de vol, n'est-ce pas?

[Text]

Mr. Davies: No, no.

Mr. Hogarth: I beg you pardon. You took some flying training?

Mr. Davies: Yes, for which I am personally responsible.

Mr. Perrault: Mr. Chairman, I think we are getting off the main subject. I want to ask a supplementary about the motion picture film, if I may.

The Chairman: Order now.

Mr. Whelan: Can I suggest something. I think there has been 12 or 14 supplementaries allowed before a person who has been given the floor is allowed to proceed with his line of questions. This is way off base. I never sat in a Committee where we went so far off base in 7 years that I have been a Member of Parliament.

The Chairman: Do not be so critical now. Let us do the best we can to revert to our normal procedure.

Mr. Hogarth: I would like to raise the point of order again that I had raised during Mr. Crouse's examination. I think that the secretary of the SPCA should be summoned to bring before the Committee all correspondence and all resolutions that have been passed by that association pertaining to the New Brunswick seal hunt.

The Chairman: Are you making that in the form of a motion?

Mr. Hogarth: I will make that a formal motion, yes.

Mr. Crouse: I will second that motion.

Motion agreed to.

Mr. McGrath: Mr. Chairman, if I may raise a point of order, it is beginning to appear very evident to me that the witness is beginning to show some signs of being tired or indifferent. I tend to be charitable and say he is tired. Perhaps it might be an idea if we were to adjourn until tomorrow. I just raise it as a suggestion.

Mr. Davies: I would prefer to go on although I will admit I am tired.

Mr. McGrath: All right. If you prefer to go on, that is fine, I withdraw my point of order.

The Chairman: Mr. Perrault, on a point of order?

Mr. Perrault: Let me explain. Some allegations or suggestions were made here which implied that there had been a degree of falsification in this motion picture. That is a

[Interpretation]

M. Davies: Non.

M. Hogarth: Mais, vous avez pris quelques leçons de pilotage?

M. Davies: Oui, et je les ai payées de ma poche.

M. Perrault: Il me semble que nous nous écartons du sujet principal. Je voudrais poser une question au sujet du film, si vous permettez?

Le président: A l'ordre.

M. Whelan: Puis-je donner un conseil? Je crois qu'on a permis 12 ou 14 questions complémentaires avant que la personne qui a la parole ne soit autorisée à poser des questions. Cela est inadmissible. Je n'ai jamais siégé à un comité où il y a eu autant de désordre depuis que je suis député.

Le président: N'ayez pas l'esprit aussi critique. Laissez-nous faire du mieux que nous pouvons pour revenir à la procédure habituelle.

M. Hogarth: J'aimerais soulever de nouveau l'appel au Règlement que j'ai soulevé pendant l'interrogatoire de monsieur Crouse. Je crois que le secrétaire de la SPC devrait être sommé de soumettre au Comité toutes les correspondances et les résolutions adoptées par l'Association pour la chasse aux phoques dans le Nouveau-Brunswick.

Le président: Faites-vous une motion?

M. Hogarth: J'en ferai une motion.

M. Crouse: J'appuierai la motion.

La motion est adoptée.

M. McGrath: Puis-je en appeler au Règlement? Il me semble de plus en plus évident que le témoin montre des signes de fatigue, ou d'indifférence. J'essaie d'être charitable et de dire qu'il est fatigué. Nous pourrions peut-être lever la séance jusqu'à demain. Je ne fais que le proposer.

M. Davies: J'aimerais mieux continuer même si j'admets être fatigué.

M. McGrath: Très bien, si vous préférez continuer, très bien, je retire ma proposition.

Le président: Monsieur Perreault, est-ce un point du règlement?

M. Perrault: Non. Laissez-moi vous expliquer. On a fait des allégations ou insinuations voulant qu'il y a une certaine dose de falsification dans ce film. C'est une chose sérieuse

[Texte]

serious thing and I have a supplementary question on that point, if it is permissible to ask it.

The Chairman: I will allow it.

Mr. Perrault: I just wonder if the witness can tell us whether there is a list of names of all those who participated in the making of the film, whether any of them signed waivers—as is customary when they appear in photographs or in motion pictures which are circulated—for having appeared in the hunt.

Can we be provided with the name of the person who actually engaged in the clubbing of this young pup seal. I think this would be one way of determining whether or not, in fact, the incident was dramatized professionally. I would ask that these names be produced, if they are available, and perhaps information with respect to any release forms which may have been signed by any of the participants.

Mr. Davies: This is a documentary, sir, and I specifically instructed my cameraman not to speak to any of the people he photographed. So there are no names available.

Mr. Perrault: You mean the people were happy to participate in having their pictures taken.

Mr. Davies: I could not comment on that, sir.

Mr. Perrault: You have kept no names of the people who appeared in the hunt then?

Mr. Davies: That is correct, sir.

Mr. Perrault: To the best of your knowledge, they were hunters engaged in their ordinary pursuit at that particular time of year?

Mr. Davies: Yes, sir.

The Chairman: In a normal day a member of parliament sits in the House until 10 o'clock and, if there is no objection, I would suggest we sit until that time.

Mr. Anderson, you have been very patient, your turn has come.

Mr. Noble: Mr. Chairman, might I suggest that you accept no further supplementaries until you exhaust your list of speakers.

The Chairman: I am in the hands of the Committee. We brought this up earlier today and members insisted that supplementaries be allowed. It is okay with me if we discontinue them.

Mr. Noble: Well, the way it has been going here about four fellows have been exploiting the whole Committee.

[Interprétation]

pour laquelle j'ai posé une question complémentaire à ce sujet, si vous me permettez la question.

Le président: Je vous en prie.

M. Perrault: Je me demande si le témoin peut nous dire s'il y a une liste de tous ceux qui ont participé à la création du film. Si certains d'entre eux ont signé des désistements, comme il est courant lorsqu'ils figurent dans les photos ou les films sur la chasse.

Est-ce qu'on peut obtenir le nom de celui qui frappe le jeune phoque. Je pense qu'on pourrait ainsi déterminer si l'incident a été dramatisé. Je voudrais que ces noms soient connus, qu'ils soient disponibles, et peut-être qu'on ait des renseignements sur les formules de décharge qui ont pu être signés par les participants.

M. Davies: C'est un documentaire. J'ai donné des ordres précis à tous mes caméramans de ne pas s'entretenir avec les hommes qu'ils filmeraient. Ainsi, on ne dispose d'aucun nom.

M. Perrault: Vous voulez dire qu'ils ont été heureux de participer au film.

M. Davies: Je ne pourrais pas y apporter de commentaires.

M. Perrault: Vous n'avez conservé les noms des gens qui participaient à la chasse?

M. Davies: C'est exact.

M. Perrault: Au meilleur de notre connaissance, c'était des chasseurs qui s'adonnaient à leur occupation ordinaire à ce moment de l'année.

M. Davies: Oui, simplement.

Le président: Une journée normale, un député siège à la chambre jusqu'à 22 heures, s'il n'y a pas d'objection. Je propose que l'on siège jusqu'à ce moment. Monsieur Anderson, vous avez été très patient. C'est maintenant votre tour.

M. Noble: Puis-je vous proposer de ne plus accepter de questions complémentaires jusqu'à ce que vous ayez épuisé votre liste.

Le président: Je suis à la disposition du comité. Nous avons soulevé cette question plus tôt et les députés ont insisté que les questions complémentaires soient permises. Je suis prêt à y mettre fin.

M. Noble: La manière dont tout s'est passé ici, quatre personnes ont monopolisé tout le Comité.

[Text]

• 2120

The Chairman: From now on, if the Committee so wishes, we will dispense with supplementaries.

Mr. Anderson, will you proceed.

Mr. Anderson: Thank you, Mr. Chairman. Once more, before starting questioning, I will repeat what I said earlier—that this is just a terrible way to run a Committee. You are not responsible, Mr. Chairman; we decided to run it this stupid way, and I really do object to it.

The Chairman: I am in the hands of the Committee.

Mr. Anderson: You are. I am sorry that the Committee puts you in the position of running a Committee in this crazy manner.

As I see it, sir, there are two basic areas which concern us here. First there is the conservation aspect. In the film you mention that the seals are going the way of the Labrador duck and some other animals or birds that have disappeared—in other words they are becoming extinct because of the hunting pressure. Now that is one aspect, and the second is the cruelty aspect.

I wonder if you could give us some information, which you must have, which justified certain statements in the film. One I have jotted down here is that they cannot tolerate this excessive hunting. Then there was a reference earlier in the film too—that in the 19th century this was all right but the annual hunt took on a totally new aspect, or something like that, with the arrival of aircraft. There was also another statement asking in effect, how long it would be before the last seal disappears. I am afraid I did not manage to write everything down in time. Could you give us some indication sir, of the decline in seal numbers—Because we have heard from the Department of Fisheries that there is no risk of this species of seals being hunted to extinction. Could you give me the information that you have, which differs from that of the Department of Fisheries, and which indicates, as you have suggested in the film, that this species is in danger?

Mr. Davies: This film, sir, was made in 1967. In 1967 I believe there was serious concern for the species. I would say, however, now, that the Department of Fisheries, through its quota system, certainly has ensured the continuation of the sub-herd in the Gulf of St. Lawrence.

Mr. Anderson: So in actual fact at this time there is no danger of extinction of the species?

[Interpretation]

Le président: A partir de maintenant, si le Comité le désire, nous laisserons de côté les questions complémentaires.

Monsieur Anderson, vous avez la parole.

M. Anderson: Merci, monsieur le président. Avant de commencer, je désire répéter ce que j'ai dit tout à l'heure, que c'était une façon atroce de diriger le Comité. Vous n'êtes pas responsable, monsieur le président. C'est nous qui avons décidé de procéder ainsi et je m'y oppose.

Le président: Je suis entre les mains du Comité.

M. Anderson: Je regrette que le Comité vous pousse à mener un comité d'une manière aussi folle. D'après ce que je vois, il y a deux domaines fondamentaux qui nous intéressent. D'abord, l'aspect de la conservation. Dans le film vous dites que les phoques suivent les traces des canards du Labrador et d'autres animaux ou oiseaux qui sont disparus. Autrement dit, ils sont en voie de disparition à cause d'une chasse effrénée. L'autre aspect est celui de la cruauté.

Pouvez-vous nous donner des renseignements que vous devez posséder et qui justifiaient certaines déclarations faites dans le film à savoir une que j'ai notée ici que les phoques ne peuvent plus tolérer une chasse démesurée. On a parlé dans le film qu'au XIX^e siècle, c'était très bien mais qu'avec l'avènement de l'aéronef, la chasse prend un aspect tout à fait différent.

Vous vous demandez également combien de temps il faudra pour faire disparaître tous les phoques. Je crains de n'avoir pu tout écrire. Pouvez-vous nous donner une idée de l'ordre de la diminution des phoques?

Le ministère nous dit qu'il n'y a pas de risque que les phoques soient exterminés par la chasse. Pouvez-vous nous donner les renseignements que vous avez et qui sont différents de ceux du ministère et qui disent, d'après ce qui est dit dans le film, que l'espèce des phoques est compromise.

M. Davies: Ce film date de 1967. Je crois qu'en 1967 on avait des inquiétudes sérieuses à ce sujet. Mais je devrais ajouter que le ministère des Pêcheries, grâce au contingentement imposé, a assuré la survivance d'un nombre suffisant de phoques dans le golfe du Saint-Laurent.

M. Anderson: A l'heure actuelle, il n'y a donc aucun danger d'extinction?

[Texte]

Mr. Davies: I would say that that is a fair comment to make, sir.

Mr. Anderson: Then, relative to the statements, "How long before the last seal..."—I am afraid I did not jot it all down and "The seal population cannot tolerate this excessive hunting" would you say that those are exaggerations?

Mr. Davies: I would say they were not exaggerations in 1967. I would say that with the material and the information we have available now they do not accurately represent the conservation picture in the Gulf.

Let me go on and say that whenever I show this film—and this is an issue—and whenever I am questioned on this particular aspect, I pay credit to the Department of Fisheries and Canada for ensuring this.

Mr. Anderson: That does explain that particular point. I think this is important, because after all a species in danger arouses different instincts perhaps and different arguments from those raised by the cruelty aspect, which I will now come to. Again, a statement was made in the film that "is it possible in the 20th century such barbaric weapons as clubs are used." This may not be an exact quote, but I believe that is the case.

Would you comment on this statement in the light of the fact, from what I believe you said previously that the club is the most efficient method of killing, or at least of stunning, the seal, and that a gun, or any other method, would not be as efficient and as humane? I am assuming, of course, that sealing continues.

Mr. Davies: Yes. I would go on to say that clubbing these animals to death is barbaric and totally unacceptable to the 20th century. I would be prepared to go on to say, however, that I know of no better way of doing it, if you must kill seals.

Mr. Anderson: That is the assumption I made earlier, that if it does continue this is perhaps the most humane way of doing it.

Mr. Davies: I would say the least cruel way.

Mr. Anderson: That is true. That helps me on that point.

Again, dealing with the film, sir, there are two statements, "Many are alive when skinned" and "Many barely stunned when skinned." Does this refer to that 3.3 per cent?

• 2125

Mr. Davies: No; it referred to something like 37 per cent in 1967.

[Interprétation]

M. Davies: Je crois qu'une telle affirmation serait correcte.

M. Anderson: Diriez-vous au sujet de la déclaration suivante: «Dans combien de temps le dernier phoque... (je crois que je n'ai pas tout noté)... la survivance chez les phoques entre en jeu et ne peut tolérer cette chasse excessive», qu'il s'agit d'exagérations?

M. Davies: Je vous dirai qu'il ne s'agissait pas d'exagérations en 1967. Mais j'ajouterai qu'en raison des renseignements que nous possédons présentement que cette déclaration ne dépeint pas correctement la situation telle qu'elle existe dans le Golfe, au point de vue conservation de l'espèce.

Permettez-moi d'ajouter que chaque fois que je projette ce film et que chaque fois qu'on me questionne à ce sujet je ne manque pas de rendre hommage au ministère des Pêcheries pour avoir rendu cette chose possible.

M. Anderson: Merci. Ceci explique ce point. C'est important car, somme toute, lorsqu'une espèce est compromise et qu'elle risque d'être exterminée, la situation est différente de ce qu'elle est lorsqu'il s'agit de cruauté, et c'est ce dont je veux maintenant parler.

On dit ailleurs dans le film: «Est-il possible qu'au 20^e siècle des armes aussi barbares que la masse soient utilisées». Ce ne sont peut-être pas les mots exacts.

Voulez-vous nous donner des explications, étant donné que vous avez dit auparavant, que le bâton est la façon la plus efficace de tuer ou d'assommer le phoque et qu'un revolver ou une autre méthode ne serait pas aussi efficace et humaine?

M. Davies: Je dirais que d'assommer ces animaux est barbare et inacceptable de nos jours. Mais j'ajouterais que je ne connais pas de meilleure méthode. Si on désire tuer les phoques.

M. Anderson: C'est ce que j'ai dit tout à l'heure: Si cette chasse est encore permise c'est probablement la meilleure méthode.

M. Davies: Je dirais, la méthode la moins cruelle.

M. Anderson: C'est cela. Pour revenir au film, voici deux autres citations: «Plusieurs sont écorchés vivants» et «plusieurs sont à peine assommés lorsque écorchés». Est-ce que ceci se rapporte au 3.3 p. 100?

M. Davies: Non; je crois qu'il s'agissait d'environ 37 p. 100 en 1967.

[Text]

Mr. Anderson: Thirty-seven per cent?

Mr. Davies: I think it is around that figure; it is close to that.

Mr. Anderson: Yes; so those statements, again, have been overruled by the Fisheries protection service?

Mr. Davies: I make this point whenever I am asked.

Mr. Anderson: That is fine.

Mr. Davies: Or without being asked, as a matter of fact.

Mr. Anderson: That clears up that particular aspect. You have seen a seal hunt and I have not, so I will have to ask you for your information on this. When the knife is inserted into the seal it appears to me that within two seconds—perhaps I was not watching too closely because it is a bloody spectacle—the jugular vein and the arteries in the neck are severed; blood spurts immediately. It would appear to me that, despite the fact that the seal is alive when the knife is inserted in it, it must die very quickly. In other words—and I do not want to make any indvidious comparisons—this is perhaps just as humane as cutting the throat of a deer, which hunters do frequently, or indeed, farmers do with their cattle.

Would you agree that when the knife is inserted it is not just a question of skinning the seal but of instantaneously cutting the throat and the arteries in the neck?

Mr. Davies: I would not agree that that is always the case. I would say that when the hunter starts to skin the seal death is probably fairly rapid. I do not subscribe to the theory at all that any skinless seals flop around the ice alive for minutes on end, no. I think the seal dies rapidly as the hunter skins it.

Mr. Anderson: Thank you very much, sir.

I believe the Beauty Without Cruelty Association has contributed funds to your campaign. Would you indicate how much has been given by this association? Do you know anything at all of this organization?

Mr. Davies: Yes. I do not believe they have contributed anything very significant.

Mr. Anderson: You do know of this organization?

Mr. Davies: Yes.

Mr. Anderson: Could you tell us more about it and its backers?

Mr. Davies: Yes. It is an organization that was formed in England by Lord and Lady Dowding. Their contention is that it is wrong to kill animals to produce fur.

[Interpretation]

M. Anderson: 37 p. 100?

M. Davies: Oui, approximativement.

M. Anderson: Ces déclarations ont été démenties par le service de protection des pêcheries?

M. Davies: Je le mentionne chaque fois qu'on me le demande.

M. Anderson: Très bien.

M. Davies: Et même si on ne me le demande pas, en fait.

M. Anderson: Voilà un autre point de réglé. Vous avez assisté à la chasse au phoque, moi pas. J'aurai donc à vous demander des renseignements. Lorsque le couteau est inséré il me semble qu'en moins de deux secondes, mais je ne regardais peut-être pas de trop près car il s'agit d'un spectacle sanglant, la veine jugulaire et les artères du cou sont sectionnées; et le sang coule aussitôt. Il me semble que même si le phoque vit à ce moment-là, qu'il doit mourir rapidement. Je ne désire pas faire de comparaisons mais ce me semble être la même chose que lorsqu'un chasseur tue un chevreuil ou un cultivateur une tête de bétail.

N'êtes-vous pas d'accord, alors, qu'il ne s'agit pas uniquement d'écorcher l'animal mais qu'en même temps et instantanément les artères du cou sont sectionnées?

M. Davies: Ce n'est pas toujours le cas, mais lorsque le chasseur commence à l'écorcher, la mort est très rapide. Et je ne suis pas d'accord avec la théorie selon laquelle des phoques écorchés vivent de longues minutes. Je crois qu'ils meurent rapidement alors que le chasseur les écorche.

M. Anderson: Merci beaucoup. Je crois que la *Beauty Without Cruelty Association* a contribué à votre campagne. Combien cette Association vous a-t-elle versé? Connaissez-vous cette Association?

M. Davies: Oui. Je ne crois pas qu'elle ait fait un don très important.

M. Anderson: Vous connaissez cet organisme?

M. Davies: Oui.

M. Anderson: Veuillez nous en parler.

M. Davies: C'est une association créée en Angleterre par Lord et Lady Dowding. Ils prétendent qu'il n'est pas juste de tuer des animaux à fourrure pour leur fourrure. Je

[Texte]

I suppose the basis for their whole organization grew around the fact that some animals were used to test cosmetics. One of the things they say is that rabbits were used to test mascara and that they had various corrosive things put in their eyes.

This organization set about developing a line of cosmetics that did not require to be tested on animals. This is the reason for the "Beauty Without Cruelty". I really do not know who the backers are.

Mr. Anderson: And you do not know whether or not this organization which, as you have suggested, has contributed some money to your campaign...

Mr. Davies: Very little.

Mr. Anderson: But you do not know whether or not it is backed by the artificial fur industry, or the clothing industry which makes artificial fur?

Mr. Davies: No, I have no knowledge.

Mr. Anderson: I am sorry; I am jumping from note to note. If I could revert to the film for a moment. Was all the filming done during the sealing season, or was any of it done previously?

Mr. Davies: No.

Mr. Anderson: And what about the sound dubbing? There appears to be sound dubbing in both your film and in the first film we saw, which I understand does not represent an accurate picture of the sound on the ice at the time of the killing of seals.

Mr. Davies: The sound on the ice, I would say, is a continual background noise of baby seals making a bleating sort of a noise.

Mr. Anderson: So the sound was dubbed into your film to indicate that. Do you feel that this was done excessively, or did it actually represent the sound level on the ice as killing took place?

Mr. Davies: I think it represented the sound level.

Mr. Anderson: I have a very short time left and I have one question about the pamphlet which your Society put out, entitled *Animals*. You mention the RCMP on page 3 and you say:

On one occasion I received an unsigned letter offering me a large sum of money to "turn the heat off the seal hunt." I contacted the Royal Canadian Mounted Police and was advised to proceed with the suggested arrangements for meeting the "bribees". One of my more amusing memories of that year is of a young

[Interprétation]

crois qu'ils ont décidé d'élever la voix parce que certains animaux servaient de cobayes lors de la mise à l'essai de cosmétiques. Ils affirment que l'on a essayé le mascara sur les lapins et qu'on leur a versé divers ingrédients dans les yeux.

L'organisme a également décidé de fabriquer des cosmétiques qui n'auraient pas à être essayés sur les animaux. Voilà la raison de l'existence de la BWCA. J'ignore qui en assure le financement.

M. Anderson: Vous ignorez si cet organisme a contribué à votre campagne.

M. Davies: Très peu.

M. Anderson: Vous ne savez pas si cette Association est supportée par l'industrie de la simili-fourrure ou l'industrie du vêtement qui fabrique cette fourrure artificielle?

M. Davies: Je l'ignore.

M. Anderson: Je regrette, je passe d'une note à une autre. Je reviens au film maintenant. Est-ce que tout le tournage s'est fait durant la saison de chasse ou certaines séquences ont-elles été tournées avant?

M. Davies: Non.

M. Anderson: Parlons de la trame sonore. Il semble qu'il y ait doublage de son dans votre film et dans celui que nous avons visionné plus tôt, et que le son ne représente pas vraiment ce qui se passait sur place.

M. Davies: Je dirais que le son, sur les glaces, est un son continu de gémissements de bébés-phoques.

M. Anderson: C'est ce que veut indiquer la trame sonore. Croyez-vous qu'il y a eu exagération ou est-ce que la trame sonore donne une idée juste du niveau du son, sur les glaces, au moment de l'abattage?

M. Davies: Une idée juste.

M. Anderson: Il me reste un peu de temps. J'aimerais vous poser une question sur la brochure intitulée *Animals* qu'a publiée votre Association. Vous parlez de la Gendarmerie Royale, à la page 3, et vous dites:

A un certain moment, j'ai reçu une lettre anonyme dont l'auteur m'offrait une forte somme d'argent pour que je me désintéresse de la chasse aux phoques. Je suis entré en contact avec la GRC et on m'a signifié de suivre les arrangements pour rencontrer les gens qui offraient des pots de vin. Un des souvenirs les plus amu-

[Text]

plainclothes detective, heavily disguised, still a young plainclothes detective, wearing dark glasses in the gloomy foyer of a local hotel and holding, upsidedown, an outdated newspaper. Needless to say, nobody approached me with further illegal propositions.

I am quite sure that you did not mean it this way, but when I first looked at that, it appeared to me that you were suggesting that an RCMP officer deliberately did these rather foolish things, such as holding a newspaper upsidedown, in a deliberate attempt to frighten off the person coming with bribes. I would like this clarification from you that there was no intention of that when you wrote that.

Mr. Davies: Heavens, no. The RCMP are people of the highest integrity, of course. There was absolutely no intention to impute that at all.

Mr. Anderson: One final question. You mention in the paragraph above that one that you presented a verbal report to the World Congress for the Protection of Animals. Is there any record of that report? Do you have one yourself? Is there any transcript which we could obtain for our own use?

Mr. Davies: No. As I recollect, I just spoke to them. They may have a record. I would be very glad to contact them.

Mr. Anderson: If you do not have one yourself, perhaps it will not be necessary. The Chairman will inform you if we think it is. Thank you, sir.

The Chairman: Mr. Carter.

Mr. Carter: Mr. Chairman, I wonder if the witness could tell the Committee how much money has been collected by him and his association throughout the world since starting this anti-seal hunt campaign. Since 1965, I believe it started, or thereabouts?

Mr. Davies: Possibly since 1965, I am guessing now, about \$75,000.

Mr. Carter: Mr. Chairman, he made reference earlier to \$12,000 that had been collected from the West German Zoological Society. I think it was in Frankfurt? Can the witness state, Mr. Chairman, whether he ever received any of that money, or did he ask to receive any of it to take a trip to Europe with his family?

Mr. Davies: No sir, no.

[Interpretation]

sants que j'aie gardé de cette année-là est la rencontre d'un jeune détective habillé en civil, grossièrement déguisé, portant des lunettes noires, dans un foyer d'hôtel de la région et qui tenait à la main un journal tourné à l'envers. Et à partir de ce moment-là, plus personne ne m'a importuné avec des propositions illégales.

Je suis à peu près certain que vous ne vouliez pas insinuer cela, mais lorsque j'ai lu cela pour la première fois, il m'a semblé que vous vouliez suggérer qu'un agent de la GRC avait délibérément agi d'une façon plutôt bizarre, comme celle de tenir un journal à l'envers, dans le but d'effrayer la personne apportant le pot de vin. J'aimerais avoir votre déclaration à ce sujet à savoir que vous n'avez pas écrit cela intentionnellement.

M. Davies: Non, absolument pas. Les agents de la GRC sont au-dessus de tout soupçon; bien sûr. Je n'ai eu absolument aucune intention de faire cela.

M. Anderson: Une dernière question. Vous avez mentionné dans le paragraphe précédant le paragraphe ci-dessus, que vous aviez présenté un rapport oral au Congrès mondial pour la protection des animaux. Avez-vous un compte rendu de ce rapport? En avez-vous un? Avez-vous une transcription de ce que vous avez dit?

M. Davies: Non, autant que je m'en souviens j'ai seulement parlé. Ils ont peut-être pris des notes. Dans ce cas-là, je peux me mettre en rapport avec cette association.

M. Anderson: Non, si vous n'avez pas de notes écrites, tant pis, c'est inutile de vous mettre en contact avec cette organisation mondiale. Le président vous le demandera si cela est nécessaire.

Le président: Monsieur Carter.

M. Carter: Le témoin pourrait-il nous dire combien d'argent a été récolté par son association dans le monde entier depuis le début de cette campagne contre la chasse aux phoques, en 1965, à peu près?

M. Davies: Depuis 1965, \$75,000 peut-être.

M. Carter: Monsieur le président, vous parlez tout à l'heure de \$12,000 obtenus d'une société zoologique ouest-allemande. De Frankfurt, je crois. Est-ce que le témoin peut nous dire, monsieur le président, s'il a reçu cet argent ou si on lui a demandé d'accepter cet argent pour qu'il voyage en Europe avec sa famille?

M. Davies: Non monsieur.

[Texte]

Mr. Carter: Did you go to Europe yourself on money that was donated by that Society?

Mr. Davies: Yes.

Mr. Carter: You did. To further your anti-seal campaign, to raise more money?

Mr. Davies: To further the anti-seal hunt campaign, sir. Yes.

Mr. Carter: That was in what, 1967, 1968?

Mr. Davies: 1966, I think.

Mr. Carter: The film, was that made prior to your visit to Europe, or after?

Mr. Davies: Well, I have been to Europe several times. It was made after some of them and prior to others.

Mr. Carter: The film we saw tonight, Mr. Chairman, has this been used extensively in Europe and maybe North America as a means of collecting money for the so-called anti-seal hunt campaign?

Mr. Davies: I would not even say that it has being used extensively, sir.

Mr. Carter: But it has been used.

Mr. Davies: It has been used. It has never been used, I do not think, specifically for raising money. It has been used as part of our program. I would say, sir, that the largest amount of public criticism of the seal hunt has always stemmed from magazine articles and newspaper articles.

Mr. Carter: Did you receive any money from the Canadian Broadcasting Corporation for showing this film?

Mr. Davies: No, I do not think so.

Mr. Carter: You do not think. You should know if you got it.

Mr. Davies: I do not think so. We always made this film freely available.

Mr. Carter: But the purpose of the film is to dramatize, if you want to call it that, the slaughter, the barbaric methods being used by Canadians, hoping to solicit sympathy from Europeans and others to donate money to your campaign. Am I right?

Mr. Davies: No, sir. You are wrong.

Mr. Carter: Well, what was the intent of your film?

[Interprétation]

M. Carter: Est-ce que vous êtes allé en Europe avec cet argent donné par ladite Société?

M. Davies: Oui.

M. Carter: Vous l'avez fait. Pour promouvoir votre campagne contre la chasse au phoque? Pour ramasser plus d'argent?

M. Davies: Pour continuer la campagne.

M. Carter: C'était quand, 1967, 1968?

M. Davies: En 1966, je crois.

M. Carter: Le film, a-t-il été fait avant votre visite en Europe ou après?

M. Davies: J'ai été en Europe plusieurs fois. Il a été fait après certaines visites et avant d'autres.

M. Carter: Le film que nous avons vu ce soir, monsieur le président, est-ce qu'il a été projeté d'une façon intensive en Europe et en Amérique du Nord pour récolter des fonds pour promouvoir cette campagne contre la chasse aux phoques?

M. Davies: Non, je ne dirais pas qu'on s'en est beaucoup servi.

M. Carter: Mais on s'en est servi.

M. Davies: On s'en est servi, mais jamais uniquement pour obtenir de l'argent. Il fait partie de notre programme. Je dirais que les grosses critiques de la chasse aux phoques sont venues après la parution d'articles dans les journaux surtout.

M. Carter: Avez-vous reçu de l'argent de Radio-Canada pour montrer ce film?

M. Davies: Non.

M. Carter: Vous ne pensez pas. En fait, vous devriez le savoir. Vous en avez reçu ou non?

M. Davies: Je ne pense pas. Nous avons toujours mis ce film gratuitement à la disposition de tout le monde.

M. Carter: Mais le but du film est de dramatiser ou, en fait, de faire un drame de la façon barbare et cruelle de chasser le phoque utilisée par les Canadiens, en espérant ainsi soulever la sympathie des Européens pour obtenir des fonds. Ai-je raison?

M. Davies: Non, monsieur, vous vous trompez.

M. Carter: Quel était le but du film, alors?

[Text]

Mr. Davies: The intent of the film is to show people what the seal hunt is like, and hopefully to convince them that it is a wrong thing.

Mr. Carter: Yes, but by your own admission you did suggest that the film was over-dramatized, or words to that effect.

• 2135

Mr. Davies: No, sir. Whatever I said, let me clarify it for you. The seal hunt film was made by an organization that is opposed to the seal hunt, and it shows things that are not very nice. I am sure that another organization that was for the seal hunt could make a film that would show something else again.

Mr. Carter: Well, you stated earlier, I think, that the people who were supposedly seal hunters were not staged. They were, to your knowledge, experienced seal hunters. Am I correct?

Mr. Davies: I never said experienced.

Mr. Carter: I mean, they were regular seal hunters.

Mr. Davies: They were seal hunters. Some of them may have been out there for the first time. Some of them may have been out there 20 times. I have no way of knowing.

Mr. Carter: Mr. Chairman, I am interested in the scene showing the seal being clubbed to death, and I believe this has been referred to several times by other members of the Committee. It seems to me that I cannot buy the story, Mr. Chairman, that this film, that some of the scenes were not staged, in that it showed one picture of a seal being clubbed, but very conveniently the camera did never show the club hitting the seal's head. The picture was taken from behind and it showed this sealer hauling off and giving the seal a half dozen smacks on the head. I do not think that any sealer with any experience would require that much of an effort to kill a seal. I think any experienced sealer would admit that it takes only one or maybe two blows on the head to render the seal unconscious and probably dead.

This scene, I submit, was staged, and it was shown very conveniently from the back of the seal. It never did show the club making contact with the seal's head. It again conveniently showed the club coming down, and this six-foot-tall sealer belting that poor little innocent seal, seven or eight times. And then a later scene, Mr. Chairman, showed another white coat that was obviously alive. It was not just reflex. It was obviously well alive, squirming in a pool of blood. Can the witness Mr. Chairman, explain these scenes? And what purpose do they serve?

[Interpretation]

M. Davies: Le but du film, c'était de montrer au public ce qu'est la chasse aux phoques en espérant le convaincre que c'est quelque chose d'atroce.

M. Carter: Mais vous avez dit vous-même, monsieur, que le film était, en fait, exagéré.

M. Davies: Non, monsieur. Quoi que j'aie dit, laissez-moi clarifier la situation. Le film sur la chasse aux phoques a été réalisé par une organisation qui s'oppose à la chasse aux phoques pour montrer certaines choses qui ne sont pas très agréables à voir. Je suis sûr que d'autres associations qui sont pour la chasse et non pas contre, pourraient montrer une version différente.

M. Carter: Mais vous disiez auparavant que les chasseurs de phoques n'ont pas joué un rôle. D'après vous, c'était des chasseurs expérimentés. Ai-je raison?

M. Davies: Je n'ai jamais dit que c'était des chasseurs expérimentés.

M. Carter: Je disais, de simples chasseurs de phoques.

M. Davies: Ce sont des chasseurs de phoques. Certains chassaient pour la première fois, certains pour la 20^e fois. Je ne peux pas vous dire.

M. Carter: Monsieur le président, je reviens sur cet épisode du phoque qu'on frappe jusqu'à ce que mort s'en suive. Je crois que c'est un détail dont on a beaucoup parlé au Comité, mais je ne suis pas convaincu, monsieur le président, que certaines scènes de ce film n'aient pas été montées de toutes pièces. On nous montre un phoque que l'on est en train de frapper, mais évidemment la caméra ne montre jamais le bâton touchant la tête du phoque. Je ne crois pas qu'un chasseur ayant de l'expérience aurait besoin de tant d'effort pour tuer un phoque. La séquence a été prise par l'arrière et on montre le phoque atteint par une douzaine de coups de bâton. Je ne crois pas qu'un chasseur expérimenté admettra qu'il suffit d'un coup, ou peut-être de deux, sur la tête pour assommer le phoque et le tuer probablement.

Je soupçonne que cette séquence est un montage, on montre le phoque de près, vu de dos, mais jamais on a vu le bâton arriver sur le crâne du phoque. Et on voit cet énorme chasseur frappant des coups redoublés sur ce pauvre petit phoque innocent. Plus tard on voit un autre bébé phoque manifestement vivant. Ce n'était pas seulement des réflexes. Il était bien vivant, gigotant dans un bain de sang. Est-ce que le témoin peut nous expliquer ces faits? Et quel dessein ils desservent?

[Texte]

Mr. Davies: First of all, there may be all sorts of parliamentary rules of procedure why I should not say it, but right now, sir, I am ashamed of being a Canadian. I am ashamed of my government, frankly.

Somebody, sir, must go out to the seal hunt for the first time. We are not all born experienced seal hunters. This may have been an inexperienced man. I have no way of knowing. I think that the man really deserves a certain amount of credit for doing his best to ensure that the skull of the animal was crushed before he started to skin it. And the other one about the animals, I do not know why you are so sure the animal was still alive. I am far from sure. It is a recognized fact, and you can read these reports. There is a great deal of postmortem reflex action.

Mr. Carter: Mr. Chairman, I think the film clearly shows that the seal was very much alive, no sign of the seal having been cut or anything else, except for the fact that he was there squirming, as it were, in a pool of blood.

Mr. Davies: And where do you suppose the blood came from? He was not cut.

Mr. Carter: I would say that—maybe you can tell the Committee where it came from.

Mr. Davies: If he was not cut, where do you suppose the blood came from?

Mr. Carter: Maybe you can tell the Committee where it came from?

Mr. Davies: Oh, come on.

Mr. Carter: I would suggest that it was put there.

Mr. Lundrigan: May I ask if the witness actually was in the film? Did I see a shot of the witness during that film?

Mr. Davies: Yes, you saw a shot...

Mr. Lundrigan: But not with his present appearance. But I thought I saw him without beard, and I was not quite sure.

Mr. Davies: I was kneeling beside Dr. Johansson who was conducting a postmortem on one of the animals.

• 2140

Mr. Carter: Mr. Chairman, getting back to that scene in the picture—I think is very important in that this picture has been shown pretty well probably right across the world—it shows a person clubbing the seal to death. Mr. Davies and his Society have distributed

[Interprétation]

M. Davies: Premièrement, il y a toutes sortes de règlements parlementaires qui m'interdisent de dire ce que je vais vous dire, mais j'ai honte d'être Canadien. J'ai honte de mon gouvernement, franchement. Quelqu'un doit aller chasser pour la première fois. Nous ne sommes pas tous nés avec l'expérience d'un chasseur de phoques. C'était peut-être un homme inexpérimenté. Je n'en sais rien et je ne le saurai jamais. Il me semble que l'homme mérite une certaine reconnaissance de bien vouloir prendre grand soin de tuer vraiment l'animal avant de l'écorcher. Et l'autre séquence à propos des animaux. Je ne sais pas pourquoi vous êtes si sûr que l'animal était bien vivant. Je suis loin d'en être sûr. C'est un fait reconnu et vous pouvez le lire dans ces rapports. Il y a de nombreux réflexes post-mortem.

M. Carter: Le film montre clairement, monsieur le président, que le phoque était bien vivant. On ne voit pas de blessures ni de coups et pourtant il évoluait dans un bain de sang.

M. Davies: Et d'où supposez-vous que venait le sang? Il n'était pas écorché.

M. Carter: Peut-être vous, vous pouvez le dire. Vous pourriez dire au Comité d'où venait le sang.

M. Davies: S'il n'était pas écorché, d'où, pensez-vous, venait le sang?

M. Carter: Vous pourriez peut-être nous dire d'où venait le sang?

M. Davies: Arrêtez-donc!

M. Carter: Je pense qu'on l'avait mis là.

M. Lundrigan: Une question supplémentaire. Puis-je vous demander si le témoin figurait dans le film? Ai-je vu l'image du témoin pendant la projection du film?

M. Davies: Oui, vous avez vu une séquence...

M. Lundrigan: Mais pas avec son apparence actuelle. Mais je pense l'avoir vu sans barbe.

M. Davies: Je me tenais près du docteur Johansson qui faisait une autopsie sur l'un de ces animaux.

M. Carter: Monsieur le président, pour revenir à la scène du film. Je pense qu'il est très important car ce film a été diffusé dans le monde entier. Ceux qui voient une personne en train d'assommer le phoque jusqu'à le tuer et M. Davies et sa Société qui a fait

[Text]

this film and must, I think, assume responsibility for it. This is one of the things that has given Canada a black eye.

I do not think that any sealer would take that much time to kill that seal, and if this was done by—if we did have one or two inexperienced sealers out that time, surely in a documentary film the camera would not just pick on that one particular person, and because of his inexperience condemn the whole sealing industry in Canada and to a great extent the Canadian people themselves.

Mr. Davies: I do not know how many inexperienced sealers were out there. It may have been one or two, as you suggest. It may have been several hundred. I have no way of knowing. All I do know is that I told the camera man to film what he saw without any contact with these people at all, and he has done that.

Mr. Carter: That is all I have, Mr. Chairman.

The Chairman: Gentlemen, in view of the time, I would ask if the Committee is agreeable to adjourning this questioning until tomorrow. As you know, we are going to the West Coast starting Saturday, and I would like the Committee to have a short in camera meeting tonight before we leave. It will only take a few minutes to deal with some business other than what is now before the Committee. Tomorrow we could continue with this present matter instead of the in camera meeting that was announced.

I thought I would put this to the Committee because we expected to have an in camera meeting tomorrow but this will not now be possible. I think it will only take five or ten minutes.

Mr. Davies: Mr. Chairman, my wife is not at all well and if there is any possibility at all of the Committee finishing tonight I would be extremely grateful, although, of course, I have to be available if you want to go on.

The Chairman: It is up to the Committee.

Mr. Borrie: Mr. Chairman, if it is necessary that we make a motion to this effect, I would move that we continue with the questioning until such time as we are finished with the witness until we return from the trip later on.

The Chairman: Is it the wish of the Committee that we continue?

Mr. Lundrigan: Mr. Chairman, may I make a suggestion? We are going to be hearing witnesses from the CBC, another gentleman who has been involved in filming and hopefully the records of the SPCA in New Bruns-

[Interpretation]

diffuser le film doivent assumer toutes les responsabilités pour sa présentation. Voilà qui a terni la réputation du Canada.

Aucun chasseur de phoques ne prendrait autant de temps pour tuer un phoque. Et si cet acte a été accompli par deux ou trois chasseurs inexpérimentés, le film documentaire ne se contenterait pas de filmer ce chasseur en particulier qui, à cause de son manque d'expérience, condamne ainsi l'industrie du phoque au Canada et, dans une certaine mesure, tous les Canadiens.

M. Davies: Je ne sais pas combien de chasseurs inexpérimentés participent à cette chasse, peut-être qu'il y en a un ou deux, comme vous semblez le penser. Peut-être aussi qu'il y en a des centaines. Il n'y a aucun moyen de savoir. Mais tout ce que je sais, c'est que j'ai dit au caméraman de filmer les scènes qui se présentaient à lui sans prendre contact avec les participants.

M. Carter: C'est tout, monsieur le président.

Le président: Messieurs, vu l'heure avancée, je demanderais au Comité s'il serait d'accord d'ajourner cet interrogatoire jusqu'à demain. Comme vous le savez nous nous rendons sur la côte Ouest à partir de samedi. J'aimerais que le Comité tienne une courte séance à huis clos ce soir avant de nous quitter. Cela ne prendra que quelques minutes pour étudier certaines questions différentes de celles qui sont devant le Comité en ce moment. Et nous pourrions reprendre demain le présent débat à la place de la séance prévue à huis clos.

Je pensais soumettre cette motion au Comité parce que nous devons tenir notre séance à huis clos demain. Et ce serait alors impossible. Je pense que cela nous prendrait seulement cinq à dix minutes.

M. Davies: Monsieur le président, ma femme ne se sent pas bien, et si on pouvait achever les travaux aujourd'hui, je serais reconnaissant.

Le président: Tout dépend du Comité.

M. Borrie: Je propose que nous poursuivions la période de questions, jusqu'à ce que nous ayons terminé avec notre témoin.

Le président: Que désire le Comité?

M. Lundrigan: Nous convoquerons d'autres témoins de Radio-Canada, un autre réalisateur de films et, je l'espère, consulterons les dossiers de la Société protectrice des animaux du Nouveau-Brunswick.

[Texte]

wick. As the witness has certainly given of his time and energies today and as we all are tired, might it be understood that we could recall him at a later date which might necessarily be a couple of weeks from now?

Mr. Noble: Mr. Chairman, I object to that suggestion. I think we should finish tonight. There are only a couple of more speakers and I will certainly curtail my questions because the whole subject has been pretty well exploited. I do not see any point in calling the man back because we have just about gone the limit, in my view.

Mr. Hogarth: Mr. Chairman, on the point I previously raised on the motion that was passed, I want to see the correspondence and the resolutions of the SPCA. This man has to come back with that documentation.

The Chairman: Is it acceptable to the Committee that the witness return in approximately two weeks at a time to be arranged by the steering committee? As to the other witnesses who have been called, some of whom are here—one could not come today on account of illness—is it understood that these witnesses will also be called at that time? Is this correct?

Some hon. Members: Agreed.

The Chairman: At a date to be decided by the steering committee?

Mr. McGrath: Mr. Chairman are you suggesting that we will not meet again until after the committee returns from British Columbia?

The Chairman: We intend to have an in camera meeting tomorrow on other matters.

Mr. McGrath: I agree that we can dispense with Mr. Davies but there are other witnesses that we could usefully hear on Thursday.

• 2145

The Chairman: I am here to listen to the Committee.

Mr. McGrath: I would suggest that we arrange to hear other witnesses on Thursday and that Mr. Davies, because of his illness in his family, could perhaps return in two weeks time with the documentation and the correspondence that Mr. Hogarth requested.

The Chairman: I am going to check with the Clerk for a moment or so to see what will be possible this week. He has made efforts today to get some of the witnesses who were mentioned this morning by this Committee.

[Interprétation]

Vu que le témoin nous a consacré beaucoup de temps et d'énergie aujourd'hui et que nous sommes apparemment tous fatigués, nous pourrions peut-être le reconvoquer à une autre occasion. Cela pourrait se faire au cours des deux prochaines semaines.

M. Noble: Je m'oppose à cette suggestion. Nous devrions finir ce soir. Il y a peut-être encore que deux ou trois orateurs, et je pourrais abréger ma question parce que le sujet a été très bien exploité, et je ne vois pas pourquoi nous devrions faire revenir le témoin simplement parce que nous avons dépassé l'heure.

M. Hogarth: Au sujet de la motion que j'ai proposée et qui a été adoptée, j'aimerais voir la correspondance et les résolutions émanant de la Société protectrice des animaux. Le témoin doit donc revenir devant nous avec les documents.

Le président: Le Comité désire-t-il que le témoin revienne dans deux semaines à un moment fixé par le comité permanent? Et les autres témoins qui ont été convoqués et qui n'ont pas pu se présenter aujourd'hui afin que ces témoins soient convoqués à nouveau au jour que le Comité fixera.

Des voix: D'accord.

Le président: A une date fixée par le Comité?

M. McGrath: Monsieur le président, voulez-vous dire que nous ne nous réunirons pas avant notre retour de la Colombie-Britannique?

Le président: Nous aurons une séance à huis clos demain pour étudier d'autres travaux.

M. McGrath: Et j'admets que nous ne pourrions pas entendre M. Davies. Mais il y a d'autres témoins que nous pourrions entendre jeudi.

Le président: Je suis là pour vous écouter...

M. McGrath: On pourrait prendre des dispositions pour convoquer d'autres témoins jeudi, et M. Davies, à cause de la maladie dans sa famille, pourrait revenir dans deux semaines avec les documents et les lettres demandés par M. Hogarth.

Le président: Je vais en parler au secrétaire du Comité pour savoir quelles sont les procédures qu'on pourrait adopter pour reconvoquer les témoins que nous devons entendre ce matin. Il n'a pas pu prendre con-

[Text]

He has not been able to get in touch with these gentlemen by telephone as yet. There is the possibility that perhaps we will not be able to have them here this week. It is a matter of doing what is possible. If it is possible, I think we should have them here.

We will carry on now with Mr. Comeau.

Mr. Comeau: Thank you, Mr. Chairman. Are you a sportsman, Mr. Davies?

Mr. Davies: Yes, I am a sportsman.

Mr. Comeau: Particularly do you do sport fishing?

Mr. Davies: No.

Mr. Comeau: Do you do any type of hunting?

Mr. Davies: No.

Mr. Comeau: The sports that you are associated with would have nothing to do with animals or this sort of thing; is that correct?

Mr. Davies: I ride horses.

Mr. Comeau: You ride horses. Do you consider sport fishing or hunting game a noble sport?

Mr. Davies: I have no opinion that I would care to give on that subject.

Mr. Comeau: I mean in your own personal view.

Mr. Davies: I am sorry, I have no opinion to give on that.

Mr. Comeau: Surely you must have an opinion—your own personal opinion. It does not necessarily have to be SPCA opinion. You have no opinion whatsoever?

Mr. Davies: I have not thought out the subject well enough to feel that I should give an opinion before this group, sir.

Mr. Comeau: Did you ever visit an abattoir or a slaughter house?

Mr. Davies: Yes, I have.

Mr. Comeau: Did you ever see pigs, let us say, being slaughtered?

Mr. Davies: Yes.

Mr. Comeau: In your opinion what is the difference between a fish being allowed to die slowly, as in the case of the sport fishermen catching a fish, a pig being slaughtered and a seal being killed?

[Interpretation]

tact avec ces personnes par téléphone. Il est toujours possible que nous ne puissions pas les entendre cette semaine. Nous ne pouvons faire que notre possible.

Nous pouvons poursuivre, continuer de poser des questions à ce témoin. Monsieur Comeau.

M. Comeau: Je vous remercie, monsieur le président. Je voudrais demander au témoin: êtes-vous sportif, monsieur Davies?

M. Davies: Oui, je suis un sportif.

M. Comeau: Êtes-vous un partisan de la pêche?

M. Davies: Non.

M. Comeau: Chassez-vous?

M. Davies: Non.

M. Comeau: Les sports que vous pratiquez n'ont rien à voir avec les animaux. Est-ce exact?

M. Davies: Je fais de l'équitation.

M. Comeau: Estimez-vous que la pêche ou la chasse sont des sports nobles?

M. Davies: Je n'ai aucune opinion à donner là-dessus.

M. Comeau: D'après vos convictions personnelles?

M. Davies: Je regrette, je n'ai aucune opinion à donner là-dessus.

M. Comeau: Vous avez sûrement une opinion personnelle qui ne doit pas forcément refléter celle de la Société protectrice des animaux.

M. Davies: Non, aucune opinion. Je n'ai pas réfléchi à ce sujet assez longtemps pour savoir si je devais donner une opinion devant ce Comité.

M. Comeau: Avez-vous déjà visité un abattoir?

M. Davies: Oui.

M. Comeau: Avez-vous déjà vu des porcs en train d'être abattus?

M. Davies: Oui.

M. Comeau: D'après vous, en quoi, où est la différence entre le fait de tolérer la mort lente d'un poisson, comme c'est le cas dans la pêche sportive, entre un cochon qu'on abat et un phoque qu'on tue?

[Texte]

Mr. Davies: The only opinion I would care to offer, sir, is that one cruelty does not justify another. There is just no relation at all in my opinion.

Mr. Comeau: Therefore, after the seals are done with, I would imagine that you are going to attack some other form of...

Mr. Davies: I will tell you: I have had such a rough ride with this seal thing that I just do not know what I am going to do after this.

Mr. Comeau: All right. You mentioned a while back that *Paris Match* rented a helicopter. For what purpose did they rent a helicopter, do you know?

Mr. Davies: To go out and document the seal hunt.

Mr. Comeau: What is their interest in the seal hunt? It is simply, like you said, for preparing a documentary on the thing or is it...

Mr. Davies: The same interest they have in writing any story. They just decided, presumably, they wanted to write a story.

Mr. Comeau: Have they contributed to your funds? Have they provided funds to your association or your organization?

Mr. Davies: No.

Mr. Comeau: None whatsoever?

Mr. Davies: No.

Mr. Comeau: That is all for now, Mr. Chairman. All my other questions have been answered.

• 2150

Mr. St. Pierre: Thank you, Mr. Chairman. I think I can be brief in my questioning of the witness. There is one aspect of this crusade I would like to go into in a bit of detail. Incidentally, Mr. Davies, you told the Committee earlier today you did not like the word "crusade", I believe.

Mr. Davies: I am not overfond of it.

Mr. St. Pierre: Why not?

Mr. Davies: In the context of this Committee room I think it is a bit over dramatic. I think it is a little bit dramatic. It is a word that I use on occasion. Although I have used it in the past I am wondering whether it is the best word to use.

Mr. St. Pierre: In your book here *Animals* by Brian D. Davies, the very first sentence is: "The New Brunswick SPCA 'Save the Seals' Fund is involved in a crusade".

[Interprétation]

M. Davies: La seule opinion que je pourrais exprimer là-dessus, ce serait qu'une cruauté n'en justifie pas une autre, parce que cela n'a aucun rapport à mon sens.

M. Comeau: Par conséquent, lorsqu'on aura aboli la chasse, vous allez vous en prendre à d'autres formes de...

M. Davies: Je vais vous dire une chose. J'ai eu assez de tracasseries avec la chasse au phoque que je ne sais à quoi je me consacrerai après.

M. Comeau: Parfait. Vous avez mentionné il y a quelques instants, que *Paris Match* a loué un hélicoptère. Dans quel but?

M. Davies: Pour se rendre sur les lieux et se renseigner sur la chasse au phoque.

M. Comeau: En quoi s'intéressent-ils à la chasse au phoque? S'agirait-il de faire un documentaire, de réaliser un documentaire?

M. Davies: Le même intérêt qu'ils ont en faisant toutes sortes de reportages. Ils ont décidé d'écrire un article à ce sujet.

M. Comeau: Est-ce que *Paris Match* a versé une contribution à votre association?

M. Davies: Non.

M. Comeau: Aucune somme?

M. Davies: Non.

M. Comeau: C'est tout, monsieur le président.

M. St-Pierre: Merci, monsieur le président. Je voudrais poser de brèves questions au témoin. Il y a un aspect de sa croisade que j'aimerais approfondir, soit dit en passant. Vous avez dit plutôt aujourd'hui que vous n'aimiez pas le terme de «croisade».

M. Davies: Je ne suis pas tellement entiché de ce mot.

M. St-Pierre: Pourquoi pas?

M. Davies: Dans le contexte de ce Comité, c'est un terme plutôt dramatique. Pour moi ce sont des termes que j'emploie bien qu'il ait été employé autrefois, je me demande encore si c'est le terme idéal.

M. St-Pierre: Je constate que dans votre brochure, «*Animals*» par Brian D. Davies, que la toute première phrase dit ceci: «La Société protectrice des animaux du Nouveau-Brunswick et le Fonds «*Save the Seals*» se sont lancés dans une croisade.»

[Text]

Mr. Davies: I do not mind so much where the organization is involved in a crusade. I am not sure that I want to be the crusader.

Mr. St. Pierre: Mr. Davies, what I would like to pursue for a few moments here is, in a sense, following on Mr. Anderson's questioning. You informed the Committee that you now are fairly confident that the herd is being conserved and that not too many seals are being killed as of this year, I believe you said.

I would like to pursue the possibilities. Should you be successful in your campaign to eliminate the Canadian sealing industry in these waters what might we then expect? There is at present a basic herd of approximately how many animals?

Mr. Davies: I believe, 1 million, sir.

Mr. St. Pierre: And the annual natural increase, harvesting excepted, is approximately what?

Mr. Davies: Ten per cent, I believe.

Mr. St. Pierre: A ten per cent increase; and the optimum number of seals, I believe you informed the Committee earlier, would be 1,700,000?

Mr. Davies: I do not think anyone really knows that for sure; but it has been suggested by competent people that the natural level for these seals may be around 1,750,000.

Mr. St. Pierre: How is this level to be maintained without the artificial reduction of the herd by present methods of killing?

Mr. Davies: Because the seals have a place in the ecology of the Gulf and the other seas that they go to, and they are kept in check by natural checks that keep them in balance with this ecology.

Mr. St. Pierre: The natural checks would be predation by animals rather than by man, would they not?

Mr. Davies: There is some question about that with regard to the harp seals. I went through this earlier and suggested that it might very well be infertility because of stress on the more overcrowded breeding areas; but, again, nobody knows for sure.

I think, in all honesty, that the Committee may be doing itself a disservice. Dr. David Sergeant with the Fisheries Department is eminently capable of answering all your questions on this.

[Interpretation]

M. Davies: Je ne pense pas que je vais être l'animateur de cette croisade.

M. St-Pierre: Ce que je voulais savoir, monsieur Davies, c'est qu'à la suite des questions de M. Anderson, vous avez dit au comité que vous étiez convaincu que l'espèce était protégée et que dès cette année très peu de phoques seront tués. J'aimerais envisager les possibilités. Supposons que votre campagne aboutisse à éliminer l'industrie du phoque dans ces eaux, quelles seraient les conséquences? Combien de bêtes environ représente le troupeau actuellement?

M. Davies: Il y a un troupeau d'environ un million de bêtes.

M. St-Pierre: A combien environ s'élève l'augmentation naturelle annuelle, sans tenir compte du nombre de bêtes tuées?

M. Davies: Dix pour cent, je crois.

M. St-Pierre: Une augmentation de 10 p. 100 dites-vous; et le nombre optima de phoques, je crois que vous aviez déclaré devant le Comité ce matin que ce serait de 1,700,000?

M. Davies: Personne ne connaît avec certitude ces chiffres mais des spécialistes en la matière croient que le niveau naturel de ces phoques se situe aux alentours de 1,750,000.

M. St-Pierre: Comment peut-on maintenir ce niveau sans avoir recours à la réduction artificielle de ce troupeau par les méthodes actuelles?

M. Davies: Parce que des phoques occupent une certaine place dans l'écologie du Golfe ou des autres mers où ils se trouvent, et parce que leur nombre est maintenu à un certain niveau par des moyens naturels qui les tiennent en équilibre avec cette écologie.

M. St-Pierre: Ces moyens naturels pourraient vouloir dire la destruction par d'autres animaux plutôt que par l'homme, n'est-ce pas?

M. Davies: Je ne crois pas que ce soit le cas pour ce qui est des phoques du Groenland. J'ai déjà mentionné cela plus tôt en disant que ce pourrait très bien être la stérilité provoquée par l'agitation qui règne dans les régions de reproduction; mais, une fois de plus, nul ne sait. En toute honnêteté, je crois que le Comité est en train de se faire du tort. M. David Sergeant du ministère des Pêcheries a toutes les qualités pour répondre à toutes vos questions à ce sujet.

[Texte]

Mr. St. Pierre: But you, Mr. Davies, are attempting to eliminate the sealing industry and I am sure you would not do so unless you had investigated this matter to your own satisfaction.

Mr. Davies: To my satisfaction, yes.

Mr. St. Pierre: You would agree, for instance, that some of nature's methods of predation and herd-reduction are extremely cruel?

Mr. Davies: I do not think you can use the word "cruel" to describe nature.

Mr. St. Pierre: That they cause extreme suffering to the animals, would be a more correct way to put it.

Mr. Davies: Yes, I would think so.

Mr. St. Pierre: You have observed moose herds in over-grazed areas and seen what a winter starvation condition is like among those animals?

Mr. Davies: No, I have not, sir.

Mr. St. Pierre: You have read of it, I presume, or are familiar with it?

Mr. Davies: No, I am not familiar with it.

Mr. St. Pierre: Are you familiar with any method of natural control of game or wildlife populations other than by predatory animals or by disease, which are two of the common methods of reducing herds?

Mr. Davies: I would not want to give an opinion, but I would agree with you that disease and being eaten by other animals are two of the checks that nature has.

Mr. St. Pierre: As you can probably see, this is the question which I am leading to. Would you prefer to see a seal herd in the Gulf controlled by these natural methods of sickness, possibly by infertility, but possibly also by heavy predation or disease, or malnutrition would you prefer to see that amount of suffering than whatever suffering is involved in the present method of harvesting?

• 2155

Mr. Davies: It is a hypothetical question. You have not proved to anyone's satisfaction that all of these things are going to happen if the seal hunt is stopped.

Mr. St. Pierre: Is it not correct that every species on earth, Mr. Davies, has sooner or later to be retained at the carrying capacity of its area?

Mr. Davies: Yes, I would say that is fair enough.

[Interprétation]

M. St-Pierre: Mais vous tenez à éliminer l'industrie du phoque, et je suis sûr que vous ne feriez pas cela sans avoir bien étudié la question à votre propre satisfaction.

M. Davies: Oui, à ma satisfaction.

M. St-Pierre: Vous en conviendrez que certaines méthodes de déprédation et de réduction naturelle des espèces animales sont extrêmement cruelles?

M. Davies: Je doute que le mot «cruel» puisse s'appliquer à la nature.

M. St-Pierre: Serait-il préférable de dire que ces moyens sont extrêmement douloureux pour les animaux?

M. Davies: Oui, je pense bien.

M. St-Pierre: Vous avez dû avoir des troupeaux d'orignaux dans des régions incultes et ce que peut représenter pour ces animaux un hiver sans nourriture.

M. Davies: Non je n'ai pas eu l'occasion.

M. St-Pierre: Vous avez dû lire quelque chose à ce sujet.

M. Davies: Non, je n'ai aucune idée.

M. St-Pierre: Connaissez-vous d'autres méthodes naturelles de contrôle de la faune par des moyens autres que la déprédation ou la maladie qui constituent deux des méthodes les plus connues pour réduire les troupeaux?

M. Davies: Je ne veux pas donner une opinion là-dessus mais j'admets que les maladies et la déprédation sont des méthodes de freinage que possède la nature.

M. St-Pierre: Voilà où je veux en venir. Préférez-vous voir un troupeau de phoques dans le Golfe qui soit réduit par les méthodes naturelles, par l'infertilité ou par les animaux de proie ou par les maladies ou la sous-alimentation. Aimerez-vous voir les bêtes subir cette méthode, ces souffrances plutôt que les douleurs subies par la chasse.

M. Davies: C'est une question hypothétique. Vous n'avez pas prouvé hors de tout doute que toutes ces choses-là se produiront si la chasse aux phoques était interdite.

M. St-Pierre: N'est-il pas vrai monsieur Davies que toute espèce sur terre doit tôt ou tard être maintenue à un niveau compatible avec la capacité de peuplement de sa région?

M. Davies: Oui, je dirais que c'est assez vrai.

[Text]

Mr. St. Pierre: So that one of these things, or all of them, must happen if this herd is left without any human predation.

Mr. Davies: Hum-hum.

Mr. St. Pierre: I do not really feel that my next question is hypothetical. It is your intention to stop sealing in Canada. If you are successful, one of these other forces must take over. Do you prefer this?

Mr. Davies: Yes, sir.

Mr. St. Pierre: Even although it may involve more suffering for the animals?

Mr. Davies: Again, that is hypothetical. I would give some consideration to modifying my point of view if I felt that the natural retardation of this heard growth was excessively unpleasant for the animals involved.

However, let me go on, sir, and say that if your concern is with controlling the heard then there are I think, ways of doing that without the present slaughter. For instance, research would be done on some form of drug to control the herd. This has been suggested by Mr. Peter Scott in England, a very eminent biologist and zoologist.

Also, if you want to minimize the killing you could very carefully kill selected adult females to keep the heard down.

But in all honesty, sir, and in all fairness, the seal hunt is not conducted to control the size of the herd. The seal hunt is to produce fur for profit.

Mr. St. Pierre: This is quite true. Most industries are designed to produce a profit, are they not, Mr. Davies.

Mr. Davies: I would think so.

Mr. St. Pierre: You do not object to that?

Mr. Davies: No.

Mr. St. Pierre: There is one matter which has come up very frequently in your testimony, Mr. Davies, and I would like to return to it briefly. I must ask this in the form of a general question, and it relates to questions I asked you earlier today.

You speak of the brutalizing effect of seal killing upon the men involved. This is a body of Canadian citizens who have no fault known to me, unless it be that they are poor, and I do not class that as a fault, and who are trying to earn their living. Surely your remarks have defamed these people. When I

[Interpretation]

M. St-Pierre: En d'autres termes, si la déprédation de la part des chasseurs n'est pas pratiquée, l'espèce devra subir une de ces méthodes naturelles ou toutes à la fois.

M. Davies: Hum! hum!

M. St-Pierre: Je ne pense vraiment pas que ma prochaine question soit hypothétique. Vous avez l'intention d'arrêter la chasse aux phoques au Canada. Si vous réussissez, un autre facteur entrera en jeu. Préférez-vous cela?

M. Davies: Oui, monsieur.

M. St-Pierre: Même si cela occasionnerait plus de souffrances aux bêtes?

M. Davies: Une fois de plus c'est hypothétique. Je serais porté à changer d'avis si je pouvais être sûr que la déprédation naturelle causerait des souffrances atroces aux bêtes en question.

Cependant permettez-moi d'ajouter que s'il s'agit essentiellement de freiner l'accroissement du troupeau, il y a, à mon avis diverses façons de le faire sans avoir recours à la présente tuerie. On pourrait, par exemple entreprendre des recherches en vue de mettre au point un certain médicament qui freinerait l'accroissement. C'est ce qu'avait suggéré M. Peter Scott, éminent biologiste et zoologiste d'Angleterre. D'autre part, si vous voulez minimiser le massacre, vous pourriez soigneusement tuer des femelles bien choisies pour empêcher l'accroissement.

Mais à vrai dire, la chasse aux phoques n'est pas pratiquée pour empêcher l'accroissement de l'espèce, elle se fait pour tirer profit des fourrures.

M. St-Pierre: C'est très juste. La plupart des industries ont pour but de faire des profits, n'est-il pas vrai, monsieur Davies?

M. Davies: Je pense bien.

M. St-Pierre: Vous ne vous opposez pas à cela?

M. Davies: Non.

M. St-Pierre: Monsieur Davies, je voudrais revenir brièvement à un point dont il a été souvent question au cours de votre témoignage. Je vais poser la question de façon générale; elle porte sur d'autres questions que je vous ai adressées plus tôt aujourd'hui.

Vous avez parlé de l'effet abrutissant que la chasse au phoque imprime sur les chasseurs en question. Vous devez comprendre qu'il s'agit de citoyens canadiens qui, selon moi, n'ont aucune faute à se reprocher, si ce n'est que celle d'être pauvres, et je ne peux considérer cela comme étant une faute, et qui

[Texte]

asked you earlier what evidence you had your answer was that you had none whatever to bring forward—not a shred.

How do you justify statements of this sort, lacking evidence to support the view you put forward?

Mr. Davies: I think sir, as a free Canadian citizen—and I believe I still am—that I may look at the seal hunt and I may in my judgment feel that battering baby seals to death is brutalizing on the people who are doing it.

Mr. St. Pierre: It is an opinion for which you can produce no evidence, and you would admit, I would hope, that it is a damaging opinion.

Mr. Davies: No, I do not think it is a damaging one.

Mr. St. Pierre: You do not feel these people are demeaned by your saying that?

Mr. Davies: No, I do not.

Mr. St. Pierre: You do not think these people are being dealt with unfairly when you say, as you did, in the television interview:

The Canadian Government don't want these men to have guns because they feel they will perhaps kill each other, either accidentally or if they get into the ship's rum, perhaps on purpose...

Mr. Davies: It is a statement I made.

Mr. St. Pierre: Was it a responsible statement, Mr. Davies?

Mr. Davies: Yes, I think so.

Mr. St. Pierre: It was responsible to say this?

Mr. Davies: Yes. People want to know why they do not shoot these seals.

Mr. St. Pierre: And that is the reason, then?

Mr. Davies: I think that it is part of the reason. There may be others that I am not aware of.

Mr. St. Pierre: Incidentally, Mr. Davies, in the earlier questioning today there was one section which I would like to read to you again. This is from a transcript of the memorandum which you have from WNEW-TV, starting in the centre:

Mr. Davies: Well on the Canadian seal hunt in the spring of the year, large ice-breaking vessels make their way to the

[Interprétation]

essayent de gagner leur vie. Vos remarques ont sûrement porté atteinte à la réputation de ces gens-là. Lorsque je vous ai demandé plus tôt si vous aviez des preuves, vous avez dit que vous en aviez aucune.

Comment pouvez-vous justifier de telles déclarations, sans avoir de preuves pour appuyer le point de vue que vous avez exposé?

M. Davies: Je pense qu'en tant que citoyen canadien libre, et je pense que je le suis encore, je suis en droit de penser et de dire que le fait d'assommer des bébés phoques constitue un acte dont l'effet est abrutissant sur ceux qui le font.

M. St-Pierre: C'est une opinion à l'appui de laquelle vous n'avez aucune preuve, et vous conviendrez, j'espère, que cette opinion est préjudiciable.

M. Davies: Non. Je ne pense pas qu'elle soit préjudiciable.

M. St-Pierre: Vous ne croyez pas que vos propos ont abaissé ces gens?

M. Davies: Non. Je ne le crois pas.

M. St-Pierre: Vous ne pensez pas que ces gens aient été traités injustement, quand vous dites, comme vous l'avez fait à la télévision: «Le gouvernement canadien ne veut pas que ces gens aient des fusils parce qu'ils pourraient se tuer les uns les autres soit par accident ou bien même intentionnellement».

M. Davies: Eh bien, je l'ai dit.

M. St-Pierre: Était-ce vraiment une déclaration réfléchie?

M. Davies: Oui, je le pense.

M. St-Pierre: Était-ce réfléchi de dire cela?

M. Davies: Oui. Les gens sont en droit de savoir pourquoi l'on ne tue pas les phoques à coup de fusil.

M. St-Pierre: Et c'est ça la raison?

M. Davies: C'est la raison, en partie. Il pourrait y en avoir d'autres que j'ignore.

M. St-Pierre: Incidemment, monsieur Davies, je voudrais vous citer un passage tiré d'un memorandum que vous aviez reçu du canal WNEW-TV, et je cite:

M. Davies: En bien, lors de la chasse au phoque, au printemps, de gros brise-glace se dirigent vers la banquise,

[Text]

floating ice, floating on the sea disgorge hundreds of hunters who then move into the breeding grounds of the harp seals, with clubs, and beat at the baby seals.

Announcer: With the intention of killing them?

Mr. Davies: With the intention of killing them but unfortunately for the baby seals the hunters are not always successful.

Announcer: So in effect he skins them alive?

Mr. Davies: Yes in effect he skins them alive.

During Mr. Hogarth's questioning of you on this matter you said, I believe, that that was not a full report of what you said at that time in those places.

Mr. Davies: No, I think not, sir.

Mr. St. Pierre: The report is, then, inaccurate in that it is incomplete.

Mr. Davies: That it is incomplete.

Mr. St. Pierre: And therefore inaccurate in that it does not reflect the full import of your remarks?

Mr. Davies: I would say that it is incomplete.

Mr. St. Pierre: That completes my questioning, Mr. Chairman. I have a motion I wish to propose.

I think the Committee would join me in feeling that this is a rather serious matter; that it is the matter of credibility. WNEW TV in New York has supplied the Minister of Fisheries with what purports to be an accurate transcript of a section of this interview. If this transcript is not accurate, the Minister of Fisheries of Canada has been misled and he, in turn, has unwittingly misled the Committee. If, on the other hand, the evidence given by this witness as to the incompleteness of this transcript is not correct, that in itself is a very serious matter.

Therefore, I move that this Committee obtain from the TV station WNEW TV in New York, the full and complete tapes of the interview conducted with Mr. Davies on March 27, 1969 and that the steering Committee be empowered to bring also a witness here from this station if necessary to establish the accuracy of the tapes so presented.

Mr. Lundrigan: I second the motion.

The Chairman: You have heard the motion. Are there any questions?

Motion agreed to.

[Interpretation]

desquels débarquent des centaines de chasseurs qui pénètrent ensuite dans les lieux de reproduction des phoques du Groenland et, à l'aide de matraques, abattent les bébés phoques.

L'annonceur: Dans l'intention de les tuer?

M. Davies: Dans l'intention de les tuer, mais malheureusement pour les petits les chasseurs ne réussissent pas toujours.

L'annonceur: Par conséquent, ils les écorchent encore vivants?

M. Davies: Oui, en fait, ils les écorchent vivants.

Lorsque M. Hogarth vous posait des questions à ce sujet, vous avez dit que ce n'était pas là un compte rendu complet de ce que vous avez dit en ce temps-là.

M. Davies: Non, je ne pense pas.

M. St-Pierre: Donc le rapport est inexact puisqu'il est incomplet.

M. Davies: Qu'il est incomplet.

M. St-Pierre: Et par conséquent inexact puisqu'il ne reflète pas entièrement la teneur de vos remarques?

M. Davies: Je dirais que c'est incomplet.

M. St-Pierre: Je n'ai pas d'autres questions, monsieur le président. Je voudrais présenter une motion. Je crois que le Comité conviendrait avec moi que c'est une question tout à fait sérieuse; c'est une question de crédibilité. La WNEW-TV de New-York a fourni au ministre des Pêcheries ce qui est censé être une transcription exacte d'une partie de cet interview. Si la transcription n'est pas exacte, le ministre des Pêcheries du Canada a été induit en erreur et, à son tour, a induit le Comité en erreur. Si, d'autre part, le témoignage qu'a donné le témoin quant au caractère incomplet de cette transcription n'est pas exact, c'est une question très sérieuse.

Je propose donc que le Comité obtienne de la station de télévision WNEW-TV de New-York l'enregistrement complet de l'interview qu'a accordé M. Davies le 27 mars 1969, et que le comité directeur puisse aussi convoquer un témoin de cette station, au besoin, pour confirmer l'exactitude de l'enregistrement.

M. Lundrigan: J'appuie la motion.

Le président: Vous avez entendu la motion. Avez-vous des questions à poser?

La motion est adoptée.

[Texte]

The Chairman: Mr. St. Pierre, have you finished?

Mr. St. Pierre: I have completed my questioning, thank you.

Mr. Borrie: Thank you, Mr. Chairman. Mr. Davies, I am not going to take too long because the questions that I had originally outlined deal more with the organization of the New Brunswick SPCA and I will leave those until you return to the Committee with some of the correspondence.

However, there is one question that I would like to ask, with regard to the reports that we have from the pathologists and the veterinarians, the reports which you have seen in complete detail, and the fact that you also acknowledge that the harp seal will not be extinct under the present harvesting regulations. Is it your intention in the future to pursue the cessation of the killing of the harp seal?

Mr. Davies: Yes, sir.

Mr. Borrie: Why?

Mr. Davies: Because I feel it is a worthwhile and ethical endeavour.

Mr. Borrie: How many members do you have in your Association of the New Brunswick, SPCA, Mr. Davies?

Mr. Davies: Several hundred.

Mr. Borrie: Are there two branches?

Mr. Davies: There are several branches.

Mr. Borrie: Do they all agree with the course of action taken by the New Brunswick SPCA?

Mr. Davies: No, they do not all agree.

Mr. Borrie: So that you are not really speaking with the unified voice of the SPCA of New Brunswick, then?

Mr. Davies: I am speaking with a majority voice, yes.

Mr. Borrie: Do you initiate the programs that are undertaken by the New Brunswick SPCA yourself, or are these initiated by members?

Mr. Davies: These are initiated—we have an annual meeting and we have an executive and we have directors, and at all three levels they initiate policy and I do my best to carry out that policy.

Mr. Borrie: Coming back again to the extinction of the harp seal, would you consid-

[Interprétation]

Le président: Monsieur St-Pierre, avez-vous terminé?

M. St-Pierre: Je n'ai plus de questions, merci.

M. Borrie: Merci, monsieur le président.

M. Davies, je n'en ai pas pour très longtemps, car les questions que j'avais préparées portaient surtout sur l'organisation de la Société protectrice des animaux du Nouveau-Brunswick, et j'attendrai que vous reveniez au Comité avec la correspondance.

Toutefois, il y a une question que je voudrais poser au sujet des rapports que nous avons reçus des pathologistes et des vétérinaires, les rapports que vous avez pu examiner en détail, et le fait que vous ayez reconnu aussi que le phoque du Groënland ne va pas disparaître, avec la réglementation actuelle de la chasse. Avez-vous l'intention, à l'avenir, de chercher à arrêter complètement la chasse aux phoques du Groënland?

M. Davies: Oui, monsieur.

M. Borrie: Pourquoi?

M. Davies: Parce que j'estime que cela en vaut la peine, et que c'est une question de morale.

M. Borrie: Combien de membres y a-t-il dans votre Société protectrice des animaux au Nouveau-Brunswick, monsieur Davies?

M. Davies: Plusieurs centaines.

M. Borrie: Est-ce qu'il y a deux sections?

M. Davies: Il y en a plusieurs.

M. Borrie: Est-ce qu'elles sont toutes d'accord avec la ligne de conduite adoptée par la Société protectrice des animaux du Nouveau-Brunswick?

M. Davies: Non, pas toutes.

M. Borrie: Donc, vous n'exprimez pas vraiment l'opinion unanime de la SPA du Nouveau-Brunswick?

M. Davies: Je parle au nom de la majorité.

M. Borrie: Est-ce que les programmes qu'organise la SPA du Nouveau-Brunswick sont lancés par vous-mêmes, ou par des adhérents?

M. Davies: Ils sont lancés lors d'une assemblée annuelle; nous avons une direction et un conseil d'administration, et aux trois niveaux on décide de la ligne de conduite. Puis je m'efforce moi-même de mettre cette politique à exécution.

M. Borrie: Pour en revenir à l'extinction du phoque du Groënland, estimez-vous qu'il

[Text]

er that a certain number of seal harvested per year, as is the present regulation, would control the situation well enough?

Mr. Davies: I do not understand that question, sir.

Mr. Borrie: What I am really trying to get at here, Mr. Davies, is that I really do not understand your thinking behind the actions that are pursued by the SCPA or by yourself. You speak very authoritatively and you speak very positively in press releases about your course of action, and yet before this Committee I must say that you have been lacking in a great deal of co-operation in helping us to decide what really you are after. In other words, what are your purposes?

Mr. Davies: In fairness, sir, I would have to state that the Committee has given me little opportunity of being helpful to it. I have been subjected to vilification and abuse at a level that I just do not believe can happen in Canada; but I know it can because I have seen it.

Mr. Borrie: This is the part that also surprises me, Mr. Davies, that I cannot see where you can say that you were vilified, because that is certainly not true of the Committee. I can tell you that I do agree with you that you have had a very rough session. Some of the questions have been very direct and have been very forceful, but do not forget that over the years you have also been very forceful in trying to stop an economy in the Gulf of St. Lawrence.

Mr. Davies: I would say, sir, that in doing that I represent majority opinion in Canada, in my opinion.

Mr. Borrie: With the facts that have been presented to this Committee today, Mr. Davies, I doubt it very much.

I am finished, Mr. Chairman.

The Chairman: Mr. Noble, would you please try to be as brief as possible because of the late hour.

Mr. Noble: Mr. Chairman, I will have to be brief, because I think pretty nearly everything has been covered, but I would like to make a few observations. My hope, Mr. Chairman, is that we might bring something constructive out of the hearing. The fur industry plays an important role in the economy and I am personally involved and I proceed by making an observation of concern.

If this type of propaganda is used in other segments of the fur industry in Canada, it could have disastrous results on our markets.

[Interpretation]

suffirait, pour garder la situation en main, de ne prendre qu'un certain nombre de phoques chaque année, comme l'impose le règlement actuel?

M. Davies: Je ne comprends pas votre question, monsieur.

M. Borrie: Voici où je veux en venir, monsieur Davies. Je ne comprends vraiment pas les motifs de vos actions, ou de celles de la SPA. Dans les communiqués de presse, vous vous exprimez de façon très claire et catégorique relativement à votre ligne de conduite. Et pourtant, je dois dire que devant le Comité, vous ne faites vraiment pas preuve d'esprit de collaboration pour nous aider à comprendre où vous voulez en venir. Autrement dit, quels sont vos objectifs?

M. Davies: Franchement, monsieur, je dois dire que le Comité ne m'a pas donné beaucoup l'occasion de l'aider. On m'a vilipendé et insulté d'une manière que je ne croyais pas possible au Canada; mais je suis obligé de croire la chose possible, puisque je l'ai vue.

M. Borrie: C'est là aussi une chose qui m'étonne, monsieur Davies. Je ne vois pas comment vous pouvez dire qu'on vous a vilipendé, car ce n'est certainement pas vrai du Comité. Je conviens avec vous que vous avez eu une séance très dure. Certaines des questions que l'on vous a posées étaient très directes et violentes, mais n'oubliez pas que, depuis des années, vous essayez aussi avec pas mal de violence de mettre fin à une section de l'économie du golfe du Saint-Laurent.

M. Davies: Il me semble, monsieur, qu'en agissant ainsi, je représente la majorité de l'opinion publique du Canada.

M. Borrie: Étant donné les faits que l'on a présentés au Comité aujourd'hui, monsieur Davies, j'en doute fort.

C'est tout, monsieur le président.

Le président: Monsieur Noble, pourriez-vous essayer d'être aussi bref que possible, car il se fait tard?

M. Noble: Monsieur le président, il me faudra être bref, car je crois qu'on a posé presque toutes les questions qu'il y avait à poser, mais je voudrais simplement faire quelques observations. J'espère, monsieur le président, que nous pourrions tirer quelque chose de constructif de l'audience. L'industrie des fourrures joue un rôle important dans notre économie, j'y suis personnellement intéressé, et je tiens à exprimer mon inquiétude.

Si l'on fait usage de ce genre de propagande dans d'autres secteurs de l'industrie des fourrures au Canada, cela pourrait avoir

[Texte]

I might say, for instance, there are approximately two million mink killed each year on ranches in Canada. As it appears, the SPCA struck at the very heart of the seal industry when they went to Europe to destroy the market with questionable propaganda. In view of the fact the sealing industry plays an important part in the economy of our Atlantic area, and granted that some cruelty has been committed in the past, did it ever occur to the witness that he might have made a worthwhile contribution in Canada's interest by using his energies and talent toward research which would result in a humane method of taking seals furs, and which would be acceptable to all concerned, rather than following the course he has taken which has cast unsavory reflections on our country and its people in many countries where his propaganda has been used to destroy this industry?

According to information revealed here today, some of the reasons for promoting such propaganda may have ulterior motives. Does the witness agree with these observations?

Mr. Davies: The witness does not agree with those observations.

Mr. Noble: If an acceptable humane method was contrived, would the witness withdraw his support toward ending the Canadian sealing industry and resign his position with the SPCA?

Mr. Davies: No, because it would not be acceptable to me. I think the seal hunt is barbaric, brutal, aesthetically ugly and morally reprehensible, and I shall continue to fight against it for the rest of my life if necessary, in Canada if you people permit me to live here, but outside if I have to.

Mr. Noble: In other words, Mr. Chairman, I believe the witness is stating that he is against killing any kind of fur animals in Canada.

Mr. Davies: The witness did not state that.

Mr. Noble: You have said that you were going to fight the killing of seals. What is the difference between killing seals and killing mink or killing any other fur-bearing animal?

Mr. Davies: I am going to do a job for the seals because it is impossible for me to fight all cruelty everywhere. I think I can do a good job in this particular area.

[Interprétation]

des répercussions désastreuses sur nos marchés. Je pourrais faire remarquer, par exemple, que l'on tue des milliers de visons chaque année dans les ranches du Canada. Apparemment, la SPA a frappé directement au cœur l'industrie des phoques lorsqu'elle est allée en Europe détruire nos marchés avec une propagande contestable. Étant donné que l'industrie des phoques joue un rôle important dans l'économie de la région de l'Atlantique, et que, je l'admets, on a commis, par le passé, pas mal de cruauté, le témoin a-t-il jamais songé qu'il aurait pu contribuer de façon précieuse aux intérêts du Canada en consacrant son énergie et ses talents à des recherches en vue d'essayer de trouver un moyen humain de prendre la fourrure des phoques, qui serait acceptable pour tout le monde, plutôt que d'agir comme il l'a fait, ce qui a donné une très mauvaise impression de notre pays et de ses habitants dans bien des pays où sa propagande a été utilisée pour détruire cette industrie.

D'après ce qui a été révélé ici aujourd'hui, certaines des raisons de cette propagande cachent peut-être d'autres motifs. Le témoin est d'accord avec ces observations?

M. Davies: Le témoin n'est pas d'accord avec ces observations.

M. Noble: Si l'on découvrait une méthode humaine acceptable, le témoin renoncerait-il à donner son appui à la suppression de l'industrie des phoques au Canada, et résignerait-il ses fonctions au sein de la S.P.A.?

M. Davies: Non, car ce ne serait pas acceptable pour moi. Je trouve la chasse aux phoques barbare, brutale, laide du point de vue esthétique, et moralement répréhensible. Je continuerai à la combattre jusqu'à la fin de mes jours s'il le faut, au Canada. Si vous me permettez d'y rester, et ailleurs si vous m'en empêchez.

M. Noble: Autrement dit, monsieur le président, je crois que le témoin déclare qu'il s'oppose à ce que l'on tue n'importe quel animal à fourrure au Canada.

M. Davies: Le témoin n'a jamais dit cela.

M. Noble: Vous avez dit que vous alliez combattre la chasse aux phoques. Quelle est la différence entre tuer un phoque et tuer un vison ou n'importe quel autre animal à fourrure?

M. Davies: Je fais ce que je pense pour les phoques parce que je ne peux pas combattre la cruauté partout et dans tous les domaines. Il me semble que je peux faire du bon travail dans ce domaine particulier.

[Text]

Mr. Noble: Mr. Chairman, if the SPCA is successful in destroying the sealing industry in Canada, does the witness not think it is obvious other countries will continue to take the seals outside our waters? This would mean that the seals we protect in our so-called sanctuary would be taken by other countries. Do you agree with this observation?

Mr. Davies: No, I do not agree with the observation.

Mr. Noble: Mr. Chairman, I said I would be brief but I will wait until the witness returns to finish my questioning.

Mr. McGrath: Mr. Chairman, on a point of order before we conclude. We all appreciate—

The Chairman: I still have—

Mr. McGrath: I do not care what you have, Mr. Chairman, I would like to raise a point of order if I may because it is a very important point.

The Chairman: On a point of order, yes.

Mr. McGrath: I think you will agree with me when you hear it. The witness just made a statement which is unfortunate, because he has said some things today which I think are unfortunate, he said that he has been subjected to abuse and vilification which to him was unbelievable. To me, sir, this is a reflection on the Committee, and certainly a reflection on the Chair in your conduct of this meeting, and I am sure that on reflection Mr. Davies would not want to have said that, and if he did say it I would submit to you that he is in contempt of the Committee. That is my point of order.

The Chairman: Thank you.

Mr. Noble: Mr. Chairman, one more question. Does the witness not think there is a humane way of killing seals?

Mr. Davies: I believe that it is impossible to make the seal hunt acceptable to civilized standards in this day and age.

Mr. Noble: Did you ever think of using cyanide on a swab? I noted, Mr. Chairman, that when these baby seals were approached they opened their mouths, and I think a cyanide swab will kill them almost instantly without any of the brutality that is used there.

[Interpretation]

M. Noble: Monsieur le président, si la SPA parvient à détruire l'industrie des phoques au Canada, le témoin ne pense-t-il pas que, de toute évidence, d'autres pays continueront à prendre des phoques en dehors de nos eaux territoriales? Cela voudrait dire que d'autres pays prendraient les phoques que nous protégeons. Êtes-vous d'accord avec cette observation?

M. Davies: Non, je ne suis pas d'accord avec cette observation.

M. Noble: Monsieur le président, j'ai dit que je serais bref, et j'attendrai que le témoin revienne pour poser mes autres questions.

M. McGrath: Monsieur le président, avant que nous ne terminions, j'invoque le Règlement. Nous nous rendons tous compte...

Le président: J'ai encore...

M. McGrath: Peu m'importe ce que vous avez, monsieur le président. J'aimerais invoquer le Règlement, si vous me le permettez, car j'estime que c'est une question très importante.

Le président: Si c'est un rappel au Règlement, d'accord.

M. McGrath: Je pense que vous serez d'accord avec moi lorsque vous entendrez ce que j'ai à dire. Le témoin vient de faire une déclaration qui est regrettable, étant donné qu'il a dit aujourd'hui certaines choses regrettables: il a dit qu'il avait été vilipendé et insulté, ce qui lui semblait incroyable. A mon avis, monsieur, c'est là une réflexion qui touche le Comité, et qui touche assurément la présidence et la façon dont vous avez mené cette séance. Je suis persuadé que s'il avait réfléchi, M. Davies n'aurait pas dit ces choses, et, s'il les a dites en effet, cela constitue, à mon avis, un outrage au Comité. Voilà mon rappel au Règlement.

Le président: Merci.

M. Noble: Monsieur le président, encore une question. Le témoin n'estime-t-il pas qu'il y ait une façon humaine de tuer les phoques?

M. Davies: A mon avis, il est impossible de rendre la chasse au phoque acceptable selon les normes de civilisation de notre époque.

M. Noble: Avez-vous ja mais songé à utiliser du cyanure sur un morceau de coton? J'ai remarqué, monsieur le président, que lorsque l'on s'approchait d'eux, les bébés phoques ouvraient la bouche, et je pense que l'application d'un morceau de coton imbibé de cyanure les tuerait presque sur le coup, sans la brutalité à laquelle on a recours actuellement.

[Texte]

The Chairman: Gentlemen, Mr. Bechard has been very patient, and I think he is the last person on the list who has indicated that he wishes to ask questions.

M. Béchard: Monsieur le président, je ne veux pas retarder le Comité, je n'en suis pas membre mais je serais prêt à attendre jusqu'à ce que M. Davies vienne dans quinze jours, de même que M. Deyglun, qui s'est senti malade aujourd'hui et qui n'a pu assister à cette réunion.

Cependant, si vous me le permettez, j'aurais quelques questions à poser à M. Davies. Monsieur Davies, je ne sais pas si on vous l'a demandé depuis le début de cette réunion, mais quelle est votre profession?

Mr. Davies: I have no trade, sir. I am a Humane Society worker.

M. Béchard: Vous viviez au Nouveau-Brunswick, si je comprends bien.

Mr. Davies: Yes, sir.

M. Béchard: Depuis combien de temps?

Mr. Davies: About ten years.

M. Béchard: Vous êtes citoyen canadien?

Mr. Davies: Yes, I am.

Le président: Monsieur Béchard, plusieurs de ces questions ont été posées.

M. Béchard: Elles l'ont été, je regrette, c'est la raison pour laquelle je lui ai demandé, si elles avaient été posées.

Monsieur Davies, votre but ultime et celui de votre association, mais particulièrement le vôtre, puisque nous n'entendons parler que de vous, lorsqu'on fait allusion à la Société protectrice des animaux, votre but ultime était-il de diminuer la cruauté de la chasse aux phoques ou bien de la faire cesser complètement?

Mr. Davies: To do away with the seal hunt in the Gulf of St. Lawrence, sir.

M. Béchard: Monsieur Davies, en réponse à une question posée par M. Hogarth ce soir, vous avez mentionné, peut-être pas dans ces termes-là, que vous étiez furieusement contre le *clubbing them to death*...

What do you mean by "clubbing them to death"?

Mr. Davies: I am against the seal hunt, sir.

M. Béchard: Alors, si en frappant ces petits phoques, on les frappe à mort, pourquoi

[Interprétation]

Le président: Messieurs, M. Béchard a été très patient, et je pense que son nom est le dernier sur la liste que j'ai des personnes qui ont demandé à poser des questions.

Mr. Béchard: Mr. Chairman, I do not want to hold the Committee up. I myself am not a member of the Committee, but I would be ready to wait until Mr. Davies returns here in two weeks time, along with Mr. Deyglun, who was not feeling very well today and was unable to attend the meeting.

However, there are a few questions I would like to ask Mr. Davies. Mr. Davies, I don't know whether you were asked this question since the beginning of this meeting, but what is your profession?

M. Davies: Je n'ai pas de profession, monsieur. Je travaille pour la Société humanitaire.

Mr. Béchard: You are living in New Brunswick, if I understand rightly.

M. Davies: Oui, monsieur.

Mr. Béchard: For how long?

M. Davies: Environ dix ans.

Mr. Béchard: Are you a Canadian citizen?

M. Davies: Oui.

The Chairman: Mr. Béchard, several of these questions have been asked.

Mr. Béchard: They have been—fine. I'm sorry. But that's the reason why I asked him whether they had already been put to him.

Mr. Davies, what are your objectives and that of your Association—but let's stick to your own objectives, since we intend to deal with you only—so, with regard to the Society for the Protection of Animals, is your final objective to decrease cruelty in seal hunting or to do away with it completely?

M. Davies: Pour supprimer la chasse aux phoques dans le golfe du Saint-Laurent, monsieur.

Mr. Béchard: Mr. Davies, in answer to a question that was asked of you by Mr. Hogarth this evening, you mentioned, perhaps not in the same words, that you were absolutely dead set against clubbing them to death... Que voulez-vous dire par «les assommer à coups de gourdin jusqu'à ce qu'ils meurent»?

M. Davies: Je suis contre la chasse aux phoques, monsieur.

Mr. Béchard: So, if by clubbing these little seals, you club them to death, why do you

[Text]

dites-vous qu'ils sont vivants lorsqu'on leur enlève la peau puisqu'ils sont morts? C'est peut-être très subtile, mais c'est vous-même qui l'avez dit.

Mr. Davies: No, sir, I would not say it is a subtle question. I would say that the evidence of the veterinary pathologists indicates that they can find no evidence that these animals are dead before they skin them. I should say in fairness to everyone concerned that there has been a very great improvement in that particular area.

M. Béchard: Vous admettez qu'il y a eu beaucoup d'amélioration.

Maintenant, cet après-midi, j'ai eu l'occasion de voir le film en couleurs qui était, je crois, le vôtre. On nous avertissait au tout début du film, que tous les participants de ce film n'ont reçu aucun paiement. Est-ce à dire, que pour d'autres films sur la chasse aux phoques, quelqu'un aurait pu recevoir quoi que ce soit pour prendre part au tournage de tels films?

Mr. Davies: It means precisely what it says; no more and no less, sir.

Mr. Béchard: No more and no less. But what exactly does that mean?

Mr. Davies: It means that we paid no hunter to do anything.

Mr. Béchard: Why did you take the precaution to mention that just at the beginning of that film, because there was another film before that.

Mr. Davies: We felt it was important to say that.

Mr. Béchard: Yes, due to the other films. Now, why when you are before us in the Committee do you call those people fishermen and in the film you call them killers?

Mr. Davies: I will call them killers here, if you wish.

Mr. Béchard: Yes, but that is not what you called them tonight, and I know people in my riding who are fishermen but they are not killers, like you want them to be understood in that film.

Mr. Davies: I will call them killers from now on, then.

Mr. Béchard: Yes.

Vous êtes conscient, monsieur Davies, du tort considérable que vous avez fait à l'économie des provinces Maritimes, en particulier, de Terre-Neuve, d'une partie du Nouveau-Brunswick et spécialement des Îles-de-la-

[Interpretation]

say that they are alive when they are skinned, since they are dead? It may be a rather subtle question, but it is you who said it.

M. Davies: Non, monsieur, je ne dirais pas que c'est une question subtile. Je dirais que les témoignages des pathologistes vétérinaires montrent qu'ils ne peuvent pas prouver que ces animaux sont morts avant qu'on ne les écorche. Pour être juste à l'égard de tous les intéressés, je dois dire qu'il y a eu beaucoup d'amélioration dans ce domaine particulier.

Mr. Béchard: You admit that there has been a great deal of improvement . . .

Now, this afternoon I saw the coloured film which was yours, I think. At the very beginning of the film, we were told that all those who took part in this film received no remuneration. Does that mean that in other films on seal hunting somebody may have received something for taking part in making such a film?

M. Davies: Cela veut dire exactement ce que cela dit, ni plus ni moins, monsieur.

M. Béchard: Ni plus ni moins. Mais qu'est-ce que cela veut dire exactement?

M. Davies: Cela veut dire que nous n'avons pas payé de chasseur pour faire quoi que ce soit.

M. Béchard: Pourquoi avez-vous pris la précaution de mentionner cela juste au début de ce film, alors qu'il y avait déjà eu un autre film auparavant?

M. Davies: Nous avons estimé qu'il était important de donner cette précision.

M. Béchard: Oui, à cause des autres films. Pourquoi appelez-vous ces gens des pêcheurs devant le Comité, et les appelez-vous des tueurs dans le film?

M. Davies: Je peux les appeler tueurs ici, si vous le voulez.

M. Béchard: Oui, mais ce n'est pas ce que vous les avez appelés ce soir. Je connais des gens dans ma circonscription qui sont pêcheurs, mais ce ne sont pas des tueurs, comme vous essayez de le faire croire dans ce film.

M. Davies: Désormais, je les appellerai tueurs, dans ce cas.

M. Béchard: Oui.

Do you realize, Mr. Davies, the considerable harm that you have done to the economy of the Maritime Provinces, particularly, of Newfoundland, part of New Brunswick, and especially the Magdalen Islands? Do you rea-

[Texte]

Madeline; vous êtes conscient du tort que vous avez causé à l'économie de cette région par cette publicité outrancière et exagérée.

Mr. Davies: I would hope, sir, that the Canadian government will recognize that the seal hunt is repugnant to many Canadians and many Europeans and many Americans...

Mr. Bécharde: That is not my question. That is not an answer to my question. I asked you if you were conscious of the damage you have caused to the economy of that part of the country. Are you?

Mr. Davies: I will go on and say that it is my honest belief that the Canadian government will replace the seal hunt with something we feel of more benefit to the men involved.

The Chairman: Have you got an answer to your question?

Mr. Bécharde: That is not an answer to my question. Are you conscious of the damages you have caused to the economy of that part of the country and to the country as a whole?

Mr. Davies: There is no question but that...

Mr. Bécharde: There is no question, that is what I wanted to know.

Mr. Davies: ...some damage has been caused to the economy.

Mr. Bécharde: What is your suggestion to replace that for the benefit of those Magdalen Islanders, those Newfoundlanders, those New Brunswickers and all those people who receive supplementary income at this time of the year? What is your suggestion?

Mr. Davies: Well, I feel it would be presumptuous of me to make specific suggestions to this Committee. Clearly it is a situation that will have to be gone into in great depth by economists but, sir, it is a dollars and cents issue. We presently pay men dollars and cents to kill seals. We could pay them dollars and cents to do something else. It is not an "either or" situation, either they hunt seals or they do not get money. They can be provided money at this time of the year doing something else and I suggest, sir, that the fruits of their labour might be more beneficial to the country if directed in another area.

Mr. Bécharde: Which one?

Mr. Davies: Again, sir, I would have to admit that this requires research by compe-

[Interprétation]

lize the harm you have done to the economy of this area because of the excessive and exaggerated publicity that you have carried out?

M. Davies: J'espère, monsieur, que le gouvernement canadien reconnaîtra que la chasse aux phoques est répugnante pour de nombreux Canadiens, de nombreux Américains, de nombreux Européens...

M. Bécharde: Ce n'est pas ce que je vous demande. Vous ne répondez pas à ma question. Je vous ai demandé si vous étiez conscient du tort que vous avez causé à l'économie de cette partie du pays. En êtes-vous conscient?

M. Davies: Je continue à soutenir que je crois sincèrement que le gouvernement du Canada va remplacer la chasse aux phoques par quelque chose qui, à notre avis, profitera davantage aux intéressés.

Le président: Cela répond-il à votre question?

M. Bécharde: Cela ne répond pas à ma question. Êtes-vous conscient des dommages que vous avez causés à l'économie de cette partie du pays et du pays tout entier?

M. Davies: Il ne fait aucun doute que...

M. Bécharde: Cela ne fait aucun doute. C'est ce que je voulais savoir.

M. Davies: ...cela a causé du tort à l'économie.

M. Bécharde: Que proposez-vous pour remplacer cela, pour les gens des Îles-de-la-Madeleine, de Terre-Neuve, du Nouveau-Brunswick, et pour tous les gens qui complètent leurs revenus à cette époque de l'année? Qu'avez-vous à proposer?

M. Davies: Il serait présomptueux de ma part de faire des propositions précises au Comité. Il est clair que cette situation devra être examinée en profondeur par des économistes. Mais, monsieur, c'est une question de dollars et de cents. Actuellement, nous payons des dollars et des cents à ces gens pour qu'ils tuent des phoques. Nous pourrions les payer pour faire autre chose. Il ne s'agit pas d'une alternative—ou ils chassent, ou ils n'obtiennent pas d'argent. Ils peuvent obtenir de l'argent à cette époque de l'année en faisant autre chose, et je dirais, monsieur, que le fruit de leur travail pourrait bénéficier davantage au pays s'ils faisaient autre chose.

M. Bécharde: Quoi?

M. Davies: Une fois encore, monsieur, je dois reconnaître que cela exige des recherches

[Text]

tent economists, but I am not prepared to believe it is beyond the wit of the Canadian government to find an alternative.

Mr. Béchard: It is beyond yours, anyway.

Mr. Davies: I will admit that it is, sir.

• 2220

Mr. Lundrigan: May I ask a supplementary? Certainly the witness must have some idea of procedures by which, if the inhumane methods against the seals were eliminated, thereby the seal fishery itself, that the inhumanity to man will be overcome in some way. He must have thought of the inhumanity to man which might be a concomitant to the ending of the seal fishery. Certainly this is a concern. I am thinking more of the brutalization of man after the seal fishery ends and the concomitant social welfare that the questioner is now referring to. Certainly you have given this thought. You are not humane to seals and inhumane to man. This is not what you are saying. I am sure you must be giving the wrong impression.

Mr. Davies: I think I answered your question already, sir, when I said that it is a question of providing these men with alternatives, and clearly it is a question of very detailed research by economists to find out what those alternatives are.

M. Béchard: Vous n'êtes pas un chasseur, vous nous l'avez dit, vous n'êtes pas un pêcheur, vous nous l'avez dit. Mangez-vous de la viande et du poisson?

Mr. Davies: Sir, my dietary habits have no concern to this Committee.

M. Béchard: Non, vous devez avoir des hauts-le-cœur lorsque vous mangez de la viande et du poisson en pensant à la cruauté que subissent les pauvres animaux lorsqu'on les tue. Vous n'avez pas de hauts-le-cœur? Parce que vous semblez très sensible, monsieur Davies.

No answer.

The Chairman: Gentlemen, I think that this would be a good time to adjourn.

Mr. Hogarh: Mr. Chairman, I understand that the *in camera* matter concerns the resolution pertaining to the Secretary of State for External Affairs and the word "failed" in that resolution is offensive.

[Interpretation]

par des économistes compétents, mais je me refuse à croire que cela dépasse l'intelligence du gouvernement canadien de trouver une autre solution.

M. Béchard: Cela dépasse la vôtre, en tout cas.

M. Davies: Je l'admets, monsieur.

M. Lundrigan: Puis-je poser une question supplémentaire? Le témoin a certainement une idée des moyens par lesquels, si l'on éliminait les méthodes inhumaines employées envers les phoques, et, du même coup, la chasse aux phoques elle-même, on pourrait surmonter le manque d'humanité que cela représenterait vis-à-vis des hommes. Il a bien dû se rendre compte du manque d'humanité vis-à-vis des hommes qui pourrait accompagner la suppression de la chasse aux phoques. Il faut assurément se soucier de cette question. Je pense beaucoup plus à la brutalité que devra subir l'homme une fois que l'on aura supprimé la chasse et aux phoques, et au bien-être social dont parle la personne qui vous a posé cette question. Vous avez certainement songé à cela. Vous ne pouvez être humain envers les phoques et inhumains envers les hommes. Ce n'est pas ce que vous voulez dire. Je suis certain que vous donnez une impression fausse.

M. Davies: Je pense avoir déjà répondu à votre question, monsieur, lorsque j'ai dit qu'il s'agissait de fournir à ces hommes d'autres possibilités. Et il est clair que c'est aux économistes à faire des recherches très détaillées pour découvrir ces autres possibilités.

Mr. Béchard: You told us that you are neither a hunter nor a fisherman. Do you eat meat and fish?

M. Davies: Monsieur, mon régime alimentaire ne regarde pas le Comité.

Mr. Béchard: No. You must be sick to your stomach when you eat fish and meat when you think of the cruelty that these animals undergo when they are being killed. Aren't you sick to your stomach? Because, you seem to be a very sensitive person, Mr. Davies.

Pas de réponse.

Le président: Messieurs, je pense que ce serait le moment de lever la séance.

M. Hogarh: Monsieur le président, je crois comprendre que la question de la séance à huis clos a trait à la résolution concernant le secrétaire d'État aux Affaires extérieures, et l'expression «n'a pas réussi» employée dans cette résolution est insultante.

[Texte]

An hon. Member: I would not say it was offensive.

Mr. Hogarth: I see no need to deal with this *in camera*.

The Chairman: I think we should deal with this *in camera*.

Mr. Crouse: Mr. Chairman, just before we adjourn there was one question I had put earlier which dealt with the very first film that was shown to us. I asked what amount of money the CBC paid for this film and to whom? That dealt with the 1964 film made by the Artek film company in Montreal. I repeat, I would like this information made available to the Committee.

Mr. McGrath: Will you excuse the witness?

The Chairman: Yes. Thank you for appearing today.

Mr. Davies: Thank you, gentlemen.

The Chairman: We will adjourn.

[Interprétation]

Une voix: Je ne trouve pas.

M. Hogarth: Je ne vois pas la nécessité qu'il y a à nous réunir à huis clos pour traiter de cette question.

Le président: Si, j'estime que nous devrions nous réunir à huis clos.

M. Crouse: Monsieur le président, avant que nous ne levions la séance, j'avais posé tout à l'heure une question relative au tout premier film qu'on nous a présenté. J'avais demandé combien Radio-Canada avait payé pour ce film, et à qui. Il s'agissait du film réalisé en 1964 par la société cinématographique Artek à Montréal. Je le répète, j'aimerais que l'on fournisse ce renseignement au Comité.

M. McGrath: Pourriez-vous excuser le témoin?

Le président: Oui. Merci pour avoir comparu ici aujourd'hui.

M. Davies: Merci, messieurs.

Le président: La séance est levée.

MINUTES OF PROCEEDINGS

MONDAY, April 21, 1969.
(20)

The Standing Committee on Fisheries and Forestry met this day at 9:30 a.m. in Vancouver. The Chairman, Mr. Crossman presiding.

Members present: Messrs. Beaudoin, Borrie, Comeau, Crossman, Crouse, Cyr, Goode, Hogarth, Howard (*Skeena*), Lundrigan, McBride, McQuaid, Noble, Perrault, Rose, Smith (*Northumberland-Miramichi*), St-Pierre, Turner (*London East*), Whelan—(19).

Witnesses: From the *Fishing Vessel Owners' Association of British Columbia*: Mr. Frank Bubl , Secretary (Salmon Section); Mr. T. Cameron, Secretary; From the *Fraser River Locals, United Fishermen and Allied Workers' Union*: Mr. Homer Stevens, Secretary-Treasurer and Mr. T. Buck Suzuki.

The witnesses presented summaries of their briefs and were questioned thereon.

It was agreed that briefs presented be printed as appendices to today's Minutes of Proceedings and Evidence as follows:

Fishing Vessel Owners' Association
(Salmon Section) as APPENDIX E

Fishing Vessel Owners' Association as
APPENDIX E(1)

Fraser River Locals, United Fishermen and Allied Workers' Union as
APPENDIX F.

Agreed—That a limit of 5 minutes be allowed members for questioning of witnesses.

At 12:45 p.m. the Committee adjourned to 2:30 p.m. this day.

[Traduction]

PROC S-VERBAUX

Le LUNDI 21 avril 1969.
(20)

Le Comit  permanent des p ches et for ts se r unit ce matin   9 h. 30,   Vancouver, sous la pr sidence de M. Crossman.

Pr sents: MM. Beaudoin, Borrie, Comeau, Crossman, Crouse, Cyr, Goode, Hogarth, Howard (*Skeena*), Lundrigan, McBride, McQuaid, Noble, Perrault, Rose, Smith (*Northumberland-Miramichi*), St-Pierre, Turner (*London East*), Whelan—(19).

T moins: De la *Fishing Vessel Owners' Association of British Columbia*: M. Frank Bubl , secr taire (Section du saumon), et M. T. Cameron, secr taire; des sections de *Fraser River de la United Fishermen and Allied Workers' Union*: M. Homer Stevens, secr taire-tr sorier, et M. T. Buck Suzuki.

Les t moins pr sentent des r sum s de leurs m moires et r pondent   des questions   ce sujet.

Il est d cid  que les m moires pr sent s soient imprim s en appendice aux Proc s-verbaux et T moignages de ce jour dans l'ordre suivant:

Fishing Vessel Owners' Association
(Section du saumon) comme APPENDICE E

Fishing Vessel Owners' Association
comme APPENDICE E (1)

Sections de *Fraser River de la United Fishmen and Allied Workers' Union*
comme APPENDICE F.

Il est d cid —Que chaque membre du Comit  ait droit   cinq minutes pour interroger les t moins.

A midi 45, le Comit  l ve la s ance pour se r unir de nouveau cet apr s-midi   2 h. 30.

AFTERNOON MEETING

(21)

The Committee resumed at 2:30 p.m., the Chairman Mr. Crossman presiding.

Members present: Same as at morning meeting.

Witnesses: From *Gulf and Fraser Fishermen's Credit Union*: Messrs. L. C. Hoelthe, Secretary-Treasurer, Philipson MacDonald; From the *Fraser River District Council, United Fishermen and Allied Workers' Union*: Messrs. Erik Arkko, Secretary, Harry Tangedal, Delegate, and Harold Wilcox, General Organizer, *United Fishermen and Allied Workers' Union*, From *Balloon Transport Limited*: Mr. C. R. Matheson, President, From *Fraser Valley Indians*: Mr. Benjamin Paul; and Chief Albert Douglas.

The witnesses presented summaries of their briefs and were questioned thereon.

The briefs presented this day were ordered to be printed as appendices to today's Minutes of Proceedings and Evidence as follows:

Gulf and Fraser Fishermens' Credit Union as APPENDIX G

Fraser River District Council, United Fishermen and Allied Workers' Union as APPENDIX H

Balloon Transport Limited as APPENDIX I

Note: The Fraser Valley Indians' brief was read into this day's Evidence.

At 4:35 p.m. the Vice-President, Mr. Tom Goode assumed the Chair.

The Vice-Chairman announced the appearance of the Honourable Ron Basford, Minister of Consumer and Corporate Affairs in the audience.

At 6:30 p.m. questioning being completed the Committee adjourned to 9:30 a.m., Tuesday, April 22, 1969.

SÉANCE DE L'APRÈS-MIDI

(21)

Le Comité se réunit de nouveau cet après-midi à 2 h. 30, sous la présidence de M. Crossman.

Présents: Les mêmes députés qu'à la séance du matin.

Témoins: De la *Gulf and Fraser Fishermen's Credit Union*: MM. L. C. Holthe, secrétaire-trésorier, C. G. Philipson, et E. MacDonald; de la *Fraser River District Council, United Fishermen and Allied Workers' Union*: MM. Erik Arkko, secrétaire, Harry Tangedal, délégué, et Harold Wilcox, organisateur général de la *United Fishermen and Allied Workers' Union*; de la *Balloon Transport Limited*: M. C. R. Matheson, président; des *Indiens de la vallée du Fraser*: M. Benjamin Paul et le chef Albert Douglas.

Les témoins présentent des résumés de leurs mémoires et répondent à des questions à ce sujet.

Il est ordonné que les mémoires présentés aujourd'hui soient imprimés en appendice aux procès-verbaux et témoignages de ce jour dans l'ordre suivant:

Gulf and Fraser Fishermen's Credit Union comme APPENDICE G

Fraser River District Council, United Fishermen and Allied Workers' Union comme APPENDICE H

Balloon Transport Limited comme APPENDICE I

Remarque: Le mémoire des Indiens de la vallée du Fraser est lu et porté au compte rendu des témoignages de ce jour.

A 4 h. 35, le vice-président, M. Tom Goode, prend place au fauteuil présidentiel.

Le vice-président annonce l'arrivée dans l'assistance de l'honorable Ron Basford, ministre de la Consommation et des Corporations.

A 6 h. 30 de l'après-midi, l'interrogatoire étant terminé, le Comité s'ajourne jusqu'au mardi 22 avril 1969, à 9 h. 30 du matin.

Le secrétaire du Comité,
J. H. Bennett,
Clerk of the Committee.

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Monday, April 21, 1969.

The Chairman: Gentlemen, I see a quorum. The meeting will come to order. I will call on Mr. Frank Bublé, who represents the Fishing Vessel Owners Association of British Columbia, to give a summary of the main points of their brief so that the members will have more time to question the representatives. I invite Mr. Bublé to come forward.

Mr. Frank Bublé (Secretary, Salmon Section, Fishing Vessel Owners' Association of British Columbia): Mr. Chairman, members of the Committee, ladies and gentlemen, this is the brief of the salmon section of our Association.

In the first part of our brief a general description of our Association and its problems has been given and although our members participate in the various fisheries mentioned, 95 per cent touch salmon fishing at some time or other. There has been a commercial salmon fishery on this coast since 1829 when the Hudson's Bay Company purchased salmon from the Indians on the Fraser River. It is an old industry and because of this the problems are many and varied.

For instance, attempts were made in the early 1900s to "box in" the seine fleet to allow the then slower gillnet boats a fairer share of the catch and this was successful and today there is a situation where the seine fleet is still in this box when the need to protect the gillnetter no longer exists. The gillnet boats of today are no longer sailboats that need to be towed around to different fishing positions and areas but high-speed vessels which can fish out their own exclusive areas and then enter any others. As it stands there are 30 areas or divisions in British Columbia waters open to commercial salmon fishing. Of these seven are completely open to seine boats and four only partially. There is no valid reason for this discrimination except that antiquated laws are still in force.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le lundi 21 avril 1969

Le président: Messieurs, nous avons le quorum. A l'ordre, s'il vous plaît. Je demanderais à M. Frank Bublé, le représentant de l'Association des propriétaires de vaisseaux de pêche de la Colombie-Britannique de nous résumer les principaux points du mémoire afin que les membres du Comité aient davantage de temps, par la suite, pour poser des questions. Je demanderais à M. Bublé de s'avancer.

M. Frank Bublé (secrétaire, division du saumon, Association des propriétaires de vaisseaux de pêche de la Colombie-Britannique): Monsieur le président, messieurs les membres du Comité, mesdames et messieurs. Ce mémoire est celui de la division du saumon de notre Association.

La première partie de notre mémoire contient une description générale de notre Association et de ses problèmes. Bien que nos membres s'adonnent aux diverses sortes de pêche qui y sont mentionnées, 95 p. 100 font la pêche au saumon à un moment ou à un autre. La pêche commerciale du saumon existe sur cette côte depuis 1829 alors que la Compagnie de la Baie d'Hudson achetait du saumon des Indiens du fleuve Fraser. Il s'agit d'une ancienne industrie; pour cette raison, les problèmes sont nombreux et variés.

Ainsi, on a tenté au début du siècle de délimiter le territoire dans lequel pourraient travailler les pêcheurs à la seine afin de permettre à ceux qui utilisaient des filets mailants à bord d'embarcations plus lentes d'obtenir une part équitable de la prise. La tentative a réussi et aujourd'hui encore les pêcheurs à la seine demeurent limités même s'il n'est plus nécessaire de protéger les propriétaires des autres embarcations. Aujourd'hui, ces embarcations ne sont plus des voiliers qui doivent être toués d'un endroit à un autre, mais des vaisseaux rapides qui peuvent se diriger d'eux-mêmes dans des secteurs exclusifs et se diriger ensuite dans tout autre secteur désiré. Il y a 30 secteurs différents dans les eaux de la Colombie-Britannique ouverts à la pêche commerciale du saumon. De ce nombre sept sont complètement accessibles aux pêcheurs à la seine tandis que quatre autres le sont partiellement. Aucune rai-

[Text]

This has been problem enough but after the gillnets came the trollers. They can fish all 30 areas, and where seine boats and gillnets are restricted to weekdays (only two or three days at that) trollers can fish weekends as well. The International Pacific Salmon Fisheries Commission is finally showing concern that this state of affairs "will upset the management of the fisheries". We seinemen have been concerned for years and resentful that we have been forced to conserve ourselves to death in some years while trolling still went on.

In an average year trollers fish 90-100 days, gillnets 60-70 days, seines 35-45 days. We lost out in areas, days and on another front—in the species, as the areas that are set aside for them contain the higher quality fish which commands three times the price.

In 1968 the seines were allowed into one quarter of an area which was an exclusive gillnet troll preserve. It is to be hoped that this will be the beginning of a better equalization of areas and species. It is long overdue. Our local fisheries department well recognize these grievances as we have stated them time and time again.

We also feel that a greater effort should be made to build up fish stocks primarily in the central areas where there are over 160 streams. A big problem is the lack of flood control. In some streams spawners are washed out before completion of spawning and spawning grounds are severely scoured and eggs are destroyed in large numbers. Most of the effort is being expended in areas we are forbidden to fish in. But in any case fish stocks must be increased. No other natural resource replenishes itself year after year as this one does, but the size of the existing fleet exerts quite a strain.

Our present Minister of Fisheries has introduced a new boat-licencing scheme which we hope will eventually trim the size of the fleet as there are too many fingers in the fishing pie. A particular unwelcome finger is the sport-fishing derbies. Over the protest of all commercial fishermen an area was closed to the commercial fishery and opened to sports

[Interpretation]

son valide ne justifie une telle discrimination si ce n'est l'existence de lois désuètes.

Ce problème était suffisant, mais un autre survint: l'arrivée des chalutiers. Ils peuvent aller dans tous les secteurs et tandis que les deux premières catégories de pêcheurs ne peuvent pêcher que la semaine (et durant deux ou trois jours seulement) les propriétaires de chalutiers peuvent pêcher, eux, même durant les fins de semaine. La Commission internationale des pêches de saumon du Pacifique craint que cette situation n'indispose la direction des pêcheries. Nous, pêcheurs à la seine, nous inquiétons depuis des années et sommes irrités de ce que nous n'avons pu que vivre, certaines années, alors qu'il était permis aux chalutiers de poursuivre la pêche.

En moyenne, durant une année, les chalutiers peuvent pêcher de 90 à 100 jours, ceux qui utilisent les filets maillants de 60 à 70 jours et les pêcheurs à la seine de 35 à 45 jours. Nous y perdons dans les secteurs, dans le nombre de jours et aussi dans un autre domaine: les secteurs qui sont réservés aux autres pêcheurs contiennent des poissons de plus haute qualité pour lesquels ils peuvent obtenir trois fois plus d'argent.

En 1968, les pêcheurs à la seine ont été admis dans le quart d'un secteur qui était, jusque-là, réservé exclusivement aux chalutiers qui utilisent les filets maillants. Il est à souhaiter que ce n'est que le début d'une meilleure répartition des secteurs et des espèces de poissons. Ceci aurait dû se faire il y a longtemps déjà. Tous les responsables des pêches, ici, connaissent ces griefs que nous avons répétés maintes et maintes fois.

Nous croyons également que de plus grands efforts devraient être tentés pour augmenter les réserves de poissons principalement dans les régions centrales où il y a 160 cours d'eau. L'un des principaux problèmes, c'est celui du contrôle des crûes. En certains endroits, les poissons sont éliminés avant d'avoir frayé, les terrains où ils se réfugient endommagés et les œufs détruits en grand nombre. Les plus grands efforts sont tentés dans les secteurs où nous ne pouvons pêcher. Quoiqu'il en soit, le nombre des poissons doit y être augmenté. Aucune autre ressource naturelle ne se remplace d'elle-même d'année en année, comme celle-ci, mais en raison de son importance, la flotte actuelle exerce de grands ravages.

L'actuel ministre des Pêches a décidé d'une nouvelle méthode de distribution de permis pour les vaisseaux de pêche. Nous espérons que cette méthode permettra de diminuer le nombre des bateaux puisque leur nombre est présentement trop élevé. De plus, ce que nous voyons d'un mauvais œil, ce sont ces concours de pêche sportive. Malgré les protestations de

[Texte]

fishing and has since been turned into another commercial fishery via sport-fishing derbies. Even the British Columbia Wildlife Federation protested over the misuse of this area. When commercial fishermen and bona fide sportsmen agree, there is a strong case for ending these so-called sports derbies.

The genuine sports-fisherman also will not use a jigtype lure called the buzz-bomb, which is most effective in catching ready-to-spawn chum salmon. It is hoped the Department of Fisheries will ban these.

Now that our Minister of Fisheries is also in charge of forestry, perhaps he can arrange a better liaison between the two than there has been in the past in the matter of pollution from log drives, as some of the results of the log drives have been erosion of banks and rerouting of spawning channels—what you would expect from a bulldozer which has run amuck. And the aftermath is the bark that stays behind releasing toxins that poison the water so that fish cannot survive (in some places for years to come).

Also, an ever-increasing worry is that our B.C. waters could be contaminated by oil or chemicals discharged from oil wells or tankers. With the building of our new superport at the mouth of the Fraser (one of our main Salmon rivers) it is a danger to be reckoned with and one which must be recognized before an accident occurs. A situation must not arise where proper precautions are not taken because the different levels and departments of government disagree over jurisdiction.

The importance of the salmon fishing can perhaps best be summed up by saying that salmon produces 80 per cent of the value of the total fish production of B.C. and British Columbia, in turn, produces over 40 per cent in value of Canadian total fish products. And Canada is the world's second largest fish exporter (behind Japan) in terms of value. But most important of all, thousands of British Columbians take pride in the fact that they are part of an old and honoured way of life in this country.

PURSE SEINING Four to eight men on each boat. These boats let their net go around

[Interprétation]

tous les pêcheurs commerciaux un secteur leur a été interdit et mis à la disposition des sportifs. Il s'agit, en définitive, d'une nouvelle pêche commerciale en raison de l'organisation de ces concours de pêche sportive. La *British Columbia Wildlife Federation* s'est, elle aussi, élevée contre l'usage que l'on faisait de ce secteur. Lorsque les pêcheurs commerciaux et les vrais sportifs sont d'accord, il nous semble évident qu'il est temps de mettre un terme à ces présumés concours.

Le vrai pêcheur-sportif n'utilisera pas le leurre baptisé *buzz-bomb* et qui est des plus efficaces pour capturer le saumon-chien qui est sur le point de frayer. Nous espérons que le ministère des Pêches interdira l'usage de ce leurre.

Puisque le ministre des Pêches est également, maintenant, responsable des Forêts, il pourra peut-être assurer une meilleure collaboration entre les deux que par le passé, dans le domaine de la pollution des eaux. Cette pollution est causée par les billes de bois qui flottent sur les cours d'eau. Elle entraîne l'érosion des berges et le déplacement des endroits où frayaient les poissons. Il en résulte que l'écorce de ces billes se détache, demeure sur les lieux, dégage des éléments toxiques qui empoisonnent l'eau de sorte que les poissons ne peuvent survivre (et, dans certains endroits, ceci peut durer des années).

De plus, nous craignons que les eaux de la Colombie-Britannique ne soient contaminées par l'huile ou des produits chimiques qui pourraient s'échapper de puits d'huile ou de pétroliers. La construction d'un super-port à l'embouchure du Fraser (l'un des principaux endroits pour la pêche au saumon) rend ce danger plus imminent, danger qu'il faut reconnaître avant que ne se produise un accident. Il ne faudrait pas que les précautions nécessaires ne soient pas prises parce que les différents niveaux de l'administration et les divers ministères ne peuvent s'entendre sur qui détient la compétence en ce domaine.

L'importance de la pêche au saumon pourrait être le mieux démontrée si l'on tient compte du fait que le saumon représente 80 p. 100 de la valeur totale du poisson pêché en Colombie-Britannique. D'autre part, la Colombie-Britannique produit 40 p. 100 de tout le poisson pêché au Canada. Le Canada, lui, est le deuxième exportateur de poisson au monde, après le Japon, compte tenu de la valeur. Mais ce qui importe davantage c'est que des milliers d'habitants de la Colombie-Britannique sont fiers de tirer leur subsistance d'un vieux métier respecté en ce pays.

SENNE À POCHE De quatre à huit hommes dans chaque bateau. Ils laissent le filet

[Text]

a school of fish and pull in a line—it says in the brief to “lose” but it is supposed to be to “close”, because if we lose the bottom of the purse the fish go right out and the next boat gets them—to close the bottom of the purse.

GILLNETTING One man operation—laying out their net across a watercourse. The mesh admits the head of the fish, catching the gills when the fish try to get out.

TROLLING One and two operation—Hook and line fishing with six lines or more strung out from long booms designed to prevent the lines from tangling up with each other.

Thank you very much.

The Chairman: Thank you, Mr. Bublé. I recognize Mr. Rose.

Mr. Rose: Mr. Bublé, you have given us a summary of the brief. I had a difficult time finding the summary in your brief, which caused me a bit of confusion, but I will not take very long in my initial questioning because I understand we are to limit ourselves slightly on the initial round. Is this not correct, Mr. Chairman.

The Chairman: Yes. I think we should adhere to a 10-minute period for each questioner on the initial round, without supplementaries.

Mr. Rose: I have two or three questions I would like to ask you.

Is the theme of your presentation that the various government regulations, whether they be in respect of areas, number of days, the region in which you are allowed to fish, the mobility of your type vessel as opposed to the gillnetter, insurance and so on seem to favour the gillnetter?

Mr. Bublé: Yes.

Mr. Rose: Would you like to elaborate on that a bit?

Mr. Bublé: Well out of the 30 areas the seiners are allowed to fish in seven fully. What usually happens is that the sockeye are the first fish to come in and that is the area we are not allowed to fish in. When the run of sockeye are finished these gillnetters and trollers too because trollers can fish during the week end, come in. In fact 535, if my

[Interpretation]

encercler un banc de poisson puis tirent (le mémoire dit «pour perdre» alors qu'il aurait fallu dire «pour refermer», car si nous perdons le fond de la poche le poisson en ressortira et c'est l'équipage du bateau suivant qui le capturera) afin de refermer le fond de la poche.

PÊCHE AU FILET MAILLANT Le travail est effectué par un seul homme qui étend son filet en travers d'un cours d'eau. Les mailles du filet permettent le passage de la tête du poisson dont les ouies demeurent captives lorsqu'il tente d'en ressortir.

PÊCHE À LA TRAINE Pêche à la ligne qui se fait à un ou deux hommes. Six lignes ou plus sont retenues par de longues perches, ces dernières étant utilisées pour empêcher les filets de s'emmêler les uns dans les autres.

Merci beaucoup.

Le président: Merci, M. Bublé, M. Rose.

M. Rose: Vous nous avez donné un résumé du mémoire, M. Bublé, mais j'ai eu de la difficulté à le retracer dans le mémoire, ce qui m'a causé quelque ennui. Je serai bref dans mes premières questions, car je crois comprendre que le temps alloué à chacun est limité, n'est-ce pas monsieur le président?

Le président: Oui. Je crois que chacun devrait se limiter à 10 minutes au cours de la première ronde et que les questions supplémentaires ne devraient pas être permises.

M. Rose: Il y a deux ou trois questions que j'aimerais vous poser.

Le thème de votre exposé reste-t-il sur les différents règlements du gouvernement qu'ils se rapportent aux régions, au nombre de jours, à la région où la pêche est permise, la mobilité de vos embarcations par rapport au pêcheur au filet maillant, à l'assurance et aux autres facteurs qui semblent favoriser le pêcheur au filet maillant?

M. Bublé: Oui.

M. Rose: Aimerez-vous préciser un peu cette question?

M. Bublé: Sur les 30 districts, les seigneurs ont toute liberté de pêcher dans sept districts. Généralement, le saumon sockeye est le premier poisson qui mord et c'est le district où nous ne pouvons pas pêcher. Quand la remonte du saumon sockeye est terminée, les pêcheurs au filet maillant et les pêcheurs à la ligne traînante aussi reviennent, parce que

[Texte]

memory is correct, gill boats change over to trolling on the week ends.

Mr. Rose: They have adaptability. Are you suggesting that this is by design and that you are being discriminated against because you are a seiner or represent the seiners?

Mr. Bublé: It is not because we are seiners, it is just because of the loss. We could do that too, you see. We could change over to trolling on the weekend and catch these sockeye or pinks, but that is not conservation.

Mr. Rose: The Fishermen's Union has suggested that they would prefer to have the licences applied to men rather than vessels. Does not the present licence limitations tend to favour your type vessel?

Mr. Bublé: Not under the Union plan.

Mr. Rose: Now just a moment. We are not talking about the Union plan, we are talking about the present licence limitations as proposed by the government.

Mr. Bublé: Oh, the present licence limitations by the government?

Mr. Rose: Yes. Does that not favour your type vessel?

Mr. Bublé: Well I think it is fair to all vessels, whether it be a one man gill-netter or a four to eight man seiner.

Mr. Rose: For instance, do you not have a greater possibility of reaching the limitation per year by maintaining yourselves as a Class A vessel than a gill-netter?

Mr. Bublé: No, I would not say that.

Mr. Rose: You have a larger vessel, you are more efficient—you said so in your brief.

Mr. Bublé: Yes, but the law restricts us to only a certain part of a few areas.

Mr. Rose: You are suggesting then that it tends to equalize the opportunities?

Mr. Bublé: Well we catch fish that are only worth one-third the price caught by other gear. How can we begin to compete?

[Interprétation]

ces derniers peuvent pêcher durant la fin de semaine. En réalité, si ma mémoire est exacte, 535 embarcations de pêche au filet maillant se transforment en fin de semaine pour la pêche à la cuiller.

M. Rose: Ils s'adaptent. Est-ce que vous insinuez que c'est délibéré et que vous faites l'objet d'une discrimination parce que vous êtes seigneur ou parce que vous les représentez?

M. Bublé: Ce n'est pas parce que nous sommes seigneurs, mais à cause de la perte. Nous pourrions aussi le faire. Nous pourrions faire la pêche à la ligne traînante en fin de semaine et prendre ces saumons *sockeye* ou des saumons roses, mais ce n'est pas de la conservation.

M. Rose: Le syndicat des pêcheurs aimerait mieux avoir des permis délivrés aux hommes plutôt qu'aux bâtiments de pêche. Le présent permis ne favoriserait-il pas votre genre d'embarcations?

M. Bublé: Pas d'après le Syndicat.

M. Rose: Nous ne parlons pas du syndicat, nous parlons actuellement des limites de délivrance des présents permis proposés par le gouvernement.

M. Bublé: Les limites apportées à la délivrance des présents permis par le gouvernement?

M. Rose: Oui. Cela ne favorise-t-il pas votre type d'embarcation?

M. Bublé: Je crois que cela est normal pour toutes les embarcations de pêche, que ce soit pour un seul pêcheur au filet maillant ou pour quatre à huit senneurs.

M. Rose: Ne serait-il pas plus facile d'atteindre la limite par année en vous maintenant à la catégorie A, pour l'embarcation, au lieu de pêcheur à filet maillant.

M. Bublé: Non je ne dirais pas cela.

M. Rose: Vous avez un navire plus grand, et vous êtes plus efficace, d'après ce que vous avez dit dans votre mémoire.

M. Bublé: Oui, mais la loi nous limite à une partie de certaines régions.

M. Rose: Vous dites que cela tend à égaliser les chances?

M. Bublé: Nous prenons du poisson qui ne vaut que le tiers du poisson qui est pris avec un autre grément. Comment pouvons-nous entrer en concurrence?

[Text]

Mr. Rose: I also noticed in your brief that you say you have no interest in canneries or any other part of the whole fishing operation. You also suggested there are too many fingers in the pie. While you have no interest in canneries, do canneries have any interest in your vessels?

Mr. Bublé: Well, if you want any money and you go to a bank you have to fill out countless forms and go through many procedures and then wait a year to get the money. However, the canneries are the only people who will give fishermen, if they know them, money. They will back up good fishermen.

Mr. Rose: With no strings attached?

Mr. Bublé: Not as far as I know nor as far as I am concerned, because they helped me buy my boat.

Mr. Rose: You are suggesting that government bureaucracy in the various forms you have to fill out inhibits the fisherman's use of these various government plans of assistance?

Mr. Bublé: Yes. Loans are very hard to get. If you know the bank manager you might get it but if you do not it does not matter how good a fisherman you are you will not receive a loan.

Mr. Rose: Therefore, they are not used to the extent that they might be and for all intents and purposes they are window dressing. Would you say that?

Mr. Bublé: Well some of our members have received loans. I cannot speak for all of them.

Mr. Rose: Is the ceiling too low on them?

Mr. Bublé: Yes, it should be raised much higher.

Mr. Rose: Now I have a few questions on conservation and also the matter of pollution.

Do you feel for instance that the government might have been a bit more zealous in enforcing their powers in regard to damage to salmon beds through log drives and that sort of thing? This is the first time fisheries and forestry have been together; are you looking forward to a greater zeal in enforcing these regulations?

Mr. Bublé: Right. When this Stellak affair happened it was just damned awful. The movies showed logs going down the water like

[Interpretation]

M. Rose: J'ai aussi remarqué dans votre mémoire que vous ne portez aucun intérêt aux conserveries ou dans tout le reste de l'industrie. Vous indiquez en outre que trop de gens s'en mêlent. Si vous ne portez aucun intérêt aux conserveries, est-ce que les conserveries en ont pour vos bâtiments?

M. Bublé: Si vous avez besoin d'argent et que vous allez à la banque, il vous faut remplir un nombre incalculable de formules et de procédures, et attendre un an avant de pouvoir jouir de cet argent. Par contre, il n'y a que les conserveries qui vont prêter de l'argent aux pêcheurs qu'ils connaissent. Elles vont soutenir un bon pêcheur.

M. Rose: Sans condition?

M. Bublé: Pas d'après ce que je sais ni en ce qui me concerne, parce qu'ils m'ont aidé à acheter mon bateau.

M. Rose: Vous insinuez que les diverses formalités de la bureaucratie gouvernementale que le pêcheur doit remplir, l'empêchent de profiter des programmes d'aide du gouvernement.

M. Bublé: Oui. Il est très difficile d'emprunter de l'argent. Si vous connaissez le directeur de la banque vous pouvez obtenir l'emprunt, sinon, peu importe vos qualités de pêcheurs on vous refusera l'emprunt.

M. Rose: Par conséquent, ces plans ne sont pas utilisés dans la mesure du possible et ce n'est que de la poudre aux yeux.

M. Bublé: En fait, quelques membres ont contracté des emprunts, mais pas tous.

M. Rose: Est-ce que le plafonnement est très bas?

M. Bublé: Oui, il devrait être beaucoup plus élevé.

M. Rose: Et maintenant, j'aimerais poser quelques questions sur la conservation et la pollution.

Croyez-vous par exemple, que le gouvernement aurait dû faire preuve d'un peu plus de zèle dans l'application de leurs pouvoirs relatifs aux dommages des bancs de saumon causés par les billots ou par des objets semblables? C'est la première fois que les pêches et les forêts se réunissent. Est-ce que vous envisagez une application plus zélée de ces règlements?

M. Bublé: Lorsque l'affaire Stellako a éclaté, c'était horrible. Les films montraient les billots de bois qui descendaient la rivière

[Texte]

bulldozers, with gravel flying. Our provincial government said that this was not the case, yet we saw it with our own eyes on the movie.

Mr. Rose: Some other members may want to elaborate on that particular point but my time is limited to 10 minutes on this particular portion.

I have a question on the sports fishery. We have been told that there is a greater return per fish and also a greater investment when one considers the thousands of sport fishermen with their boats and the various things they they purchase to go sports fishing. You are taking a rather strong stand against the sports fishery and yet the return of dollars per fish to our economy is probably greater.

Can you see any way around this, do you have any suggestions where the sports fishery might be limited, or what is your particular feeling about this—other than the fact that it tends to squeeze your group out of what might be considered a logical or sensible source of income?

Mr. Bubl : I would say that we have to work along with the bona fide sportsmen, but not the ones who start these commercial derbies—those fellows are more commercialized than what we had before?

Mr. Rose: Are you speaking about the Vancouver *Sun* now?

Mr. Bubl : I would say the Vancouver *Sun* also.

Mr. Rose: So you are against the Vancouver *Sun* derby?

Mr. Bubl : Yes. I would say the only derbies that are not commercial are the ones put on by a sports organization.

Mr. Rose: Like the bar derbies and that sort of thing?

Mr. Bubl : Yes.

Mr. Rose: You do not feel that they are any cause of trouble?

Mr. Bubl : They are not detrimental to the commercial fishermen. I think we can live together. We just have to. I would say the sportsmen need the commercial fishermen and we need the sportsmen. If we are going to win against pollution, forestry and hydro dams we are going to need each other.

Mr. Rose: In other words, you just think it takes planning, that the two groups can live

[Interpr tation]

comme des fouailleuses qui nivellent le terrain. Notre gouvernement provincial a dit que cela ne correspondait pas   la r alit , bien que nous le voyions de nos propres yeux sur le film.

M. Rose: D'autres d put s aimeraient peut- tre d velopper cette question, mais je n'ai plus que dix minutes. J'aurais une question relative   la p che sportive. On nous a dit que les b n fices par poisson seraient plus grands, ainsi que l'investissement, si l'on tenait compte des milliers de p cheurs sportifs dot s de tout l' quipement voulu pour faire de la p che commerciale. Vous vous opposez assez vivement   la p che sportive et le rendement par poisson pour notre  conomie est probablement plus fort.

Avez-vous des suggestions   formuler   propos de la restriction  ventuelle de la p che sportive ou qu'en pensez-vous,   part le fait que cela tend   vous priver d'une source de revenu int ressante?

M. Bubl : Je dirais que nous devons tirer profit de la bonne foi des p cheurs sportifs mais pas de ceux qui ont inaugur  des tournois commerciaux. Ces gens sont plus vou s au commerce que ce que nous connaissions avant.

M. Rose: Est-ce que vous parlez du Vancouver *Sun*?

M. Bubl : Le Vancouver *Sun* ferait partie de cette liste.

M. Rose: Vous vous opposez donc au tournoi du Vancouver *Sun*.

M. Bubl : Oui.   mon avis, les seuls tournois sans but commercial sont ceux qui sont organis s par les associations sportives.

M. Rose: Comme les tournois de bar et autres du genre.

M. Bubl : Oui.

M. Rose: Vous ne croyez pas qu'ils peuvent causer des ennuis.

M. Bubl : Ils ne nuisent pas au p cheur de m tier. Je crois qu'ils peuvent c toyer. Nous devons le faire. Je dirais que les sportifs ont besoin des p cheurs de m tier et inversement. Si nous r ussissons   lutter contre la pollution, la for t et les barrages hydrauliques, nous aurons besoin l'un de l'autre.

M. Rose: Autrement dit, pour que les deux groupes puissent cohabiter, il faut faire

[Text]

together but at present there are not sufficient regulations to protect your interests?

Mr. Bublé: Yes. One of the main problems with the sports derby is that the idea is to get the biggest fish possible. If a 10 pound fish is caught and then, later, a 14 pound one, the 10 pounder is thrown overboard. That is the kind of thing that is happening.

Mr. Rose: I would not throw it overboard; I would put it under the seat.

The Chairman: Mr. Crouse.

Mr. Crouse: Thank you, Mr. Chairman. I have a few questions for Mr. Bublé. Are you a Canadian, Mr. Bublé?

Mr. Bublé: Yes, I was born in Vancouver.

Mr. Crouse: Are you a herring seiner owner?

Mr. Bublé: I am a salmon seiner. I used to be a herring seiner too, but the salmon seiner is different. I own my own boat.

Mr. Crouse: You own your own boat?

Mr. Bublé: Yes.

Mr. Crouse: Are you seriously suggesting in your initial brief—and I must confess I had some difficulty dovetailing the one you read this morning with the one which was originally provided to the Committee—that the federal government assume insurance premiums, interest payments and depreciation for herring seiners who are unable to fish and, if so, how do you suggest this would be policed?

Mr. Bublé: I think that question should be directed to Mr. Cameron, because actually his brief was supposed to be read first. When the Chairman called me up I came up and gave the salmon brief. Actually it was supposed to be the other way around.

Mr. Crouse: I see.

Mr. Bublé: I think Mr. Cameron should answer that question, although I could.

Mr. Crouse: All right, Mr. Bublé.

The Chairman: I was not aware that this brief would be in two parts.

[Interpretation]

preuve de planification, mais à l'heure actuelle, il n'y a pas suffisamment de règlements pour protéger vos intérêts.

M. Bublé: Et l'une des grandes difficultés relatives aux tournois de pêche c'est qu'il faut obtenir le plus grand nombre de poissons possible. Si vous prenez un poisson de 10 livres et ensuite un de 14 livres, vous jetez celui de 10 livres à l'eau. C'est le genre de choses qui se passe.

M. Rose: Je ne le rejeterais pas, je le mettrais sous le siège.

Le président: Monsieur Crouse.

M. Crouse: Monsieur le président, je voudrais poser quelques questions à monsieur Bublé. Êtes-vous canadien?

M. Bublé: Oui, je suis né à Vancouver.

M. Crouse: Est-ce que vous êtes propriétaire d'un sennetier de hareng?

M. Bublé: Je suis un pêcheur de saumon à la seine. Avant je pêchais le hareng, mais le saumon c'est différent. J'ai mon propre bateau.

M. Crouse: Votre propre bateau?

M. Bublé: Oui.

M. Crouse: Dans votre mémoire, proposez-vous sérieusement, je dois vous avouer que j'ai eu un peu de difficulté à raccorder celui que vous avez lu ce matin à celui que vous avez fourni au comité, que le gouvernement fédéral se charge des primes d'assurance, des paiements d'intérêt et de la dépréciation des sennetiers de hareng qui ne peuvent pêcher et, dans le cas de l'affirmative, comment cela serait-il appliqué?

M. Bublé: Je crois que vous devriez adresser votre question à monsieur Cameron parce que c'est son mémoire qui devait être lu en premier. Lorsque le président m'a appelé, je suis venu et je lui ai donné le mémoire sur le saumon. En fait, ce devait être le contraire. Vous pourriez poser votre question.

M. Crouse: Je vois.

M. Bublé: Je crois que monsieur Cameron devrait répondre à cette question, même si je pouvais le faire.

M. Crouse: Très bien, monsieur.

Le président: Je ne savais pas que le mémoire serait donné en deux parties.

[Texte]

Mr. Whelan: It said in the original brief that we could expect an additional brief when they appeared before the Committee.

The Chairman: I was of the impression that Mr. Bublé's brief was first to be read. I think we can continue with Mr. Bublé and then have Mr. Cameron later on.

Mr. Crouse: Mr. Bublé, you mentioned the lack of flood control on rivers. Whose responsibility would this be, the federal or provincial governments?

Mr. Bublé: The federal responsibility in this province.

Mr. Crouse: For the control of flood waters.

Mr. Bublé: The Department of Fisheries.

Mr. Crouse: Are you faced with a serious pollution problem as a result of oil discharged from tankers or other ships in this area?

Mr. Bublé: Well, not as yet, but with this super port coming in and bigger tankers—the oil companies and other companies say it never happens—it is bound to happen. If just once in the Gulf of Georgia a 500,000 ton tanker went down our Fraser River would be finished and the shell fish in the whole Gulf of Georgia would be finished for many years. We would lose salmon for four years.

Mr. Crouse: What you are telling the Committee then, Mr. Bublé, is that your concern is not so much the oil which may be discharged with total disregard for federal laws on this matter but for tankers which may go down and despoil the area.

Mr. Bublé: Yes.

Mr. Crouse: Then what proposal would you make to the federal government to eliminate this situation? Are you suggesting that we should not have oil carried by tankers?

Mr. Bublé: No, but we should know whose jurisdiction this is if something did happen and what those people would do. Could they force them to salvage or clean up the mess? It happened down in the States and it was provincial versus federal. No one knew who was in charge and they were fighting each other. In the meantime the debris is there. I would like to know beforehand who has the jurisdiction and what we can do about it and

[Interprétation]

M. Whelan: Il est indiqué dans le mémoire original qu'on devait s'attendre à un autre mémoire lorsqu'ils témoigneraient devant le Comité.

Le président: J'avais l'impression que le mémoire de monsieur Bublé devait être lu le premier. Je crois que nous pouvons continuer à interroger monsieur Bublé. Nous inviterons ensuite monsieur Cameron.

M. Crouse: Monsieur Bublé, vous avez mentionné le manque de contrôle des inondations dans les rivières. Est-ce qu'à votre avis, cela relèverait du gouvernement fédéral ou provincial?

M. Bublé: Du gouvernement fédéral.

M. Crouse: Pour le contrôle des inondation.

M. Bublé: Du ministère des Pêches.

M. Crouse: Est-ce que vous devez faire face à un grave problème de pollution à la suite du déversement du pétrole des pétroliers ou d'autres navires dans cette région?

M. Bublé: Non, pas jusqu'à présent, mais avec un plus grand port et de plus gros navires-citernes, les sociétés de pétrole et d'autres sociétés affirment que cela ne se produit jamais, mais cela risque de se produire. Si un navire-citerne de 500,000 tonnes coulait une seule fois dans Georgia Gulf le fleuve Fraser serait ruiné et les mollusques et crustacés dans le Georgia Gulf disparaîtraient pendant plusieurs années. Le saumon serait absent pendant quatre ans.

M. Crouse: Vous dites au Comité que vous ne vous préoccupez pas tellement du pétrole qui peut être déchargé, au mépris des lois fédérales en la matière, mais plutôt des navires-citernes qui pourraient couler et endommager toute la région.

M. Bublé: Oui.

M. Crouse: Que proposeriez-vous comme moyen pour éliminer ce danger? Estimez-vous que le pétrole ne devrait pas être transporté sur des navires-citernes?

M. Bublé: Non, mais nous devrions savoir de qui relève cette question, si quelque chose se produisait ou sur ce que feraient ces personnes. Pourraient-elles les forcer à sauver ou à nettoyer la zone? Cela s'est produit aux États-Unis et il y a eu opposition entre le gouvernement fédéral et le gouvernement provincial. Personne ne savait qui était chargé de ce domaine et ils luttaient l'un contre l'autre. Entretemps, les débris étaient là.

[Text]

then leave it up to the men who are in charge of pollution.

Mr. Crouse: I think that is a very good point, Mr. Chairman, and I hope that it is duly noted, because this is something which is controversial at present. We saw this happen when the *Torrey Canyon* went down, we have seen it happen on the American coast where drilling was not properly supervised and large areas of the ocean have been despoiled. I think the witness has raised a very good point which not only the federal government but the provincial government as well might take into consideration. I hope that as a result of his testimony this will be brought forth at a future federal-provincial conference so that a determination can be made as to who is responsible for oil pollution. I feel, as one deeply interested in the fishing industry on the east coast, that this is a very important matter.

Mr. Rose: Are you going on to another subject?

Mr. Crouse: In a way I regret that I have not had time to study the witness's brief because it was just presented. I was avidly searching for his comments in what I thought was a resumé of the brief before me, therefore I have no further questions at the moment.

Mr. Rose: Mr. Chairman, I have just a comment on the line that Mr. Crossman was pursuing. The Canada Shipping Act was introduced into Parliament, I believe, last Thursday which envisages protection along this line. It deals with boarding and inspection of vessels and was introduced by Mr. Richardson. It is an interim measure before this thing is finally and completely examined and overhauled. It was supposed to go to Committee but it did not get finished. At least it has been introduced.

The Chairman: Mr. Crouse.

Mr. Crouse: Mr. Chairman, I have summarized as quickly as I can my views on the brief presented by the witness. As I say, I think he has raised a most important point which must be considered by federal and provincial governments, namely a determination as to which government is responsible for the payment of damages to the resort owners, to the fisheries interests, ship owners and so on when an oil tanker goes down. This is something that has not as yet been resolved and I hope that his testimony is such that it will bring to the attention of all governments con-

[Interpretation]

J'aimerais bien savoir de qui relève la question et ce qu'on peut faire, et ensuite le laisser entre les mains des personnes qui s'occupent du domaine de la pollution.

M. Crouse: J'estime que c'est une très bonne proposition, et j'espère qu'on en a bien pris note parce que c'est un sujet de controverse à l'heure actuelle. Nous l'avons vu lorsque le *Torrey Canyon* a coulé, nous l'avons constaté sur la côte américaine où le forage n'était pas surveillé d'assez près et où de grandes zones de l'océan ont été souillées. Je crois que le témoin a soulevé un point très intéressant que non seulement le gouvernement fédéral mais aussi le gouvernement provincial devraient étudier. J'espère qu'à la suite de ce témoignage, cette question sera soulevée lors de la prochaine conférence fédérale-provinciale afin de déterminer de qui relèverait exactement la question de la pollution par le pétrole. Il me semble que c'est une question très importante pour qui s'intéresse à l'industrie de la pêche sur la côte est.

M. Rose: Allez-vous aborder une autre question?

M. Crouse: D'une certaine manière, je regrette de ne pas avoir pu étudier à fond le mémoire présenté par le témoin. J'attendais ses commentaires dans ce que je croyais être un résumé du mémoire. C'est pourquoi je n'ai pas d'autres questions à poser pour l'instant.

M. Rose: Pour faire suite à ce que monsieur Crouse disait, la loi sur la marine marchande du Canada a été présentée par monsieur Richardson au Parlement jeudi dernier, en vue, je crois, de prévoir des mesures de protection à cet effet. Cela a trait à l'arraisonnement et à l'inspection des navires. C'est une mesure temporaire prise avant l'examen définitif et complet. On devait renvoyer le projet au Comité mais on ne l'a pas terminé.

Le président: Monsieur Crouse.

M. Crouse: Monsieur le président, j'ai résumé aussi rapidement que possible mes conclusions sur le mémoire présenté par le témoin. Je crois qu'il a soulevé un point très important qui doit être étudié par les gouvernements fédéral et provincial surtout pour décider quel gouvernement sera chargé du paiement des dommages aux propriétaires des plages, aux exploitants forestiers, aux propriétaires de navires et autres quand un pétrolier coule. On n'a pas encore trouvé de solution au problème et j'espère que le témoignage de monsieur Bublé attirera l'attention

[Texte]

cerned the need for establishing legislation which will determine who is responsible for damages.

The Chairman: Mr. Whelan, you are next.

Mr. Whelan: Mr. Chairman, I just want to ask a couple of questions. First of all, the witness spoke of sports fishermen and derbies. Could he elaborate a bit on this by telling us how they work and why they are so much against them.

Mr. Bublé: Mr. Chairman, in the first place this is one area where the commercial fishermen have been turned out of after working there for 50 years in some cases. We went along with it because we thought it was going to be for sports fishing. As long as sportsmen said there it was fine, but now these commercial derbies have come in there and taken over, with big prizes of \$25,000. Two or three promoters are making quite a bit of money out of this.

Mr. Whelan: Could you explain how they make their money. Do the participants in the derby contribute to the amount of money these promoters make?

Mr. Bublé: Yes, every entrant pays a \$10 or \$15 fee and then they are entitled to win that prize and the promoters get what is left over—which is quite a sum.

Mr. Whelan: How much do they get—80 per cent of the \$10.

Mr. Bublé: I could not say exactly what the percentage is. In my opinion, it is the same as a farmer evicted from his land and then it is turned into a gambling casino or a golf course. I can see it if it is something for the benefit of our people—like the super port which is supposed to help all of our people. The farmers in that case could not complain too much because, after all, it is going to help all of British Columbia. But when you take land or water away from fishermen and give it to promoters to reap the benefit, that is not right as far as we are concerned.

Mr. Whelan: You are saying that these promoters make a very good thing out of these derbies. Do the sports fishermen who participate have to pay a licence to the federal government?

[Interprétation]

sur la nécessité pour les gouvernements d'adopter des mesures législatives destinées à régler ces questions de responsabilité en cas de dommages.

Le président: Monsieur Whelan, vous avez la parole.

M. Whelan: Monsieur le président, j'aimerais poser quelques autres questions. Tout d'abord au sujet de la pêche sportive et des tournois de pêche. Est-ce qu'il pourrait nous donner quelques détails sur la manière dont se déroulent ces tournois et pourquoi il y a une telle opposition?

M. Bublé: Tout d'abord, monsieur le président, c'est un domaine dont les pêcheurs commerciaux ont été rejetés souvent après y avoir travaillé pendant 50 ans, dans certains cas. Nous avons appuyé ces tournois parce que nous croyions que cela allait favoriser la pêche sportive. Aussi longtemps que les pêcheurs sportifs prenaient part, c'était bien, mais maintenant, on a lancé des tournois commerciaux où l'on offre de gros prix de \$25,000. Deux ou trois organisateurs y font pas mal d'argent.

M. Whelan: Pouvez-vous nous expliquer comment ces gens font de l'argent? Est-ce que les participants paient une certaine somme d'argent à ces organisateurs?

M. Bublé: Oui, chaque candidat verse \$10 ou \$15 pour participer au concours et l'organisation reçoit le montant qui reste après la distribution des prix, ce qui représente une jolie somme.

M. Whelan: Combien reçoivent-ils? 80 p. 100 de \$10?

M. Bublé: Je ne pourrais pas vous donner le pourcentage exact. A mon avis, c'est la même chose que si un cultivateur était expulsé de ses terres et qu'on y installait un casino ou un terrain de golf. Je comprends cela si cela sert l'intérêt du public, comme l'aménagement d'un port géant qui est censé aider les gens. Les cultivateurs ne pouvaient porter plainte parce que cela va profiter à toute la population de la Colombie-Britannique, mais lorsque vous enlevez de la terre ou des eaux des pêcheurs et que vous l'accordez à des organisateurs qui vont en recueillir tous les bénéfices, et ce n'est que juste à notre avis.

M. Whelan: Vous dites que ces tournois leur rapportent beaucoup d'argent. Est-ce que les pêcheurs sportifs doivent payer un permis au gouvernement fédéral?

[Text]

Mr. Bublé: I am not sure if they have to have a licence for salt water fishing or not.

Mr. Whelan: If they do not have a licence do you think they should have a licence?

Mr. Bublé: I think everyone should be licenced out there so at least you could keep track of them. The Department of Fisheries do a good job in keeping track of them but they cannot begin to have an official on every boat. You know yourself they get a lot of these small fish and they keep throwing them overboard to get the larger ones so they can win the prize. The goal is to win the prize, so they throw the rest of the small fish overboard—yet in 30 years time our children will welcome that fish to eat. I do not think there is another country where this would happen.

Mr. Whelan: Do the promoters of the derby raise this money for charitable purposes or for their own purpose?

Mr. Bublé: For their own pockets.

Mr. Whelan: The other question I had was on pollution. Mr. Crouse has expressed his concern. What the witness has said about it is of course of concern to everyone, and the matter of jurisdiction is of deep concern to everyone.

You did not say it but I think you meant to say that as the fishermen could be put out of business for four years they should be compensated? In other words, their livelihood would be lost and you feel in such a case they should be compensated. Is that what you meant?

Mr. Bublé: I was hoping it would never come to that, but oil pollution would hurt the shell fish, oysters and so on for many years to come. I do not know how many years it would be before things would be back to normal. I would say that there should be extra precaution taken so it does not happen.

Mr. Whelan: Thank you.

The Chairman: Mr. Howard.

Mr. Howard (Skeena): Mr. Chairman, I think perhaps we should put on the record that there was a bit of awkwardness here in that the brief which Mr. Bublé has just read unfortunately was not contained within the brief provided to members. It was in two parts and somewhere in the make-up of it the second part was lost, therefore it was difficult for us to try to follow it. I was trying to find what you were reading in the brief that was

[Interpretation]

M. Bublé: Je ne sais pas s'ils doivent avoir un permis de pêche dans l'eau salée ou non.

M. Whelan: S'ils n'ont pas de permis, estimez-vous qu'ils devraient avoir un permis?

M. Bublé: J'estime que tout le monde devrait y prendre un permis, ainsi on pourrait les suivre. Le ministère des Pêches fait du bon travail pour contrôler ces gens, mais ils ne peuvent envoyer un agent par embarcation. Vous le savez très bien qu'ils prennent beaucoup de petits poissons qu'ils jettent par-dessus bord pour en prendre des plus gros afin de gagner le prix. Il s'agit surtout de gagner. Ils jettent donc les petits poissons et peut-être que dans trente ans nos enfants auront besoin de ces poissons pour vivre. Je ne crois pas que cela se produise dans un autre pays.

M. Whelan: Est-ce que cet argent sert à des buts charitables ou aux buts purement égoïstes des organisateurs?

M. Bublé: Cela ne sert que leur bourse.

M. Whelan: J'aurais aussi d'autres questions à poser au sujet de la pollution. Le témoin s'est montré inquiet face à ce problème. Il a dit que cela intéressait tout le monde, ainsi que la question de responsabilité.

Vous ne l'avez pas dit, mais je pense que vous avez voulu dire qu'étant donné le fait que le pêcheur peut se trouver sans travail pendant quatre ans, on devrait leur verser une indemnité. Autrement dit, leur gagne-pain disparaîtrait et vous croyez que, dans pareil cas, ils devraient être indemnisés. Est-ce que c'est ce que vous vouliez dire?

M. Bublé: J'espère bien qu'on n'en arrivera pas là, mais la pollution par le pétrole blesserait les huîtres, les crustacés, et autres pendant plusieurs années. Je ne sais pas au juste combien d'années s'écouleraient avant que les choses reprennent leur cours normal. Je dirais qu'il faudrait faire preuve de plus de précautions pour que cela ne se produise.

M. Whelan: Merci.

Le président: Monsieur Howard.

M. Howard (Skeena): Monsieur le président, nous devrions peut-être mettre au compte rendu qu'il y a eu quelques difficultés dues au fait que le mémoire que monsieur Bublé vient de lire n'était pas le même que celui qui nous avait été remis. Il était composé de deux parties et une partie s'est perdue. Donc, il a été très difficile de suivre ce que vous lisiez. J'ai essayé de le faire mais ce n'était pas possible et je crois que les

[Texte]

before me and I am sure other members are doing the same thing. If it sounds a little odd to you this is the reason.

Just this morning in the Vancouver Province there was an item to the effect that the Minister of Fisheries had made a declaration on his way back from Japan that he had invited the Japanese fishing interests to fish within Canadian waters for dogfish, which is a predator. He claimed that the stocks of dogfish that Japan normally fish are declining and that there is a market for dogfish in Japan, which we have known for some time. Do you have any views on how we can organize our own dogfishery or whether it is more practical to provide work for Canadians in this field than it is to do it the way he suggests?

Mr. Bublé: I would say that we have the vessels and the equipment to look after this fishery quite easily. It is just a matter of making it worthwhile, that the men and boats make decent wages in going out there.

Mr. Howard (Skeena): Have any proposals been made to vessel owners or to other groups of fisheries on the west coast in recent months about a plan to establish a dogfishery on an economic basis?

Mr. Bublé: We have asked them many times to bring something up. I think last year \$25,000 was given, but that is not enough money to rig out some of our bigger boats. We need much more money than that to rig them out, you see.

Mr. Howard (Skeena): Yes, I know that propositions have been put forward to the government in this connection.

Mr. Bublé: But none the other way.

Mr. Howard (Skeena): Well, that is what I was inquiring about.

Mr. Whelan: Mr. Chairman, on a point of order—perhaps Mr. Howard is going to go further—based on this same article the Minister said that he was going to ask the Japanese officials to co-operate with Canadian officials in working out a scheme whereby Canadian fishermen somehow could catch these fish in the Japanese interest.

Mr. Howard (Skeena): Well, I do not know if we have an answer yet.

Mr. Whelan: I gathered from what you said, Mr. Howard, that you thought the Japa-

[Interprétation]

autres députés ont rencontré la même difficulté. Cela peut vous sembler bizarre, mais c'est là la raison.

Dans le journal *Province* de Vancouver de ce matin, il y avait un article à l'effet que le ministre des Pêches avait fait une déclaration en rentrant du Japon, à savoir qu'il avait invité des entreprises de pêche japonaises à venir dans les eaux canadiennes pour pêcher le chien de mer, un poisson prédateur. Il a prétendu que les réserves de ce poisson diminuaient au Japon et qu'il y a un marché japonais pour ce poisson. Savez-vous comment nous pourrions organiser notre propre pêche au chien de mer ou est-ce plus pratique de donner du travail aux Canadiens dans ce domaine que de le faire de la manière qu'il suppose?

M. Bublé: Je dirais que nous avons les navires et l'équipement pour faire cette pêche assez facilement. Il s'agit tout simplement de le rendre rentable, que les membres de l'équipage et que les navires rapportent suffisamment d'argent pour aller au large.

M. Howard (Skeena): Est-ce qu'il y a eu des propositions faites aux armateurs ou autres groupes de pêche sur la côte ouest au cours des derniers mois au sujet d'un plan pour établir la pêche aux chiens de mer sur une base économique?

M. Bublé: Nous leur avons demandé bien souvent de faire quelque chose. Je crois que l'an dernier on a donné \$25,000, mais ça n'est pas assez d'argent pour équiper un de nos plus gros bateau. Nous avons besoin de beaucoup plus d'argent que cela pour les équiper, voyez-vous.

M. Howard (Skeena): Oui, je sais que des propositions ont été avancées au gouvernement à ce sujet.

M. Bublé: Mais aucune dans l'autre sens.

M. Howard (Skeena): Eh bien, c'est ce que je voulais savoir.

M. Whelan: Monsieur le président, sur un rappel au Règlement, M. Howard va peut-être s'avancer un peu plus au sujet de cet article, M. Davis a dit qu'il demanderait aux autorités japonaises de travailler avec les autorités canadiennes à établir un programme en vertu duquel les Canadiens pourraient prendre ces poissons pour les Japonais.

M. Howard (Skeena): Eh bien, je ne sais pas si nous avons eu une réponse encore.

M. Whelan: D'après ce que vous avez dit, monsieur Howard, j'ai conclu que vous pen-

[Text]

nese fishermen were going to catch the fish.

Mr. Howard (Skeena): Mr. Davis, in the *Vancouver Province* article, is referred to having said that he hoped that Canadian fishermen would be involved in the fisheries aspect of it and that the Japanese would simply be involved in the processing and distribution of it. That is how I read the article. I do not want to quibble with you, Mr. Whelan, over what Mr. Davis meant, whether he is misquoted or not quoted, but the point of fact is that this is the second time that Mr. Davis has made this suggestion in recent months and I am trying to find out from Mr. Bubl  whether we might not have a program that would involve all Canadians and not really in effect sell out our fisheries prospects to other nations.

The Chairman: Do you have any other questions, Mr. Howard?

Mr. Howard (Skeena): No, Mr. Chairman.

The Chairman: Next on my list is Mr. Goode.

Mr. Goode: Thank you, Mr. Chairman. As you know, in recent months the Minister of Fisheries has suggested that he is going to work on some baseline legislation to protect Hecate Strait and Queen Charlotte Sound. Have your people ever experienced difficulty with Japanese and Russian fishermen, and do you favour this baseline legislation?

Mr. Bubl : I think Mr. Cameron should answer that question, because it is in his brief. Mine is strictly salmon or salmon products.

Mr. Goode: Do you not feel that this covers salmon products?

Mr. Bubl : Well, we do not have too much of that. We worry about the trawl fleet and halibut fleet in respect of the the 12-mile limit more than we do in the salmon area.

Mr. Goode: The only thing that interested me in your statement was that you felt that the \$25,000 fishery loan was not enough, that you felt it should be \$50,000. Are you aware that on the east coast of Canada the provincial governments supply money for the purchase of fish boats and that the particular government in British Columbia has not seen

[Interpretation]

siez que les p cheurs japonais allaient prendre ce poisson.

M. Howard (Skeena): Dans l'article du *Vancouver Province*, on dit que M. Davis a d clar  qu'il esp rait que les p cheurs canadiens s'occuperaient de la p che et que les japonais s'occuperaient simplement du conditionnement et de la distribution. C'est ainsi que j'ai lu l'article. Mais nous n'allons pas nous disputer, monsieur Whelan, sur ce que M. Davis voulait dire, qu'il ait  t  cit    faux ou non cit , mais le point c'est que c'est la deuxi me fois que M. Davis a fait cette suggestion au cours des derniers mois et je voudrais que M. Bubl  nous dise si ce serait pas possible d'avoir un programme qui int resserait tous les Canadiens et qui ne passerait pas notre possibilit    d'autres pays.

Le pr sident: Avez-vous d'autres questions, monsieur Howard?

M. Howard (Skeena): Non, monsieur le pr sident.

Le pr sident: Vous  tes le suivant sur la liste, monsieur Goode.

M. Goode: Merci, monsieur le pr sident. Comme vous le savez, ces derniers mois, le ministre des P cheries a sugg r  qu'il pr parerait des lois de base pour prot ger sur les lignes de base le d troit d'H cate et le d troit de la Reine Charlotte. Est-ce que vos p cheurs ont d j  eu des difficult s avec les p cheurs japonais et russes, et  tes-vous en faveur de telles lois de base.

M. Bubl : Je crois que M. Cameron devrait r pondre parce que ceci se trouve dans son m moire. Le mien touche strictement le saumon et les produits du saumon.

M. Goode: Ne croyez-vous pas que ceci couvre les produits du saumon?

M. Bubl : Eh bien, nous n'avons pas beaucoup l -dessus. Nous nous inqui tons de la flotte de chalutiers et de la flotte de p che au fl tan   l' gard de la limite de 12 milles, plus que nous ne le faisons dans la r gion du saumon.

M. Goode: La seule chose qui m'a int ress  dans ce que vous avez dit, c'est que vous estimiez que les \$25,000 n' taient pas suffisants, que vous estimiez que c' tait \$50,000 qu'il faudrait proposer. Savez-vous que sur la c te est du Canada, les gouvernements provinciaux fournissent l'argent pour l'achat de bateaux de p che et qu'en Colombie-Bri-

[Texte]

fit to help you? Would you suggest that the provincial government enter this field?

Mr. Bublé: Well, I do not care which government enters the field, but it should be raised. \$25,000 does not go very far because, as you know, if you want to build a power skiff or new herring nets it costs you right there \$30,000 or \$40,000. And in respect of a new engine installation \$25,000 does not go very far on these large boats. I would say that it should be at least \$50,000, which is the amount our Association has requested. Most of our members feel that to overhaul a boat completely, to buy a new one and fix it up, or repairing an old one—changing the winch and so on—requires more than \$25,000. Mind you, \$25,000 has been a good jump and I have to commend the members for bringing it up that far, but I would say that it should go up to \$50,000. And if the provincial government goes ahead and helps, that is all for the better.

Mr. Goode: May I say that some of us had an awful time getting it to \$25,000.

Mr. Howard (Skeena): Mr. Chairman, I wonder if I could raise a point here.

The Chairman: On a point of order, Mr. Howard?

Mr. Howard (Skeena): Did I understand Mr. Goode to say that this has now been raised to \$25,000?

Mr. Goode: I think it has been announced that legislation is coming in to cover that. I think we covered this in the Fisheries Committee. You may have been absent at the time.

Mr. Howard (Skeena): No, no. I am just trying to understand from you whether it has been raised or not.

Mr. Goode: Well, I believe that it has been announced that legislation to this effect is forthcoming. As you remember, in the Fisheries Committee we had some difficulty with technicalities.

Something that concerns me, and I think it concerns all of us around the table, is the fact that the new legislation announced by the Minister of Fisheries does not include refinancing of vessels. Do you think it should include the refinancing of vessels in order that you could, if you wished, get away from financing by canneries and some of the implications that are implied by this?

[Interprétation]

tannique, le gouvernement provincial n'a pas cru bon de faire la même chose? Est-ce que vous voudriez que le gouvernement provincial entre dans ce domaine?

M. Bublé: Peu m'importe, quelque soit le gouvernement, pourvu qu'on l'augmente. \$25,000 ne nous mènent pas très loin car si nous voulons construire une embarcation à moteur ou des nouvelles harenguières, il nous en coûte là \$30,000 ou \$40,000 et pour l'installation d'un nouveau moteur \$25,000 ne vont pas loin sur ces gros bateaux. Je dirais que l'emprunt devrait être de \$50,000 et c'est le montant que notre association a demandé. La plupart de nos membres estiment que pour radoubler complètement un bateau, pour en acheter un neuf et l'aménager, ou en réparer un vieux, pour changer un moulinet ou n'importe quoi, ça leur coûte plus que \$25,000. Je ne dis pas que \$25,000 n'a pas été une bonne hausse et je tiens à féliciter les membres pour l'avoir fait monter là, mais je dirais qu'il devrait monter à \$50,000. Et si le gouvernement provincial nous aide, tant mieux.

M. Goode: Permettez-moi de dire que certains de nous on beaucoup de peine déjà à obtenir \$25,000.

M. Howard (Skeena): Monsieur le président, j'invoque le Règlement.

Le président: Un rappel au Règlement, monsieur Howard?

M. Howard (Skeena): Ai-je entendu M. Goode dire que le montant a été augmenté à \$25,000?

M. Goode: Je crois qu'on l'a annoncé, que la loi va être présentée. Je crois que nous avons parlé de cela au Comité des pêches. Vous étiez peut-être absent alors.

M. Howard (Skeena): Non. Je voudrais simplement savoir de vous si le prêt a été haussé.

M. Goode: Eh bien, je crois qu'une loi a été annoncée, à cet effet. Si vous vous souvenez, au Comité des pêches, nous avons eu certaines difficultés d'ordre technique.

Mais une chose qui nous intéresse tous et moi de même, c'est que dans la loi annoncée par le ministre des Pêches, il n'est pas question de refinancement des bateaux. Trouvez-vous qu'on devrait y trouver une disposition concernant le refinancement des vaisseaux afin que, si vous le désirez, vous pourrez éviter le financement par les conserveries et les conséquences désastreuses dont vous avez parlé.

[Text]

Mr. Bublé: Yes, I think most of our members would be very glad to have this because, as you know, the cannery have been our banks. You cannot blame them for it because they are the only ones that would give the fishermen money. If you go to a bank manager you have to make application for loans, fill out this and that and wait a year, meanwhile your bills are there and you have to pay them. I would think this refinancing would help the vessel owners quite a bit to get out of the companies' hands.

Mr. Goode: I know you are concerned with pollution because you brought up in your brief a little while ago about oil slicks and so on, particularly from the new harbour. Although you did not mention it, I am sure you are very concerned about the offshore drilling that is going on, because this is where the big problem came in the United States. Would you favour a group made up perhaps of representatives from industry, unions and government being set up to study and to recommend to government whether the provincial government should handle it, whether the federal government should handle it, and whether there should be research on tides and this type of thing?

Mr. Bublé: Yes, I think that would be a must.

Mr. Goode: In respect of this one being built now off the coast, do you think if there was an accident and an oil slick resulted it would come onto the coast of British Columbia, onto our beaches and into our rivers?

Mr. Bublé: It depends on wind conditions and tides.

Mr. Goode: But is it possible?

Mr. Bublé: Oh, yes, very possible. That is why we are very worried about it.

Mr. Goode: You mentioned the *Sun* Salmon Derby. It has been traditional to hold this derby and it is enjoyed by many sports fishermen. Do you not think there is a difference between the *Sun* Derby which is held on a non profit basis and the derbies being promoted now by people seeking profits from them?

Mr. Bublé: Well, I would say there is some difference, yes.

Mr. Goode: Would you say one was more evil than the other one?

Mr. Bublé: Yes.

Mr. Goode: Thank you, Mr. Chairman.

[Interpretation]

M. Bublé: Oui, je crois que la plupart de nos membres en serait très heureux, car comme vous le savez, les conserveries ont été nos banques. On ne peut les blâmer, parce qu'elles les seules qui veulent prêter aux pêcheurs. Si vous aller voir un gérant de banque, vous devez demander des emprunts, remplir ceci et cela et attendre un an, entre-temps, vos factures sont là et il vous faut les payer. Je dirais que ce refinancement aiderait les propriétaires de bateaux dans une grande mesure à se débarrasser des conserveries.

M. Goode: Je sais que vous vous inquiétez de la pollution parce que vous avez mentionné dans votre mémoire, un peu plus tôt, les nappes d'huile, etc, surtout du nouveau port. Bien que vous ne l'avez pas mentionné, je suis sûr que le forage en mer vous inquiète, car c'est devenu un grand problème aux États-Unis. Est-ce que vous seriez en faveur d'un groupe d'industries, de syndicats et du gouvernement qui se forme pour étudier cette question et faire des recommandations au gouvernement, que ce soit sous la direction du gouvernement fédéral ou du gouvernement provincial, ou qu'il devrait y avoir des recherches sur les marées et ainsi de suite?

M. Bublé: Oui, je crois que ce serait nécessaire.

M. Goode: En ce qui concerne celle qu'on construit présentement au large de la côte, pensez-vous que s'il arrive un accident et qu'une nappe d'huile en résulte, elle atteindrait le littoral de la Colombie-Britannique, ainsi que nos plages et nos rivières.

M. Bublé: Cela dépend du vent et des marées.

M. Goode: Mais, est-ce possible?

M. Bublé: Oui, et très possible. Voilà pourquoi ça nous fait peur.

M. Goode: Vous avez mentionné le concours de pêche au saumon du *Sun*. Il a été un concours traditionnel dont de nombreux sportifs tiraient partie. Est-ce que vous n'estimez pas qu'il y a une grande différence entre le concours du *Sun* qui est tenu sans but lucratif et les concours organisés maintenant par des gens qui cherchent le profit.

M. Bublé: Oui, je dirais qu'il y a une grande différence.

M. Goode: Diriez-vous que l'un est plus mauvais que l'autre?

M. Bublé: Oui.

M. Goode: Merci, monsieur le président.

[Texte]

The Chairman: Taking the time element into consideration, is it agreed that we call Mr. Cameron to the table to give the other part of the brief and then questions could be put to whoever was ready to answer?

Some hon. members: Agreed.

The Chairman: I will now call Mr. Cameron to the table to give a summary of his part of the brief.

Mr. T. Cameron (Secretary, Fishing Vessel Owners' Association of British Columbia): Mr. Chairman and members of the Committee, may I apologize for any confusion that arose due to the apparent non-delivery of the part of the brief that Mr. Bubl  went into. We did in fact send 40 copies of it to Mr. J. H. Bennett. The one that apparently the members have went to Mr. Bennett on April 10 and the second part of it went to him on April 11 or 12 with a note asking him to put them together. Maybe the federal government should be considering the late delivery of the mails as well. In any event, when I leave here this morning I will get another 20 copies and have them delivered to you.

The salmon fishery is of such importance to us in B.C. that we thought it better to have an expert in that particular fishery available to answer your questions. What I will now do is to summarize the other part of our brief.

By way of introduction, our organization, which is properly known as the Fishing Vessel Owners' Association of British Columbia, is composed of owners and part owners of fishing vessels who have no financial interest in canneries, cold storage plants or businesses of that nature. Generally speaking our vessels—that is, the ones that belong to our members—are the largest and finest on the west coast and the value of all the vessels in the Association is around \$15 million.

We assume that during the course of this Committee hearing people and briefs you will hear a number of complaints. We would like to start out by saying that while there is no doubt that so far as the west coast fisherman is concerned things could be very much better, generally speaking the members of our organization would like to compliment the new Minister of Fisheries and to express our appreciation for what he is doing and has done to correct some of the problems that face us.

In the salmon fishery for many years we have had a surplus of gear and boats and we

[Interpr tation]

Le pr sident: Est-ce qu'il ne serait pas bon d'appeler maintenant M. Cameron qui nous pr senterait l'autre partie du m moire. Puis ensuite nous passerons la parole   tous ceux qui voudraient poser des questions l -dessus?

Des voix: D'accord.

Le pr sident: Je vais maintenant appeler M. Cameron   la table pour nous donner un sommaire de sa partie du m moire.

M. T. Cameron (secr taire, Fishing Vessel Owners' Association of British Columbia): Monsieur le pr sident, messieurs les membres du Comit , je m'excuse de la confusion cr  e par le fait qu'on ne vous a pas distribu  avant le m moire dont M. Bubl  a parl . De fait, nous avons envoy  40 exemplaires   M. J. H. Bennett. Celui que vous avez, a rejoint M. Bennett le 10 avril et il a re u la deuxi me partie le 11 ou le 12 avec une note lui demandant de les mettre ensemble. Il faudrait peut- tre que le gouvernement examine aussi le retard de la livraison postale. De toute fa on, apr s mon d part d'ici ce matin, je vous ferez parvenir 20 autres exemplaires.

La p che du saumon a une telle importance pour nous en Colombie-Britannique que nous avons pens  qu'il valait mieux avoir un sp cialiste de cette p che qui serait   votre disposition pour r pondre   vos questions. Ce que je vais faire maintenant c'est tout simplement r sumer le reste de notre m moire. Notre organisation qui est appel e *Fishing Vessel Owners' Association of British Columbia* est form e de propri taires et de semi-propri taires de bateaux qui n'ont aucun int r t financier dans les conserveries, les entrep ts frigorifiques ou les entreprises commerciales du genre. Nos bateaux, en g n ral, ceux qui appartiennent   nos membres sont les plus gros et les meilleurs sur la c te ouest et la valeur de tous les b timents dans l'Association se monte   15 millions de dollars environ.

Nous supposons qu'au cours de cette audience du Comit  des p ches, vous entendrez plusieurs critiques. Nous voudrions commencer par vous dire que s'il ne fait pas de doute que pour ce qui est des p cheurs de notre littoral, la situation pourrait  tre bien meilleure, de fa on g n rale, les membres de notre organisation voudraient f liciter le nouveau ministre des P ches et nous voudrions lui dire combien nous sommes heureux qu'il ait pris des mesures et qu'il prendra des mesures pour r soudre certaines des difficult s que nous avons.

Dans la p che au saumon pendant bien des ann es, nous avons eu un exc dent d' quipe-

[Text]

are particularly pleased to see a start on a salmon licence limitation program which we and I think every other organization in the industry on the west coast have advocated for a long time.

We are particularly pleased to note that the Minister has announced the intention of the federal government to buy up and retire old salmon vessels and that he will see to it that the large companies do not by 1970 own more than a small percentage of the salmon fleet. We have suggested this for many years. Of course everybody in the industry knows that the independent owner operates his vessel more efficiently and economically than a large company can possibly do.

We had a serious problem regarding what we felt was fraudulent misrepresentation to the public. The words "Greenland Halibut" were used to sell an inferior though by no means unpalatable type of fish produced on the east coast and known to most of us in the past as turbot.

We are appreciative of his interest in improving provisions with regard to fishermen's loans and extending the coverage available under the Fishermen's Indemnity Plan. I will say more about that later, if I may. Officers of the Department of Fisheries have told us that the Minister runs them off their feet and this is good and necessary in order to bring about a radical change.

Regarding improving conditions in connection with fishermen's loans, the Fisheries Improvement Loans Act was a complete anachronism until the Minister went to work on it. While the government would guarantee loans to fishermen under certain circumstances there was only provision in the Act for guaranteeing loans bearing interest at 5 per cent, and of course for many years nobody has been able to borrow money at 5 per cent.

The provision with regard to interest has been changed but the limit on these loans still remains at \$10,000. We are told that the Minister is considering an increase to \$25,000 but, in our opinion at any rate and in so far as our members are concerned, we feel it imperative that this limit should be raised to a minimum of \$50,000. As Mr. Bublé has already pointed out, expenses to our vessels, by and large big vessels, are considerable. Of course re-engining alone of one of our vessels can cost \$50,000—certainly far more than \$25,000.

[Interpretation]

ment et de bateaux et nous sommes très heureux de voir le plan de limitation des permis que nous et que chaque organisation de ce littoral a préconisé depuis longtemps.

Nous sommes surtout heureux de constater que le ministre a annoncé que le gouvernement fédéral avait l'intention d'acheter et de désaffecter les vieux bâtiments de pêche au saumon et qu'il fera en sorte que les grandes entreprises, dès 1970, ne détiennent qu'un faible pourcentage de la flotte de pêche au saumon. Nous avons suggéré cela depuis des années. D'ailleurs, tout le monde dans l'industrie sait que le propriétaire indépendant exploite son bateau d'une façon plus efficace et plus rentable que les grandes entreprises.

Nous avons eu des difficultés avec ce que nous estimions être une mauvaise représentation auprès du public. Sous le nom de flétan du Groenland, on vendait un genre de poisson de qualité inférieure, mais non immangeable, produit sur la côte est et connu par la plupart de nous par le passé sous le nom de turbots.

Nous sommes heureux de l'intérêt que le ministre y a manifesté à l'amélioration des conditions des emprunts aux pêcheurs et à l'expansion de la couverture disponible en vertu du Plan d'indemnisation des pêcheurs. J'en dirai plus à ce sujet plus tard, si vous le permettez. Les fonctionnaires du ministère des Pêches nous ont dit que le ministre les avait fait travailler durement et c'est excellent parce que nous aurons des changements radicaux.

A propos de l'amélioration des conditions concernant les dispositions, concernant les prêts aux pêcheurs, la Loi sur les prêts aux pêcheurs était un anachronisme complet jusqu'à ce que le ministre s'y attaque. Alors que le gouvernement garantissait des emprunts aux pêcheurs dans certaines circonstances, la Loi ne prévoyait qu'un taux d'intérêt de 5 p. 100, et naturellement, depuis bien des années, personne ne peut emprunter pour 5 p. 100.

Les dispositions concernant l'intérêt ont été modifiées, mais le plafonnement de ces emprunts reste à \$10,000. On nous dit que le ministre envisage de l'élever à \$25,000, mais à notre sens, de toute façon, pour ce qui est de nos membres, nous estimons qu'il est nécessaire d'élever ce plafonnement à \$50,000. Comme M. Bublé vous l'a déjà dit, les dépenses concernant nos bâtiments qui sont de gros bâtiments, de part et d'autre sont considérables. L'installation seule de nouvelles machines dans un de nos vaisseaux coûte beaucoup plus près de \$50,000 que de \$25,000.

[Texte]

I have summarized, gentlemen, to page 3 and, having handed out a few bouquets, let us now say that much remains to be done to make the owning of a fishing vessel on the west coast a sound, economic proposition.

Our members engage in every facet of the industry, generally speaking, which includes the salmon fishery, the halibut fishery, the trawl as opposed to troll, the trawl being a bottom fishery, the tuna fishery and, while there was one, our members engaged in the herring fishery here on the west coast. We have many members who built or bought vessels specifically for that fishery and they are faced with grave economic problems now. We have, I think I can state without any possibility of anyone contradicting me, overfished the herring on the west coast. This resource, which is and was administered by the federal government through the Department of Fisheries, has been permitted—I do not necessarily lay any blame for that—to become depleted to the extent where the Department has realized this and banned all commercial herring fishing for 1968-69 and indicated the probability of no fishing until 1971-72 and possibly later.

“Probably” later, I think I may say now. In the meantime our herring seine vessels which have fished eight or nine months of the year prior to this depletion of the resource have no income at all from herring fishing. Now if we are to lay blame for this depletion, while the proximate cause is undoubtedly the fishermen fishing too hard and too well management was in the hands of the federal government, and of course if the federal government says, “Go ahead and catch a quarter of a million tons” the fishermen will go out and try to do it. It seems to us that now the government should do something to assist these vessel owners who are faced with economic ruin.

I set out on page 4 some figures that are representative. The first one I take on page 4 is actually the smallest investment in our organization in such a boat. The figures shown are those for 1967. His operating expenses were approximately \$7,800, the interest he paid on the mortgage was a little over \$4,000, all of which totals almost \$12,000.

The Chairman: Mr. Cameron, as every member has a copy of the brief I would ask that you make your remarks as brief as possible.

Mr. Cameron: Certainly, Mr. Chairman. You will see the first set of figures on page 4 represents a loss for the last year this vessel

[Interprétation]

J'en suis à la page 3, messieurs et ayant lancé quelques compliments, je tiens à dire qu'il reste beaucoup à faire pour que les propriétaires d'un bâtiment de pêche sur la côte ouest aient une exploitation rentable.

Généralement, nos membres font la pêche de tout, la pêche au saumon, au flétan, la pêche au chalut par opposition aux lignes de fond, la pêche au thon et, lorsqu'elle existait, la pêche au hareng sur la Côte ouest. Un grand nombre de nos membres ont acheté ou construit des bateaux tout spécialement conçus pour la pêche au hareng et ils ont de grandes difficultés économiques à l'heure actuelle. Nous avons, et je puis le dire sans que personne ne puisse le contester, trop pêché le hareng. On a permis, et je ne blâme personne pour cela, que cette ressource qui est et qui était gérée par le gouvernement fédéral par l'entremise du ministère des pêches devienne épuisée jusqu'au point où le ministère s'en est rendu compte et a interdit toute la pêche du hareng pour 1968-1969 et a indiqué que probablement la pêche resterait interdite jusqu'en 1971-1972 et peut-être plus tard.

Je crois pouvoir dire maintenant que ce sera plus tard «probablement». Entre-temps, nos senneurs au hareng qui ont pêché pendant huit ou neuf mois avant cet épuisement de la ressource, ne reçoivent aucune recette de la pêche du hareng. Maintenant, s'il faut blâmer quelqu'un pour cet épuisement, alors que la cause approximative est sans doute que les pêcheurs ont trop pêché, la gestion appartenait au gouvernement fédéral, et bien entendu, si le gouvernement fédéral dit: «Allez et prenez un demi-million de tonnes» le pêcheur le fera ou essaiera de le faire. Il nous semble maintenant que le gouvernement devrait faire quelque chose pour aider les propriétaires de bateaux et les empêcher de faire faillite.

Je donne à la page 4 quelques chiffres qui montrent la situation des pêcheurs et je prends tout d'abord à la page 4, les petits investissements dans les bateaux et l'équipement. Les chiffres donnés se rapportent à 1967. Ses frais d'exploitation ont été d'environ \$7,800, l'intérêt sur l'emprunt hypothécaire qu'il a payé était d'un peu plus de \$4,000, soit un total de près de \$12,000.

Le président: Monsieur Cameron, étant donné que tous les membres ont un exemplaire de votre mémoire, je vous demanderais d'être aussi bref que possible.

M. Cameron: Certainement, monsieur le président. Vous verrez que la première série de chiffres à la page 4 représente une perte

[Text]

fished of over \$4,000. The next set of figures is a mean taken from the largest herring vessels and while of course one can do anything with figures, practically speaking, this shows by a pretty simple accounting procedure how these vessels lost \$23,000-odd.

I will go on to page 5, if I may. These vessels, as I say, could be converted to the trawl fishery but that fishery is in poor condition right now and needs \$20,000 to \$30,000 to do this. Some of our vessels have gone to the east coast. I hope we do not in five years' time see a similar situation there.

The salmon fishery has already been covered by Mr. Bublé.

We have a few members that engage in the trawl fishery. These are the ones who are bothered, at any rate on our coast, by foreign fleets. Headland to headland baselines will do much to assist them. We mention dogfish on page 5 and, as I believe Mr. Whelan has already mentioned, in the *Vancouver Province* this morning is a report of what the Minister hopes to do with the Japanese.

We have no definite position on that. The dangers inherent in inviting the Japanese into our waters are obvious, but so long as any properly policed system is arrived at for decimating or reducing absolutely the dogfish this would be beneficial. Of course if benefits to Canadian fishermen directly by income from the catching of this predator can be achieved, and of course we would be in favour of that.

I move on to the middle of page 6, where there is a reference to marine insurance. We are very concerned about this.

There is in existence the Fishermen's Indemnity Plan operated by the federal government, which is a type of insurance limited to 75 per cent of the value of vessels having an appraised value of \$25,000 or less. Very few of our members, perhaps only one or two, qualify for this plan in which the premiums are certainly low—only 2 per cent. Some of our members are currently paying as high as 10 per cent of the insured value of their vessel in insurance premiums; and for your consideration I set out on page 6 another one of our vessels, having a current value of \$60,000 paying a premium of \$6,000, and the gross earnings of which for 1968 were \$6,100. He had \$100 left which to pay all his maintenance expenses and the boat's living, after paying his insurance premiums. The fol-

[Interpretation]

de plus de \$4,000 pour la dernière année de pêche de ce bâtiment. La série de chiffres suivante est une moyenne prise des plus grands bateaux de pêche au hareng et alors que, bien entendu, on puisse manipuler les chiffres comme on veut, à bien parler, ceci montre par un simple calcul de comptabilité que la perte de ces bateaux est d'environ \$23,000.

Je passe à la page 5 maintenant. Ces bateaux, comme je l'ai dit, peuvent être convertis pour la pêche au chalut. Mais cette pêche est en piètre condition présentement et il faut de \$20,000 à \$30,000 pour le faire. Certains de ces bateaux se sont rendus sur la côte orientale. J'espère que d'ici cinq ans, ils ne se retrouveront pas dans la même situation.

La pêche au saumon a déjà été couverte par M. Bublé.

Nous avons de nos membres qui font de la pêche au chalut. Ils sont ceux qui sont ennuyés, du moins sur notre côte, par les flottes de pêche étrangères. Les lignes de base de cap en cap les aideront beaucoup. Nous mentionnons le chien de mer à la page 5 et, comme je crois que M. Whelan l'a déjà dit, dans le *Vancouver Province* ce matin, on trouve un rapport de ce que le ministre espère pouvoir réaliser avec les Japonais.

Nous n'avons pas une prise de position définitive à ce sujet. Les dangers inhérents à inviter les Japonais dans nos eaux sont manifestes, mais aussi longtemps que l'on peut conclure un accord pour décimer et diminuer la population des chiens de mer et qu'on puisse surveiller cette pêche, ce serait profitable. Je passe maintenant au milieu de la page 6, où il est question d'assurance maritime. Cette question est d'un intérêt primordial pour nous. Il existe le Régime d'indemnité aux pêcheurs administré par le gouvernement fédéral qui est une forme d'assurance se limitant à 75 p. 100 de la valeur des navires ayant une évaluation de \$25,000 ou moins. Très peu de nos membres ou à peine quelques-uns étaient admissibles à ce régime dont les primes sont vraiment peu élevées, 2 p. 100 seulement. Certains de nos membres paient jusqu'à 10 p. 100 de la valeur assurée de leur bateau et des primes très élevées, et à votre intention, je cite en page 6 le cas d'un de nos bateaux valant \$60,000 sur le marché actuel qui paie une prime de \$6,000 et dont les recettes brutes ont été de \$6,100. Cela laissait \$100 pour payer les frais d'entretien et de subsistance après l'acquittement de la prime d'assurances.

[Texte]

lowing year he said, in effect, "To heck with it," and did not go out.

We have here in Vancouver a Co-Operative Marine insurance company which operates with considerable success and at very low rates, but the company is highly selective—one accident and you are out. Although that is a bit of an exaggeration, generally speaking that is the way it works.

We need something to take up the slack. We have had meetings with the Department and we know that the Department of Fisheries is studying the situation. We trust that something will be done.

On the 12-mile limit, Mr. Davis announces things, as soon as I get them written down, but we hope that legislation will be passed—and quickly—drawing these baselines from headland to headland.

At the bottom of page 7 we mention the difficulty our vessels have in trying up in Vancouver. Although we do have a scheme, recently implemented, where by *bona fide* fishing vessels can pre-empt space in False Creek Fishermen's terminal, the problem is acute, and all encouragement should be given to the National Harbours Board to provide more facilities to overcome this difficulty faced by fishermen. Perhaps this might tie in with Marathon Realities plan for False Creek.

On page 8 we suggest that the federal government enter the advertising business and make Canada into a fish-eating nation. Fish is good and healthful, and if everybody eats it it is good for the industry.

Thank you, gentlemen.

The Chairman: Thank you, Mr. Cameron.

Mr. Howard (Skeena): Mr. Chairman, relative to our procedure, may I make a suggestion? The number of briefs that are being presented to us is getting larger as we go on. Could we not establish a practice for the future—and the witnesses who are here will know of it and will prepare accordingly—that the members take the trouble of reading the briefs beforehand so that we are familiar with them. We can then proceed either directly into questions, or, if the witness so desires, he may make a summary of it. If we do not do that I can see us sitting here until midnight and still not completing our activities.

[Interprétation]

L'année suivante il a dit effectivement: «Au diable, ça ne vaut pas la peine» et il n'a pris le large. Nous avons ici à Vancouver, une compagnie d'assurance maritime coopérative qui remporte beaucoup de succès en demandant des primes très basses, mais la compagnie est très sévère dans le choix de ses risques.

Même s'il y a un peu d'exagération, en général c'est ce qui se passe. Nous avons besoin de quelque chose pour nous venir en aide. Nous avons eu des entretiens avec les services du ministère. Nous savons que le ministère des Pêches et Forêts étudie la question. Nous espérons qu'il fera quelque chose.

Au sujet de la zone de 12 milles, M. Davis a exposé des plans dès que nous les aurons mis par écrit, nous espérons que cette loi sera adoptée, et très rapidement, et que la ligne des limites sera établie de cap en cap. Au bas de la page 7, il est question des difficultés auxquelles font face nos bateaux mouillant à Vancouver, et bien que nous ayons un plan, mis en vigueur récemment, qui permet aux bateaux de pêche indépendants de se réserver une place au débarcadère des pêcheurs de False Creek. Le problème est aigu et on devrait inciter le Conseil des Ports nationaux par tous les moyens possibles à nous fournir plus de moyens de remédier à cette difficulté que rencontrent les pêcheurs. Ceci s'imbriquerait peut-être au projet de Marathon Realities, en ce qui a trait à False Creek. À la page 8, nous disons que le gouvernement fédéral devrait se lancer dans le domaine de la publicité, et transformer le Canada en un pays consommateur de poisson. Le poisson est une nourriture excellente pour la santé, et si tout le monde en mange, c'est très bon pour l'industrie du poisson. Merci, messieurs.

Le président: Merci, monsieur Cameron.

M. Howard (Skeena): Maintenant, pour ce qui est de la procédure à suivre, est-ce que je pourrais faire une suggestion? Le nombre des mémoires qu'on nous présente s'accroît à mesure que nous avançons, je me demande si nous ne pourrions pas fixer une règle pour l'avenir et les témoins qui sont ici présents la connaîtraient et se prépareraient en conséquence. Il faudrait que les membres du Comité se donnent la peine de lire au préalable, les mémoires afin d'en connaître le contenu. Nous pourrions alors procéder directement aux questions soit par des séances qui se poursuivraient jusqu'à minuit, ou, si le témoin le veut bien, il rédige un résumé. Autrement je ne vois pas comment nous

[Text]

The Chairman: Yes, Mr. Howard...

Mr. Noble: Mr. Chairman, may I make a further suggestion? There are 18 briefs on the table. If they each take 10 minutes that is three hours. Could we not cut it down to five minutes each?

The Chairman: If the Committee is in agreement.

Mr. St. Pierre: Mr. Chairman, further on the same point, could we have it made clear to us who will be appearing today, and in what order? Again, we have so many briefs that the Committee should know which we should be reading.

The Chairman: In the order that I have them here, the first one is the one on the table now, that of the Fishing Vessel Owners' Association. We have it set down for 10.30. Then I have Mr. Stevens, UFAWU. At 2.30 this afternoon we will have Gulf and Fraser Fishermen's Credit Union and then Fraser River Locals and Fraser River and District Council, UFAWU, followed by Balloon Transport Ltd.

Mr. St. Pierre: We will not hear the main brief from the UFAWU today, then?

The Chairman: I do not think so.

Mr. St. Pierre: Thank you.

The Chairman: Then the Committee is in agreement that the restriction to be five minutes instead of 10. Our next questioner is Mr. Lundrigan.

Mr. Lundrigan: The first one on 5 minutes! This seems to be sabotage! I have to be very quick now.

Could Mr. Cameron explain what he meant by the inferior quality of turbot? I am referring to his statement on the fraudulent advertising received last year. What do you mean by "inferior quality?"

Mr. Cameron: Halibut, I am advised, is plentiful in polyunsaturated fats. Turbot is a mushy fish which, I am again advised, lacks healthful properties foodwise. It is what is known technically as, I think, Hippoglossus stenolepis on this coast, and Hippoglossus hippoglossus on the east coast. It is a fatty, mushy, dirty-looking, yellowish fish. For those members of the Committee who have

[Interpretation]

pourrions siéger jusqu'à minuit sans même être capables de terminer notre travail.

Le président: Oui, M. Howard.

M. Noble: Puis-je faire une autre suggestion? Il y a 18 mémoires sur la table. Si chacun retranche 10 minutes nous aurons gagné 3 heures. Ne pourrions-nous pas réduire le temps à 5 minutes chacun?

Le président: Si le Comité est d'accord.

M. Saint-Pierre: De plus, monsieur le président, j'enchaîne sur le même sujet. Ne pourrait-on pas savoir exactement quels sont les témoins qui comparaitront aujourd'hui et dans quel ordre? Nous avons tant de mémoires à lire, que nous ne savons plus lesquels nous devrions lire.

Le président: Eh bien, dans l'ordre où ils sont disposés. Le premier est celui qui se trouve présentement sur la table, celui de l'Association des propriétaires de bateaux de pêche. Nous l'avons réservé pour 10h30. Ensuite, j'ai M. Stevens de l'UFAWU. A 2h.30 cet après-midi nous avons Gulf et Fraser Fisherman's Credit Union, et ensuite les locales syndicales du Fraser et le conseil du district du Fraser de l'UFAWU. Balloon Transport sera le suivant.

M. Saint-Pierre: Alors nous n'entendrons pas le principal mémoire du Syndicat des pêcheurs, aujourd'hui?

Le président: Je ne crois pas.

M. St-Pierre: Merci.

Le président: Alors le Comité est d'accord pour réduire le 10 minutes à 5 minutes. Monsieur Lundrigan.

M. Lundrigan: Le premier député est limité à 5 minutes! Il me faudra aller très vite. M. Cameron pourrait-il expliquer ce qu'il entendait par du turbot de qualité inférieure? Je me reporte à la déclaration sur la publicité frauduleuse qui a été faite l'an dernier. Qu'est-ce que vous voulez dire par qualité inférieure?

M. Cameron: Le flétan me dit-on est un poisson qui a beaucoup d'huile poly-insaturé, tandis que le turbot est un poisson qui est dépourvu de ces propriétés bénéfiques pour la santé. Son nom scientifique est je crois l'hippoglossus stenolepis sur cette côte-ci et l'hippoglossus hippoglossus sur la côte est, qui présente un aspect sale, jaunâtre. Pour les membres du comité qui ont des connaissances

[Texte]

some scientific background—and I have not—it is known as Reinhardtius Hippoglossoides.

Mr. Lundrigan: Thank you for the classical description, but I was just seeking the professional reason for your value-laden choice of terminology.

Thank you, Mr. Chairman. I will move on to my next question because I have only five minutes.

Could the first witness give me an indication of the net income of the seiners as compared with the gill netters?

Mr. Bublé: I could not say offhand.

Mr. Lundrigan: I just want an estimate; not a statistical, scientific...

Mr. Bublé: It would take me a little time, but I could find out as much as possible for you from the Department of Fisheries.

Mr. Lundrigan: Could you give me an estimate on whether the seiner is making much less money, or much more?

Mr. Bublé: I would say it is quite close. You have to remember that in the seine procedure the crew members get seven-elevenths of the catch and four-elevenths go to the boat. In the case of a gill net boat; it is a troller, and all the income goes toward the boat, to offset expenses. It would be quite difficult to figure out which makes the most.

Mr. Lundrigan: You have indicated that they are pretty close, but could you give me an indication, as a skipper, of the average net income of a person involved in the type of work in which you are now involved? What would be your average net income? I do not mean you, particularly, but the average successful seiner?

Mr. Bublé: Do you mean as a crew member—what a crew member makes?

Mr. Lundrigan: Yes; crew members and the skipper—very roughly.

Mr. Bublé: In the 1968 season, which was one of the best we have had in salmon for a long time, I would say the average crew member on a seiner must have made between \$4,500 and \$5,000 for that three-month fishing period.

Mr. Lundrigan: For three months?

Mr. Bublé: Yes.

Mr. Lundrigan: And the skipper?

[Interprétation]

scientifiques, moi-même je n'en ai pas, son nom est le Reinhardtius hippoglossoides.

M. Lundrigan: Merci pour la description classique mais je cherchais la raison professionnelle pour le choix précieux de votre terminologie. Merci M. le président. Je passe à la question suivante vu que je ne dispose que de 5 minutes. Est-ce que le premier témoin pourrait me donner une idée du revenu net des pêcheurs à la seine en comparaison des pêcheurs au filet maillant.

M. Bublé: Je ne pourrais le dire comme ça.

M. Lundrigan: Seulement une estimation sans statistiques scientifiques.

M. Bublé: Cela prendrait un peu de temps, je pourrais me renseigner le mieux possible pour vous en m'adressant au ministère des Pêches et Forêts.

M. Lundrigan: Pouvez-vous me donner une petite idée? Est-ce que les pêcheurs à la seine gagnent beaucoup moins ou beaucoup plus?

M. Bublé: Le revenu est à peu près le même. Il faut se souvenir qu'à la pêche à la seine les membres de l'équipage reçoivent 7/11 de la prise et 4/11 va au propriétaire du bateau. Le chalutier à filet maillant peut réduire ses frais, donc c'est assez difficile de calculer qui gagne le plus.

M. Lundrigan: Vous m'avez dit que les revenus se ressemblaient mais en tant que patron d'un bateau, pouvez-vous me dire à peu près quel est le revenu net moyen d'une personne qui fait ce genre de travail dans lequel vous œuvrez en ce moment. Quel serait votre revenu net moyen? Je ne veux pas dire le vôtre en particulier, mais celui du pêcheur à la seine moyen qui réussit.

M. Bublé: Voulez-vous dire un membre d'équipage?

M. Lundrigan: Oui, les membres de l'équipage et le patron?

M. Bublé: En 1968, une des meilleures saisons que nous ayons eues pour le saumon, depuis longtemps je crois que chaque membre de l'équipage d'un bateau de pêche à la seine a dû gagner de \$4,500 à \$5,000 pour la saison de pêche de trois mois.

M. Lundrigan: Pour trois mois?

M. Bublé: Oui.

M. Lundrigan: Et le patron?

[Text]

Mr. Bublé: The skipper would make one and a half times that. He would make about \$7,000, if he did not own the boat.

Mr. Lundrigan: Mr. Chairman, I could continue on that subject for quite some time, but this is my last question. Can either of the witnesses give us some specific indication of how the present federal loan arrangements can be improved? I do not mean in relation to the total value, but in order to allow the fisherman to avail himself of this money. I believe the first witness indicated that at the moment, even when the banks are being permitted to loan money, they have to depend on different sources for the availability of funds, namely, the canneries, and so on. Could you indicate some ways in which money could be more readily made available, aside from improvements in the structures and the total value of loans, and so on?

Mr. Cameron: The Fisheries Improvement Loans Act contains the machinery for this. It is a matter of extending the amounts which the fishermen can borrow. So long as it is at meaningful interest rates, of course, the banks will naturally be very happy to lend the money, knowing that it is guaranteed by the federal government. If it is possible, of course, to lend money to a primary industry such as this at interest rates lower than the current rate, so much the better from the point of view of the fishermen. This would mean new legislation.

Mr. Lundrigan: Is there not a contradiction there? Our first witness indicated that the banks are not all that eager to lend the money, even with the present structure, as you have indicated.

Mr. Cameron: No; the industry on the west coast has built up, of course, with money advanced, to a large extent, by the large fishing companies. This is natural when one considers that these companies are interested in production. If a man showed that he was likely to be able to produce, in many cases the companies would advance money—secured, of course—to enable him to buy a boat in which initially he had very little equity.

In this way the companies have, we feel, exercised an immense amount of control over the industry. This may not be wholly bad, but things could be improved if the fishermen were more independent.

The Chairman: Mr. Lundrigan, have you finished? We will now move to Mr. Comeau.

[Interpretation]

M. Bublé: Le patron gagne la moitié de ce montant en surplus. Il gagnerait à peu près \$7,000 s'il n'était pas propriétaire du bateau.

M. Lundrigan: Je pourrais parler sur ce sujet pendant longtemps, mais je pose ma dernière question. Est-ce que les témoins pourraient nous dire de façon précise comment on peut améliorer les présentes dispositions régissant les prêts du gouvernement fédéral aux pêcheurs. Je ne veux pas dire par rapport à la valeur totale, mais pour permettre au pêcheur lui-même de profiter de cet argent. Je crois que le premier témoin a mentionné qu'en ce moment, même lorsque les banques ont la permission de prêter de l'argent, ils doivent s'en remettre à des sources diverses pour obtenir de l'argent, notamment aux conserveries et à d'autres sources. Pouvez-vous m'indiquer des moyens par lesquels la disponibilité de l'argent pourrait être améliorée, à part les améliorations de structures et du total des prêts?

M. Cameron: La Loi sur les prêts aux pêcheurs canadiens prévoit des dispositifs à cette fin. Il s'agit d'augmenter les montants qu'un pêcheur peut emprunter. Tant que ce sera à des taux d'intérêt qui auront du sens, les banques prêteront naturellement avec plaisir sachant que l'argent est garanti par le gouvernement fédéral. S'il est possible naturellement de prêter de l'argent à une industrie primaire comme celle là, à des taux d'intérêt inférieurs au taux courant, tant mieux, du point de vue des pêcheurs. Pour cela, il faudrait une nouvelle loi.

M. Lundrigan: N'y a-t-il pas une contradiction là dedans? Le premier témoin a dit que les banques ne tenaient pas tellement à prêter de l'argent, même avec la structure actuelle, comme vous l'avez mentionné.

M. Cameron: Non. L'industrie de la côte de l'Ouest s'est formée avec l'argent avancé, dans une grande mesure, par les grandes entreprises de pêche. C'est naturel quand on considère que ces compagnies s'intéressent à la production. Si une personne a démontré qu'il a vraisemblablement la capacité de produire, dans plusieurs cas les compagnies avanceraient de l'argent, contre garantie évidemment, pour lui permettre d'acheter un bateau. De cette façon, les compagnies ont à notre avis exercé un contrôle considérable sur l'industrie. Ce n'est peut-être pas entièrement une mauvaise chose, mais les conditions pourraient s'améliorer si les pêcheurs étaient plus indépendants.

Le président: C'est tout M. Lundrigan? Monsieur Comeau.

[Texte]

Mr. Comeau: Thank you, Mr. Chairman.

Relative to the briefs, how do you feel that the Department of Fisheries can guard against a monopoly by a large company in the ownership of vessels, and so on?

Mr. Cameron: Mr. Davis has said, of course, that if he finds some company is buying up large numbers of class "A" salmon vessels he is going to get on the telephone to the president of that company and tell him not to. I think it requires something a little stiffer than that.

We have suggested from time to time that the larger fishing companies be absolutely prohibited from owning any interest whatsoever in fishing vessels. We feel, in fact I think I can say we know, that the cost of maintaining their own fishing vessels comes out of the price of fish. It has got to eventually if they are going to make any profits.

There is no doubt that the independent owner, working all hours of the day and night when he is not out fishing—at no cost, of course, except to his own health—keeps up his own vessel much more cheaply than can the companies, which have to pay wages for everything that is done to a vessel.

Mr. Comeau: We have the same problem, you know, in the lobster fishery on the east coast. The Minister has said the same thing about the lobster industry. Can he really control this? How do you suggest he should do it? A telephone call is very easy to make and it is very easy for a company to bluff and to make arrangements to have the boat not under their name but in the names of various other people. I can have a house under my wife's name and a car under my son's, and so on. The same thing could happen here. How do you feel this could be presented?

Mr. Cameron: If the penalty is made stiff enough then eventually I think the problem will cease to exist, as there are more and more prosecutions. I know of no other way of enforcing legislation than by making it punitive.

Mr. Comeau: Thank you, Mr. Chairman. I now go on to the subject of the herring fisheries. How do you feel that the depletion has been caused? Could legislation have been introduced to prevent it?

Mr. Cameron: Undoubtedly it could. Had we not taken as much herring out, presumably—and I say presumably because nobody

[Interprétation]

M. Comeau: Merci, monsieur le président. En lisant les mémoires, comment croyez-vous que le ministère des Pêches puisse empêcher un monopole constitué par une grande compagnie qui est propriétaire de navires, etc.

M. Cameron: M. Davis a dit, évidemment, que s'il se trouvait qu'une compagnie achetait beaucoup de navires de la Classe A pour la pêche au saumon il demanderait à la compagnie de ne pas le faire. Il me semble qu'il faudrait des mesures un petit peu plus rigides que cela. Nous avons proposé de temps à autre que les grandes compagnies soient empêchées tout à fait d'avoir des bateaux de pêche, d'être propriétaires de titres quels qu'ils soient dans des navires de pêche. Nous croyons, en fait je crois pouvoir dire que nous savons que les frais d'entretien de leurs propres navires de pêche sont prélevés sur le prix du poisson. C'est inévitable si elles veulent réaliser un profit. Le propriétaire indépendant travaille du matin au soir, évidemment à toute heure, quand il n'est pas en mer à faire la pêche sans frais, naturellement, sauf pour sa santé. Il entretient son propre bateau et il lui en coûte beaucoup moins qu'aux compagnies qui doivent payer des salaires pour tout ce qui se fait sur un navire.

M. Comeau: Nous connaissons le même problème pour la pêche au homard sur les côtes de l'Est. Le ministre a dit exactement la même chose pour cette industrie. Peut-il véritablement contrôler la situation? Comment, à votre avis, devrait-il procéder? Il est très facile de donner un coup de téléphone et il est très facile pour une compagnie de jeter de la poudre aux yeux et de prendre des dispositions pour que le bateau ne soit pas immatriculé à son nom mais par l'entremise d'autres personnes. Ma maison peut être au nom de ma femme et mon auto au nom de mon fils, et ainsi de suite. La même chose pourrait se produire ici. Comment peut-on prévenir cela, à votre avis?

M. Cameron: Si on impose des amendes assez sévères, je pense qu'éventuellement, le problème disparaîtra, avec l'escalade des poursuites. Je ne connais pas d'autre façon de faire respecter la loi autrement qu'en la rendant primitive.

M. Comeau: Merci, monsieur le président. Je passe maintenant à la pêche au hareng. Quelle est, selon vous, la raison de son dépeuplement? Aurait-on pu passer des lois pour prévenir cet état de choses?

M. Cameron: Certainement, c'était possible. Si on n'avait pas pêché autant de hareng, on peut présumer—je dis «présumer» parce que

[Text]

really knows—there still would be a viable fishery on the west coast. It is lack of knowledge. I do not blame the Department of Fisheries for that, necessarily, because perhaps the finances have not been available for making a sufficient study of the west coast herring. Nobody really knows the answer.

Mr. Comeau: How can we prevent the same thing happening on the east coast? You must have studied this a little. We have the same problem, or we might run into it in five years' time. It is a valuable industry in our area.

Mr. Cameron: We must, of course, ask the biological experts within the Department of Fisheries if they require more money to study the question and find where these stocks come from and if, and to what extent, they are being reduced. I suppose Parliament will have to provide more money. But it is a question for biologists and scientists.

Mr. Comeau: Mr. Bubl , what would be the average size of your boats? On page 4 you mention an investment in boat and gear of \$60,000. What would be the size of this boat and would this be an average value of all boats in all fisheries that you have here?

Mr. Cameron: No, sir; this reference on page 4 is specifically to the herring fleet. I would be hard put to it to give you an average value on the salmon fleet. I would say it might be a little lower—perhaps \$55,000 or so. Typically, this would be a drum seiner of about 45 feet or so, 10 to 15 years old.

Mr. Comeau: Has my time expired, Mr. Chairman?

The Chairman: Your time is up, Mr. Comeau.

Before I go to the next questioner may I ask members to try as much as possible to avoid duplication of questions. Mr. Cyr?

M. Cyr: Monsieur le pr sident, j'aimerais poser mes questions en fran ais, peut- tre que le t moin pourrait-il se servir de l' couteur?

M. Cameron: Si vous parlez lentement monsieur, peut- tre pourrais-je comprendre.

M. Cyr: C'est bien, monsieur Cameron. F licitations.

[Interpretation]

personne ne le sait v ritablement—la p che serait encore rentable sur la c te ouest. Le manque de connaissances en est la cause. Je ne bl me pas n cessairement le minist re des P ches pour cet  tat de choses, parce qu'il n'avait peut- tre pas suffisamment de fonds   sa disposition pour entreprendre des  tudes assez pouss es sur le hareng de la c te ouest. Personne ne d tient la r ponse.

M. Comeau: Comment pouvons-nous emp cher que la m me chose ne se produise sur la c te est. Vous avez d   tudier quelque peu la question. Nous avons le m me probl me, ou nous aurons peut- tre   y faire face dans 5 ans—c'est une industrie pr cieuse pour notre industrie.

M. Cameron: Eh bien,  videmment, il faut demander aux biologistes experts du minist re des P cheries s'ils ont besoin de plus d'argent pour  tudier la question, pour voir d'o  viennent les stocks, jusqu'  quel point on les d peuple. Je suppose que l' tat devra d bourser plus d'argent. C'est une question qui rel ve des scientifiques et des biologistes.

M. Comeau: M. Bubl , quelles seraient les dimensions moyennes de vos bateaux? A la page 4 de votre m moire, je crois, vous nous parlez d'une mise de fonds de \$60,000 pour un bateau et son appareillage. Quelles seraient les dimensions de ce bateau et serait-ce l  la valeur moyenne de tous les bateaux dans tous les genres de p che qui se pratiquent ici?

M. Cameron: Non, monsieur. A la page 4, il s'agit sp cifiquement de la flotte de p che au hareng. Il ne serait pas facile de vous donner la valeur moyenne des bateaux qui composent la flotte de la p che au saumon. Peut- tre serait-ce aux environs de \$55,000. Quant   la description, ce serait un bateau de p che   la senne   tambour d'environ 45 pieds, vieux de 10   15 ans.

M. Comeau: Mon temps est-il expir , monsieur le pr sident?

Le pr sident: Oui, monsieur Comeau. Avant de donner la parole   un autre, je demanderais aux membres du Comit  d'essayer autant que possible d' viter de poser les m mes questions. Monsieur Cyr?

Mr. Cyr: Mr. Chairman, I would like to ask my questions in French, so would the witness care to use the earphones?

Mr. Cameron: If you speak slowly, maybe I will be able to follow you.

Mr. Cyr: Fine, Mr. Cameron, I congratulate you.

[Texte]

Monsieur le président, j'aimerais demander à M. Cameron combien il y a de membres dans son Association?

M. Cameron: Il y en a 150, monsieur.

M. Cyr: Y a-t-il augmentation ou diminution comparativement aux années 1967 ou 1968?

M. Cameron: Ah, la même chose, je pense. La même chose.

M. Cyr: Depuis quand votre Association existe-t-elle? En quelle année fut-elle fondée?

M. Cameron: Depuis 1930.

M. Cyr: 1930. Avez-vous plusieurs pêcheurs sportifs qui sont passés de la pêche sportive à la pêche commerciale au cours des dix dernières années?

M. Cameron: Non, non.

M. Cyr: Maintenant, dans votre mémoire, vous mentionnez que quelques pêcheurs de hareng de la côte du Pacifique sont rendus dans le golfe Saint-Laurent pour y faire cette pêche; sont-ils tout de même demeurés membres de votre Association?

M. Cameron: Oui, monsieur.

M. Cyr: Vous ont-ils dit qu'ils étaient satisfaits des prix? Est-ce qu'ils bouclent leur budget?

M. Cameron: Ils le sont assez, oui.

M. Cyr: Lorsque vous demandez de l'aide du gouvernement fédéral pour subventionner les réparations ou aider à payer les dépenses, avez-vous constaté, au cours des dernières années, qu'il y avait eu une augmentation assez prononcée du coût de réparations de vos bateaux dans les chantiers maritimes?

M. Cameron: Oui, vraiment, nous l'avons constaté.

M. Cyr: Et puis, y a-t-il eu aussi augmentation dans le coût des agrès de pêche?

M. Cameron: Oui, c'est la même chose.

M. Cyr: C'est la même chose. Voici ce qui se passe dans l'Est. Lorsque les gouvernements, soit fédéral ou provincial, aident le pêcheur ou le propriétaire de bateau, il semble que immédiatement, nos pêcheurs se plaignent que les chantiers maritimes et les manufacturiers d'agrès de pêche augmentent leurs prix et alors, ce sont eux qui bénéficient le plus de ces subventions. Avez-vous constaté la même chose ici, sur la côte du Pacifique?

[Interprétation]

Mr. Chairman, I would like to ask Mr. Cameron, how many members there are in his Association?

Mr. Cameron: One hundred and fifty, sir.

Mr. Cyr: Is that an increase or a decrease compared to the year 1967 or 1968?

Mr. Cameron: It is about the same, I think.

Mr. Cyr: How long has your Association been in existence. When was it established?

Mr. Cameron: In 1930.

Mr. Cyr: 1930. Do have a lot of sportsmen who have gone from sport fishing to commercial fishing in the last 10 years?

Mr. Cameron: No.

Mr. Cyr: In your brief you mention that there are some herring fishermen from the Pacific coast who have gone to the Gulf of St. Lawrence to fish herring. Are they still members of your Association?

Mr. Cameron: Yes, they are.

Mr. Cyr: Have they told you whether they were satisfied with the prices. Can they meet their expenses?

Mr. Cameron: Yes, they are fairly well satisfied.

Mr. Cyr: When you ask for assistance from the federal government to subsidize repairs or to help cover the costs, have you noticed that in the last few years there has been a fairly large increase in the cost of repairs in the shipyards for your boats?

Mr. Cameron: Yes, we have actually noticed that.

Mr. Cyr: Has there also been an increase in the cost of fishing equipment?

Mr. Cameron: Yes. It's the same thing.

Mr. Cyr: It's the same thing. Now, this is what happens in the East. When governments, whether provincial or federal, give assistance to fishermen or boat owners, it would seem that our fishermen immediately complain that shipyards and the manufacturers of fishing gear increase their prices and they are the ones who benefit most from the subsidies. Have you found the same thing here on the Pacific coast?

[Text]

M. Cameron: Oui, monsieur.

M. Cyr: Votre Association a-t-elle fait des pressions auprès de ces manufacturiers ou auprès de ces chantiers maritimes, afin qu'ils coopèrent beaucoup plus avec les pêcheurs ou les propriétaires de bateaux pour que ceux-ci ne se sentent pas toujours obligés d'avoir recours à l'État pour l'obtention de subventions? Vous arrive-t-il parfois de rencontrer ces manufacturiers ou propriétaires de chantiers maritimes?

M. Cameron: Nous avons fait cela constamment, monsieur, mais c'est très difficile pour nous. C'est très difficile.

M. Cyr: Je crois, monsieur le président, que ça suffit. Merci, monsieur Cameron.

Le président: Merci, monsieur Cyr. Monsieur Borrie.

Mr. Borrie: I will by-pass this witness, Mr. Chairman, because my question would be a duplication.

The Chairman: Mr. Hogarth.

Mr. Hogarth: I would like to ask the first witness some questions, if I may.

I am somewhat concerned with your suggestion that the salmon derbies that are conducted on the coast are so damaging to the commercial fishing interests, and I would like to explore that a bit, if I may.

First of all, why do you distinguish, from the point of view of damaging the industry, between the Vancouver *Sun* salmon derby and the ones that take on a more commercial flavour?

Mr. Douglas: Well, there is a difference between a Vancouver *Sun* derby and the other professional commercial derbies, I would say.

Mr. Hogarth: From the point of view of the conservation of the fish for the commercial fishermen, is there any difference?

Mr. Douglas: Well, I would not say there is any difference as far as conservation goes because in any derby sportsmen or fishermen would like to get the largest fish possible and naturally they throw the smaller ones away. And as Mr. Rose said, he puts his under the seat. But I am quite sure that many of the fish go in the water.

Mr. Hogarth: On what basis do you make that allegation? My experience has been that any fish caught in a derby is usually taken home and boasted about, if not eaten.

[Interpretation]

Mr. Cameron: Yes, sir.

Mr. Cyr: Has your Association brought pressure to bear on these manufacturers or these shipyards so that they would co-operate more with the fishermen or the shipowners so that the latter are not always obliged to turn to the State for subsidies? Do you ever meet these manufacturers or shipyard owners?

Mr. Cameron: Yes, we have done so all the time, but it is extremely difficult for us.

Mr. Cyr: Mr. Chairman, I think that will be all. Thank you, Mr. Cameron.

The Chairman: Thank you, Mr. Cyr. Mr. Borrie.

M. Borrie: Je veux poser la même question, donc je renonce à mon tour de parole, monsieur le président.

Le président: Monsieur Hogarth.

M. Hogarth: Pourrais-je interroger le premier témoin, s'il vous plaît. Une chose me préoccupe; vous dites que la pêche récréative du saumon, qu'on fait sur la côte, nuit à la pêche commerciale, et je voudrais en savoir plus à ce sujet. Pourquoi faites-vous une distinction entre les concours de pêche du *Sun* de Vancouver et les autres concours commerciaux, en ce qui concerne les dommages causés à la pêche commerciale?

M. Douglas: Il y a une différence entre le concours du *Sun* de Vancouver et les autres concours.

M. Hogarth: Mais du point de vue de la conservation du poisson pour les pêcheurs commerciaux, est-ce qu'il y a une différence?

M. Douglas: Non, je ne dirais pas qu'il y a une différence pour la conservation du poisson, car dans tout concours, le pêcheur sportif voudrait avoir le poisson le plus gros et il rejette le plus petit. Comme disait M. Rose, il met le sien sous son siège. Mais je suis sûr qu'un grand nombre de poissons sont rejetés à l'eau.

M. Hogarth: A quoi vous fiez-vous pour dire cela quand je sais bien que tout poisson pêché lors d'un concours est rapporté à la maison, pour le montrer, et souvent le manger.

[Texte]

Mr. Douglas: Well, there is a certain limit of fish you can catch.

Mr. Hogarth: I see.

Mr. Douglas: I am not sure what the limit is exactly, but when they catch their limit I am quite sure they are not going to stop if they have not a large prize fish to win the derby.

Mr. Hogarth: Do you know how many sports fishermen take part in the *Sun* derby?

Mr. Douglas: I fully realize what the sports fishing industry means to British Columbia. The Vancouver *Sun* derby put in \$176,000. That is how much was spent that day they figured for gas, expenses, food and liquor, and they thought that was quite a good thing. Yet that does not even cover five per cent of our insurance for our commercial fleet for the year.

Mr. Hogarth: Well, that derby takes place in one day, is that not so?

Mr. Douglas: Yes.

Mr. Hogarth: Do you honestly think that the number of fish that are caught in that day substantially decreases the fish population for commercial fishermen?

Mr. Douglas: Well, they do catch quite a few. I could not say exactly, and I am sure that even the Fisheries Department with all the inspectors and boats out there cannot patrol every boat. You cannot watch 5,000 people out there fishing.

Mr. Hogarth: You left the suggestion that commercial fishermen are excluded from this particular fishing area. This is for the derby only, is it not?

Mr. Douglas: No, this area was turned over to sports fishing.

Mr. Hogarth: Exclusively?

Mr. Douglas: Yes.

Mr. Hogarth: I see. Now, Mr. Cameron, you spoke about the dogfish problem. Have you read the Minister's suggestions pertaining to some arrangement with Japanese fishermen to pick up this garbage.

Mr. Cameron: Yes, Mr. Hogarth, as a matter of fact I have it in front of me now.

Mr. Hogarth: What is the reaction of your Association, to such a proposal?

Mr. Cameron: Having only read it just before I came in here, we have had no time

[Interprétation]

M. Douglas: Il y a une certaine limite au poisson qu'on peut pêcher.

M. Hogarth: Je vois.

M. Douglas: Je ne sais pas quelle est la limite mais je sais qu'ils vont continuer à pêcher jusqu'à ce qu'ils prennent un assez gros poisson pour gagner.

M. Hogarth: Savez-vous combien de personnes participent à ce concours du *Sun* de Vancouver.

M. Douglas: Oui, je me rends compte de ce que la pêche sportive vaut à la Colombie-Britannique. Le concours du *Sun* de Vancouver a rapporté \$176,000. C'est ce qu'on a dépensé pour l'essence, la nourriture et la boisson et autres choses. C'est une excellente chose, à ce qu'on a dit. Cependant, cela ne vaut pas 5 p. 100 des primes d'assurance pour le flotte de pêche commerciale pour l'année.

M. Hogarth: Ce concours a lieu en un seul jour, n'est-ce pas?

M. Douglas: Oui.

M. Hogarth: Vous pensez vraiment que le nombre de poissons pris ce jour-là diminue de beaucoup le nombre des poissons pour les pêcheurs commerciaux?

M. Douglas: En fait, ils en pêchent beaucoup. Je suis sûr que le ministère des Pêcheries, avec tous ses inspecteurs et bateaux, ne peut pas surveiller chacun des bateaux qui prennent part au concours. On ne peut surveiller 5,000 personnes à la pêche.

M. Hogarth: Vous prétendez que les pêcheurs commerciaux ne sont pas admis en cet endroit. Est-ce uniquement durant le concours?

M. Douglas: Cette région est réservée au concours.

M. Hogarth: Exclusivement?

M. Douglas: Oui.

M. Hogarth: Monsieur Cameron, vous parlez du chien de mer. Avez-vous lu ce que le ministre suggérerait à propos d'ententes éventuelles avec les Japonais pour qu'ils pêchent ces poissons de rebut?

M. Cameron: Oui, monsieur Hogarth, j'ai ce texte sous les yeux.

M. Hogarth: Quelle est la réaction de votre association à cette idée?

M. Cameron: Ne l'ayant lu qu'avant de me rendre ici, je n'ai pas eu le temps d'en parler

[Text]

to discuss it. However, I have heard this advanced by the Minister before, though I have not had time to form any opinions as far as our organization is concerned. As I said, there are obvious dangers inherent in allowing the Japanese within our fishing limits, obvious dangers. However, if they can be properly policed and if Canadians can do the fishing, why not? We are in favour of anything that will reduce the population of dogfish.

Mr. Hogarth: Well, would your opinion be changed if Canadians did not do the fishing?

Mr. Cameron: Not necessarily, no. But we tried to get the best deal we could.

Mr. Perrault: I have some questions and I will be as concise as possible in asking them.

On page 5 reference is made to the currently depressed prices affecting members engaged in the fisheries. I would like to ask Mr. Bubl   and Mr. Cameron how they can explain the fact that while the prices are currently depressed for the members who engage in the fishery, some species of fish, as far as the consumer is concerned, are standing at record prices. An eight-ounce can of salmon costs 69 cents. I think that is a general price in the country. What is the problem? Who is getting the money? Why does the consumer have to pay so much for fish products at the present time?

Mr. Cameron: On page 5 in referring to currently depressed prices, that specifically refers to bottom fish and not necessarily salmon.

Mr. Perrault: Well, the success of the fishery depends on consumer acceptance, does it not, in the final analysis? Some people are regarding some species of fish as being almost luxury items.

Mr. Cameron: Well, it would appear that the large fishing companies—only one of which is a public company here and has to publish financial statements—are not getting a large return from it, if one looks at profit based on what their investment is.

Mr. Perrault: Perhaps the middleman is making the money, perhaps the gear supplier, the shipyards. The expense of everything, of course, goes up and up and up. You do not think there are any particular villains in the piece?

Mr. Cameron: Well, I am sure you will hear many people say who they are, but if there are any, I do not know who they are.

[Interpretation]

avec les membres de mon association, mais je crois que le ministre en a parl   auparavant. Notre association n'a pas eu le temps de se faire une opinion. Il y a des dangers manifestes    c  der aux Japonais le droit de p  cher    l'int  rieur de nos zones de p  che, mais s'ils sont surveill  s   troitement, et que les Canadiens peuvent faire la p  che, pourquoi pas? Tout est bon pour diminuer la population du chien de mer.

M. Hogarth: Est-ce que votre opinion serait chang  e si ce n'  tait pas les Canadiens qui p  chaient?

M. Cameron: Non, pas n  cessairement, mais nous avons fait de notre mieux.

M. Perrault: Monsieur le pr  sident, j'ai quelques questions    poser. Je serai aussi bref que possible.    la page 5, il est question des prix trop bas actuellement touch  s par les membres de votre association qui font de la p  che. Je voudrais demander    M. Bubl   et    M. Cameron, comment se fait-il, alors, que les prix sont trop bas pour ces p  cheurs, que certaines esp  ces de poissons,    la consommation, se vendent    des prix records? Une bo  te de 8 onces de saumon co  te 69c. Je crois que c'est le prix courant dans le pays. Quel est le probl  me? Qui est-ce qui obtient cet argent? Pourquoi le consommateur doit-il payer tant pour le poisson?

M. Cameron:    la page 5, il est question des prix trop bas. Ceci se rapporte au prix du poisson de fond mais pas celui du saumon.

M. Perrault: Le succ  s de l'exploitation de la p  che d  pend du consommateur, n'est-ce pas? Certaines esp  ces de poissons sont consid  r  es comme produits de luxe.

M. Cameron: Il semble que les grandes soci  t  s, dont une seule est publique et doit publier ses comptes pour inspection, ne font pas tellement de profit, compte tenu de leur investissement.

M. Perrault: C'est peut   tre l'interm  diaire qui fait l'argent, ou celui qui fournit l'  quipement, ou le chantier maritime. Tous les prix ne cessent de monter. Vous ne pensez pas qu'il y ait des m  chants qui prennent tous les b  n  fices.

M. Cameron: Oui, peut-  tre, mais nous ne savons pas qui.

[Texte]

Mr. Perrault: Well, the second question I would like to ask, Mr. Chairman, relates to the cost of insurance. There are some bitter words in this brief about the cost of marine insurance, on page 6. Do the witnesses suggest that the marine insurance companies are exploiting the industry, that inordinate profits are being realized by the marine insurance companies? We have just had an investigation of the cost of automobile insurance in the Province of British Columbia. Do you suggest that we need the same kind of investigation as far as marine insurance is concerned?

Mr. Cameron: So long as that investigation did not cost too much, it might be helpful. However, I think the situation is probably this. It must be realized that marine insurance by and large is not underwritten here in Vancouver. What we have here is a number of brokers. Most of the risk is underwritten in England, to a large extent by Lloyds or through Heath and Company who are the English brokers.

Now, I do not think that there is much doubt that for a number of years the cost of premiums on this coast was not high and the loss experience was bad. It is no secret that the last published statement of Lloyds shows a loss on marine risks of 92 million pounds sterling, or \$92 million; the figure is so big, it does not really matter. I believe that the high premiums being paid here now are charged in an effort to recoup the losses of past years. They are back-breaking, and I understand even worse on the East Coast.

Mr. Perrault: What you are suggesting is that it is having a very serious effect on the industry?

Mr. Cameron: No doubt whatsoever.

Mr. Perrault: Aside from the proposals advanced in the brief, would you like to propose that the government take any specific steps in order to investigate this kind of insurance activity?

Mr. Cameron: Well, Mr. Perrault, I do not know what this sort of thing costs. If it means another \$10 million to do that, I would say no; let us get a plan going to take up the slack, as they say.

Mr. Perrault: Mr. Chairman, briefly talking about costs, very graphically on page 4 we have an illustration of the difficulties being experienced by the herring fishery. It is suggested that the federal government assume insurance premiums, interest payments and depreciation for those vessels unable to fish. First of all, how many herring fishermen are affected by the present cessation of herring

[Interprétation]

M. Perrault: Ma question suivante se rapporte au coût de l'assurance. Vous parlez à propos de frais d'assurance maritime trop élevés à la page 6. Est-ce que les témoins prétendent que, les compagnies d'assurance maritime exploitent l'industrie? On vient de faire, en Colombie-Britannique, une enquête sur les assurances-automobile. Est-ce que vous préconisez une enquête semblable sur les assurances maritimes?

M. Cameron: Si cette enquête ne coûtait pas trop cher, peut-être. Mais voici ce qui en est, sans doute. Rendons-nous compte que l'assurance maritime n'est pas réassurée, à Vancouver. Il y a plusieurs courtiers. La plupart des risques sont réassurés en Angleterre par Lloyd's ou par la *Heath and Company*, qui sont des courtiers. Pendant bien des années les primes, sur ce littoral, n'étaient pas élevés, et on a beaucoup perdu. Dans son dernier rapport financier, la *Lloyd's* accuse un déficit de 92 millions de livres sterling. Ce pourrait être 92 millions de dollars, c'est quand même une grosse perte. Les primes élevées qu'on exige ici maintenant montrent que les compagnies d'assurance veulent amortir ces pertes.

M. Perrault: Vous dites donc que tout ceci affecte gravement l'industrie.

M. Cameron: Absolument.

M. Perrault: Est-ce qu'en plus des suggestions proposées dans votre mémoire, vous voudriez que le gouvernement fasse enquête dans le domaine des assurances maritimes?

M. Cameron: Monsieur Perrault, je ne sais pas ce qu'une enquête coûterait. Si cela coûte 10 millions, je dis non. Il faudrait tenter de rattraper le jeu.

M. Perrault: Monsieur le président, au sujet des frais, à la page 4, nous avons l'illustration littérale des difficultés du pêcheur de hareng. On suggère que le gouvernement prenne à sa charge les primes d'assurance, les paiements d'intérêt et la dépréciation des chalutiers incapables de faire la pêche. Combien de pêcheurs sont touchés par l'arrêt de la pêche du hareng, à l'heure actuelle? Et quels sont

[Text]

fishing and how much will it cost the government to assist these fishermen?

Mr. Cameron: Within our organization, approximately 30. This does not take into account the crews that are affected which would be seven times that number. This is not our direct concern—the crews.

Mr. Perrault: There are about 225 men affected?

Mr. Cameron: At least that many. Now, that is the crews for the vessels in our organization. There are approximately another 50 boats that belong to the companies and to other organizations. They each have a skipper and seven men as well. Nearly all have a skipper and seven men aboard.

Mr. Perrault: You are not suggesting that the 225 men formerly involved in the herring fishery are not otherwise employed at the present time.

Mr. Cameron: No. I am suggesting that some of these herring boats are not occupied during the period that they were before.

Mr. Perrault: Have you any estimate of the cost of helping the herring fleet?

Mr. Cameron: Let us take the loss shown on page 4, the \$23,000, and multiply it by 30, and that would give us the cost of assuming these amounts that we suggest. It would be a small amount compared to what the federal government has paid out in subsidies. I presume, although I am not sure of the figures, it is a small amount compared to what Mr. Robichaud said he was going to pay to East Coast fishermen who were suffering depressed prices in the bottom fishery. I think it was termed an income supplement, and was probably under the Fisheries Prices Support Board, although I am not too sure about that. But let us look at it as welfare, if we must. It is a small amount.

Mr. Perrault: And finally, Mr. Chairman, if time permits, a short question arising out of a statement on page 5. It says:

...where enormous trawlers operated by foreign governments plow up grounds that for years have been exploited only by Canadian and American vessels.

How do you define that word "plow"?

Mr. Cameron: Well, I was never a trawl fisherman. I was a longline fisherman and a seine fisherman, and to me trawling is farming. They plow up the bottom with the net,

[Interpretation]

les frais, pour le gouvernement, du soutien de ces gens?

M. Cameron: Dans notre association, environ 30 pêcheurs. Ceci ne tient pas compte des équipages, ce qui serait 7 fois le chiffre. Mais les équipages ne nous concernent pas.

M. Perrault: Donc à peu près 225 personnes.

M. Cameron: Oui, au moins. Il s'agit des équipages des bateaux de notre association. Il y a environ 50 bateaux qui appartiennent à des entreprises, et à d'autres organismes. Tous ont un capitaine et sept hommes à bord.

M. Perrault: Vous ne dites pas que les 225 hommes qui faisaient la pêche du hareng auparavant sont actuellement sans emploi.

M. Cameron: Non, je dis que certains bateaux ne sont pas employés maintenant, alors qu'autrefois, à la même époque, ils faisaient la pêche.

M. Perrault: Sait-on ce que coûte le soutien de la flotte de pêche du hareng?

M. Cameron: Prenons la perte de \$23,000, à la page 4, et multiplions par 20, ce qui nous donnera le coût total. Ce serait un petit montant comparativement à ce que le gouvernement a versé en subsides. Je suppose, même si je n'en suis pas sûr, que c'est un petit montant comparativement à ce que M. Robichaud disait qu'il paierait aux pêcheurs qui ont subi de fortes pertes dans la pêche du poisson de fond. Je pense qu'on parlait de supplément au revenu et que c'était accordé par l'Office des prix des produits de pêche; considérons cela comme de l'assistance sociale, s'il le faut. C'est peu.

M. Perrault: Finalement, une question découlant de la déclaration faite à la page 5 du mémoire, si le temps le permet.

On y parle d'énormes chalutiers étrangers qui labourent les pêcheries que jusqu'alors seulement les bateaux canadiens et américains exploitaient.

Qu'est-ce que vous voulez dire par «labourent»?

M. Cameron: Je n'ai jamais fait la pêche au chalut; j'ai fait la pêche à la ligne et à la seine, et pour moi, la pêche au chalut, c'est du labourage: on ratisse le fond de la mer,

[Texte]

and they chew up the feed and they kill off everything. It is a fishery that we need, and that our members engage in. So I do not want to sound too critical.

The Chairman: But the word "plow" is chosen for a reason. Mr. McQuaid.

Mr. McQuaid: Thank you, Mr. Chairman. I would like to take the witness, Mr. Cameron, back to page 4 of his brief, and the question is in connection with these estimated costs. In your \$60,000 investment example, Mr. Cameron, you show operating expenses to be \$7,810. Presumably this includes your crew wages. Is that correct?

Mr. Cameron: There are no wages paid in the fishing industry, in fishing as such. It is all done on a share basis. The boat does not pay that.

Mr. McQuaid: Well, how much are these men paid? I think you said in the salmon fishing industry, as I understand it, they got seven elevenths. Is that right?

Mr. Cameron: Yes. The herring fishery is on an entirely different basis, with the companies that reduce the herring paying an agreed-upon price for the fish to the crew and chartering the vessels in actual fact at so much per ton. This has nothing to do with payments to the crew. It is based on the cost of maintaining the vessel, shipyard costs, renewal of equipment, repairs to main engine, perhaps, and things of this nature.

Mr. McQuaid: Let us take your \$60,000 boat. What would be the average wage or earnings of the crew during the herring fishing season?

Mr. Cameron: You will hear other witnesses, sir, with these figures at their fingertips. I would say in the last full season fished, and that includes what we refer to as the summer and winter herring, about \$4,000.

Mr. McQuaid: That would be their average wage?

Mr. Cameron: I say "about". I may be wrong.

Mr. McQuaid: As to the depreciation, Mr. Cameron, I notice that in your \$60,000 boat you estimate depreciation at approximately 6½ per cent, and when you go to your \$180,000 group your depreciation has risen to 7½ per cent. First of all, are these steel boats that you are speaking about?

Mr. Cameron: In the first instance, no, sir. In the \$60,000 boat this was not an estimate;

[Interprétation]

avalant toute la nourriture et tuant tout. Nous avons besoin de cette forme de pêche, alors je ne me plains pas trop fort.

Le président: Mais vous avez choisi le verbe labourer pour de bonnes raisons. Monsieur McQuaid.

M. McQuaid: Monsieur le président, je voudrais référer M. Cameron à la page 4 de son mémoire. Je pose une question au sujet du coût estimatif. Dans l'exemple que vous donnez d'un investissement de \$60,000, vous faites état de frais d'exploitation de \$7,810. Je suppose que cela représente les salaires de l'équipage.

M. Cameron: Dans l'industrie de la pêche on ne verse pas de salaire, on se partage les recettes de la pêche et la part du bateau n'atteint pas ce chiffre.

M. McQuaid: Combien font ces gens? Vous avez dit que dans le cas de la pêche au saumon, ils touchaient sept onzièmes.

M. Cameron: Oui, mais c'est tout à fait différent pour la pêche du hareng. La compagnie qui transforme le hareng convient d'un prix à payer à l'équipage pour le poisson et pour le nolisage du bateau, à tant par tonne. Ceci n'a rien à faire avec le versement à l'équipage. Cette somme se fonde sur les frais d'exploitation du bateau, les frais de chantier, de rénovation et d'équipement. Il y a aussi les revisions des moteurs, et autres dépenses.

M. McQuaid: Pour un bateau de 60,000, quel serait, en moyenne, le revenu de l'équipage durant une campagne de pêche?

M. Cameron: D'autres témoins vous donneront des chiffres plus précis et plus rapidement que moi, mais lors de la dernière campagne de pêche du hareng, d'été et d'hiver, cela serait à peu près \$4,000.

M. McQuaid: C'est là leur salaire moyen?

M. Cameron: J'ai dit à peu près, je puis me tromper.

M. McQuaid: Au sujet de la dépréciation du bateau de \$60,000, monsieur Cameron, vous estimez qu'il est de 6½ p. 100, alors que quand vous parlez groupe de navires de \$180,000, la dépréciation est de 7½ p. 100. Est-ce que ce sont des bateaux d'acier dont vous parlez?

M. Cameron: Dans le premier cas, non. Dans le cas du bateau de \$60,000, ce n'est pas

[Text]

these were the exact figures provided by the vessel owner himself. Why it worked out to 6½ per cent I cannot say. As far as I recall, this vessel owner uses what is known as the straight line method at 7 per cent, I think or 7½ per cent, which is not taxable when recaptured.

Mr. McQuaid: Then you would agree, Mr. Cameron, that possibly these figures with respect to depreciation are very variable. This may not be a true picture that we are getting here as far as depreciation is concerned. What does the income tax department allow you by way of depreciation, do you know?

Mr. Cameron: It is either 7 or 7½ per cent. But you can choose what you want and depreciate at any rate so long as when you sell you pay tax on the recaptured capital.

Mr. McQuaid: Yes, that is correct. Now, you estimated that your net cost of tying up a boat for one year, one of these \$180,000 boats, is in the vicinity of \$23,355. There is a suggestion on page 5 of your brief that possibly these boats could be converted to the trawling industry at a cost of I believe you said \$20,000 to \$25,000?

Mr. Cameron: No, \$20,000 to \$30,00, sir.

Mr. McQuaid: Would it not be more economically feasible and of better value to the fishermen themselves, rather than put them on what you suggest would be another form of relief, for the government to give some help in converting these boats and putting them to work?

Mr. Cameron: Yes, sir, undoubtedly, so long as there is some market for what they catch. At the moment there is not, and even the few trawlers, which is the only feasible conversion that we have, generally speaking, fish on what we call limits. This is the amount of fish they can actually sell when they get home.

Mr. McQuaid: Do you feel, Mr. Cameron, that this Committee might make some recommendations of some kind to the government which could improve the marketing situation for this particular type of fish?

Mr. Cameron: I hope that that is covered in a general way on pages 8 and 9 under the title: "Promotion of good health". Convince our country to eat fish five times a week.

Mr. McQuaid: Well, just getting back to that point, Mr. Cameron. I was going to raise it later on. You realize, of course, that the

[Interpretation]

une estimation; ce sont les chiffres fournis par le propriétaire du bateau. Pourquoi à 6½ p. 100, je ne puis dire. Si je me souviens bien, ce pêcheur emploie la méthode dite *straight line*, à 7 p. 100, ou 7½ p. 100, je crois, qui n'est pas imposable lorsqu'il est amorti.

M. McQuaid: Vous conviendrez, monsieur Cameron que ces chiffres concernant la dépréciation sont très variables. Ce n'est peut-être pas l'image exacte de la situation que nous avons. Qu'est-ce que le ministère du Revenu national permet comme dépréciation? Le savez-vous?

M. Cameron: C'est soit 7 ou 7½ p. 100. Vous pouvez choisir ce que vous voulez, et puis fixer la dépréciation, si vous le rendez en impôts après amortissement.

M. McQuaid: Vous estimez que cela coûte \$23,355 d'immobiliser un bateau de \$180,000 pour une saison. A la page 5 du mémoire on prétend que ces bateaux pourraient être transformés pour la pêche au chalut et que cette transformation coûterait de \$20,000 à \$25,000.

M. Cameron: Non, plutôt de \$20,000 à \$30,000.

M. McQuaid: Est-ce qu'il ne serait pas moins cher et plus utile pour le pêcheur de l'aider à transformer son navire et de le faire travailler plutôt que de lui accorder ce que vous appelez l'assistance sociale.

M. Cameron: Oui, sans doute, tant qu'il aura des débouchés pour leur poisson. Pour le moment, il n'y a pas de débouchés. Même les quelques chalutiers que nous avons, qui ont été transformés, exploitent dans certaines limites, c'est-à-dire dans les limites de ce qu'ils peuvent vendre au retour de la pêche.

M. McQuaid: Est-ce que vous pensez que ce Comité pourrait faire des recommandations au gouvernement pour l'amélioration des marchés pour ce type de poisson.

M. Cameron: J'espère qu'on a traité de cela en général aux pages 8 et 9, sous le titre «*Promotion of good health*». Il faut convaincre les Canadiens de manger du poisson cinq fois par semaine.

M. McQuaid: Pour revenir à cela, monsieur Cameron, vous vous rendez compte que le gouvernement fédéral fait un excellent travail

[Texte]

a federal government is doing what I think is a fairly competent job in this direction. You may have a chance to visit their laboratory.

Do you not think, Mr. Cameron—I may be saying this at some risk of incurring the wrath of the women—but I am afraid that about 75 per cent of our women in Canada do not know how to properly cook fish.

Mr. Cameron: That is true, sir. Well, let us educate the women, too.

Mr. McQuaid: Just one more question, Mr. Chairman, I am not well informed about your West Coast fisheries, but in my province of Prince Edward Island we have problems with the trawlers operating in what we call in-shore waters and destroying the gear of the inshore fishermen. Do you have similar problems on the West Coast? And, if you do, how do you handle them?

Mr. Cameron: Yes, we have that problem, particularly in the Bering Sea and the Gulf of Alaska where foreign trawlers from time to time do pick up our halibut gear.

We have had meetings with the Japanese and the Russians in conjunction with the Seattle fleet, and from time to time we have tried to work out a system whereby gear will only be set in certain directions in certain places in the hope that the foreign fleets will not drag over it. It has worked to some extent, but it is still a problem.

The Chairman: Thank you, Mr. McQuaid, Mr. McBride.

Mr. Whelan: Could I raise a point of order, Mr. Chairman, in defence of the housewives of Canada.

My wife is a good cook and can cook good fish if it is presented in a good condition. But I think 90 per cent of the time this fish is not good fish when it reaches the home.

Yesterday, Mr. Chairman, we were told by a well-informed and well-known person in British Columbia that he doubted if one could get a good fish dinner in the city of Vancouver. So this means the cooks do not know how to cook it either.

The Chairman: Mr. McBride.

Mr. McBride: Pursuant to what Mr. Whelan is saying, one of the briefs I read last night mentioned this same thing. I have forgotten which one it is.

Mr. Cameron: This one on page 8 mentions a possible solution to that.

[Interprétation]

dans ce domaine, d'après moi. Si vous avez la possibilité de visiter les laboratoires, vous le verrez.

Je vais m'attirer la colère des ménagères canadiennes, mais ne pensez-vous pas, monsieur Cameron, que les trois quarts d'entre elles ne savent pas apprêter le poisson convenablement?

M. Cameron: C'est vrai. Alors, il faut le leur apprendre.

M. McQuaid: Une autre question, monsieur le président. Je ne suis pas très au courant de vos pêcheries de l'Ouest, mais dans ma province de l'Île-du-Prince-Édouard, nous avons des problèmes à propos des chalutiers qui sont à l'intérieur des zones côtières et qui détruisent l'équipement du pêcheur des zones côtières. Est-ce que vous avez des problèmes semblables? Si oui, comment les réglez-vous?

M. Cameron: Oui, nous avons ce problème qui se pose dans la mer de Bering et le Golfe d'Alaska, où les chalutiers étrangers, de temps à autre, entraînent avec eux les agrès de pêche du flétan.

Nous nous sommes entretenus avec les Japonais et les Russes à propos de la flotte de Seattle, de temps à autre nous avons cherché à mettre au point un système qui permette de placer certains filets d'une certaine façon dans l'espoir que les chalutiers étrangers ne les emporteront pas. Cela fonctionne dans une certaine mesure, mais nous avons encore des difficultés.

Le président: Merci, monsieur McQuaid. Monsieur McBride.

M. Whelan: J'invoque le Règlement, monsieur le président, pour défendre les ménagères canadiennes. Ma femme est bonne cuisinière. Elle apprête le poisson très bien si on le lui présente en bon état, mais dans la plupart des cas, le poisson n'est pas bon quand nous l'achetons. Hier, monsieur le président, une personne bien informée et bien connue de la Colombie-Britannique nous disait qu'elle doutait que nous puissions avoir un bon dîner au poisson dans les restaurants de Colombie-Britannique, ce qui veut dire que les chefs ne savent pas comment le faire cuire.

Le président: Monsieur McBride.

M. McBride: Un des mémoires que j'ai lu hier soir à la suite de ce qu'a dit M. Whelan, mentionnait la même chose. Je ne me souviens plus lequel.

M. Cameron: Nous proposons une solution possible à cet état de choses à la page 8.

[Text]

Mr. McBride: Mr. Chairman, I want to commend both these gentlemen for the briefs before us, and I have only one brief question—most of my questions have already been covered—concerning the cost of marine insurance, on pages 6 and 7. I would ask Mr. Cameron what suggestion he would have. What actual recommendation, what solution would he suggest for this problem?

Mr. Cameron: I would suggest the Fisherman's Indemnity Plan being extended to provide the type of coverage needed by all vessels in the fleet at a price that the fishermen can afford to pay, which I see at the moment as no more than 3 per cent.

Mr. McBride: So it would have to go down roughly 7 per cent.

Mr. Cameron: This 10 per cent, sir, is an exception. One naturally tends, in presenting a problem, not to exaggerate but to present the most extreme examples. I do not want to leave this Committee with the impression that our members average 10 per cent, they certainly do not. I think it is fair to say that in the coming year they will average 7 per cent, possibly more.

Mr. McBride: I pass, Mr. Chairman.

The Chairman: Mr. Beaudoin.

M. Beaudoin: Monsieur le président, je remarque, à la page 4, que la prime d'assurance, fait partie de votre administration pour une large part et je remercie MM. Perrault et McBride d'avoir posé certaines de mes questions. Mais il y en a une que je vais poser à M. Cameron; vos associations, si vous en avez plusieurs, se sont-elles occupées de grouper les assurances en assurance-groupe?

Mr. Cameron: We have tried, sir, to get group insurance through private industry. We got it started, but the loss experience was so bad that the underwriters cancelled it after one year.

M. Beaudoin: A la page 6 de votre rapport, vous dites que la contribution du pêcheur est de 25 p. 100 de la valeur de son bateau en assurance; si le gouvernement en assumait une partie du coût, croyez-vous que cela améliorerait beaucoup de choses?

Mr. Cameron: I am sorry, sir, I do not understand the question.

M. Beaudoin: Je la pose autrement. Vous dites à la page 6 que la limite accordée par la compagnie d'assurance est de 75 p. 100 de la

[Interpretation]

M. McBride: Monsieur le président, je voudrais féliciter ces deux messieurs de leurs mémoires. Je n'ai qu'une question brève à poser à propos des frais d'assurances maritimes aux pages 6 et 7. Je voudrais demander à M. Cameron ce qu'il proposerait, quelles recommandations, quelles solutions proposerait-il à ce problème?

M. Cameron: A mon avis, il faudrait que le Régime d'indemnité aux pêcheurs soit élargi pour assurer le genre d'assurance nécessaire à tous les bateaux de la flotte à un prix abordable pour les pêcheurs, ce qui, pour le moment, ne devrait pas dépasser 3 p. 100.

M. McBride: Il faudrait donc baisser les primes de 7 p. 100.

M. Cameron: Ce 10 p. 100 est une exception. Lorsqu'on présente un problème, on a naturellement tendance, non pas à exagérer, mais à présenter des cas extrêmes. Je ne voudrais pas vous donner l'impression que nos membres paient, en moyenne, 10 p. 100. Je crois qu'il serait juste de dire que pendant l'année en cours ils paieront une moyenne de 7 p. 100, peut-être un peu plus.

M. McBride: J'ai terminé, monsieur le président.

Le président: Monsieur Beaudoin.

Mr. Beaudoin: I notice, Mr. Chairman, on page 4, that insurance premiums constitute a large part of your administration, and I thank Messrs. McBride and Perrault for having asked some of my own questions for me. But there is one question I would like to ask Mr. Cameron. Have your associations—if you have a number of them—been concerned with getting group insurance for the members?

M. Cameron: Nous avons essayé, monsieur, d'avoir de l'assurance groupe de l'industrie privée. Nous l'avons mise sur pied, mais les pertes ont été telles que les assureurs l'ont supprimée au bout d'un an.

Mr. Beaudoin: On page 6 of your report, you say that the fisherman's contribution towards insurance is 25 per cent of the value of his boat. If the government were to assume part of the cost, do you think that would improve things to any great extent?

M. Cameron: Je regrette, monsieur, je ne comprends pas la question.

Mr. Beaudoin: I will ask my question in a different way. On page 6, you say that the limit granted by the insurance company is 75

[Texte]

valeur du bateau; cela veut dire que le propriétaire du bateau paie 25 p. 100. Si le gouvernement prenait ce montant à sa charge, ne pensez-vous pas que, pris en groupe, cela pourrait en réduire énormément, le coût?

Mr. Cameron: No, sir. Not necessarily. The problem is not so much that only 75 per cent is covered but that the limits of \$25,000, even with the government taking the other 25 per cent, would not be sufficient.

Mr. Beaudoin: Thank you.

The Chairman: Thank you Mr. Beaudoin. Mr. St. Pierre.

Mr. St. Pierre: Thank you, Mr. Chairman. One question, Mr. Cameron, in regard to the conversation we had recently around this table. Can you tell me, without of course naming any names, whether there are any restaurant cooks who know how to cook fish?

Mr. Cameron: Oh, yes. Some.

Mr. St. Pierre: Some. Many?

Mr. Cameron: Yes.

Mr. St. Pierre: Mr. Chairman, my line of questioning is about the concern which has been expressed about the possible company control of the fishing fleet, by the lending of money to fishermen. Mr. Bublé, I judge that you have borrowed from companies before?

Mr. Bublé: Yes. That is right.

Mr. St. Pierre: With good results?

Mr. Bublé: Yes. I would say my dealings with the companies have been very good.

Mr. St. Pierre: At what interest rates, in comparison with the interest rates then prevailing?

Mr. Bublé: I would say average rates. Nothing exorbitant.

Mr. St. Pierre: About what you might have expected from the bank had the bank been more amenable to lending?

Mr. Bublé: Yes. That is right.

Mr. St. Pierre: What would be the company's reason for lending to you? What advantage would there be to the company in this?

Mr. Bublé: To make sure that they have the salmon fishery production come to them.

[Interprétation]

per cent of the value of the boat, which means to say that the owner of the boat pays 25 per cent. If the government took over the 25 per cent, do you not think that, on a group basis, that could reduce its cost a great deal?

M. Cameron: Non, monsieur, pas nécessairement. La difficulté n'est pas tellement que seulement 75 p. 100 de la valeur est couverte mais que la limite de \$25,000, même si le gouvernement prenait les autres 25 p. 100 à sa charge, ne serait pas suffisante.

M. Beaudoin: Merci.

Le président: Merci, Monsieur Beaudoin. Monsieur St-Pierre.

M. St-Pierre: Merci, monsieur le président. Une question que je voudrais poser à Monsieur Cameron. Vu notre récente conversation autour de cette table, pourriez-vous nous dire, sans nous donner de noms, s'il y a des chefs dans les restaurants qui savent préparer le poisson?

M. Cameron: Oui, certainement.

M. St-Pierre: Est-ce qu'il y en a beaucoup?

M. Cameron: Oui.

M. St-Pierre: Monsieur le président, mes questions porteront sur l'inquiétude qu'on a exprimée du fait que les sociétés prendront le contrôle des flottes de bateaux de pêche en prêtant de l'argent aux pêcheurs. Vous avez sans doute emprunté de l'argent aux sociétés, monsieur Bublé, n'est-ce pas?

M. Bublé: Oui.

M. St-Pierre: Avec des résultats satisfaisants?

M. Bublé: Oui. Je crois que mes transactions avec les sociétés ont été très bonnes.

M. St-Pierre: Et quels étaient les taux d'intérêt appliqués par rapport aux taux en cours?

M. Bublé: C'était des taux moyens, rien d'exorbitant.

M. St-Pierre: A peu près ce que les banques vous auraient accordés si les banques avaient été mieux disposées à prêter?

M. Bublé: Oui.

M. St-Pierre: Et pourquoi les sociétés vous prêtaient-elles de l'argent? Quels en étaient les avantages pour eux?

M. Bublé: Pour s'assurer la production de la pêche du saumon. Autrement, une autre

[Text]

Otherwise another company might grab me or grab some other fisherman for his production.

Mr. St. Pierre: Would you be obliged to sell all your catch to that company then?

Mr. Bublé: Yes, I would say so. We go out and we know for sure that they are going to take our fish regardless of what time of the year it is, what the market condition is. They will still take our fish regardless, and we do not have to worry about the packer situation.

Mr. St. Pierre: Would this be a contractual obligation or a friendly one, a moral obligation that you would feel?

Mr. Bublé: Well, I cannot say for everyone, but for myself it has been a friendly one. I have never signed a contract with a company yet. But mind you, I know other vessel owners who have had to sign because I guess they were scared of the company and the company was scared of them. But in my case I have never signed any of these agreements yet.

Mr. St. Pierre: There is one thing which perhaps you could expand on a little. The prices for fish are set year by year in British Columbia. Every company pays the same amount for fish. Is this correct?

Mr. Bublé: Yes.

Mr. St. Pierre: There is no variation. The people who are under company loans would not be selling to the company for anything below market prices. There will be no low price sales to the companies.

Mr. Bublé: No. Not that I know of.

Mr. St. Pierre: I am still not entirely clear in my mind, Mr. Bublé, what the advantage is to the company. We have only a couple of large companies left on this coast. Are they likely to be short of fish stocks at any time? Is there that much competition between them?

Mr. Bublé: Yes. There is quite a bit of competition between them. In fact sometimes it is really funny. There are some fellows I know who are good seine fishermen and they are good gillnetters too, and the same company has tried to get them—one production manager tries to get a man to go gillnetting and the other production manager is trying to get him to go seining, and it is in the one company itself. That is how much competition there is.

[Interpretation]

société pourrait obtenir le fruit de ma pêche ou d'un autre.

M. St-Pierre: Est-ce que vous seriez obligé de vendre toute votre prise à la société?

M. Bublé: Oui, sans doute. Nous partons à la pêche et nous savons que la société va prendre toute notre prise, quelle que soit la saison ou l'état du marché, elles prendront nos prises et nous n'avons pas à nous inquiéter de ce problème.

M. St-Pierre: Est-ce que ce serait en vertu d'un contrat, est-ce que vous vous arrangez à l'amiable, ou une obligation morale?

M. Bublé: Je ne saurais parler pour tout le monde, mais en ce qui me concerne, l'entente a toujours été à l'amiable. Je n'ai jamais signé de contrat. Il y a d'autres propriétaires évidemment qui ont pu signer des contrats parce qu'ils n'avaient pas confiance dans les sociétés ou vice versa, mais dans mon cas, je n'ai signé aucun contrat jusqu'à présent.

M. St-Pierre: Vous pourriez peut-être nous donner quelques renseignements sur une question. Les prix du poisson sont établis chaque année en Colombie-Britannique. Chaque société paie le même prix pour le poisson. C'est juste, n'est-ce pas?

M. Bublé: Oui.

M. St-Pierre: Il n'y a pas d'exceptions. Ceux qui reçoivent des prêts ne vendraient pas à la société à des prix inférieurs aux prix du marché?

M. Bublé: Non, pas à ma connaissance.

M. St-Pierre: Je ne vois pas très bien quel est l'avantage pour une société. Il n'y a plus que deux sociétés importantes sur le littoral. Est-ce qu'elles pourraient manquer de poisson? Est-ce qu'il y a beaucoup de concurrence entre les deux?

M. Bublé: Oui, il y en a. Les deux sociétés se font concurrence et c'est même parfois assez comique. Je connais des personnes qui sont très habiles avec une seine et qui obtiennent également de bons résultats avec un filet maillant, et la même société a tenté de les recruter; un gérant de la production l'encourage à aller pêcher avec un filet maillant et l'autre gérant de la production veut l'envoyer pêcher à la seine. Au sein de la même société. Vous voyez jusqu'à quel point va la concurrence.

[Texte]

Mr. St. Pierre: And yet we are told that there is too large a fleet on this coast. We are attempting to reduce the size of the salmon fleet, are we not?

Mr. Bublé: Yes. I would hope so.

Mr. St. Pierre: So how can there be this competition for boats with the present situation in which there are too many boats?

Mr. Bublé: I guess you will have to talk to the companies about that because I am not sure why one company puts out 40 or 50 boats and the other company naturally wants to keep their share up and they put out 60 boats. I am only trying to catch the fish.

Sometimes in the summer you see 17 fishermen waiting in one key position, because it is a very valuable position, it is a good fishing position. Seventeen men waiting in turn for one set and each set takes about half an hour. Well, you can figure out—17 times half an hour—how long the last person has to wait, but it is a key position. When I see those places I just do not go near them because I think it is a waste of time to have 17 boats and men waiting for one point when three or four could look after it very well.

Mr. St. Pierre: Mr. Bublé, a hypothetical question. Would you agree that if the companies invest heavily in the fleet, if a large proportion of the salmon fleet is obligated to companies for loans, either by contract or by unwritten agreement, that this could give rise to a monopoly situation on this coast with undue control by the canneries?

Mr. Bublé: Yes, that could happen.

Mr. St. Pierre: Do you fear this happening at this moment? Are you fearful that this will happen?

Mr. Bublé: Well, I was not too scared last year, but the way these companies have been amalgamating during the last three or four months, I would hate to venture too much on it.

Mr. St. Pierre: Could you tell me, or if you do not know, could you give me an opinion, whether company control of the fleets in this manner is increasing, decreasing, or remaining about the same?

Mr. Bublé: I have heard from companies offices that many fishermen in their ranks have been paying their boats off this year.

Mr. St. Pierre: A final question, Mr. Chairman. May I ask Mr. Cameron his response to the last two questions?

[Interprétation]

M. St-Pierre: Et pourtant on a dit que la flotte est trop importante sur cette côte. Nous essayons de réduire le nombre de bateaux qui font la pêche au saumon, n'est-ce pas?

M. Bublé: Oui. Je l'espère.

M. St-Pierre: Alors, pourquoi est-ce qu'il y a une telle rivalité pour les bateaux quand il y en a trop?

M. Bublé: Vous devriez peut-être vous entretenir avec les sociétés à ce sujet, car je ne sais pourquoi une société a 40 ou 50 bateaux et l'autre, afin de maintenir sa part de la production, en a 60. Moi, j'essaie simplement de prendre le poisson.

En été, par exemple, il y a parfois 17 marins qui attendent à un endroit stratégique, mais c'est un très bon endroit pour la pêche. Il y a 17 senneurs qui attendent leur tour pour jeter leur filet; il faut une demi-heure pour poser et retirer le filet mais quand il s'agit d'une zone de pêche très fructueuse, il vaut la peine d'attendre. Lorsque je vois ces endroits, je me tiens loin car je crois que c'est une perte de temps d'avoir 17 hommes et bateaux qui attendent alors que trois ou quatre personnes seraient suffisantes.

M. St-Pierre: Monsieur Bublé, une hypothèse. Est-ce que si les sociétés investissent une forte somme dans ces bateaux, si une forte proportion des pêcheurs ont obtenu des prêts de la société, et qu'ils y sont liés soit par contrat, soit par entente orale, il pourrait y avoir un monopole exercé par les conserveries sur la côte?

M. Bublé: Oui, c'est possible.

M. St-Pierre: Est-ce que vous craignez que cette situation se présente?

M. Bublé: Non, l'année dernière je ne craignais rien mais en ce moment, avec les fusions qu'il y a eues depuis trois ou quatre mois, je le crains un peu.

M. St-Pierre: Est-ce que vous pourriez me dire si le contrôle des sociétés augmente, diminue ou reste à peu près le même?

M. Bublé: Certains représentants des sociétés m'ont dit que bon nombre de pêcheurs ont fini d'amortiser leur bateau cette année.

M. St-Pierre: Une dernière question, monsieur le président. Pourrais-je demander à M. Cameron de répondre aux deux dernières questions?

[Text]

Mr. Cameron: I cannot say if company control has been growing. We have of course a certain amount of vertical integration within this industry. With regard to the fear of the companies grabbing for the boats, production is all-important to the canneries, and how that production is arrived at does not matter.

Mr. St. Pierre: Thank you. That completes my questioning, Mr. Chairman.

The Chairman: Mr. Noble.

Mr. Noble: Mr. Chairman, coming from the Great Lakes area, I am quite willing to sit by and listen and learn from the questioning of the members from the coastal areas. However, Mr. Bublé has mentioned that some fishermen should be withdrawn from the industry and I am wondering how he would propose this should be done?

Mr. Bublé: I am not sure how your question goes, like which fishermen.

Mr. Noble: You said there were too many fishermen and you proposed that some of them should be withdrawn, there should be fewer fishermen. I think you said that in your brief.

Mr. Bublé: Yes. First there would be a moratorium on boats. We have enough problems now and I would say that I would not like to see more new boats coming in, because our boats are very capable of catching the fish. I am quite sure that if we had two-thirds of them we could still catch the same amount of fish.

My intention would not be just to throw commercial fishermen out of work. You have to start somewhere and the first thing is a moratorium. And right now I see where one department is trying to make a moratorium of boats, and with these loans that we have now for the native fishermen, we are putting more boats in. Here is one part of the government bucking the other part. I am not against seeing these native fishermen get this money, but I think this money should go to these people to buy existing boats.

We have plenty of boats in our industry at present. I can name 30 or 40 men who want to sell out right now. And these are the boats that should go to these native fishermen. To see them build new ones when in two years we are going to have to scrap some, I just do not see it. And I would say a moratorium

[Interpretation]

M. Cameron: Je ne peux pas vous dire si le contrôle des sociétés a augmenté. Évidemment il y a eu de l'intégration verticale au sein de l'industrie. En ce qui concerne la crainte que les sociétés mettent la main sur les bateaux, seule la production importe pour les conserveries quelle que soit la façon dont elle est assurée.

M. St-Pierre: Je vous remercie. C'est tout ce que j'avais à demander, monsieur le président.

Le président: Monsieur Noble.

M. Noble: Je viens de la région des Grands Lacs et je suis très heureux d'écouter les questions posées par les députés qui viennent des régions côtières, et d'apprendre ce qu'on dit. Pourtant, M. Bublé a dit qu'il faudrait éliminer certains pêcheurs et je me demande comment il propose qu'on le fasse.

M. Bublé: Je ne vois pas très bien ce que vous voulez dire. Quels pêcheurs?

M. Noble: Vous dites qu'il y avait trop de pêcheurs et qu'il faudrait en éliminer. Vous l'avez dit je crois dans votre mémoire.

M. Bublé: Oui, il faudrait d'abord imposer un moratoire sur les bateaux. Nous avons déjà suffisamment de problèmes et je n'aimerais qu'on augmente le nombre de bateaux, car nous pouvons très bien prendre le poisson nous-mêmes. Je suis convaincu que si nous n'avions que les deux tiers de ces bateaux nous pourrions prendre la même quantité de poisson.

Je ne pense pas qu'il faille éliminer ces pêcheurs qui seront sans emploi. Il faut un point de départ, c'est-à-dire un moratoire. Je vois actuellement qu'un ministère s'efforce de faire adopter un moratoire sur les bateaux, et avec cette question de prêts aux pêcheurs indiens, on augmente le nombre de bateaux de pêche. Voilà un exemple d'un ministère qui travaille contre un autre. Je ne vois aucun inconvénient à ce que les Indiens reçoivent cet argent, mais j'estime qu'il faudrait que cet argent leur permette d'acheter des bateaux qui sont déjà en exploitation.

Nous avons assez de bateaux pour le moment. Je connais entre 30 et 40 propriétaires qui voudraient vendre leurs bateaux à l'heure actuelle, et ce sont ces bateaux que les Indiens devraient acheter. S'ils en contruisent d'autres, il faudra en mettre d'autres hors service. Je ne vois vraiment pas à quoi cela

[Texte]

first, then we would have to have some solution.

I am not sure what the best procedure is, perhaps get rid of the least efficient fishermen, say the bottom 10 per cent or something. But then that would hurt a lot of people too. How can you tell which is the bottom 10 per cent? I know some of the best commercial fishermen and they get the most gross in, but they also spend the most money too. And yet the fellow who is maybe \$3,000 or \$4,000 below in getting gross money, maybe he spends \$10,000 less a year. So actually that fellow is better off and a better fisherman, I would say. I would say first of all to have a moratorium on new boats and to help the native fishermen if possible by giving them money or letting them buy the other boats that are in the industry right now. Does that answer your question?

Mr. Noble: That is very good. Mr. Chairman, I would like to ask one more question here. It was also stated that logging was seriously interfering with the reproduction of the fisheries. I am wondering if Mr. Bublé has any suggestion as to how this might be overcome. Are there any other methods of logging in these areas which would eliminate the problem?

Mr. Bublé: Well, referring to the Stellako deal where we ran into problems several years ago, it was recommended—I am not sure by which department—that this logging company build a road. It was quite easy to build a road but it did not seem to work because they did not agree and they did not go through with it.

I am quite sure that if it was done properly, some of these log drives could happen at the proper time. You have to have the proper tide level, and if the level of the water is low and you see all those big logs going down and just excavating the river as they go, that is not the time to do it. I think the Department of Fisheries should have the final say whether a log drive should be allowed.

Mr. Noble: One final question, Mr. Chairman. I believe it was Mr. Cameron who mentioned that some of the fishermen worked for about three months of the year. Do they have any other means of income during the other nine months?

Mr. Cameron: I think it was Mr. Bublé who mentioned that. But anyway, sir, this would depend upon the fisherman himself. Some of

[Interprétation]

pourra servir. Il faudrait donc d'abord avoir un moratoire, et ensuite trouver une autre solution.

La meilleure façon de s'y prendre serait peut-être d'en éliminer 10 p. 100 des navires ou de forcer les pêcheurs peu efficaces à partir. Mais beaucoup des pêcheurs en souffriraient. Comment décider lesquels obtiennent les résultats les moins satisfaisants? Je connais quelques-uns des meilleurs pêcheurs et bien que leur revenu brut soit supérieur, ils dépensent aussi le plus. Tandis que celui dont le revenu brut est de \$3,000 ou \$4,000 inférieur, dépense peut-être \$10,000 de moins par année. De sorte qu'il a plus de bénéfices et est un meilleur pêcheur. Tout d'abord, il faudrait avoir un moratoire sur les bateaux, et aider si possible en leur donnant de l'argent ou en leur permettant d'acheter les bateaux qui sont déjà en exploitation plutôt que d'en construire d'autres. Ai-je répondu à votre question?

M. Noble: Oui. Une autre question. On a dit aussi que l'exploitation forestière présente des complications pour la reproduction du poisson. Comment pourrait-on surmonter ces difficultés? Est-ce qu'il y a d'autres méthodes d'exploitation forestière qui arrangeraient les choses?

M. Bublé: Dans le cas de la Stellako où on a éprouvé des difficultés il y a quelques années, je crois qu'on a recommandé, je ne sais plus quel ministère a recommandé que la société d'exploitation forestière construise une route. Il était facile de construire une route, mais comme on n'a pas pu s'entendre, elle n'a pas été construite.

Il me semble que si l'on s'y prenait de la bonne façon, il y aurait moyen de s'organiser pour que la drave se fasse au bon moment. Comme il faut que la marée soit à un niveau donné, si la marée est basse et que les billots descendent en arrachant le lit de la rivière, ce n'est pas le moment qui convient. Je crois qu'il faudrait s'en remettre au ministère des Pêcheries pour décider quand la drave aura lieu.

M. Noble: M. Cameron a dit, je crois, que certains pêcheurs travaillent pendant trois mois de l'année, est-ce qu'ils ont d'autres sources de revenu pendant le reste de l'année?

M. Cameron: Je crois que c'est M. Bublé qui l'a dit, mais de toutes façons cela dépend de chaque pêcheur. Il y en a évidemment qui

[Text]

course take unemployment insurance, some serve beer in beer parlors and do other jobs.

Mr. Noble: They still make an existence solely from fishing?

Mr. Cameron: Yes.

Mr. Noble: Thank you.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: That question was a very central one. I was interested in getting the answer to it, and I was not at all impressed with the answer we got from the witness. It did reflect unfavourably on at least some fishermen, and I would like to know if the witness can give us any indication of whether they do take part in logging operations and other forms of fishing operations, and so on.

Mr. Cameron: I must apologize, sir, if you got an unfavourable impression. It certainly was not my intention.

I am unable to say if fishermen generally spend more time in their off-seasons in the logging industry or other things. Certainly fishermen do work ashore in other occupations. Some work in the companies net lofts occasionally, making seines, hanging seines, making fishing gear, equipment and that sort of thing. We are deteriorating on this coast in the salmon fisheries certainly with a situation arising where there are, I think, fewer what I will call for want of a better term career fishermen. And we are getting to a state in the salmon industry where it is hard to come by a very experienced crew member who can hang a salmon seine. And it is even comparatively unusual to find a crew who can all mend a hole in a net, nowadays.

Mr. Lundrigan: Mr. Chairman, that would sound much better on the record than the impression that they spend nine months slinging beer or whatever it was that the witness referred to. Thank you.

The Chairman: Gentlemen. I think we have come to the end of the questioning on this.

Mr. Crouse: Mr. Chairman, I would like an opportunity to direct one or two brief questions to Mr. Cameron, if I may.

The Chairman: Go ahead.

Mr. Crouse: Mr. Cameron, the Fisheries Improvement Loans Act will come up before Parliament for revision and expansion, we hope, and in your brief you have made a strong plea for an increase in the amount of

[Interpretation]

reçoivent de l'Assurance-chômage, d'autres qui servent de cabaretier, ou qui travaillent à droite et à gauche.

M. Noble: Ils gagnent néanmoins leur vie surtout par la pêche.

M. Cameron: Oui.

M. Noble: Merci.

Le président: Monsieur Lundrigan.

M. Lundrigan: C'est une question importante. J'étais intéressé à obtenir la réponse, mais celle du témoin ne m'a pas impressionné outre mesure. Elle était pour le moins tendancieuse à l'égard de certains pêcheurs. J'aimerais savoir si le témoin pourrait nous dire si les pêcheurs participent à l'exploitation forestière où à d'autres phases de l'industrie de la pêche, et ainsi de suite.

M. Cameron: Je dois m'excuser, si vous avez eu une mauvaise impression, ce n'était pas mon intention.

Je ne saurais vous dire si, en général, les pêcheurs participent à l'exploitation forestière durant la saison morte. Ils travaillent certainement sur la terre ferme. Certains travaillent dans les ateliers de fabrication de filets des sociétés, à l'occasion, ils fabriquent des seines, des agrès et du matériel de pêche. La situation se détériore ici dans la pêche au saumon, où il y a de moins en moins de pêcheurs que j'appellerais des pêcheurs de carrière. Nous en arrivons au point dans l'industrie de la pêche au saumon où il est très difficile de trouver un membre de l'équipage qui a de l'expérience et qui sait comment jeter une seine. Il est même très difficile de trouver un équipage dont les hommes savent réparer les filets.

M. Lundrigan: C'est beaucoup mieux que de dire qu'ils passent neuf mois de l'année dans les cabarets à servir de la bière ou quelque chose du genre comme l'avait laissé entendre le témoin. Merci.

Le président: Messieurs. Je crois que ce sont toutes les questions qu'il y avait à ce sujet.

M. Crouse: Monsieur le président, j'aimerais avoir l'occasion de poser une ou deux brèves questions à M. Cameron, si vous me le permettez.

Le président: D'accord.

M. Crouse: Monsieur Cameron, la *Loi sur les prêts aidant aux opérations de Pêche* sera présentée sous peu au Parlement pour être révisée et étendue, nous l'espérons du moins, et dans votre mémoire vous demandez ins-

[Texte]

money made available under that Act. Is the figure that you have indicated, \$50,000, the ceiling that would be recommended by your group as being the most acceptable?

Mr. Cameron: The alternative that we considered, sir, was twice whatever equity a vessel owner had in his vessel. Supposing he owned half of a \$100,000 vessel and the rest was mortgaged or something of that nature. Then the limit for him would be \$100,000. This would be a useful figure. Quite frankly, in our meetings on this particular point we were a little scared of advancing too high a figure because of the possibility of criticism for asking too much, but we could usefully use anything up to \$150,000.

Mr. Crouse: Since Mr. Bublé mentioned that salmon represents 80 per cent of the value of the British Columbia fishing industry and some 40 per cent of Canada's fish export, is there any indication, Mr. Cameron, that your provincial government plans to establish a fishermen's loan board similar to the boards established in Nova Scotia, New Brunswick, Prince Edward Island, Quebec and Newfoundland?

Mr. Cameron: Not the current provincial government, no, sir.

Mr. Crouse: Why have the provincial authorities shown no interest in your problem? Have you submitted briefs to them asking them for assistance?

Mr. Cameron: Yes, sir, we have; and generally speaking the only answer we have had is that other peoples' needs are greater.

Mr. Crouse: Can you estimate what is the gross annual income, of your fishermen from salmon and from other types of fishing and from net-mending, and so on? Could you give the Committee some indication of the yearly earnings of these people from their combined operations?

Mr. Cameron: For tax purposes one is permitted to average, for obvious reasons, and I would have to give nothing other than an average. I would say \$10,000 a year.

Let me put it this way, if I may. It must be recalled that there is a considerable investment in many instances—frequently over \$100,000—and this represents work, as well; so the earnings on \$100,000 and more in many cases is not high.

Mr. Crouse: What is the estimated value of your troll fishery? What species of ground

[Interprétation]

tamment qu'on augmente la somme d'argent que l'on met à la disposition des pêcheurs en vertu de cette Loi. Est-ce que la somme de \$50,000 que vous mentionnez, représente le plafond que votre groupe recommanderait comme le plus acceptable?

M. Cameron: L'autre possibilité que nous avons examinée, Monsieur, était deux fois la part du bateau appartenant au propriétaire. S'il est propriétaire de la moitié d'un bateau de \$100,000 dont le reste est hypothéqué ou quelque chose du genre, la limite serait de \$100,000 pour lui. Ce serait un chiffre judicieux, mais disons franchement que dans nos réunions, nous avons eu peur de proposer un chiffre trop élevé de crainte qu'on nous critique trop, mais nous aurions pu demander jusqu'à \$150,000.

M. Crouse: Comme M. Bublé disait que le saumon représente 80 p. 100 de la valeur des pêches de la Colombie-Britannique et 40 p. 100 des exportations de poisson du Canada, est-ce que le gouvernement provincial a l'intention d'établir un office de prêts aux pêcheurs semblables à ceux de la Nouvelle-Écosse, du Nouveau-Brunswick, de l'Île du Prince-Édouard, du Québec et de Terre-Neuve?

M. Cameron: Pas le gouvernement provincial actuel, non, monsieur.

M. Crouse: Pourquoi les autorités provinciales ne s'intéressent-elles pas à votre problème? Est-ce que vous leur avez présenté des mémoires pour leur demander de l'aide?

M. Cameron: Bien sûr; et généralement, la seule réponse que nous ayons eue, c'est que les besoins des autres sont plus pressants.

M. Crouse: Pouvez-vous évaluer le revenu annuel brut que retirent vos pêcheurs de la vente du saumon, et autre poissons, de la réparation des filets, etc? Pouvez-vous nous donner une indication sur le revenu annuel de ces gens?

M. Cameron: Aux fins de l'impôt, je ne pourrais donner qu'une moyenne, pour des raisons évidentes. Je dirais \$10,000 par an. Précisons. Il faut se rappeler qu'il y a beaucoup d'investissement dans bien des cas, présentant un montant de plus de \$100,000. Et tout cela représente le travail également. De sorte que le revenu, sur \$100,000 et plus n'est pas très élevé, dans plusieurs cas.

M. Crouse: Quel est le revenu de la pêche à la ligne? Quelles variétés de poissons de fond

[Text]

fish do you catch, and how many months would your ships operate in the troll fishing?

Mr. Cameron: Ten to eleven months of the year in operation, if they want to. The species caught are what we call grey cod, a fish very similar to Atlantic cod; all bottom fish, including sole, of which there are several species; snapper; or what we call red carp; and, to a certain extent, ocean perch, much of which is turned into filets and fish sticks and things of this sort.

Mr. Crouse: And are you experiencing any difficulty whatever in marketing these species?

Mr. Cameron: Yes.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: Gentlemen, if we wish to maintain our schedule at all we will have to be as brief as possible. I have one more question, Mr. Turner.

Mr. Turner (London East): Mr. Chairman, Mr. Davis is reported in this morning's newspaper as saying that he hopes the B.C. fishermen can do most of their dogfish catching, with the Japanese teams handling the processing and shipping. Do you agree fully with that statement?

Mr. Cameron: I hope that if we come to the state of affairs that Mr. Davis talked about today or yesterday the Canadians can do the fishing.

Mr. Turner (London East): If a fisherman insures his boat in this area is there one commission paid, do you know? The reason for my asking this question is that in Ontario we have had many investigations by organizations such as the Board of Education, and it has been found that insurance has been taken out and that all agents in the area were getting their commission, or their cut. Can you tell me whether there is one commission, or are all those in the area who are insurance agents getting their cut?

Mr. Cameron: They are all getting their commission. They take their commission from the premium which they send on to the underwriters. That is how they stay in business.

Mr. Turner (London East): Do you feel there is a combine in the insurance industry?

Mr. Cameron: No, I do not. There is a much bigger one in this industry, but we are exempted from the provisions of the act.

[Interpretation]

attrapez-vous, et la saison de la pêche à la ligne dure combien de mois?

M. Cameron: De dix à onze mois, si on le veut. On prend de la morue grise, espèce très semblable à la morue de l'Atlantique; tous les poissons de fond: plusieurs espèces de sole, le «snapper», qu'on appelle la carpe rouge, et, jusqu'à un certain point, la perche rose qui est transformée en filets et en bâtonnets, etc.

M. Crouse: Est-ce que vous avez de la difficulté à vendre ces espèces?

M. Cameron: Oui.

M. Crouse: Merci, monsieur le président.

Le président: Messieurs, si nous voulons nous en tenir à notre horaire, soyons brefs. M. Turner a encore des questions à poser.

M. Turner (London-Est): Monsieur le président, M. Davis, selon le journal de ce matin, a dit qu'il espérait que les pêcheurs de la Colombie-Britannique pourraient faire la majeure partie de la prise du chien de mer, les Japonais assurant la transformation et l'expédition. Etes-vous d'accord avec cette déclaration?

M. Cameron: J'espère que, si nous réalisons ce que M. Davis disait aujourd'hui, ou hier, les Canadiens pourront pêcher.

M. Turner (London-Est): Si le pêcheur assure son navire, dans cette région, verse-t-on une commission? Car, en Ontario, nous avons eu plusieurs enquêtes menées par des organisations comme le *Board of Education*, et on a découvert que tous les agents de la région obtenaient une commission. Y a-t-il une commission, ou est-ce que tous les agents de la région obtiennent une commission?

M. Cameron: Ils ont tous leur commission. Ils la prennent sur la prime qu'ils envoient aux assureurs. Voilà comment ils restent en affaires.

M. Turner (London-Est): Croyez-vous qu'il existe une coalition au sein de l'industrie des assurances?

M. Cameron: Non. Il y en a une, beaucoup plus importante, dans cette industrie, mais nous échappons aux dispositions de la loi.

[Texte]

Mr. Turner (London East): I have visited your province on vacation three times in the last five years and I must say you have a beautiful province. Can you tell me why canned salmon is cheaper in Ontario than in British Columbia?

Mr. Cameron: No; I am staggered; I cannot.

Mr. Turner (London East): That is a question to which I think we should find the answer. How many more fish can a drum seiner catch than a gill-netter?

Mr. Cameron (witness): I will have Mr. Bubl   answer that.

Mr. Bubl  : This depends on how the fish are schooled up. If the fish are well schooled, the drum seiner, or seiner, will beat out the gill-netter completely. But if the fish are scattered the gill-netter will do better than the seiner. It just depends on the area and how much wind there is. The gill nets do very well when it is windy, and we do not; we have a tougher time. But I would say that a seiner will catch roughly three or four times more than the gill-netter.

Mr. Turner (London East): What is the difference in the size of the crew?

Mr. Bubl  : The seiner has from four to eight men; a gill-netter has a one man operation; and a troller has one, or two. Sometimes they take two; they take a deckhand to make it easier to travel at night, and because of the long hours; it makes it a lot easier for them to work.

Mr. Turner (London East): Thank you, Mr. Chairman.

The Chairman: Mr. Borrie, one short question?

Mr. Borrie: Yes, a very short question, Mr. Chairman, and it may be answered by either witness. Could the herring vessels be easily converted for the purpose of fishing dogfish?

Mr. Cameron: One can use a seine to catch dogfish. In fact, many people catch them with a seine when they do not want to. The answer is yes.

Mr. Borrie: You can?

Mr. Cameron: It is pretty hard on the gear, but yes, you can.

Mr. Borrie: Thank you.

[Interpr  tation]

M. Turner (London-Est): J'ai visit   trois fois votre province, au cours des cinq derni  res ann  es, et je dois dire qu'elle est magnifique. Pouvez-vous me dire pourquoi le saumon est meilleur march   en Ontario qu'en Colombie-Britannique?

M. Cameron: Non, je ne sais pas.

M. Turner (London-Est): C'est une question    laquelle, il me semble, nous devrions trouver la r  ponse. Combien plus de poissons peut-on prendre    la seine    tambour qu'   la p  che au filet maillant?

M. Cameron: M. Bubl   va r  pondre    cette question.

M. Bubl  : Ca d  pend du banc de poisson. Si le poisson arrive en banc, la senne    tambour est beaucoup plus efficace que le filet maillant. Mais si les poissons sont dispers  s, le filet maillant est plus efficace que la senne    tambour. Cela d  pend de la r  gion et du vent. Quand il vente, le filet maillant est tr  s efficace, mais c'est plus difficile pour nous. Mais je dirais que la senne peut prendre, en gros, trois ou quatre fois plus de poissons qu'un filet maillant.

M. Turner (London-Est): Quelle est la diff  rence pour ce qui est de l'importance de l'  quipage?

M. Bubl  : Le seinier a un   quipage de quatre    huit hommes, tandis que la p  che au filet maillant n'exige qu'un homme, et la p  che    la ligne, un homme ou deux. Parfois, il en faut deux, dont un homme de pont pour faciliter les man  uvres de nuit, qui sont longues; ce qui facilite le travail.

M. Turner (London-Est): Merci, monsieur le pr  sident.

Le pr  sident: Monsieur Borrie, une courte question?

M. Borrie: Oui, une question tr  s br  ve, monsieur le pr  sident, et n'importe quel t  moin peut y r  pondre. Est-ce qu'il serait facile de transformer les chalutiers    harengs pour la p  che aux chiens de mer?

M. Cameron: On peut p  cher les chiens de mer    la seine. En fait, beaucoup de p  cheurs prennent des chiens de mer dans leurs seines sans le vouloir. La r  ponse est oui.

M. Borrie: C'est donc possible?

M. Cameron: C'est assez dur pour le mat  riel, mais c'est possible.

M. Borrie: Merci.

[Text]

The Chairman: Gentlemen, I think that has brought to an end the questioning on this combined brief. I wish to thank Mr. Bublé and Mr. Cameron for their able presentation.

Some hon. Members: Hear, hear.

The Chairman: Thank you, gentlemen.

The next brief is that of the UFAWU from the Fraser River Locals. I will ask Mr. Homer Stevens, the secretary treasurer, to introduce the witness and the man who will present the brief.

Mr. Comeau: Mr. Chairman, before we start on the brief could we again call on the hospitality and goodwill of our B.C. members to provide us with a map of the area so that we will know exactly where we are when we talk about the Georgia Bay, and so on?

The Chairman: We will pass that request on to the Clerk.

An hon. Member: Mr. Chairman, could you identify the brief?

The Chairman: It is the red brief that is before you, the one by the Fraser River Locals of the UFAWU. Does everyone have it?

I will now call on Mr. Homer Stevens.

Mr. Homer Stevens (General Secretary Treasurer, United Fishermen and Allied Workers' Union): Mr. Chairman and members of the Committee, first of all, on behalf of our organization, I would like to extend our greetings and welcome to the Province of British Columbia. We hope that in addition to these quite lengthy sessions you will have an opportunity to get out and perhaps enjoy some sport fishing and some good food in some of the restaurants. If you want to know where to go we will see if we can help you. Your other activities we will leave to your discretion.

My purpose here this morning is to introduce the man who will present this brief. When we received notice that the Committee was coming we prepared a rather lengthy submission on quite a wide range of subjects, but our locals on the Fraser were so concerned about pollution in that area that they asked that an additional brief be presented. When I say "locals on the Fraser", we have about 1,300 members in the six locals that got together to present this brief. Most of them are gill-netters, but there are some seiners, halibut fishermen, crab fishermen and others who are gathered together in that group.

The man who is going to introduce it is certainly well qualified. Mr. Buck Suzuki was

[Interpretation]

Le président: Messieurs, ceci met fin à l'interrogation des deux témoins. Je tiens à remercier M. Bublé, et M. Cameron de leur excellent exposé.

Des voix: Bravo.

Le président: Merci, messieurs.

Nous avons maintenant un mémoire de l'UFAW, présenté par le local du fleuve Fraser. Je demanderai à M. Horner Stevens, secrétaire-trésorier, de nous présenter le témoin et la personne qui fera l'exposé du mémoire.

M. Comeau: Pouvez-vous demander à nos collègues de Colombie-britannique de nous fournir une carte de la région afin que nous sachions exactement la baie de Georgie et le reste?

Le président: Nous transmettons votre demande au secrétaire.

Une voix: Monsieur le président, quel est ce mémoire?

Le président: C'est celui de la section locale du fleuve Fraser de l'UFAW. Est-ce que tout le monde l'a?

Je donne la parole à M. Homer Stevens.

M. Homer Stevens (secrétaire-trésorier, United Fishermen and Allied Workers' Union): Monsieur le président, messieurs; au nom de notre association, je tiens à vous apporter nos salutations et à vous souhaiter la bienvenue en Colombie-Britannique. Nous espérons qu'après ces longues séances vous aurez la possibilité de faire de la pêche sportive et de prendre de bons repas dans nos restaurants. Et si vous ne savez pas où aller, nous vous aiderons. Nous vous laisserons le soin de faire vos travaux.

J'ai l'intention de vous présenter la personne qui fera l'exposé du mémoire. Lorsque nous avons su que votre Comité venait chez nous, nous avons préparé un long mémoire sur de nombreux sujets, mais les sections locales du Fraser étaient si troublées par le problème de la pollution qu'elles ont demandé à présenter un mémoire particulier. Les 6 sections locales du Fraser qui présentent le mémoire comptent environ 1300 membres. La plupart sont des pêcheurs à l'araignée, mais il y a également des pêcheurs à la seine, des pêcheurs de flétan, de crabes, et d'autres pêcheurs qui font parti du groupe.

La personne qui va vous présenter le mémoire est certainement très qualifiée. M.

[Texte]

born and raised on the Fraser and has spent all of his adult life as a commercial gill net fisherman, except for a very short period of time that he spent working for the Union, particularly during the past year or so, when he was acting president when the president and myself had a vacation at Mr. Bennett's expense.

Therefore, I will now turn the presentation over to Mr. Buck Suzuki, formerly vice-president of our Union and at present a member of our executive board.

The Chairman: I will now ask Mr. Suzuki to make his presentation.

Mr. T. Buck Suzuki (United Fishermen and Allied Workers' Union): Thank you, Mr. Chairman and gentlemen. I have a special request to make here. I timed myself this morning to see how long this brief would take to read. It is roughly nine and a half minutes. Perhaps I could read it instead of going through it piecemeal.

The Chairman: That is fine.

Mr. Whelan: Excuse me, Mr. Chairman. I think the witness should be told that it is printed in the Committee Proceedings anyhow, whether he reads it or not.

The Chairman: It is agreed, then?

Some hon. Members: Agreed.

The Chairman: Mr. Suzuki?

Mr. Suzuki: This is addressed to the Standing Committee on Fisheries and Forestry.

Commercial fishermen who gain their livelihood from the waters of the Fraser River and the eastern portion of the Gulf of Georgia have noted with serious concern the ever-increasing pollution of this area.

Our concern is twofold. First, for the survival of the young salmon on their seaward migration from the spawning grounds; secondly, for the health of fishermen who come in contact with domestic and industrial waste discharged into the Fraser River.

If the Fraser River was a one-way, fast-flowing river with no tidal influence, waste matter would be subject to destruction through the forces of natural purification.

However, in the lower 20 to 25 miles of the Fraser River tide is an over-riding complicating factor affecting outflow in the lower reaches. The degree to which outflow is affected varies with the range of the tide, river discharge and velocity of south-east winds in the Gulf of Georgia.

[Interprétation]

Buck Suzuki, est né sur les bords du Fraser et il est pêcheur à l'araignée de sa profession. Il a cependant cessé de l'être pendant quelque temps, lorsqu'il commença à travailler pour l'Union; il y a un an, il a été président suppléant, lorsque le président et moi-même avons pris un congé aux frais de M. Bennett.

Je passe la parole à M. Buck Suzuki, ancien vice-président de notre association et membre du conseil d'administration.

Le président: Je demande donc à M. Suzuki de présenter son mémoire.

M. T. Buck Suzuki (United Fishermen and Allied Workers' Union): Merci, monsieur le président, et messieurs. Je tiens tout d'abord à formuler une demande toute particulière. Je me suis demandé ce matin combien de temps prendrait la lecture du mémoire; environ 9 minutes et demie.

Peut-être pourrais-je le lire au lieu de prendre des petits bouts ici et là?

Le président: Très bien.

M. Whelan: Excusez-moi, monsieur le président, il me semble que nous devrions dire au témoin que cela est imprimé dans les délibérations du Comité, qu'il le lise ou non.

Le président: Êtes-vous d'accord?

Des voix: D'accord.

Le président: M. Suzuki?

M. Suzuki: Le mémoire s'adresse au comité permanent des pêches et forêts.

Les pêcheurs commerciaux qui tirent leur gagne-pain des eaux du fleuve Fraser, et du versant est du golfe de Georgie, observent avec appréhension la pollution croissante de cette région.

Notre préoccupation est double. Nous voulons, tout d'abord, assurer la survie des jeunes saumons qui se dirigent vers la mer à partir des frayères et deuxièmement, protéger la santé des pêcheurs qui sont menacés par les déchets domestiques et industriels déchargés dans le fleuve Fraser.

Si ce fleuve était un cours d'eau rapide, affranchi des bouleversements de la marée, les déchets seraient voués à la destruction grâce aux forces de purification naturelle.

Toutefois, dans les 20 à 25 derniers milles en aval, le courant se heurte à un puissant facteur qui modifie son écoulement. La force de cet obstacle dépend de l'ampleur de la marée, du débit du fleuve et de la vitesse des vents sud-est dans le golfe de Georgie.

[Text]

Reverse tidal flow, or back-up conditions, mean that sewage discharged into the waterway remains in the vicinity of discharge for up to 10 hours in each 24-hour period. Under flow and tidal conditions prevailing during late October to the beginning of April, the daily outflow volume at New Westminster is very little greater than the backflow. Under these conditions almost two complete tidal cycles or two days will be required for water initially in the New Westminster area to clear the mouth of the river. Perhaps up to three or four days' flow time may be necessary from Haney and Mission.

Some of the discharged sewage and industrial waste will be carried out with the outflow but much of it settles on the river bottom or washes up on the shoreline and beaches.

Fishermen working the lower Fraser encounter ever-increasing amounts of domestic sewage entangled in their gillnets and considerable concern has been expressed for the health of men working in these conditions.

Plans by the Greater Vancouver Sewage and Drainage District are well under way for a combined sewage outfall located on the south arm of the Fraser River in the vicinity of Gilbert Road in Richmond that would not only service Richmond but South Delta and Ladner as well. Addition of this huge new outfall will further heighten the problem of nets being fouled by raw sewage and domestic waste.

Commercial and sports fishermen in Richmond and in lower mainland communities alike express anxiety regarding the effect of increased pollution on fish stocks, particularly on young salmon migrating seaward from the spawning grounds.

The United Nations Food and Agriculture Organization has emphasized the increasing threat to fish stocks when chlorine is used as an anti-pollutant in waste treatment and municipal water supplies.

I would like to read a quotation here:

Chlorine, a greenish gas that dissolves to form a potent germicide, is commonly used to disinfect water supplies. This is particularly true in areas where growing population has led to increased use of chlorine and other disinfectants to make water safe for drinking.

The amount used presents no problem for human safety—but it is lethal to

[Interpretation]

La marée qui freine le courant arrête les eaux vannes pendant 10 heures sur 24 à proximité de la région où elles sont déchargées dans le cours d'eau. Entre la fin d'octobre et le début d'avril, la marée est telle que le débit quotidien à New Westminster est à peine plus puissant que le reflux. Dans ces conditions, la marée doit accomplir presque deux cycles, ce qui exige deux jours, avant que l'embouchure du fleuve soit libérée de l'eau qui traversait tout d'abord la région de New Westminster. Il faut peut-être trois ou quatre jours à l'eau pour s'écouler entre Haney et Mission.

Une partie des eaux vannes et des déchets industriels sera emportée par le courant, mais une bonne portion va se déposer sur le lit du fleuve, ou se déverse sur les côtes et les plages.

Les pêcheurs installés dans le bas Fraser voient leurs filets maillants absorber une quantité croissante des déchets domestiques et on a exprimé de vives appréhensions à propos de la santé de ceux qui travaillent dans ces conditions.

Le service des égouts du Vancouver métropolitain se consacre activement à l'installation d'un grand égout à décharge situé sur le versant sud du fleuve Fraser à proximité de Gilbert Road à Richmond, égout qui desservira, non seulement Richmond, mais South Delta et Ladner. Les filets, à cause de l'installation de cet énorme égout, risqueront encore plus qu'avant, d'être embarrassés par les eaux vannes et les déchets domestiques.

Ceux qui se livrent à la pêche commerciale et sportive à Richmond, et dans d'autres localités du sud du continent, ont tous exprimé leur crainte à propos des conséquences de cette pollution croissante sur les réserves du poisson surtout sur les jeunes saumons qui émigrent vers la mer à partir des frayères.

L'Organisation des Nations Unies pour l'alimentation et l'agriculture a fait ressortir que les réserves de poisson sont de plus en plus menacées par le chlore employé dans le traitement des déchets et dans les aqueducs municipaux pour combattre la pollution.

Et qu'on me permette de citer ceci:

L'utilisation du chlore, gaz jaunâtre qui se dissout pour former un germicide puissant, est très répandu pour la désinfection des aqueducs. On le constate surtout dans des régions où l'essor démographique a entraîné l'usage constant du chlore et d'autres désinfectants, pour rendre l'eau potable.

Le volume utilisé ne menace pas la santé humaine, mais il est meurtrier pour

[Texte]

many species of fish. On contact with chlorinated water, they sicken and die for no apparent reason.

And as chlorination is increasingly used in combatting pollution, more fish will die from apparently mysterious causes.

A bulletin issued by the F.A.O. North American regional office cites research work on chlorination problems conducted by three Polish scientists at Warsaw Agricultural University's fisheries department.

In their experiments the scientists found that even small quantities of chlorine, as little as 0.1 to 0.2 milligrams per litre of water, were death to fish, especially at low temperatures.

The Fraser River is now the largest salmon-producing river in North America. The commercial fishery based on the spawning migrations of salmon has developed into a multi-million dollar protein food industry.

The estimated commercial worth of salmon in a normal year would be in the neighborhood of 80 to 90 million dollars. Perhaps half of the catch could be attributed to fish of Fraser River origin, regardless of where they may be caught in British Columbia.

It has been predicted that by 1984 tourism may replace forestry as B.C.'s leading industry. In 15 years' time, it has been suggested, tourism in B.C. will be a \$1.5 billion pillar of our economy. The fame of B.C. salmon is world wide and when tourists are asked why they choose B.C. as a place to spend their holidays, a large number of them express a desire to catch salmon.

We are afraid that unless proper methods are employed in the treatment of domestic and industrial effluents before release into the Fraser, the valuable salmon resource of the Fraser is jeopardized.

Our greatest concern at present is the health hazard posed by pollution of the lower Fraser River. Commercial fishermen are gravely concerned for their health as they come in contact with domestic sewage and other effluents caught up in their nets.

Here, Mr. Chairman, I quote the Boundary Health Unit which is an organization looking into the health matters of the lower Fraser.

[Interprétation]

de nombreuses espèces de poisson. Celles-ci, sitôt en contact avec l'eau verdunie, tombent malades et meurent mystérieusement.

Et au fur et à mesure que la verdunisation sert à combattre la pollution, la destruction mystérieuse des poissons ne fera que s'accroître.

Une brochure publiée par le Bureau régional de la F.A.O. pour l'Amérique du Nord fait état de recherches faites sur la chloruration par trois scientifiques polonais, au département des Pêches de la faculté d'Agriculture de Varsovie.

Ces scientifiques ont constaté, au cours de leurs expériences, que même de faibles quantités de chlore, par exemple de 0.1 ou de 0.2 milligrammes par litre d'eau, entraînaient la mort des poissons, surtout à de basses températures.

Le fleuve Fraser est la plus grosse source de saumon en Amérique du Nord. La pêche commerciale qui dépend des migrations du saumon vers les frayères a permis une production alimentaire riche en protéine qui s'écoule pour des millions de dollars.

On calcule qu'en une année normale la valeur commerciale du saumon atteint entre 80 et 90 millions de dollars. La moitié des poissons proviennent peut-être du Fraser même s'ils sont capturés dans d'autres régions de la Colombie-Britannique.

On a prédit que vers 1984, le tourisme remplacera les forêts comme principale industrie de la Colombie-Britannique. On prévoit que dans 15 ans le tourisme rapportera un milliard et demi de dollars à notre économie. Le saumon de la Colombie-Britannique est de réputation mondiale et lorsqu'on demande aux touristes pourquoi ils viennent passer leurs vacances dans cette province, ils sont nombreux à répondre que c'est le saumon qui les attire.

A moins d'appliquer des méthodes appropriées pour traiter les déchets domestiques et industriels avant qu'ils soient déversés dans le Fraser, les réserves précieuses de saumon seront compromises.

C'est le risque pour la santé que cause la pollution des bas Fraser qui provoque notre plus vive préoccupation à l'heure actuelle. Les pêcheurs commerciaux craignent pour leur santé lorsqu'ils doivent débarrasser leurs filets des déchets domestiques et d'autres. Ici, monsieur le président, je cite le service sanitaire de Boundary qui s'occupe des questions d'hygiène du bas Fraser.

[Text]

Boundary Health Unit points out that no part of the lower Fraser is safe any longer for swimming or aquatic sports.

According to the 1966 Boundary Health Unit report the coliform count on the lower Fraser ranged as high as 1.6 million during certain periods at Annicis Island. At Westham Island near the mouth of the Fraser it was 8000. The lowest count was upriver at Barnston Island where the count was 4000.

From a health standpoint, therefore, the lower Fraser already has been eliminated as a safe area for any recreational purposes. Boundary Health says its findings refute the contention that almost unlimited quantities of untreated sewage can be discharged into the Fraser River. Although there may well be enough oxygen in the water eventually to oxidize the sewage, it points out, in the interim that "the water represents a direct health hazard for persons coming in contact with it."

Modern communities can no longer be satisfied with using waterways as a means of disposing of domestic and industrial wastes.

We are particularly pleased to note that the title of this Standing Committee is Forestry and Fisheries.

In recent years the use of huge barges by the forest industries has created a serious pollution problem of another nature to the waters of the Fraser River. Each barge transports many millions of board feet of logs to the Fraser River where they are dumped and held in log sorting areas, then made up into booms until needed by lumber and chipper mills located along the Fraser River.

While this method of transportation greatly facilitates the movement of logs, especially those having poor buoyancy qualities, it brings with it much of the forest debris, such as bark and limbs, formerly lost in the towing of log booms enroute to the river from upcoast logging operations.

This debris is fouling the river bottom in certain areas so badly that boat anchors will not hold on the bottom. Also, due to the difference in buoyancy properties of salt and fresh water, low-floating logs picked up from salt water log-holding ponds and loaded on barges soon sink to the bottom of the river and become snags that cause many thousands of dollars damage to fishermen's nets or as they slip out from the booms, become low-lying, barely visible menaces to navigation.

[Interpretation]

Le service sanitaire de Boundary signale qu'aucune zone du bas Fraser n'est, au point de vue santé, propice à la nage ou aux sports nautiques.

Ce service, dans le rapport de 1966, signale que le chiffre de la pollution dans le bas Fraser atteignait jusqu'à 1.6 million de «germes» pendant certaines périodes à l'île Annicis. À l'île Westham près de l'embouchure, le chiffre était de 8,000. Le plus bas chiffre, 4,000, a été enregistré, en aval, à l'île Barnston.

Le bas Fraser a été éliminé comme région de loisir, à cause des risques pour la santé. Le Service sanitaire de Boundary déclare que ses conclusions réfutent la thèse voulant que le Fraser puisse absorber une quantité presque illimitée de déchets non traités. Bien que l'eau puisse contenir assez d'oxygène pour oxygéner à la longue les déchets, on signale que, dans l'intervalle, l'eau menace directement la santé de ceux qui s'y approchent.

Les collectivités modernes ne peuvent plus se contenter de l'utilisation des cours d'eau pour le déversement des déchets domestiques et industriels.

Nous avons été plutôt heureux de remarquer que ce Comité a pour titre «Comité permanent des Pêches et Forêts.»

Les industries forestières qui, depuis ces dernières années, utilisent d'énormes chalands ont contribué à polluer sous une autre forme les eaux du fleuve Fraser. Chaque chaland transporte du bois par million de pieds planches, les décharge dans la rivière où les billots sont retenus dans les zones du triage puis formés en chapelets jusqu'à ce qu'ils soient absorbés par les fabriques de planches et de copeaux situées le long du Fraser.

Bien que ce moyen facilite énormément le transport du bois, surtout lorsque la flottabilité est médiocre, il entraîne un grand nombre de déchets forestiers comme les écorces et les rameaux qui, autrefois, se répandaient lorsqu'on remorquait les chapelets à partir des zones de coupe du haut de la côte, vers le fleuve.

Le lit du fleuve est souillé à tel point par ces déchets, que, dans certaines régions, les ancres ne peuvent pas s'y accrocher. En outre, comme l'eau salée et l'eau douce présentent chacune différents degrés de flottabilité, les billots à basse flottabilité provenant des fosses installés sur la mer et chargés à bord des chalands coulent immédiatement au fond du fleuve et deviennent des écueils qui causent des dommages très onéreux aux filets ou lorsqu'ils s'échappent de la

[Texte]

Another danger to navigation is the almost totally submerged log with just its tip visible above water. Commonly known as deadheads, they are transported, unknowingly on board log barges. Today there is hardly a fisherman who has not suffered serious damage to his boat due to striking deadheads. Many pleasure boat owners also have had near fatal accidents from striking these partially submerged logs.

This form of pollution is becoming worse with the increasing use of log dumping barges.

Conclusion:

1. The need is urgent for a comprehensive study of the Lower Fraser River by a research team.

2. The health of the lower mainland B.C. citizens must not be jeopardized by the dumping of any further sewage, whether raw or partially treated, into our waterways.

3. It is imperative that the valuable commercial and sports salmon fisheries not be jeopardized by the dumping of raw or partially treated wastes into the Fraser River.

4. Federal and provincial governments must undertake a program of financial aid in the form of grants and long term, low interest loans to municipalities for sewage treatment.

5. Water quality standards must be established immediately to determine the kind of treatment plant required in each given area with at least secondary treatment to be required in the lower Fraser River areas where tidal back-up creates a particularly serious threat of pollution.

6. A pollution control board must be constituted having as its members non-civil servants who are not responsible to any ministry of federal or provincial governments, and who may act independently in enforcement of a pollution control Act.

7. Log dumping must be prohibited in the waters of the Fraser River and a suitable site near the mouth of the river in salt water should be constructed to dump and boom logs prior to towing into the river for storage.

8. Certain species of logs such as hemlock and yellow cedar should be inspected for

[Interprétation]

chaîne flottante, ils deviennent des obstacles à peine visibles à la navigation.

Une autre menace à la navigation est causée par les billots presque totalement submergés dont seul le sommet est visible. Appelés communément des «deadheads», on les transporte par mégarde sur les chalands. Rares sont les pêcheurs de nos jours qui n'ont pas vu leurs bateaux sérieusement détériorés par suite d'une collision avec ces obstacles. Nombreux aussi sont les propriétaires de bateaux de plaisance qui ont failli être victimes d'une collision avec ces billots partiellement submergés.

Cette forme de pollution s'aggrave avec l'utilisation croissante de chalands pour décharger des billots.

Conclusion

1) La nécessité de créer une équipe de recherches pour faire une étude urgente et détaillée du bas du fleuve Fraser.

2) La santé des résidents du Sud de la Colombie-Britannique ne doit pas être menacée par le déversement des déchets bruts ou partiellement traités dans nos cours d'eau.

3) Il importe que les précieuses réserves de poisson destinées à la pêche commerciale et sportive ne soient pas compromises par le déversement de déchets bruts ou partiellement traités dans le Fraser.

4) Les gouvernements fédéral et provinciaux doivent entreprendre un programme d'assistance financière sous forme de dons et de prêts à long terme, à faible intérêt, aux municipalités, pour le traitement des déchets.

5) Il faut établir immédiatement des normes des qualités de l'eau pour déterminer le modèle d'usine de traitement approprié à chaque région donnée et installer aussi des usines au moins secondaires dans le bas du fleuve Fraser où le reflux de la marée entraîne un risque grave de pollution.

6) Un conseil de contrôle de la pollution doit être constitué de membres choisis hors de la Fonction publique et qui ne soient pas comptables à aucun ministère des gouvernements fédéral ou provinciaux et qui peuvent en toute indépendance appliquer une loi sur le contrôle de la pollution.

7) Le déversement du bois doit être interdit dans les eaux du Fraser et on doit aménager à l'embouchure du fleuve, en eau salée, un endroit approprié pour recevoir les billots en chapelets avant de les remorquer sur le fleuve pour l'entreposage.

8) Certaines espèces de bois comme le sapin cigue et le cyprès jaune doivent être inspec-

[Text]

"conkey" or hollow butts after falling, and that portion of the log that is hollow or "conkey" should be removed before storing in holding ponds at upcoast points.

Respectfully submitted by the Fraser River Locals and we have the endorsement of the Fraser River District Council, United Fishermen and Allied Workers' Union.

The Chairman: Thank you, Mr. Suzuki. We will now proceed with the questioning and Mr. Goode is first.

Mr. Goode: Thank you, Mr. Chairman. It is indeed a pleasure for me to see Mr. Buck Suzuki here today. I do not think there is any doubt but that he is the most qualified expert in Canada on the pollution problems of the Fraser River. I was also very pleased to see that he brought forth the results of the Boundary Health Unit. As you may know, I was chairman of the Boundary Health Unit when that study was made.

The problem I am concerned with, and one that you did not bring forth, is the fact that although your organization is very actively putting pressure on several of the municipalities in the area because of the small amount of treatment they are giving the sewage before it goes into the Fraser River I have never heard you make representations to New Westminster, which is obviously the greatest offender with respect to polluting the Fraser River. Have you ever made or do you plan to make representation to them?

Mr. Suzuki: No sir, we have not.

Mr. Goode: Do you plan to make representation to them?

Mr. Suzuki: Yes, we expect to get in touch with every municipality and every city and town in the lower mainland.

Mr. Goode: You do agree that New...

Mr. Hogarth: As my colleague might suspect, I would like to speak on a point of order. I wish to remind him that although the actual outfall occurs in the City of New Westminster, a great deal of the effluent which is discharged into the river does not necessarily come from that city. I would like to say that just to set the record straight. So, if my friend would be kind enough to confine his remarks to the outfall of the City of New Westminster, I think that would be acceptable, but to say that it is the sole responsibility of the City of New Westminster is grossly unfair.

[Interpretation]

tées après leur chute afin d'en découvrir les portions creuses et celles-ci doivent être retranchées avant qu'on place le bois dans des fosses à certains points du long de la côte.

En tout respect, nous soumettons ce mémoire aux noms des sections syndicales du fleuve Fraser et Conseil du district et du fleuve Fraser, et de l'union des pêcheurs et travailleurs assimilés unis.

Le président: Merci, monsieur Suzuki. Nous abordons à présent la période des questions. La parole est à M. Goode.

M. Goode: Je vous remercie, monsieur le président. Il me fait grand plaisir de voir M. T. Buck Suzuki parmi nous aujourd'hui parce qu'il n'y a aucun doute que c'est un expert dans ces questions de pollution du fleuve Fraser. Je suis très heureux de voir que c'est grâce à lui que l'Unité sanitaire de Boundary a donné des résultats. Comme vous le savez, j'étais président de cette unité lorsque cette étude a été faite.

Le problème qui me préoccupe et dont vous n'avez pas fait mention est le fait que même si votre organisation s'occupe activement d'exercer une pression sur un bon nombre de municipalités de la région, à propos du peu de traitement qui s'effectue avant le déversement des eaux dans le Fraser, je ne vous ai jamais vu présenter des griefs auprès de la municipalité de New Westminster qui est sans aucun doute le principal responsable de la pollution des eaux du Fraser. Vous en êtes-vous plaints, sinon avez-vous l'intention de le faire?

M. Suzuki: Non, nous ne l'avons pas fait.

M. Goode: Avez-vous l'intention de vous plaindre à eux?

M. Suzuki: Oui, nous avons l'intention de nous mettre en rapport avec chaque municipalité, cité et ville, dans les basses terres du territoire.

M. Goode: Vous admettez que...

M. Hogarth: Comme mon collègue s'en doute, j'invoque le Règlement. J'aimerais rappeler que, bien que le déversement se fasse dans New Westminster, une grande proportion des eaux d'égouts qui se déchargent dans le fleuve ne vient pas nécessairement de cette ville. Je voulais simplement mettre la chose au point. Par conséquent, j'aimerais bien que mon collègue limite ses remarques à la décharge de la cité de New Westminster, mais prétendre que c'est uniquement la responsabilité de la cité de New Westminster, c'est faire preuve de grossière injustice.

[Texte]

Mr. Goode: I am glad to see that we have a defender of the City of New Westminster present. The point I was about to raise and speak on is that under the provincial laws governing pollution New Westminster is favoured by the fact that although you cannot build new treatment plants you can build high-rises in the existing sewer trunklines. Do you agree that this is a problem?

Mr. Suzuki: Yes, sir, it is a problem.

Mr. Goode: I have a further question I would like to ask. Do you agree that the federal government should bring about legislation to remove the excise tax tariffs and also the provincial government sales taxes on the pollution control equipment that is used by industry?

Mr. Suzuki: Yes, I agree that it would help very much because it is a very costly item.

Mr. Goode: The problem that I think bothers me more than anything else, and perhaps I could direct this to Mr. Stevens, is that over the years the co-operation between the Fisheries Committee and the Department of Fisheries and the Union that you both represent has been very poor. Do you have any recommendations to make on how we can get together and work together for the fishing industry, rather than fighting all the time?

Mr. St. Pierre: On a point of order, Mr. Chairman. It seems to me that Mr. Goode's latest question opens up an entirely new line of questioning and one which does not directly concern this witness. There will be time to ask Mr. Stevens about this later.

The Chairman: I think the point is well taken.

Mr. Goode: That is fine, Mr. Chairman. I will bow to Mr. St. Pierre. However, it is a problem that I think should be considered. I will now pass to the next questioner, Mr. Chairman.

The Chairman: Mr. Howard.

Mr. Howard (Skeena): Mr. Chairman, I would also like to commend Mr. Suzuki and these organizations for presenting an excellent and well-thought-out brief which deals with a very, very important subject that is not confined, as everyone will agree, simply to the lower Fraser River or to these sorts of pollutants. You mention on page 2 that the increased pollution in that area has a particu-

[Interprétation]

M. Goode: Je suis heureux de voir parmi nous un défenseur de la cité de New Westminster. Ce que je voulais dire c'est qu'en vertu des lois provinciales régissant la pollution des eaux, la cité de New Westminster se trouve favorisée par le fait que même si l'on ne peut construire de nouvelles usines de traitement des eaux d'égoûts, on peut installer des élévations dans les conduites principales déjà en place. Admettez-vous qu'il s'agit ici d'un problème?

M. Suzuki: Oui, monsieur, il s'agit bien d'un problème.

M. Goode: J'aimerais poser une autre question. Estimez-vous que le gouvernement fédéral devrait prendre des mesures législatives pour exempter de l'impôt indirecte et de la taxe de vente provinciale, l'équipement utilisé par l'industrie pour le contrôle de la pollution des eaux?

M. Suzuki: Oui, cela aiderait beaucoup car ce genre d'équipement est très coûteux.

M. Goode: Le problème qui me préoccupe peut-être plus que tous les autres, et j'adresse cette question à M. Stevens, c'est que, au cours des années, la coopération entre le Comité des pêches et forêts et le ministère des Pêcheries ainsi que le syndicat dont vous êtes les représentants a été très faible. Pourriez-vous nous dire ce que vous proposer de faire pour que nous puissions œuvrer ensemble pour le bien de l'industrie au lieu de nous tirailler tout le temps?

M. St-Pierre: J'invoque le Règlement, monsieur le président. Il me semble que la question de M. Goode s'écarte absolument du sujet et ne concerne pas directement le témoin. Nous pourrions poser des questions de cet ordre à M. Stevens plus tard.

Le président: Je crois que cet argument est valable.

M. Goode: Très bien, monsieur le président, je m'incline devant M. St-Pierre. Cependant, c'est un problème, qui, j'estime, devrait faire l'objet d'une étude. Je cède la parole au suivant, monsieur le président.

Le président: Monsieur Howard.

M. Howard (Skeena): Monsieur le président, j'aimerais féliciter M. Suzuki, ainsi que ces organismes pour avoir présenté un excellent mémoire qui porte sur un sujet excessivement important, et qui ne concerne pas simplement le bas-Fraser ou ce genre de pollution. Vous mentionnez à la page 2, que l'augmentation de la pollution, dans cette région, peut être particulièrement fatale à la

[Text]

larly deathly effect upon the younger salmon that are migrating seaward. Do you know if the Department of Fisheries or any other organized group has made any studies of this? Has any scientific analysis been made about the effects of this?

Mr. Suzuki: I believe the Department of Fisheries have some reports on studies that have been made, but in pursuing this matter there seems to be a difference of opinion on just how dangerous this situation is. We, the fishermen, are afraid of what might happen, and in a lot of areas our fears have been justified. In example, very recently in the Nanaimo area one of the large pulp mills was discharging effluent. An estimate was made by some expert as to the numbers of fish killed and it was more or less played down, but how long has this been going on? You must consider that the Fraser River salmon contribute to the economy of not only British Columbia but to the rest of Canada and in its future attractions to tourism. From time to time we differ with the Departmental people. I think they do have some reports, and very recently I was at a meeting and a Department of Fisheries expert was there and he was speaking on the subject of tidal movement on the Fraser River and we varied very greatly.

Mr. Howard (Skeena): I wonder if I could also inquire about your experience in connection with the activities of the B.C. Pollution Control Board in this or in any other area. I think we are all pretty well aware that the Provincial government generally treats fisheries matters as if they were something to be ignored and shunned, and I wondered what your experience has been in connection with the government's activities through the Pollution Control Board. This is partly based on one of the recommendations concerning a non-civil servant type of pollution control board.

Mr. Suzuki: The reason we put that non-civil servant section in there is that we believed it would be easier for a person to make a direct recommendation if he were in that position. I must say with respect to the provincial government that I had the opportunity of appearing before the Pollution Control Board in Victoria and I think in view of the fact that generally speaking the public in this lower mainland area have become greatly aroused to the dangers of pollution of

[Interpretation]

jeune génération de saumons qui émigre vers l'océan. Savez-vous si le ministère des Pêcheries ou quelque autre groupe a étudié cette question? A-t-on déjà entrepris une analyse scientifique sur les effets de cette pollution?

M. Suzuki: Je crois que le ministère des Pêcheries a fait un rapport sur des études qui ont été faites, mais on dirait qu'il y a une différence d'opinions sur la situation, le danger que présente cette situation. Nous, les pêcheurs nous inquiétons des conséquences et, dans bien des régions nos craintes étaient justifiées. Par exemple, tout récemment, dans la région de Nanaimo, une importante fabrique de papier déversait ses eaux d'égoûts. On a fait une évaluation du nombre de poissons qui avaient été tués et l'on a minimisé la chose, mais peut-on savoir depuis quand cette situation dure? Il ne faut pas oublier que le saumon du fleuve Fraser contribue beaucoup non seulement à l'économie de la Colombie-Britannique mais au reste du Canada, et à son importance au point de vue du tourisme. Nous avons, de temps en temps, des divergences de vue avec les gens du Ministère. Je crois que le ministère a des rapports, et tout dernièrement, j'ai assisté à une réunion et un expert du ministère des Pêcheries a abordé la question du mouvement des marées sur le Fraser et nos vues n'étaient pas du tout identiques.

M. Howard (Skeena): Pourriez-vous me dire ce que vous savez de l'activité de la Commission de contrôle de la pollution de la Colombie-Britannique à cet égard, ou dans tout autre domaine? Nous savons très bien que le gouvernement provincial traite généralement des questions de pêche comme si c'était les sujets qu'il fallait éviter, et je me demande ce que vous savez des activités du gouvernement par l'intermédiaire de la Commission de contrôle de la pollution?

Ce que je dis est fondé sur les recommandations qui ont été faites et qui prévoient une commission de contrôle de la pollution formée de personnes qui ne servent pas la Fonction publique.

M. Suzuki: Oui, si nous proposons ceci, c'est parce que nous estimons que ce serait plus facile pour une personne de faire des recommandations, si elle ne relevait pas de la Fonction publique. En ce qui a trait au gouvernement provincial, je dois dire que j'ai eu l'occasion de comparaître devant le Conseil de contrôle de la pollution, à Victoria, et étant donné que le public dans cette région se rend compte de ces difficultés, en général et des dangers que représente la pollution, je crois

[Texte]

our waters that their attention to this matter has been very good and I think they are taking a very serious look at it.

However, the problem is so great and the degree of treatment of effluent going into the Fraser River must be so much higher than in some of the other areas that will not have a \$80 million to \$100 million fisheries industry in the future, plus an attraction for tourists, that the costs would be prohibitive for any municipality. I think it would be quite hard for the provincial government alone to assume that responsibility and this is why we ask that all levels of governments participate in this pollution abatement.

Mr. Howard (Skeena): If I may be permitted one further question, Mr. Chairman. You mentioned the necessity of logbutting, or cutting off the butts of hemlocks, yellow cedar, and so on, in the bush. I have heard estimates made at log dumping grounds of logging companies, not particularly in the Fraser River but on the west coast of Vancouver Island and elsewhere, that 8 per cent to 10 per cent of the logs that are dumped in the salt water from the log dumping operations of the companies are in effect deadheads, or sink, and I wonder if you have made any analysis of this on different parts of the coastline?

Mr. Suzuki: From my observations I think that would be a little too high. There is a log dumping site immediately opposite to where I live, and I think a lot depends on the variety of logs. If it is spruce or fir there is no likelihood of sinkers, but if it is hemlock, yellow cedar or balsam any person who understands logs or lumber can see at a glance that they should not have been allowed into the water.

The Chairman: Mr. McBride.

Mr. McBride: I wish to congratulate the witness on the brief, it seems to be a very thorough one, and also to ask a question for clarification.

I am not from British Columbia, but do I understand correctly from the brief that all of the sewage that is dumped into the Fraser River is raw sewage? You do not have sewage treatment plants in your cities in British Columbia?

Mr. Suzuki: Almost all the domestic sewage that is released into the Fraser River is in raw form. Screening might take place in some of the smaller municipalities and there could

[Interprétation]

que ces gens considèrent la question très sérieusement.

Cependant, le problème est tellement grave et des travaux de traitement des eaux d'égouts qui se déversent dans le Fraser doivent être tellement plus importants que ceux des autres régions qui n'ont pas l'avantage de voir des industries de la pêche s'y établir au coût de 80 ou 100 millions de dollars, en plus d'être un centre d'attraction pour les touristes, que les coûts seraient simplement inabornables pour une municipalité quelconque. Je crois que le gouvernement provincial ne pourrait, à lui seul, assumer une telle responsabilité, et c'est la raison pour laquelle nous demandons à tous les paliers de gouvernement de prendre part à cet effort tendant à éliminer la pollution.

M. Howard (Skeena): Une autre question, si vous me le permettez, monsieur le président. Vous avez dit qu'il fallait absolument couper les bouts des sapins et des cèdres jaunes et autres, dans la forêt. D'après certaines évaluations provenant des chantiers d'exploitation forestière, pas précisément ceux du fleuve Fraser, mais sur la côte Ouest de l'île de Vancouver et ailleurs, 8 à 10 p. 100 des billots déversés dans l'eau de mer sont en fait des «bois canard», et je me demande si vous avez étudié ce problème à divers points de la côte?

M. Suzuki: D'après mes constatations, je crois que le chiffre que vous donnez est un peu élevé. Il y a un endroit où l'on dépose les billes, près de chez moi et cela dépend beaucoup du genre de bois. Si ce sont des pins ou des sapins, ils ne sombreront jamais; s'il s'agit de pruches, de baumiers ou de cèdres jaunes, quiconque connaît les billots vous dira tout de suite qu'on ne devrait pas les jeter à l'eau.

Le président: Monsieur McBride.

M. McBride: J'aimerais féliciter le témoin pour le mémoire qu'il a présenté et qui semble très bien préparé; j'aimerais poser une autre question à titre de renseignement. Je ne suis pas de la Colombie-Britannique, mais ai-je bien compris, d'après votre mémoire, que toutes les eaux d'égouts déversées dans le Fraser n'ont pas été traitées? Vous n'avez pas d'usines de traitement des eaux d'égouts dans vos villes en Colombie-Britannique?

M. Suzuki: Presque toutes les eaux ménagères qui sont déversées dans le Fraser ne sont pas traitées. Sauf peut-être dans certaines petites municipalités où l'on effectue le tami-

[Text]

be one or two small villages that give it primary treatment.

Mr. McBride: Yes. As a member from Ontario I would like to observe that I find this incredible. I pass.

The Chairman: Mr. Crouse.

Mr. Crouse: Mr. Suzuki, in view of the value of the salmon resource on the Fraser River have you made representations to the provincial and municipal authorities requesting that they take action with respect to controlling the amount of pollutants that are dumped into the Fraser River?

Mr. Suzuki: Yes, we have made representations on this question to various levels of government, including the federal government.

Mr. Crouse: As it would appear that most of the responsibility for control of these pollutants rests with the provincial and municipal authorities, what response did you get from these people in reply to your representations?

Mr. Suzuki: We have agreement with our stand from almost every level of government. Yes, there is an area of danger, but when you pursue this further you will find that you always run up against the question of adequate finances, whether it is on the provincial or the municipal level.

Mr. Crouse: As it is obvious from the brief that has been presented—and speaking as a person from the East coast I might say it is a very able brief—that the Fraser River salmon contributes so much to the economy of British Columbia by its direct sale as well as by the tourist industry, have you made any representations to the lumber and paper companies asking them to take steps to control and eliminate the effluent from their plants as well as policing the dumping of logs in the Fraser River waters, and what was their response?

Mr. Suzuki: No. In 1967, sir, I had occasion to appear at the first hearing of the provincial Pollution Control Board in Surrey, and at that time I concentrated on the question of domestic and forest industrial pollution on the Fraser River somewhat along the line I am presenting today, only a little briefer. At that time I was approached by the public relations officer of the forest industrial council, I think it was, or the council of forest industries, and he was very disturbed that we should bring this out in public. We have not made a direct approach and we have had a

[Interpretation]

sage des eaux, et il se pourrait qu'il y ait un ou deux villages qui donnent à ces eaux un traitement primaire.

M. McBride: Oui. Comme député de l'Ontario, j'aimerais simplement faire remarquer que ce que vous dites là est incroyable.

Le président: Monsieur Crouse.

M. Crouse: Monsieur Suzuki, étant donné l'importance des ressources en saumon du fleuve Fraser, avez-vous demandé aux autorités provinciales et municipales de prendre les mesures qui s'imposent en vue de contrôler les quantités de déchets déversés dans le Fraser?

M. Suzuki: Oui, nous avons présenté des requêtes aux divers paliers de gouvernement y compris le gouvernement fédéral.

M. Crouse: Puisqu'il semble que le contrôle de ces déchets relève surtout des autorités provinciales et municipales, quelle a été leur réponse?

M. Suzuki: Presque tous les paliers de gouvernement sont d'accord avec notre point de vue. Oui, on convient qu'il y a certainement un danger, mais lorsqu'on étudie la question à fond, on constate qu'il y a toujours la question des finances qui s'oppose, qu'il s'agisse des municipalités ou du gouvernement provincial.

M. Crouse: Étant donné que, selon le mémoire qui nous a été présenté, (qui, je dirais est un excellent mémoire) le saumon provenant du Fraser a une telle importance pour l'économie de la province, à cause des ventes directes et de l'attrait touristique, avez-vous présenté des instances aux compagnies de papier ou aux entreprises forestières, leur demandant de prendre les mesures nécessaires pour contrôler et éliminer l'écoulement des déchets de leurs usines, et de réglementer le déchargement des billots dans les eaux du fleuve, et quelle a été leur réaction?

M. Suzuki: Non, en 1967 j'ai eu l'occasion de comparaître à la première audience de la Commission Provinciale de contrôle de la pollution, à Surrey, et, à ce moment-là, j'ai traité surtout de la question de la pollution industrielle et domestique du Fraser un peu dans la même veine qu'aujourd'hui, mais plus brièvement. A ce moment-là, l'agent des relations publiques du Conseil des industries forestières m'a dit qu'il était très ennuyé que nous fassions ressortir cette question en public. Nous n'avons pas étudié la question directement; nous avons été, il y a deux ans, très

[Texte]

rather hectic two years out on the coast here with our union and we have not been able to pursue this question properly, but I did receive an invitation from the director of public relations to meet with them, but up to the present time we have not taken advantage of this invitation.

Mr. Crouse: One final question, Mr. Chairman, and then I will pass. Recommendation No. 6 in your brief reads:

A pollution control board must be constituted having as its members non-civil servants who are not responsible to any ministry of federal or provincial governments, and who may act independently in enforcement of a pollution control Act.

Because this type of board would not be responsible to the federal government or to the provincial government and, since as a rule boards are the children of one government or the other and must be appointed by one government or the other if they are to have any real authority, just who do you suggest would have the responsibility for appointing this type of board, who would its members be and under what authority would they enforce their recommendations?

Mr. Suzuki: At the present time many of us are asking a question exactly along the lines, sir, of the one you asked me, and no one seems to have come up with an answer. However, the fact remains that under certain given conditions and circumstances a civil servant is very, very careful in stating what should be more forcefully said. Perhaps one area we might look into to find people to serve on such a board would be the higher levels of learning, the universities, and also perhaps from some of the doctors and some of the industrial people. That is something which I would request the Committee to look into very thoroughly. The fact is that civil servants are reluctant to go all the way in stating a possible solution.

The Chairman: Thank you, Mr. Crouse. Mr. St. Pierre.

Mr. St. Pierre: Thank you, Mr. Chairman. I only have one question and it is on an isolated, specific section of this matter, and it has already been asked by Mr. Crouse. However, I feel I must ask it again because the witness's answer did not really satisfy me.

I quite understand the point the witness made that he does not wish to have a board composed of civil servants who might be

[Interprétation]

occupés avec notre syndicat, et nous n'avons pas pu poursuivre la question comme il l'aurait fallu. Mais, le Directeur des relations publiques m'a invité à le rencontrer. Jusqu'à présent, je n'ai pas pris avantage de cette invitation.

M. Crouse: Une dernière question, monsieur le président, puis je cède la parole. La recommandation n° 6 de votre mémoire se lit comme suit:

Un conseil de contrôle de la pollution doit être constitué de membres choisis hors de la Fonction publique et qui ne soient pas comptables à aucun ministère des gouvernements fédéral ou provinciaux et qui peuvent en toute indépendance appliquer une loi sur le contrôle de la pollution.

Puisque ces personnes ne seraient pas responsables envers le gouvernement fédéral ou provincial et puisque les conseils, en général, relèvent d'un gouvernement ou d'un autre et doivent être nommés par un gouvernement ou un autre pour exercer une autorité quelconque, qui, selon vous, devrait être chargé de nommer ce genre de conseil? Quels en seraient les membres? Et en vertu de quelle autorité pourrait-il faire des recommandations?

M. Suzuki: C'est une question que nous nous posons en ce moment, exactement comme vous le dites, et personne n'a trouvé de réponse jusqu'à présent. Il n'en reste pas moins qu'un fonctionnaire, dans certaines conditions, fait très attention à ce qu'il dit, alors qu'il devrait parler avec beaucoup plus d'autorité. Une chose que nous devrions peut-être prendre en considération lorsqu'il s'agit de nommer des membres du conseil, ce serait le niveau d'instruction. Nous devrions penser à certains universitaires, à certaines personnes très capables dans l'industrie. Mais je vous demanderais, en tant que Comité, d'étudier cette question de très près. C'est que les fonctionnaires hésitent à proposer une éventuelle solution.

Le président: Merci, monsieur Crouse. Monsieur St-Pierre.

M. St-Pierre: Merci, monsieur le président. J'ai une seule question à poser au sujet du mémoire. M. Crouse l'a déjà posée, mais je crois que je devrais la reprendre, parce que la réponse que le témoin a donnée ne m'a pas satisfait.

Je comprends que le témoin ne voudrait pas qu'il y ait un conseil dont les membres hésiteraient à proposer des mesures de con-

[Text]

timid about enforcing pollution control, but the other part of Mr. Crouse's question—and it is also mine—is that surely any board must be responsible to somebody and it must be appointed by someone, and I assume you would prefer if it were appointed by an elected body of Canadians, either federal or provincial. I am referring to the appointment of the original board.

Mr. Homer Stevens (Secretary-Treasurer, Fishing Vessel Owners' Association of British Columbia): I wonder if I might answer that question, Mr. Chairman. I do not think it is intended that the responsibility for appointment be taken out of the hands of the elected governments, it is to get away from the idea of the government departments simply appointing civil servants. So the answer to your question would be that the appointments would still have to be made by the provincial and federal governments if it was going to be a joint board.

Mr. St. Pierre: That answers my question, Mr. Chairman. Thank you.

Mr. Rose: Mr. Chairman, before asking my questions, I would like to make an observation. I did not blame Mr. Hogarth for being rather excited at some of the allegations about New Westminster that were made by a previous questioner, but I think it is only fair to say that New Westminster, along with many other municipalities, one of which I used to represent, does dump untreated sewage into the Fraser River, and this is of real concern.

However, perhaps it will not come up later, but in case it does, I think it is only fair to point out that New Westminster as a city applied to join the Vancouver Sewage and Drainage Board only one year ago. So they have not really been part of this concern, and there are five outfalls there.

Certainly there is sewage from places other than New Westminster. I was interested in this business of pollution control, and as a former municipal alderman I am also interested in the cost of it. The Vancouver Sewage and Drainage Board recently—I guess two years ago—did a study, and presented a brief in which they suggested that over the next 10 years in the Vancouver area we could expect an additional cost of some \$250 million for just trunks and sewers to handle this particular problem of effluent. So there is a problem here in many areas of a choice between soil pollution and water pollution with the astonishing growth that we have undergone.

This says nothing about pollution control for plants at all. This is just for trunks, so

[Interpretation]

trôle de la pollution. Mais il semble que tout conseil devrait être responsable envers quelqu'un, devrait être nommé par quelqu'un. Et vous préférez sans doute qu'il soit nommé par un groupe de Canadiens élus, au fédéral, ou au provincial. Je parle de la formation du conseil original.

M. Homer Stevens (secrétaire-trésorier de l'Association des propriétaires de bateaux de pêche de la Colombie-Britannique): Si vous me le permettez, monsieur le président, je vais répondre à cette question. Nous ne voulons pas, je crois, que la responsabilité d'une nomination soit enlevée au gouvernement élu par le peuple, mais il ne faudrait pas que ce soit le ministère qui nomme simplement un homme, un fonctionnaire, les nominations devraient être faites par le gouvernement fédéral et le gouvernement provincial si l'on doit établir une commission conjointe.

M. St. Pierre: Ceci répond à ma question, monsieur le président. Je vous remercie.

M. Rose: Monsieur le président, avant de poser ma question je tiens à faire une remarque. Je ne blâme pas M. Hogarth de s'enflammer devant les déclarations qui ont été faites plus tôt au sujet de New Westminster. Mais il n'est que juste de dire que New Westminster, à l'instar de bien d'autres municipalités, déverse des eaux non traitées dans le Fraser, C'est vrai, et c'est un souci constant.

Cependant il n'est que juste de dire que New Westminster à titre de municipalité a fait une demande au *Vancouver Sewage and Drainage Board* il n'y a qu'un an, ce n'est pas la seule municipalité dans ce cas, il y a cinq autres déversoirs à cet endroit.

Il y a certainement des égouts qui proviennent d'autres endroits que New Westminster. Je me suis occupé de cette question du contrôle de la pollution et, en tant qu'ancien échevin, je me suis préoccupé de son coût. Le *Vancouver Sewage and Drainage Board* avait présenté un mémoire, il y a deux ans, qui disait qu'au cours des dix prochaines années, dans la région de Vancouver, on peut s'attendre à une dépense de l'ordre de 250 millions de dollars pour des égouts et les collecteurs pour traiter ce problème particulier des eaux-vannes. De sorte qu'il y a un choix à faire entre la pollution du sol ou la pollution des eaux dont nous sommes obligés de subir la terrible augmentation. On ne parle pas ici du contrôle de la pollution visant les usines. Il

[Texte]

therefore I was interested in your comments about some federal assistance towards this problem as far as municipalities are concerned.

Mr. Suzuki: Yes, and you will note that this brief of ours has been presented from the commercial fisherman's point of view mostly, the person who is making a livelihood on the Fraser River and in the Gulf of Georgia area. You will also note that we shied away from discussion of coliform count, BOD's, and controversy between municipalities as to who should do this and who should do that.

We have this situation already, where at one time the early up-river migration of salmon took place on what is now known as the north arm of the Fraser River, which is immediately adjacent to Vancouver. Now hardly any salmon use that route in entering the Fraser River. The same species of salmon going to the same place are now already swinging to the south arm of the Fraser and to the Canoe Path area.

We attribute this difference in the migratory pattern, regardless of what the Department of Fisheries says, to the excessive pollution on the north arm of the Fraser river by New Westminster and other municipalities that have industries and domestic sewage outfalls located there. We think that is the cause. Now they are going ahead with a rapid increasing in the number of houses.

The residential area is expanding all along the main Fraser River. Richmond intends to combine its sewer outfall with North Delta and Ladner, and perhaps even tap the giant Tsawwassen Point Roberts industrial complex that will be built, bringing in that effluent nine miles across land, in fact nine miles up the Fraser River to one outfall and dumping it into this area that has this tidal situation where that effluent will be held for up to 10 hours in an almost stationary stagnant pool.

When you stand on the bank the Fraser River might look like a big river, but when you make a study of its depth you find that the main channel is roughly 300 feet wide; that the capacity to hold water or anything else has already in the last 20 years been seriously taken over by silt and sand coming down the Fraser River and from efforts made to deepen the main channel. As a result, all you have is a narrow channel plus wide shelves with water or no water on both sides. And that is the sort of situation that this effluent is being dumped into.

Mr. Rose: Mr. Suzuki, the combination of the length of my question and the length of your answer has effectively destroyed the five

[Interprétation]

s'agit uniquement des égouts, donc j'ai été fort intéressé par vos commentaires au sujet de l'aide fédérale éventuelle envers les municipalités pour la lutte contre la pollution.

M. Suzuki: C'est ça, et vous noterez que notre mémoire a présenté le point de vue du pêcheur de métier qui tire son gagne-pain de la pêche dans le golfe de Géorgie et dans le fleuve Fraser. Nous évitons de nous prononcer sur le calcul des colibacilles, et la controverse entre les municipalités, à savoir qui devrait faire quoi. Nous avons déjà eu cette situation à un moment donné, nous nous sommes penchés sur la remontée hâtive du saumon dans le bras nord du fleuve Fraser, dans le voisinage immédiat de Vancouver. Autrefois, c'était la route de migration, maintenant les mêmes espèces de saumon remontent le bras sud du Fraser.

Nous attribuons ce changement dans la migration quoi que disent les services du ministère des Pêcheries, à la pollution excessive causée par New Westminster et d'autres municipalités qui ont des industries et qui déversent leurs eaux industrielles et leurs eaux-vannes directement dans le Fraser. Nous croyons que la cause réelle est là.

La construction domiciliaire augmente énormément le long des berges du Fraser, Richmond a l'intention de combiner le déversement de ses eaux usées avec North Delta et Ladner et rejoindra peut-être le complexe industriel géant Tsawwassen-Point Roberts qui sera construit ce qui conduira ces eaux-vannes à travers le pays sur une longueur de 9 milles pour les déverser neuf milles en amont, dans le fleuve à l'endroit où la marée retiendrait ces eaux stagnantes pour une dizaine d'heures.

Le Fraser, lorsqu'on le regarde de la berge, semble un fleuve majestueux. Mais quand on étudie la profondeur de l'eau, on se rend compte que le chenal principal n'a qu'environ 300 pieds de large. La capacité du fleuve pour retenir l'eau a été, au cours des 20 dernières années, compromise gravement par le sable et la vase ainsi que par les efforts qui ont été faits pour maintenir le chenal, il en résulte un chenal très étroit et des hauts-fonds et des bancs de sable très larges. Et ce sont dans ces conditions que l'on veut déverser des eaux-vannes dans le fleuve.

M. Rose: Monsieur Suzuki, étant donné la longueur de votre réponse, et la longueur de ma question, le résultat est que mon temps

[Text]

minutes that I am allotted, but it is probably my fault. You made some reference, I believe, to the trifurcation and the narrowing of channels, and I do not want to deal with that now. But you did, I feel, imply that it depends on who makes the study, whether or not the coliform count or the level of pollution is damaging to salmon. If the fisheries industry made the study it might possibly and hypothetically work out quite differently in terms of toxicity than if, say, the Greater Vancouver Sewage and Drainage Board made the study. Are you suggesting that?

Mr. Suzuki: No, not to that extent.

Mr. Rose: Are you suggesting there is not an agreement between scientists of how toxic the river could be in terms of its effects on the salmon?

Mr. Suzuki: Yes, on fish.

Mr. Rose: We do not know, then.

Mr. Suzuki: We do not know.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: Mr. Chairman, a number of witnesses have asked questions around this point that I wanted to make and the question I wanted to ask, but I do not think anybody has really asked the exact question. My question is, who do you think, Mr. Suzuki, should have the ultimate responsibility for pollution generally?

At the federal level there are many departments that have a finger in the pie. And there are regulations. For example, with industrial pollution the federal government cannot move in until the industry has started and has begun pollution. Again, the provincial government has a department of municipal affairs; there is the municipal problem; there is the industrial pollution problem; there are various companies involved. There are the unions, labour groups, the people affected, and various town involved. Who has the ultimate responsibility or should have the ultimate responsibility for legislation and enforcement of pollution regulations?

Mr. Suzuki: I do not like to answer that question on a general basis. You will note again that this problem is related to the Fraser River, and because of the fact that the salmon fisheries come under the jurisdiction of the federal government, I think the federal government has a special obligation in so far as the Fraser River pollution is concerned.

Mr. Lundrigan: I think, with all due respect to the witness, that this brief is using a

[Interpretation]

est écoulé. C'est peut-être de ma faute. Vous avez fait état, il me semble, des trois embranchements et du rétrécissement des chenaux, et je ne m'y arrêtera pas. Mais je crois que vous avez suggéré que cela dépend de qui fait l'étude, si oui ou non on calcule le nombre des colibacilles, ou si la pollution est nuisible au saumon. Naturellement, la toxicité peut être différente si l'étude est faite par l'industrie de la pêche ou par disons, le Greater Vancouver Sewage and Drainage Board. C'est là ce que vous voulez dire?

M. Suzuki: Non, pas jusqu'à ce point.

M. Rose: Voulez-vous dire que les hommes de science ne sont pas d'accord au sujet du degré de toxicité du fleuve et de l'effet nuisible qu'elle a sur le saumon?

M. Suzuki: C'est ça, sur le poisson.

M. Rose: Alors, nous ne pouvons pas le savoir.

M. Suzuki: Nous ne le savons pas.

Le président: Monsieur Lundrigan.

M. Lundrigan: Monsieur le président, plusieurs témoins ont soulevé la question à ce sujet. Voici ma question: Monsieur Suzuki, d'après vous, qui devrait avoir la responsabilité ultime de s'occuper de la pollution?

A l'échelon fédéral, il y a de nombreux ministères qui s'en occupent, il y a des règlements concernant les eaux industrielles. Par exemple, dans le secteur industriel, le gouvernement fédéral ne peut pas intervenir avant que l'industrie en question ait déjà commencé à polluer les eaux industrielles. Là encore, le gouvernement provincial possède son ministère des Affaires municipales. Les municipalités s'en occupent. Il y a la pollution industrielle, les diverses compagnies touchées, les syndicats, les villes et la population. Qui a la responsabilité ultime? Qui devrait légiférer et faire appliquer les règlements concernant la pollution?

M. Suzuki: Je n'aimerais pas répondre à cette question de façon générale. Nous nous occupons du Fraser et comme les industries de la pêche du saumon relèvent du gouvernement fédéral, j'estime que le gouvernement fédéral a une obligation exceptionnelle, unique, en ce qui concerne le Fraser.

M. Lundrigan: En toute déférence, vis-à-vis du témoin, ce mémoire vise un exemple par-

[Texte]

particular example of pollution without looking at it in the broadest context. I have noticed this throughout the brief. I think it is a good brief, but I think pollution should be approached in the broadest possible context. It is a complex problem.

I think it is useless for the witness or anybody else to argue that because the salmon fishery is involved, therefore this is a federal responsibility. Generally speaking, with all industrial, chemical and bacteriological pollution and so on, should there not be somebody who has the ultimate responsibility? This seems to be one of the complicating factors right now. There seem to be so many people involved without anybody being able to say that it is his responsibility. I still would like a comment on the question.

Mr. Suzuki: I agree with what you say, that there must be an ultimate source of authority or guidance. At the present time the level of this guidance is on the same level as the questioning here: the provincial government should do it; the federal government should do it; the municipal government should do it; and in the meantime we who are here are suffering from it.

One of the reasons why I did not delve into aspects other than fisheries and the problem as it pertained to fishermen was that I did not want the chairman to say later that the brief is concerned with municipal matters or something that does not pertain to fisheries. I did not know how much leeway we were going to have. I must admit and apologize that it is an abrupt sort of brief, but it was intentionally abrupt because I did not know what leeway we would have in appearing before you.

Mr. Lundrigan: Could you state again who you think should have the ultimate responsibility?

Mr. Suzuki: I think that the responsibility ultimately on the Fraser River should be a provincial one. However, we are representing the salmon people, whether they be sportsmen or otherwise. I am, incidentally, a director of a sports marina motel group, besides being an executive member of the Fishermens Union. So even though I think the ultimate responsibility lies with the provincial government, because of this salmon factor we would like the federal government to share the responsibility.

Mr. Lundrigan: Do you think generally the authority for the legislative responsibility should rest with provincial governments as

[Interprétation]

ticulier de la pollution sans tenir compte de tout le reste. J'ai remarqué cela tout au long du mémoire. Le mémoire est intéressant, mais il me semble qu'on devrait aborder le problème de la pollution d'une façon beaucoup plus large.

Il est inutile que le témoin prétende que, à cause de la pêche du saumon, le problème se trouve être du ressort du gouvernement fédéral. De façon générale, étant donné la pollution bactériologique, chimique et industrielle, est-ce qu'il ne devrait pas y avoir quelqu'un qui devrait détenir l'ultime responsabilité? Il me semble que c'est déjà là un facteur de complication. Il y a tant de personnes qui s'en occupent, que personne ne peut dire, «c'est moi qui ai la responsabilité générale de cette question». J'aimerais quand même avoir votre commentaire sur ce sujet.

M. Suzuki: Je suis d'accord avec ce que vous dites. Il doit y avoir quelqu'un qui, en fait de compte, doit être responsable, une autorité responsable au haut de l'échelle. Mais à l'heure actuelle, on finit par nous dire, le gouvernement fédéral, le gouvernement provincial ou le municipal devraient s'en occuper, mais nous, les pêcheurs, entre-temps, nous en souffrons.

C'est la raison pour laquelle je n'ai pas parlé d'autres questions que celle de la pêche et ceci à titre de pêcheur. Je ne voulais pas que le président me dise: écoutez votre mémoire s'occupe de questions qui relèvent de la municipalité ou de questions qui n'ont rien à voir avec les pêches. Je ne savais pas quelle latitude nous aurions et j'admets, c'est un mémoire un peu direct, mais en fin, je ne savais pas ce que vous pourriez nous dire.

M. Lundrigan: Pouvez-vous nous dire une fois de plus qui devrait avoir la responsabilité définitive.

M. Suzuki: Je crois que la responsabilité ultime pour le Fraser devrait être du ressort provincial. Néanmoins, nous qui représentons les pêcheurs de saumon, que ce soit des pêcheurs commerciaux ou des pêcheurs sportifs, en passant, je suis directeur d'un groupe de motels et de marinas, en plus de représenter les pêcheurs unis. Je tiens à dire que c'est le gouvernement provincial qui devrait s'occuper de la pollution mais étant donné que nous sommes des pêcheurs de saumon, nous voudrions que le gouvernement fédéral partage cette responsabilité.

M. Lundrigan: Pensez-vous que ce serait aux gouvernements provinciaux de légiférer en matière de pollution? Je parle des autres

[Text]

far as pollution is concerned? I am thinking of other areas of British Columbia where you undoubtedly will have basically the same problem or similar problems.

Mr. Suzuki: It is complicated. Not so very long ago the question of off-shore drilling came up, and the possibility of huge ocean tankers coming into tidal waters, in a province such as British Columbia jurisdiction rests partly with the federal government if you go a certain distance off-shore. If you are on the inside waters, perhaps it could be a joint or strictly a provincial matter. It is a very complicated thing, sir.

The Chairman: Mr. Hogarth.

Mr. Hogarth: Has your union made representations to the Greater Vancouver Sewage and Drainage Board?

Mr. Suzuki: Yes, sir, we did, in a personal way. We had immediate contact with the Director.

Mr. Hogarth: So that the members from other parts of the country will see this in the proper perspective, that government agency, which is an offspring of the provincial government, controls all sewage distribution in the lower mainland of British Columbia. Is that not so?

Mr. Suzuki: So I understand, sir.

Mr. Hogarth: And they built a plant some years ago, the Iona Island plant, that processes sewage to its complete erasure so far as the pollution problem is concerned. Is that not so?

Mr. Suzuki: That is not so, sir.

Mr. Hogarth: I see. Is there still a pollution problem resulting from discharge of effluent from the Iona Island plant?

Mr. Suzuki: Yes, sir, there is definitely a pollution problem from the Iona Island plant, and if you should go out there at low water on any given day, you will be shocked and appalled at the mess left by the Iona Island outfall. There is a whole area degradation in that area. That is about the only way I can describe it.

Mr. Hogarth: That is on the north arm that you are referring to?

Mr. Suzuki: That is Sea Island.

Mr. Hogarth: That is Sea Island, I beg your pardon, yes.

[Interpretation]

provinces, dans lesquelles, sans doute, les mêmes problèmes se posent.

M. Suzuki: C'est très compliqué. Il n'y a pas très longtemps, on a posé la question des forages au large des côtes, des pétroliers géants pénétrant dans les eaux côtières. Toutes ces questions relèvent en partie de la province, à l'intérieur d'une certaine limite et au-delà, elles relèvent du gouvernement fédéral. Ce sont des choses bien compliquées.

Le président: M. Hogarth.

M. Hogarth: Monsieur, est-ce que votre syndicat a fait des représentations auprès du Greater Vancouver Sewage and Drainage Board?

M. Suzuki: Oui monsieur, nous avons fait des représentations personnelles au Directeur.

M. Hogarth: Ainsi les députés des autres régions du pays sont mis dans la vraie perspective, cette Commission du gouvernement qui est une création du gouvernement provincial s'occupe du système d'égout de toute la région du bas Fraser. Est-ce exact?

M. Suzuki: Je suppose.

M. Hogarth: La Commission a construit une usine de traitement des eaux d'égoûts il y a quelques années, l'usine de Iona Island, qui devrait être une réponse totale pour ce qui est de la pollution. En est-il ainsi?

M. Suzuki: Il n'en est pas ainsi.

M. Hogarth: Je vois. Il existe encore des problèmes résultant du déversement des eaux traitées de cette usine?

M. Suzuki: Oui. Il y a définitivement un problème résultant des activités de l'usine de Iona Island. Si vous y allez à marée basse, certains jours, vous serez surpris de voir qu'il y a toute une région qui est dégradée, abimée, c'est une île maritime immédiatement près du déversoir, il faut voir la situation à marée basse pour se rendre compte de la façon dont les choses ont été gâchées.

M. Hogarth: Vous parlez du chenal Nord?

M. Suzuki: Je parle de Sea Island.

M. Hogarth: Sea Island, je vous demande pardon.

[Texte]

Mr. Suzuki: It is in the immediate vicinity of where this outfall occurs, and you must take the low water when the tide is out to realize how aesthetically unfavourable the outcome of that is.

Mr. Hogarth: Do you suggest that the discharge from that plant is unfavourable to fish?

Mr. Suzuki: It is unfavourable to the citizens residing in that area; it is unfavourable for people who wish to use that area for recreational purposes; it is unfavourably situated generally; and it is not acting in the manner it was supposed to.

Mr. Hogarth: But dealing only with fish, is the discharge from that plant in your opinion unfavourable to the fishing industry from the point of view of the health of the fish?

Mr. Suzuki: I could not answer that question.

Mr. Hogarth: What happened to the order that the Minister of Municipal Affairs made a year ago that was designed to compel all the municipalities discharging raw sewage into the Fraser to treat the sewage before it was discharged. Do you recall that order?

Mr. Suzuki: Yes, that order was made, and the recommendation was for primary treatment of effluent.

Mr. Hogarth: But is that not being carried out?

Mr. Suzuki: The primary treatment for effluent apparently is a combination of effluent plus chlorine, in which case we are very fearful, especially with the tidal conditions that you find in the lower Fraser River, that perhaps from the point of view of the existence of fish, primary treatment might be more dangerous than just dumping raw sewage right into the Fraser River.

Mr. Hogarth: The reference to the chlorine pollution in your brief applies to the primary treatment of raw sewage when it is carried out. Is that correct?

Mr. Suzuki: To a very great degree, plus the use of chlorine and related products by every household at the present time.

Mr. Hogarth: Is your reference to chlorine a reference to chemical contamination of water generally, such as with potassium and other chemicals?

[Interprétation]

M. Suzuki: Elle est située dans le voisinage immédiat du déversement des eaux de cette usine et c'est à marée basse que l'on peut juger des dégâts.

M. Hogarth: Voulez-vous dire que le déversoir est néfaste aux poissons?

M. Suzuki: Il est néfaste aux résidents, pour ceux qui veulent s'en servir pour leurs loisirs et c'est en général défavorable pour tout. L'usine ne fonctionne pas comme elle devrait le faire.

M. Hogarth: Mais pour revenir au poisson, est-ce que le déversement de cette usine est défavorable à la pêche au point de vue de la santé du poisson, de la croissance du poisson?

M. Suzuki: Je ne pourrais pas vous répondre.

M. Hogarth: Qu'est-il arrivé au règlement du ministre des Affaires municipales obligeant, il y a un an, toutes les municipalités qui déversaient leurs eaux d'égouts non traitées dans le fleuve Fraser, à les traiter avant de les déverser. Vous rappelez-vous ce règlement?

M. Suzuki: Oui, ce règlement existe. Il s'agissait de faire subir aux eaux d'égouts un traitement préliminaire.

M. Hogarth: Il n'a pas été appliqué?

M. Suzuki: Le traitement préliminaire consiste à traiter les eaux usées au chlore; nous n'aimons pas utiliser ce procédé à cause des effets de la marée dans le bas Fraser. Pour le poisson, le traitement primaire au chlore pourrait être plus nocif que le déversement des eaux d'égout non traitées dans le fleuve.

M. Hogarth: Vous avez parlé du chlore et de la pollution au chlore dans votre mémoire; ceci s'appliquerait au traitement primaire des eaux d'égouts, lorsqu'on le fait. Est-ce bien cela?

M. Suzuki: Dans une bonne mesure, oui. Il faut ajouter à cela les produits ménagers à base de chlore et les produits dérivés du chlore dont tous les foyers font usage à l'heure actuelle.

M. Hogarth: Est-ce que vous parlez de la pollution chimique de l'eau de façon générale, comme dans le cas de la potasse et d'autres produits chimiques?

[Text]

Mr. Suzuki: Yes. I did not go into detail on that, but there are industries that are discharging some sort of toxic material—I just do not know what it is—that does have an effect on fish. I have lived there all my life, sir, and it is only in the last seven or eight years that I have noticed stunned fully-grown adult fish on the river in certain areas. I have spoken to others who have picked up healthy looking salmon that were at the stage of the last gasp, so to speak, from some causes that we have not been able to identify, but in the area where there are industries.

Mr. Hogarth: We heard evidence last fall from members of the Department of Fisheries that the actual discharge of raw sewage into the Fraser River does not, in their opinion, have a detrimental effect on the health or life of the salmon. It has a very detrimental effect on the aesthetics of catching the fish because of what you have mentioned in your brief. Do you agree with that opinion that was offered to use last fall?

Mr. Suzuki: Yes, generally speaking I would agree that raw sewage would not harm fish.

Mr. Hogarth: So there are two things that this Committee has to look out for as far as you are concerned. The first one is the pollution of the waters by chemical waste. That is item number one. The second one is the aesthetics to the fishermen of catching fish in sewage-polluted waters. Is that correct?

Mr. Suzuki: And the consequences to their health.

Mr. Hogarth: Yes, I appreciate that.

The Chairman: Mr. Hogarth, I will allow you one last question.

Mr. Hogarth: No, I will not bother, Mr. Chairman. It was about the logs, but I think we see the point there.

The Chairman: Mr. Noble.

Mr. Noble: Mr. Chairman, Mr. Suzuki mentioned that the main current in the Fraser is limited to 300 feet. Does he think that dredging in the lower stretch of the river might bring some temporary relief to the situation until other measures could be taken to eliminate the pollution?

Mr. Suzuki: No. What I meant by 300 feet is that the main channel of the Fraser River is roughly 300 feet wide. The river has shoulders on both sides that are much wider, but they are shallow areas. The water capacity of the Fraser River is being displaced by sand

[Interpretation.]

M. Suzuki: Oui, certaines industries déversent des produits toxiques, dont je ne connais pas la composition mais qui ont un effet nocif sur le poisson. J'ai vécu là toute ma vie, et ce n'est que récemment, il y a sept ou huit ans, que j'ai remarqué des poissons adultes malades dans la rivière. D'autres pêcheurs m'ont dit qu'ils avaient attrapé des saumons qui paraissaient en bonne santé mais qui en étaient à leur dernier souffle, pourrait-on dire. Nous n'avons pas pu trouver la cause de la maladie du poisson, mais nous savons qu'il y a des industries dans cette région.

M. Hogarth: Des fonctionnaires du ministère des Pêcheries nous ont dit, l'automne dernier, que le déversement d'eau d'égouts, dans le Fraser n'a pas d'effet nocif sur la vie et la santé du saumon, mais nuit grandement au côté esthétique, ainsi que vous le mentionnez dans votre mémoire. Est-ce que vous êtes d'accord avec cette affirmation?

M. Suzuki: Oui, de façon générale, les eaux d'égouts ne sont pas mauvaises pour le poisson.

M. Hogarth: De sorte qu'il y a deux aspects à considérer. Premièrement, la pollution de l'eau par les déchets chimiques. Deuxièmement le côté esthétique, de l'affaire, le fait que le pêcheur se retrouve au milieu d'eaux polluées. Est-ce exact?

M. Suzuki: Et, l'effet de ces eaux polluées sur sa santé.

M. Hogarth: Oui, je comprends.

Le président: Monsieur Hogarth, je ne permettrai qu'une seule autre question.

M. Hogarth: Je vais laisser tomber cette question. Elle est inutile maintenant.

Le président: M. Noble.

M. Noble: Monsieur Suzuki mentionnait que le courant principal du courant se limitait à 300 pieds dans le Fraser. Est-ce que le témoin pense qu'en draguant le bas du fleuve on pourrait apporter certaines mesures temporaires jusqu'à ce qu'on mette fin à la pollution?

M. Suzuki: Non, ce que je voulais dire par 300 pieds, c'est le canal principal du Fraser qui a 300 pieds, c'est la partie la plus large du Fraser. Il y a des accotements beaucoup plus larges de chaque côté mais il y a des étendues très peu profondes où la capacité du Fraser a

[Texte]

and silt coming down-river with the seasonal outflow, and with the rising number of flash floods in the last 25 years due we think to excessive logging in the upper watersheds. Every time it rains a terrific amount of water comes down because where are no retentions, or the water retention potential of the forest has been removed. When that happens, a lot of silt and sand comes down, and that has filled up much of the lower reaches of the river, especially in the area where the tide stops the flow and gives the sediment a chance to settle.

Mr. Noble: I would take it then, Mr. Chairman, that the witness thinks it would be too big a proposition to remove this tremendous amount of stuff that has come down over the years in order to widen the 300-foot main channel. Do you not think it would improve the channel greatly if another 100 feet of that sand and silt were taken off the sides?

Mr. Suzuki: If it could be done economically it would be wonderful idea but I doubt very much that it is economically feasible to do that at the present time. You will note, sir, that perhaps it might not be within the jurisdiction of the Department of Fisheries. You must have heard how the Fraser River municipalities are building their dikes up higher and higher each year, but there has to be a limit to that. Why are they doing that? Because the same amount or almost the same amount of water—or perhaps a little more because there is a denuding of the forest—is coming down all in one lake. That water wants space, cubic space, capacity space on the Fraser River in order to flow out. That space is already taken over by sand and silt to a very great degree. It is in addition to that that a similar amount of water must find its way out towards the gulf into the open water; and as a result of the pressure from the tide holding it in the gulf it has only one place to go—it rises. And when it rises, in order to stop it from going over the dike, what do you do? You keep building the dikes higher and higher. That is what is happening on the lower Fraser.

Mr. Comeau: Mr. Chairman, I have one more question, in respect of the logs. Does any logging company salvage any of these loose logs and those that have gone down to the bottom of the river?

Mr. Suzuki: Not those, sir, which have gone to the bottom of the river, but they are making efforts now to pick up the so-called dead-heads. But when you see only possibly six or eight inches of a 60- to 80-foot log, it is a

[Interprétation]

été déplacée par le limon et la boue arrivant avec les crues annuelles et les inondations des 25 dernières années qui ont été causées par les billes de bois. Nous avons ou bien des inondations en terrain plat chaque fois qu'il pleut parce que la rétention de l'eau du terrain avoisinant a été diminuée, dans ce cas-là, beaucoup de limon et de boue sont emportés.

M. Noble: J'en conclus que le témoin estime qu'il serait beaucoup trop onéreux d'enlever tous ces sédiments pour améliorer cette étendue de 300 pieds et l'élargir, est-ce que vous croyez que si on l'élargissait de 100 pieds de plus de chaque côté, la situation serait améliorée?

M. Suzuki: Si on pouvait le faire de façon rentable, ce serait magnifique, mais je doute qu'on puisse le faire à l'heure actuelle. Vous remarquerez que cela n'est peut-être pas de la compétence du ministère des Pêcheries. Vous avez certainement entendu dire que les municipalités du fleuve Fraser construisent leurs digues de plus en plus hautes chaque année, mais il y a une limite à cela! Pourquoi est-ce qu'elles le font? Parce que le même volume d'eau, ou peut-être un peu plus à cause du déboisement, se déverse dans le lac. Ce volume d'eau a besoin d'espace sur le fleuve Fraser pour s'écouler. Cet espace est déjà occupé en grande partie par les sédiments et le limon. C'est que en plus de ce débit, un volume équivalent d'eau doit s'écouler vers le golfe et à cause de la pression très forte de la marée qui la retient dans le golfe, l'eau en peut que monter. Lorsqu'elle monte, pour éviter les inondations, on construit des digues, et de plus en plus hautes. C'est ce qui se produit dans la partie inférieure du fleuve Fraser.

M. Comeau: Monsieur le président, encore une dernière question concernant les grumes. Est-ce que ces sociétés d'exploitation forestière vont récupérer ces billes, celles qui sont perdues de chaque côté et celles qui sont au fond de l'eau?

M. Suzuki: Non, par celles qui sont au fond de l'eau; les sociétés font un effort maintenant pour récupérer ce qu'on appelle le «bois canard». Mais lorsqu'on ne voit que six ou huit pouces d'une grume de 60 ou 80 pieds, il

[Text]

very difficult thing to go and control the river to keep it absolutely clear. Perhaps the best solution would be to check the logs before you bring them in.

Mr. Noble: Mr. Chairman, if these logs are a serious menace to shipping and fishing, does Mr. Suzuki have any proposals as to how this problem might be coped with, and would he suggest to the government to make equipment and staff available to handle the problem?

Mr. Suzuki: We need a lot of money. But I think as recommended in No. 7,

7. Log dumping must be prohibited in the waters of the Fraser River and a suitable site near the mouth of the river in salt water should be constructed to dump and boom logs prior to towing into the river for storage.

you would eliminate a lot of these sinkers being dropped right into the Fraser River.

Mr. Noble: Do you think the suggestions in No. 7 would answer this problem?

Mr. Suzuki: It would help to a very great degree, sir.

The Chairman: We eventually got to Mr. Whelan.

Mr. Whelan: Mr. Chairman, I would like to ask the witness first of all if he is aware of the submission made to the Pollution Control Board of British Columbia by the Richmond Anti Pollution Association.

Mr. Suzuki: Yes, sir.

Mr. Whelan: It has a lot of similarities with your brief. I agree with both as far as pollution is concerned, though not with the total content; but a lot of things are very good in both briefs.

Can you say what species of fish the chlorine does not affect?

Mr. Suzuki: No, sir, I cannot.

Mr. Whelan: Can you say what species it does affect?

Mr. Suzuki: It does affect most species. Even the hardy types such as carp, which are known to be one of the hardiest species of fish, are affected by chlorine. Salmon definitely is. We had trouble in the upper regions of the Fraser River when I believe our army

[Interpretation]

est très difficile de patrouiller les rivières pour enlever tous les obstacles. Peut-être que la meilleure solution serait plutôt d'inspecter les grumes avant de les lancer à l'eau.

M. Noble: Une dernière question. Si ces grumes constituent vraiment une menace pour la pêche et le transport, est-ce que M. Suzuki a des suggestions quant aux façons de résoudre le problème? Est-ce qu'il proposerait que le gouvernement mette de l'équipement et du personnel à la disposition des autorités pour résoudre le problème?

M. Suzuki: Nous avons besoin de beaucoup d'argent mais je crois que comme il est dit à la recommandation n° 7:

Il faut interdire de jeter les grumes à l'eau dans le fleuve Fraser et aménager des installations spéciales à l'embouchure du fleuve, dans l'eau salée, pour jeter à l'eau et mettre en estacade les grumes avant de les remorquer dans la rivière pour les entreposer.

De cette façon, on éliminerait énormément de problèmes causés par ces bois canards jetés directement dans la rivière.

M. Noble: Est-ce que la recommandation n° 7 serait une réponse au problème?

M. Suzuki: Elle contribuerait dans une grande mesure à résoudre le problème.

Le président: On en est rendu à M. Whelan.

M. Whelan: Monsieur le président, je voudrais d'abord demander au témoin s'il est au courant de la recommandation faite au *Pollution Control Board of British Columbia* par la *Richmond Anti Pollution Association*.

M. Suzuki: Oui.

M. Whelan: Ce mémoire est très semblable au vôtre. Je tombe d'accord avec les deux pour ce qui est de la pollution, mais non pas avec tout le contenu. Les deux mémoires renferment beaucoup de choses valables. Quand vous parlez de chlore, quelles espèces de poissons ne sont pas affectées?

M. Suzuki: Je ne saurais vous le dire.

M. Whelan: Quelles espèces sont affectées?

M. Suzuki: La plupart des espèces sont affectées même la carpe qui est très résistante est affectée par le chlore. Le saumon l'est certainement. Je crois qu'il y a eu un des problèmes dans les parties supérieures du fleuve Fraser lorsque le camp militaire de

[Texte]

campes at a point called Chilliwack up river were instructed to increase the amount of chlorine used to treat their effluent. At that time there was quite a kill of young coho salmon until it was stopped by the Department of Fisheries.

Mr. Whelan: I come from the Great Lakes area and maybe you know about the coho there. That area probably has the highest content of chlorine in the water on account of the sewage threatment plants in the area and many species of fish, even the coho, are surviving. That is why I ask that question.

The Chairman: I think, Mr. Whelan, you are quite a few miles from the subject.

Mr. Whelan: I do not think so. We are talking about chlorine and we are talking about the fish and I have certain doubts, Mr. Chairman, as to how it affects the fish.

The Chairman: Geographically?

Mr. Whelan: Geographically. We are talking about fish and this is a Canadian committee on fisheries—at least I think it is anyway.

I note that you said that you are associated with the tourist association. What value do you place on one salmon for a sports fisherman, say?

Mr. Suzuki: I do not think that anyone can place a value on the price of salmon. With all due respect, should you have the opportunity to go out there—and I hope you do—and catch a 30-pound salmon...

Mr. Whelan: No, I am talking about...

Mr. Suzuki: May I continue? I think that the value of that salmon would stay with you lifelong. There would be no way of placing a value on that salmon. It would be with you forever and it is beyond value. And that is what we want to continue for others that is why we are here.

Mr. Whelan: I was talking about value not to the human heart but to the federal treasury or the provincial treasury. There is no heart there.

Mr. Suzuki: I think the tourist industry in the very near future, because of our beautiful province—I am not saying this because I am prejudiced as I have been all over—will be

[Interprétation]

Chilliwack a reçu l'ordre d'augmenter la quantité de chlore pour traiter leurs eaux-vannes. A ce moment-là, on a tué beaucoup de jeunes saumons cohoes avant que le ministère des Pêcheries s'interpose.

M. Whelan: Je viens de la région des grands lacs et vous êtes peut-être au courant des cohoes qu'on a transplantés là-bas. Cette région a probablement la plus forte teneur en chlore à cause des usines d'épuration des eaux-vannes dans la région, et beaucoup d'espèces de poissons, même le coho, parviennent à survivre. Voilà pourquoi je pose la question.

Le président: Vous vous écarterez du sujet, monsieur Whelan.

M. Whelan: Je ne le crois pas. Nous parlons de chlore et de poissons, et je ne sais pas à quel point le chlore affecte le poisson.

Le président: Au point de vue géographique?

M. Whelan: Oui, au point de vue géographique. Nous parlons de poissons et après tout nous sommes un comité national sur les pêches. Je remarque que vous avez dit que vous êtes associé à l'Association du tourisme. Quelle valeur accordez-vous à un saumon pour un amateur de la pêche sportive, par exemple?

M. Suzuki: Je ne crois pas qu'on puisse établir une valeur pour un saumon avec tout le respect que je vous dois, j'espère que vous aurez l'occasion de vous y rendre et de prendre un saumon de 30 livres...

M. Whelan: Non, je parle de...

M. Suzuki: Puis-je continuer? Je crois que la valeur de ce saumon est que vous vous en souviendrez toujours. Il est impossible d'apprécier à prix d'argent ce saumon, mais vous vous en souviendriez toute votre vie et il est impossible de l'apprécier à prix d'argent. Et c'est ce que nous voulons assurer aux autres qui viendront.

M. Whelan: Oui, mais en parlant de valeur je ne voulais pas dire du point de vue sentimental mais pour la trésorerie nationale ou provinciale. Il n'y a pas de cœur, pas de sentimentalité en cause.

M. Suzuki: Dans un avenir rapproché, étant donné que notre province est très belle, je ne le dis pas parce que j'ai un préjugé à son égard car j'ai beaucoup voyagé, mais je crois

[Text]

the number one industry in British Columbia. Whether or not they have seen British Columbia salmon, one of the main attractions is that they have heard of British Columbia salmon and have expressed the wish that they might be able to catch one. That is an attraction for tourists coming in and we would like to keep it that way, sir.

Mr. Whelan: I know, Mr. Chairman, why he is a director of the tourist association. We have heard all kinds of figures from \$100 to \$150, our economist tells us, for each salmon. Now you say on the fourth page:

We are particularly pleased to note that the title of this Standing Committee is Forestry and Fisheries.

I gather from that that you are happy that these two departments are now together. Do you think that possibly wildlife should not be with this, or would care to express an opinion?

Mr. Suzuki: I think that the problems are related and similar. There are wildlife people here and I would hate to speak for them but I think it would be a very good idea.

Mr. Whelan: On page 6 in No. 4 you say:

4. Federal and Provincial Governments must undertake a program of financial aid in the form of grants and long term, low interest loans to municipalities for sewage treatment.

I have been a member since 1962 and I am just a little concerned by what Mr. McBride said about it in Ontario. I wonder if some of the members in this area have not been negligent in giving leadership to these communities because we had former members—and some of the present ones have been there for some time—in on a very good program and many of the municipalities took advantage of the forgiveness clause if they had their sewage treatment plants finished by 1970. I think we tried to give leadership to our municipalities and many, many of them in my whole area will be finished this year. Were you aware of this program?

Mr. Suzuki: Yes, sir, I was.

Mr. Whelan: Question no. 6 about non-civil servants was covered at great length by some of the members. Are you aware of the Immi-

[Interpretation]

que l'industrie du tourisme sera la plus importante de la province. Qu'une personne ait vu le saumon de la Colombie-Britannique ou non, ce qui les attire surtout c'est qu'ils en ont entendu parler et veulent essayer d'en prendre un.

M. Whelan: Je sais maintenant pourquoi il est directeur de cette association de tourisme. On a cité toutes sortes de chiffres, on nous a parlé de \$100 ou de \$150 par saumon; c'est ce que nous dit notre économiste. A la page 4 vous dites:

Nous sommes particulièrement heureux de remarquer que le titre du Comité permanent est celui des Pêches et Forêts.

J'en conclus que vous êtes heureux de la fusion des deux ministères. Ne croyez-vous pas qu'on devrait y adjoindre le service de la faune?

M. Suzuki: Je crois que les problèmes se rattachent et sont semblables. Il y a des gens du service de la faune dans la salle et je ne voudrais pas répondre en leur nom, mais je crois que ce serait une bonne idée.

M. Whelan: A la page 6, numéro 4, vous dites:

Le gouvernement fédéral et les gouvernements provinciaux devraient entreprendre un programme d'aide financière sous forme de subventions et de prêts à long terme et à faible intérêt à l'égard des municipalités pour le traitement des eaux-vannes.

Je suis député depuis 1962 et ce que monsieur McBride dit au sujet de l'Ontario me préoccupe un peu. Je me demande si les députés de cette région n'ont pas négligé cette question en laissant l'initiative aux collectivités parce que d'autres députés et certains députés actuels qui y sont depuis assez longtemps avaient mis sur pied un très bon programme et bon nombre de municipalités ont profité de l'indulgence accordée si elles avaient terminé leur usine d'épuration des eaux-vannes avant 1970. Je crois que nous avons tenté de laisser l'initiative à nos municipalités et la plupart de celles de ma région auront terminé cette année. Est-ce que vous connaissiez ce programme?

M. Suzuki: Oui.

M. Whelan: Le numéro 6 au sujet des personnes qui ne sont pas des fonctionnaires, a été traité assez longuement par certains dépu-

[Texte]

gration Appeal Board and how it acts? It has non-civil servants and it has power to give direction and power to act. It is one of the best appeal boards that I think we have in the whole federal set-up. Are you aware of it?

Mr. Suzuki: I have heard of it.

Mr. Whelan: Thank you.

The Chairman: Thank you, Mr. Whelan. Mr. Rose?

Mr. Rose: Sir, I presume we are on the second round. To get back to the sports fishing, I notice that there is quite a difference in the emphasis in your brief. Mr. Suzuki, compared to that of the fishing Vessel Owners in their concern for the sports fishery. Can you give me any indication of why this difference exists? It appears to me that the Vessel Owners were most concerned about the expansion of the sports fishery while your brief deals with tourism and the need to maintain it. I may be unfair to them in suggesting this as maybe they just wanted to define the areas. But I note that there is this contrast.

Mr. Suzuki: I do not think that this salmon belongs to the commercial fishermen alone. I think that we are an established group, a recognized group, and we make our living from it. We are saying that the salmon is in danger, and when it is in danger it is not only our problem but also that of others who are enjoying this salmon such as the sports group. What we regret very much is that something is not done to maintain and even to bring about a bigger growth in the salmon population and to take steps and measures to see that there is enough salmon to go all around.

The stage that we are in at the present time is that we are arguing over what is left in a lot of cases. It is the most regrettable sort of situation. That situation should never have been brought about here in British Columbia. There should have been plenty for the sports people. They must have a big body of fish to go and enjoy themselves and they cannot make use of it all. They have to have a commercial fishery to harvest the excess and to maintain the spawning ground in its proper form. We do not begrudge the sports people but we do regret that from time to time the effort is not made to maintain the salmon population at the desired level when the opportunities are there, the facilities are there and knowledge is there.

[Interprétation]

tés. Est-ce que vous êtes au courant de la Commission d'appel de l'immigration et de la façon dont elle fonctionne. Elle est composée de gens qui ne sont pas fonctionnaires et elle a le droit de conseiller et d'agir. C'est une des meilleures commissions d'appel qu'il y a dans toute l'organisation fédérale. Est-ce que vous la connaissez?

M. Suzuki: J'en ai entendu parler.

M. Whelan: Merci.

Le président: Merci, monsieur Whelan.

M. Rose: C'est le deuxième tour de questions, je crois. Pour en revenir à la pêche sportive, je remarque qu'il y a une grande différence entre votre mémoire et celui des propriétaires de bateaux de pêche, quant à l'accent mis sur la pêche sportive. Est-ce que vous pouvez me dire pourquoi il y a une telle différence? Il me semble que les propriétaires se préoccupent surtout d'étendre davantage la pêche sportive, tandis que dans votre mémoire, vous parlez du tourisme. Il est peut-être injuste à leur égard de dire cela car ils voulaient peut-être simplement définir les champs d'activité. Mais je remarque qu'il y a un contraste.

M. Suzuki: Je ne crois pas que le saumon appartienne uniquement à la pêche commerciale. Je crois que nous sommes un groupe reconnu et que nous en tirons notre pain. Mais nous disons que le saumon est en danger, et lorsqu'il est en danger, le problème n'est pas uniquement le nôtre. Il y a d'autres personnes qui jouissent du saumon, comme les groupes sportifs. Nous regrettons beaucoup qu'on ne fasse rien pour maintenir et même pour augmenter la quantité de saumon, et qu'on ne prenne pas de mesures pour qu'il y ait assez de saumons pour tout le monde.

Nous en sommes, en ce moment, à parler de ce qui reste dans beaucoup de cas. C'est vraiment très regrettable. On n'aurait jamais dû avoir une telle situation en Colombie-Britannique. Il aurait dû avoir amplement de poisson pour tout le monde, pour la pêche sportive. Il leur faut beaucoup de poissons pour aller s'amuser, mais ils ne peuvent pas tous les prendre. Il est donc nécessaire d'avoir des entreprises commerciales de pêche pour récolter l'excédent et maintenir les endroits de frayage en bon état. Nous n'en voulons pas à ceux qui font de la pêche sportive mais nous regrettons que de temps à autre on ne fasse pas assez d'efforts pour maintenir la population à un niveau assez élevé lorsque la situation s'y prête, et que nous avons les moyens et les connaissances voulues.

[Text]

Mr. Rose: Mr. Whelan made the suggestion that perhaps some of the members of Parliament had not given enough leadership in this forgiveness clause of the Municipal Loan Fund which is due to expire in March 1970. It is almost too late now for any municipality to take advantage of it when you consider the planning. Were you suggesting an extension of this Municipal Loan Fund, of the 25 per cent forgiveness clause on capital and interest? Is this what you are suggesting?

Mr. Suzuki: No, sir. What we are suggesting is aid in our solution of this problem arising in this area. We do not care how you do it, although one of the areas that could be utilized is the area that you suggest. But I do not think it is adequate.

Mr. Rose: Why not?

Mr. Suzuki: I do not think that for proper treatment the amounts loaned to the municipalities by the federal government are adequate to take care of the problem.

Mr. Whelan: Mr. Chairman, may I ask a supplementary question? Being so closely associated with the tourist industry and the sports fishermen, do you think the sports fishermen, those fishing in the interior and those fishing in salt waters, should be licensed so that they can contribute to conservation and so that we can have more salmon for them to fish?

Mr. Suzuki: I think at the present time what is necessary is a sort of token licence fee and a registration to know just how many actually are taking part in this sports fishery. We have been using some very round figures and we want to know just how accurate we are. I think for that purpose if we had a sort of token licence fee, or a sort of registration system rather than a licence, it would suffice for the time being.

The Chairman: Mr. Stevens?

Mr. Stevens: I just want to comment on why we say that the federal and provincial governments should provide more financial aid to the municipalities. It is because the municipalities, when we go to them, are still saying that they have not enough funds without increasing the taxes and the taxpayer, the homeowner, is saying that he is taxed to the limit now.

And they rebel against a number of things—educational facilities at times, in this case sewers or sewage treatment plants and

[Interpretation]

M. Rose: M. Whelan a laissé entendre que certains députés n'avaient peut-être pas laissé assez d'initiative dans cet article d'indulgence du Fonds de prêts aux municipalités qui doit se terminer en mars 1970. Il est déjà presque trop tard pour une municipalité d'en profiter si l'on tient compte de la planification. Est-ce que vous préconisez une extension de ce Fonds de prêts aux municipalités, de l'article d'indulgence à l'égard du 25 p. 100 du principal et des intérêts? Est-ce que c'est ce que vous préconisez?

M. Suzuki: Non. Ce que nous proposons c'est une aide à la solution du problème qui se pose dans ce domaine. Peu importe les modalités de cette aide, mais celle que vous proposez est une des façons de la faire. Mais je ne pense pas qu'elle suffise.

M. Rose: Pourquoi pas?

M. Suzuki: Je ne pense pas que l'aide accordée par le gouvernement fédéral aux municipalités soit suffisante pour régler le problème efficacement.

M. Whelan: Une question supplémentaire. Puisque vous êtes si étroitement associé à l'industrie du tourisme et à la pêche sportive, pensez-vous que ceux qui s'adonne à la pêche sportive, que ce soit dans l'intérieur ou dans la mer, devraient détenir un permis de façon à contribuer à la conservation et nous permettre d'accroître le nombre de saumons pour leurs loisirs.

M. Suzuki: Je crois qu'à l'heure actuelle, il faudrait exiger un genre de droit d'enregistrement symbolique et un enregistrement afin de savoir quel est le nombre de pêcheurs sportifs. On a cité toutes sortes de chiffres approximatifs et nous voudrions savoir dans quelle mesure nous serrons la réalité de près. Je crois, qu'à cette fin, si on exigeait un genre de droit d'enregistrement symbolique, ou un enregistrement quelconque, au lieu d'un permis, ce serait suffisant pour l'instant.

Le président: Monsieur Stevens?

M. Stevens: Je voulais seulement faire un commentaire sur la raison pour laquelle nous disons que le gouvernement fédéral et provincial devraient fournir davantage d'aide financière aux municipalités. C'est parce que lorsqu'on s'adresse aux municipalités elles disent encore qu'elles n'ont pas suffisamment de fonds sans augmenter les impôts, et les contribuables, les propriétaires fonciers disent qu'ils sont déjà beaucoup trop imposés.

Ils se soulèvent contre un certain nombre de choses, les écoles parfois, et, dans ce cas, les canalisations d'égouts et les usines d'épu-

[Texte]

so on and will not pass the necessary authorization or they will dump the municipal council because it goes ahead and presses too far. Obviously there is not enough money there to go into that kind of sewage, not just in the sense of treatment plants but in bringing all the sewage together in a major way. This would probably be the answer, in the lower Fraser Valley at least, so that we would get the maximum benefit and the tax load would be spread as wide as possible. Obviously, if we go to one level of government they say they cannot afford it and to go to the senior government because that is where the main taxation is taking place at the present time.

The Chairman: Are there any further questions?

Mr. Comeau: Mr. Chairman, I realize and appreciate the pollution problems which you experience here and I only wish that in my constituency we were not bothered with the same type of industrial waste polluting our waters.

Mr. Crouse: Mr. Stevens, under what authority do you believe that the federal government, for example, could implement a program to eliminate municipal waste from entering the Fraser River? Do you not anticipate a conflict between the federal government and your provincial authorities? Are you certain of provincial rights if the federal government were to try to come into British Columbia and institute this type of program? Is this not a complete responsibility of the municipal and provincial governments concerned?

Mr. Stevens: I think that if the federal government not only said it was concerned and prepared to come in and wanted to have some control but also said it had some x millions of dollars it was prepared to provide, part of it in grants, part of it in long-term loans, to see that this is done, I do not see why there should be any serious objections. There would be some conflict but I do not see any area at almost any level of government where there is not some dispute and overlapping.

Mr. Crouse: But you would agree, Mr. Chairman that it is the responsibility of the municipal and provincial authorities to make requests of this nature to the federal government and that it is not the other way around—that the federal government cannot

[Interprétation]

ration des eaux-vannes, et ainsi de suite, et ne veulent pas accorder l'autorisation voulue, sinon ils vont rejeter le conseil municipal s'il va trop loin et fait trop de pressions. Elles n'ont évidemment pas suffisamment d'argent pour se lancer dans ce genre de systèmes d'égouts, non seulement les usines d'épuration, mais pour installer un réseau collecteur. Ce serait probablement la solution dans la partie inférieure de la vallée du fleuve Fraser pour obtenir le plus d'avantages possibles, et répartir le fardeau fiscal le plus possible. Lorsqu'on s'adresse à un palier de gouvernement, on nous dit qu'il n'a pas les fonds voulus et de s'adresser à un palier plus élevé car c'est lui qui retire la plupart des impôts à l'heure actuelle.

Le président: Avez-vous d'autres questions?

M. Comeau: Monsieur le président, je me rends compte de la gravité du problème de la pollution qui se pose ici et je souhaite que ma circonscription n'aura pas à faire face au même problème de déchets industriels dans nos eaux.

M. Crouse: Une dernière question. Monsieur Stevens, qu'est-ce qui vous porte à croire que le gouvernement fédéral pourrait, par exemple, mettre en vigueur un programme pour interdire le déversement des eaux-vannes d'une municipalité dans le fleuve Fraser? Est-ce que vous ne vous attendez pas à un conflit entre le gouvernement fédéral et la province? Êtes-vous certains des droits de la province si le gouvernement fédéral veut appliquer ce genre de programme en Colombie-Britannique? Est-ce que cela ne relève pas complètement des provinces et des municipalités?

M. Stevens: Je crois que le gouvernement fédéral a dit qu'il n'était pas seulement disposé à agir et à prendre un certain contrôle mais qu'il disposait de quelques millions de dollars qu'il était prêt à mettre à votre disposition sous forme de prêts à long terme, de subventions, pour s'assurer que ce soit réalisé. Je ne vois pas pourquoi il y aurait des objections sérieuses. Il y aurait peut-être des conflits mais je ne vois pas de domaine à presque tous les paliers de gouvernement où il n'y a pas chevauchement de compétence et des conflits.

M. Crouse: Mais vous conviendrez, monsieur le président, que c'est la responsabilité des autorités provinciales et municipales de formuler des demandes de ce genre au gouvernement fédéral et non pas au gouvernement fédéral d'intervenir et d'imposer son

[Text]

come in and impose their authority on the municipal and provincial governments without being requested.

Mr. Stevens: I think in terms of the control of inland waters this does at the moment, as I understand it, rest with the provincial government but that would not preclude the federal government from coming in.

The Chairman: Gentlemen, I think we should adjourn because we have to reconvene at 2.30 p.m. Before anybody leaves, we are going to ask for a meeting of the Steering Committee immediately after adjournment.

I want to thank Mr. Suzuki and Mr. Stevens for their information and to commend them for trying to keep this brief within the confines of federal jurisdiction. It certainly makes my task much easier. Thank you, gentlemen.

The meeting is adjourned.

AFTERNOON SITTING

• 1442

The Chairman: Order. I see a quorum. We will now have the brief of the Gulf and Fraser Fishermen's Credit Union.

However, at this stage I will temporarily adjourn the meeting for the purpose of allowing photographs to be taken and then we can go ahead.

Order. I will ask Mr. Holthe to introduce the witnesses from his organization.

Mr. L. C. Holthe (Secretary Treasurer, Gulf and Fraser Fishermen's Credit Union): Thank you, Mr. Chairman. I have with me today Mr. E. MacDonald and Mr. C. J. Philipson, as well as the Vice-President of our Credit Union, Mr. Arnold Hennberg, and our solicitor, Mr. Robert McMaster. I do not expect that all of these gentlemen will speak to you, and possibly Mr. MacDonald or Mr. Philipson will be able to answer any questions or make any further comment that you may wish.

The Chairman: Mr. Holthe will now proceed to give a summary of the brief. Order.

Mr. Holthe: I believe you have a copy of this introductory statement, which is really a summary of the brief that we presented to you.

Gulf & Fraser Fishermen's Credit Union is a large fishermen's credit union which, since its incorporation in 1941, has made aggregate loans as at the end of 1968 in the sum of

[Interpretation]

autorité aux gouvernements provinciaux et municipaux sans y être invité.

M. Stevens: Pour ce qui est du contrôle des eaux intérieures, je crois qu'à l'heure actuelle, il relève du gouvernement provincial, mais cela n'empêche pas pour autant le gouvernement fédéral d'intervenir.

Le président: Messieurs, je crois que nous devrions lever la séance puisque nous reviendrons à 14 h. 30. Nous aurons immédiatement après l'ajournement une réunion du comité de direction.

Je tiens à remercier nos deux témoins, M. Suzuki et M. Stevens, de leurs renseignements et à les féliciter de s'en être tenu, dans leur mémoire, à la juridiction du gouvernement fédéral. Je vous remercie, messieurs.

La séance est levée.

SÉANCE DE L'APRÈS-MIDI

Le président: Je crois qu'il y a quorum. Nous allons entendre le mémoire de la *Gulf and Fraser Fishermen's Credit Union*. Je vais ajourner la séance temporairement pour permettre les photographies, puis nous reprendront.

A l'ordre. Je demanderais à monsieur Holthe de nous présenter les membres de son organisation.

M. L. C. Holthe (secrétaire-trésorier de la Gulf and Fraser Fishermen's Credit Union): Merci, monsieur le président. Je vais vous présenter les autres membres de notre délégation. Ce sont MM. E. MacDonald et C. J. Philipson, ainsi que notre vice-président, M. Arnold Hennberg et notre avocat, M. Robert McMaster. Je suppose que tous ces messieurs ne prendront pas nécessairement la parole mais peut-être que MM. MacDonald et Philipson pourront répondre aux questions que vous aurez à poser ou faire certains commentaires.

Le président: On va maintenant nous présenter un résumé du mémoire. A l'ordre s'il vous plaît.

M. Holthe: Je crois que vous avez un exemplaire de la déclaration d'ouverture, qui est vraiment un résumé du mémoire que nous vous avons présenté.

La *Gulf and Fraser Fishermen's Credit Union* est une coopérative de crédit considérable qui, depuis sa fondation en 1941 jusqu'à la fin de 1968, a consenti des prêts représen-

[Texte]

\$23,700,000 to its members, of which it has only been necessary to date to write off \$21,500 in bad debts. Of the \$3 million of new loans made by the Credit Union in 1968 alone, 40 per cent was lent to fishermen to finance boats and gear. Accordingly, we feel that our credit union has had a great deal of practical experience in the field of lending with which the Fisheries Improvement Loans Act is concerned. Because of this experience and the current discussions of that Act, we thought it might be helpful to your Committee if we expressed our views to the Committee as to how the Act ought to be further amended and administered to more fully carry out its purpose expressed in its title, that is, "an Act respecting loans to assist fishermen engaged in a primary fishing enterprise".

Principally, our brief deals with:

(a) A practical proposal for the freeing of interest rates on loans under the Act in a manner which would attract funds and at the same time protect the fishermen;

(b) Proposals for eliminating expensive red tape; and

(c) Certain proposed further amendments to the Act which in our view are required to fulfill its purpose, particularly in the present situation in the salmon fishery on the west coast, including:

(i) refinancing fishermen who hold salmon licences and to whom company financing may become difficult;

(ii) increase in the size of loan (with corresponding increase in the aggregate amounts of guarantee); and

(iii) extension of the period of the operation of the Act past the present statutory limitation of June 30, 1970.

Reference to our brief will indicate that a unique situation has been created on the west coast in the salmon fishery by virtue of the salmon licencing regulations and the consolidation of certain fishing companies which has occurred since those regulations were first announced. We have singled this particular aspect out of our brief to comment on in this introductory statement because since the preparation of our brief:

(a) The Hon. Minister of Fisheries has announced a further change in the salmon licencing regulations which applies a two-boat ceiling on the acquisition of licences; and

(b) We have received a letter from the Hon. Minister of Finance dated April 2, 1969 in which he sets out his reasons for

[Interprétation]

tant \$23,700,000 à ses membres. Jusqu'ici, nous n'avons perdu que \$21,500 de dettes non payées. Des 3 millions prêtés par l'Union en 1968, 40 p. 100 a servi aux pêcheurs pour financer l'équipement et les bateaux. Ainsi nous estimons que notre coopérative de crédit a beaucoup d'expérience pratique dans le domaine des prêts connexes à la *Loi sur les prêts aidant aux opérations de pêche*. En raison de cette expérience et de la controverse que soulève cette loi, nous avons pensé qu'il serait utile au Comité de lui exposer nos opinions en ce qui concerne la façon dont la loi devrait être modifiée et appliquée afin de mieux atteindre son but, qui est bien explicité dans le titre *Loi sur les prêts destinés à aider les personnes exerçant une entreprise de pêche fondamentale*.

Notre mémoire porte surtout sur les trois points suivants:

a) Une proposition pratique pour libérer les taux d'intérêt sur les prêts en vertu de la Loi, de façon à attirer des fonds et aussi protéger les pêcheurs.

b) Des propositions pour éliminer les frais d'administration onéreux.

c) D'autres modifications à la Loi qui, à notre avis, sont indispensables à la réalisation de ses objectifs, compte tenu de la situation actuelle de la pêche du saumon sur la côte de l'Ouest:

(i) Refinancement des pêcheurs qui ont des permis de pêche au saumon et qui auront de plus en plus de peine à obtenir le financement des entreprises;

(ii) L'augmentation de la grosseur des prêts, et augmentation correspondante du nantissement global;

(iii) Prolongement de la période d'application de la Loi au-delà de la date limite statutaire le 30 juin 1970.

En lisant notre mémoire, vous verrez qu'une situation unique a été créée le long de la côte ouest, en raison des nouveaux règlements relatifs aux permis de pêche au saumon et de l'amalgamation de certaines entreprises de pêche qui a eu lieu depuis l'annonce de ces règlements. Nous avons isolé cet aspect particulier de notre mémoire pour en parler maintenant parce que depuis la préparation de ce mémoire, deux choses sont arrivées. D'abord, le ministre des Pêches a annoncé un autre changement au règlement visant les permis de pêche au saumon qui fixe un maximum de deux bateaux pour l'acquisition de permis. Deuxièmement, nous avons reçu une lettre du ministre des Finances, en date du 2 avril 1969, dans laquelle il explique ses raisons pour ne pas étendre les avantages de la Loi au refinancement.

[Text]

not extending the benefits of the Act to refinancing.

With respect to the new licencing regulations announced by the Hon. Minister of Fisheries recently, we submit that it fails to meet the situation outlined in our brief. With the licences now held by the major fishing companies, the same being transferable to new boats, the companies now hold sufficient licences to basically monopolize the fishing industry to the detriment of the independent owner or, alternatively, they could do so by building bigger boats which are better equipped and to which they can transfer their licences.

Concerning the letter from the Hon. Minister of Finance (copies of which and our reply thereto we have made available to your clerk for distribution to members of the Committee), we would point out that the Minister of Finance apparently objects to the proposal on the following grounds:

(a) That the Fisheries Improvement Loans Act, like similar Acts applying to other primary producers, is general legislation, not designed to meet the unique problems of one particular branch of the fisheries; and

(b) If the fishing enterprises affected (and presumably here he is speaking of the independent fishermen) are commercially viable, he thinks that they would be able to obtain refinancing from commercial lenders, including credit unions, presumably without a provision in the Fisheries Improvement Loans Act.

(c) Lenders may be much less ready to assist fishermen and borrowers under similar programs for a variety of credit needs, if they can be paid out from the proceeds of a guaranteed loan program after they have taken the initial risk.

As you will observe from our reply to the Minister of Finance, we have urged him to reconsider his position on the following grounds:

(a) That while guaranteed loans to primary producers is general legislation, it surely should, if it is to be useful, be viable enough to deal with known specific special circumstances of an urgent nature;

(b) The Minister of Fisheries has expressed the intention of the Government to protect the independent fisherman. If this is the real intent, then the

[Interpretation]

Quant aux nouveaux règlements visant les permis annoncés par le ministre des Pêches, nous estimons que cela ne règle pas la situation décrite dans notre mémoire. Avec les permis qu'elles détiennent actuellement, qui sont transférables à de nouveaux bateaux, les entreprises ont suffisamment de permis pour monopoliser l'industrie de la pêche au détriment des propriétaires indépendants. Elles pourraient aussi construire de plus grands bateaux, mieux équipés, et auxquels elles pourraient transférer leur permis.

Quant à la lettre du ministre des Finances, dont nous avons fait parvenir des copies, ainsi que des copies de notre réponse, au secrétaire, pour qu'elles soient distribuées aux membres du Comité, nous aimerions signaler que le ministre des Finances s'oppose apparemment à la proposition pour les raisons suivantes:

a) Parce que la *Loi sur les prêts aidant aux opérations de pêche*, comme d'autres lois concernant les producteurs primaires, est une loi générale qui n'est pas destinée à éliminer les problèmes particuliers d'un secteur particulier des pêches.

b) Parce que si les entreprises de pêche concernées (il s'agit sans doute ici des pêcheurs indépendants) sont rentables, il estime qu'elles pourraient obtenir du refinancement des prêteurs commerciaux, y compris des coopératives de crédit, sans qu'il y ait nécessairement une disposition à cette fin à la *Loi sur les prêts aidant aux opérations de pêche*.

c) Parce que les prêteurs seraient moins disposés à aider les pêcheurs et emprunteurs en marge de programmes semblables pour diverses sortes de crédit s'ils peuvent être remboursés à même le fonds d'un programme de prêts garantis après avoir pris le risque initial.

Comme vous le constaterez dans la réponse que nous donnons au ministre des Finances, nous l'exhortons à reconsidérer sa position sur la base des faits suivants:

a) Alors que les prêts garantis aux premiers producteurs correspondent à une législation générale, pour être utile ce projet devrait être suffisamment viable pour faire face à des circonstances spéciales connues, de nature urgente.

b) Le ministre des Pêches a exprimé l'intention du gouvernement de protéger les pêcheurs indépendants. Si c'est vraiment l'intention du gouvernement, les pêcheurs

[Texte]

independent fisherman must be helped to refinance his financial obligations to the companies;

(c) The Companies now have transferable licences and a fairly large number of licensed boats and are in a position to push the independent to the wall unless he is strong;

(d) No credit institution makes loans relying solely upon the security for the loan, even if part of that security is a government guarantee. In other words, loans are not made unless the fisherman is credit-worthy and a good fisherman. He may be "commercially viable", but with the drastic changes which have taken place in the industry, he has to be given time to adjust. As indicated in our brief, in the past because of the competition between companies for a supply of salmon they have been prepared to finance fishermen's boats on a very "generous" basis. Now that the companies are in a position to assure their supply by ownership of licensed vessels, the pressure of competition for supply will rapidly be a decreasing factor, and the "generosity" of the companies in financing already shows signs of drying up.

Heretofore, the Fishermen's Co-operative and a few small fish buyers on this coast have only been a small competitive factor in the salmon fishery, through which truly independent fishermen could choose to free themselves from large company domination. Given a reasonable period of time and the means to be financially independent, the fisherman has an opportunity to become commercially viable through the Co-operative. Should this happen, the Co-operative could act as a check upon the monopolistic tendency which otherwise is almost certain to result from the licensing and consolidation of the companies.

(e) For a lot of fishermen it is now or never to become independent. A small deviation from the generality of the Fisheries Improvement Loans Act surely will be less expensive for the Government than the foreseeable cost of unemployment insurance and direct special relief which may follow if the present trend is not now stopped.

(f) If a man is not entitled to pay off a loan on reasonable notice, or with any lawful bonus, it would be a clog on the

[Interprétation]

indépendants devront recevoir de l'assistance afin d'obtenir de nouveaux prêts pour honorer leurs engagements envers les sociétés.

c) Les sociétés ont actuellement des permis transférables et un grand nombre de bateaux, ce qui leur permettrait d'écraser les pêcheurs indépendants, si ceux-ci ne sont pas assez forts.

d) Aucune société de crédit n'accorde des prêts en se fiant à une simple garantie, même si celle-ci provient en partie du gouvernement. Autrement dit, on n'accorde pas de prêts à moins que les pêcheurs aient une bonne réputation de solvabilité. Leurs entreprises peuvent être «économiquement viables», mais vu les changements radicaux qui ont eu lieu dans l'industrie de la pêche, il faut leur donner le temps de s'adopter. Comme nous l'indiquons dans notre mémoire, dans le passé, en raison de la concurrence entre les sociétés pour l'approvisionnement en saumon, ces sociétés étaient disposées à financer les bateaux des pêcheurs de façon «généreuse». Mais, maintenant que les sociétés peuvent assurer leur propre approvisionnement grâce aux bateaux qu'elles possèdent, la concurrence ira en décroissant et la «générosité» des sociétés va diminuer.

Jusqu'ici, les coopératives de pêcheurs et quelques petits acheteurs de poisson le long de la côte constituaient une bien faible concurrence dans l'industrie du saumon. Mais grâce à eux, les pêcheurs indépendants pouvaient se libérer de la domination des grandes sociétés. Si on leur accordait un délai raisonnable et le moyen d'être financièrement indépendants, le pêcheur, grâce à la coopérative, peut rendre son entreprise commercialement viable. La coopérative peut alors servir de contre-poids aux tendances monopolisantes qui peuvent résulter de la délivrance de permis aux compagnies et de leur consolidation.

e) Beaucoup de pêcheurs peuvent devenir indépendants maintenant ou jamais. Sûrement, une petite déviation de la généralité de la Loi sur les prêts aidant aux opérations de pêche coûterait beaucoup moins cher au gouvernement que l'assurance-chômage et les programmes spéciaux d'assistance qui deviendront nécessaires si on ne met pas fin à la tendance actuelle.

f) Il serait contraire à la loi et à la conscience de ne pas permettre à un homme de rembourser un prêt dans un

[Text]

equity of redemption contrary to law and unconscionable, when government policy under the Minister of Fisheries together with monopolistic tendencies in the industry may destroy an independent fisherman's rights to pursue his livelihood there is no impropriety in the Government taking steps (including guarantees) which will help him retain that independence.

We have requested our solicitor to be present at this hearing with us in view of the fact that our brief is dealing with matters of amendments to the Act and in that respect it may be useful to have him available.

We trust that the indication in our brief of a willingness on the part of this Credit Union to seek to make substantial funds available, providing that the Act, the interest charges and the procedure of the loans are reasonably adjusted, may encourage the Committee and the government to seriously consider the representations which we have made.

We shall be pleased to answer any questions which members of the Committee wish to direct to our representatives arising out of our brief and relating to the additional matters raised in this introductory statement.

Thank you.

The Chairman: Thank you, Mr. Holthe. We will now begin the questioning. First on my list I have Mr. McBride.

Mr. McBride: I will pass; I have no questions.

The Chairman: Mr. Goode?

Mr. Goode: Thank you, Mr. Chairman. In your brief you refer to the refinancing of boats, which I think we both understand is not considered by the government at this time. What advantages do you feel are to be found in the refinancing of boats? Do you feel that many boats now financed by high interest finance companies could be done away with if we would refinance already-existing contracts?

Mr. Holthe: There are not so many financed by companies that charge excessive interest rates. Many, of course, are financed through the fishing companies, as such.

Mr. Goode: As a rough estimation, do you have any idea what percentage would be financed by the companies?

Mr. Holthe: No, I would not have any idea.

[Interpretation]

délai raisonnable. Si la politique du gouvernement qu'applique le ministre des pêcheries, et les tendances monopolisantes de l'industrie, peuvent nier à un pêcheur indépendant le droit à la subsistance, il n'y a pas d'inconvénient à ce que le gouvernement prenne des mesures (y compris des garanties) qui aideraient ce pêcheur à conserver son indépendance.

Nous avons demandé à notre avocat d'être présent à cette séance puisque notre mémoire porte sur des modifications éventuelles à la loi et à cet égard sa présence nous sera peut-être utile.

Nous espérons que les indications que donne notre mémoire sur la disposition des coopératives de crédit à fournir des fonds importants pourvu que la loi, les taux d'intérêt et les modalités d'octroi des prêts soient modifiés, cela pourraient peut-être encourager le Comité et le gouvernement à étudier soigneusement nos observations.

Nous serons heureux de répondre aux questions que les membres du comité voudront poser à nos représentants au sujet de notre mémoire et des questions soulevées dans cette déclaration préliminaire. Merci messieurs.

Le président: Merci beaucoup, monsieur Holthe. Maintenant nous pouvons commencer l'interrogatoire. J'ai d'abord le nom de M. McBride sur la liste.

M. McBride: Je n'ai pas de question. Merci beaucoup, monsieur le président.

Le président: Monsieur Goode.

M. Goode: Merci monsieur le président. Dans votre mémoire, vous parlez de l'obtention de nouveaux prêts sur les bateaux, ce qui n'est pas prévu par le gouvernement à l'heure actuelle. Quels avantages présente ces nouveaux prêts? Est-ce qu'il y a un nombre de navires de pêche maintenant financés à un intérêt élevé qui justifierait de nouveaux prêts?

M. Holthe: Il n'y a pas tellement de navires financés par des sociétés de financement à des taux d'intérêt excessifs. Il y en a beaucoup, bien entendu, qui sont financés par l'entremise des sociétés de pêche.

M. Goode: Savez-vous quel est le pourcentage approximatif des bateaux financés par des sociétés?

M. Holthe: Non, je ne saurais le dire.

[Texte]

Mr. Goode: In your experience, are a large number of them financed through the companies and, consequently, as I understand it, must sell their fish to these companies?

Mr. Holthe: That is correct.

Mr. Goode: You also mention the matter of premium interest rates. At the present time what do you think would be a fair market interest rate for credit unions to finance boats?

Mr. Holthe: If you look at the government's program for the NHA I believe they have established a rate of 9½ for homes. If that is a reasonable rate for the government to charge on their loans under the National Housing Act I believe that somewhere in that neighbourhood would also be a reasonable rate for the financing of boats.

Mr. Goode: As you know, some suggestion has been made, although there is no legislation to the effect that housing interest rates will be freed. If they were freed at this time this would possibly increase the interest rates quite considerably on fishing boats; but if you had a term loan, for example, and every six months the interest rate on a mortgage on a boat was adjusted, would this be advantageous?

Mr. Holthe: I think so. I think it would be the fairest way of dealing with it, both from the point of view of the lender and of the borrower. I think we also mention in our brief that we feel this would be an equitable basis.

Mr. Goode: For the period between 1956 and 1960 you give some figures in your brief on how much you financed under the Act. Did you also finance outside the Act?

Mr. Holthe: Yes.

Mr. Goode: And I take it that because of the interest rates you are now financing outside the Act?

Mr. Holthe: Yes; we have not financed under the Act since 1960.

Mr. Goode: And you would prefer to finance under the Act because of the guarantees you can give your shareholders?

Mr. Holthe: That is correct, yes.

Mr. Goode: You also mention in your brief that the size of the mortgage on a boat guar-

[Interprétation]

M. Goode: D'après votre expérience, y a-t-il un grand nombre de bateaux financés par les sociétés de pêche et dont les propriétaires doivent donc vendre leur poisson à ces sociétés?

M. Holthe: Oui.

M. Goode: Vous parlez aussi des taux d'intérêt. Quel serait à l'heure actuelle un intérêt raisonnable pour le financement des bateaux par les coopératives de crédit?

M. Holthe: Si vous considérez le programme du gouvernement intéressant la Loi nationale sur l'habitation, on finance des logements à 9½ p. 100. Je crois que si c'est là un taux d'intérêt raisonnable pour le gouvernement, notamment pour les prêts accordés aux termes de la Loi nationale sur l'habitation, j'ai l'impression qu'un taux approximativement égal à celui-là serait raisonnable aussi pour les bateaux.

M. Goode: Comme vous le savez, il y a certaines propositions qui ont été faites, à savoir de libérer les taux hypothécaires. Dans ce cas, cela provoquerait une hausse considérable des taux d'intérêt sur les bateaux à l'heure actuelle. Par contre, si vous aviez un prêt à terme, s'il y avait un rajustement des taux d'intérêt tous les six mois, est-ce que cela serait avantageux pour vous?

M. Holthe: Je crois que si. Je crois que cela serait la façon la plus juste de procéder tant au point de vue du prêteur qu'à celui de l'emprunteur. Nous le disons d'ailleurs dans notre mémoire.

M. Goode: Pour la période allant de 1956 à 1960, vous donnez des chiffres des prêts avancés en vertu de la Loi. Avez-vous également donné des prêts en dehors de la Loi?

M. Holthe: Oui.

M. Goode: Je crois comprendre que c'est à cause des taux d'intérêt.

M. Holthe: Oui. Nous n'avons pas offert de prêts aux termes de la loi, depuis 1960.

M. Goode: Et vous préféreriez financer en vertu de la loi, en raison des garanties que vous pourriez alors donner à vos actionnaires?

M. Holthe: C'est exact.

M. Goode: Dans votre mémoire, vous dites que l'hypothèque sur un bateau, en vertu de

[Text]

anted under the Act is possibly going to be \$25,000, and that it seems accepted by the industry and by the public that this is going to be the figure chosen by the Minister of Finance. What would you suggest is a more equitable figure?

Mr. Holthe: We have been dealing with \$10,000 for a number of years. If we went to \$25,000 I think it would be quite a step forward.

Again, I think we point out in our brief the fact that it is necessary and I guess it is necessary—to have a ceiling. But why could we not have a ceiling of, say, \$100,000? As long as the loan is a proper loan, properly secured, in the first place, and made to a person who can repay it, or at least it appears that he should be able to repay it, I do not see why we necessarily have to have such a restricted limit as we have had in the past, at least.

Mr. Goode: Another thing that interests me a great deal is your reference to the red tape involved. I take it that there are delays because of the red tape. Could you give us a little rundown on what red tape you have to go through, and what a fisherman has to do to get a government-guaranteed loan?

Mr. Holthe: I would like to comment on this. Since our brief was prepared we have had a chance really to go into the regulations in quite a bit of detail. Since 1960 they have been improved considerably. At one time it was necessary to submit copies of the application of each loan. I think it is now a monthly reporting. We would like to assure the Committee that we really were not aware of this when we submitted the brief, because we did not have time really to do the amount of research that we would have liked to have done. Therefore, I am afraid we were at fault in making a major point of this.

The Chairman: Your time is up, Mr. Goode.

Mr. Goode: Thank you very much, Mr. Chairman.

Mr. Borrie: Thank you, Mr. Chairman.

You say that from 1956 to 1960 you only lent \$500,000 for the four-year period. Why was that? Was it because of the interest rate, or were there no demands for loans from the credit union?

Mr. Holthe: Primarily, I guess, a lot of it had to do with the fact that the limit on loans at that time was \$4500, or \$5000. But a fair number of loans were made at that amount.

[Interpretation]

la Loi, pourrait peut-être atteindre \$25,000, et qu'il est admis par l'industrie et le public que c'est ce chiffre que choisira le ministre des Finances. Pourriez-vous proposer un chiffre qui serait plus équitable?

M. Holthe: Nous avons conclu des affaires sur la base de \$10,000 depuis un certain nombre d'années. Si nous passions à \$25,000, je crois que ce serait un progrès certain. Comme nous le disons dans le mémoire, il est nécessaire qu'il y ait un maximum, mais pourquoi ne pourrions-nous pas avoir un maximum de \$100,000? Tant que le prêt est légal, tant qu'il est accordé à une personne qui semble pouvoir le rembourser, et qu'il est adéquatement garanti, pourquoi fixer des limites si peu élevées que dans le passé au moins?

M. Goode: Un autre point qui m'intéresse beaucoup. Vous parlez de la bureaucratie et des rouages administratifs compliqués. Je crois comprendre que cela provoque des retards. Pouvez-vous nous parler des formalités qu'un pêcheur doit faire pour obtenir un prêt garanti par l'état?

M. Holthe: Je vais en parler. Lorsque notre mémoire a été rédigé, nous avons eu la possibilité d'examiner les règlements de façon détaillée. Depuis 1960, ils ont été beaucoup améliorés. A un moment donné, il a été nécessaire de présenter une copie de la demande pour chaque emprunt. Ce n'est plus nécessaire. Cela figure dans le rapport mensuel. Je peux assurer le comité que c'est quelque chose dont nous n'étions pas au courant lorsque nous avons rédigé le mémoire, parce que nous n'avons pas eu tout le temps de faire des recherches que nous aurions voulu. Aussi, dois-je dire que c'était une erreur de notre part d'insister sur ce point.

Le président: Monsieur Goode, vous avez épuisé votre temps de parole.

M. Goode: Merci, monsieur le président.

M. Borrie: Monsieur le président, je m'adresse au témoin. De 1956 jusqu'en 1960, vous dites avoir seulement prêté \$500,000. Pourquoi? A cause du taux d'intérêt ou parce qu'il n'y avait aucune demande de prêts?

M. Holthe: Cela est surtout dû au fait que la limite était alors de \$4,500 ou \$5,000. Cependant, un assez grand nombre de prêts de ce montant ont été faits.

[Texte]

Mr. Borrie: Right.**Mr. Holthe:** The limit was lower. I believe it was \$450, if my memory serves me correctly.**Mr. Borrie:** And you do not have any figures on the number of borrowers against the \$500,000?**Mr. Holthe:** No; I am sorry.**Mr. Borrie:** In your brief and also in your preamble you state that loans from the cannery companies and packing companies are drying up. What is the reason for that? Did they give you any reason?**Mr. Holthe:** No; but I think, primarily—and I am speculating now, because I do not really have any proof of it—that the competition to try to have a certain amount of production is being eliminated because of there now being really only two companies in the business, and they are reasonably assured between them of having a reasonable supply of the production of the industry. A year or two ago there were five, or six, or seven, reasonably good-sized companies in the industry. And, of course, as I say, there is not the demand to try to have the fishermen fish, therefore there is not the same enthusiasm to do the financing of boats.**Mr. Borrie:** Is the demand by the companies not still as great relative to the number of fish they require?**Mr. Holthe:** With two competing in place of five I think the competition is less.**Mr. Borrie:** I am thinking of a brief that we had earlier this morning, or possibly one that I have read, in which they said they were dumping, or at least selling, in the United States.**Mr. Holthe:** I could not comment further on that. I do not know what that relates to.**Mr. Borrie:** Thank you, Mr. Holthe.**Mr. C. J. Philipson (Director, Gulf and Fraser Fishermen's Credit Union):** I think it should be made clear, though, that although there are other small companies these two large fishing concerns are the only ones that are now left in the industry.**Mr. Borrie:** Thank you.**The Chairman:** Mr. Comeau?**Mr. Comeau:** Thank you, Mr. Chairman. I am interested in the licensing program that

[Interprétation]

M. Borrie: Oui.**M. Holthe:** La limite était de \$4,500, je crois.**M. Borrie:** Vous ne savez pas combien d'emprunteurs il y a eu pour les \$500,000?**M. Holthe:** Non, je regrette.**M. Borrie:** Dans votre mémoire et dans votre introduction également, vous dites que les prêts avancés par les sociétés de mise en conserves diminuent. Pouvez-vous nous donner les raisons? Vous ont-elles donné des raisons?**M. Holthe:** Non, mais je pense—et c'est simplement une hypothèse—que la concurrence s'exerçant autour de la production est éliminée car il n'y a vraiment que deux sociétés dans cette industrie, à l'heure actuelle. Elles sont toutes deux assurées d'avoir un approvisionnement suffisant pour leur production. Il y a une année ou deux, il existait encore cinq, six ou sept compagnies d'une importance raisonnable dans ce secteur industriel. Je le répète, il n'existe pas de demande de poisson, de sorte que ces sociétés ne montrent pas beaucoup d'empressement pour financer les bateaux.**M. Borrie:** Est-ce que la demande des sociétés n'est pas aussi importante qu'auparavant?**M. Holthe:** Quand il y a deux concurrents seulement au lieu de cinq, la concurrence n'est pas aussi grande.**M. Borrie:** Dans l'un des mémoires que j'ai lus, on dit qu'il y a du dumping ou au moins de la vente aux États-Unis.**M. Holthe:** Je ne pourrai rien dire à ce sujet. Je ne sais pas à quoi cela se rapporte.**M. Borrie:** Merci, monsieur Holthe.**M. C. J. Philipson (directeur de la Gulf and Fraser Fishermen's Credit Union):** Je voudrais préciser que ces deux grandes sociétés sont les principales et qu'il y en a de petites aussi. Mais ces deux grandes sont les seules qui restent maintenant dans cette industrie.**M. Borrie:** Merci.**Le président:** Monsieur Comeau.**M. Comeau:** Merci, monsieur le président. Je suis très intéressé par le programme de

[Text]

the Minister has introduced. This also has some implications, if I may say so, in relation to the lobster licensing program on the Atlantic Coast. At a recent meeting of the Atlantic coast United Maritime Fishermen it was said that the only way to become involved in the industry would be to buy your way in. Would you say that is a proper assessment of the program on the west coast relative to the salmon fishery?

Mr. Holthe: That you would have to buy your licence? Is that what you mean?

Mr. Comeau: Yes; that you would have to buy your licence from other people. This could really be an industry in itself.

Mr. Holthe: I do not know. Probably the future will prove whether or not this is a good move. The City of Vancouver have licensed their taxi-cabs and allow only a certain number in the City of Vancouver. I know that some of our ex-fishermen have become taxi-cab operators in the City of Vancouver. I think the current cost of a taxi cab licence is around \$22,000 to \$23,000.

I do not know. It depends on whether the fishing industry is going to become...

Mr. Comeau: I will ask you the same question I asked earlier. How do you suggest that the monopoly in the industry be checked?

Mr. Holthe: Mr. Philipson might be able to answer that.

Mr. Philipson: The best method, I suppose, is to have a committee of the government or of the Fisheries Department scan all these things each year.

Mr. Comeau: You mean to provide supervision, and so on?

Mr. Philipson: Supervision, yes; that is what I mean.

Speaking on your last question, we already know of specific cases where fishermen have paid, or are in the process of paying, a bonus to obtain a salmon fishing licence.

Mr. Comeau: This is true. This also happens on the east coast in the lobster industry. The licences have gone up.

Another thing that interests me is the matter of interest rates. You suggest on page 5 of the original brief that the $7\frac{1}{2}$ per cent interest is highly inadequate to attract funds. You mean it is not high enough to attract funds—to attract lenders?

[Interpretation]

délivrance de permis que le ministre a annoncé et qui a certaines conséquences, si je puis dire, sur le programme concernant la pêche au homard sur la côte atlantique. Au cours d'une récente réunion de l'association des pêcheurs des Maritimes, on a dit que la seule façon de travailler, c'était d'acheter les permis. Est-ce que vous diriez qu'il en va de même de votre côté en ce qui concerne l'industrie du saumon?

Mr. Holthe: Voulez-vous parler de l'achat des permis?

Mr. Comeau: Oui, achat à d'autres personnes. Cela en soi pourrait constituer un commerce.

Mr. Holthe: Je ne sais pas. L'avenir prouvera si c'est une bonne initiative ou non. La Ville de Vancouver, par exemple, a limité le nombre des taxis dans la ville et ces taxis doivent avoir des permis. Je sais que certains de nos anciens pêcheurs sont devenus chauffeurs de taxis à Vancouver. Le prix courant d'un permis est de \$22,000 à \$23,000 actuellement.

Je ne sais pas. Cela dépend de ce que l'industrie de la pêche...

Mr. Comeau: Je vais répéter ma question de ce matin. Comment pensez-vous qu'on peut lutter contre la monopolisation de l'industrie de la pêche?

Mr. Holthe: M. Phillipson pourrait répondre à cette question.

Mr. Philipson: Le meilleur moyen serait d'avoir un comité gouvernemental ou du ministère des Pêches pour examiner la question chaque année.

Mr. Comeau: Vous voulez parler de surveillance, etc.?

Mr. Philipson: Oui.

A propos de votre dernière question, nous savons que des pêcheurs ont payé ou sont sur le point de le faire pour obtenir un permis de pêcher le saumon.

Mr. Comeau: C'est vrai. Ceci arrive aussi sur la côte de l'Est pour le homard. Le prix augmente. Une autre chose qui m'intéresse: c'est la question des taux d'intérêt. Vous dites à la page 5 de votre mémoire, qu'un taux de $7\frac{1}{2}$ p. 100 est tout à fait insuffisant pour attirer les fonds voulus. Vous entendez par là que ce n'est pas assez élevé pour attirer les prêteurs?

[Texte]

Mr. Holthe: That is correct. It is not high enough.

Mr. Comeau: Do you think that a recommendation to the government that the interest rates on these loans should be increased is a good one to make?

Mr. Holthe: No, I do not necessarily think it is a good recommendation, but we have to be honest and face the facts as they are.

Mr. Comeau: Do you not feel, then, that we should recommend to the government that all interest rates should be checked? All our interest rates have gone up in the past year, on housing loans, on veterans loans, on fishermen's loans—everything. Do you not think we should strongly recommend to the government that interest rates be checked?

Mr. Holthe: Most definitely so; I do not think anyone would disagree with that statement.

We are paying $7\frac{1}{2}$ per cent now to our members on some of the deposits they are making with us, to try to attract money. We provide life insurance up to \$10,000 on a loan, and then we have to have our administrative costs. So unless we get at least somewhere around 9, or $9\frac{1}{2}$, on $9\frac{1}{4}$ per cent we do not even pay for the cost of making the loan. It is very difficult for us to subsidize this type of loan, although we would like to.

Mr. Comeau: Yes. But I do not like the specific recommendation as you have it there. To me it is just falling into a trap.

That is all, Mr. Chairman.

The Chairman: Thank you, Mr. Comeau. Mr. Whelan?

Mr. Whelan: I have just one or two questions, Mr. Chairman. The witness has said that he would be glad to see, or is realistic about, the raising of the interest rates. Generally we measure our productivity, on efficiency, when we are demanding wage increases, and so on. Do you think any of our lending associations have become more efficient in the past three or four years?

Mr. Holthe: I do not quite understand.

Mr. Whelan: Do you operate with fewer people? Are you more efficient in your operations?

Mr. Holthe: I think so; and we are planning to become more efficient in order to continue

[Interprétation]

M. Holthe: C'est bien cela.

M. Comeau: Pensez-vous qu'il faudrait recommander au gouvernement d'augmenter les taux d'intérêt?

M. Holthe: Non, pas nécessairement, nous ne pensons pas que c'est une bonne recommandation, mais soyons réalistes et reconnaissons les faits.

M. Comeau: Pensez-vous donc qu'il faut plutôt recommander au gouvernement que tous les taux d'intérêt soient fixés, bloqués, afin que nous en empêchions l'augmentation. Tous sont augmentés, les prêts aux anciens combattants, aux pêcheurs, au logement, etc. Devrions-nous recommander plutôt au gouvernement que les taux d'intérêt soient bloqués?

M. Holthe: Sûrement, personne ne contesterait cela.

Nous payons $7\frac{1}{2}$ p. 100 maintenant pour certains dépôts que nos membres font, pour chercher à attirer leurs fonds. Nous avons une assurance-vie de \$10,000 sur les prêts et nous payons des frais administratifs de sorte que si nous ne pouvons pas obtenir $9\frac{1}{2}$ ou $9\frac{1}{4}$ p. 100, nous ne pourrions même pas rentrer dans notre argent. Il nous est très difficile de financer ces prêts, bien que nous voulions le faire.

M. Comeau: Oui, mais je n'aime pas cette recommandation telle que vous l'avez faite. J'estime que ce serait simplement tomber dans un piège. Merci, monsieur le président, j'ai terminé.

Le président: Monsieur Whelan.

M. Whelan: J'ai une ou deux questions à poser. Le témoin disait qu'il fallait être réaliste en ce qui concerne la majoration des taux d'intérêt. Généralement, nous mesurons la productivité en augmentant les salaires etc. Ne croyez-vous pas que nos entreprises de prêts sont devenues plus efficaces au cours des trois ou quatre dernières années?

M. Holthe: Je ne comprends pas très bien ce que vous dites.

M. Whelan: Votre entreprise fonctionne-telle avec un personnel réduit? Est-ce que vous êtes plus efficace dans votre activité?

M. Holthe: Je le pense. Nous envisageons d'augmenter encore notre efficacité pour qu'il

[Text]

to operate. Today we are in competition, to a great extent, with the chartered banks. They have got into the fields that we used to more or less cater to ourselves such as the individual in his day-to-day requirements.

Mr. Whelan: Have some of the chartered banks become more efficient? Some of them have amalgamated and now have within three blocks three branches for an area they could serve with one branch. They are showing tremendous profits that they never had before in that history. Are they serving the public in any better fashion than they did before?

Mr. Holthe: I certainly agree with you.

Mr. Whelan: Do you not think that that is the same as a fisherman having three boats when he needs only one to catch the same amount of fish?

Mr. Holthe: Of course, the fishermen are trying to become more efficient by having larger boats and better equipment. Electronic equipment in the fishing industry has made them much more efficient today. As a matter of fact, electronic equipment in our own office is making us more efficient. Today we are able to handle a greatly increased volume compared to what we handled two or three years ago, because of electronic data processing.

Mr. Whelan: In lending money to fishermen your cost per loan has gone down?

Mr. Holthe: I would say it has declined.

Mr. Whelan: You do not operate like the chartered banks, with two or three branches within two or three blocks of one another.

Mr. Holthe: We are the only fishermen's credit union in the lower mainland. There is one in Prince Rupert which primarily caters to commercial fishermen.

Mr. Whelan: You say in your brief also that the licencing regulations and the consolidation of certain fishing companies which has occurred since these regulations were first announced will create a certain situation. Are you intimating that that licencing factor is going to make it more difficult to finance.

Mr. Holthe: We found it has had that effect with respect to several individual cases that we have come up against.

Mr. Whelan: Why?

[Interpretation]

nous soit possible de continuer nos activités. Nous concurrençons en quelque sorte les banques à charte, à l'heure actuelle. Elles commencent à s'introduire dans des domaines qui nous étaient plus ou moins réservés.

M. Whelan: Croyez-vous que certaines des banques à charte sont devenues plus efficaces? Certaines ont fusionné et sur trois ou quatre pâtés de maisons, elles ont trois ou quatre succursales alors qu'une seule aurait suffi. Elles ont des bénéfices extraordinaires, beaucoup plus qu'elles n'en ont jamais réalisé. Vous croyez qu'elles servent le public mieux qu'auparavant?

M. Holthe: Je suis d'accord avec vous.

M. Whelan: Ne pensez-vous pas que c'est la même chose que le pêcheur qui a trois bateaux maintenant pour pêcher la même quantité de poisson qu'il aurait pu prendre avec un seul?

M. Holthe: Naturellement, les pêcheurs essaient d'augmenter leur efficacité en ayant des bateaux plus grands et un équipement plus moderne. L'électronique a considérablement augmenté le rendement des opérations de pêche aujourd'hui. L'équipement électronique dans nos propres bureaux a augmenté notre productivité. Nous pouvons nous occuper de beaucoup plus d'affaires aujourd'hui qu'il y a deux ou trois ans, grâce au traitement électronique des données.

M. Whelan: Ainsi, vos frais d'exploitation ont-ils diminué?

M. Holthe: Oui, ils ont diminué.

M. Whelan: Vous ne faites pas comme les banques qui multiplient les succursales.

M. Holthe: Nous sommes la seule coopérative de crédit des pêcheurs du sud de la Colombie-Britannique. Il y en a une autre à Prince Rupert qui fait surtout affaire avec les pêcheurs commerciaux.

M. Whelan: Dans votre mémoire, vous dites également que les règlements à l'égard des permis et que la consolidation de certaines sociétés de pêche qui se sont produites depuis l'entrée en vigueur de ces règlements va présenter des problèmes. Est-ce que vous laissez entendre par là que cette amalgamation des sociétés rendra le financement beaucoup plus difficile?

M. Holthe: Nous avons constaté cet effet dans plusieurs cas qui se sont posés.

M. Whelan: Pourquoi?

[Texte]

Mr. Holthe: I do now know. The companies have become much more particular in respect of who they finance and to what extent they finance them.

Mr. Whelan: These are the fishing companies?

Mr. Holthe: Yes.

Mr. Whelan: Do you think then that is an indication of their wanting to get out of the financing of fishing boats?

Mr. Holthe: I do not know if this is the situation or not. You mentioned just a little while ago about becoming more efficient and I imagine that maybe what they are going to try and do is to make them become more efficient. The men that have been appointed to head these companies now are economists; their background is maybe connected with fishing but they have also certainly improved their method of handling.

Mr. Whelan: On page 2 you say that

With the licences now held by the major fishing companies, the same being transferable to new boats, the companies now hold sufficient licences to basically monopolize the fishing industry to the detriment of the independent owner or, alternatively, they could do so by building bigger boats which are better equipped and to which they can transfer their licences.

I gather from that that you are against the transfer of licences from one ship to another?

Mr. Holthe: Not necessarily.

Mr. Whelan: We have heard some talk about a gill-netter with a class A licence transferring to a drum seiner. We all agree I think that there is less fish, so there should be less boats. We heard this morning that a drum seiner can fish four times as much as a gill-netter and I have heard that it can fish eight times as much. This does not seem to make much sense, does it?

Mr. Holthe: No, possibly not.

Mr. Whelan: You do not think it should be transferred?

The Chairman: Do you want me to put you down for another round?

[Interprétation]

M. Holthe: Je ne sais pas. Les sociétés sont beaucoup plus soucieuses de savoir qui elles financent et dans quelle mesure elles financent.

M. Whelan: Est-ce qu'il s'agit des sociétés de pêche?

M. Holthe: Oui.

M. Whelan: Ne croyez-vous pas que ce serait un signe qu'elles veulent se retirer du financement des bateaux de pêche?

M. Holthe: Je ne sais pas, si c'est le cas. Vous parliez tout à l'heure d'accroître l'efficacité, mais j'imagine que c'est ce qu'on essaie de faire. Les hommes qui ont été nommés à la tête de ces sociétés sont des économistes. Ils sortent peut-être du milieu de la pêche, mais ils ont certainement amélioré leur façon de procéder.

M. Whelan: A la page 2, vous dites «étant donné que ce sont les grandes sociétés de pêche qui détiennent les permis, qu'elles peuvent transférer aux nouveaux bateaux, les sociétés détiennent présentement suffisamment de permis pour monopoliser l'industrie de la pêche au détriment des pêcheurs indépendants, et, par surcroît, elles peuvent aboutir au même résultat, en construisant de plus grands bateaux mieux équipés auxquels elles peuvent transférer les permis.» J'en conclus que vous n'êtes en faveur de la pratique du transfert des permis d'un bateau à l'autre.

M. Holthe: Pas nécessairement.

M. Whelan: Nous avons entendu dire par exemple, qu'un bateau de pêche à filet maillant détenant un permis de classe «A» dont le permis a été transféré à un bateau équipé pour la pêche avec une seine à tambour. Nous nous accordons tous pour dire que s'il y a moins de poisson, il faudrait diminuer le nombre de bateaux on nous a dit ce matin qu'un bateau équipé d'une seine à tambour peut prendre quatre fois plus qu'un bateau de pêche à filet maillant et j'ai entendu dire qu'il peut en prendre huit fois plus. Ce n'est pas très sensé, n'est-ce pas?

M. Holthe: Peut-être pas.

M. Whelan: Vous vous opposez au transfert des permis?

Le président: Votre temps est écoulé. Voulez-vous que j'inscrive de nouveau votre nom sur la liste?

[Text]

Mr. Whelan: No, I just ask that you treat me the same as you did some of the members this morning. When they wanted one more question to finish their line of questioning you allowed them to proceed. I am finished.

The Chairman: Mr. Rose.

Mr. Rose: Mr. Holthe, you made a point in your brief about the lack of refinancing provisions under the Fisheries Improvement Loans Act that you suggested would tend to continue fishing company control. If there is no competition—you have suggested this, or there is less competition—why would they want to continue the control because they are going to get all the catch anyway?

Mr. Holthe: This is quite true. The only thing is that when there is no provision under the Act for refinancing the less efficient fishermen can fall into a position with the companies where the companies say they want to have their loan repaid or the financing they have on their vessel.

Mr. Rose: They might foreclose.

Mr. Holthe: They might foreclose on you.

Mr. Rose: In your opinion, because of this tendency towards monopolistic control will the fishermen, be forced to accept lower prices by the companies in order to keep their licences alive? I have had it suggested to me that there will be actually more vessels, not fewer, chasing the same number of fish in order to keep these licenses alive.

Mr. Holthe: I would hope that they would not receive less for their fish.

Mr. Rose: They are in a box, are they not?

Mr. Holthe: They are in a box.

Mr. Rose: They are forced to go fishing or else their licence dies. And they are forced to take the prices that the fish companies are going to offer them under these conditions—and they are only two of them left.

Mr. Holthe: That is correct but you must appreciate that you are dealing with the owners as well as the crewmen. The price of the fish is negotiated separately and the vessel owner would receive a price for his product in line with negotiated prices.

Mr. Rose: What did you mean on page 4 of your original brief by the statement,

[Interpretation]

M. Whelan: Non, je demande simplement que vous me traitiez de la même façon que les autres députés ce matin qui ont voulu poser une dernière question. J'ai terminé.

Le président: Monsieur Rose.

M. Rose: Vous insistez dans votre mémoire sur le refinancement et le fait que la *Loi sur les prêts à l'amélioration des opérations de pêche*, ne prévoit pas cette situation et encourage ainsi la main-mise des sociétés de pêche. S'il n'y a pas de concurrence, ou moins de concurrence, comme vous l'avez laissé entendre, pourquoi les sociétés veulent-elles continuer à exercer un contrôle sur les bateaux de pêche car elles auront toute la prise de toute façon.

M. Holthe: C'est vrai. Toutefois, lorsqu'il n'y aucune disposition dans la loi concernant le refinancement, le pêcheur moins productif risque de tomber dans une situation, à l'égard des sociétés où les sociétés les mettent en demeure de rembourser le prêt ou le financement accordé pour son bateau.

M. Rose: Elles pourront saisir les bateaux.

M. Holthe: Et vous aussi.

M. Rose: A votre avis, à cause de cette tendance au monopole, est-ce que les pêcheurs seraient forcés d'accepter un prix inférieur de la part des sociétés afin de conserver leur permis? On m'a laissé entendre qu'il y aurait un plus grand nombre de bateaux pour prendre la même quantité de poissons afin de conserver leur permis.

M. Holthe: J'espère qu'ils ne recevront pas moins pour leur prise.

M. Rose: Ils sont pris, n'est-ce pas?

M. Holthe: Oui, ils sont pris dans le système.

M. Rose: Ils doivent faire la pêche, sans quoi ils perdent leur permis. Ils doivent accepter le prix offert par les sociétés de pêche dans une telle situation et il n'y en a plus que deux.

M. Holthe: C'est vrai, mais rappelez-vous qu'il ne s'agit pas seulement des propriétaires mais aussi de l'équipage. Le prix du poisson est négocié séparément, et le propriétaire du bateau reçoit pour sa prise un prix conforme au prix négocié.

M. Rose: Qu'est-ce que vous voulez dire à la page 4 lorsque vous dites: «...bien qu'un

[Texte]

...although many fishermen who ostensibly own their boats have no real equity.

Mr. Philipson: I think that means that some fishermen have a very small token financial interest in a vessel but it really and truly is controlled by a fishing company.

Mr. Rose: Who holds the title of such a boat?

Mr. Philipson: In this type of financing I think that the company would hold the title.

Mr. Rose: It would not be the fisherman holding the title although deeply in hock to the fish company?

Mr. Philipson: Not necessarily so, no.

Mr. Rose: Therefore it could possibly be that the records of what boats are held by the company might be conceivably higher in terms of real equity in the boat than that owned by the independent operator. Is that so?

Mr. Philipson: This could be. On the other hand, some of the vessels are registered in the name of the fisherman who operates it—in other words he would be shown as the owner.

Mr. Rose: I too am interested, in what I consider a rather remarkable suggestion, that you should free interest rates since most of your depositors are fishermen. I assume that you are in this business to assist fishermen and your suggestion tends to force them into the kind of rates that we have on housing. That seems a little bit inconsistent to me. You have explained that partially. Another thing that I think is remarkable is your suggestion for a flexible interest rate over the term of the loan. How would any fisherman ever know what his cost on that loan is going to be if we followed your suggestion?

Mr. Holthe: I do not know. Maybe he would not know but at least he would know that he was getting his money in accordance with what the cost of the dollar was at that particular time and that it might, say every six months, be reassessed in accordance with certain criteria.

Mr. Rose: You mentioned taxi licences being over-inflated. From your observations have the new licence limitations kited the price of boats beyond their value?

[Interprétation]

grand nombre de pêcheurs qui manifestement sont propriétaires de leur propre bateau n'en sont pas le propriétaire réel.»

M. Philipson: Je crois que cela veut dire que certains pêcheurs ont une part financière très faible dans un bateau, mais que le bateau est réellement contrôlé par la société de pêche.

M. Rose: Qui a le titre de propriété du bateau?

M. Philipson: Dans ce genre de financement, je crois que c'est la société qui détient le titre.

M. Rose: Ce ne serait pas le pêcheur, même s'il a une grosse dette auprès de la société?

M. Philipson: Pas nécessairement.

M. Rose: Par conséquent, il se peut que la société soit propriétaire d'un plus grand nombre de bateaux que n'indiquent les livres en termes du capital investi par rapport aux titres de propriété des pêcheurs indépendants. N'est-ce pas.

M. Philipson: Possiblement. Par ailleurs, certains bateaux sont enregistrés au nom du pêcheur qui l'exploite et il passe pour propriétaire.

M. Rose: Je m'intéresse également à ce que je considère une proposition remarquable, que vous libériez le taux d'intérêt puisque la plupart de vos dépositaires sont des pêcheurs. Je pense que vous êtes là pour aider les pêcheurs mais il me semble que votre proposition tend à les forcer à accepter le même genre de taux d'intérêt qu'on accorde pour le logement. Il me semble que ce n'est pas très cohérent. Une autre chose qui me frappe c'est votre argumentation en faveur d'un taux mobile sur la durée du prêt. Comment est-ce que le pêcheur saura quel est le taux d'intérêt qu'il devra payer sur son emprunt?

M. Holthe: Je ne sais pas, mais au moins il saura qu'il obtient son argent à un taux fondé sur les conditions du marché, selon la valeur du dollar à ce moment-là, et que tous les six mois, le calcul est refait conformément à certains critères.

M. Rose: Vous dites que le prix des permis du service de taxi monte trop vite. D'après vous, est-ce que les nouvelles limites apportées aux permis ont fait monter le prix des bateaux au-delà de leur valeur?

[Text]

Mr. Holthe: Yes. I think the cost of a licence is around \$1,000 now, give or take \$100 or \$200. I would say the approximate cost of a licence on a fish boat now is \$1,000.

Mr. Rose: Just the licence cost?

Mr. Holthe: Yes.

Mr. Rose: I was interested in point 19 where you make this statement.

The Government is not advancing the money and it doesn't have to borrow any money to make the Act useful.

You are objecting to having the cost of the loan tied to the long-term rate on government bonds. What are your suggestions for a way around this? I am referring to the bottom of page 6.

Mr. Holthe: I do not know if we are necessarily objecting to tying it to the long-term rate. Mind you, it depends on how you tie it to the long-term rate, but I would think it should be around 9 per cent.

Mr. Rose: It is 1 per cent above the long-term rate on a number of recent bills and acts coming out—Canada Student Loans, Farm Credit Corporation, Farm Improvement Loans—and I wondered if you had any alternative to offer.

Mr. Holthe: No. I would say it is not unreasonable to expect it to be tied to some criteria such as this.

Mr. Rose: But you tend to object to this.

Mr. Holthe: Well as long as it is tied to it in such a manner that it would indicate that it is a reasonable cost of money. I do not know but I do not think that there has been any others connected with the financing of the making of loans under this Act outside the chartered banks. Mind you, I think that they have had from time to time substantial amounts of money placed on deposit with them by the federal government.

Mr. Rose: You do not?

Mr. Holthe: We do not. So they can make loans at 5 per cent.

Mr. Rose: But that they do not?

Mr. Holthe: They make these loans to a degree, yes. There have been a few made.

Mr. Rose: Thank you.

The Chairman: Mr. St. Pierre.

[Interpretation]

M. Holthe: Oui, le prix de la licence est présentement de \$1,000.00 environ à \$100 ou \$200 près.

M. Rose: Le prix de la licence seulement?

M. Holthe: Oui.

M. Rose: Je vous réfère à l'item 19 où vous dites que

«le gouvernement n'avance pas l'argent et n'a pas besoin d'emprunter l'argent pour rendre la Loi utile.»

Vous vous opposez à ce que le coût du prêt soit lié au rendement à long terme des obligations de l'État. Comment comptez-vous contourner cette difficulté? Je vous renvoie au bas de la page 6.

M. Holthe: Je ne sais pas si on s'oppose nécessairement à ce que le taux soit lié au rendement à long terme des obligations de l'État. Tout dépend de la façon dont on le fait, mais je crois qu'il devrait être de 9 p. 100.

M. Rose: C'est 1 p. 100 de plus que le taux à long terme des obligations dans quelques lois récentes, comme les prêts aux étudiants, la Société du crédit agricole, les Prêts destinés aux améliorations agricoles, et je me demande quelles autres solutions vous entrevoyez.

M. Holthe: Non, je crois qu'il est raisonnable que le taux soit lié à des critères de ce genre.

M. Rose: Mais vous vous y opposez?

M. Holthe: Aussi longtemps qu'il est lié d'une façon qui montre que le coût de l'argent est raisonnable. En fait, je ne sais pas, mais je ne pense pas que d'autres que les banques à charte ont participé au financement ou consenti des prêts aux termes de cette Loi. Mais je crois que, à l'occasion, le gouvernement fédéral a déposé chez eux des sommes considérables d'argent.

M. Rose: Vous ne le faites pas?

M. Holthe: Nous ne le faisons pas. Ils peuvent donc consentir des prêts à 5 p. 100.

M. Rose: Mais elles ne le font pas.

M. Holthe: Elles accordent ces prêts dans une certaine mesure. Ils en ont consenti quelques-uns.

M. Rose: Merci.

Le président: Monsieur St-Pierre.

[Texte]

Mr. St-Pierre: Mr. Chairman, in the interests of saving time I feel that the answers to the questions I was going to ask have come fairly well from the latter part of Mr. Whelan's questioning and from the early part of Mr. Rose's. I will pass.

The Chairman: Mr. Howard.

Mr. Howard (Skeena): I am in somewhat the same position, Mr. Chairman, because the one thing I wanted to deal with was the matter of freeing interest rates, which has been covered. As a credit union member myself for a long period of time I object to the proposition that you are making here because it is simply tying the concept of credit unionism into the pressures in society to drive interest rates up and by doing this I submit you are just simply playing the same game by adding to the system and the pressures to raise interest rates.

Mr. Holthe: I agree with you 100 per cent but I do not know where we are going to get this money from to make the loans at less than what the cost of money is. If somebody would give us the money for 2, 3 or 4 per cent, well, we will loan it at 1 or 2 per cent more than what it costs us.

Mr. Howard (Skeena): The idea has been advanced on a number of occasions that we should treat our national treasury as a sort of a national credit union and extract something from that. Some people may giggle and laugh about it but if it is sensible for the government to make long-term low interest loans to industry to locate in certain areas and give tax concessions and write-offs to corporate structures to do this why can they not do the same thing to primary producers like fishermen? This has been advocated on more than one occasion.

Mr. St. Pierre: On a point of order, it seems to me that Mr. Howard is suggesting there is a limitless supply of money. No matter how you may talk around this, this is the effect of his suggestion—that there should be money provided by government.

Mr. Howard (Skeena): Again, Mr. St. Pierre, you are ridiculous in your accusations.

The Chairman: Order. Mr. McQuaid.

Mr. McQuaid: Thank you, Mr. Chairman.

Mr. Holthe, I understand from your opening statement that your credit union is one that deals exclusively with fishermen.

Mr. Holthe: I would not say exclusively now but we deal primarily with fishermen.

[Interprétation]

M. St-Pierre: Monsieur le président, pour économiser du temps, je pense que les réponses aux questions que j'allais poser ont été données en réponses aux questions de M. Whelan déjà et de M. Rose. Je cède donc la parole au suivant.

Le président: Monsieur Howard.

M. Howard (Skeena): Je suis un peu dans la même situation, monsieur le président, parce que la seule chose dont je voulais dire de parler était de la libération du taux d'intérêt. On en a parlé. Étant moi-même membre d'une Caisse populaire depuis longtemps, je m'oppose à ce que vous proposez, car ceci équivaldrait à lier le principe des coopératives de crédit aux pressions de l'économie pour hausser les taux d'intérêt et en agissant ainsi, je crois que vous jouez simplement leur jeu.

M. Holthe: Je suis tout à fait d'accord, mais je ne sais pas où nous obtiendrons l'argent voulu pour accorder des prêts à un taux moindre que le coût de l'argent. Si quelqu'un nous prête à 2, 3 ou 4 p. 100, nous le prêterons à 1 ou 2 p. 100 de plus.

M. Howard (Skeena): On a proposé à plusieurs reprises que nous devrions considérer notre trésor public comme une sorte de coopérative nationale de crédit d'où on pourrait extraire quelque chose.

Vous pouvez rire, mais s'il est raisonnable pour le gouvernement d'accorder des prêts à long terme à des taux d'intérêt très bas aux industries, afin qu'elles s'établissent dans certaines régions, leur accorder des concessions fiscales et aux avantages aux sociétés, pourquoi est-ce qu'il ne pourrait pas faire la même chose pour les pêcheurs? On l'a proposé plus d'une fois.

M. St-Pierre: J'invoque le Règlement et il me semble que monsieur Howard dit qu'il y a suffisamment d'argent et que le gouvernement devrait fournir de l'argent.

M. Howard (Skeena): Monsieur St-Pierre, vos accusations sont ridicules.

Le président: A l'ordre. Monsieur McQuaid.

M. McQuaid: Merci, monsieur le président. D'après ce que vous avez dit, monsieur Holthe, votre coopérative de crédit s'occupe seulement des pêcheurs.

M. Holthe: Je ne dirais pas exclusivement, à l'heure actuelle, mais surtout des pêcheurs.

[Text]

We also deal with shore workers—those that work in canneries, net loss and this type of processing.

Mr. McQuaid: Do you accept deposits from people other than fishermen or those involved in the fishing industry?

Mr. Holthe: No, not normally. The only other ones that are entitled to join are close relatives—a brother, a father or a sister of the actual fisherman.

Mr. McQuaid: Would you be free to divulge to the committee how much money your fishermen have deposited in your credit union, for example, during the past year?

Mr. Holthe: I could not tell you off-hand. I would certainly tell you if I knew.

Mr. McQuaid: Would it be over \$1 million, for example?

Mr. Holthe: I would say it might be \$15 million, because outside of the deposits there is also withdrawals. I can tell you what the net position is.

Mr. McQuaid: You suggest that possibly from the fishermen alone in the area in which you operate they have been able to deposit \$15 million in one year.

Mr. Holthe: I would say between \$10 and \$15 million.

Mr. McQuaid: They are not too badly off for credit then, are they, if they can deposit this amount.

Mr. Holthe: Some of them are not, no. Some of them are quite credit worthy.

Mr. McQuaid: I wish our credit unions on the east coast could say that about our fishermen down there.

Mr. Holthe: what rate of interest do you presently charge your fishermen who borrow money from your credit union?

Mr. Holthe: We presently charge 10 per cent on the first \$10,000—and this includes the life insurance to the individual on that \$10,000 loan—and 9½ per cent on the amount over and above \$10,000. In other words we feel we need 9½ per cent for the money and ¾ of 1 per cent to cover the insurance on that money on his life.

Mr. McQuaid: And is this money repaid monthly?

[Interpretation]

Nous acceptons aussi les ouvriers des conserveries, les ouvriers qui fabriquent ou réparent les filets, et ainsi de suite.

M. McQuaid: Est-ce que vous acceptez des dépôts de personnes autres que les pêcheurs ou de ceux qui participent à l'industrie de la pêche?

M. Holthe: Non, pas normalement. Les seuls autres membres qui sont acceptés sont les proches parents du pêcheur.

M. McQuaid: Est-ce que vous seriez libre de divulguer au Comité combien d'argent les pêcheurs ont déposé dans votre caisse, au cours de la dernière année, par exemple?

M. Holthe: Je ne pourrais pas vous le dire à pied levé. Si je le savais, je vous le dirais certainement.

M. McQuaid: Est-ce que ce serait plus d'un million de dollars?

M. Holthe: Je dirais que ce serait peut-être 15 millions car en plus des dépôts, il y a les retraits. Je pourrais vous dire notre position nette.

M. McQuaid: Vous dites qu'à eux seuls les pêcheurs de la région où vous exercez votre activité ont pu déposer de 10 à 15 millions de dollars en un an?

M. Holthe: Je dirais entre 10 et 15 millions de dollars.

M. McQuaid: Par conséquent, ils ont un bon crédit s'ils ont pu déposer une si forte somme.

M. Holthe: Certains ne le sont pas, mais certains sont très solvables.

M. McQuaid: Je voudrais qu'il en soit de même pour nos co-opératives de crédit de l'Est du Canada.

Quel taux d'intérêt, est-ce que vous facturerez présentement?

M. Holthe: A l'heure actuelle, nous facturons 10 p. 100 sur les premiers \$10,000, ce qui comprend l'assurance-vie de l'individu sur ce prêt, puis 9½ p. 100 sur les montants qui dépassent \$10,000. Autrement dit, nous avons besoin de 9½ p. 100 pour l'argent et 0.75 p. 100 pour les frais d'assurance.

M. McQuaid: Est-ce que cet argent est remboursé mensuellement?

[Texte]

Mr. Holthe: No. With our fishermen loans we usually have annual repayments.

Mr. McQuaid: They pay interest on what, the unpaid balance?

Mr. Holthe: Always the unpaid balance, yes.

Mr. McQuaid: I have just one other question, Mr. Holthe. You say at the bottom of page 7,

Also the loans should be on the basis that the fisherman will not be under any obligation to deliver his catch to any particular fish buyer or processor unless he is under contract so to do...

We heard some evidence here this morning to the effect that this situation does not exist to any great extent in British Columbia—that is, if a fisherman borrows from a packer or a fish buyer he does not necessarily have to sell his catch to that particular buyer. What have you to say to that?

Mr. Holthe: I do not know. The ones I have had contact with have always had to deliver their fish to the one that has done the financing. I know one or two cases where they did not. They came into the credit union and tried to obtain financing and I think one or two were successful in paying off the companies—otherwise they were going to take his boat.

Mr. McQuaid: Do you know why they wanted to break away? Were they not getting equally as good a price?

Mr. Holthe: In the case that comes to mind, this was the case, yes. They were giving him a price that was not in line with what some of the other fishermen who were not financed were getting.

Mr. McQuaid: Would you be knowledgeable enough on the subject to suggest that this might be general practice throughout the province?

Mr. Holthe: I would not like to say it was general, no, but I know of two specific cases.

Mr. McQuaid: Thank you, Mr. Chairman.

The Chairman: Mr. Crouse.

Mr. Crouse: Thank you, Mr. Chairman. Most of the questions I had in mind have been asked. However I have one or two that I would like to put to Mr. Holthe.

[Interprétation]

M. Holthe: Non, généralement, le remboursement se fait une fois par an pour les pêcheurs.

M. McQuaid: Est-ce qu'ils paient des intérêts seulement sur le solde impayé?

M. Holthe: Oui, toujours sur le solde impayé.

M. McQuaid: Une dernière question, monsieur Holthe. Vous dites, au bas de la page 7,

les prêts consentis à un pêcheur devraient être tels que ce dernier ne soit pas dans l'obligation de livrer sa prise à un acheteur ou une conserverie en particulier à moins d'avoir un contrat à cet effet.

Des témoins nous ont dit ce matin que cette situation ne se produit pas très souvent en Colombie-Britannique, savoir que si un homme emprunte d'une conserverie ou d'un acheteur de poisson, il n'a pas nécessairement à livrer sa prise à cette conserverie. Qu'est-ce que vous avez à dire?

M. Holthe: Je n'en sais rien, mais ceux avec qui j'avais des contrats devaient toujours livrer leur prise à la société qui leur avait accordé un prêt. Je connais un ou deux cas où ils ne l'ont pas fait. Ils se sont adressés à nous pour obtenir des prêts et je crois qu'ils ont pu rembourser la société; autrement ils auraient perdu leurs bateaux.

M. McQuaid: Savez-vous pourquoi ils voulaient se soustraire? Est-ce parce qu'ils n'obtenaient pas un prêt à d'aussi bonnes conditions?

M. Holthe: Dans le cas que je connais, oui. On lui donnait un prix qui ne concordait pas à ce que les pêcheurs non-financés par la société obtenaient.

M. McQuaid: En savez-vous assez long sur cette question pour dire que c'est une pratique général dans la province?

M. Holthe: Je ne voudrais pas dire qu'elle est générale, mais je connais deux cas particuliers.

M. McQuaid: Merci, monsieur le président.

Le président: Monsieur Crouse.

M. Crouse: La plupart des questions auxquelles je songeais ont déjà été posées. Il m'en reste cependant quelques-unes que j'aimerais adresser à M. Holthe.

[Text]

Is it correct to assume, as you have stated, that no loans were made under the Fisheries Improvement Loans Act since 1960?

Mr. Holthe: January 1, 1960, that is right.

Mr. Crouse: Why is this so?

Mr. Holthe: Since that time the cost of money to the credit union has been greater than 6 per cent and we were not able to make loans under the Act. Only recently was it changed, I believe, to 7½ per cent. Prior to last Fall I believe it was 5 per cent.

Mr. Crouse: In 27 years, as I read your introductory statement, you have loaned out something like \$23,700,000 to its members. Is it correct that you originally secured this money from the fishermen—they deposited it with your credit union?

Mr. Holthe: Primarily this is where the bulk of the money comes from, yes.

Mr. Crouse: Of the amount you lost, \$21,500 in bad debts, was part of this written off under the federal government assistance program or was this a loss to your credit union?

Mr. Holthe: This is a loss to the credit union. None of it was written off under the Fisheries Improvement Loans Act?

Mr. Crouse: You also state that certain proposed amendments to the Act are required in respect of refinancing fishermen who hold salmon licences because company financing may become difficult for them. Why would company financing become difficult to these fishermen now?

Mr. Holthe: As I mentioned before, I would think possibly that they are not may be as efficient fishermen as the companies think they should be. They might be only in the average producer category. They hold a licence. The company perhaps have a considerable amount of money invested in the boat and they would like to see this boat in the hands of a highliner—a better producer. So, they will make it difficult for this man to continue to operate with them. They will require him to dispose of this boat.

Mr. Crouse: In suggesting certain proposed amendments to the Act you say that under part 2 that there should be an increase in the size of the loan. What amount do you suggest should be recommended to the federal government?

[Interpretation]

Aie-je raison de supposer, comme vous l'avez dit, qu'aucun prêt n'a été consenti en vertu de la Loi sur les prêts aidant aux opérations de pêches depuis 1960.

M. Holthe: Depuis le 1^{er} janvier 1960, oui.

M. Crouse: Pourquoi?

M. Holthe: Depuis que le coût de l'argent aux co-opératives de crédit est de plus de 6 p. 100. Nous n'avons pas pu faire de prêts aux termes de cette Loi. Ce n'est que récemment que le coût est passé à 7½ p. 100 avant c'était 5 p. 100.

M. Crouse: En 27 années, si j'ai bien compris votre déclaration préliminaire, vous avez prêté environ \$23,700,000 à vos membres. Est-il vrai qu'à l'origine vous avez obtenu ces fonds des pêcheurs? Il s'agissait de dépôts à votre co-opérative de crédit?

M. Holthe: Oui, en majeure partie.

M. Crouse: Est-ce qu'une partie de vos pertes, des dettes irrécouvrables de 21,500 dollars, en vertu du programme d'aide du gouvernement fédéral ou est-ce que votre coopérative a assumé cette perte?

M. Holthe: C'était une perte. Aucune de cette dettes n'a été remboursée aux termes de la Loi sur les prêts aidant aux opérations de pêche.

M. Crouse: Vous dites aussi que certains amendements proposés à la Loi s'imposent pour le financement de pêcheurs qui ont des permis de pêche aux saumons car il se peut qu'il devienne de plus en plus difficile d'obtenir le financement des sociétés. Pourquoi les pêcheurs auraient-ils maintenant plus de difficulté à obtenir des prêts des sociétés?

M. Holthe: Comme je l'ai mentionné auparavant, ils ne sont peut-être pas des pêcheurs assez compétents au gré des sociétés. Ils sont peut-être des pêcheurs moyens, mais ils ont un permis. La société, par contre, a peut-être investi beaucoup d'argent dans le bateau et elle voudrait qu'il soit exploité par un pêcheur dont la prise serait plus considérable. Ils vont alors faire en sorte que le pêcheur en cause ait peine à continuer sa production. Ils vont exiger qu'il se débarrasse de son bateau.

M. Crouse: En suggérant certains amendements proposés à la Loi, vous dites, sous la partie 2, qu'il devrait y avoir une augmentation de l'ampleur du prêt. Quel montant devrait être recommandé au gouvernement fédéral à cette fin?

[Texte]

Mr. Holthe: I would say as a minimum \$25,000. I would like to see \$50,000, which would possibly cover more efficient-sized vessels. If you are speaking in terms of \$25,000, the only thing you will be able to involve yourself in is small trollers and small gillnetters. Large trollers now cost somewhere in the neighbourhood of \$40,000 or \$50,000, and perhaps even higher, but generally speaking a \$40,000 boat is not a large vessel. It is approximately a 40 to a 42-foot vessel.

Mr. Crouse: In your view is the generosity of the fishing companies in financing boats, which according to you already shows signs of drying up, because of the desire of the industry to control the entire salmon industry or is it because of the lack of profit in the industry for the processors who must sell their products in competitive world markets?

Mr. Holthe: This could very well be; it may be. I would not really like to say that it is this way or that way. It may be the fact that they also have to become more efficient.

Mr. Crouse: This is slightly contrary to your brief, is it not?

Mr. Holthe: I am not going to take anything away from them, outside of what I know to be the facts.

Mr. Crouse: Thank you, Mr. Chairman.

Mr. Lundrigan: Again, Mr. Chairman, most of the questions I had in mind have already been asked. However, I would like to ask two simple questions. What is the cost of money to your union right now? In other words, what interest do you pay your lender?

Mr. Holthe: At the present time we are borrowing money because we are getting to the end of the year, we are almost into the new fishing season. From the beginning of the year until June or July, when the fishermen's returns start coming in for the current year, we borrow money from the B.C. Central Credit Union and we pay a rate of 8 per cent.

Mr. Lundrigan: What rate do the fishermen pay who invest with your union?

Mr. Holthe: I would say that it would now average around 7 per cent. Some rates are at

[Interprétation]

M. Holthe: Je dirais un minimum de 25,000. J'aimerais encore mieux voir \$50,000, ce qui couvrirait sans doute des navires plus efficaces. S'il s'agit d'un chiffre de \$25,000, tout ce que vous pourrez faire, dans ce cas, vous ne pourrez avoir que des petites embarcations de pêche à la ligne traînante et au filet maillant. Les grosses embarcations de pêche à la ligne traînante coûte maintenant entre \$40,000 et \$50,000, et peut-être un peu plus, mais, en général, un bateau de \$40,000 n'est pas un gros bâtiment. Il a de 40 à 42 pieds de longueur environ.

M. Crouse: D'après vous, est-ce que la générosité des compagnies de pêche pour le financement des bateaux de pêche, qui, à votre avis, semble déjà s'assécher, est le résultat du désir de l'industrie de contrôler toute l'industrie du saumon ou est-ce à cause du manque de profits dans l'industrie pour les conserveries qui doivent vendre leurs produits sur un marché mondial concurrentiel?

M. Holthe: C'est peut-être le cas. Je n'aime pas réellement établir une ligne de démarcation. C'est peut-être le fait qu'ils doivent aussi devenir plus compétents.

M. Crouse: Cela est un peu à l'encontre de ce que vous dites dans votre mémoire, n'est-ce pas?

M. Holthe: Je ne veux rien leur enlever, sauf ce que j'en sais.

M. Crouse: Merci, monsieur le président.

M. Lundrigan: Encore une fois, monsieur le président, la plupart des questions que je voulais poser ont été déjà posées. Il ne m'en reste que deux qui sont simples. Qu'est-ce qu'il en coûte en argent à votre co-opérative présentement? En d'autres termes, quel intérêt accordez-vous à vos prêteurs?

M. Holthe: Nous empruntons de l'argent à l'heure actuelle, parce que nous en sommes à la fin de l'année. Nous sommes presque à la veille de la nouvelle saison de pêche. Du début de l'année jusqu'au mois de juin ou juillet lorsque les recettes des pêcheurs commencent à entrer pour l'année courante, nous empruntons de l'argent de la Coopérative centrale de crédit de la Colombie-Britannique et nous payons 8 p. 100.

M. Lundrigan: Et quel taux accordez-vous aux pêcheurs qui investissent dans votre coopérative?

M. Holthe: Environ 7 p. 100, maintenant. Certains taux peuvent varier de 5 à 7, 5 à 6,

[Text]

5 per cent, some are at 6 per cent, some are at 7 per cent and some are at $7\frac{3}{4}$ per cent.

Mr. Lundrigan: You say less than 7 per cent?

Mr. Holthe: I would say the cost of the money to them would be around 7 per cent.

Mr. Lundrigan: Yes. Therefore, what is the minimum interest rate at which you could loan money?

Mr. Holthe: I would like to clarify the cost of the money. When I say 7 per cent, this is about the average it costs us, but if we are going to loan it out we will cover it with insurance up to \$10,000, which I would like you to remember when you are considering this, which amounts to about $\frac{3}{4}$ of 1 per cent.

Mr. Lundrigan: That is the other side of the story. If I were to lend a fisherman money I could expect to make about 7 per cent.

Mr. Holthe: Around that.

Mr. Lundrigan: If I were to borrow from you, what is the minimum at which you could loan me the money in order to break even?

Mr. Holthe: I would say around 9 per cent.

Mr. Lundrigan: Therefore it costs about 2 per cent to administer that money, to insure it and to give all the fringe benefits, and so on.

Mr. Holthe: Around that, yes.

Mr. Lundrigan: I may be incorrect here, and if I am perhaps somebody will correct me, but it seems to me that the federal government indicated in evidence before our Fisheries Committee that if money is borrowed at about 6 per cent or 7 per cent, whatever the case might be, they need to charge at least $\frac{1}{2}$ of 1 per cent for administrative costs and other benefits, so again 2 per cent seems to be an exorbitant difference between their administrative costs and the costs of your administration. Is the union putting any part of that 2 per cent into reserves, which are set aside and which are being built up into great assets by the credit union?

Mr. Holthe: I would like to clarify one point, if I may. When I say 2 per cent I mean that we now need 2 per cent in order to operate. This 2 per cent is not necessarily to cover the cost of administration and insurance. We have made loans to our members over a period of time which are not call loans. We still have some mortgage loans on our books at 6 per cent and 7 per cent, and

[Interpretation]

7, $7\frac{3}{4}$, même.

M. Lundrigan: Vous dites moins de 7 p. 100?

M. Holthe: Je dirais qu'en moyenne, l'argent leur coûte à peu près 7 p. 100.

M. Lundrigan: Oui. Quel est alors le taux d'intérêt minimum auquel vous pouvez prêter l'argent?

M. Holthe: Je voudrais tout simplement donner une explication sur le coût de l'argent. Quand je dis 7 p. 100, c'est une moyenne de ce qu'il nous coûte, mais si nous allons prêter de l'argent, nous allons l'assurer jusqu'à \$10,000, ce que j'aimerais que vous vous souveniez lorsque vous considérerez cela, ce qui représente environ $\frac{3}{4}$ p. 100.

M. Lundrigan: C'est l'autre côté de la médaille. Si je prêtai de l'argent à un pêcheur, je pourrais m'attendre à faire environ 7 p. 100.

M. Holthe: A peu près.

M. Lundrigan: Si j'emprunte de vous, quel est le taux minimum auquel vous pouvez me prêter l'argent afin de ne rien perdre?

M. Holthe: Autour de 9 p. 100.

M. Lundrigan: Par conséquent, il coûte environ 2 p. 100 pour administrer cet argent, pour l'assurer et pour fournir tous les avantages requis, etc.

M. Holthe: A peu près, oui.

M. Lundrigan: Quelqu'un pourrait me rectifier si je me trompe, mais il me semble que le gouvernement fédéral a indiqué auprès du Comité des pêches que si de l'argent est prêté à 6 ou 7 p. 100, selon le cas, il faut demander au moins $\frac{1}{2}$ p. 100 pour les frais administratifs et les autres bénéfices, donc de nouveau, le 2 p. 100 semble être une différence exorbitante entre leurs frais administratifs et les frais de votre propre administration. Est-ce qu'une partie de ces 2 p. 100 est constituée en réserve par la coopérative de crédit pour accroître son actif?

M. Holthe: Une explication, si vous me le permettez. Quand je dis 2 p. 100, je veux dire que nous avons besoin de 2 p. 100 à l'heure actuelle pour fonctionner. Ce 2 p. 100 n'est pas nécessairement destiné à couvrir le coût de l'administration et de l'assurance. Nous avons accordé des prêts à nos membres pour une certaine période de temps qui ne sont pas des prêts remboursables sur demande. Nous

[Texte]

on up, so not all of our money changes immediately, if you know what I mean. We have had some loans for six or seven years and we are still receiving 6 per cent on some of our money, which cuts down on the amount that we can repay our members.

Mr. Lundrigan: The evidence you have given me is completely in order. I just wanted to get this on the record.

Mr. Borrie: Mr. Chairman, Mr. Lundrigan invited anyone to make a correction, and I think the percentage should be 1 per cent above the borrowing rather than $\frac{1}{2}$ of 1 per cent.

Mr. Lundrigan: I will accept that correction.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, I have listened with interest to this excellent brief from the Gulf and Fraser Fishermen's Credit Union. It seems to me the suggestion is made that the credit union movement is the only real barrier against what in your view seems to be a sinister and dangerous conspiracy on the part of the fishing industry to gain still more power for themselves. In the letter which is addressed to the Minister of Finance and throughout the brief there is constant reference to a monopoly and the weakened position of the fishermen, and this is an alarming suggestion. We have seen this paragraph repeated twice, and I would like you to comment on it. This is what appears on page 3:

As indicated in our brief, in the past because of the competition between companies for a supply of salmon they have been prepared to finance fishermen's boats on a very "generous" basis. Now that the companies are in a position to assure their supply by ownership of licenced vessels, the pressure of competition for supply will rapidly be a decreasing factor, and the "generosity" of the companies in financing already shows signs of drying up.

That has been repeated twice. Do you have any proof in terms of specific instances to present to this Committee to support that allegation? It suggests that if this is taking place the government should consider some form of action.

[Interprétation]

avons encore dans nos livres des prêts hypothécaires à 6 p. 100 et à 7 p. 100 et même plus, de sorte que tout notre argent ne se change pas immédiatement, si vous me comprenez. Nous avons eu des prêts de six ou sept ans et nous recevons encore 6 p. 100 pour une part de notre argent, ce qui réduit le montant que nous pouvons rembourser à nos membres.

M. Lundrigan: Je crois que vos observations sont tout à fait justes. Je voulais simplement les voir inscrites au procès-verbal.

M. Borrie: Monsieur le président, M. Lundrigan a invité n'importe qui à le corriger et je crois que le pourcentage devrait être de 1 p. 100 en plus de l'emprunt plutôt que de $\frac{1}{2}$ p. 100.

M. Lundrigan: J'accepte la correction.

Le président: Monsieur Perrault.

M. Perrault: Monsieur le président, j'étais très intéressé par ce texte de l'excellent mémoire de la *Gulf and Fraser Fishermen's Credit Union*. Il me semble qu'il y est suggéré que la coopérative de crédit est la seule barrière réelle contre ce qui, à votre avis, semble être une conspiration sinistre et dangereuse de la part de l'industrie de la pêche pour accroître leur propre contrôle. Dans la lettre qui est adressée au ministre des Finances et partout dans le mémoire, vous parlez constamment d'un monopole et de la position affaiblie des pêcheurs et c'est là une suggestion alarmante. Nous avons vu ce paragraphe répété à deux reprises et j'aimerais avoir vos commentaires. C'est ce qu'on trouve à la page 3:

comme nous l'avons indiqué dans notre mémoire, par le passé, en raison de la concurrence entre les compagnies pour un approvisionnement de saumon, elles ont été prêtes à financer les bateaux des pêcheurs de façon très «généreuse». Maintenant que les compagnies sont en mesure d'assurer leur approvisionnement en étant propriétaires des bateaux licenciés, les pressions concurrentielles pour l'approvisionnement deviendront rapidement un facteur décroissant, et la «générosité» des compagnies dans le financement semble déjà vouloir s'épuiser.

Vous l'avez répété deux fois. Avez-vous des preuves, des cas particuliers, à présenter au Comité pour appuyer cette allégation. Si c'est le cas, le gouvernement devrait sûrement songer à passer à l'action.

[Text]

Mr. Holthe: I know for a fact that certain individuals who wished to finance their vessels through the fishing companies were not able to do so. They were told directly, "We just do not have funds to put out for the purchase of vessels this year".

Mr. Perrault: In other words, it was the opinion of your informant that this was not a valid reason at all; the money was there but it was just not being made available as it had been in the past.

Mr. Holthe: This is the way it was explained to me. They said, "We do not have the funds which would enable us to help finance you".

Mr. Perrault: Have you canvassed the people in the fishing industry to find out whether or not this has been the experience of other people in relation to some of these large companies?

Mr. Holthe: Are you speaking of individual fishermen?

Mr. Perrault: You said twice in the brief that there are signs that the "generosity" of the companies in financing are drying up. You gave more than one example of this.

Mr. Holthe: Yes.

Mr. Perrault: As you correctly point out on page 2:

The Honourable Minister of Fisheries has announced a further change in the salmon licencing regulations which applies a two-boat ceiling on the acquisition of licences;

This is in response, I think, to those who feel that it is dangerous if the companies acquire too much power over the licences. Are you reassured at all by the action of the Minister and by his other assurances that if there is a move to acquire too many of these licences that he will get in touch with the companies to make sure this does not happen? If you are not reassured, what kind of action would you like the government to take in order to prevent the major companies from corraling effective control over the fishing fleet?

Mr. Holthe: It is certainly reassuring to know that he is thinking about it, anyway.

Mr. Perrault: You were pleased to see the action that was taken in connection with this two-boat ceiling.

[Interpretation]

M. Holthe: Je sais que certaines personnes qui voulaient financer leurs navires par l'entremise d'une compagnie de pêche n'ont pas pu le faire. On leur a répondu directement: «Nous n'avons simplement pas les fonds pour l'achat de navires cette année».

M. Perrault: Autrement dit, celui qui vous a informé pensait que ce n'était pas une raison valide; il y avait de l'argent mais cet argent n'était pas aussi disponible que par le passé.

M. Holthe: C'est l'explication qu'on m'a donnée. Ils ont dit: «Nous n'avons pas suffisamment de fonds pour nous permettre de vous aider à vous financer».

M. Perrault: Avez-vous discuté la chose avec les gens de l'industrie de la pêche pour voir si cela a été l'expérience d'autres personnes par rapport à certaines de ces grosses compagnies?

M. Holthe: Parlez-vous des pêcheurs individuels?

M. Perrault: Vous avez dit deux fois, dans le mémoire, qu'il y a des indices manifestant que la «générosité» des compagnies à l'égard du financement s'épuise. Vous avez donné plus d'un exemple de cela.

M. Holthe: Oui.

M. Perrault: Comme vous l'avez signalé correctement à la page 2:

Le ministre des Pêcheries a annoncé un autre changement aux règlements des permis pour la pêche au saumon, qui impose un maximum de deux bateaux pour l'obtention de licences;

C'est, je crois, répondre à ceux qui estiment qu'il serait dangereux que les compagnies obtiennent trop de pouvoirs sur les permis. Êtes-vous quelque peu rassuré par cette initiative du ministre et par ses autres assurances à savoir que si on acquiert un trop grand nombre de permis, il s'adressera aux compagnies pour assurer que cela ne se produise pas? Et si vous n'êtes pas rassuré, quel genre d'initiative voudriez-vous que le gouvernement prenne afin d'empêcher les grosses compagnies de s'emparer du contrôle effectif de la flotte de pêches?

M. Holthe: C'est sûrement rassurant de voir que le ministre y réfléchit.

M. Perrault: Vous avez été heureux de la mesure prise à l'égard de cette limite de deux bateaux.

[Texte]

Mr. Holthe: Although I work in the industry I am not a fisherman, and I at least thought it was better than what we had had previously?

Mr. Perrault: After the announcement by the Minister of Fisheries was there any further evidence of this drying up of company financing? Do you think that has served to slow down what you allege to be this trend on the part of the companies?

Mr. Holthe: I am afraid I could not answer that to date. I might know something more about it in a few weeks, but I do not want to—

Mr. Perrault: I repeat, are there any other measures that you think the government should take in order to guarantee that there will not be effective control over the fishing licences? Is there any measure which you think we should bring in the House of Commons in advance?

Mr. Holthe: From what I have read I think they have done a fair job with the introduction of this last amendment, and if it is followed through I think it will certainly do a good job. At the moment I could not offer any...

Mr. Perrault: You are satisfied with the ceiling which the Minister has imposed. You would like to see him police it fairly effectively?

Mr. Holthe: Yes, definitely.

Mr. Perrault: Thank you, Mr. Chairman.

Mr. Holthe: If I may comment with respect to your question about proof, if we had proof of this, I know of one or two instances which will indicate proof of what we are saying. In one particular case the company approved the construction of a vessel for a man and he brought the plans in and they told him to go ahead, they would look after the financing of it. So, he went ahead and he got as far as the bare framework of the boat and then, of course, he went to the company for money and they told him that because of changes in their policy they would not be able to finance him. This is one case that would lead me to believe that they are definitely taking a much more conservative point of view with respect to the financing of new vessels.

Mr. Perrault: Could any of this detail be made available on any basis to the Chairman of the Committee?

[Interprétation]

M. Holthe: Je ne suis pas pêcheur, mais je m'occupe de l'industrie de la pêche. Et il me semblait que c'était mieux que ce que nous avions eu dans le passé.

M. Perrault: Après l'annonce du ministre des Pêcheries, y a-t-il eu d'autres preuves de cet épuisement du financement par les compagnies? Est-ce que cela a servi à réduire ce qui, d'après vous, est tendance de la part des compagnies?

M. Holthe: Je regrette de ne pas pouvoir vous répondre en ce moment. Il se peut que dans quelques semaines j'aie plus de renseignements, mais je ne veux pas...

M. Perrault: Je répète y a-t-il d'autres mesures que, selon vous, le gouvernement devrait prendre pour garantir qu'il n'y ait pas de contrôle effectif par les compagnies de permis de pêche? Y a-t-il des mesures que nous devrions présenter à l'avance à la Chambre des communes?

M. Holthe: D'après ce que j'ai lu, je crois qu'on a fait un excellent travail, en introduisant ce dernier amendement, et sûrement si cet amendement est bien appliqué je crois que les résultats seront satisfaisants. En ce moment, je ne pourrais offrir aucune...

M. Perrault: Vous êtes satisfait du maximum que le ministre a imposé. Vous voudriez que cela soit appliqué strictement.

M. Holthe: Oui, définitivement.

M. Perrault: Merci, monsieur le président.

M. Holthe: Si vous me permettez de faire un commentaire, à la suite de votre question à savoir si nous avions des preuves, je connais un ou deux cas qui prouvent nos avancés. Dans un cas particulier, la compagnie avait approuvé la construction d'un navire pour un homme et il avait présenté des plans et ils lui avaient dit d'aller de l'avant, qu'ils s'occuperaient du financement. C'est ce que ce type a fait. Il avait la charpente du bateau d'entamée et il s'est adressé à la compagnie pour de l'argent, et ils lui ont dit qu'en raison des changements de leurs lignes de conduite ils ne pourraient pas financer son bateau. C'est donc là un cas qui me porte à croire que les compagnies adoptent un point de vue beaucoup plus modéré en ce qui a trait au financement de nouveaux navires.

M. Perrault: Est-ce que certain de ces détails pourraient être présentés d'une façon ou d'une autre, au président du Comité?

[Text]

Mr. Holthe: I would have to obtain the sanction of the person involved, if you know what I mean, but I would be pleased to do this.

Mr. Perrault: I think it would be useful to the Committee if the Chairman could be provided with this material. Thank you very much.

Mr. Holthe: Yes, I will try to make it available.

Mr. Hogarth: Witness, I take it the consensus of your evidence is that if the licences given to salmon fishermen are to be restricted, the vertical integration of the industry should be prohibited on the West Coast. Is that correct?

Mr. Holthe: I think any further steps to integrate it, should be restricted, yes.

Mr. Hogarth: But your point is that if salmon licensing is to be restricted, then the company should be prohibited from owning boats and it should be left to the individual fisherman to finance any boat that he might operate as he wishes. Is that correct?

Mr. Holthe: That is correct, yes.

Mr. Hogarth: How many members of your credit union are native Indians? Could you give me an approximate percentage?

Mr. Holthe: A very small percentage.

Mr. Hogarth: My recollection of any participation by myself involving the fishing industry is that a great many of the native people—far more than the other people—are involved with company-financed boats. Is that not so?

Mr. Holthe: My experience on the Indian Fisheries Loan Board would indicate that this is quite true.

Mr. Hogarth: And they never get out of debt to the company.

Mr. Holthe: No. I would say that is correct, yes.

Mr. Hogarth: And nobody has ever stopped—even the native himself—to try to figure out his equity in the boat because it is always in favour of the company. Is that not so?

Mr. Holthe: I think this has been the case. I think some of them are looking pretty closely at the situation now.

[Interpretation]

M. Holthe: Il faudrait que j'obtienne la permission de l'intéressé, si vous savez ce que je veux dire, mais ça me ferait un plaisir de le faire.

M. Perrault: Je crois que ce serait utile au Comité, monsieur le président, d'avoir cette documentation.

M. Holthe: Oui, j'essaierai de la faire mettre à votre disposition.

M. Hogarth: Monsieur le témoin, je crois comprendre que votre témoignage se résume ainsi: Si on restreint les permis sur la pêche au saumon, l'intégration verticale de l'industrie devrait être interdite le long de la côte de l'ouest. Est-ce exact?

M. Holthe: Oui, je crois que tout autre effort pour l'intégrer devrait être restreint.

M. Hogarth: Mais vous prétendez que si nous devons restreindre les permis de pêche au saumon, on devrait restreindre la compagnie d'être propriétaire de bateaux et les pêcheurs devraient eux-mêmes financer comme ils l'entendent leur bateaux. Est-ce exact?

M. Holthe: C'est exact, oui.

M. Hogarth: Combien de membres de votre coopérative de crédit sont des Indiens, des Indigènes canadiens?

Pouvez-vous me donner un pourcentage approximatif?

M. Holthe: Une très petite proportion.

M. Hogarth: Mes souvenirs de toute participation par moi-même concernant l'industrie de la pêche sont que beaucoup d'indigènes, beaucoup plus que d'autres gens, sont mêlés aux navires financés par les compagnies. N'est-ce pas vrai?

M. Holthe: Mon expérience comme membre du *Indian Fisheries Loan Board* indiquerait que c'est vrai.

M. Hogarth: Et ils ne cessent jamais d'être en dette avec la compagnie.

M. Holthe: Non. Je dirais que c'est exact, oui.

M. Hogarth: Et personne n'a essayé, même l'indigène lui-même, de déterminer sa part de propriété dans le bateau parce que c'est toujours en faveur de la compagnie.

M. Holthe: Je crois que cela a été le cas. Je crois que certains maintenant sont en train d'examiner cette situation de très près.

[Texte]

Mr. Hogarth: Apart from your participation in the G.A.F.F. Credit Union, which is obviously an extremely important one in the fishing industry, what do you suggest that we as a parliamentary committee might recommend to try to break up the company ownership of the native boats, because they do not ever seem to get out of debt to the company.

Mr. Holthe: I think this provision that is now available through the federal government which allows the financing of native fishermen to enable them to become more efficient is a step in the right direction, but again I think it should be made quite clear that refinancing should be allowed under that Act. As we say here, I think another recommendation that could be made which would enable them to become independent and not have to rely entirely on the company would be to have the guarantee apply to refinancing.

Mr. Hogarth: Then your recommendation across the board is that the fishermen in British Columbia become independent of the companies that market, process and sell the fish. Is that correct?

Mr. Holthe: Right. That is our recommendation.

Mr. Hogarth: Thank you.

Mr. Noble: Mr. Chairman, I would like to have one thing clarified. I understood the witness to say that \$15 million was deposited by the fishermen last year. Is this correct?

Mr. Holthe: I said approximately. I do not have the figure at hand but I would say it would be between \$10 million and \$15 million, yes.

Mr. Noble: This was all deposited in one year, or do you mean that you have it on deposit?

Mr. Holthe: No, it was deposited. We do not have it on deposit, no. I mentioned that this amount would have been deposited and subsequently a portion of it would be withdrawn throughout the year.

Mr. Noble: That answers my question.

Mr. Turner (London-East): Mr. Holthe, you said in your answer to Mr. Perrault that Mr. Davis' licensing idea was a step in the right

[Interprétation]

M. Hogarth: En plus de participer ou de vous occuper de la «*Gulf and Fraser Fishermen's Credit Union*», qui est une coopérative de crédit vraiment importante pour l'industrie de la pêche, que pourriez-vous suggérer que nous, en tant que Comité parlementaire, pourrions recommander pour essayer de morceler la propriété des compagnies sur les bateaux des indigènes, parce que ceux-ci ne semblent pas pouvoir se sortir de leur dette auprès de la compagnie.

M. Holthe: Je crois que la disposition qui existe maintenant, par l'entremise du gouvernement fédéral, laquelle autorise le financement des pêcheurs indigènes pour leur permettre d'être plus efficaces est un pas dans la bonne voie, mais de nouveau je crois qu'il devrait être très clair que le refinancement devrait être autorisé aux termes de cette Loi. Comme nous le disons ici, je crois qu'une autre recommandation pourrait être faite qui leur permettrait de devenir indépendants et de ne pas avoir à se fier entièrement sur la compagnie pour que la garantie s'applique au refinancement.

M. Hogarth: Par conséquent, vous recommandez en tout que les pêcheurs de la Colombie-Britannique deviennent indépendants des compagnies qui vendent et conditionnent le poisson. Est-ce exact?

M. Holthe: C'est exact. C'est notre recommandation.

M. Hogarth: Merci.

M. Noble: Monsieur le président, j'aimerais avoir une petite explication. J'ai cru entendre le témoin dire que la compagnie avait des dépôts de 15 millions de dollars de la part des pêcheurs. Est-ce vrai?

M. Holthe: J'ai dit environ. Je n'ai pas les chiffres en main, mais je dirais entre 10 et 15 millions de dollars, à peu près.

M. Noble: Cet argent a été déposé en une seule année ou voulez-vous dire que ce montant est en dépôt?

M. Holthe: Non, ces fonds ont été déposés. Ces dépôts ne sont pas en réserve, non. J'ai mentionné que ce montant aurait été déposé et par la suite une portion du dépôt aurait été retirée durant l'année.

M. Noble: Cela répond à ma question.

M. Turner (London-East): Monsieur Holthe, vous dites dans votre réponse à M. Perrault que l'idée des permis de M. Davis est un pas

[Text]

direction. What is the next step that you think Mr. Davis should take?

Mr. Holthe: As you can appreciate, we are not directly involved in the producing end of the industry, we are more involved in the financing end, and we have some people who have strong ideas in both directions. Some of them feel that certain things should be done to improve it and certain other groups of our members think that we should have other methods of handling it. I might say that the United Fishermen and Allied Workers' Union and the fishing Vessel Owners' Association are members of our credit union, so we have groups of these people who are members of the credit union, but we have not formulated any definite policies so I would not like to say one way or another what we think would be the best way to handle it.

Mr. Turner (London-East): May I ask you to explain further that part of your brief on page 10 where you state that the federal government has not made deposits with the credit unions as they are now doing with the banks. Do you feel that if the federal government did place deposits with you that the credit unions could assist the fishermen more in financing boats than they are doing now?

Mr. Holthe: Quite definitely so. This is the whole reason that we are not involved to as great an extent as we would like to be. The cost of money has made it impossible for us to get into it. If we had funds that we could utilize or had some form of subsidy which would allow us to make these low-cost loans, we would be very pleased to do it.

Mr. Turner (London-East): Thank you, sir.

Mr. St. Pierre: I have one supplementary, Mr. Chairman, merely for clarification in relation to some of the questioning by our friends from the Maritimes who have suggested that our fishermen are doing very well indeed. Mr. Chairman, I do not know if the witness can answer this or not, but it is my impression that on the average the B.C. fisherman's annual income is pretty well on what in B.C. we call the poverty line. Do you have the answer to that? Do you know the statistics?

Mr. Holthe: We have some very successful fishermen and we have some very unsuccessful fishermen. We have almost every type of fishery.

[Interpretation]

dans la bonne voie. Quelle est, d'après vous, la prochaine étape que M. Davis devrait prendre?

M. Holthe: Comme vous le voyez, nous ne nous occupons pas directement de la production dans l'industrie, nous sommes plus mêlés au financement, et nous avons des gens qui ont des idées très fermes des deux côtés. Certains estiment que l'on devrait faire certaines choses pour améliorer les choses, d'autres pensent que nous devrions avoir d'autres méthodes de traitement. Je pourrais dire que la *United Fishermen and Allied Workers Union* et la *Fishing Vessel Owners Association* sont membres de notre coopérative de crédit, de sorte que nous avons des groupes de ces gens qui sont membres de la coopérative de crédit, mais nous n'avons pas adopté des lignes de conduite particulières, je ne voudrais donc pas me prononcer d'un côté ou de l'autre en ce qui concerne la meilleure ligne de conduite.

M. Turner (London-East): Pouvez-vous expliquer un peu plus à la page 10 du mémoire où vous dites que le gouvernement fédéral ne fait pas de dépôts auprès des coopératives de crédit comme il en fait dans les banques? Pensez-vous que si le gouvernement fédéral vous remettait des dépôts, que les coopératives de crédit pourraient aider les pêcheurs davantage à financer leurs bateaux qu'à l'heure actuelle?

M. Holthe: Définitivement. C'est toute la raison pour laquelle nous ne pouvons pas avoir plus d'activités que nous en avons en raison du coût de l'argent. Si nous avions des fonds que nous pourrions utiliser ou si nous avions une sorte de subside qui nous permettrait de faire que ces prêts ne coûtent pas cher, nous nous ferions un plaisir de le faire.

M. Turner (London-East): Merci, monsieur.

M. St-Pierre: Une question complémentaire, monsieur le président, en guise d'explications qui intéressent certaines des questions posées par nos amis des Maritimes qui ont dit que nos pêcheurs se tirent fort bien d'affaires. Monsieur le président, j'ignore si le témoin a la réponse à cette question, mais j'ai l'impression, qu'en moyenne, le revenu moyen annuel des pêcheurs de la Colombie-Britannique voisine la ligne de pauvreté. Avez-vous des réponses? Avez-vous des données spécifiques?

M. Holthe: Nous avons des pêcheurs évidemment qui font beaucoup d'argent et d'autres qui en font très peu. Nous avons presque tous les genres de pêche.

[Texte]

Mr. St. Pierre: I realize that. I was specifically aiming at the average figure.

Mr. Holthe: I could not honestly answer the question. I am sorry.

Mr. St. Pierre: Thank you.

The Chairman: Are there any further questions? Mr. Lundrigan, on a point of order.

Mr. Lundrigan: Some of the members who are present are from the Atlantic region and we are certainly interested in finding out about a number of the problems, and any indication that we are delighted with the success of the fishermen stems from the fact that a lot of us are interested in moving west.

The Chairman: I wish to personally thank the witnesses, but I believe Mr. Goode has a further few words to say at this time.

Mr. Goode: Thank you, Mr. Chairman. May I thank the Gulf and Fraser Fishermen's Credit Union for a well-prepared brief. May I also compliment you on your continuing activity in Ottawa to improve the fishermen's lot. I think we all appreciate your efforts.

Mr. Holthe: Thank you very much.

The Chairman: Gentlemen, the next brief is from the Fraser River District Council, United Fishermen and Allied Workers' Union, and I will ask Mr. Arkko to come forward and introduce his colleagues.

Mr. Erik Arkko (Secretary, Fraser River District Council, United Fishermen and Allied Workers' Union): Mr. Chairman and members of the Standing Committee on Fisheries and Forestry, first I would like to introduce the other members of our delegation. They are Harry Tangedal from North Delta, and Harold Wilcox, General Organizer of the United Fishermen and Allied Workers' Union.

I have been informed that as our brief has been made available in advance, only a summary is to be presented at this hearing, so I will be as brief as possible.

The first problem that we would like to raise is the United States Point Roberts fishery. We feel that some agreement with the United States must be reached on this question. This is a case where we do all the conserving and they reap the benefits. An example of this is that in 1968, one fifth of their total catch of chums for all the Puget Sound area came from this small three-by-five-mile zone. These fish, I might add, are mainly of Fraser River origin.

[Interprétation]

M. St-Pierre: Je me rends compte de cela. Je m'intéressais au revenu moyen.

M. Holthe: Je regrette, je n'ai pas les chiffres pour répondre à votre question.

M. St-Pierre: Merci.

Le président: Y a-t-il d'autres questions? Un rappel au Règlement, monsieur Lundrigan.

M. Lundrigan: Il y a certains des membres qui sont de la région de l'Atlantique et nous aimerions sûrement connaître tous les problèmes. Nous nous réjouissons, évidemment, du succès des pêcheurs et beaucoup d'entre nous seraient peut-être intéressés ou non à déménager dans l'Ouest, selon le succès ou l'insuccès qu'ont les pêches de l'Ouest.

Le président: Je désire remercier personnellement les témoins, mais je crois que M. Goode a quelques autres mots à dire.

M. Goode: Merci monsieur le président. Je tiens à remercier la *Gulf and Fraser Fishermen's Credit Union* pour leur excellent mémoire. Continuez votre travail pour améliorer le sort des pêcheurs. Nous apprécions tous vos efforts.

M. Holthe: Merci beaucoup.

Le président: Merci, voici quel sera le prochain mémoire. Les pêcheurs unis du district du fleuve Fraser. J'aimerais que M. Arkko s'avance et présente les autres témoins.

M. Erik Arkko (Secrétaire, Fraser River District Council, United Fishermen and Allied Worker's Union): Monsieur le président, membres du Comité permanent des Pêches et Forêts, j'aimerais tout d'abord présenter les autres membres de notre délégation. A mon extrême droite, M. Harry Tangedal, délégué du Delta Nord M. Harold Wilcox, organisateur général du syndicat. On m'a fait savoir que notre mémoire avait été distribué sous forme de résumé seulement. En conséquence, je serai aussi bref que possible. Le premier problème que nous aimerions soulever est celui des pêcheries américaines à Point Roberts. Nous estimons qu'il faut en venir à une entente avec les Américains à ce sujet. En somme, nous faisons le travail de conservation et ce sont les Américains qui en récoltent les avantages. En 1968, le cinquième des prises de saumon-chien de Puget Sound est venu de cette petite région de cinq milles. Il s'agissait évidemment de saumon venant du fleuve Fraser.

[Text]

The next problem, and this we think should be acted on immediately, is a rescinding of a closure in Area 20 east of Sheringham Light. This closure was forced on us two years ago without any advance study of its merits. The regional Director, Mr. Hursten, recently said that some modification is under consideration. This is not good enough. We need these grounds this coming season. We are hoping that this Committee could use its influence so that this could be done.

Finally, concerning the native Indian food fishery, we would like this Committee to know that in no way do we want to interfere in any legitimate rights of the natives to conduct a fishery for their own food. We do, however, think that laws must be enacted and enforced to protect the salmon on its spawning migration from abuse of these rights by non-Indians and Indians alike.

I would like to thank the Committee for accepting our brief and we will do our best to answer any questions they would like to pose.

The Chairman: Thank you, Mr. Arkko. I have Mr. Lundrigan first on the list.

Mr. Lundrigan: Mr. Chairman, may I ask the witness if representation has been made to the federal government specifically about the first point he raised regarding the American cropping of our resources. Has this ever been presented to the federal government before, and if so, with what results?

Mr. Arkko: I think it has been presented on a number of occasions, and as recently as March of this year I wrote to the Minister on this, that this is a continuous sore point with the Canadian fishermen, and that nothing has ever been done really to solve this problem. In his letter he intimated that the Americans have pulled back their fleet on occasion, but we are of the opinion that the only time they will ever pull their fleet back is when their own stocks are threatened, and not the Canadian stocks.

Mr. Lundrigan: How long have you recognized the problem?

Mr. Arkko: My own involvement in it, I would say, would go back at least 20 years. This has always been...

Mr. Lundrigan: What was the first time you brought it to federal attention?

[Interpretation]

L'autre problème, que l'on doit régler immédiatement, à notre avis, est le suivant: supprimer un secteur fermé, dans le secteur 20 du phare de Sheringham. Cette fermeture nous a été imposée alors qu'il n'y avait eu aucune étude de faite sur cela. Le directeur régional, M. Herston, a dit dernièrement qu'on envisageait certaines modifications. Ce n'est pas assez. Il nous faut ces pêcheries. Nous espérons que le Comité pourra faire jouer son influence pour qu'on prenne cette initiative.

Enfin, quant à la pêche pour l'alimentation des Indiens, nous aimerions que vous sachiez que nous ne voulons pas entraver les droits de pêche légitime des Indiens pour leur propre alimentation. D'autre part nous estimons qu'il faut que des lois édictées pour protéger le poisson en migration pour le frai. Ni les indigènes ni les Blancs ne doivent en abuser. Nous remercions le Comité d'avoir reçu notre mémoire et nous sommes prêts à répondre à toutes les questions qu'on veut poser.

Le président: Merci beaucoup, M. Arkko.

Monsieur Lundrigan est le premier sur la liste.

M. Lundrigan: Monsieur le président, puis-je demander au témoin si des représentations ont été faites auprès du gouvernement fédéral sur le premier point soulevé, à propos de l'empiètement des Américains sur nos ressources? A-t-on déjà fait des représentations auparavant?

Si cela a déjà été fait, quels ont été les résultats?

M. Arkko: Oui, on a fait des représentations à plusieurs reprises. Justement en mars dernier, j'ai écrit au ministre à ce sujet, lui disant que cette situation offusque les pêcheurs canadiens depuis longtemps et que rien n'a été fait pour résoudre ce problème. Dans sa lettre, le ministre a répondu que les Américains ont retiré leurs flottes à l'occasion, mais que la seule chose qui les pousse à retirer leurs flottes était lorsque leurs propres stocks de poissons ont été menacés, et non ceux du Canada.

M. Lundrigan: Depuis combien de temps le problème existait-il?

M. Arkko: Je m'intéresse à cela depuis au moins 20 ans.

M. Lundrigan: Quand avez-vous fait remarquer la chose au gouvernement fédéral pour la première fois?

[Texte]

Mr. Arkko: I have been the Secretary of the Council for five years and I know that in that five-year period we have raised it, not necessarily with the Minister, although I do recall raising it with the previous Minister, Mr. Robichaud. Every year we insist to the Department of Fisheries here that something has to be done.

Mr. Lundrigan: What has been the excuse given for no action being taken?

Mr. Arkko: As I said to the Minister, usually the answer that we get from the federal department here is, "There is nothing that we can do about it".

Mr. Lundrigan: It is an international problem.

The second question, Mr. Chairman, is the observation about the closing of Area 20. This is all new language to me, but I seem to detect a sort of conflict of interest between the commercial and the sports fishermen, which came out very prominently earlier on today. Is your attitude towards Area 20 a very general attitude among commercial fishermen in British Columbia, or of only the body you represent?

Mr. Arkko: No, as far as I recall even the cannerys were against this, and the vessel owners, not only the gillnetters. There was some support by a small group of trollers when this was originally proposed, but they in turn no longer support it. They would like to see this rescinded.

Mr. Lundrigan: Whose responsibility is it to have the regulations amended?

Mr. Arkko: The Minister of Fisheries.

Mr. Lundrigan: Thank you.

Mr. Perrault: I was interested in the statement about the Point Roberts situation, which certainly needs correction. Have you broached the subject with the Department of Fisheries about the disparity between the gillnets employed by the Americans and by Canadians in that area?

Mr. Arkko: No, but they are well aware of it. This is standard practice. It is their standard gear.

Mr. Perrault: Has there been any suggestion that negotiations proceed between Canada and the United States to standardize with respect to equipment in the interests of conservation.

Mr. Arkko: No, not in that light, because that is their standard gear all through Wash-

[Interprétation]

M. Arkko: Je suis secrétaire du Conseil depuis 5 ans, et nous avons soulevé cette question durant cette période. Nous n'avons pas fait observer le problème au ministre actuel, mais je me souviens qu'on avait fait remarquer la chose à l'ancien ministre, M. Robichaud. Chaque année nous insistons pour que le ministère des Pêches y fasse quelque chose.

M. Lundrigan: Quelle a été l'excuse donnée pour l'inaction?

M. Arkko: Comme je l'ai dit au ministre, le gouvernement fédéral répond toujours qu'il ne peut rien faire.

M. Lundrigan: C'est une question internationale.

Ma deuxième question, monsieur le président, est sur la fermeture du secteur 20. Tout cela est nouveau pour moi, mais je crois déceler un conflit d'intérêt entre les pêcheurs sportifs et les pêcheurs commerciaux, qui s'est révélé ouvertement plus tôt. Est-ce que votre attitude quant au secteur 20 est l'attitude générale des pêcheurs commerciaux de la Colombie-Britannique dans ce conflit, ou est l'attitude exclusive de votre organisme.

M. Arkko: Non, si je me souviens bien, les conserveries même s'y opposaient, et les propriétaires des vaisseaux, pas seulement les pêcheurs au filet maillant. Quelques pêcheurs au chalut les appuyaient, au début, mais ils ont abandonné. Ils voudraient qu'on l'abroge.

M. Lundrigan: Qui a l'autorité de changer ces règlements?

M. Arkko: Le ministre des Pêches.

M. Lundrigan: Merci.

M. Perrault: La question de Point Roberts et la situation qui y est décrite m'intéressent. Il faut certainement trouver une solution. Avez-vous parlé au ministère des Pêches de la différence entre les filets maillants des Canadiens et ceux des Américains, dans cette région?

M. Arkko: Non, mais il est au courant de la chose. C'est l'équipement habituel.

M. Perrault: Est-ce qu'il y aura des négociations entre le Canada et les États-Unis pour normaliser l'équipement, pour assurer la conservation?

M. Arkko: Non, pas en ce qui concerne cela, parce que c'est l'équipement utilisé dans

[Text]

ington State. I do not think there are quite the same regulations in Alaska, but in Washington State these are their regulations. We at one time did fish bigger gear; in Area 20 in particular we do fish a little larger size gear.

Mr. Perrault: There is no prohibition against Canadians employing the same type of gear, is there?

Mr. Arkko: Yes, there is. It is absolutely illegal. Inside the Gulf of Georgia you cannot have anything longer than 200 fathoms.

Mr. Perrault: It would seem logical in the interest of preserving an international resource of this kind that there should be attempts to standardize the equipment.

Mr. Arkko: If you are going to standardize, you would have to allow a sein fishery inside the Gulf, and I do not think anyone would really be in favour of that.

Mr. Perrault: No. What you would like to do, as you point out on page 2, is that you would like to have a no-fishing zone opposite Point Roberts.

Mr. Arkko: That is correct.

Mr. Perrault: There probably would be violent opposition from the American fishing industry.

Mr. Arkko: Perhaps you are aware that there is some talk of this little peninsula being made into an international park, and the only objection that I have heard so far is that there are American fishing interests there.

Mr. Perrault: Have the residents been asked yet whether they want this?

Mr. Arkko: I do not think there has been anything done on that question, although I have some Ladner clippings here about it.

The Chairman: Mr. Hogarth.

Mr. Hogarth: Are all the fish caught by the Americans off Point Roberts destined for the Fraser River run?

Mr. Arkko: Practically all, yes. The locality and the situation of that area—they are destined for Fraser River fish. The sockeye is moving in the other direction most of the time. It is coming from the American side this way. The stocks that we are mostly concerned with are the stocks that build up in the mouth of the Fraser River and go back over to the American side.

[Interpretation]

tout l'État du Washington. Je crois que les règlements sont différents en Alaska, mais dans le Washington, c'est la règle. Autrefois, on se servait de plus gros filets au Canada, et particulièrement dans le secteur 20, on le fait encore.

M. Perrault: Rien ne défend aux Canadiens d'employer le même équipement, donc?

M. Arkko: C'est illégal. A l'intérieur du golfe de Georgie, la limite de longueur est de 40 brasses.

M. Perrault: Il serait logique, pour préserver ces ressources internationales, d'essayer de normaliser les instruments de pêche.

M. Arkko: Si on les normalise, il faut permettre de pêcher à la seine dans le golfe, et personne ne permettrait cela.

M. Perrault: Non. Selon ce que vous dites à la page 2, vous voulez qu'on établisse une zone de pêche interdite au large de Point Roberts.

M. Arkko: C'est cela.

M. Perrault: Mais là vous allez probablement faire face à l'opposition des pêcheurs américains?

M. Arkko: Peut-être que vous êtes au courant, cette petite péninsule pourrait être transformée en parc international. La seule entrave, c'est que les Américains y font la pêche.

M. Perrault: Est-ce que les habitants ont été consultés?

M. Arkko: Je ne le crois pas, mais j'ai ici des coupures de journal de Ladner qui le mentionnent.

Le président: Monsieur Hogarth.

M. Hogarth: Est-ce que tout le poisson pêché à Point Roberts est destiné à remonter le Fraser?

M. Arkko: Oui, ils remontent presque tous le Fraser. Pour ce qui est du «sockeye», ces poissons se dirigent dans l'autre direction, dans la majorité des cas. Ils proviennent de la zone américaine. Ce qui nous intéresse le plus, c'est le poisson du Fraser qui se dirige du côté américain.

[Texte]

Mr. Hogarth: How is it possible to distinguish those from the legitimate American stock, if I may use that phrase.

Mr. Arkko: I think there has been tagging. That is an accepted practice in the industry, that they do tag and these fish will show up. You cannot tag every fish, but the fish do show up in these areas.

Mr. Hogarth: I appreciate that, but the gist of your brief leads me to believe that what you are objecting to in the main is that the American fishermen off Point Roberts are catching fish that are destined for the Fraser River and its tributaries to spawn. Is that correct?

Mr. Arkko: That is correct.

Mr. Hogarth: I take it from your brief also that the appearance of these fish off Point Roberts is a question of weather and tide. Is that correct?

Mr. Arkko: Yes, that is the main reason for the blowback situation. The migration of the sockeye and the pink is under an international agreement. We get 50 per cent; they get 50 per cent. We do not care how they catch them or where they catch them, but the Commission recognizes the fact that they could take more than their share or take fish that are needed for conservation purposes, and they close that area and they do not allow the Americans to fish there.

Mr. Hogarth: I see, thank you.

Mr. Crouse: My question deals with the legislation that was passed some time ago. And I want to ask the witness, will the implementation of the legislation passed in 1964, calling for the establishment of the territorial sea and the 12-mile fishing zone, have any effect whatever on this particular problem?

Mr. Arkko: No effect whatsoever.

Mr. Crouse: Will the establishment of the geographical co-ordinates and the drawing of baselines have any effect on this particular problem?

Mr. Arkko: No, because, you see, we have what they call surf lines here, lines drawn the whole length of the British Columbia coast that we cannot go over. In fact, it is commonly referred to as the tree line, so you can imagine how far up on the beach it is.

Mr. Crouse: It would appear then that the only real solution to this problem, which is an international one, is some discussion at the

[Interprétation]

M. Hogarth: Est-ce qu'il n'y a pas un moyen de déterminer qu'est-ce qui est américain de droit, si l'on peut dire?

M. Arkko: Oui, c'est la pratique dans l'industrie d'étiqueter des poissons. On ne peut pas étiqueter tous les poissons, mais on peut les retrouver dans ces parages.

M. Hogarth: Oui, je vois bien cela, mais votre mémoire, au fond, porte à croire que vous vous opposez surtout au fait que les Américains pêchent, au large de Point Roberts, du poisson qui se dirige vers le fleuve Fraser. Est-ce exact?

M. Arkko: C'est juste, oui.

M. Hogarth: D'après votre mémoire, je comprends également que l'apparition de ce poisson au large de Point Roberts dépend des marées et du temps, n'est-ce pas?

M. Arkko: Oui. C'est la raison du rejet par les vagues. Pour le « sockeye » et le saumon rose, des dispositions sont prévues dans l'accord international. Peu importe où et comment le poisson est pêché, nous partageons 50-50. La Commission admet que les Américains pourraient pêcher plus que leur part, plus qu'il n'est bon pour la conservation, et voilà pourquoi on ferme ce secteur.

M. Hogarth: Merci, monsieur le président.

M. Crouse: Ma question se rapporte à la loi adoptée il y a quelques temps. Est-ce que l'application de cette loi, adoptée en 1964, et exigeant l'établissement de la mer territoriale et de la limite de pêche de douze milles touche à cela?

M. Arkko: Pas du tout.

M. Crouse: Est-ce que l'établissement des coordonnées géographiques et le tracé de la ligne de base auront un effet?

M. Arkko: Non. Parce qu'il existe ce qu'on appelle la ligne de la marée en Colombie-Britannique, tout le long de la côte. Nous ne pouvons pas la dépasser. En fait, on l'appelle la ligne de la forêt, alors vous imaginez qu'elle remonte assez loin sur la plage!

M. Crouse: Par conséquent, il semble que la seule solution pour ce problème international serait des pourparlers internationaux entre

[Text]

federal level between Ottawa and Washington. Is this a correct assumption?

Mr. Arkko: Yes, I feel that this is the only way that it could be resolved.

Mr. Crouse: And your representations to date have brought no concrete assurance from the federal government that they will take action to alleviate this matter. Is this correct?

Mr. Arkko: No, not quite to that effect. Mr. Davis, the Minister, in his last correspondence on this, said that they would try to continue efforts to get the Americans to pull back their fleet from that area whenever there is a danger to our stocks. But it does not seem to happen. It is only in the fall that it seems to happen. We have a situation right now with the spring salmon where they go at it seven days a week. Not seven day a week, four days a week, rather.

Mr. Crouse: In your opinion this excessive fishing could well bring about a similar situation to the one brought about by our own native Canadians in excessively fishing the herring stocks. This could deplete the salmon runs in this area. Is this right?

Mr. Arkko: I would not say it could ever deplete the total salmon runs, but there might be a particular stock of some fish destined for some place that gets blown in there, and that could be wiped out.

Mr. Crouse: Thank you, Mr. Chairman.

Mr. Howard (Skeena): I wonder whether in discussing this geographically, the use of the Fisheries Department map at the back might help members to appreciate the areas that you are talking about.

Mr. Harold Wilcox (General Organizer, United Fishermen and Allied Workers' Union): We are not allowed to go over the black line on the chart.

Mr. Harry Tangedal (Delegate, United Fishermen and Allied Workers' Union): This is as far as we can go. The tree line goes from Cape Flattery to Bonilla Point and everything west of this is closed to netfishing, except in the fall when the fish go into this inlet. I have not fished there for 10 years and I do not think I will see it in a lifetime. We have been told there is no fish. So this is all closed to netfishing.

Mr. Crouse: It is closed to Canadians, is it?

Mr. Tangedal: Yes, to Canadians.

[Interpretation]

les gouvernements fédéraux de Washington et Ottawa? Ai-je raison?

M. Arkko: Oui. J'estime que c'est là la seule façon de le résoudre.

M. Crouse: Et vos demandes, jusqu'à maintenant, n'ont entraîné aucun résultat direct du gouvernement fédéral? Vous ne savez pas si le gouvernement fédéral prendra des mesures pour résoudre le problème?

M. Arkko: Non, ce n'est pas tout à fait ça. M. Davis, le ministre, dans sa dernière lettre à ce sujet, disait qu'il continuerait les efforts en vue de demander aux Américains de se retirer de cette zone de pêche chaque fois qu'il y a le danger que cette sorte de pêche diminue nos réserves. Cela ne se produit qu'à l'automne. Pour le moment, les Américains pêchent 4 jours par semaine.

M. Crouse: A votre sens, cette pêche excessive pourrait bien avoir les mêmes résultats que nous avons eu en pêchant le hareng en trop grande quantité, au Canada. Cela diminuerait les bancs de saumon.

M. Arkko: Je ne sais pas si on pourra jamais épuiser les bancs de saumon, mais il y a peut-être certaines espèces qui sont destinées à certains endroits, et qui y sont rejetées et qui pourraient être épuisées.

M. Crouse: Merci, monsieur le président.

M. Howard (Skeena): Je me demande, du point de vue géographique, si l'utilisation de la carte du ministère des Pêches pourrait vous aider?

M. Harold Wilcox (Organisateur général, United Fishermen and Allied Worker's Union): Nous ne pouvons pas franchir la ligne noire sur la carte.

M. Harry Tangedal (Délégué, United Fishermen and Allied Worker's Union): C'est notre limite. Cette ligne part du cap Flattery et se rend à la pointe Bonilla; tout ce qui est à l'ouest nous est interdit, sauf à l'automne quand le poisson entre dans la baie. Je n'y ai pas fait la pêche depuis dix ans, et je ne la ferai probablement jamais plus. On nous dit qu'il n'y a plus de poisson, alors, on ferme cette baie aux chalutiers.

M. Crouse: C'est fermé aux Canadiens?

M. Tangedal: Oui, aux Canadiens.

[Texte]

Mr. Arkko: Excuse me, if I may clarify that. That is salmon netfishing. You can go out there with other nets, but in salmon netfishing you cannot go beyond that line.

Mr. Crouse: And yet the Americans can fish both sides of that line with trollers. Is that correct?

Mr. Arkko: No, they have a similar line in Washington State, and Oregon and California. In Alaska, I think, it is stretched out a little further than with the other states.

The Chairman: Is that all, Mr. Crouse? I have Mr. Goode next on the list.

Mr. Goode: Thank you, Mr. Chairman. In your brief you stated that you fear the new fish-licensing program will create larger boats, or more improved boats, and that the capacity of the fishing fleet will increase rather than decrease. Would you agree that the government should promote a program of purchasing some of the Class A licensed boats in order to cut down the number in the fleet? Would you agree that this was a good thing?

Mr. Arkko: Any reduction in the fleet would be a good thing as far as I am concerned. There is just too much gear in the water. I think we recognize it, and I think the Minister recognizes it. Definitely there are too many boats, and that might be a way of resolving the problem, by buying those licences.

Mr. Goods: You do not oppose, then, the upgrading of the boats; you oppose the increased productivity of each boat when the fleet itself is not decreased.

Mr. Arkko: That is right. Take an old boat out of the Fraser River that has probably never fished anywhere else but in the Fraser River and is not capable of going out. When you put a \$20,000 to \$30,000 gillnet in its place, it has to go out there. There is no doubt about it; you have to go out where there is fish.

Mr. Goode: So the only solution to the problem, as you see it, would be the government stepping in and purchasing some of these older boats that could indeed be made over to have more capacity than they have now.

Mr. Arkko: Yes.

Mr. Goode: You mentioned fishlegging, which I understand means the native people selling their catch to persons who are not natives. I think this is what you call fishlegging.

[Interprétation]

M. Arkko: C'est la pêche du saumon au filet, si je puis préciser. On peut pêcher autrement, mais pas au filet, plus loin que cette ligne.

M. Crouse: Et pourtant, les Américains peuvent pêcher des deux côtés au chalut?

M. Arkko: Non, ce n'est pas vrai. Ils ont aussi une ligne, dans l'État de Washington, ainsi que de l'Orégon et de la Californie. En Alaska, on la pousse plus loin.

Le président: Monsieur Goode.

M. Goode: Merci, monsieur le président. Dans votre mémoire vous dites que vous craignez que le nouveau programme de permis n'entraîne de plus gros bateaux, de meilleurs bateaux, et que la capacité de pêche de la flotte augmentera au lieu de diminuer. Est-ce que vous pensez que le gouvernement devrait acheter certains bateaux de classe «A» pour diminuer le volume de la flotte? Est-ce que ce serait une bonne chose?

M. Arkko: Toute diminution de la flotte serait une bonne chose, quant à moi. Il y a tout simplement trop de navires sur l'eau. Le ministre le reconnaît, et vous aussi. Il y a trop de bateaux, et ce serait une façon de résoudre le problème: acheter les permis.

M. Goode: Vous ne vous opposez donc pas à l'amélioration des bateaux, mais vous vous opposez au rendement accru de chaque bateau quand la flotte n'est pas diminuée.

M. Arkko: Oui, c'est exact. Prenez un vieux bateau du fleuve Fraser qui n'a jamais pêché ailleurs que dans le Fraser et qui ne peut le remonter quand on y met des instruments de \$20,000 à \$30,000 dollars, il faut que le bateau remonte là où il y a du poisson. Il n'y a pas de doute là-dessus. Il faut qu'il aille où il y a du poisson.

M. Goode: La seule solution au problème, à votre avis, ce serait que le gouvernement s'en mêle et achète certains de ces vieux bateaux dont on pourrait augmenter le tonnage.

M. Arkko: Oui.

M. Goode: Vous avez parlé du «fishlegging», ce qui veut dire, je pense, que les aborigènes vendent leur prise à des étrangers. Je crois que c'est ce que vous appelez «fishlegging»?

[Text]

Mr. Arkko: Yes, it is similar to bootlegging.

Mr. Goode: Yes, that is right. Would you suggest, other than having more inspectors, that an increased fine be placed on persons caught buying fish from the native people?

Mr. Arkko: Yes, that is absolutely correct. I think that stiffer penalties must be imposed on people who are caught doing this. And this is why one of the recommendations reads:

3. Severe penalties be imposed on persons found assisting or abetting in the Indian Food Fisheries.

It should be amended there to read "for commercial purposes" after "Indian Food Fisheries".

Mr. Goode: Do you happen to know what the fine is right now?

Mr. Arkko: That depends on the judge.

Mr. Goode: I see, but is there any limit that you happen to know of?

Mr. Wilcox: It has gone up to \$1,000, but it could be \$50 too. It depends. This is why we have made the suggestion that they appoint a person to deal with all these cases and get acquainted with them, because a judge from Abbotts probably does not know one end of the fish from the other and he just uses his own discretion on many of these cases, and they can be very serious.

Mr. Goode: Thank you very much, Mr. Chairman.

The Chairman: Mr. Rose.

Mr. Rose: Mr. Chairman, I want to have the witness enlarge on this problem of fishlegging. How does the price of fresh salmon sold by a native Indian compare with that available through the normal channels, from a fishmarketing company?

Mr. Arkko: I think the general going price is \$1 a fish in the interior.

Mr. Rose: What do you charge?

Mr. Arkko: Twenty-five cents to one dollar for sockeye, for example.

Mr. Rose: Ten to twelve pounds?

Mr. Wilcox: No, six or seven pounds.

Mr. Rose: So it is about one third.

[Interpretation]

M. Arkko: Oui, c'est semblable au bootlegging, c'est une vente clandestine du poisson.

M. Goode: Oui, assurément. Proposeriez-vous en plus d'embaucher un plus grand nombre d'inspecteurs, d'augmenter l'amende pour les personnes surprises à acheter du poisson des autochtones?

M. Arkko: Oui cela serait plus juste. On devrait imposer des amendes plus sévères aux braconniers. Voilà pourquoi on propose que:

3. L'on prévoit des sanctions plus sévères à l'égard des personnes qui aident ou qui incitent les Indiens à pêcher.

On devrait ajouter «à des fins commerciales» à la fin de la phrase.

M. Goode: Est-ce que vous sauriez par hasard quelles sont les sanctions présentement?

M. Arkko: Ça dépend du juge.

M. Goode: Je vois, mais connaissez-vous la limite?

M. Wilcox: Elle peut aller maintenant jusqu'à \$1,000. Mais l'amende est le plus souvent de \$50. Cela dépend. Et c'est pourquoi nous préconisons qu'on désigne une personne qui s'occupe de tous ces cas et apprenne le règlement, car souvent un juge d'Abbotts ne peut différencier un poisson et un autre. Et il se sert simplement de son jugement de juge et l'applique sans pouvoir discrétionnaire. Cela peut devenir grave.

M. Goode: Merci beaucoup, monsieur le président.

Le président: Monsieur Rose.

M. Rose: Monsieur le président, je voudrais que le témoin revienne sur cette question de braconnage. Comment le prix du saumon frais vendu par un Indien de la région se compare-t-il à son prix commercial d'une poissonnerie?

M. Arkko: Généralement, c'est \$1 par poisson.

M. Rose: Que chargez-vous?

M. Arkko: Vingt-cinq cents à un dollar pour le «sockeye», par exemple.

M. Rose: De dix à douze livres?

M. Arkko: Non, de six à sept livres.

M. Rose: Donc, c'est environ le tiers du prix?

[Texte]

There is no commercial fishing above the Mission bridge as I understand it. Is the problem far greater in areas above the Mission bridge than below it?

Mr. Wilcox: Fishlegging? Oh, yes.

Mr. Rose: It is in the interior, Williams Lake, Chilkoot, and that area?

Mr. Arkko: That is right.

Mr. Rose: That is the problem. Are fresh salmon not available any other way to the residents of that area? Has your industry ever thought of putting up a sales agency to look after this demand in that area?

Mr. Wilcox: Well, there are trucks going out there that do deliver fish right in there. I think there is one person on Campbell Avenue that has three trucks that go up there steady. They are selling fish up there but it is from one of the small companies on Campbell Avenue. The fish are available but not at the price they want to pay. If there happens to be lots of fish they get it for two bits but if it becomes scarce they may have to pay \$2 for a fish. It just depends on the availability and the price.

Mr. Arkko: This problem has cropped up before. I think the main objection is that the fish spawn right up in the country where these people live and yet they cannot touch them. They are closed off beyond Mission.

Mr. Rose: The problem is more than just a matter of illegality. A problem of economics for the native fishermen in that area has forced them into this situation.

Thirty years ago there was a stream just west of Mission called Silver Creek which was a very proficient spawning ground. Are the other tributaries of the lower Fraser still productive or have they been destroyed as possible spawning grounds for Fraser fish?

Mr. Wilcox: It depends on the kind of fish. There are various species of fish. There are very few sockeye other than Pitt Lake that spawn below Mission bridge. One species goes into Pitt Lake. The ones we are talking about are the majority that go up to the upper Fraser. You do have chum salmon and pink salmon that spawn below the Mission bridge. It is pretty hard to define because they do spawn all over.

Mr. Rose: You stated a concern about transportation and shipping because of the possible problem resulting from the creation of the Roberts Bank port and the fishing cor-

[Interprétation]

Je crois savoir qu'il n'y a pas de pêche commerciale passé le pont Mission. Est-ce que le problème est plus aigu en aval qu'en amont?

M. Wilcox: Le braconnage? Ah oui.

M. Rose: Est-ce qu'on le pratique à l'intérieur, au lac Williams, à Chilkoot et dans cette région?

M. Arkko: Oui.

M. Rose: Voilà le problème. Est-ce que les habitants de la région ne peuvent pas obtenir du saumon frais d'autres façons?

M. Wilcox: Non. Il y a des camions qui vont livrer du poisson dans ces régions. Je crois que sur l'avenue Campbell, une personne a trois camions et il fait régulièrement de la livraison. Ils vendent du poisson, mais il provient d'une petite entreprise de l'avenue Campbell. On peut se procurer le poisson, mais pas au prix qu'ils veulent payer. S'il y a beaucoup de poisson, ils l'obtiennent pour deux bouchées de pain, mais s'il est rare, ils peuvent être obligés de payer jusqu'à \$2 par poisson. Cela est soumis au prix et à l'offre.

M. Arkko: Ce problème s'est déjà présenté. L'objection principale, c'est que le poisson va dans la région pour frayer et pourtant les gens ne peuvent pas y toucher. Ils sont retirés au-delà de Mission.

M. Rose: C'est plus qu'un problème d'illégalité. C'est un problème d'économie qui a poussé les pêcheurs autochtones de la région dans cette situation.

Il y a trente ans, il y avait un cours d'eau, appelé Silver Creek, où il y avait d'excellentes frayères à l'ouest de Mission. Est-ce que les autres tributaires du bas Fraser sont encore producteurs ou elles ont été détruites comme des frayères possibles du Fraser?

M. Wilcox: Ça dépend du genre de poisson. Il y a différentes espèces de poisson. Il y a très peu de sockeye ailleurs que dans le lac Pitt qui fraye en aval du pont Mission. Une espèce va dans le lac Pitt, ceux dont nous parlons représentent ceux du Fraser. Il y a le saumon-chien et le saumon-rose qui frayent en aval du pont. Il est très difficile de le préciser, parce qu'ils frayent partout.

M. Rose: Vous avez exprimé votre inquiétude à propos du transport et de l'expédition à cause du problème résultant de la création du port de Roberts Bank et du corridor de

[Text]

ridor. I would like you to enlarge on your concern. Perhaps you did not mean Roberts Bank.

[Interpretation]

pêche. J'aimerais que vous précisiez. Vous n'avez peut-être pas pensé à Roberts Bank.

Mr. Arkko: No, I do not believe I mentioned Roberts Bank.

M. Arkko: Je ne crois pas avoir mentionné Roberts Bank.

Mr. Rose: The Strait of Juan de Fuca?

M. Rose: Le détroit de Juan de Fuca?

Mr. Arkko: Yes, the Strait of Juan de Fuca.

M. Arkko: Oui.

Mr. Rose: Would you mind enlarging on that, sir.

M. Rose: Pourriez-vous préciser?

Mr. Arkko: I gathered from talking to the Area Director, Mr. Hurst, that they were thinking of only taking a mile or so from the beach, excluding us from that particular area and letting us have the outer part of the straits where the sports fishermen do not normally fish anyway because you are fairly far off shore in some of those places.

M. Arkko: Lors d'un entretien avec monsieur Hurst, le directeur régional, j'ai cru comprendre qu'ils pensaient prendre environ un mille de la plage, ce qui nous sépare de la région et qui nous laisse de l'autre côté du détroit, là où les pêcheurs ne pêchent généralement pas parce que vous êtes passablement éloigné dans quelques endroits.

Mr. Rose: My final question concerns licencing? Do you feel that there is going to be a greater investment in here because of the new licence regulations?

M. Rose: Une question finale à propos des permis. Vous croyez qu'il y aura plus de mise de fonds maintenant à cause du nouveau règlement concernant les permis?

Mr. Arkko: Yes.

M. Arkko: Oui.

Mr. Rose: Therefore productivity would actually fall then when you consider the investment related to the return.

M. Rose: Par conséquent, une baisse de la productivité s'ensuivrait si l'on tient compte des investissements par rapport aux recettes.

Mr. Arkko: Yes. You can expand to a certain extent or increase your productivity, but I think there must be an end to it.

M. Arkko: Oui. On peut s'étendre dans une certaine mesure ou augmenter sa productivité, mais ça ne peut pas aller indéfiniment.

Mr. Rose: No, but if you continue to invest and your catch is roughly the same your productivity is going to fall by definition, is that not so?

M. Rose: Non, mais si vous continuez à investir et que votre prise est à peu près la même, votre productivité va diminuer par définition, n'est-ce pas?

Mr. Arkko: Perhaps, but I do not quite catch the point.

M. Arkko: Peut-être, mais je ne comprends pas très bien ce que vous voulez dire.

Mr. Rose: If you spend \$50,000 to catch "x" number of fish compared to say spending \$100,000 on outfitting a boat for the same number of fish, then your productivity is going to fall.

M. Rose: Si vous dépensez \$50,000 pour pêcher un nombre «x» de poissons, de consacrer \$100,000 à équiper le bâtiment de pêche pour un même nombre de poissons, votre productivité s'abaissera.

Mr. Arkko: Yes, but I do not think I would invest another \$50,000 if I could not see myself able to increase my productivity.

M. Arkko: Oui, mais je n'investirai pas un autre \$50,000 si je ne vois pas les moyens d'augmenter la production.

Mr. Rose: You would be forced to this to maintain your licence.

M. Rose: Vous y serez forcé pour conserver votre permis?

Mr. Arkko: I think in that case, yes. To maintain your licence and to make a living in the industry you might have to invest more without even increasing your productivity just to stay on the same level.

M. Arkko: Dans ce cas, je crois que pour conserver le permis et pour gagner sa vie en investissant plus, il faudra peut-être augmenter les investissements pour rester au même niveau.

[Texte]

Mr. Rose: You see then a fewer number of higher priced boats operating in the industry in the future.

Mr. Arkko: Yes, I could see that, but I am not too much of an expert in this field of licencing.

Mr. Rose: Thank you.

The Chairman: Mr. Howard.

Mr. Howard (Skeena): Mr. Chairman, I would like to ask Mr. Arkko and the other gentlemen if they are familiar with the situation that exists on Vancouver Island in the summertime whereby tourists with campers, trucks, cookers and small home-style canning operations...

Mr. Arkko: Around Campbell River?

Mr. Howard (Skeena): Yes, around Campbell River and Qualicum River. Ostensibly these are sports fishermen but in fact they are small scale commercial operators who catch and transport the catch in canned form back across to the States for a variety of purposes. Are you aware of the number of fish that might be involved? Do you know of any study that has been made in that connection?

Mr. Arkko: No, I have not. Do you have anything on that, Mr. Wilcox?

Mr. Wilcox: No, but I do know that it goes on to a great extent. I know of one individual who stayed there all summer and canned up almost a small trailer load. When we started to investigate it eased off a little, but it is continually going on all over the province actually.

Mr. Crouse: I have a supplementary question, Mr. Chairman. What efforts are made by the provincial people to investigate the sanitary methods under which this canning operation is conducted?

Mr. Wilcox: I am really not sure of that.

Mr. Crouse: Would this not be a provincial responsibility?

Mr. Arkko: The canning part comes under provincial jurisdiction, yes. I think some places are licenced by the provincial government as sports fish canneries. But this home cooked trailer stuff is not; that is strictly done by individuals.

Mr. Crouse: Would you say then, Mr. chairman, that this salmon is canned, not

[Interprétation]

M. Rose: De sorte qu'il y aura un nombre moins grand de bateaux plus chers, dans cette industrie à l'avenir.

M. Arkko: Oui, éventuellement, mais je ne suis pas expert dans le domaine des permis.

M. Rose: Merci.

Le président: Monsieur Howard.

M. Howard (Skeena): Monsieur le président, j'aimerais demander aux témoins s'ils ne sont pas au courant de la situation dans l'île de Vancouver, en été, où les touristes, avec caravanes, des camions, des poêles et de petites exploitations artisanales de mise en conserves...

M. Arkko: Près de Campbell River?

M. Howard (Skeena): Oui, près de Campbell River et de Qualicum River. Il est évident que, en fait, ce sont des pêcheurs sportifs, mais ce sont des pêcheurs de métier de petite échelle qui prennent des poissons et les transportent dans des conserves aux États-Unis pour diverses fins. Connaissez-vous le nombre de poissons qui pourraient y entrer? Connaissez-vous des études à ce sujet?

M. Arkko: Non. Avez-vous quelque chose là-dessus monsieur Wilcox.

M. Wilcox: Non mais je sais que ceci se fait dans une grande mesure. Je connais un individu qui y est resté tout l'été et qui avait des boîtes de conserve d'une petite remorque de cette façon-là. Quand on a commencé à examiner les affaires, cela a un peu diminué, mais cela continue dans toute la province.

M. Crouse: Une question complémentaire, monsieur le président. Quels efforts sont faits par les autorités provinciales en matière d'examen des conditions hygiéniques dans lesquelles l'opération est faite.

M. Wilcox: Je n'en suis pas certain.

M. Crouse: Est-ce que cela ne relèverait pas de la province?

M. Arkko: La mise en conserve de ce poisson relève de la province. Certains endroits sont autorisés par le gouvernement provincial, comme les conserveries de poisson, mais le poisson cuit artisanalement dans une remorque, relève d'un particulier.

M. Crouse: Diriez-vous alors que ce saumon est mis en conserve, non étiqueté, transporté

[Text]

labelled and then transported to the U.S. and sold under any label that may be obtained there?

Mr. Arkko: I do not think it is sold. I think most of that is for their own use and for their friends. I do not think it is ever labelled. It is not that type of an operation.

Mr. Crouse: Yet it is large enough to warrant sometimes a whole trailer load being canned and transported.

Mr. Arkko: That is only my idea.

Mr. Crouse: Might I suggest that this matter should be investigated by the provincial authorities, since under the Food and Drugs Act they would be canning it illegally if it is not properly canned under sanitary methods. This is a provincial responsibility.

Mr. Arkko: Yes.

Mr. Howard (Skeena): Mr. Chairman, I am going to try to answer this by indirection, if I could. I doubt very much if the provincial government would be involved in it any more than they would be involved in looking into my home to see if we are canning fish in a sanitary or an unsanitary way—if it is for home consumption. I think we have gone around and around on this before in trying to deal with it and the reason that the provincial government has given for not becoming involved in this is that it is the individual's own activity.

Do you know if anybody on Vancouver Island, say the locals over there, have taken a more formal look at the situation to get a more definite indication of what is happening, other than just the general knowledge that it goes on fairly extensively but no number is attached to the amount of fish being lost?

Mr. Arkko: The only time that I recall anything to that effect was when it became a hot subject on one of the hot line shows here for two or three days a year ago. I have no idea of the number of fish involved.

The Chairman: Thank you, Mr. Howard. Mr. Perrault.

Mr. Perrault: I was going to ask the very same question as was asked by Mr. Howard. I was involved in that particular study and controversy at the time of that hot line show and I talked to the Minister of Recreation and Conservation in Victoria and to the Minister of Fisheries there. They both admit that a problem exists. I think, Mr. Chairman, that it

[Interpretation]

et vendu aux États-Unis avec une étiquette américaine?

M. Arkko: Je ne pense pas que ce soit vendu. C'est surtout pour leur propre utilisation et pour leurs amis. Je ne pense pas qu'ils soient étiquetés. Ce n'est pas ce genre d'exploitation.

M. Crouse: Et pourtant c'est assez grand pour remplir toute une remorque.

M. Arkko: C'est mon idée.

M. Crouse: Pourrais-je vous demander que cette question soit examinée par les compétences provinciales, étant donné qu'en vertu de la Loi sur les aliments et drogues, ils seraient dans l'illégalité, s'ils ne font pas la mise en conserve appropriée, dans des conditions sanitaires. Cela relève de la province.

M. Arkko: Oui.

M. Howard (Skeena): Monsieur le président, je vais essayer d'y répondre indirectement. Je doute que le gouvernement provincial s'en occupe plus qu'il ne s'occuperait de venir dans ma maison pour voir si nous mettons en conserve du poisson dans des conditions sanitaires ou non et destiné à la consommation personnelle. C'est une question à propos de laquelle nous avons tourné en rond pendant longtemps et la raison pour laquelle les autorités provinciales ne s'en occupent pas, c'est qu'il s'agit d'une activité personnelle.

Savez-vous si d'autres personnes de l'île de Vancouver ont examiné la situation d'un peu plus près pour mieux savoir ce qui se passe et non pas avoir une connaissance générale que ça se fait sur une échelle assez grande, mais on ne connaît pas le nombre de poissons qui sont perdus.

M. Arkko: La seule chose dont je me souviens, c'est que la question était assez brûlante lors d'une émission il y a deux ou trois ans. Je n'ai aucune idée du nombre de poissons impliqués.

Le président: Merci, monsieur Howard. monsieur Perrault.

M. Perrault: J'allais poser la même question. Je me suis occupé de cette étude au moment de cette émission, j'ai parlé avec le ministre des Loisirs et de la Conservation et au ministre des Pêches à Victoria. Ils ont tous deux admis que le problème existait. Monsieur le président, je crois qu'on a le sentiment que l'industrie touristique est très

[Texte]

really comes down to this—that there is a feeling that the tourism industry is very important, it earns a great many dollars for British Columbia and there is an attitude that we should not be too hasty about suggesting that we crack down on these fishleggers or fishing predators.

Has any attempt been made to measure the extent of the loss sustained by the industry each year because of these activities? It seems to me that if there are abuses and these abuses are continuing or even increasing then we should be prepared to take action, and if that means having more inspectors, more fisheries protection officers then there should be provincial-federal co-operation to make sure that this resource is not exploited.

Mr. Arkko: I will try to give you my feelings on it. I think the enforcement of it has been pretty severe. They have done a good job in the last couple of years. I think, there has been a cry that the pressure is too much on some of these individuals and they want laws passed or legislation enacted.

Mr. Perrault: You are not concerned about this then. It is not a major issue, as far as you are concerned?

Mr. Wilcox: I could answer it, Mr. Perrault, this way. A few years ago we did get a program under way which has started to work in the last two years. However, at the moment it is beginning to weaken. We hear all kinds of rumours of ways that it is weakening. One of the reasons is that one of the MLA's from Victoria has won another case as far as the Indians are concerned—that it is against the law to trespass on an Indian reserve. A lot of the inspectors are worried that if it is going to be law that they will not be able to go around these reserves and that these people will be free to participate more in this type of thing.

Mr. Perrault: You are talking about the Indian food fisheries aspect of this?

Mr. Wilcox: That is right.

Mr. Perrault: There are two aspects of this fishlegging which concerns me. There is a suggestion that the Indian people are guilty of selling to those who wish to distribute fish or fish products. I rather think it would have been a stronger position in this brief had there been proof produced and instances cited where this has occurred. I think it is unfair to the Indian people to make a blanket accusation without some pretty strong supporting evidence. I attended a meeting of Indian

[Interprétation]

importante, rapporte beaucoup de dollars à la province, et ils ont le sentiment qu'il ne faudrait pas se hâter de mettre fin à cette contrebande ou ce braconnage.

Est-ce qu'on a pris des mesures pour évaluer l'ampleur de ces pertes soutenues par l'industrie chaque année, parce qu'il me semble y avoir des abus qui continuent ou même augmentent. Nous devrions être prêts à prendre des mesures, et s'il faut plus d'inspecteurs, d'agents de la protection des pêches, il devrait alors y avoir une collaboration fédérale-provinciale qui s'assurerait que cette ressource n'est pas exploitée.

M. Arkko: Je vais essayer de vous dire ce que j'en pense. Je crois que sa mise en application a été assez grave. Ils ont fait un excellent travail ces dernières années. Je crois qu'il y a eu un cri à l'effet que la pression est trop forte sur certains individus et ils veulent que des mesures législatives soient adoptées ou mises en vigueur.

M. Perrault: Cette question ne vous inquiète pas beaucoup. Ce n'est pas une question très importante pour vous.

M. Wilcox: Je pourrais répondre de cette façon. Il y a quelques années nous avons lancé un programme qui a commencé à donner des résultats au cours des deux dernières années. Mais pour le moment, le tout commence à diminuer. Nous entendons toutes sortes de rumeurs à ce sujet. L'une des raisons vient du fait qu'un des députés provinciaux de Victoria a gagné une autre cause pour les Indiens à l'effet qu'il est illégal de traverser une réserve indienne. Un grand nombre d'inspecteurs ont peur que si la loi est mise en vigueur, ils ne pourront pas traverser les réserves, et qu'ils auront toute la liberté voulue pour prendre part à ce genre de choses.

M. Perrault: Vous parlez de la pêche de subsistance des Indiens?

M. Wilcox: C'est juste.

M. Perrault: Il y a deux aspects du braconnage qui m'intéresse. On a l'air de dire que les Indiens sont coupables de vendre aux personnes qui veulent distribuer du poisson et des dérivés du poisson. Je pense que si vous aviez apporté des preuves de ce que vous avancez, votre mémoire aurait beaucoup plus de poids. Il me semble injuste vis-à-vis des Indiens que vous énonciez une accusation globale sans de bonnes preuves. J'ai assisté à une réunion des chefs indiens

[Text]

chiefs up in the Fraser valley a few months ago and there is resentment on their part. Many of them think, and I think probably they have a good case, that they have been unfairly accused of activities with respect to this resource and they may not be necessarily the guilty parties at all.

Mr. Arkko: Well, there are a good many cases on record where the fish had come from. The natives are the only ones that can fish up there with nets, so that is the primary source from which these other people are getting the fish.

The Chairman: Mr. Hogarth on a supplementary.

Mr. Hogarth: On page 3 of your brief recommendation No. 3 reads,

3. Severe penalties be imposed on persons found assisting or abetting in the Indian Food Fisheries.

Would you not also extend that to the natives themselves, if they were abusing their privileges?

Mr. Wilcox: As I stated when I commenced, that should be amended because "for commercial purposes" should be added to the end of that paragraph.

Mr. Hogarth: Any persons, native or otherwise. If the natives abuse their privileges or persons assist or abet you are suggesting they should be severely penalized.

Mr. Wilcox: That is right.

Mr. Perrault: The sentence that I rather question is this:

...we do want to bring to your attention that some Native people are using this privilege for their own personal gain under the disguise of Indian food fisheries.

If proof exists with respect to this allegation then it should be provided to the Chairman of this Committee. I think that many Indian people would resent a blanket accusation of this kind without full supporting evidence. That is all I have to say.

The Chairman: Thank you, Mr. Perrault. Mr. Whelan.

Mr. Whelan: Mr. Chairman, I just wanted to ask one or two questions, the first one about sports fishermen. Do you think the

[Interpretation]

dans la vallée du Fraser, il y a quelques mois, et ils sont animés de ressentiment. Plusieurs d'entre eux pensent, et je crois qu'ils ont bien raison, qu'on les a accusés injustement d'activités relatives à l'exploitation de cette ressource et il se peut qu'ils ne soient pas du tout coupables.

M. Arkko: Il y a eu plusieurs cas sur le poisson. Seuls les Indiens peuvent y pêcher avec des filets, et ils constituent donc la seule source.

Le président: Une question complémentaire, monsieur Hogarth?

M. Hogarth: A la page 3 de votre mémoire, la recommandation n° 3 indique que: des peines sévères seront imposées aux personnes qui sont complices ou coupables dans les réserves indiennes.

Est-ce que cela serait appliqué aux indigènes s'ils abusaient de leurs privilèges?

M. Wilcox: J'ai dit au début qu'on devrait y apporter une modification, «à des fins commerciales» et l'ajouter à la fin de ce paragraphe.

M. Hogarth: Toutes les personnes, indiennes, ou autres. Si les indigènes abusent des privilèges, ou aident ou sont complices de personnes, vous prétendez qu'ils devraient faire l'objet de sanctions sévères.

M. Wilcox: C'est cela.

M. Perrault: Je mets en doute le fait que «nous voulons vous signaler que des indigènes profitent de ces privilèges à leurs fins personnelles sous le masque des pêches indiennes.» Si on arrive à prouver cette allégation, on devrait la fournir au président du comité, je crois que bon nombre d'Indiens répugneront à une accusation globale sans preuves suffisantes. C'est tout.

Le président: Merci, monsieur Perrault. Monsieur Whelan.

M. Whelan: Monsieur le président, je voudrais simplement poser quelques questions dont la première question s'adresse aux

[Texte]

sports fishermen should be licenced and, if so, what fee should they pay?

Mr. Arkko: As far as a sports fishing licence is concerned; yes, I think they should be licenced in tidal water. A fee perhaps of \$2 to \$5 would suffice.

Mr. Whelan: On page 2 of your brief you say that the new licencing program too will have an effect on this fishery. Do you feel that this result in a demand for new fishing boats?

Mr. Arkko: No, I would not say the demand is for new fishing boats, but the new fishing boats that were built this year are going to go to that area and boats partially under construction are going to be rushed through to have them ready for this coming year, and the biggest part of that fleet will show up in Area 20.

Mr. Whelan: Do you think that they knew we were going to licence the craft?

Mr. Arkko: No, I am not implying that, but once the announcement was made boats that were half finished or partially finished were completed.

Mr. Whelan: You say:

There will be a large increase in fleet size due to the building of replacement "A" category boats and the overall increase in new boats.

Mr. Arkko: Yes. A part of that is attributed to the fact that we had a relatively good salmon season last year.

Mr. Whelan: But that really has nothing to do with the licencing. You intimate that licencing is going to result in a demand for new boats. I would think it would be the other way around.

Mr. Arkko: I do not know, maybe I did not word it right. I know that fishermen who never fished there before have built new boats. They are all acquiring the type of gear to fish that particular area and the boats were designed for that purpose.

The Chairman: Mr. Borrie.

Mr. Borrie: Mr. Chairman, I would like to go back to Area 20. On the second page there is a notation that the Americans are in the process of developing a major fishing opera-

[Interprétation]

pêcheurs sportifs. Pensez-vous que les pêcheurs sportifs devraient être assujettis à des permis et alors combien devraient-ils payer?

M. Arkko: Oui, je crois que les pêcheurs sportifs devraient être assujettis à des permis de \$2 à \$5.

M. Whelan: A la page 2 de votre mémoire, vous dites que le nouveau programme de délivrance des permis aura un effet sur les pêches. Pensez-vous que cela créera une demande de nouveaux bateaux de pêche?

M. Arkko: Non. Je ne dirais pas qu'on demande de nouveaux bateaux de pêche, mais ceux qui ont été construits cette année vont aller dans ce secteur et les bateaux qui sont en voie de construction sont prévus pour la fin de l'année. La plus grande partie de ces bâtiments de pêche se trouvent dans la zone 20.

M. Whelan: Croyez-vous qu'ils savaient qu'on allait imposer des permis aux bateaux?

M. Arkko: Non, une fois qu'on en ait fait la déclaration, les navires qui étaient partiellement ou presque complètement construits ont été terminés.

M. Whelan: Vous dites qu'il y aura:

une augmentation considérable de l'envergure de la flotte en raison de la construction pour remplacer les bateaux de la catégorie «t» et de l'augmentation globale des nouveaux bateaux.

M. Arkko: Oui. Cela tient en partie du fait que nous avons eu une excellente saison de pêche au saumon l'an dernier.

M. Whelan: Mais cela n'a rien à voir avec la délivrance de permis. Vous dites que cela va créer une demande de nouveaux bateaux. J'ai l'impression que ce serait le contraire.

M. Arkko: Je ne sais pas. Je ne me suis peut-être pas bien exprimé. Je sais que des pêcheurs qui n'y avaient jamais fait de pêche auparavant ont construit des nouveaux bateaux. Ils se procurent tous les gréments nécessaires dans cette région et les navires sont conçus à cette fin.

Le président: Monsieur Borrie.

M. Borrie: Monsieur le président, j'aimerais revenir à la question de la zone 20. A la deuxième page, on fait remarquer que les Américains sont en train de mettre au point

[Text]

tion opposite this closed area. I wonder if you could point that out on the map for us.

Mr. Arkko: Yes. The boundary now is here. It is closed off here and this is the area that we can no longer fish. We pointed out, when they excluded us from this area, that we were leaving it open to the Americans. Large American operations have started right now in this area here opposite the closed area. This is partly because of the traffic pattern of steamships through the lines. Not only that, it gives them a good area to fish and the fish are free to move out of this area. They have a tendency to come this way and come back out here. When this fleet is not here it is naturally obvious that they are going to fish in that one and then you open the door for somebody to set up a Fishery right there.

Mr. Borrie: What would you expect to take out of that area if it were opened again to commercial fishermen? Would it be such an appreciable amount as to warrant reopening?

Mr. Arkko: It would because the migrating patterns of the fish are such that they come fairly close in on that particular stretch. When they took that away from us they might as well have taken the other half of the strait because that other half is a dead area. The fish are on the other side of the line, on the American side, and then they do come back over to the Canadian side.

Mr. Borrie: This area was closed purposely for sports fishing.

Mr. Arkko: That is correct. And not particularly for the salmon that we catch there, although we do catch the same stocks late in the year, but it was mostly coho fishery that the sports fishermen were concerned about. It is only for maybe three months of the year at the most that we do fish up in that strait there.

Mr. Borrie: It is not a conservation movement?

Mr. Arkko: No, it is in no way at all a conservation.

Mr. Borrie: On page 3 at the top, you mention here:

Any benefits gained by sports fishermen from the closure are far out-weighted by the harmful effects it has on the major commercial fishery in the area.

Do you mean the loss of revenue by the commercial fishermen?

[Interpretation]

une pêche importante près de cette région fermée. Pourriez-vous nous indiquer où est cette région sur la carte?

M. Arkko: Oui. La frontière est ici. C'est fermé en ce point et c'est la zone où la pêche est interdite dorénavant. Lorsqu'on nous a chassé de ce territoire, nous avons déclaré qu'ils en laissaient l'accès aux Américains. Ces derniers ont inauguré d'importantes exploitations près de cette zone fermée. Cela provient en partie du parcours des navires à vapeur dans cette ligne. En outre, cela leur donne un bon territoire pour pêcher et les poissons sont libres de sortir de cette zone. Ils ont tendance de venir de cette direction et de revenir ici. Quand la flotte n'est pas là, c'est qu'on est naturellement parti pêcher dans cette région, et ensuite vous laissez à quelqu'un l'occasion de pêcher en cet endroit.

M. Borrie: Que pensez-vous tirer de ce territoire s'il était ouvert de nouveau, aux pêcheurs commerciaux? Y en aurait-il un nombre suffisant pour en garantir la réouverture?

M. Arkko: Oui, parce que le trajet de migration du poisson passe tout près de cette zone. Lorsqu'on nous a retiré de cette zone, ils auraient aussi bien pu prendre l'autre moitié du détroit parce qu'une moitié est une région morte. Les poissons se trouvent de l'autre côté de la ligne sur le côté américain et ils reviennent ensuite sur le côté canadien.

M. Borrie: Cette région était interdite volontairement à la pêche sportive.

M. Arkko: C'est exact. Ceci ne s'applique pas particulièrement aux saumons que nous y prenons même si nous ne pêchons pas les mêmes poissons à la fin de l'année, mais, cela s'applique aux saumons argentés qui intéressent les pêcheurs. Nous n'y faisons la pêche que trois mois par année, et surtout dans ce détroit.

M. Borrie: Ce n'est pas du tout une question de conservation.

M. Arkko: Non, il n'est pas du tout question de conservation.

M. Borrie: Au début de la page 3 vous dites:

Tous les bénéfices retirés de la pêche sportive à cause de la fermeture sont réduits à cause des effets nocifs sur les principales pêches commerciales.

Parlez-vous de la perte de la pêche commerciale?

[Texte]

Mr. Arkko: Basically, yes. Mainly that is it.

Mr. Borrie: What would you figure the loss would be?

Mr. Arkko: I could not really answer it but I would estimate it would be as high as a quarter of our total.

Mr. Borrie: Of your total annual revenue?

Mr. Arkko: Yes, from that particular area 20.

Mr. Borrie: Thank you very much, Mr. Chairman.

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, I wonder if I could ask the witness first of all if he is a fisherman himself?

Mr. Arkko: Yes, I am.

Mr. Lundrigan: This question is not perhaps quite in order to the point that you would be able to reflect on it in depth. I am sticking right to the brief on this point. I think a lot of us have tended to stray a little bit. Do you think that we have been aggressive enough in our relations with the United States so far as the policy on conservation and so on is concerned, or do you think that may be a good bit of our policy is a reflection or an echo of an American policy?

Mr. Arkko: I do not quite know how to answer you. Could you repeat that question again, please?

Mr. Lundrigan: Yes. Do you think that we have been aggressive enough in our relations with the United States in having a Canadian fishing policy established, or have we allowed much of our interests to be dictated by strong American interests?

You have mentioned a point here, and basically the point you have raised is one which is of great interest to me because I feel in our region of Canada where we are prosecuting a fishery, the tariff relationships and the total international relationship with the United States has been a reflection of American policy. I sometimes thought that we have not been aggressive enough in trying to get agreement from the United States because there are other very strong industrial reasons why we should not push fishing interests to the point that I think we should.

Mr. Arkko: Yes, I agree with you there. I do not think that our policy is nearly aggressive enough when it comes to fisheries regulations. It seems to me that we get the dirty

[Interprétation]

M. Arkko: En fait, oui. C'est cela.

M. Borrie: Quelles seraient, d'après vous, les pertes?

M. Arkko: Je ne peux donner un chiffre précis mais j'ai l'impression que cela représentera environ le quart de notre total.

M. Borrie: Du revenu annuel total?

M. Arkko: Oui, pour le secteur 20.

M. Borrie: Merci beaucoup, monsieur le président.

Le président: M. Lundrigan?

M. Lundrigan: Monsieur le président, je me demande si je puis demander au témoin tout d'abord s'il est lui-même pêcheur?

M. Arkko: Oui, je le suis.

M. Lundrigan: Cette question ne touche pas peut-être les observations pour pouvoir les étudier en profondeur. Je m'en tiens au mémoire en ce moment. Je crois que nous avons eu tendance à nous en éloigner. Pensez-vous que notre politique avec les États-Unis a été assez militante en ce qui concerne la conservation ou croyez-vous que dans ce domaine, nous imitons un peu les Américains?

M. Arkko: Je ne sais pas comment vous répondre. Voulez-vous répéter la question, s'il vous plaît?

M. Lundrigan: Oui. Pensez-vous que notre politique a été assez militante avec les États-Unis pour fixer une politique canadienne de la pêche au nous avons-nous beaucoup laissé influencer par les Américains?

Vous avez soulevé une question qui m'intéresse beaucoup car j'estime que dans la région du Canada dont nous étudions la pêche, la question des rapports tarifaires, des relations avec les États-Unis du point de vue international est un simple reflet de la politique américaine. J'ai parfois l'impression que nous n'avons pas été tellement militants pour essayer de conclure un accord avec les États-Unis, parce qu'il y a bien d'autres raisons industrielles, pour lesquelles nous ne devrions pas considérer la pêche comme une chose aussi importante.

M. Arkko: Oui, je suis d'accord avec vous sur ce point. Je crois que notre politique n'a pas été assez militante, en ce qui concerne les règlements de pêche. Il me semble que nous

[Text]

end of the stick on any kind of fishing regulations or treaties with the United States.

Mr. Lundrigan: Thank you, Mr. Chairman.

The Chairman: A supplementary Mr. Smith?

Mr. Smith (Northumberland-Miramichi): You complain about the Americans catching our fish, but is there not another side to the coin too? Do not Canadian fishermen catch some fish that are destined for American rivers?

Mr. Arkko: Yes, perhaps we do get a small amount but nothing in the relationship of what they take from us.

Mr. Smith (Northumberland-Miramichi): Is that so.

An hon. Member: How many do you get from Alaska?

Mr. Arkko: No, we do not get any of the Alaska fish, or very little.

The Chairman: Any further questions? Mr. Noble.

Mr. Noble: Mr. Chairman, from a conservation point of view I would like to ask the witness if, in his opinion, the dollar value of West Coast fisheries has fluctuated to any great extent during the past five years?

Mr. Arkko: Offhand I would say no, not really. We have had good years and bad years. Some years the conditions are such that the runs are coming. One year we might get a good run from natural reasons. It is not so much because of regulations or other factors that you have the good years and the bad years.

Mr. Noble: In your view then the fisheries here is holding its own? We are not using up a resource; we are not depleting it? It is continuing to hold its own?

Mr. Arkko: I would not know really if we are depleting it. I do not think we are depleting it. I think we might barely be holding our own.

Mr. Noble: Mr. Chairman, there was a press release made from the Department of Fisheries in Ottawa on April 17, and it states:

The federal fisheries department reports salmon fishermen in British Columbia landed a record 33,500,000 salmon during 1968 worth \$44,500,000, an improvement of \$6,000,000 over the 1967 catch. The total value of all fish landed in B.C., was

[Interpretation]

avons le mauvais mot dans tous les règlements et les traités que nous signons avec les États-Unis sur la pêche.

M. Lundrigan: Merci, monsieur le président.

Le président: Une question supplémentaire, monsieur Smith.

M. Smith (Northumberland-Miramichi): Vous vous plaignez du fait que les Américains viennent prendre nos poissons, mais y a-t-il un envers à la médaille? Les pêcheurs canadiens ne prennent-ils pas de poisson qui vont dans les fleuves américains?

M. Arkko: Oui, nous en capturons une faible quantité, mais rien qui ne soit comparable à ce que les Américains prennent chez nous.

M. Smith (Northumberland-Miramichi): Est-ce vrai?

Une voix: Combien en prenez-vous en Alaska?

M. Arkko: Nous n'en prenons pas ou très peu en Alaska.

Le président: Une question supplémentaire, monsieur Noble?

M. Noble: Monsieur le président, à propos de la conservation, j'aimerais demander au témoin si, à son avis, la valeur du dollar des pêcheries de la côte ouest a beaucoup fluctué au cours des cinq dernières années.

M. Arkko: De prime abord, je répondrais non pas vraiment. Nous avons eu des années grasses et des années maigres. A certains moments, il y a des montées. Une année, il peut y avoir une bonne montée à cause de raisons naturelles. Ce n'est pas à cause de règlement ou d'autres facteurs qu'il y a de bonnes ou de mauvaises années.

M. Noble: Alors, à votre avis, la pêche, cette année, est excellente? Nous n'épuisons pas une ressource; n'en abusons-nous pas? Est-elle toujours aussi bonne?

M. Arkko: J'ignore si nous sommes en train de l'épuiser. Je ne pense pas que nous sommes en train de l'épuiser. Je pense que nous y arrivons à peine.

M. Noble: Monsieur le président, le 17 avril, le ministère des Pêcheries d'Ottawa a émis un communiqué de presse qui disait:

Le ministère des Pêches et Forêts rapporte que les pêcheurs du saumon de la Colombie-Britannique ont pris 33,500,000 saumons en 1968, soit une valeur de \$44,500,000, une augmentation de \$6,000,000 par rapport à 1967. La valeur totale

[Texte]

\$56,000,000 nearly \$7,000,000 more than in the preceding year.

This would indicate that you are catching more fish now than you did before.

Mr. Arkko: In this particular year I think you can attribute the biggest increase to something that the department did not do. It was a natural occurrence. We had the biggest sockeye salmon fishing, I think, in history in one particular area of this coast. It was the River Smith Inlet area, and that makes the big difference there. However, there was nothing there that the fisheries did to help it along; I assure you of that.

Mr. Noble: Could you give any indication of why you had this big catch this particular year?

Mr. Arkko: There are pros and cons to it, but some of them attribute it to the strike that we had back in 1963. These were five-year fish resulting from that strike.

Mr. Noble: Thank you, Mr. Chairman.

The Chairman: Are there any others who wish to present questions? Mr. Crouse.

Mr. Crouse: I have just one question I would like to ask the witness. In his presentation to the Committee he has stated on page 3:

Another problem that has been growing with this "fish-legging" is the setting of nets and leaving them unattended for long periods, allowing the fish to die and become unusable.

Is it your considered opinion that this situation could be alleviated if it were possible to have fisheries guardians on this river at certain times of the year?

Mr. Arkko: There is no doubt that this happens when they are allowed to have set nets. If the situation is so that they can get rid of those fish they may pick them up, but if it is not they are left there. The fish consequently die and are of no use to anyone. The fisheries inspectors tell me that it is quite an occurrence to have these nets set and then never picked up again for weeks at a time. The fish that go into those nets just die off and rot. They are no good to anybody.

Mr. Crouse: Coming from the East Coast where salmon are a bit of a rarity I find it almost impossible to understand the thinking of anyone who would set a net where it could possibly become filled or half filled with

[Interprétation]

des pêcheries en Colombie-Britannique pour 1967 fut de \$56,000,000, soit près de \$7,000,000 de plus que l'année précédente.

Ceci indique que vous prenez plus de poissons cette année qu'auparavant.

M. Arkko: Je crois que cette année, on peut attribuer cette considérable augmentation à quelque chose que le Ministère n'a pas fait. Elle est due à un facteur naturel. Nous avons pris, à mon avis, les plus gros saumons sockeye de l'histoire dans une région particulière de la côte; la région de l'Inlet Smith a occasionné toute cette différence. Toutefois, le ministère des Pêches et Forêts n'a rien fait du tout pour améliorer la situation.

M. Noble: Pouvez-vous nous dire pourquoi il y a eu une prise si considérable cette année?

M. Arkko: Il y a des pour et des contre. Mais certains croient que cela est dû à la grève qu'il y a eu en 1963. Ce sont des poissons de cinq ans résultant de cette grève.

M. Noble: Merci, monsieur le président.

Le président: Y a-t-il quelqu'un d'autre qui désire poser des questions? Monsieur Crouse.

M. Crouse: Je voudrais simplement poser une question au témoin. Il a cité au Comité un passage de la page 3:

Un autre problème qui devient de plus en plus important est la course aux poissons qui consiste à placer des filets et à ne pas les surveiller pendant une longue période de sorte que les poissons meurent et deviennent inutilisables.

Pensez-vous qu'il serait possible de remédier à cette situation si des gardes-pêche surveillaient la rivière à certains moments de l'année?

M. Arkko: Cela se produit sans doute lorsque les pêcheurs peuvent placer leurs filets. S'ils peuvent se débarrasser des poissons, ils les ramasseront peut-être, sinon ils les laisseront là. Alors les poissons meurent et ne sont plus utiles à personne. Les inspecteurs me disent que cela se produit très souvent et que les pêcheurs ne retirent pas leurs filets durant des semaines. Les poissons qui s'y aventurent, y meurent et pourrissent. Ils sont alors inutilisables.

M. Crouse: Venant de la côte est où les saumons sont plutôt rares, j'ai peine à croire que quelqu'un puisse poser un filet qui puisse se remplir à moitié ou en entier de saumons et que personne ne se donne pas la peine

[Text]

salmon and then not go and pick it up or at least take the catch. This is an amazing statement to me coming from Nova Scotia.

Mr. Arkko: I think the fisheries inspectors here can verify it. I have seen it myself and I have heard a lot about it. In fact, they have even put a hook on the front of their bows so that they can pick these nets that are set. They are sunken nets. They are allowed to do that. They can set a net, and as long as they can identify it they can pick it up whenever they like.

Mr. Crouse: Mr. chairman, may I make a comment?

The Chairman: Yes.

Mr. Crouse: Thank you, Mr. Chairman. You could never catch a lobster by leaving the lobster trap in the water while it was filled with lobster. I was relating the one with the other.

Mr. Arkko: Yes, I quite see that, but it is a little different case. With a drift net you could not do that because it naturally would drift out to sea or become tangled up. However, with a set net you could leave it. You could come back to it. Fish could go into it in a fair amount.

Mr. Crouse: Thank you.

Mr. Tangedal: I just want to make one comment because I am a fisherman and I make my livelihood on the West Coast. I was on the committee when we talked to the Department of Fisheries about why they wanted to close this area. They closed off roughly 15 miles.

In the peak season there can be 500 gillnetters out there compared to the 2 or 3 dozen Americans. We have a problem of overcrowding. We cannot go west because the patrol boat is there. We have fog and a lot of difficulties. If we go over the line we are arrested and brought to court. There is always some innocent guy who gets caught with the ones who take advantage of this.

They took 15 miles off the east end of Sheringham. I was, in my opinion, led to believe they would not close this off. Half the fishermen are spread all over the coast. Then I heard they took it anyway. The main excuse at that time was that the sports fishermen complained that they had to put the gear down to 40 fathoms to catch a coho. My net only goes down 4 or 5 fathoms, and at that on Thursday I am high-tailing it home because it is closed. So you have Friday, Saturday and

[Interpretation]

d'aller recueillir sa prise. Pour un Canadian de la Nouvelle-Écosse, c'est une déclaration renversante.

M. Arkko: Je crois que les inspecteurs de la pêche pourraient témoigner de la véracité de cette assertion. J'en ai moi-même vu et j'en ai beaucoup entendu parler. De fait, ils ont même placé un crochet devant la proue pour retirer les filets qu'ils ont tendus. Ce sont des filets submergés. Ils ont la permission de faire cela. Ils peuvent tendre un filet en autant qu'ils peuvent le reconnaître. Ils peuvent les recueillir au moment où ils le désirent.

M. Crouse: Monsieur le président, puis-je faire un commentaire?

Le président: Oui.

M. Crouse: Merci, monsieur le président. Vous ne pouvez jamais capturer un homard en laissant dans l'eau les casiers lorsqu'ils sont remplis de homards. Je compare le homard au saumon.

M. Arkko: Je comprends très bien mais, c'est un cas un peu différent. Vous ne pouvez faire cela avec un filet traînant car il flotterait à dérive ou s'emmèlerait. Toutefois, vous pouvez laisser un filet fixe. Les poissons peuvent s'y prendre en grand nombre.

M. Crouse: Merci.

M. Tangedal: Je voudrais faire un commentaire car je suis un pêcheur et durant mon enfance, j'ai vécu sur la côte ouest. Je fais partie du comité qui s'est adressé au ministère des Pêches et Forêts au sujet de la fermeture de cette zone. On en a fermé environ 15 milles.

En saison, il y a 500 pêcheurs à l'araignée par rapport à une trentaine d'Américains. Il y a un problème de surpeuplement. Nous ne pouvons aller dans l'ouest car le bateau patrouilleur y est. Il y a de la brume et nous avons beaucoup de problèmes. Si nous dépassons la limite, on nous arrête et on nous accuse. Il y a toujours un innocent qui se laisse prendre et d'autres qui en profitent. Ils ont réduit de 15 milles la limite est de Sheringham. J'étais porté à croire qu'ils fermentaient cette région à la pêche. La moitié des pêcheurs habitent la côte. J'ai entendu dire qu'il l'avait pris de toute façon. La principale excuse à ce moment-là était que les fervents de la pêche sportive se plaignaient qu'il fallait tendre les filets à 45 brasses pour prendre le saumon argenté. Mon filet ne descend qu'à 4 ou 5 brasses et de plus, le jeudi je déguerpis parce que c'est fermé. Par conséquent, il

[Texte]

Sunday where there is not a commercial boat in sight.

What makes it bad now is that we cannot go any further west. The tide is always moving west. Those boats found good fishing there close to Sooke Harbour in the east end. Especially older fishermen with smaller boats could fish there. They are now being forced to go west, and the further west you go the rougher weather conditions you get and the competition gets unbearable.

Just imagine how it is when you come to the end of the line and you have to pull your net in, which is sometimes loaded with dogfish and fish which are a problem. Also, you might have salmon. If you do not get it in you are arrested and you have to go to court.

They took off 15 miles. They crowded an area already overcrowded. I speak personally for myself when I say I am looking for a ray of hope where they can open some areas or spread areas. I do not care what boat I have. I only get two days a week in one little area and you chop it off. You go out towards the middle of the strait and you have the American Coast Guard.

A friend of mine was arrested a couple of years ago in thick dense fog—he had no radar. I finally invested my savings on a radar, so I have not been pinched yet. Touch wood. He appealed it and it is still up, and in my opinion it was a very unfair deal. There was a little bit of dispute when the Canadian and American people got together. I will not go into detail.

To chop an area off is just like an old couple who were laying in bed. The blanket was too short, so the old man got an idea. He cut off the bottom end and he sewed it on the top end. However, the Department of Fisheries to please the sports fishermen who want to bring the coho up from 40 fathoms on a Sunday afternoon chopped the bottom end but did not sew it on the other end.

Personally, I would say it is more important to me to get some elbow room, because it is not a matter of experience or a good boat in this industry to help you. It is a matter of knowing. You have to go out and find a spot without cutting off your fellow fishermen. We have lost 15 miles of a good area where the sea is not so rough closer to the harbour, and they have not done nothing about it. At least

[Interprétation]

reste le vendredi, le samedi et le dimanche lorsqu'il n'y a pas de navires commerciaux en vue.

Ce qui nous embête maintenant, c'est que nous ne pouvons pas aller plus loin vers l'ouest. La marée se dirige toujours vers l'ouest. L'extrémité est de Sooke Harbour est un bon site pour la pêche. Les vieux pêcheurs avec de petites embarcations vont pêcher là-bas. Ils se voient maintenant forcés d'aller vers l'ouest, et, plus vous allez à l'ouest, plus le climat est dur—plus la concurrence devient insupportable.

Imaginez-vous les conditions lorsque vous arrivez à la limite et que vous devez retirer vos filets qui sont chargés de chiens de mer et de poissons qui nous donnent des problèmes. Vous pouvez aussi prendre des saumons. Si vous n'en prenez pas, vous pouvez être arrêtés et vous devez comparaître en jugement. Ils ont réduit la zone de 15 milles; ils ont surpeuplé une zone déjà surpeuplée. Je parle en mon nom personnel lorsque je dit que j'espère qu'ils exploitent ou qu'ils agrandissent certaines zones. Je ne me soucie pas de mon embarcation. Je n'ai que trois jours par semaine pour pêcher dans une petite zone que vous réduirez toujours. Vous allez vers le milieu du détroit et vous rencontrez les gardes-côtes américains.

Un de mes amis fut arrêté il y a environ deux ans lorsqu'il était dans une brume très épaisse—il n'avait pas de radar. Je me suis alors décidé à consacrer mes économies à l'achat d'un radar; je n'ai donc pas encore été pris, du moins pour le moment. Il a comparu en jugement et je crois que son affaire n'est pas réglée; ce fut un jugement non équitable. Il y a toujours de fortes discussions lorsque les Canadiens et les Américains se rencontrent. Je ne donnerai pas plus de détails là-dessus. Réduire une zone c'est comme ce qui se passe chez un vieux couple dans un lit. La couverture est trop petite alors le vieillard a une idée: il coupe le bout et le coud à la partie supérieure. Mais, le ministère des Pêches et Forêts pour plaire aux fervents de la pêche qui veulent faire monter les saumons argentés à 40 brasses le dimanche après-midi, réduit l'extrémité sans ajouter de partie supérieure.

A mon avis, il est plus important d'avoir une zone plus considérable parce qu'il n'est question d'expérience ou d'avoir une bonne embarcation pour vous aider dans cette industrie; c'est une question de connaissances. Vous devez chercher un endroit pour ne pas nuire au pêcheur voisin. Nous avons perdu 15 milles où les conditions étaient favorables et nous n'avons rien fait à ce sujet. Ils

[Text]

they could sew an end on the west end if they do not want to do it to the east end. They could please the sports fishermen and help the bona fide fisherman.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: I wonder if I could, at the risk of indecent exposure, cut a little bit out of the middle of the blanket and ask the two gentlemen how they would react to a suggestion that the interest rates on loans made available to fishermen should be pretty free, or do you think that there should be some obligation to have a fixed interest rate? I am asking this question realizing that it is not part of the brief but realizing too that we have three fishermen with us, and these are the people who will be effected by this kind of high cost of money.

Mr. Arkko: I do not like to comment too much on this. I was contemplating building a boat until Mr. Davis said, no, last year. You know how I feel about it. I did have an arrangement with a bank and it was at a pretty reasonable rate. However, I really do not know how it should be fixed, how it should be arrived at, and what rate of interest you should pay.

Mr. Whelan: May I ask a question, Mr. Chairman, of the three fishermen that are before the Committee now? They do not have to answer this if they do not want to. Do any one of you have a loan now and what interest rates are you paying?

Mr. Arkko: No, I have no loan right now. In fact, I am fishing for a co-op, and the only reason you can belong to it is that you cannot have any financial ties with a company, although they do advance us money for gear for the operation for that particular season.

Mr. Whelan: Do either of the other two members appearing have loans?

Mr. Tangedal: Yes, I was down there today and I owe them about \$4,500. That is gas coupons, nets, and so on. It is added on to it.

Mr. Whelan: What interest rate are you paying?

Mr. Tangedal: It is 8 per cent.

Mr. Whelan: 8 per cent.

The Chairman: Are there any further questions? Perhaps we could excuse these gentlemen, and I would like to thank them very much for the interesting brief and the forth-

[Interpretation]

pourraient au moins agrandir la zone du côté ouest si non celle du côté est. Ils pourraient plaire aux fervents de la pêche sportive et aider les pêcheurs de carrière.

Le président: Monsieur Lundrigan.

M. Lundrigan: Je me demande si l'on peut faire une incision au milieu de la couverture et demander à ces deux personnes quelles seraient leurs réactions si les taux d'intérêt des prêts aux pêcheurs devraient être libres ou croyez-vous qu'on devrait les obliger à avoir un taux d'intérêt fixe? Je pose cette question sachant que vous n'en parlez pas dans votre mémoire et sachant que nous avons trois pêcheurs avec nous qui seront touchés par le coût élevé de l'argent.

M. Arkko: Je n'aimerais pas faire de commentaires là-dessus. Je songeais à construire un navire jusqu'à ce que monsieur Davis m'ait dit non, l'an dernier. Vous savez ce que je pense à ce sujet. J'avais conclu un accord avec une banque et le taux d'intérêt était très raisonnable. Cependant, je ne sais pas vraiment comment pourrait-on les fixer et quel taux d'intérêt devrait-on payer.

M. Whelan: Puis-je poser une question, monsieur le président aux trois pêcheurs qui assistent à cette réunion du Comité? Ils n'ont pas à répondre s'il ne le veulent pas. Y en a-t-il un parmi vous, qui ayez contracté un emprunt et si oui, quel taux d'intérêt payez-vous?

M. Arkko: Non, je n'ai pas contracté de prêt à l'heure actuelle. En fait, je pêche pour une société; la seule condition d'appartenance à ce groupe est que n'ayez aucune relation financière avec une compagnie même s'ils nous prêtent l'argent pour acheter l'attirail et faire l'exploitation au cours de cette saison particulière.

M. Whelan: Est-ce que l'un des deux autres témoins a contracté un prêt?

M. Tangedal: Oui, je dois \$4,500 dollars. Il s'agit de bons pour l'essence, les filets, etc. C'est ajouté à cela.

M. Whelan: Quel taux d'intérêt payez-vous?

M. Tangedal: Je paie 8 p. 100.

M. Whelan: 8 p. 100.

Le président: Y a-t-il d'autres questions? Nous pouvons donc libérer nos témoins. Je tiens à les remercier pour leur mémoire très intéressant et pour leurs réponses spontanées.

[Texte]

right way in which you have answered the questions.

The next brief is by Balloon Transport Ltd. Balloon Transport Ltd. is represented by Mr. C. R. Matheson. Mr. Matheson.

Mr. C. R. Matheson (President, Balloon Transport Limited): I would like to read a two-page brief to the Committee.

Balloon Transport Ltd. is a Vancouver based company which is actively developing a new system of transportation.

The use of captive balloons to move materials and men over difficult terrain is a Canadian invention and development. It is the first major break-through in the transportation of logs since the nineteen-thirties, when the logging truck, the bulldozer, and the power saw were put to use in the industry.

More than 20 million acres of forest land in western North America are considered inaccessible by conventional harvesting methods. Much of this area will become accessible with the development of a new harvesting method—the balloon logging system—a quotation from *Production Analysis of Balloon Logging* by J. A. McIntosh of the *Forest Products Laboratory*, Vancouver, B.C. Canada.

Although the concept holds large economic advantages for Canada, and particularly British Columbia, none of the local forest industries nor related industries has contributed in any positive way to the development program. The Provincial Forest Service, which stands to gain more than any other single agency from the use of balloon logging, has contributed \$2,100 in reduced stumpage on a salvage logging area.

From 1961 to 1967, the entire cost of development of the concept was borne by private business men in Vancouver—an amount exceeding \$300,000. In 1967, the Department of Industry in Ottawa recognized the large potential advantages of the system and the need for quick action to help our small company to continue the development in face of what appeared to be overwhelming competition from the United States. Thus, in 1967, our company was successful in arranging a loan from the Department of Industry under its PAIT program (Program for the Advancement of Industrial Technology). Support was also obtained from the Federal Forest Products Laboratory, both in Ottawa and Vancouver. Under this program our company was able to design, build, and operate prototype components, which are so close to

Le mémoire suivant vient de la Balloon Transport Limited, qui est représentée par monsieur C. R. Matheson. Monsieur Matheson.

M. C. R. Matheson (Président de la Balloon Transport Limited): J'aimerais lire deux pages du mémoire présenté au Comité.

La société Balloon Transport Limited, dont le siège est à Vancouver, vise à mettre au point un nouveau mode de transport.

L'emploi de ballons fixes pour le transport de matériaux ou de la main-d'œuvre dans une région accidentée est une innovation d'origine canadienne. Il s'agit de la plus importante percée, en matière du transport des billes, depuis les années 30, alors que le camion à billes, le bulldozer et la scie mécanique firent leur apparition dans l'industrie.

«Dans l'Amérique du Nord occidentale, plus de 20 millions d'acres boisées sont dites inaccessibles, eu égard aux seules méthodes classiques d'exploitation. La majeure partie de ce territoire pourra être mise en valeur, grâce à une nouvelle technique, soit l'exploitation forestière au moyen de ballons». Ce passage est tiré d'un article intitulé: *Production Analysis of Balloon Logging*, par J. A. McIntosh, du Laboratoire des produits forestiers à Vancouver (C.-B.), au Canada.

Quoique cette méthode permette théoriquement d'entrevoir une foule d'avantages économiques pour le Canada, et surtout pour la Colombie-Britannique, aucune des industries forestières ou connexes de la région n'a concouru effectivement à sa mise au point. Pour sa part, la province, par l'entremise de ses services forestiers, qui bénéficieraient le plus d'une telle innovation, a contribué \$2,100 sous forme de réduction des droits de coupe dans un secteur de coupe accidentelle.

De 1961 à 1967, toutes les dépenses nécessaires à la concrétisation de ce principe innovateur, soit plus de \$300,000, ont été acquittées par des hommes d'affaires de Vancouver. Le ministère de l'Industrie, à Ottawa, s'est rendu compte, en 1967, des importants avantages que présentait pareille méthode d'exploitation, autant que de la nécessité d'agir rapidement afin de venir au secours d'une société modeste qui menaçait de sombrer sous le poids d'une vive concurrence américaine.

Nous avons donc réussi, cette année-là, à obtenir un prêt de la part du ministère susmentionné, au titre du programme pour l'avancement de la technologie (PAT). En outre, le personnel des laboratoires fédéraux des produits forestiers, à Ottawa et à Vancouver, nous a fourni son appui. En conséquence, nous avons pu concevoir, assembler et mettre

[Text]

commercial acceptance that our own company plans to operate one unit on a commercial operation close to Vancouver commencing next month.

We cannot speak highly enough of the excellent foresight, co-operation, patience, and capable business management of the PAIT program of the Department of Industry. It is estimated that by 1975, the balloon transport business in Canada could be turning over gross sales of \$50 million annually, and exporting saleable systems all over the world. Certainly, this is proof of money well spent on research and development.

Dr. O. M. Solandt, Chairman of the Science Council of Canada, in speaking at the University of British Columbia on Friday, March 14th, 1969, said, "It's fairly safe to say we're not doing enough industrial research in Canada. We're not carrying enough new ideas through to new products and new processes that are saleable. What Canada needs is more entrepreneurs willing to take a plunge with new ideas, and willing to maintain local ownership."

We feel that Balloon Transport Ltd. is doing all of these things mentioned by Dr. Solandt, but needs financial support to carry out the development. The Department of Industry, with its PAIT program, is the only agency in all Canada apparently capable of seeing the opportunity, and capable of backing up its interest with dollars at the right time. This should be encouraged on wider fronts.

The Financial Post of November 4th, 1967, explains why the U.S. economy is improving its performance and pulling ahead faster than Canada in this way. "The U.S. spends as much on research and development as it does on fixed capital. In Canada, capital outlays are ten times greater than research spending."

Certainly, no natural law exists to limit intelligence, ingenuity, and business acumen to an area south of the 49th Parallel. Then let us loyal Canadians, who have faith in our native ability and business capability, join hands with the best agencies to expand our economy. From our experience, the best agencies are our federal Departments of Industry and the Forestry Branch, Canada

[Interpretation]

en service des prototypes qui se rapprochent tellement des exigences de l'industrie que nous envisageons, le mois prochain, de faire commercialement usage d'un appareil dans un secteur situé près de Vancouver.

Nous ne pouvons tarir d'éloges à l'endroit des responsables du programme PAT, au ministère de l'Industrie, pour la clairvoyance, l'esprit de collaboration, la patience et l'aptitude aux affaires qu'ils ont si brillamment manifestés. En 1975, selon les estimations, l'industrie canadienne du transport par ballon atteindrait un chiffre brut de ventes de 50 millions de dollars l'an, outre qu'elle exporterait des appareils complets dans tous les coins de l'univers. En pareil cas, l'utilité des dépenses faites pour la recherche et le perfectionnement se révélerait incontestable.

Lors d'une allocution prononcée le 14 mars 1969, à l'Université de la Colombie-Britannique, le président du Conseil des Sciences du Canada, M. O. M. Solandt, a déclaré: «Peu de gens nieront qu'il ne se fait pas suffisamment de recherches industrielles au Canada. Trop peu souvent, les idées nouvelles se traduisent-elles en nouveaux produits ou procédés qu'il soit possible d'écouler. Ce qu'il nous faut, en ce moment, c'est des hommes à l'esprit à la fois inventif et aventurier, prêts à courir tous les risques et à promouvoir le commerce canadien local.»

La société Balloon Transport Limited remplit toutes ces conditions, à notre avis, mais elle a besoin d'un appui financier afin de pouvoir poursuivre son activité. Le ministère de l'Industrie, par l'entremise de son programme PAT, est le seul organisme au Canada, semble-t-il, qui veuille profiter d'une telle occasion et manifester son intérêt en lui fournissant des fonds en temps voulu. Il faudrait adopter la même démarche sur d'autres fronts importants.

Dans son numéro du 4 novembre 1967, le *Financial Post* a fait voir pourquoi l'économie américaine progresse et distance tellement celle du Canada. «Les États-Unis», dit-il, «dépensent autant pour la recherche et le perfectionnement que pour les immobilisations, tandis qu'au Canada, les investissements sont dix fois plus élevés que les sommes affectées à la recherche.»

L'intelligence, l'esprit d'invention et le sens des affaires ne sont pas l'apanage exclusif, certes, de nos voisins au sud du 49° parallèle. Alors, nous, loyaux Canadiens, qui avons confiance en nos talents et aptitudes naturels, concertons-nous avec les meilleurs organismes pour donner de l'expansion à notre économie. Pour nous, les meilleurs organismes sont, au gouvernement fédéral, le ministère de l'In-

[Texte]

Department of Fisheries and Forestry—particularly the Forest Management Institute and the Vancouver Forest Products Laboratory.

Thank you, Mr. Chairman.

The Chairman: Thank you. Mr. Matheson, did you want to make any further comments?

Mr. Matheson: Having listened to some of the furore of the fisheries sessions here, I think you might be interested in what this balloon transport system will do. I list six things.

The system enables inaccessible timber to be logged. This will result in increased stumpage to the provincial government and an increase to the overall economy of Canada.

Secondly, it will reduce breakage of logs to practically zero.

Thirdly—and when I use the word “will”, we have already made provision for starting a will do so in the course of the next two weeks—it will eliminate the slash in streams, cutting out pollution entirely.

Fourthly, it enables one pass clean logging which will eliminate the slash burning problem.

Fifthly, it attracts the best loggers, because they are using half-inch chokers and they can rag the work.

Sixthly, it applies to other industries. The mining exploration industry has been in contact with us. We have been approached by a Montreal company which wants to unload ships in the Arctic, where these sit offshore half a mile and may have to wait for two or three weeks for the ice to go.

With balloon transport you can pick up a six-ton load, barrel it through the air at 40 miles per hour, and take it up a mile and a half in elevation—no problem at all. The system has tremendous potential, but it is very hard, in Canada, to develop new ideas.

Mr. McQuaid: Would it take the place of Prince Edward Island hog raising?

The Chairman: Before we proceed with the questioning I would like to welcome to the hearing Mr. Ron Basford, the Minister of Consumer and Corporate Affairs.

[Interprétation]

dustrie, la Direction des forêts du ministère des Pêches et Forêts et, en particulier, l'Institut de gestion sylvicole et le Laboratoire des produits forestiers, à Vancouver. Merci, monsieur le président.

Le président: Merci. Monsieur Matheson, avez-vous quelque chose à ajouter?

M. Matheson: Après avoir écouté certaines grandes manifestations d'enthousiasme au cours des séances sur les pêches, peut-être cela vous intéresserait-il de savoir ce qui fera ce système de transport par ballon. J'ai six choses à nommer.

Ce système permet de transporter le bois inaccessible. Cela aura pour résultat un accroissement du tronçonnage pour le gouvernement provincial et une augmentation pour l'ensemble de l'économie canadienne.

Deuxièmement, cela supprimera presque complètement la casse des billes.

Troisièmement—j'emploie le futur, mais en fait, nous avons déjà prévu de commencer ce genre de transport, et nous allons le faire dans les deux semaines à venir—cela éliminera les déchets d'abattage dans les cours d'eau, et supprimera ainsi complètement la pollution.

Quatrièmement, cela permet de tronçonner les billes proprement, et élimine ainsi le problème du boulage des déchets.

Cinquièmement, cela attire les meilleurs scieurs, car ils utilisent des nœuds coulants en câble métallique et ils peuvent accélérer le travail.

Sixièmement, cela s'applique à d'autres industries. L'industrie d'exploration minière s'est mise en rapport avec nous. Une entreprise de Montréal a fait appel à nous: elle veut décharger des navires dans l'Arctique, où ils doivent jeter l'ancre à un demi-mille du rivage et attendre parfois deux ou trois semaines que la glace disparaisse.

Avec le transport par ballon, on peut ramasser une cargaison de six tonnes, la transporter par air à 40 milles à l'heure, et la soulever à un mille et demi d'altitude sans aucune difficulté. Ce système offre des possibilités magnifiques, mais il est très difficile au Canada de faire accepter des idées nouvelles.

M. McQuaid: Est-ce que cela supplanterait l'élevage de porcs de l'Île-du-Prince-Édouard?

Le président: Avant que nous ne passions aux questions, j'aimerais accueillir parmi nous M. Ronald Basford, ministre de la Consommation et des Corporations. J'ai sur ma

[Text]

I have the names of Mr. Whelan, Mr. Howard, Mr. St. Pierre, Mr. Rose, Mr. Hogarth, Mr. Crouse.

Mr. Whelan?

Mr. Whelan: My main question is: what was the interest rate which you paid on the loan from the Department?

Mr. Matheson: That has not as yet been established. We still have to arrange the repayment program. We are still, officially, in the midst of the program.

Mr. Whelan: You say it is very hard to create interest in new ideas and research. Is your idea not developed now, or do you feel there is a long way to go yet? It is here now, is it not?

Mr. Matheson: This is it. On the other hand, you cannot stand still in the face of the United States' snowing us under with dollar bills, you might say. In other words, the minute Britain developed the jet aeroplane, who took it and profited from its invention? It was not Great Britain; it was the United States.

Mr. Whelan: Having viewed, a few weeks ago, some of the operations at logging camps—particularly on Vancouver Island—I can see the great potential of this ballooning, though. There must be a tremendous saving. Is this not recognized by the logging industry and similar concerns?

Mr. Matheson: No, it is not, and that is why I said that nothing has been done. In other words, there is always a great time lag. If you own a 1917 white truck with hard tires, have no money to buy a brand new one, and must move two cords of wood somewhere, you are going to persevere with the old 1917 truck. This is the general attitude of the industry. I do not feel it is correct, but this is the situation.

Mr. Whelan: We have heard complaints from the fishermen that the spawning beds are frequently ruined by lumber interests, which take the gravel out of the beds and use them for the roadways. Are the trucking interests so great, do they have so much control, that your development would not go ahead?

Mr. Matheson: I do not think I would agree with that because I do not think there is any

[Interpretation]

liste les noms de M. Whelan, de M. Howard, de M. St-Pierre, de M. Rose, de M. Hogarth et de M. Crouse. Monsieur Whelan?

M. Whelan: Voici ma question principale: quel taux d'intérêt avez-vous payé sur le prêt que vous a accordé le Ministère?

M. Matheson: Ce taux n'a pas encore été fixé. Il nous faut encore organiser le programme de remboursement. Officiellement, nous en sommes toujours au milieu du programme.

M. Whelan: Vous dites qu'il est très difficile de soulever l'intérêt pour les idées nouvelles et les travaux de recherches. Estimez-vous que votre idée n'est pas encore au point et qu'il vous reste beaucoup à faire? Tout est déjà prévu, n'est-ce pas?

M. Matheson: Oui. D'autre part, on ne peut rester immobile et, se laisser inonder de dollars par les États-Unis. Autrement dit, la Grande-Bretagne, ce petit pays, a mis au point les avions à réaction. Mais qui a profité de l'invention? Pas la Grande-Bretagne, les États-Unis.

M. Whelan: Ayant observé, il y a quelques semaines, le travail qui se fait dans les camps de bûcherons—en particulier dans l'île de Vancouver—je me rends compte des grandes possibilités qu'offre le transport par ballon, toutefois. Cela doit permettre des économies considérables. Est-ce que l'industrie forestière et les autres industries intéressées ne s'en rendent pas compte?

M. Matheson: Non, c'est pourquoi j'ai dit que rien n'avait encore été fait. Autrement dit, il y a toujours un grand intervalle de temps. Si vous possédez un camion blanc de 1967 avec des pneus durs, que vous n'avez pas d'argent pour en acheter un nouveau et que vous deviez transporter deux cordées de bois quelque part, vous continuez à utiliser votre vieux camion de 1917. C'est l'attitude générale de l'industrie. J'estime que ces gens ont tort, mais telle est la situation.

M. Whelan: Nous avons entendu les pêcheurs se plaindre de ce que bien souvent les frayères étaient détruites par les entreprises forestières, qui enlèvent le gravier du lit des rivières et s'en servent sur les routes. Est-ce que les entreprises de camionnage sont si puissantes que vous ne pourriez pas donner suite à votre idée?

M. Matheson: Je ne dirais pas cela car je ne pense pas qu'il y ait de grande conspira-

[Texte]

great conspiracy. After all, you might say there was a conspiracy to keep the buggies going when Henry Ford invented the Model T.

Mr. Whelan: I can see the one terrific advantage of balloon transport. It would eliminate the necessity of building all these roads. Do you feel that this would be so?

Mr. Matheson: Absolutely. I just handed some additional information, written five years ago, to the Chairman. It was, in fact headed in that way. I said, "Why build expensive spur roads?" Our operations have been within the watershed of the greater Vancouver water district, where they insist on reducing their road program to a minimum. Furthermore they want us to get back as quickly as possible, relog areas that have already been logged, and reduce the slash so that it does not require to be burned.

Mr. Whelan: The main advantage of the proposed system that I can see is that it would leave our spawning beds intact. It would remove from the trucking companies the temptation of taking out of the streams the gravel from the spawning beds. We know of instances where our fishery officials have warned trucking companies to refrain from taking the gravel out of a stream bed, only to discover that the practice continued when the fishery officials disappeared. I can see, therefore, that balloon transport would have a tremendous advantage over the existing system.

One other question. Was the new scheme devised by the Thinkers Club, or something similar, out here?

Mr. Matheson: I think they accuse me of being a member. I have never attended a meeting. I think some of them are fine fellows. After all, we should all encourage anybody who is using his head.

On the other hand, we can all have terrific ideas, but if we do not implement them... That is why I said that this is a Canadian development. I went ahead on my own and I found out afterwards that it had been begun in Sweden, but what has been done there? Sweden spent a great deal of government money and then dropped the whole project. They said, "Oh, it does not work." This is reminiscent of the story told of Marconi. Someone once asked him, "How did you invent the wireless?" "Oh," he said, "I did not invent the wireless; but while everybody else was worrying about the things that

[Interprétation]

tion. Après tout, on pourrait dire qu'il y a eu une conspiration pour maintenir les charrettes au moment où Henry Ford a inventé sa première voiture.

M. Whelan: Je me rends compte de l'avantage énorme du transport par ballon. Cela éliminerait la nécessité de construire toutes ces routes. Estimez-vous qu'il en serait ainsi?

M. Matheson: Bien sûr. Je viens de donner au président des renseignements supplémentaires, préparés il y a cinq ans. Le document était en fait intitulé ainsi; je disais: «Pourquoi construire des routes d'embranchement coûteuses?» Notre activité s'est limitée au bassin des eaux territoriales du grand Vancouver, où l'on veut réduire le programme routier à un minimum. De plus, on veut que nous y retournions aussi vite que possible, que nous fassions une deuxième coupe dans les zones qui ont déjà été exploitées, et que nous réduisions les déchets afin qu'ils n'y aient pas à être brûlés.

M. Whelan: Le plus gros avantage que je vois au système proposé, c'est qu'il laisserait nos frayères intactes. Les entreprises de camionnage ne seraient plus tentées de retirer le gravier des cours d'eau dans les frayères. Il y a eu des cas où nos représentants du ministère des Pêches ont averti les entreprises de camionnage qu'elles ne devaient plus retirer le gravier du lit des cours d'eau, et ont découvert ensuite que la chose recommençait dès qu'ils avaient disparu. Je me rends bien compte, donc, que le transport par ballon présenterait un énorme avantages par rapport au système actuel.

Encore une question. Est-ce que le nouveau projet a été mis au point par le Club des penseurs, ou quelque chose du même genre ici?

M. Matheson: Je crois que l'on m'accuse d'en être membre. Je n'ai jamais assisté à une réunion. Je pense qu'il y a là des gens très bien. Après tout, nous devrions tous encourager quiconque se sert de son intelligence.

Par ailleurs, nous pouvons tous avoir d'excellentes idées, mais si nous ne les mettons pas en pratique... C'est pourquoi j'ai dit que c'était là une idée canadienne. Je me suis lancé de mon propre chef, et j'ai découvert par la suite que l'on avait commencé cela en Suède; mais qu'est-ce qu'on a fait là-bas? La Suède a dépensé beaucoup d'argent du gouvernement, puis a abandonné toute l'entreprise en disant que ça ne marchait pas. Cela me fait penser à l'anecdote que l'on raconte au sujet de Marconi. Quelqu'un lui avait demandé un jour: «Comment avez-vous inventé la télégraphie sans fil?» Il avait

[Text]

would not work, I was working with the components that would work."

Mr. Whelan: Just one further question. What do you want this Committee to do?

Mr. Matheson: All I want the Committee to do is to ensure that the livewire, far-sighted people in Ottawa continue to support research and development. It is criminal that a province which earns 50 cents on the dollar does no research in logging. You cannot compete against the United States, which is spending probably 200 times as much as we are on such research. It is like living next door to E. P. Taylor. I mean, how could I get ready to do my garden as well as he does when even the manure he gets from the horses would be better than what I could go out and buy.

Mr. Whelan: He feeds them better oats. This is a comment again on the Thinkers Club. One of the things that they stated was that they were going to drain Lake Erie and that was supposed to be new. I heard that when I was a little boy and that was quite a few years ago.

Mr. Matheson: Well let us face it, the balloon is 200 years old.

An hon. Member: Almost.

Mr. Matheson: That is right, 1783. Because your father and my father, you and I, spent several billions of dollars developing the fixed wing aeroplane, it does not prove that you cannot lift logs by balloon just as well as by automobile, wagon, barge, helicopter, hovercraft, or fixed wing aircraft. A balloon will lift them too—and there is the proof.

Mr. Whelan: I say once again that I think it has a tremendous potential.

The Chairman: Do you have any further questions? Well then, Mr. Howard.

Mr. Howard (Skeena): I think Mr. Whelan covered the point in which I was initially interested. Do you have a spare copy of this Production Analysis of Balloon Logging by McIntosh?

Mr. Matheson: I would be delighted. I have all kinds of them.

[Interpretation]

répondu: «Oh, je n'ai pas inventé la télégraphie sans fil, mais pendant que tous les autres s'inquiétaient de ce qui ne marcherait pas, je travaillais avec les éléments qui marcheraient.»

Mr. Whelan: Plus qu'une question. Que voulez-vous que ce Comité fasse?

Mr. Matheson: Tout ce que je veux que le Comité fasse, c'est s'assurer que les gens actifs et prévoyants à Ottawa continuent à appuyer la recherche et le développement. Il est criminel qu'une province qui gagne 50 cents sur chaque dollar ne se livre pas à des recherches sur l'industrie forestière. On ne peut soutenir la concurrence des États-Unis, qui dépensent sans doute 200 fois plus que nous pour la recherche. C'est comme si je vivais dans la maison voisine de celle de E.P. Taylor. Comment pourrais-je essayer d'avoir un jardin aussi beau que le sien, alors que même le fumier qu'il obtient de ses chevaux est meilleur que celui que je pourrais acheter.

M. Whelan: Il les nourrit avec de l'avoine de meilleure qualité. C'est là de nouveau une observation qui vise le Club des penseurs. Ils avaient déclaré, entre autres, qu'ils allaient assécher le Lac Érié, et c'était censé être quelque chose de nouveau. J'ai entendu dire cela quand j'étais petit, et il y a pas mal d'années de cela.

M. Matheson: Ne l'oublions pas, le ballon date de 200 ans.

Une voix: Presque.

M. Matheson: En effet, 1783. Ce n'est pas parce que votre père et le mien, et vous et moi, avons dépensé des milliards de dollars pour mettre au point l'avion à ailes fixes que l'on ne peut pas transporter des billes par ballon tout aussi bien que par automobile, par wagon, par barque, par hélicoptère, par aéroglisseur ou par avion à ailes fixes. Un ballon peut tout aussi bien les transporter et vous en avez la preuve.

M. Whelan: Je le répète, j'estime qu'il y a là des possibilités extraordinaires.

Le président: Avez-vous d'autres questions? Dans ce cas, à vous, monsieur Howard.

M. Howard (Skeena): Je crois que M. Whelan a déjà dit tout ce qu'il y avait à dire sur la question qui m'intéressait le plus. Avez-vous un autre exemplaire de cette Analyse de production du transport des billes par ballon faite par McIntosh?

M. Matheson: Avec plaisir. J'en ai tout un tas.

[Texte]

Mr. Howard (Skeena): As a former logger I would be interested—and I am sure other members of the Committee would—to learn whether or not you have arranged the loan with the Department.

Mr. Matheson: We have arranged it. It is just a matter...

Mr. Howard (Skeena):...of getting the money.

Mr. Matheson: In fact, they are seriously asking us if we cannot take a further step. In other words, they feel that we have done a tremendous job with what we already have.

There are other considerations—if the Committee will bear with me. I do not want to bore you, but only the first step has been taken—and can you imagine what this will do to the industry? Now the benefits are not going to be realised overnight, and this where we could spend money to good advantage. Much timberland in British Columbia and Alaska starts here at the salt water; and the rising terrain consists of rock, muskeg, rock, muskeg, rock, muskeg, rock, muskeg.

In consequence, the timber is not good quality either, and you cannot economically build a road through it. With a balloon, like the one you see on the wall there, we can reach out one mile, but with this system we could reach two to five miles with three men. We would get a larger balloon lifting a self-propelled carriage. I do not know about you fishermen, but we loggers shun the word electronics because I feel we have to have a man ride this car. Maybe the American Space Administration can finance an electronics that works, but we cannot. A self-propelled carriage lifted by a balloon raises the logs and pulls itself along a cable. This is ideal to cross the terrain. With three men then, from two to five miles can be covered. Neither a yarder nor a loader, nor a truck, nor a saw, nor any road is required. The logs can be picked up and deposited in the salt water—in all the inlets along British Columbia, Alaska, and Newfoundland, for that matter.

I hope that this answers your question, sir.

Mr. Howard (Skeena): Virtually. I was wondering about this loan—that is where I started. You have arranged it, but you do not have the details the terms or anything of this nature?

[Interprétation]

M. Howard (Skeena): En tant qu'ancien exploitant forestier, j'aimerais savoir, de même, j'en suis certain, que les autres membres du Comité, si oui ou non vous avez obtenu le prêt du ministère.

M. Matheson: Oui, nous l'avons obtenu. Il ne reste plus qu'à...

M. Howard (Skeena): ...obtenir l'argent.

M Matheson: En fait, on nous demande sérieusement si nous ne pourrions pas aller jusqu'à l'étape suivante. Autrement dit, on estime que nous avons extrêmement bien réussi dans ce qui nous avons déjà fait. Il y a d'autres choses qui entrent en ligne de compte, si le Comité veut bien être patient avec moi. Je ne veux pas vous ennuyer, mais nous n'en sommes encore qu'à la première étape, et pouvez-vous imaginer les répercussions que cela va avoir sur l'industrie? Les bénéfices ne vont pas se faire du jour au lendemain, et c'est là que nous pourrions dépenser de l'argent à profit. Une grande partie des terres boisées de la Colombie-Britannique et de l'Alaska commence ici, à l'eau salée; et le terrain en élévation consiste de roche, de marécage, de roche, de marécage, de roche, de marécage.

En conséquence, le bois n'est pas de très bonne qualité, et il n'est pas rentable de construire une route qui traverse la région. Avec un ballon semblable à celui que vous voyez sur le mur, 1 mille, mais avec ce système, on peut atteindre entre 2 et 5 milles avec trois hommes. Il faudrait un plus gros ballon pour lever un wagon auto-propulseur. Je ne sais pas ce qu'en pensent les pêcheurs, mais les porteurs de bois évitent le terme électronique, parce que, je crois, nous devons avoir un homme pour conduire. Il est possible que l'*American Space Administration* puisse financer un appareil électronique qui fonctionne, mais nous ne le faisons pas. Un wagon auto-propulsé levé par un ballon élève des billots et s'achemine sur le câble. C'est un moyen idéal pour traverser le terrain avec trois hommes car on peut avancer de 2 à 5 milles. On n'a pas besoin de manœuvres, de camions, de routes, de scie ou de chargeur. Les billots sont saisis et déposés dans l'eau salée, dans toutes les anses le long de la Colombie-Britannique, Alaska et Terre-Neuve.

J'espère que cela répond à votre question, monsieur.

Mr. Howard (Skeena): Éventuellement. A propos de l'emprunt qui m'a servi de point de départ, vous avez pris des dispositions, mais vous n'avez aucun détail aucune modalité ou autre chose de ce genre.

[Text]

Mr. Matheson: Oh, yes.

I am sorry I did not bring it. It is just a case of determining the actual terms of payment—whether we are going to make these over a period of five years, eight years, or two years. This will depend upon what our next step will be. Mr. Cuff of the Department of Industry is actually in town today, and we are working on that paper. As of this moment, though, we have not come to grips with the exact timing.

Mr. Howard (Skeena): Or the amount?

Mr. Matheson: Oh, the amount. It is quite definite. We have \$134,560, but we had already previously raised \$150,000, and before that we spent another \$150,000 to take the risk out of it.

Mr. Howard (Skeena): So the time over which the loan will extend is not settled?

Mr. Matheson: Not settled.

Mr. Howard (Skeena): Nor the interest rate?

Mr. Matheson: Nor the interest rate. There again, though, I think it will be normal bank rates—7½ per cent, or whatever the Bank of Canada says shall be paid.

Mr. Howard (Skeena): Thank you.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, I feel, at least in some measure, that my constituency is the Kitty Hawk of balloon logging in the world. By reason of explanation, Lynn Valley certainly was the site of some of your early experiments in this area, was it not?

Mr. Matheson: Seymour Valley.

Mr. Perrault: Seymout Valley—that is what I meant. It comprises a great part of my constituency.

I am interested in some of the statements in your brief, which I enjoyed very much, because it has such an optimistic and positive quality to it. I think it is commendable to listen to presentations of this kind. You make the statement:

...none of the local forest industries nor related industries has contributed in any positive way to the development program.

and you said later that it is criminal that no research in logging has taken place in British Columbia. Let me ask you. Did you go to the forest industries in B.C. and ask for their

[Interpretation]

M. Matheson: Oui. Je regrette de ne pas les avoir apporté. Il s'agit seulement de déterminer les modalités de paiement pour une période de 5, 8 ou 2 ans. Cela dépendra de notre prochaine décision. Monsieur Cuff du ministère de l'Industrie est en ville aujourd'hui, et nous étudions ce document. Pour l'instant, nous n'avons pas réussi à saisir le bon moment.

M. Howard (Skeena): Ou le montant?

M. Matheson: Oh! le montant est très défini. Nous avons \$134,560 mais nous avions recueilli \$150,000 auparavant et avant, nous avons déjà dépensé \$150,000 pour éloigner de tout risque.

M. Howard (Skeena): Donc, la durée de l'emprunt n'est pas encore déterminée?

M. Matheson: Non.

M. Howard (Skeena): Ni le taux d'intérêt?

M. Matheson: Non plus, même si je crois que ce sera le taux bancaire courant, soit 7 ½ p. 100 ou celui que le Banque du Canada fixera.

M. Howard (Skeena): Merci.

Le président: Monsieur Perrault.

M. Perrault: Monsieur le président, je pense que, dans une certaine mesure, ma circonscription est vraiment le centre des exploitations par ballon fixe au monde. A titre d'explication, Lynn Valley a naturellement été le siège des premières expériences dans ce domaine, n'est-ce pas?

M. Matheson: Seymour Valley.

M. Perrault: C'est ce que je voulais dire! Cela comprend une grande partie de ma circonscription. Je suis intéressé par quelques-unes des déclarations que vous faites dans votre mémoire, que j'ai eu beaucoup de plaisir à lire car on y trouve tellement d'optimisme. C'est magnifique de lire qu'aucune entreprise forestière locale ni entreprise connexe n'a contribué de façon positive au programme d'expansion et qui est criminel de ne faire aucune recherche sur l'exploitation forestière en Colombie-britannique. Puis-je poser cette question? Est-ce que vous avez demandé aux entreprises forestières de la Colombie-Britannique d'appuyer votre projet? Êtes-vous entré en contact avec eux?

[Texte]

support in the project? Did you make any direct approach to them?

Mr. Matheson: Oh, goodness, Mr. Perrault, I approached every one. I started on this in 1961 and I was scared to death...

Mr. Perrault: Were they skeptical of this development?

Mr. Matheson: Absolutely. They are still skeptical.

Mr. Perrault: They would not put any money in it at all?

Mr. Matheson: One company put some money into it against our advice, because we had taken the 1917 Model T with the hard tires into Seymour in 1963, at the expense of \$150,000, and proved that the system worked—just as the group of us here would have done if, in 1917, we had had to prove that you can move a load of fish on a wheeled vehicle. But you do not do that in 1963—particularly when you are competing against the United States.

In 1963 the United States forest service had a man at Okanagan Helicopters Ltd. whose sole job was to set up a laboratory in Seattle and find out how to log in Alaska as we were logging. He was told of what we were doing, looked at the operation for ten minutes, went into the nearest phone, phoned Washington direct, and said, "Look, stop the helicopter program. We have to adopt balloon logging." \$250,000 was immediately advanced—and this is why I say it is tough to be a Canadian.

Mr. Perrault: You are not too impressed with the spirit of adventure which motivates our forest industry in this country then?

Mr. Matheson: I am not. I think that it is, as I say, "criminal" that in this province, which earns 50c on the dollar, there is not even a research department.

Mr. Perrault: Well, we intend to ask the forest industry some questions about their theory in this tomorrow, I can assure you.

Mr. Matheson: Jolly good. I am all for it.

Mr. Perrault: Did you make this statement as well that the Provincial Forest Service has contributed only \$2,100 in reduced stumpage on a salvage logging area? That is a disgraceful figure. Is that a correct figure?

Mr. Matheson: That is a correct figure.

[Interprétation]

M. Matheson: Je les ai tous rencontrés. J'ai commencé en 1961 et j'avais peur ..

M. Perrault: Étaient-ils sceptiques?

M. Matheson: Naturellement. Ils le sont encore.

M. Perrault: Ils ne voudraient pas y investir de l'argent?

M. Matheson: Une compagnie a investi de l'argent malgré nos conseils, parce que nous avions amené le modèle T de 1917 avec des pneus durs dans Seymour en 1963, au coût de \$150,000 et nous avons prouvé que le système fonctionnait tout comme si en 1917 on avait dû prouver qu'il est possible de transporter une charge de poisson sur un véhicule à roues. Mais en 1963, cela ne se fait pas, en particulier lorsque vous faites concurrence aux États-Unis. En 1963, le service forestier américain avait envoyé un homme à *Okanagan Helicopters Ltd* dont l'unique travail était de créer un laboratoire à Seattle et de voir comment procéder à l'exploitation forestière en Alaska, comme nous le faisons. Il avait entendu parler de ce que nous faisons, il a examiné notre projet pendant 10 minutes, a téléphoné immédiatement Washington en disant «Arrêtez le programme d'hélicoptère, il faut adopter l'exploitation forestière ballon fixe». On m'a alors avancé \$250,000. Voilà pourquoi je dis qu'il est difficile d'être canadien.

M. Perrault: Vous n'êtes pas frappé par l'esprit d'aventure de notre industrie forestière?

M. Matheson: Non, j'ai utilisé le mot «criminel» parce que, dans cette province qui a 50% de revenus, il n'y a même pas de département de la recherche.

M. Perrault: Nous avons l'intention de poser quelques questions à l'industrie forestière sur leur théorie, demain. Je vous le promets.

M. Matheson: Très bien. Je suis tout à fait d'accord.

M. Perrault: Avez-vous dit aussi que le service forestier de la province n'a donné que \$2,100 pour réduire les déchets dans une région d'abattage? C'est honteux. Le chiffre est-il exact?

M. Matheson: Oui.

[Text]

Mr. Perrault: \$2,100.

Mr. Matheson: Yes. When I was up in a goat pasture on Seymour that no other system can rob, we took people over from the industry and they did not even know what they were looking at. They did not believe that it is a mile from the road up to the top of that ridge. They never had to walk it. It takes me two hours to do it, but I am out of shape. This is the sort of ignorance that exists.

Mr. Perrault: Do you feel again there is a lack of foresight there? Did somebody make a decision without even troubling to look at the operation?

Mr. Matheson: Absolutely. We are paying people in The Vancouver Club and the Panama City Club who will tell you that balloon logging will never work, but they did not even have the courage to get in their own automobile and drive up and look at it.

Mr. Perrault: Let me ask you this: as far as the reduced stumpage is concerned and this alarming statistic, did you seek a hearing before the legislative committee on forestry during the past session?

Mr. Matheson: No, I am sorry, I did not Mr. Perrault.

Mr. Perrault: I would suggest to you that this should be brought to the attention of the provincial legislature.

Mr. Matheson: I dare say that after you have tried a dozen times, you finally give up.

Mr. Perrault: You have kind words for the Department of Industry. However, I notice that on page 2 in one paragraph you say:

We feel that Balloon Transport Ltd. is doing all of these things mentioned by Dr. Solandt but needs financial support to carry out the development.

You are seeking further financial support then presumably?

Mr. Matheson: I think anybody who is trying to develop anything is always looking for more money.

Mr. Perrault: Have you made a specific request to the federal government for additional funds?

Mr. Matheson: We are doing that now, sir.

[Interpretation]

M. Perrault: \$2,100.

M. Matheson: Oui, j'étais dans un pâturage de chèvre à Seymour qu'aucun autre système ne peut voler. Nous avons pris des gens de l'industrie et ils ne savaient même pas ce qu'ils voyaient. Il ne croyaient pas qu'ils étaient à un mille de la route. Ils n'avaient jamais marché jusque là. Cela me prend 2 heures pour le faire, mais je ne suis pas en forme. C'est le genre d'ignorance crasse.

M. Perrault: Estimez-vous qu'il y a un manque de prévisions? Quelqu'un a-t-il pris une décision sans se donner la peine d'en examiner le fonctionnement?

M. Matheson: Oui. Nous payons des gens du *Vancouver Club* et du *Panama City Club* qui vous diront que l'exploitation à ballon fixe ne marchera jamais, mais ils n'ont même pas eu le courage d'aller sur les lieux pour voir ce qui se passait.

M. Perrault: Au sujet des souches et des chiffres alarmants que vous me donnez, est-ce que vous avez cherché à obtenir une audience auprès du comité des forêts au cours de la session?

M. Matheson: Non, monsieur Perrault.

M. Perrault: Ceci devrait être présenté à l'assemblée législative provinciale.

M. Matheson: Oui, je sais, mais après avoir frappé à la porte une demi-douzaine de fois sans réponse, on abandonne.

M. Perrault: Vous avez des mots gentils à l'endroit du ministère de l'Industrie. Toutefois, j'ai noté que dans un paragraphe, à la page 2, vous dites:

«La société *Balloon Transport Limited* remplit toutes ces conditions, à notre avis, mais elle a besoin d'un appui financier afin de pouvoir poursuivre son activité»

Vous cherchez plus de subventions, je suppose?

M. Matheson: J'estime que quiconque qui cherche à mettre au point quelque chose a toujours besoin de plus d'argent.

M. Perrault: Avez-vous demandé des fonds supplémentaires au gouvernement fédéral?

M. Matheson: C'est ce que nous faisons maintenant.

[Texte]

Mr. Perrault: You have already received in excess of \$100,000?

Mr. Matheson: Yes, \$134,560.

Mr. Perrault: How much more would you require, do you think, to carry out your final phase of research?

Mr. Matheson: In my spare time, after another meeting tonight, I may get around to that and I might know the figure tomorrow.

Mr. Perrault: Is there interest being expressed in the United States with respect to adapting this procedure in Oregon and Washington?

Mr. Matheson: Very much so. As I say, that happened in 1963. The U.S. Forest Service came and took very deliberate action. They raised the money to set up a whole establishment in Seattle in conjunction with the University of Washington and used their wind tunnel. They asked our permission. I had this patented, personally, in 19 countries throughout the free world. There again I speak of we Canadians who have faith in our ability. In other words, I knew that if I did not have enough faith to spend the last few dollars that was in the bank on the patents, I certainly could not go to Vancouver businessmen and ask them to put money into my company.

Mr. Perrault: You put your money where your faith was.

The Chairman: Mr. Perrault, your time has expired.

Mr. Perrault: Yes, I know, Mr. Chairman. I have just one final brief question requiring only a one-word answer.

The Chairman: Very well.

Mr. Perrault: You say that your company plans to operate one unit on a commercial operation close to Vancouver commencing next month. Where will that be?

Mr. Matheson: That will be at exactly the same place.

Mr. Perrault: At Seymour. Excellent. Thank you very much, Mr. Chairman.

The Chairman: Mr. St. Pierre.

Mr. St. Pierre: Mr. Chairman, I find that after three questioners I am still a little confused on some things. You have received \$134,000. The amount of interest you are to pay you do not know, or you have not received it?

[Interprétation]

M. Perrault: Et vous avez déjà reçu plus de \$100,000?

M. Matheson: Oui, nous avons déjà reçu \$134,560.

M. Perrault: Combien de plus vous faudrait-il?

M. Matheson: Dans mon temps libre, après une autre réunion ce soir, je pourrais trouver ce chiffre, pour demain.

M. Perrault: Est-ce que les États-Unis s'intéressent à l'adaptation de ce moyen de transport pour l'Oregon et le Washington?

M. Matheson: En effet. En 1963, le service des forêts américain a pris des mesures. On a accumulé des fonds pour établir un centre de recherches à Seattle, en collaboration avec l'Université de Washington, faisant usage de leur tunnel à air. On a demandé notre autorisation. J'ai fait breveter cette invention dans dix-huit pays du monde libre. Je parle de nous, des Canadiens qui ont foi dans leurs aptitudes. Autrement dit, si j'avais assez de confiance pour dépenser mon dernier cent pour l'obtention d'un brevet, je pouvais aller proposer aux hommes d'affaires de Vancouver d'investir dans ma compagnie.

M. Perrault: Vous avez investi dans votre confiance.

Le président: Monsieur Perrault, vous avez épuisé votre temps de parole.

M. Perrault: Je sais, mais une dernière question, monsieur le président, très courte. Elle n'exige qu'une réponse d'un seul mot.

Le président: Allez-y.

M. Perrault: Nous dites que votre compagnie doit faire fonctionner un ballon le mois prochain, près de Vancouver. Où est-ce?

M. Matheson: Au même endroit.

M. Perrault: A Seymour. Très bien. Merci beaucoup, monsieur le président.

Le président: Monsieur Saint-Pierre.

M. St. Pierre: Monsieur le président, je trouve qu'après trois séries de questions je suis encore confus. Vous avez reçu \$134,000. Le montant d'intérêt que vous devrez payer est-il inconnu, ou peut-être ne l'avez-vous pas reçu?

[Text]

Mr. Matheson: I think, sir, that the terms of repayment and the interest rate will have to be established when that phase of it comes about.

Mr. St. Pierre: You have received \$134,000?

Mr. Matheson: That is correct.

Mr. St. Pierre: Did the federal government not tell you how much they wanted in payment?

Mr. Matheson: I think at that time it was 6 per cent, but I do not think they would be pleased with that now. The bank rate has gone up. We are quite pleased to pay whatever the going bank rate is or whatever the Department suggests.

Mr. St. Pierre: That is a rather extraordinary way to get money. You do not have any idea of what you are going to have to pay in interest.

Mr. Hogarth: Mr. Chairman, on a point of order. I might be corrected, but I think a paid loan is made on the basis of research into a new idea or a new commodity, and that the government anticipates a repayment according to the success of the venture after that has been determined. Is that not so, witness?

Mr. Matheson: That is correct. In other words, if the venture proved no good, there was no payment whatsoever.

Mr. St. Pierre: The government is risking with you?

Mr. Matheson: The government is taking the risk.

Mr. St. Pierre: How much more money do you need?

Mr. Matheson: That is a tough one. It always comes back to the person who is doing it. I cannot answer that today; perhaps I could answer it tomorrow.

Mr. St. Pierre: Do you feel that the only logical source for this additional money is the federal government?

Mr. Matheson: I do not say it is the only logical source. I feel a province which earns 50 cents on the dollar from the forestry business should be actively in research and development. Whether we do it or who does it, I do not care, but I do feel that it should be being done. All I say is that I was not able to do it. I may be a poor salesman. A prophet is not without honour save in his own country. I

[Interpretation]

M. Matheson: Non. Les modalités de remboursement et le taux d'intérêt devront être fixés lorsque cette phase viendra.

M. St. Pierre: Mais vous avez reçu \$134,000?

M. Matheson: C'est juste.

M. St. Pierre: Est-ce que le gouvernement fédéral ne vous a pas dit combien serait le remboursement?

M. Matheson: Je crois qu'à ce moment-là c'était 6 p. 100, mais je ne pense pas qu'on serait satisfaits de cela maintenant. Le taux d'intérêt a augmenté. Nous sommes tout à fait satisfaits de payer le taux bancaire ou quel que soit le taux fixé par le ministère.

M. St. Pierre: C'est une façon assez extraordinaire d'obtenir des fonds. Vous ne savez pas quel sera l'intérêt.

M. Hogarth: Monsieur le président, j'invoque le Règlement. Je crois que les emprunts sont faits en fonction des recherches, sur une nouvelle idée ou un nouveau produit. Le gouvernement s'attend au remboursement conformément aux résultats de l'entreprise. Est-ce bien cela?

M. Matheson: Oui. Autrement dit, si cela ne réussit pas, nous n'avons rien à rembourser.

M. St. Pierre: Au fond le gouvernement court le risque avec vous?

M. Matheson: Oui.

M. St. Pierre: De combien d'argent de plus avez-vous besoin?

M. Matheson: C'est difficile à dire. Je ne peux pas répondre à cela aujourd'hui. Je pourrai répondre demain, peut-être.

M. St. Pierre: Vous pensez que la seule source logique de fonds additionnels est le gouvernement fédéral?

M. Matheson: Je ne dis pas que ce soit la seule source logique. Je dis que la province qui obtient 50 p. 100 de ses revenus de l'exploitation forestière devrait s'intéresser à la recherche. Que ce soit nous qui fassions cette recherche, ou d'autres, peu m'importe. Tout ce que je peux dire, c'est que je n'ai pas pu obtenir ces fonds. Je ne réussis peut-être pas à enthousiasmer mes compatriotes, mais le Con-

[Texte]

think the Council of Forest Industries should be doing something. In other words, in the provinces of Ontario and Quebec, Abitibi Power & Paper Company Ltd., Canadian International Paper Company, Domtar Pulp & Paper Ltd., there is a group of...

Mr. St. Pierre: Yes, if I may interrupt, this leads directly into my next question which deals with your criticism of the B.C. forest industry. I think you agreed with Mr. Perrault that it lacks a spirit of adventure.

I would like to take your mind back to the development of water bombing in B.C. Are you familiar with the history of that?

Mr. Matheson: Yes, I am.

Mr. St. Pierre: This was done by a consortium of B.C. forest industries?

Mr. Matheson: Yes.

Mr. St. Pierre: With no government assistance, I believe.

Mr. Matheson: Yes, but was that not a matter of live or die? In other words, they had to come up with something.

Mr. St. Pierre: Was it not a pioneering effort on this continent?

Mr. Matheson: I do not know. I really do not know.

Mr. St. Pierre: It was carried out entirely by the B.C. forest industries?

Mr. Matheson: Yes.

Mr. St. Pierre: This was a very costly thing also; considerably more costly I believe than the figures you are dealing with here.

Mr. Matheson: This is the point.

Mr. St. Pierre: Why do you suppose they risked money there but are unanimously opposed to risking money in your operation?

Mr. Matheson: I have no way of knowing and I would think if you asked each one individually you would get that many different answers and probably none of them would be the real answer.

Mr. St. Pierre: Finally, how far are the Americans advanced? Is this now in commercial operation in the states?

Mr. Matheson: It is not in commercial operation in the states. They must have spent \$2 billion.

[Interprétation]

seil de l'industrie forestière devrait faire quelque chose. Autrement dit, dans l'Ontario et dans le Québec, dans l'Abitibi, les grosses entreprises forestières...

M. St. Pierre: Ceci nous amène à ma question suivante, qui se rapporte à votre critique de l'industrie forestière de Colombie-Britannique; elle manque d'esprit d'initiative, selon vous et comme disait M. Perrault. Vous souvenez-vous des bombardements d'eau, en Colombie-Britannique.

M. Matheson: Oui.

M. St. Pierre: Ceci a été mis au point par l'industrie forestière?

M. Matheson: Oui.

M. St. Pierre: Sans d'aide du gouvernement, je crois.

M. Matheson: Oui, mais c'était une question de vie ou de mort, il fallait trouver une solution.

M. St. Pierre: Est-ce que ce n'était pas une nouvelle initiative sur le continent?

M. Matheson: Je ne sais pas.

M. St. Pierre: Ceci a été réalisé entièrement par l'industrie forestière de Colombie-Britannique.

M. Matheson: Oui.

M. St. Pierre: C'était très cher, beaucoup plus cher que les chiffres que nous examinons maintenant.

M. Matheson: C'est ce qui en ressort.

M. St. Pierre: Pourquoi pensez-vous que l'industrie risque ces fonds pour cela et qu'elle s'est opposée à risquer des fonds dans votre entreprise?

M. Matheson: Je n'ai aucun moyen de la savoir, et je pense que si vous posez ces questions à chaque entreprise en particulier, vous obtiendrez des réponses différentes chaque fois.

M. St. Pierre: Est-ce que ceci est exploité commercialement aux États-Unis? Où en est-on dans ce pays?

M. Matheson: Ce n'est pas en exploitation commerciale aux États-Unis. On y a mis 2 milliards de dollars.

[Text]

Mr. St. Pierre: Without getting into a commercial operation?

Mr. Matheson: Without getting into a commercial operation.

Mr. St. Pierre: Do you think we might run into \$2 billion before we get a commercial operation?

Mr. Matheson: Not a chance. We are ready to go next week. The reason is that they had the wrong balloons, and this shows how we have to be very careful about big government and big business because the Goodyear Rubber Company just happen to have a Vee-Balloon. I went to see the Goodyear Rubber Company because I did not know they built balloons in England, and the Goodyear Rubber Company management said to the sales department, "The Vee-Balloon shall be the logging balloon".

If you can imagine taking two of your sailing boats that you have been talking about which are capable of going eight knots under full power, you bring them together at the noses, put a spar across the sterns and lash them so they are 45 degrees, and go ahead full bore on both motors, I will defy you to go eight knots. That is what they tried to do down there. They ended up with winches of 700 and 800 horsepower and they could not pull the balloon through the air. Just everything went wrong.

Mr. St. Pierre: Your operation is prepared to go into commercial operation immediately?

Mr. Matheson: That is correct.

Mr. St. Pierre: Why do you need more money?

Mr. Matheson: We need money because I would say that if we do not do the things as a Canadian company, we will be once again overwhelmed by the General Motors...

Mr. St. Pierre: What things, witness? The Americans have spent \$2 billion and have not been successful. What things must you do?

Mr. Matheson: We must do this thing, for instance. In other words, the research that has to go into that self-propelled carriage would be tremendous for Canada. For one thing, it would use the gas turbine engine which is built south of Montreal. There again nobody has put a gas turbine in the automobile that you and I drive yet and made it economically and commercially acceptable. So, in order to make this thing commercially

[Interpretation]

M. St. Pierre: Sans se lancer dans l'exploitation commerciale.

M. Matheson: Tout à fait.

M. St. Pierre: Aurons-nous à dépenser deux milliards avant de commencer l'exploitation commerciale?

M. Matheson: Non, pas du tout. Nous sommes prêts. En fait, les américains avaient le mauvais ballon. Voilà pourquoi il faut être très prudent à l'égard des gros gouvernements et des grandes entreprises. La *Goodyear Rubber Company* avait un ballon en «V». J'ai consulté la *Goodyear*, car je ne savais pas qu'elle fabriquait des ballons en Angleterre, et la direction de cette entreprise a décidé que le ballon en «V» serait celui dont l'industrie forestière se servirait. Ce ballon n'est tout simplement pas adapté à cet usage, car il consiste à réunir deux ballons, ce qui exige des treuils très puissants. Tout a fait défaut.

M. St. Pierre: Vous êtes disposé à vous lancer dans les exploitations commerciales immédiatement?

M. Matheson: Oui.

M. St. Pierre: Pourquoi avez-vous besoin de plus d'argent?

M. Matheson: Nous avons besoin davantage d'argent parce que si nous ne faisons pas les choses à titre de compagnie canadienne, une fois de plus nous serons submergés par la *General Motors*...

M. St. Pierre: Les Américains ont dépensé deux milliards et n'ont pas réussi. Qu'est-ce que vous devez faire?

M. Matheson: Les recherches à faire pour la mise au point de ce chariot à propulsion autonome seront onéreuses au Canada. Tout d'abord, on fera usage de la turbine à essence qu'on fabrique au sud de Montréal. Il n'existe encore aucune turbine à essence pour les voitures qui soit pratique et rentable. Il faut donc commencer tout de suite si nous voulons avoir des résultats d'ici quatre ans.

[Texte]

accessible three or four years from now, we should be doing it today.

Mr. St. Pierre: That completes my questioning, Mr. Chairman.

The Chairman: Thank you, Mr. St. Pierre. Mr. Rose.

Mr. Rose: Mr. Chairman and Mr. Matheson, your testimony, sir, has an "they all laughed at Columbus" quality about it.

Mr. Matheson: I have been at something, sir, for eight years. Emerson said, "Nothing worthwhile was ever successful without enthusiasm".

Mr. Rose: Your appearance before this Committee is very interesting, but I have yet to find out, at least in my own mind, just what it is you want, besides perhaps exposing your idea and your research to a wider audience than you have perhaps been able to reach up to now.

Mr. Matheson: N, I would not say that, sir. Without any expenditure on our part we have had coverage in *Life* magazine and *Time* and we have been on the CBC. We have not sought any publicity whatsoever. The only thing that I want to get across is this one thing: From our experience the best agencies are branches of our federal Department of Industry and Forestry to develop new ideas in forestry. That is all I am saying.

Mr. Rose: You are really here to laud these particular departments for their support and interest in your new ideas?

Mr. Matheson: That is correct.

Mr. Rose: You mentioned also that you are ready to go. Do you actually have contracts for your type of operation? Do you have a market now?

Mr. Matheson: Yes, we do as a matter of fact, and we have markets from other parts of the world. In other words, tomorrow I will not be able to be here because there are American interests who are coming and they want to place orders for this for delivery in 1970.

Mr. Rose: You made quite a strong case, I felt, for the fact that we do very little research here, not only in forestry but in many other areas. Is it because a good number of our large industrial and primary products industries are controlled by American companies, and therefore, the research is done in the states rather than in Canada?

[Interprétation]

M. St. Pierre: Ceci met fin à mes questions, monsieur le président.

Le président: Monsieur Rose.

M. Rose: On a ri de Christophe Colomb.

M. Matheson: J'y ai travaillé pendant huit ans. Emerson disait que rien n'a jamais réussi sans enthousiasme.

M. Rose: Votre témoignage est très intéressant, mais je ne sais pas ce que vous voulez en plus d'avoir l'occasion d'afficher votre découverte devant un plus gros public.

M. Matheson: Je ne dirais pas cela. Sans que nous ayons déboursé un cent, on a parlé de nous dans des articles dans le *Life*, dans le *Time*; nous avons paru à Radio-Canada. Nous n'avons pas cherché la publicité. Je veux faire comprendre une chose, c'est que d'après notre expérience, nos meilleurs agents, ce sont le ministère de l'Industrie et le ministère des Forêts, en ce qui concerne la mise au point de nouvelles idées dans l'industrie forestière. C'est tout ce que j'ai à dire.

M. Rose: Par conséquent vous êtes ici pour louer ce ministère pour leur appui de votre initiative?

M. Matheson: C'est cela.

M. Rose: Et vous dites que vous êtes prêt à faire fonctionner votre invention. Est-ce que vous avez des contrats? Est-ce que vous avez un marché?

M. Matheson: Oui, nous avons des débouchés. Nous avons des débouchés dans d'autres parties du monde. Par exemple, demain je ne pourrai pas venir parce qu'un groupe d'Américains s'intéresse et voudrait la livraison d'un appareil en 1970.

M. Rose: Vous dites que nous faisons très peu de recherche non seulement dans l'industrie forestière, mais dans d'autres domaines. Est-ce que c'est parce qu'un grand nombre de nos grandes industries sont entre les mains d'entreprises américaines et que les recherches se font aux États-Unis plutôt qu'au Canada?

[Text]

Mr. Matheson: I do not know...

Mr. Rose: Sir, it takes large firms to indulge in this kind of investment and research, and most of the large firms that we have, certainly in the forest industries, and we learned this morning that this is true also of fishing and it is true of mining and oil... We can go right down the line. It appears to me that this is one of the inhibiting factors, and I wanted your comments on it.

Mr. Matheson: I do not know that I could honestly answer it. I have not done enough work in that field. However, I do feel that you cannot really call MacMillan and Bloedel a small company, or Crown Zellerbach Canada Ltd.—well, that is an American company. The only Canadian companies here are Canadian Forest Products and MacMillan Bloedel.

Mr. Rose: They are not doing the kind of research you think they should. What about safety? You mentioned five men involved in this operation. Has your technique through the balloon logging advanced to such an extent that you can ensure the safety of people operating these things?

Mr. Matheson: Let me answer in this way: This morning I met Robert Swanson who is the head of the commercial transport department in this province. I told him that I was appearing here and he said, "Well, one thing you can say is that the balloon transport system is approved by the Commercial Transport Department of the Province of British Columbia. All you have to do is read last night's paper and see that tugboats cannot even float after being built for several hundreds of years. I rode on your system and I will ride on it any day in the week".

Mr. Rose: Does this have any weather limitations?

Mr. Matheson: We have had no weather limitations other than heavy wet snow.

Mr. Rose: You can operate in all kinds of weather and wind conditions and all the rest of it?

Mr. Matheson: We logged in winds up to 65 miles an hour in north Vancouver and that is why our American cousins at the moment are dead in the water. They started out with this Vee-Balloon, they could not operate it in winds over 20 miles an hour, they swung the pendulum from the Vee-Balloon over to a great big sphere, and it cannot go in winds over 15 miles an hour. That is like saying, "I

[Interpretation]

M. Matheson: Je ne sais pas...

M. Rose: Il faut de grandes entreprises pour faire ce genre de recherche et d'investissement. Dans la plupart des grandes industries, dans le domaine du pétrole, des pêches, des mines, enfin partout, cela semble être le gros problème. Qu'en pensez-vous?

M. Matheson: Je ne sais pas si je peux répondre honnêtement. Je n'ai pas fait de travail dans ce domaine, mais j'estime qu'on ne peut pas dire que la *MacMillan Bloedel* est une petite entreprise. Au Canada, il n'y a que *MacMillan Bloedel* et *Canadian Forest Products*.

M. Rose: On ne fait pas la recherche selon vous, qu'on devrait faire. Et la sécurité? Vous avez parlé de cinq hommes. Est-ce que votre technique transport par ballon comporte certaines mesures qui puissent assurer tous les facteurs de sécurité aux usagers de ce dispositif?

M. Matheson: Ce matin, j'ai rencontré M. Robert Swanson, ministre des Transports commerciaux de la Colombie-Britannique. Je lui ai dit que je comparaisais ici et il m'a dit qu'une chose que je pourrais dire, c'est que le système de transport par ballon est approuvé par ce ministère. Suffit de lire le journal d'hier pour voir que les remorqueurs ne peuvent pas même flotter, après cent ans de mise au point. Le ministre a confiance en mon système.

M. Rose: Est-ce qu'il y a des limitations imposées par les intempéries?

M. Matheson: Seulement la neige mouillée, qui est lourde.

M. Rose: Vous pouvez faire fonctionner ces ballons dans toutes sortes de temps?

M. Matheson: Nous avons pu travailler malgré les vents de 60 milles à l'heure, à North Vancouver, voilà pourquoi les Américains sont battus à l'heure actuelle. Ils ont commencé avec un ballon en «V», ils ne pouvaient pas l'utiliser avec un vent de 20 milles; leur ballon sphérique ne peut pas résister à un vent de 15 milles à l'heure. C'est tout comme une auto qui ne peut servir les jours de pluie.

[Texte]

have a car that I cannot take out on rainy days".

Mr. Rose: My final question to the witness, Mr. Chairman, concerns the lift capacity of these balloons. Did you mention six tons?

Mr. Matheson: Yes. The balloons lift three tons statically; in other words, the straight lift of the gas.

Mr. Rose: I am sorry, I did not understand that.

Mr. Matheson: You then double it with the movement of the balloon through the air. If you will notice there, it is flying at about a 15 degree positive angle, so if you move it at speeds in excess of 30 miles an hour you pick up another three tons.

Mr. Rose: How does that relate in terms of number of logs?

The Chairman: Mr. Rose, your time is up.

Mr. Borrie: Mr. Chairman, would you permit a supplementary on the weather; just a short one?

The Chairman: A supplementary, Mr. Borrie.

Mr. Borrie: I wonder whether the witness would comment on storms and lightning? How does lightning affect your balloon operations?

Mr. Matheson: Lightning affects the balloon operations in this way: you get a lightning strike on Wednesday and your whole object is to get logs, so therefore you keep working until Saturday and Saturday you get a long ladder and you climb up on the balloon and you patch it. A real lightning strike that just lights the whole thing up like Granville Street puts a hole in the balloon about the size of a ballpoint pen. That is all. The gas does not leak out because it is not under pressure; it is just a big bag filled with helium.

Mr. Borrie: What about your guy wires?

Mr. Matheson: No problem.

Mr. Borrie: They are grounded?

Mr. Matheson: Yes.

The Chairman: I would just like to say that five members have indicated they want to question. We have one more brief to deal with today, so I would like to put the emphasis on brevity. Mr. Hogarth is next.

[Interprétation]

M. Rose: Ma dernière question au témoin, monsieur le président, se rapporte à la capacité de lever. Est-ce que vous avez mentionné 6 tonnes?

M. Matheson: Oui. Le ballon lève trois tonnes de façon statique.

M. Rose: Je n'ai pas compris cela.

M. Matheson: Puis on double la charge vu le déplacement du ballon dans l'air; il vole à un angle positif de 15 degrés, de sorte qu'il peut se charger de trois tonnes supplémentaires à plus de 15 milles à l'heure.

M. Rose: Et qu'est-ce que cela donne en ce qui concerne les billots?

Le président: Monsieur Rose, votre tour de parole est terminé.

M. Borrie: Monsieur le président, me permettez-vous de poser une question supplémentaire? Une question très courte d'ailleurs.

Le président: Allez-y, monsieur Borrie.

M. Borrie: Le témoin voudrait-il faire des commentaires sur les tempêtes et notamment sur les éclairs en ce qui concerne leur effet sur les ballons.

M. Matheson: L'éclair, si gros soit-il, ne peut faire qu'un trou de la grosseur d'une pointe stylo à bille dans le ballon, et ce n'est pas suffisant pour que tout le gaz s'échappe. Les réparations peuvent donc attendre quelques jours et l'exploitation n'est pas retardée.

M. Borrie: Et les câbles?

M. Matheson: Pas de problèmes.

M. Borrie: Il y a une mise à terre?

M. Matheson: Oui.

Le président: Cinq députés ont exprimé le désir de poser des questions. Il y a un autre mémoire qui va nous être présenté. J'aimerais donc mettre l'accent sur la brièveté. Monsieur Hogarth.

[Text]

Mr. Hogarth: Do you propose to have the Fraser Valley Indians fishing brief heard before we adjourn?

The Chairman: If there is time.

Mr. Hogarth: I see. Am I next in line?

The Chairman: That is right.

Mr. Hogarth: I will pass.

The Chairman: Mr. Crouse.

Mr. Crouse: Very briefly, Mr. Chairman, I am a bit confused but interested over the proposals. Are these balloons manned? And how are they operated?

Mr. Matheson: They are operated from a winch on the ground and really the basic part of the help from Ottawa was to develop this new winch. We had quite a struggle in order to get this winch developed. Man has been building winches for 50 years. What we needed was something entirely different. Logging, as you know, at the present is governed by sheer brute strength. You go out with heavy equipment and you grab onto this log and you drag it over everything by sheer strength; so you need heavy cable and a powerful, slow winch. We needed a racing car instead of a logging truck. There again was the inertia in industry. I am not being critical other than these are the facts of life, and if we in Canada cannot change and be ahead of these things we are going to be behind.

Mr. Crouse: Mr. Chairman, I have one other question. Are these balloons of any value in fighting a fire? I suppose they would be, but only in the area in which you are set up.

Mr. Matheson: That is correct. We have thought about it. For instance, below the lower black holes there, there is a water tank. In other words, there is a water tank two feet deep; the whole diameter of that thing. It has a hose on it, so if we had a fire anywhere in the area you would just hang the balloon at 600 feet and you would have all the pressure you could want and you would be there in two minutes.

Mr. Crouse: Have the logging companies indicated any interest in your company's product? Are they now using your service here in British Columbia?

Mr. Matheson: They have not used the service until right now when we said that we would contract for them. In other words, let us face it. Balloon transport was competing against the Caterpillar Tractor Company, Cummins Diesel of Canada Ltd. and Euclid.

[Interpretation]

M. Hogarth: Est-ce que vous comptez que nous entendions le mémoire sur la pêche des Indiens de la vallée du Fraser?

Le président: S'il y a le temps.

M. Hogarth: Je vois. C'est mon tour?

Le président: Oui.

M. Hogarth: Alors, je cède mon tour.

Le président: Monsieur Crouse.

M. Crouse: Je serai bref, monsieur le président. Je suis quelque peu confus mais je m'intéresse à ces propositions. Est-ce que ces ballons sont pilotés?

M. Matheson: Ils fonctionnent à partir d'un treuil, au sol. L'assistance que nous avons reçue d'Ottawa, c'est précisément de mettre au point ce nouveau treuil. Nous avons eu beaucoup de peine à faire cette mise au point. Ce qu'il nous fallait, c'était quelque chose de tout à fait différent. Comme vous le savez l'exploitation forestière, à l'heure actuelle, se fait simplement par la force. On se sert d'équipement très robuste, de la force de brute. Il faut de gros treuils, de gros câbles. Il nous fallait un treuil plus délicat. Je ne veux pas critiquer, mais le Canada doit progresser dans ce domaine.

M. Crouse: Une autre question, monsieur le président. Est-ce que ces ballons pourraient servir aussi à la lutte contre l'incendie? Je suppose que oui, mais seulement là où les ballons sont installés.

M. Matheson: Nous y avons songé. Avec un réservoir d'eau profond de deux pieds qui est muni d'un boyau, s'il y avait un feu dans la région, on n'aurait qu'à faire voler le ballon à 600 pieds, et on aurait toute la pression que l'on veut pour arroser l'incendie.

M. Crouse: Est-ce que les compagnies d'exploitation forestière sont intéressées à vos produits? Est-ce qu'ils utilisent vos services en Colombie-Britannique.

M. Matheson: On n'a pas utilisé nos services jusqu'à maintenant. Admettons-le, nous devons concurrencer avec la *Caterpillar Tractor*, la *Cummins Dieze* et la *Euclid*. Ces compagnies fabriquent l'équipement pour les entreprises d'exploitation forestière et il faut

[Texte]

They would build the machinery for our Canadian loggers and take them and say, "Would you like to try it once?"

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: I just have one short question, Mr. Chairman. This one has been raised before but I want to get further reaction. The brief states:

We feel that Balloon Transport Ltd. is doing all of these things mentioned by Dr. Solandt but needs financial support to carry out the development.

I am all taken up with the enthusiasm of the witness. I like to see people with ideas and good concepts and finding new things and so on, but I find it a little amazing that you cannot put your finger on the kind of financial assistance you need because this is the kind of thing we have to have if we are going to make any recommendations in support of your concept. We want to know this and I am surprised that you do not have this kind of general information or cannot give us a "guesstimation" at least of what kind of assistance your company needs.

Mr. Matheson: I can give you all kinds of "Guesstimates". In fact, my life is "guesstimating." All I am saying is that perhaps you want something a little more accurate and I could give it in the next day or two because Mr. Cuff is here from Ottawa and this is our job.

Mr. Lundrigan: I would like to suggest that you get this sort of thing and submit it to the Department of Industry and see what reaction you get there. Then perhaps, there is the Committee as well.

The Chairman: Mr. Comeau.

Mr. Comeau: Mr. Chairman, I will be very brief. I have two questions. In your estimation what would be the cost to a company to operate such an operation?

Mr. Matheson: Do you mean the capital cost, sir, or the operating cost?

Mr. Comeau: The capital and operating cost as well.

Mr. Matheson: Let me put it this way: the brochure which I gave to the other gentleman there—regarding analysis made by the Federal Forest Products Laboratory—indicates that, with this system, you can log out 5,000 feet with the balloon equipment just as cheaply—as you could log out 600 feet with a

[Interprétation]

drait laisser à ces entreprises une occasion d'essayer le ballon.

Mr. Crouse: Merci, monsieur le président.

Le président: Monsieur Lundrigan.

Mr. Lundrigan: Une brève question. Elle a déjà été soulevée, mais je veux obtenir une petite explication. Le mémoire dit:

La société *Balloon Transport Limited* remplit toutes ces conditions, à notre avis, mais elle a besoin d'un appui financier afin de pouvoir poursuivre son activité.

Je suis tout à fait pris par l'enthousiasme du témoin. J'aime à voir des gens avec de bonnes idées, avec de nouveaux concepts, mais je trouve quelque peu étonnant qu'on ne puisse déterminer le genre d'assistance financière dont on a besoin, car c'est précisément ce qu'il nous faut si nous voulons formuler des recommandations pour appuyer vos idées. Je suis surpris que vous n'ayez pas ce genre d'information générale, que vous ne puissiez pas nous donner une vague idée de l'assistance dont votre compagnie a besoin.

Mr. Matheson: Je peux vous donner toutes sortes d'estimations. Tout ce que je dis, c'est que je suppose que vous voulez avoir quelque chose de précis. Je pourrais vous le transmettre dans une journée ou deux car M. Cuff d'Ottawa est à Vancouver et nous devons précisément en discuter.

Mr. Lundrigan: J'aimerais que vous présentiez ces données au ministère de l'Industrie, pour voir sa réaction, et puis au Comité également.

Le président: Monsieur Comeau.

Mr. Comeau: Monsieur le président, j'ai deux questions. Quel serait le coût, pour une compagnie, de l'exploitation d'un système de transport de ce genre?

Mr. Matheson: Vous voulez dire les immobilisations ou les frais de fonctionnement?

Mr. Comeau: Les deux.

Mr. Matheson: La brochure que j'ai donnée à l'autre personne, au sujet des analyses faites par le Laboratoire fédéral des produits forestiers indique que ce système de ballon permet d'assurer l'exploitation de 5,000 pieds carrés au même prix que 600 pieds carrés par un pylône d'acier. De plus, il n'est pas néces-

[Text]

steel spire. Moreover, you do not have to build the road.

Mr. Comeau: So it compares very well with other records in...

Mr. Matheson: Oh, very much so.

Mr. Comeau: ...and at the same time probably reaches inaccessible regions. I have another question. You mentioned that this system did not work in Sweden. Why did it not work there—why, nevertheless, are you so enthusiastic about it working here?

Mr. Matheson: It is like the little story which I told, about Marconi. The Swedes used a British barrage balloon which had drifted right over the North Sea from Britain during the war and landed in Sweden. I am accused of using very poor comparisons but the following illustration may help.

If you and I loaded some fish on a Model T Ford—sedan, for that matter—I do not think it would need much imagination on our part to realize that if the body were taken off and a big box put on it, we could take more fish. The addition of bigger tires, a bigger engine, and a bigger transmission would put us in the fish trucking business.

In Sweden, however, for some reason or other, they said: "Well, it did not work here because the balloon leaked helium".

Gentlemen, if, in the year 1969, we can send men to the moon, I am confident that we procure a balloon which we can put up in the air in February and never even look at until November.

Mr. Comeau: Why the lack of enthusiasm about this idea? This is apparently what happened, they gave it up for...

Mr. Matheson: I am sorry, I could not answer that, sir. Why does anyone start something and give up? I almost gave up this winter, but when the price of logs went from \$50 to \$150, and the phone started ringing, I could not be unenthusiastic.

The Chairman: Thank you, Mr. Comeau. Mr. McBride?

Mr. McBride: My questions were on weather. I will pass because they have been answered.

The Chairman: Mr. Beaudoin?

[Interpretation]

saire de construire une route.

M. Comeau: Par conséquent, cela se compare très bien à tout autre moyen d'exploitation...

M. Matheson: Oh oui, beaucoup.

M. Comeau: ...et rejoint aussi des régions inaccessibles. Vous nous avez dit que ce système n'avait pas donné de bons résultats en Suède. Pourquoi? Qu'est-ce qui n'allait pas en Suède, et pourquoi êtes-vous si enthousiastes ici.

M. Matheson: C'est comme l'histoire que j'ai racontée au sujet de Marconi. Les Suédois ont utilisé un ballon de barrage britannique, qui s'était envolé de Grande-Bretagne, au-dessus de la Mer du Nord, pendant la dernière guerre et qui avait abouti en Suède. On m'accuse de faire de piètres comparaisons. Mais voici un exemple pour aider à comprendre: si vous et moi nous chargions du poisson à bord d'une voiture Ford, modèle T ou sedan, je pense qu'il ne faut pas un grand effort d'imagination pour réaliser que, si vous enleviez la charpente et mettiez une grosse boîte, le chargement pourrait être beaucoup plus volumineux. Vous pourriez avoir des pneus plus larges, une transmission plus puissante et pourriez ainsi assurer le transport en gros du poisson. Mais en Suède, pour quelque raison, on a dit que cela n'a pas donné de bons résultats car de l'hélium s'échappait du ballon. En 1969, si nous pouvons envoyer des hommes à la lune, je suis sûr que nous pouvons avoir un ballon, que nous pourrions faire monter en février et ne pas avoir à nous en occuper avant novembre.

M. Comeau: Comment se fait-il qu'il n'y a pas eu beaucoup d'enthousiasme en Suède? On a abandonné le projet en raison de l'échappement de l'hélium.

M. Matheson: Je ne peux pas répondre à cette question. Pourquoi commence-t-on un projet et l'abandonne-t-on? J'ai presque abandonné le projet moi-même cet hiver, mais lorsque le prix des billes est passé de \$50 à \$150 et que le téléphone a commencé à sonner sans arrêt je n'ai pas pu me désintéresser de l'affaire.

Le président: Merci, monsieur Comeau. Monsieur McBride?

M. McBride: Mes questions se rapportaient au climat; je passe, je cède mon tour car on y a répondu.

Le président: Monsieur Beaudoin?

[Texte]

M. Beaudoin: Merci, monsieur le président. Je poserais juste...

M. Matheson: Je parle un peu, très peu.

M. Beaudoin: Merci. Juste une question au témoin. Combien coûte un équipement tel que celui que nous voyons sur le mur là, l'équipement complet?

Mr. Matheson: Somewhere between \$175,000 and \$200,000. In other words, not much more than a steel spire. A Washington track loader or a Skagit—what do they call it?—a grapple rider—cost \$175,000 to \$180,000.

M. Beaudoin: Et quel serait le coût d'opération à l'heure, le taux horaire?

Mr. Matheson: Operating cost per hour? Eight into 600—about \$70-odd dollars.

M. Beaudoin: Merci.

The Chairman: Are there any further questions?

Mr. Noble: I would just like to ask if the witness has any idea how many board-feet there would be in three tons? You say three tons would be a cargo?

Mr. Matheson: About 750 board-feet.

Mr. Noble: Seven-hundred and fifty?

Mr. Matheson: Yes. One thousand board-feet of British Columbia fir weighs about four tons. But, if you are interested, I have here pictures of logs that we have moved which are five feet on the bottom and 32 feet long. That was on a windy day.

Mr. Noble: You said something about "slash and fire." I do not understand what you meant by that.

Mr. Matheson: This system enables a choker to be put on a very small piece of wood. In other words, we are using only half-inch chokers, so that we can put them around these little pieces of wood. An inch and a quarter choker just will not bend around. Our system, however, enabled us to clean the thing right off—as clean as this floor.

Mr. Noble: You can take it right out of the woods?

Mr. Matheson: Correct, right through the air.

[Interprétation]

Mr. Beaudoin: Thank you, Mr. Chairman. I would just like to put—

Mr. Matheson: I speak a little, but very little.

Mr. Beaudoin: Thank you. I have a question which I would like to put to the witness. What would be the cost of the kind of equipment we see on that wall over there? What would be the cost of the complete equipment?

M. Matheson: Entre \$175,000 et \$200,000. Autrement dit, pas beaucoup plus qu'un pylone en acier. Un chargeur par camion, type Washington ou un «SKAGIT» coûte environ de \$175,000 à \$180,000.

Mr. Beaudoin: And what would be the operating cost per hour?

M. Matheson: Le coût d'opération à l'heure? Environ \$70.

Mr. Beaudoin: Thank you.

Le président: Est-ce que vous avez d'autres questions? Monsieur Noble?

M. Noble: Monsieur le président, j'aimerais demander au témoin s'il sait combien de pieds planches il y aurait dans trois tonnes? Vous dites que 3 tonnes constitueraient la cargaison.

M. Matheson: Environ 750 pieds planches.

M. Noble: 750?

M. Matheson: Oui, 1,000 pieds planches de conifères pèsent environ 4 tonnes. J'ai ici des photos de billes de 32 pieds de longueur que nous avons pu déplacer, et par une journée où il y avait beaucoup de vent.

M. Noble: Vous avez parlé de déchets, d'incendies, de feu: de quoi parliez-vous exactement? Je ne comprend pas bien ce que vous voulez dire par là.

M. Matheson: C'est que ce système nous permet de passer un nœud coulant autour d'une très petite pièce de bois, nous n'utilisons que des câbles d'un demi-pouce car si vous vous servez d'un câble d'un pouce et quart, on ne pourra pas l'ajuster autour de la bille. Par cette méthode nous pouvons nettoyer complètement la place, et évacuer tous les déchets de l'exploitation.

M. Noble: Vous pouvez tout sortir des bois?

M. Matheson: Oui, par la voie des airs.

[Text]

The Chairman: Are there any further questions? If not, we wish to thank Mr. Matheson for a very interesting presentation.

I will now call Mr. Benjamin Paul to the Chair to present the Fraser Valley Indians Fishing Brief. We will now hear the brief read by Mr. Benjamin Paul.

Mr. Benjamin Paul (Fraser Valley Indians):

At this time I wish to welcome the opportunity to speak to you gentlemen this afternoon. On my right I have the . . . Chief Albert Douglas. My name is Benjamin Paul, the executive director of the confederation. I would say that it is, indeed, welcome to have such a gathering here this afternoon to listen to our disputation as regards our Indian aboriginal rights. As the executive director, I wish to emphasize, on behalf of the Committee, that we are very concerned—concerned to the extent that we will do everything in our power—to protect our hereditary and aboriginal rights.

I would like to draw to your attention—to the ministers here present—that protection of aboriginal rights is part and parcel of unsurrendered title. For those of you who are not familiar with this, we, in British Columbia, consider ourselves in a unique position because at no time has there ever been any surrender of title. This is why I say that until such time as the federal government will recognize the Indians' title—their right become legal entities—we will continue to struggle in this regard.

I would also suggest that when those in authority can produce documented evidence to show that they have justly compensated the Indians of British Columbia, then we, the Indians of British Columbia, will be prepared to discuss with them any pertinent business with regard to the conservation of fish and game. Until such time as such evidence is produced, we will continue to hunt fish and game for food.

The issues state quite emphatically that the Indians of the Fraser Valley are in complete disagreement with the closures which are being imposed indiscriminately by the Department of Fisheries. These constitute an infringement of aboriginal hereditary rights to hunt and fish for food. We want our hereditary rights to be recognized, and not usurped by Orders in Council, either provincially or federally. To the Indians of British Columbia this type of procedure is dictatorial and discriminatory. We want our aboriginal rights to be recognized as legal entities in every court of law—not superseded by a list

[Interpretation]

Le président: Y a-t-il d'autres questions? Non? Dans ce cas je voudrais remercier M. Matheson pour son très intéressant exposé.

J'invite maintenant M. Benjamin Paul à prendre la parole et à nous présenter le mémoire des pêcheurs indiens de la vallée du Fraser. Maintenant, M. Benjamin Paul va nous donner lecture du mémoire.

M. Benjamin Paul (Fraser Valley Indians):

Pour l'instant je suis heureux de l'occasion qui m'est donnée de vous adresser la parole cet après-midi. A ma droite, je vous présente le chef Albert Douglas, de Rosedale; je m'appelle Benjamin Paul, directeur exécutif de la Confédération, nous sommes vraiment satisfaits de voir une assemblée aussi impressionnante prête à écouter nos instances au sujet de nos droits aborigènes. A titre de directeur exécutif, je tiens à vous faire remarquer que nous sommes vivement préoccupés et inquiets, nous sommes prêts à faire tout ce qui est en notre pouvoir pour protéger nos droits héréditaires et aborigènes.

J'aimerais attirer votre attention et celle des ministres ici présents sur le fait que la protection des droits aborigènes et héréditaires est partie intégrante de l'entente générale que nous avons conclue. En Colombie-Britannique, nous nous considérons dans une position unique car, en aucun moment, il n'y a eu de renoncement à nos droits. C'est pourquoi je dis que jusqu'à ce que le gouvernement fédéral reconnaisse le droit des Indiens, leur droit d'être reconnus juridiquement, nous continuerons de lutter.

Je voudrais dire aussi que lorsque ceux qui détiennent le pouvoir nous démontreront avec preuve à l'appui que les Indiens de la Colombie-Britannique ont été équitablement indemnisés, nous alors, Indiens de la Colombie-Britannique, nous serons toujours prêts à discuter de toutes les questions pertinentes intéressant la conservation du poisson et de la faune. Jusqu'à ce qu'on puisse produire ces preuves, nous continuerons à pêcher et à chasser pour nous nourrir. Le mémoire dit que les Indiens du Fleuve Fraser s'opposent tout à fait au règlement de la fermeture des zones qui ont été imposées par le ministère des Pêches et qui sont contraires à nos droits aborigènes de pêche et de chasse pour nous nourrir. Nous voulons que nos droits héréditaires soient reconnus et ne soient pas entravés par des règlements fédéraux ou provinciaux. Pour nous, ce genre de procédure est discriminatoire et dictatorial. Nous voulons que nos droits aborigènes soient reconnus comme des faits au point de vue juridique dans chaque tribunal et qu'ils ne soient pas ignorés ou

[Texte]

of regulations such as those imposed by the Department of Fisheries.

I would suggest that if the federal government is not willing to adhere to our demands—namely, to hunt and fish for food—then, it leaves us no alternative but to seek solutions elsewhere, perhaps outside Canada—within the United Nations, or in an International Court of Law.

All we want is an unbiased and unprejudiced adjudication. And it is hoped that this committee will once again give equitable and justifiable consideration.

At this time I would like to read the brief which was prepared by the Fraser Valley Indians.

Various representations have been made to the Federal Fisheries Department during the past two years by the Fraser Valley Indians regarding their aboriginal and hereditary fishing rights on the Fraser River, culminating in a meeting at Seabird Island with the Honorable Arthur Laing and Federal Fisheries representatives on March 25, 1968.

One of the complaints brought forward at that meeting was the unwarranted harassment by fisheries officers of the Indians of the Fraser Valley. The Fraser Valley Indians wish to convey to the Federal Fisheries that this complaint has been acted upon and undue harassment has ceased.

It was suggested by Mr. Hourston, Director of the Pacific Region, Federal Fisheries, that a liaison be established to hear requests of the Indians of the Fraser Valley and other areas as to the Indians fishing problems and this brief is in answer to an attempt at such a liaison.

The Indians of the Fraser Valley, and some nearby points in the Fraser Canyon, were interested in reading a recent newspaper article which stated that commercial salmon fishermen in 1968 caught 180 million pounds of salmon worth \$44.5 million, totalling some 33.5 million salmon landed. In answer to this article Chief Vincent Harris of Seabird Island Reserve queries the attitude of Federal Fisheries towards the Indian Fisheries in the Fraser Valley as follows:

Dear Sir:

Regards to Mr. Jack Davis, Federal Minister of Fisheries report, fish landed in British Columbia 1968, 180 million pounds, worth \$44.5 million.

There is no report of the non commercial fisherman, who were badly affected by a shortage, in July 1968, which caused closure

[Interprétation]

annulés par des règlements, comme ceux imposés par le ministère des Pêches.

Je suis d'avis que si le gouvernement fédéral ne veut accéder à nos demandes, notamment au sujet de la chasse et la pêche alors, il faudra peut-être trouver des solutions ailleurs, peut-être hors du Canada devant les Nations Unies ou devant des cours de justice internationales. Tout ce que nous voulons, c'est une décision impartiale et équitable. Nous espérons que le Comité, encore une fois, pourra accorder une considération impartiale à nos demandes. J'aimerais maintenant vous donner lecture du mémoire qui a été préparé par le groupe des pêcheurs Indiens du fleuve Fraser.

Diverses instances ont été présentées au ministère fédéral des pêcheries au cours des deux dernières années, par le groupe des Indiens pêcheurs de la vallée Fraser, au sujet de leurs droits héréditaires et aborigènes le long du fleuve Fraser. Ces instances ont donné lieu à une réunion à l'île Seabird, avec l'honorable Arthur Lang et des représentants du ministère fédéral des Pêcheries au printemps de 1968, le 25 mars 1968.

L'une des plaintes formulées à cette réunion c'était le harcèlement injustifié auquel on soumettait les Indiens de la Vallée du Fraser. Il semble qu'on ait donné suite à ce grief et que le harcèlement ait pris fin.

M. Hourston, directeur de la région du Pacifique des pêcheries fédérales a proposé qu'une forme de liaison soit instituée pour donner droit ou donner suite aux requêtes des Indiens. Et, justement, notre mémoire, constitue une tentative d'établissement de liaison de ce genre.

Les Indiens de la vallée du Fraser et des localités environnantes du canion Fraser ont appris avec intérêt dans un article de journal que les pêcheurs commerciaux de saumon en 1968 avaient pris 180 millions de livres de saumon d'une valeur de 44.5 millions, 33.5 millions de dollars de prises: En réponse à cet article le chef Vincent Harris de Seabird Island Réserve se demande quelles sont les attitudes du ministère des Pêches envers les pêcheries indiennes des réserves de la vallée du Fraser:

Monsieur, voici la lettre au sujet des prises de l'an dernier qui totalisaient 180 millions de livres et d'une valeur de 44 millions de dollars.

Il n'y a aucun rapport sur les pêcheurs non-commerciaux, qui ont été durement affectés par la pénurie de poissons en l'année

[Text]

to Indians in the Fraser river from the Mission bridge up the Fraser river east.

I would appreciate the Minister explaining where the shortage of salmon came in 1968, and where Indians were blamed for this shortage, and caused hardship.

The Indians have stated they have landed less than one percent of the salmon in comparison to salmon caught by commercial fishermen. In this regard the Indians should have some explanation to the above report, and also why Indians have been fined and put in the gaol for landing food for themselves.

As a chief I would appreciate the fisheries allowing the Indians of the Fraser river 45 million pounds or one quarter of the salmon caught by commercial fishermen, any time of the day.

Chief Vincent Harris.

In response to requests by Federal Fisheries for the problems of the Indians in the Fraser Valley and their needs, the following are listed in hopes for consideration:

1. Fraser Valley Indians wish the right to use drift nets again.

2. They ask for unrestricted days for fishing during winter months. At present the three days allowed them per week are not sufficient, as the fish usually do not start running until Sunday night. If this is not considered, then at least five days should be allowed with the Indians having some say as to the days.

3. There should be no restrictions on the length of a net in that 10 fathoms, or 60 feet is not sufficient.

4. Indian fishing permits should not be necessary as Indians should have the right to fish for food purposes by only producing their Indian identity cards.

5. There should be no restrictions as to area regarding Indian food fishing rights. Indians are fined if they fish in areas not designated on their fishing permits, and wish to be able to fish where they want to. Sports fishermen are not restricted as to area and Indians who fish for food should not be either.

6. Smoked salmon and dried salmon are Indian delicacies and the Indians of the Fraser Valley ask that they be allowed the right to sell such delicacies to a certain extent. A co-operative established in the Fraser Valley

[Interpretation]

1968, pénurie qui a donné lieu à la fermeture pour les Indiens de zones de pêche à partir du pont de Mission jusqu'à l'est de la rivière.

J'aimerais que le ministre nous fournisse des explications au sujet de cette pénurie en 1968.

Les Indiens ont déclaré qu'ils ont débarqué ou qu'ils ont eu des prises représentant moins de 1 p. 100 des prises totales du saumon pris par les pêcheurs commerciaux. Les Indiens devraient donc recevoir des explications sur le rapport ci-dessus et on devrait leur dire pourquoi ils ont dû payer une amende ou aller en prison et pour avoir pêché du poisson pour eux-mêmes.

A titre de chef j'aimerais que le ministère des Pêches permette aux Indiens de la vallée Fraser de prendre le quart, ou 45 millions de livres de ces prises commerciales.

Le Chef Vincent Harris.

En réponse aux requêtes présentées par le ministère fédéral des Pêches, concernant les problèmes des Indiens de la vallée du Fraser et leurs besoins, les points suivants sont énumérés en vue d'être considérés:

1. Les Indiens de la vallée du Fraser veulent avoir le droit d'utiliser des filets dérivants.

2. Ils demandent que le nombre de jours de pêche ne soit pas restreint pendant les mois d'hiver; les trois jours par semaine ne sont pas suffisants à l'heure actuelle, puisque le poisson ne commence pas sa montée avant le dimanche soir. On devrait accorder au moins cinq jours et les indiens devraient pouvoir choisir les journées qui leur conviennent.

3. Il ne devrait y avoir aucune restriction quant à la longueur d'un filet. Et les limites de 10 brasses ou 63 pieds sont insuffisantes.

4. Les permis de pêche ne devraient pas être nécessaires aux Indiens, car les Indiens ne devraient que montrer leur carte d'identité quand ils pêchent pour se nourrir.

5. Il ne devrait y avoir aucune restriction quant aux endroits où les Indiens pêchent pour se nourrir. Les Indiens payent une amende s'ils pêchent dans un endroit qui n'est pas mentionnée sur leur permis. Ils désirent pouvoir pêcher là où ils le veulent. Les pêcheurs sportifs ne sont pas restreints quant aux zones et les indiens ne devraient pas l'être.

6. Le saumon fumé et séché sont des mets recherchés pour les Indiens et les Indiens de la vallée du Fraser devraient pouvoir les vendre, dans une certaine mesure. Une coopérative pourrait être établie dans la vallée du

[Texte]

has been considered for this purpose and the Indians ask that they be allowed to sell salmon to a certain degree in order to supplement their seasonal incomes.

7. The Indians of the Fraser Valley ask that the Stuart Lake run closure in July be lifted.

8. Sports fishermen are not restricted by cutting snouts or dorsal fins on salmon and the Indians of the Fraser Valley request these restrictions be removed regarding their food fisheries.

To me, this is certainly very humiliating and very dehumanizing. To me, it is very discriminatory when they ask Indians to do this, because they do not ask anybody else to do so.

9. The Boston Bar and North Bend Reserve Indians have only one place to fish. Their fishing is done by dip net and the Indians have long distances to travel. They are not allowed to fish at 4.9 mile, where the best fishing is located. The CNR created the rock slide at Hells Gate, not the Indians, yet they are prevented from fishing in their hereditary fishing spots in this area. When the water goes down they have to have more than one place to fish, and this should be given Consideration.

10. We strongly recommend that a committee of Indian people be established by the Department of Fisheries to act as a liaison between the Indians of British Columbia and the Department of Fisheries, and we further recommend that this committee be on a salaried basis, if it is to become effective and meaningful.

At the same time, gentlemen, I wish to make a few observations in this regard. What has the Department of Fisheries done in the 12-mile limits? I believe we are exasperated with this type of manipulation—manoeuvring—by government officials. This is a fact, because what have they really done with regard to the 12-mile limits? If Peru, a small country, can protect their fishing rights, surely the federal government can do something with regard to the 12-mile limits.

What has the Department of Fisheries done with regard to pollution—with regard to pulp mills in British Columbia?

Another point: what has it done in regard to forestry in terms of destroying the spawning grounds? I think this is worthy of consideration. Why does it always attack the line of least resistance—that is, the poor Indian people of British Columbia? I think it is high

[Interprétation]

Fraser à cette fin et les Indiens demandent de pouvoir vendre une quantité de saumon pour accroître leur revenu saisonnier.

7. Les Indiens de la vallée du Fraser demandent que la fermeture du lac Stuart en juillet, soit annulée.

8. Les pêcheurs sportifs ne sont pas obligés d'éliminer les nageoires dorsales ou les rostrés et les Indiens de la vallée du Fraser ne devraient pas être assujettis à ces restrictions quand ils pêchent pour se nourrir.

C'est là une chose très humiliante. C'est là une forme de discrimination lorsqu'ils demandent aux Indiens de faire ce qu'ils ne demandent pas aux autres.

9. Les Indiens de la *Boston Bar and North Bend Reserve* n'ont qu'un endroit où pêcher. La pêche est faite avec un filet à puisette et les Indiens doivent parcourir de longues distances. Ils ne peuvent pas pêcher à 4.9 milles là où se trouvent les meilleures zones de pêche. Le national canadien a provoqué des avalanches, mais non pas les Indiens et pourtant on les empêche de pêcher dans leurs zones de pêche ancestrales. Au moment de l'étéage, ils doivent avoir d'autres endroits pour pêcher et cela devrait être concédé.

10. Nous recommandons fortement qu'un comité d'Indiens soit institué par le ministère fédéral des Pêches afin de servir de liaison entre les Indiens de la Colombie Britannique et le ministère. Nous recommandons en outre que les membres de ce comité soient rémunérés si ceci devient efficace et prend une certaine signification.

Messieurs, j'aimerais ajouter certaines observations à ce mémoire. Qu'est-ce qu'a fait le ministère des Pêches au sujet de la limite de 12 milles. Je crois que nous en avons assez de ce genre de manœuvres de la part de ces fonctionnaires fédéraux. Qu'a-t-on fait vraiment au sujet de la limite de 12 milles. Si le Pérou, un petit pays, peut protéger ses droits de pêche, sûrement le gouvernement fédéral peut faire quelque chose au sujet de la limite de 12 milles.

Qu'a fait le gouvernement fédéral au sujet de la pollution causée par les scieries en Colombie Britannique?

Qu'a-t-on fait en ce qui concerne la destruction des frayères? Je crois que ceci devrait être pris en considération. Pourquoi toujours attaquer les plus faibles, c'est-à-dire les pauvres Indiens de la Colombie-Britannique?

[Text]

time that the federal government recognized the Indian people as legal entities, rather than taking a very discriminatory attitude.

At this point, gentlemen, I wish to call upon Chief Albert Douglas. Perhaps he can make further evaluations with respect to fishing in the Fraser River.

The Chairman: I now call Chief Albert Douglas.

Chief Albert Douglas (Fraser Valley Indians): Gentlemen, I appreciate the opportunity of coming here today. This has been my fight for a long time. I have always taken it as a comparison. What the government regards as a violation, the Indian people do not necessarily regard as being such. We do not quite consider it as a violation whenever they arraign us.

I am going to give only one comparison: The Japanese vessel which they caught here and escorted to Prince Rupert had, so I understand, 150 tons of fish in its hatch. The prosecutor was strong enough and brave enough to pressure for \$1,000 fine; however, I understand that the magistrate pressed for \$2,500.

When an Indian gets picked up, he loses everything. If he has a car, a boat, a net, and a motor on that boat, he loses it all and in addition gains a fine. An Indian would go out twice a day if he thought that he could get away with a \$2,500 fine for a \$44,000 or \$50,000 cargo. This is what we have been harping on here for the last 25 years.

Because we are small, we have no resistance. They give us the limit when we go to court. If we go to court, and we win our case, we are still losers.

I will give you one example on a case of a couple of years ago. There was a truck confiscated and there were 9,000 pounds of salmon on that truck. This fish was bought on the river at 45 cents a pound. The fisheries' officer that picked up this cargo took it to the fishing cannery and sold it to the cannery for 41 cents a pound. The Indian that handled this fish was given 47 cents a pound for his fish at another cannery. They fought that case and it took five months to clear it up. In the end it was dismissed and the Indian was the loser; he got 4 cents a pound less than what he paid for that fish. It cost him about \$1,000 for a lawyer's fee as well.

[Interpretation]

Je crois qu'il est grand temps que le gouvernement fédéral considère les Indiens comme des entités légales plutôt que de prendre une attitude de discrimination.

Et j'aimerais maintenant demander au chef Douglas de dire quelques mots; peut-être pourra-t-il faire une évaluation plus complète au sujet de la pêche dans le Fraser.

Le président: J'invite monsieur Douglas à prendre la parole.

M. Albert Douglas (Chef des Indiens de la Vallée du Fraser): Je suis content de pouvoir vous adresser la parole aujourd'hui. C'est la lutte que je mène depuis très longtemps. J'ai toujours fait une comparaison suivante: ce que le gouvernement considère comme une violation, les Indiens ne le considèrent pas ainsi; c'est le cas lorsqu'on nous inculpe.

Je voudrais faire une autre comparaison: Le vaisseau japonais qu'on a arrêté et conduit à Prince Rupert avait 150 tonnes de poissons dans son écoutille. On a imposé une amende de \$100,000. Le magistrat a porté cette amende à \$2,500. et lorsqu'un Indien est appréhendé, il perd tout. S'il a une voiture, s'il a un navire, s'il a des filets, il perd tout. Et on lui impose en plus une amende. Si l'on compare les natures de pêches et les Indiens, un Indien ira sûrement pêcher deux fois par jour, s'il pense qu'il peut s'en tirer avec une amende de \$2,500 pour une cargaison de \$44,000 ou \$50,000. C'est ce que nous avons rabâché ici depuis les vingt-cinq dernières années.

Simplement parce que nous sommes faibles, nous n'avons pas une grande résistance. Le Tribunal nous donne toujours les peines maximums. Par exemple, si nous allons en Cour et que nous gagnons notre cause, nous sommes néanmoins les perdants.

Je vais vous donner une idée de ce qui s'est passé il y a quelques années. Lorsqu'un camion a été confisqué, il y avait neuf mille livres de saumon sur le camion; ce poisson avait été acheté sur la rivière à 45 cents la livre. L'inspecteur des pêcheries, qui a saisi cette cargaison, l'a apportée à la conserverie, l'a vendu pour 41 cents la livre. L'Indien pouvait obtenir 47 cents à une autre conserverie. Il a fallu cinq mois pour éclaircir la cause; à la fin la plainte a été rejetée par le Juge, l'inspecteur a été renvoyé mais l'Indien a tout de même perdu. Il a reçu 4 cents la livre de moins qu'il avait payé pour ce poisson. Et il a dû payer environ mille dollars en frais d'avocat.

[Texte]

The Chairman: Thank you, Mr. Douglas. Mr. Howard is first on the list.

Mr. Howard (Skeena): Mr. Chairman, I do not want to get into the fundamental question of the hereditary rights or into the land question because I think we might be here all night and all day tomorrow if we discuss them. Moreover, I gather Mr. Paul or Chief Douglas that the Fisheries Department has asked you to make some presentations on what you would like to have, what the problems, are and what solutions you propose with respect to them. The points that you have enumerated are the response to that. Am I correct in assuming this?

Mr. Paul: This is true because we have had various meetings in the Fraser Valley in regard to the fishing there. The attitude of the Department of Fisheries should be a more discreet one in the performance of their duties. The cutting off of the snout and the dorsal fin, is an insult to me. They do not ask the sports fishermen to do this. They do not ask anyone to do this; that is why I say that this regulation imposed by the Department of Fisheries should be lifted immediately. If they want the Indians to do this then likewise they should ask the sports fishermen to do it as well. When they do that, then we will be prepared to do it also.

Mr. Howard (Skeena): I have two or three other things that I would like to inquire about, Mr. Paul. You mention in Point No. 6, with respect to smoked salmon and dried salmon and the like, about marketing them, that a co-operative has been considered for construction in the Fraser Valley. How close is this to realization? Have you any plans for developing it or any ideas of assistance from an area?

Chief Douglas: We have not really secured any plans at all because we are tied down. We cannot sell our fish or anything at all; until such time as this restriction is lifted from us, we will not be able to plan on this. The Indian way of curing salmon does not require very much money; this is the reason why the Indian has gotten by up until now: he never had to have big capital to smoke and cure his salmon.

Mr. Howard (Skeena): You are not allowed to fish at 4.9 mile where presumably the best fishing is located; your fishing is restricted in other areas in the river as well. Why is this? Has there been any explanation given for it?

[Interprétation]

Le président: Je vous remercie, monsieur Douglas. Maintenant, monsieur Howard est le premier sur ma liste.

M. Howard (Skeena): Monsieur le président, je ne veux pas aborder la question fondamentale des droits héréditaires. Si nous commençons à aborder cette question, nous parlerons toute la nuit et toute la journée de demain. Mais s'il est possible d'entendre monsieur Paul ou monsieur Chief Douglas, est-ce que le ministre des Pêches vous a demandé de formuler un mémoire sur les solutions que vous proposez à l'égard des problèmes que vous soulevez? Les points que vous avez soulevés sont la réponse à cette demande du ministère des Pêches? Est-ce exact?

M. Paul: Oui, c'est vrai, dans la vallée du Fraser, nous avons tenu différentes réunions. L'attitude du ministère des pêcheries devrait être un peu plus discrète au cours de l'exercice de leurs fonctions. Pour moi, couper la tête et la nageoire dorsale d'un saumon c'est une insulte. Ils ne demandent pas aux pêcheurs sportifs de le faire; voilà pourquoi je dis que ce règlement du ministère des pêcheries devrait être levé immédiatement. S'ils exigent de faire ainsi, des Indiens, qu'ils demandent aussi aux pêcheurs sportifs de le faire. Lorsqu'ils le feront, nous le ferons aussi.

M. Howard (Skeena): Une autre chose, monsieur Paul. Vous dites dans le paragraphe 6 au sujet du saumon fumé et du saumon séché que l'établissement d'une coopérative est envisagé. Dans quelle mesure est-ce que ce plan va être réalisé? Est-ce que vous avez des plans, des projets définitifs, aurez-vous une aide?

M. Douglas: A ce sujet, nous n'avons pas encore un plan car nous avons les mains liées. Nous ne pouvons pas vendre notre poisson, tant que cette restriction n'est pas levée; nous ne pouvons pas faire de projets. La façon dont l'Indien s'y prend pour fumer son saumon ne coûte pas cher.

M. Howard (Skeena): Vous n'êtes pas autorisés à pêcher au point 4.9, où l'on trouve le meilleur emplacement. Et vous avez des restrictions à la pêche dans d'autres endroits de la rivière, est-ce qu'on vous a donné des explications?

[Text]

Chief Douglas: Perhaps I could answer that better than Mr. Paul. This 4.9 mile is a 2-mile limit above and below the Hells Gate side.

Mr. Howard (Skeena): There is a restriction.

Chief Douglas: Yes, there is a restriction. These Indians are not allowed to fish in that area at all. They have had fishing grounds in that area; since that restriction has been imposed, they only have one spot in which to fish; the Indians have to wait their turn. Sometimes they sit there for seven or eight hours before their time comes to fish in that one spot.

Mr. Paul: Another thing we are asking for is permission to fish one mile from Hells Gate on both sides. This would not handicap the Indian people in that particular area. I think this is something that should be considered by the Department of Fisheries because all the Indians want is to fish for their own personal use.

In regard to Point No. 6, there are many Indian people in the lower mainland that find it rather difficult to go up in the Fraser Valley or in the Fraser Canyon to dry salmon; however, if this restriction were lifted, then the delicacies which many people require would be salvaged. It is a delicacy to have smoked salmon or sun-dried salmon; and this is what they want for their own consumption and personal use only.

Mr. Howard (Skeena): Thank you very much.

Mr. Borrie: Mr. Chairman, the question I have is related to a previous brief that we had with regard to fishlegging, bootlegging of fish. I was wondering if the Indian Councils or the Indians themselves along the Fraser River are trying to police this in any manner. Do the Indian Councils, the Reserve Councils, attempt to police the selling of fish caught by Indians contrary to law in any way?

Chief Douglas: I will give you a straight answer on that. As I said before we Indian people feel that we are not doing anything wrong and until such time as the restriction is lifted, that we cannot sell our salmon, we are not going to police it or anything. This is what the Indian feels. The salmon was here when he was here and he therefore feels that he is not breaking the law if he sells fish.

[Interpretation]

M. Douglas: J'ai une autre réponse. Ces 4.9 milles sont une limite de deux milles en haut et en bas d'une rive de Hells Gate.

M. Howard (Skeena): Il y a une restriction.

M. Douglas: Oui, il y a une restriction. Les Indiens ne sont pas autorisés à pêcher dans cette région du tout. Ils avaient autrefois des lieux de pêche le long de cette région et depuis l'institution de cette restriction, les Indiens n'ont plus qu'un seul endroit pour pêcher. Et les Indiens doivent attendre leur tour, ils doivent quelquefois attendre six ou sept heures pour avoir leur tour de pêcher à cet endroit.

M. Paul: Nous demandons aussi l'autorisation de pêcher à un mille au-dessus et au dessous de Hells Gate. Cela n'handicaperait pas la population indienne de la région, et devrait être envisagé par le ministère des Pêches, car ce que veulent les Indiens, c'est pêcher pour leur propres besoins. En ce qui concerne le paragraphe 6, il y a de nombreux Indiens dans les basses terres qui trouvent qu'il est difficile de se rendre dans la vallée du Fraser ou le Canyon, dans la gorge du Fraser pour sécher le saumon. Mais si cette restriction était levée, cette gourmandise qu'est le saumon séché, et qui fait les délices de nombreuses personnes pourra se perpétuer. Le saumon fumé ou séché au soleil, est une gourmandise que les Indiens veulent conserver pour leur usage.

M. Howard (Skeena): Merci beaucoup.

M. Borrie: Monsieur le président, la question que je voudrais poser se rapporte à un précédent concernant le braconnage du poisson. Est-ce que le conseil des Indiens ou les Indiens eux-mêmes le long du Fraser cherchent à faire la surveillance entre la vente du poisson pris par les Indiens, ce qui est contraire à la Loi, et certains le font. Est-ce que le conseil des Indiens cherche à surveiller les Indiens, pour les empêcher de le faire. Pouvez-vous donner une réponse directe?

M. Douglas: Comme je l'ai dit tout à l'heure, nous estimons que nous ne faisons rien de mal; et tant que cette restriction ne sera pas levée, que nous ne pouvons pas vendre notre saumon, nous ne surveillerons pas notre population. Les Indiens estiment que le saumon était ici quand ils se trouvaient ici; ils estiment qu'ils ne violent pas la loi, et ils n'ont pas le sentiment de commettre une infraction.

[Texte]

Mr. Borrie: Yes, I think that most members of the Committee are very sympathetic with the comments in your brief. There is one thing that confuses me, because I am not a fisherman, and that is that fish do not start running until Sunday night. Why do they choose Sunday night?

Chief Douglas: The Department of Fisheries regulate it right from the mouth of the river, right through. The commercial fishermen fish from the mouth of the river right up to the Mission Bridge on a certain day. It takes so many days or so many hours for a fish to get up to the Agassiz Bridge and this is why we wanted to pick our own days; the Indian feels that he is given the day when the fish start to slack down on the river at that certain point. At all points along the river, there is a certain day for fishing.

Mr. Borrie: Yes, I see. There is an analogy that Mr. Paul made in his opening remarks, and I could not help but remember it. You mentioned the 12-mile limit. If smaller countries can enforce probably in Canada we could too; however, it is to enforce a 12-mile limit so that all things are equal, Mr. Paul.

Mr. Paul: I think that we should stop patronizing the various departments. I feel that the various departments are wrong in this regard; I would suggest that the Department of Fisheries take very strong action regardless of what External Affairs has to say or Trade and Commerce has to say. This is what I mean. We should stop patronizing one another. I think this is very important. It is high time that you Members of Parliament become cognizant of this. This is what I am trying to point out.

Mr. Borrie: I think that we are very cognizant of it, Mr. Paul; however, international agreements are also involved in this; that is a much deeper and a much more probing question than it would appear to be on the surface. This is the position that we have to take at the present time. We agree with you, mind you about the 12-mile limit.

Mr. Paul: I am glad that you do.

Mr. Borrie: Yes, we do, very much so. Thank you, Mr. Chairman.

Mr. Hogarth: Mr. Paul, I am extremely interested in some of the things that you have said. I do not know any Fraser Valley Indian fisherman. However, I have known a number in the northern part of the province. It is my understanding that any native Indian in

[Interprétation]

M. Borrie: Je puis vous assurer que la plupart des membres du comité sont d'accord avec vous, mais il y a une chose qui m'embrouille, parce que je ne suis pas un pêcheur. Le saumon ne commence pas à remonter avant... le dimanche soir(?) Pourquoi est-ce qu'il commence à remonter le dimanche soir?

M. Douglas: Le ministère des Pêches réglemente la pêche à partir de l'embouchure du Fleuve. Le pêcheur commercial va de l'embouchure jusqu'au pont «Mission un jour donné! Il faut un certain nombre de jours, un certain nombre d'heures, pour que le poisson remonte jusqu'au pont d'Agassiz. Voilà pourquoi nous voulons choisir nos propres jours, car les Indiens ont l'impression qu'on leur donne le jour où le poisson ralentit sa course dans la rivière. A tous les points tout le long de la rivière, il y a certains jours prévus pour la pêche.

M. Borrie: Monsieur Paul a cité une analogie au début de son discours. Je n'ai pas pu m'en souvenir. Vous avez mentionné la limite de douze milles des eaux territoriales. Si certains petits pays peuvent appliquer probablement qu'au Canada nous pourrions aussi le faire.

M. Paul: Ce que je voulais dire, c'est que nous devrions commencer par cesser de protéger différents ministères. Le ministère des Pêches devrait prendre des mesures énergiques sans écouter ce qu'ont à dire le ministère du Commerce et le ministère des Affaires extérieures. Qu'ils cessent de se protéger les uns les autres. C'est très important. Il est grand temps que vous, les membres du Parlement, vous vous en rendiez compte. C'est ce que je voulais dire.

M. Borrie: Nous nous en rendons compte, monsieur Paul, mais c'est une question d'accords internationaux. Et c'est une question beaucoup plus importante, qui va beaucoup plus loin que ce qu'il en paraît à la surface. Nous sommes d'accord avec vous, à propos de cette zone de douze milles.

M. Paul: Je suis heureux de l'apprendre.

M. Borrie: Oui, nous vous approuvons. Merci.

M. Hogarth: Monsieur Paul, certaines des choses que vous me dites m'intéressent beaucoup. Je ne connais aucun pêcheur Indien de la vallée du «Fraser». J'en ai connu certains dans la partie septentrionale de la province, et il me semble que tout pêcheur Indien a le

[Text]

this province is quite entitled to fish commercially for fish anywhere he wishes subject to the Fisheries Department regulations. Is that not so?

Chief Douglas: I did not get your question.

Mr. Hogarth: It is my understanding that any native person in this province, no matter where he lives, be it in Port Simpson, Skidegate, the Fraser Valley, Seabird or wherever, is entitled to fish commercially for salmon just like other people in the province who have a licence. Is that not so?

Mr. Paul: This is true, but we are concerned primarily with fishing for food consumption.

Mr. Hogarth: Let me get to that in a minute. The right to fish commercially is accorded to native people even more so than it is to white people in the province. Is that not correct?

Mr. Paul: As long as the Indians abide by regulations, then that is correct.

Mr. Hogarth: All right, so the fishing with which you are concerned is the right to fish solely for your personal use of food. Is that correct?

Mr. Paul: Not entirely. You mentioned Point No. 6; we also wish to sell dried salmon and smoked salmon; this would be going further than the restrictions now allow.

Mr. Hogarth: What restriction is there to prevent you from selling smoked and dried salmon that you have caught under your commercial licences, as opposed to what you have caught for your personal use. There is none, is there? You can smoke all the commercially caught fish you wish to smoke and sell them anywhere, can you not?

Chief Douglas: Yes, we can sell anything that is caught commercially as long as we pay for our licence and go to about \$25,000 or \$30,000 to buy equipment. We are talking about the Indian people who cannot afford this, such as our elderly people who are 60 or 65 years old. A lot of these people have to go on welfare because they cannot afford this.

Mr. Hogarth: That is true with a lot of white people too, is it not?

Chief Douglas: Yes, this is probably so, but this is why we are here. We are asking why? Why do we have to abide by this? Why do we

[Interpretation]

droit de pêcher commercialement, compte tenu des restrictions et du règlement du ministère des Pêcheries, n'est-ce pas exact?

M. Douglas: Je n'ai pas compris votre question.

M. Hogarth: Je croyais que les Indiens de la province, où qu'ils vivent, que ce soit à Port Simpson, à Skidegate dans la vallée du Fraser, à Seabird ou n'importe où, ont le droit de pêcher commercialement du saumon, comme n'importe qui, s'il a un permis. N'est-ce pas exact?

M. Paul: C'est vrai; mais nous voulons surtout pêcher pour nos propres besoins.

M. Hogarth: Oui, nous y reviendrons; mais le droit de pêcher commercialement est accordé à tous les Indiens, encore plus facilement que des Blancs dans la province. Est-ce que ce n'est pas vrai?

M. Paul: Aussi longtemps que les Indiens s'en tiennent au règlement, oui.

M. Hogarth: De sorte que la pêche que vous voulez faire est uniquement celle pour vos besoins domestiques.

M. Paul: Pas complètement, comme on le mentionne dans le numéro 6. Nous voulons aussi vendre le poisson séché et le poisson fumé, le saumon fumé, le saumon séché, nous voulons aller un peu plus loin que les restrictions actuelles.

M. Hogarth: Quel règlement vous empêche-t-il de vendre du saumon séché ou fumé que vous avez pris en vertu de votre permis commercial, par opposition au saumon que vous avez pris pour votre propre consommation, vous pouvez fumer tout le saumon et le vendre.

M. Douglas: Nous pouvons vendre n'importe quoi qui est pris commercialement aussi longtemps que nous payons pour le permis et que nous payons \$25,000 à \$30,000 en équipement—Nous parlons des Indiens qui ne peuvent pas se payer cet équipement, ceux qui ont 60, 65 ans par exemple; un grand nombre de ces Indiens sont sous l'assistance publique, ceux qui ne peuvent pas le faire.

M. Hogarth: C'est vrai pour beaucoup de Blancs aussi, non?

M. Douglas: Peut-être, mais voilà pourquoi nous sommes ici, nous demandons pourquoi est-ce que nous devons respecter ce règle-

[Texte]

have to go to such large expense in order to sell and survive in this world?

Mr. Hogarth: Of course, white people who are impoverished could raise the same point of view, could they not? However, is it not so that for your personal use of the fish for food, that we are concerned with here today, that you are entitled to fish in areas which are prohibited to other fishermen?

Chief Douglas: Yes, we are entitled to fish in such areas with a very restricted net. I will pass a fishing permit around here, if you people would like to see it.

Mr. Hogarth: I appreciate that there may be some restrictions upon that use but nonetheless are you not entitled to fish in areas that are closed to other fishermen of all kind for your personal use?

Chief Douglas: That is not entirely true. The sports fishermen have all the freedom in the world to fish in the same area as we do.

Mr. Hogarth: Yes, but they are precluded, are they not, from using the methods that you are entitled to use?

Mr. Paul: Yes, this is true, but at the same time, they are not asked to cut off the snout and the dorsal fin.

Mr. Hogarth: No, but is that not for the purpose of the Fisheries Department to be able to identify those fish which have been caught by the methods that you use as opposed to those that have been caught by sports fishing methods?

Chief Douglas: Any fish caught under sports fishermen angler's licence is not allowed to be sold or bartered either.

Mr. Hogarth: I appreciate that but the point is that you can catch fish, in the areas in which you are entitled to fish and by the methods that you are entitled to use, in greater quantities than the sports fishermen of which you may be one. Is that not so? In short, you can catch fish by the methods you use for commercial quantities of fish, this is rather difficult for a sports fishermen, is it not?

Chief Douglas: I would not say so for all fish, take the steelhead, for example. I think the sports fisherman will get as many steelhead as the Indian does.

Mr. Hogarth: I have not met a steelhead fisherman yet who has caught one in his first

[Interprétation]

ment; pourquoi est-ce que nous devons faire toutes ces énormes dépenses pour pouvoir survivre dans ce monde?

M. Hogarth: Naturellement, les Blancs qui sont pauvres peuvent soulever la même question, n'est-ce pas? Mais il n'en est pas ainsi pour vos besoins personnels? Vous avez le droit de pêcher dans les régions qui sont interdites à d'autres pêcheurs. Est-ce que ce n'est pas vrai?

M. Douglas: Oui, avec beaucoup de restrictions...

M. Hogarth: Mais néanmoins, vous n'avez pas le droit de pêcher dans des régions qui sont fermées à d'autres pêcheurs.

M. Douglas: Ce n'est pas entièrement vrai. Le pêcheur sportif peut pêcher n'importe où.

M. Hogarth: Mais ils ne peuvent pas utiliser les méthodes que vous employez; est-ce qu'il n'en est pas ainsi?

M. Paul: C'est vrai, mais en même temps, on ne leur demande pas de couper la tête et la nageoire dorsale de leurs poissons.

M. Hogarth: Mais est-ce qu'il ne faut pas que le ministère des pêches reconnaisse les poissons que vous avez pêchés par rapport aux poissons pêchés par des sportifs?

M. Douglas: Tout poisson pris en vertu du permis sportif ne peut être vendu ou échangé.

M. Hogarth: Je m'en rends compte, mais vous pouvez prendre du poisson dans les régions où vous avez droit de pêcher; par les méthodes que vous pouvez utiliser, vous pouvez prendre du poisson en plus grande quantité que le pêcheur sportif. En fait vous pouvez prendre, par les méthodes que vous utilisez, des quantités commerciales de poissons, ce qu'un pêcheur commercial aurait peine à faire. Est-ce qu'il n'en est pas ainsi?

M. Douglas: Il n'en est pas ainsi pour tous les poissons. Prenez le «Steelhead» par exemple. En fait le Blanc pêche autant de «Steelheads» que nous.

M. Hogarth: De toute façon, dites-vous que le pêcheur sportif peut prendre autant de

[Text]

two years. In any event, are you suggesting that the steelhead sports fisherman can catch as many steelhead in a year with the equipment he uses as a native person using a net?

Chief Douglas: I will disagree with that any day.

Mr. Hogarth: You would say that, would you?

Chief Douglas: You are quite right that I would.

The Chairman: Mr. Lundrigan, on a supplementary.

Mr. Lundrigan: It is my understanding that in catching a fish, you have to literally mark "Indian" across that fish?

Mr. Paul: All fish that are caught, the snout and the dorsal fin must be cut off.

Mr. Lundrigan: Therefore, you have to mark Indian on your fish, this means that I can go out as a sports fisherman or in any capacity and cut the fin and the snout off, then sell the fish and you literally can get the blame for what I did? In other words, you have to mark Indian on your fish; this is what it amounts to.

Mr. Paul: That is about the size of it, yes. This to me is being discriminatory.

Mr. Hogarth: Just one moment. If you are up in the Vetter River or the South Thompson, and you are using sports tackle to catch the fish—forget the fact that you may be a member of an Indian band—then that fish does not have to be marked, does it?

Mr. Paul: No.

Mr. Hogarth: Therefore, the only fish that has to be marked is the fish that you as Indians are permitted to catch in otherwise prohibited areas by otherwise prohibited methods. Is that not so?

Mr. Paul: This is true. However, the federal Government is taking the line of least resistance because the Indian people are not really prone to protect themselves. We are at the mercy of the Department of Fisheries in this regard and all we are asking is for some favourable consideration; I think that you yourself would be highly insulted if I told you to cut off the dorsal fin and the snout. The sports fisherman and anyone else should have to do this as well.

The Chairman: Mr. Hogarth, I am sorry but you have gone over your limited time.

[Interpretation]

«steelheads» avec l'équipement qu'il utilise qu'un Indien qui utilise un filet.

M. Douglas: Oh non.

M. Hogarth: Vous dites cela?

M. Douglas: Je suis tout à fait d'accord.

Le président: M. Lundrigan.

M. Lundrigan: Question supplémentaire, monsieur le président. Dois-je comprendre qu'en prenant votre poisson vous avez littéralement à écrire «poisson indien» sur sa peau.

M. Paul: On doit enlever la tête et les nageoires de tout poisson qu'on capture.

M. Lundrigan: Si je fais cela et que je vends mon poisson vous pouvez ainsi être accusé à ma place?

M. Paul: C'est environ cela, oui. Et pour moi, c'est discriminatoire.

M. Hogarth: Si vous prenez le poisson avec un équipement sportif, par exemple dans la rivière Vetter ou Thompson Sud, oubliez-vous le fait que vous soyez membres d'une bande indienne. Ce poisson n'a pas à être marqué?

M. Paul: Non.

M. Hogarth: De sorte que le seul poisson qui doit être marqué est le poisson que vous, à titre d'Indiens, êtes autorisés à pêcher dans les régions interdites à la pêche pour d'autres personnes.

M. Paul: C'est vrai, mais en même temps j'affirme que si le ministère des Pêches était un peu plus coulant à ce sujet ils attaquent la ligne de moindre résistance, parce que les Indiens ne sont pas réellement portés à se protéger. Nous sommes à la merci du ministère des Pêches, à ce sujet. Tout ce que nous demandons, c'est un examen de la situation à cet égard; car vous-mêmes, vous seriez insultés si on vous demandait de couper la tête et la nageoire du poisson.

Le président: M. Hogarth vous avez dépassé votre temps.

[Texte]

Mr. Hogarth: I have just one more brief question. Are steelheads not marked by sports fishermen by tagging them?

Chief Douglas: Not that I know of.

Mr. Paul: I do not think so.

Mr. Hogarth: There is a scale sample taken from every steelhead. Is that not so? They have to punch their licence.

Mr. Paul: I am not aware of that.

Mr. Hogarth: I have no further questions. I would like to continue, Mr. Chairman, but I will abide by your ruling with respect to the time.

Mr. Whelan: Mr. Chairman, there is one question that Mr. Hogarth has covered regarding the cutting the snout and the dorsal fin; this to me is wrong; it has been explained, however, I still do not see why it has to be done, why the Indian people have to do it. I would like to ask either Chief Douglas or Mr. Paul how many of the people in the Fraser Valley who cannot fish—are not allowed to fish—are on welfare. What percentage of them?

Mr. Paul: In the Fraser Canyon, Lytton, Lillooet District, I would say that 95 per cent of the Indian people are on welfare.

Mr. Whelan: Is it partly because the fish are a delicacy that they cannot catch them? Is that one of the reasons they do not have this extra income?

Chief Douglas: It is the only thing the older Indian knows—he has to hunt and he has to fish—this is what he knows.

Mr. Paul: In addition to that, it is the economy that prevails in the area. It should be declared a designated area and this is what we are working towards.

Mr. Whelan: When we talk about the twelve-mile limit, we hear so much about the fact of historic rights. It is the Indian's historic right to fish and hunt wherever he pleases that you are claiming, is it not?

Chief Douglas: This is true.

Mr. Whelan: You feel that this should be so, the same as in other countries that are fishing off the coast. Also, do you know if any of your people set nets and then forget about

[Interprétation]

M. Hogarth: Est-ce que les «steelheads» sont marqués par le pêcheur sportif, est-ce qu'il les étiquette?

M. Douglas: Je ne sais pas, je ne pense pas.

M. Paul: Je ne crois pas.

M. Hogarth: Est-ce qu'il y a une écaille prise à chaque poisson? Est-ce qu'on ne lui met pas...?

M. Paul: Je ne suis pas au courant.

M. Hogarth: Je voudrais continuer, monsieur le président; mais je dois m'en tenir au temps imposé.

M. Whelan: Une question, soulevée par monsieur Hogarth, à propos de l'écaille. Il me semble que cette méthode est fausse; elle a été mal expliquée. Je ne vois pas pourquoi les Indiens devraient le faire. Je pourrais demander au chef Douglas ou à M. Paul, combien d'Indiens de la vallée du Fraser qui ne peuvent pas pêcher ou qui ne sont pas autorisé à pêcher reçoivent de l'aide de l'assistance publique. Quel pourcentage?

M. Paul: Dans la gorge du Fraser, les districts de Lytton et Lillooet, je dirais que 95 p. 100 des Indiens dépendent de l'assistance publique.

M. Whelan: Est-ce en partie parce que le poisson est un plat recherché des gourmets que vous ne pouvez pas le prendre? Est-ce pour cette raison qu'ils n'ont pas ce revenu supplémentaire?

M. Douglas: C'est tout ce que les vieux Indiens savent faire, la pêche et la chasse, c'est la seule chose qu'ils savent faire.

M. Paul: Et j'ajoute également que c'est l'économie principale de la région. C'est une région qui devrait être désignée. C'est ce que nous voulons.

M. Whelan: Une des choses dont on entend parler lorsqu'on parle de cette limite des 12 milles c'est les droits historiques. Ce que vous prétendez alors c'est que l'Indien a le droit historique de pêcher n'importe où, n'est-ce pas?

M. Douglas: C'est exact.

M. Whelan: Vous estimez qu'il devrait en être ainsi, tout comme dans les autres pays où l'on pêche sur la côte. Est-ce que vous êtes également au courant que certains In-

[Text]

them and leave the salmon in the nets? Does this ever happen, to your knowledge?

Chief Douglas: I would say yes, the odd time, but not too often. If the Department of Fisheries, as usually happens, say, "You have to pull your nets out at six o'clock Sunday night", sometimes they are right there at six o'clock and the Indian does not come there until about seven o'clock.

Mr. Whelan: Do they fine the Indian when they do that, sir?

Chief Douglas: If they catch the Indian, he usually has to go to court for it—for fishing out of season.

Mr. Whelan: Because he is one hour late? Do you have any idea what percentage of the fish would be lost in the nets by Indians leaving them too long in the nets and forgetting about them. Would it be 10 per cent?

Mr. Paul: I think it would be a very small percentage, really.

Mr. Whelan: That is all, Mr. Chairman.

The Chairman: Mr. Rose.

Mr. Rose: Mr. Paul and Chief Douglas, has this matter of historic rights been a long concern to the Indian people in British Columbia?

Mr. Paul: It certainly has. As I said in my opening remarks, the Indians of British Columbia are in a unique position because at no time have we been a day in court where the federal government has recognized the legal entity of the Indian people. This is why we are so concerned about the British Columbia land question, which is part and parcel of hunting and fishing for food.

Mr. Rose: Is this perhaps the rationale behind or the reason behind your suggestion in point 6, that the Indian bands above the Mission Bridge be allowed the right—and I quote from your letter or brief here:

to sell such delicacies to a certain extent.

Do you feel that you have been discriminated against so long that you would like some legislation that would discriminate for the native Indian, or in favour of the native Indian?

Mr. Paul: I hope we do receive favourable consideration in regard to all points—not only

[Interpretation]

diens posent des filets, qu'ils les oublient et y laissent le saumon? Est-ce que cela arrive quelquefois?

M. Douglas: Je dirais que oui, cela arrive parfois, mais pas très souvent. Si le ministère des Pêcheries nous dit, comme il le fait parfois, qu'il faut retirer les filets à 6h00 le dimanche soir, ils y ont parfois à l'heure mais l'Indien n'arrive pas avant 7h00 environ.

M. Whelan: Est-ce qu'il lui imposent alors une amende?

M. Douglas: S'ils prennent l'Indien, il le traduisent en tribunal lorsqu'il pêche en dehors de la saison.

M. Whelan: Parce qu'il est une heure en retard? Vous n'avez pas une idée du pourcentage de poisson qui serait perdu dans le filet parce que les Indiens laissent les filets trop longtemps? Serait-ce 10 p. 100?

M. Paul: Je crois que ce serait un faible pourcentage réellement.

M. Whelan: C'est tout, monsieur le président.

Le président: Monsieur Rose.

M. Rose: Monsieur Paul et chef Douglas, est-ce que cette question des droits historiques préoccupe les Indiens de la Colombie-Britannique depuis longtemps?

M. Paul: Certainement. Comme je l'ai dit au début dans mon exposé, les Indiens de la Colombie-Britannique sont dans une situation exceptionnelle car ils n'ont jamais comparu devant un tribunal où le gouvernement fédéral ait reconnu l'entité juridique des Indiens. Voilà pourquoi nous nous inquiétons tellement de la question des terres en Colombie-Britannique, qui fait partie de l'alimentation grâce à la chasse et la pêche.

M. Rose: Est-ce que c'est pour cela que vous préconisez, au poste 6 du mémoire, que les bandes d'Indiens en amont du Pont Mission aient le droit, et je cite votre mémoire: de vendre ces mets recherchés jusqu'à un certain point.

Est-ce que c'est la raison pour laquelle vous estimez que vous avez fait l'objet de discrimination pendant si longtemps que vous voudriez qu'on adapte une loi qui favorise les Indiens?

M. Paul: J'espère que nous ferons l'objet d'un traitement favorable au sujet de tous les

[Texte]

number 6, but all points, 1 to 10, in terms of hunting and fishing for food or game.

Mr. Rose: Yes, but you specifically mentioned to sell, and this is something that is now not allowed. I think your brief made quite a point of trying to provide some sort of industry along the lines of such delicacies as smoked salmon for the people living above the Mission Bridge. Below that you enjoy the same privileges as any commercial fisherman. Is that not so?

Mr. Paul: This is what we are asking for because there are many Indians in British Columbia who would like to purchase smoked salmon or dried salmon. If this became permissible, then we could establish some co-operative or some means whereby we could sell such delicacies not only of fish but also some of the sea foods, shell foods.

Mr. Rose: I think perhaps you might be able to make a proposal along these lines on a more thought-out basis rather than just mentioning it. I think the Committee would be most interested in this.

You made the point of wishing to use a drift net, as opposed, I presume, to the set net or dip net. Could you explain the reason behind this?

Mr. Paul: I will let Chief Douglas answer this one.

Chief Dougals: Yes. Around 1927 or the early 30's the Indian used to be allowed to drift on the bars above the Mission Bridge but now he is restricted to a set net. When we had a talk with Mr. Hourston, the Area Director of the Department of Fisheries, he did not know that there was such a thing as a drift net which had been used by the Indian people on the bars.

Mr. Rose: I see. One of the briefs suggested tighter control in the alleged sale of salmon by native people and your brief mentions harassment. The two things seem to me in complete opposition to one another.

Mr. Paul: I would say that the brief presented previously was primarily concerned with the commercial fishing aspect, whereas we are concerned with fishing for food. This is the difference.

Mr. Rose: Improving the economy of the people.

Mr. Paul: Right.

[Interprétation]

points, pas seulement du point 6, pour ce qui est de la pêche et de la chasse en vue de notre propre consommation.

M. Rose: Oui, mais vous parlez précisément de vente, et c'est quelque chose qui n'est pas autorisé à l'heure actuelle. Je crois que dans votre mémoire vous insistez pour en faire une industrie d'un met aussi recherché que ce saumon fumé pour la population en amont du Pont Mission. En aval vous avez les mêmes privilèges de tout le monde, n'est-ce pas?

M. Paul: C'est ce que nous demandons parce qu'il y a beaucoup d'Indiens de la Colombie-Britannique qui voudraient acheter du saumon fumé ou séché. Si c'était permis, nous pourrions créer une co-opérative ou une organisation qui nous permettrait de vendre de tels mets recherchés, non seulement du saumon, mais aussi des crustacés et des fruits de mer.

M. Rose: Vous devriez formuler une proposition concrète plus approfondie au lieu de simplement le mentionner dans un mémoire. Le Comité l'examinerait plus attentivement.

Vous avez insisté que vous voudriez utiliser un filet dérivant au lieu, j'imagine, d'un car-relet ou d'un filet tendu. Pourquoi?

M. Paul: Je vais laisser le Chef Douglas vous répondre.

M. Douglas: En 1927, ou au début des années trente, les Indiens avaient le droit d'avoir un filet dérivant en amont du Pont Mission mais ils n'ont plus droit qu'à un filet tendu. Nous avons eu un entretien avec M. Houston, le directeur de la région du ministère des Pêcheries cette année. Il ne savait pas que ce genre de filet existait, que les Indiens utilisaient autrefois.

M. Rose: Je vois. Vous proposez un contrôle plus sévère des prétendues ventes de saumon de la part des Indiens et vous mentionnez le harcèlement. Il me semble que vous vous contredisez.

M. Paul: Le mémoire que j'ai présenté antérieurement, portait surtout sur l'aspect commercial de la pêche alors que dans ce mémoire, on parle plutôt de la pêche, pour notre propre consommation. Voilà la différence.

M. Rose: Pour améliorer l'économie de la population.

M. Paul: Oui.

[Text]

Mr. Cyr: I would like to ask a question in French, if you will use the interpretation. It would be easier for me.

Je ne sais pas si c'est M. Paul ou M. Douglas qui va répondre à mes questions: il s'agit de la pêche sportive. Les Indiens favorisent-ils la pêche sportive ou non?

Chief Douglas: Well, I do not know. Maybe I could answer in Indian here. I do not know.

Mr. Cyr: Did you understand? I can put it in English if you want me to.

Chief Douglas: No. On the question of whether we are against sports fishermen—no, we are not against anybody. All we are asking for is a fair shake. That is all we are asking for. We are not against anyone.

M. Cyr: Maintenant, une autre question. La pêche sportive fournit-elle beaucoup d'emplois aux Indiens comme guides sur les rivières?

Chief Douglas: I would say no.

Mr. Paul: Up in the northern country there are guides available but they are not primarily Indians. Last year the Indian Affairs Branch started a program for training guides, but it was not too successful because of the choice.

Mr. Cyr: I had other questions to ask but if there are no Indians working as guides on sports fishing, that will be all, Mr. Chairman.

The Chairman: Thank you, Mr. Cyr. Mr. Noble? Mr. Smith?

Mr. Smith (Northumberland-Miramichi): The witnesses mentioned several times that they would like to be considered legal entities. I would like to ask if there are any legal rights enjoyed by other people which are not enjoyed by the Indians.

Mr. Paul: I will put it this way. The Indians of Canada as governed by the Indian Act are not legal entities because the lands are vested in the Crown for the use and benefit of the Indian people and this places the Indian in a very awkward position. This is why I suggest that the federal government enact an Order in Council to recognize his legal enti-

[Interpretation]

M. Cyr: Je voudrais poser une question en français, si vous voulez prendre votre écouteur. Ce serait plus facile pour moi.

I do not know whether it is Mr. Paul or Mr. Douglas who will reply to my questions. My concern is with sport fishing. Are Indians against this type of fishing, or are they in favour of it?

M. Douglas: Je ne sais pas. Peut-être je devrais répondre en indien. Je ne sais pas.

M. Cyr: Avez-vous bien compris la question?

Je pourrais la poser en anglais si vous le voulez.

M. Douglas: Non. On nous demande si nous sommes en faveur de la pêche sportive ou non; nous ne sommes pas contre quoi que ce soit. Tout ce que nous demandons, c'est qu'on nous traite équitablement. C'est tout ce que nous voulons. Nous ne sommes pas contre qui que ce soit.

M. Cyr: Now, another question. Does sport fishing create many jobs for Indians as guides on the rivers?

M. Douglas: Je dirais que non.

M. Paul: Il y a des guides dans le nord, mais ce ne sont pas surtout des Indiens. L'an dernier, la direction des Affaires indiennes a institué un programme de formation des guides, qui n'a pas été très fructueux en raison du choix.

M. Cyr: J'avais d'autres questions à poser, mais s'il n'y a pas d'Indiens qui travaillent comme guides pour la pêche sportive, je crois que mes autres questions tombent, monsieur le président.

Le président: Merci, monsieur Cyr. Monsieur Noble? Monsieur Smith?

M. Smith (Northumberland-Miramichi): Les témoins ont répété à plusieurs reprises qu'ils aimeraient être considérés comme des entités juridiques. J'aimerais demander s'il y a des droits d'ordre juridique dont jouissent d'autres personnes et dont ne jouissent pas les Indiens.

M. Paul: Les Indiens du Canada qui relèvent de la Loi sur les Indiens ne sont pas à ce titre des entités juridiques ou des personnes morales, car les terres sont gérées par la Couronne pour l'usage et le bénéfice des Indiens. Les Indiens sont donc dans une situation plutôt difficile. C'est la raison pour laquelle, j'estime que le gouvernement canadien devrait

[Texte]

ty—so that he can himself enjoy what other Canadians enjoy.

Mr. Smith (Northumberland-Miramichi):

Well, the Indian can buy his own land if he wants to. That is what I mean. He can do anything that any other person can do. Is that right?

Mr. Paul: If land is available, yes. He can buy from another band member, yes.

The Chairman: Thank you. Mr. Hogarth, a supplementary?

Mr. Hogarth: Off the reservation a native person has the same legal rights as any other Canadian as far as ownership of land is concerned. Has he not?

Mr. Paul: Provided he buys off the reserve, yes.

Mr. Hogarth: Yes, but your concern is solely with the reserve lands. When you say that an Indian has no right to own land, you are referring solely to lands on the reserve.

Mr. Paul: Yes, I am concerned with the Indians living on the reserve.

Mr. Hogarth: Thank you.

The Chairman: Any further questions? If not, I want to take this opportunity to thank Mr. Paul and Chief Douglas for a very interesting and, I think, important brief. Thank you very much.

The meeting is adjourned until 9:30 tomorrow morning.

[Interprétation]

faire en sorte qu'on reconnaisse des Indiens comme des entités juridiques afin qu'on puisse jouir des mêmes droits que les autres canadiens.

M. Smith (Northumberland-Miramichi):

Mais l'Indien peut acheter sa propre terre s'il le désire. C'est ce que je veux dire. L'Indien peut faire tout ce que les autres Canadiens peuvent faire. N'est-ce pas?

M. Paul: S'il y a des terres de disponible, oui. Il peut acheter une terre d'un autre membre de la bande oui.

Le président: Merci. Une question supplémentaire, monsieur Hogarth.

M. Hogarth: En dehors de la réserve, l'Indien jouit des mêmes droits que les autres Canadiens en ce qui concerne les propriétés, n'est-ce pas?

M. Paul: Pourvu qu'il achète en dehors de la réserve, oui.

M. Hogarth: Par conséquent, vos problèmes portent seulement sur les terres de la réserve. Lorsque vous dites que les Indiens n'ont pas le droit de devenir propriétaire, vous parlez seulement des terres de la réserve.

M. Paul: Oui, je parle des Indiens qui habitent la réserve.

M. Hogarth: Merci.

Le président: Y a-t-il d'autres questions? Sinon, je tiens à remercier M. Paul et le Chef Douglas de leur importante et intéressante contribution. Merci beaucoup.

La séance est donc levée jusqu'à 9h30 demain matin.

APPENDIX E

FISHING VESSEL OWNERS'
ASSOCIATION
OF
BRITISH COLUMBIA
SALMON FISHERY
BRIEF

TO: THE STANDING COMMITTEE ON
FISHERIES AND FORESTRY, APRIL 1969

In the first part of our Brief a general description of our Association and its problems has been given and although our members participate in the various fisheries mentioned, 95 per cent touch salmon fishing at some time or other. There has been a commercial salmon fishery on this Coast since 1829 when the Hudson's Bay Company purchased salmon from the Indians on the Fraser River. It is an old industry and because of this the problems are many and varied. For instance, attempts were made in the early 1900s to "box in" the seine fleet to allow the then slower gillnet boats a fairer share of the catch and this was successful and today there is a situation where the seine fleet is still in this box when the need to protect the gillnetter no longer exists. The gillnet boats of today are no longer sail boats that need to be towed around to different fishing positions and areas but high-speed vessels which can fish out their own exclusive areas and then enter any others. As it stands there are 30 areas or divisions in British Columbia waters open to commercial salmon fishing. Of these 7 are completely open to seine boats and 4 only partially. There is no valid reason for this discrimination except that antiquated laws are still in force.

This has been problem enough but after the gillnets came the trollers. They can fish all 30 areas, and where seine-boats and gillnets are restricted to weekdays (only 2 or 3 days at that) trollers can fish weekends as well. The International Pacific Salmon Fisheries Commission is finally showing concern that this state of affairs "will upset the management of the fisheries". We seinemen have been concerned for years and resentful that we have been forced to conserve ourselves to death in some years while trolling still went on.

APPENDICE E

L'ASSOCIATION DES
PROPRIÉTAIRE DE BATEAUX
DE PÊCHE DE LA
COLOMBIE-BRITANNIQUE

LA PÊCHE AU SAUMON
MÉMOIRE PRÉSENTÉ

AU COMITÉ PERMANENT DES PÊCHES
ET FORÊTS, AVRIL 1969

La première partie de notre mémoire comporte un exposé de la nature et des problèmes de notre Association et bien que nos adhérents s'intéressent aux diverses variétés de poissons mentionnées, 95 p. 100 d'entre eux ne sauraient éviter de pêcher le saumon. La pêche commerciale du saumon le long de cette côte remonte à 1829 lorsque la compagnie de la Baie d'Hudson a acheté du saumon des indiens habitant les rives du Fraser. C'est une industrie très ancienne et voilà pourquoi ses problèmes sont multiples et variés. Par exemple, au début de 1900, on a voulu confiner les bateaux senneurs à une certaine réserve de poissons afin de permettre aux bateaux à filets maillants de capturer une tranche plus équitable de la prise, et ces efforts ont abouti et il s'ensuit que, de nos jours, les bateaux senneurs doivent encore s'en tenir à la même réserve et qu'il ne soit plus nécessaire de protéger les bateaux aux filets maillants. Ceux-ci ne sont plus des bateaux à voile qu'il fallait remorquer vers différentes zones de pêche, mais des bateaux rapides qui bénéficient de leur propre zone exclusive tout en pénétrant dans d'autres. A l'heure actuelle, les eaux de la Colombie-Britannique sont réparties en 30 zones de pêche commerciale du saumon. Les bateaux senneurs ont libre accès à 7 et accès partiel à 4. Aucune raison sérieuse, sauf l'application des lois désuètes, ne justifie cette partialité.

Ce problème a été aggravé par l'arrivée après les bateaux à filets maillants, des bateaux à la ligne trainante. Ceux-ci ont libre accès aux 30 zones et tandis que les bateaux senneurs et les bateaux à filets maillants ne peuvent pêcher que la semaine (et encore seulement 2 ou 3 jours), les bateau à la ligne trainante peuvent pêcher les fins de semaine aussi. La Commission internationale de pêches de saumon du Pacifique a finalement exprimé la crainte que cet état de choses ne désorganise l'administration des pêches. Nous les pêcheurs à la senne, sommes depuis de années préoccupés et mécontents de ce que nous soyons obligés certaines années de frôler la ruine pendant que se poursuivait la pêche à la ligne trainante.

In an average year trollers fish 90-100 days, gillnets 60-70 days, seines 35-45 days. We lost out in areas, days and on another front—in the species, as the areas that are set aside for them contain the higher quality fish which commands three times the price.

In 1968 the seines were allowed into one quarter of an area which was an exclusive gillnet troll preserve. It is to be hoped that this will be the beginning of a better equalization of area and species. It is long overdue. Our local fisheries department will recognize these grievances as we have stated them time and time again.

We also feel that a greater effort should be made to build up fish stocks primarily in the Central areas where there are over 160 streams. A big problem is the lack of flood control. In some streams spawners are washed out before completion of spawning and spawning grounds are severely scoured and eggs are destroyed in large numbers. Most of the effort is being expended in areas we are forbidden to fish in. But in any case fish stocks must be increased. No other natural resource replenishes itself year after year as this one does, but the size of the existing fleet exerts quite a strain.

Our present Fisheries Minister has introduced a new boat licensing scheme which we hope will eventually trim the size of the fleet as there are too many fingers in the fishing pie. A particularly unwelcome finger is the sport fishing derbies. Over the protest of all commercial fishermen an area was closed to the commercial fishery and opened to sports fishing and has since been turned into another commercial fishery via sports-fishing derbies. Even the British Columbia Wildlife Federation protested over the misuse of this area. When commercial fishermen and bona fide sportsmen agree, there is a strong case for ending these so called sports derbies.

The genuine sports fisherman also will not use a jig-type lure called the buzz-bomb, which is most effective in catching ready-to-spawn chum salmon. It is hoped the Fisheries Department will ban these.

Now that our Fisheries Minister is also in charge of Forestry perhaps he can arrange a

En une année moyenne, la pêche à la ligne trainante dure de 90 à 100 jours, la pêche aux filets maillants, de 60 à 70 jours, et la pêche à la senne de 35 à 45 jours. Nous sommes défavorisés, quant aux zones, aux jours, et sous un autre angle: celui des espèces, car les zones qui sont réservées aux autres contiennent la meilleure qualité de poisson et elle se vend trois fois plus cher.

En 1968, on autorisait les pêcheurs à la senne à s'implanter dans le quart d'une zone qui était une réserve exclusive des pêcheurs à la ligne trainante et aux filets maillants. Nous espérons que ce sera le début d'une meilleure répartition des zones et des variétés. Ce ne sera pas trop tôt. Notre ministère local des Pêches doit prendre acte de ces griefs car nous les avons exprimé en maintes fois.

Nous estimons aussi qu'on devrait se consacrer davantage à établir des réserves de poisson surtout dans les régions centrales qui sont sillonnées par plus de 160 cours d'eaux. Un problème majeur est l'absence de contrôle des inondations. Dans certains cours d'eaux, les reproducteurs sont emportés par le courant avant la fin de la ponte; les zones de frai se dégradent, ce qui entraîne la perte d'un grand nombre d'œufs. Le gros des efforts se fait dans les zones qui nous sont interdites. Quoiqu'il en soit, cependant, il faut accroître les réserves de poisson. Aucune autre ressource naturelle ne se renouvelle annuellement avec autant de régularité que le poisson, mais celui-ci est menacé par le grand nombre de bateaux de pêche.

Notre actuel ministre des Pêches, a présenté un nouveau régime de permis aux bateaux qui nous l'espérons, réduira le nombre des bateaux car ceux-ci sont trop nombreux pour les réserves de poisson. Un événement plutôt mal accueilli, c'est l'organisation des compétitions de pêche sportive. Les pêcheurs commerciaux ont protesté en masse contre l'interdiction d'une zone de pêche commerciale en faveur de la pêche sportive, zone qui, depuis, assure des prises considérables à chaque compétition de pêche sportive. Même l'Association de la protection de la faune de la Colombie-Britannique a protesté contre l'abus dont cette zone est victime. Lorsque l'unanimité rassemble les pêcheurs commerciaux et les sportifs de bonne foi, tout milite en faveur de l'abolition de ces soi-disants compétitions sportives.

Le pêcheur, qui respecte l'éthique de ce sport, n'emploiera pas un appât monté sur une sorte d'harpon appelé «buzz-bomb» qui est l'arme idéale contre le saumon-chien à l'époque du frai. Nous espérons que le ministère des Pêches abolira cet attirail.

Maintenant que notre ministre des Pêches est aussi responsable des Forêts, il pourra

better liaison between the two than there has been in the past in the matter of pollution from log drives, as some of the results of the log drives have been erosion of banks and rerouting of spawning channels—what you would expect from a bulldozer which has run amuck. And the aftermath is the bark that stays behind releasing toxins that poison the water so that fish cannot survive (in some places for years to come).

Also, an ever increasing worry is that our B.C. waters could be contaminated by oil or chemicals discharged from oil wells or tankers. With the building of our new Superport at the mouth of the Fraser (one of our main Salmon rivers) it is a danger to be reckoned with and one which must be recognized before an accident occurs. A situation must not arise where proper precautions are not taken because the different levels and departments of Government disagree over jurisdiction.

The importance of the Salmon fishing can perhaps best be summed up by saying that Salmon produces 80 per cent of the value of the total fish production of B.C. and British Columbia, in turn, produces over 40 per cent in value of Canadian total fish products. And Canada is the World's second largest fish exporter (behind Japan) in terms of value. But most important of all, thousands of British Columbians take pride in the fact that they are part of an old and honoured way of life in this country.

PURSE SEINING 4 to 8 men on each boat. These boats let their net go around a school of fish and pull in a line to close the bottom of the purse.

GILLNETTING 1 man operation—laying out their net across a water course. The mesh admits the head of the fish catching the gills when the fish try to get out.

TROLLING 1 and 2 men operation—Hook and line fishing with six lines or more strung out from long booms designed to prevent the lines from tangling up with each other.

Respectfully submitted

SALMON SECTION
FISHING VESSEL OWNERS OF
BRITISH COLUMBIA

Frank Bublé

assurer une meilleure liaison entre les deux ministères pour enrayer la pollution causée par le flottage, car il en résulte parfois l'érosion des bancs de pêche et le détournement des frayères, comme après le passage d'un bulldozer en furie. Et comme répercussion, l'écorce qui reste sur le parcours dégage des substances toxiques qui empoisonnent l'eau, tuant toute vie piscicole pour de nombreuses années en quelques endroits.

En outre, on craint de plus en plus que nos eaux de la Colombie-Britannique ne soient contaminées par le pétrole et les produits chimiques émanant des puits et des pétroliers. Maintenant qu'on construit le nouveau port géant à l'embouchure du Fraser, une de nos principales sources de saumon, c'est une éventualité qu'on ne doit pas écarter et un danger dont on doit tenir compte avant qu'un accident ne survienne. Il faut éviter tout risque éventuel, du fait que divers niveaux de gouvernement et plusieurs ministères n'ont pas déterminé leur champs de juridiction.

La meilleure façon, peut-être, de faire ressortir l'importance de la pêche du saumon, c'est de rappeler que le saumon compte pour 80 p. 100 de la valeur de la production piscicole de la Colombie-Britannique et cette province à son tour produit plus de 40 p. 100 du poisson canadien, quant à la valeur. En outre le Canada est le deuxième exportateur de poisson du monde, après le Japon, quant à la valeur. Mais le plus important, c'est que des milliers de résidents de la Colombie-Britannique s'en enorgueillissent du fait qu'ils préservent dans le pays une occupation vieille et respectable.

SENNE À POCHE Chaque bateau compte 4 à 8 pêcheurs. Ces bateaux déploient leur filet autour d'un banc de poissons et on tire une corde qui laisse échapper le fond de la poche.

PÊCHE AU FILET MAILLANT Un seul pêcheur qui lance son filet à contre-courant. Les mailles emprisonnent la tête du poisson, le serrent aux branchies lorsque le poisson essaie d'en sortir.

LA PÊCHE À LA LIGNE TRAÎNANTE Un homme ou deux; à la ligne ou à l'hameçon; six lignes ou plus attachées à de longues vergues taillées de façon à empêcher l'enchevêtrement des lignes.

En tout respect,

Frank Bublé

Section de la pêche au saumon de l'Association des propriétaires de bateaux de pêche de la Colombie-Britannique.

APPENDIX E (1)

FISHING VESSEL OWNERS'
ASSOCIATION OF
BRITISH COLUMBIA

BRIEF

TO: THE STANDING COMMITTEE ON
FISHERIES & FORESTRY, APRIL 1969

The Fishing Vessel Owners' Association of British Columbia is composed of owners and part owners of fishing vessels which said owners or part owners have no financial interest in Canneries, Cold Storage Plants or businesses of that nature. Generally speaking member-owned vessels are the finest and largest on the West Coast and a rough estimate of the value of all vessels in the Association is in the neighborhood of \$15,000,000.00.

We assume that you will hear more complaints from the fishing industry than congratulations and there is no doubt that in so far as the West Coast is concerned, fishermen generally and vessel owners in particular have reason to feel sorry for themselves. However, before getting down to the many problems that face us we would like to express our appreciation of the effort that our new Minister of Fisheries is making to correct some of them. We are particularly pleased to see a start on a salmon licence limitation programme which we have long advocated and pleased to note that the Minister has announced the intention of the Federal Government to buy up and retire old salmon vessels and that a watchful eye will be kept open to see that under the new system the large fishing companies own, by 1970, no more than a small percentage of the fleet. We have advocated this for many years for it is of course, common knowledge that an independent owner operates his vessel more efficiently and economically than a large company can possibly do.

We congratulate the Minister for the stand he has taken on the "Greenland Halibut" problem, his interest in improving provisions with regard to Fishermen's loans and in extending the coverage available under the Fishermen's Indemnity Plan. Officers of the

APPENDICE E (1)

ASSOCIATION DES PROPRIÉTAIRES
DE BATEAUX
DE
PÊCHE DE LA
COLOMBIE-BRITANNIQUE

EXPOSÉ

PRÉSENTÉ AU COMITÉ PERMANENT DES
PÊCHES ET DES FORÊTS EN AVRIL 1969

L'Association des propriétaires de bateaux de pêche de la Colombie-Britannique se compose de propriétaires totaux et partiels de bateaux de pêche qui ne possèdent aucun intérêt financier dans des conserveries, des entrepôts frigorifiques ou d'autres entreprises de même nature. Règle générale, les bateaux des adhérents sont les mieux équipés et les plus gros de la côte Ouest et une estimation approximative de la valeur de l'ensemble des bateaux des adhérents de l'Association s'établit à environ \$15,000,000.

Nous supposons que vous entendrez plus de plaintes que de félicitations de l'industrie de la pêche et il n'y a pas de doute, en ce qui concerne la côte Ouest, que les pêcheurs en général et les propriétaires de bateaux en particulier ont raison de s'apitoyer sur leur sort. Cependant, avant d'aborder les nombreux problèmes qui nous assaillent nous voulons faire savoir à notre nouveau ministre des Pêcheries que nous lui savons gré des efforts qu'il fait pour résoudre certains de nos problèmes. En particulier, nous le félicitons d'avoir commencé à mettre en vigueur un programme de limitation des permis de pêche au saumon. Nous préconisons depuis longtemps l'application d'un tel programme et nous avons appris avec plaisir que le Ministre a annoncé l'intention du gouvernement fédéral d'acquérir et de mettre au rancart les vieux bateaux de pêche au saumon et qu'on veillera avec vigilance à ce que sous le nouveau système les grandes sociétés ne possèdent pas plus d'un faible pourcentage de la flotte d'ici en 1970. C'est ce que nous préconisons depuis plusieurs années parce qu'il est évidemment bien connu que tout propriétaire indépendant exploite son bateau plus efficacement et plus économiquement qu'une grande compagnie peut le faire.

Nous félicitons le Ministre de l'attitude qu'il a adoptée au sujet du problème du flétan du Groënland, de l'intérêt qu'il a manifesté en améliorant les dispositions relatives aux prêts accordés aux pêcheurs et de l'extension de la protection offerte par le Régime des indemnités.

Department of Fisheries have told us that the Minister runs them off their feet and this is good and necessary in order to bring about radical change.

Regarding improving provisions in connection with fishermen's loans, the Fisheries Improvement Loans Act was a complete anachronism until the Minister got to work on it in that while the Government would guarantee loans to fishermen under certain circumstances there was only provision therein for guaranteeing loans bearing interest at 5% and, of course, the fishermen found it to all intents and purposes impossible to borrow money anywhere at 5%. The provision with regard to interest has now been changed but the limit on such loans remains \$10,000.00. We have been advised that the Minister is considering an increase to \$25,000.00. but in our respectful opinion, at any rate in so far as members of our organization are concerned, it is imperative that this limit be raised to at least \$50,000. The purpose of this loan, largely speaking, is to enable the fishermen to borrow money to "improve" their vessels and in that regard the majority of our owners who require to re-engine their vessels are faced with bills far in excess of \$25,000.00.

Having handed out a few bouquets, let us now say that much remains to be done to make the owning of a fishing vessel on the West Coast a sound economic proposition.

Our members engage in the Salmon, Halibut, Trawl and Tuna fisheries and, while there was one, they engaged in the West Coast Herring fishery; indeed many built or purchased vessels specifically for that fishery and we now set out for your consideration some of the problems that face our members and our recommendations for solution:

THE WEST COAST HERRING FISHERY

For many years the herring on the West Coast have been over fished and this natural resource, cropping of which is administered by the Federal Government through the Department of Fisheries, has been allowed to become depleted to the extent where the Department of Fisheries has finally realized the gravity of the situation and banned all commercial herring fishing, for 1968-69, and indicated the probability of no fishing until 1971-72 and possibly later. In the meantime

tés payables aux pêcheurs. Des fonctionnaires du ministère des Pêcheries nous ont dit que le Ministre était en train de leur rompre les jambes et nous croyons que cela est nécessaire et bon si des changements radicaux doivent être apportés.

Au sujet de l'amélioration des dispositions relatives aux prêts disponibles aux pêcheurs, la Loi sur les prêts aidant aux opérations de pêche était un anachronisme total jusqu'au moment où le Ministre s'est mis au travail. En effet, si l'État garantissait les prêts faits aux pêcheurs dans certaines circonstances il n'y avait dans cette loi qu'une seule disposition garantissant les prêts portant intérêt à 5 p. 100. Il va sans dire qu'il était impossible aux pêcheurs, en pratique, d'emprunter des fonds à des taux se rapprochant de 5 p. 100. Les dispositions relatives aux taux d'intérêt ont été modifiées mais la limite de ces prêts reste fixée à \$10,000. On nous fait savoir que le Ministre étudie la possibilité d'augmenter ce montant à \$25,000 mais nous estimons bien humblement, du moins en ce qui concerne les membres de notre Association, qu'il est impérieux de voir cette limite fixée à au moins \$50,000. Le but de ce genre de prêt, règle générale, est de permettre aux pêcheurs d'emprunter de l'argent pour «améliorer» leurs bateaux et, à ce propos, la majorité des propriétaires qui sont obligés de renouveler les moteurs de leur bateau doivent acquitter des factures qui dépassent de beaucoup \$25,000.

Maintenant que nous avons offert quelques fleurs, on nous permettra de dire qu'il reste beaucoup à faire pour que la possession d'un bateau de pêche sur la côte Ouest soit économiquement rentable.

Les membres de notre Association pratique la pêche au saumon, au flétan et au thon et la pêche chalutière et, lorsqu'il y avait du hareng, nos membres le pêchaient. En fait, plusieurs pêcheurs ont construit ou acheté des harenguiers. A ce propos, nous exposons certains problèmes qui se posent à nos adhérents et nous recommandons des moyens pour les résoudre.

LA PÊCHE AU HARENG SUR LA CÔTE OUEST

Durant plusieurs années sur la côte Ouest, les pêcheries de harengs ont été surexploitées et cette ressource naturelle, dont l'usage est réglementé par le gouvernement fédéral par l'intermédiaire du ministère des Pêcheries, a tellement diminué que le ministère des Pêcheries s'est finalement rendu compte de la gravité de la situation. Il a interdit tout harengaison durant l'année 1968-1969 et a annoncé qu'il est probable que la pêche ne reprendra pas avant 1971-1972 et peut-être

our herring seine boats, accustomed to fishing eight or nine months of the year, strikes permitting, have no income whatsoever. If fault is to be found for this depletion of the resource, though admittedly the proximate cause is the fishermen fishing too hard and efficiently, the resource was managed, if that is the word, by the Federal Government and it seems to us that the Federal Government should do something to alleviate the position of the herring seine vessel owner faced with economic ruin. Many of our members put their life's work and savings into the building of herring seine vessels with the expectation that the resource would be so managed that a living, at any rate, could be taken therefrom. Set out hereunder is an example of a herring seine vessel which represents just about the smallest investment in our association in such a vessel:

Investment in Boat and Gear—\$60,000.00

Operating Expenses	\$7,810.36	
Interest on Mortgage	4,181.39	\$11,991.75
<hr/>		
Income from fishing	11,750.00	
<hr/>		
Net loss from fishing	241.75	
Depreciation	3,957.00	
<hr/>		
Loss for the year	\$4,178.75	

The above represents the last year this vessel fished herring. For 1968 when that boat had no income from herring fishing an average breakdown of the situation culled from a dozen of the larger herring vessels, looks like this:

Investment in Boat and gear—\$180,000.00

Insurance Premium	\$ 4,389.00
Interest	2,766.00
Miscellaneous expenses	2,700.00
Depreciation	13,500.00
<hr/>	
Net loss for the year	\$23,355.00

The low insurance premium, comparatively speaking, in the above-noted example is due to the fact that lay-up returns were paid or port risk only was taken. Herring vessel owners are in a very bad situation and it is suggested that the Federal Government assume insurance premiums, interest payments and depreciation for those vessels unable to fish. It is true that these vessels could be converted to the trawl fishery but that fishery is already overcrowded and the expense of conversion is in the neighborhood of \$20,-

plus tard. Entre-temps, nos harenguiers, qui étaient actifs durant huit ou neuf mois dans l'année, selon les prises, ne rapportent absolument plus rien. S'il est nécessaire de trouver la cause de cette diminution de rendement de cette ressource, il faut évidemment admettre d'ardeur et d'efficacité des pêcheurs, mais cette ressource était gérée, si c'est le terme qu'il convient d'employer, par l'État fédéral et il nous semble que ce dernier devrait faire quelque chose pour atténuer la gravité de la situation des propriétaires de harenguiers qui sont acculés à une faillite économique. Bon nombre de nos membres ont mis le travail et les économies d'une vie dans ces harenguiers en s'attendant que les ressources seraient gérées de telle façon qu'ils pourraient au moins en tirer leur subsistance. Nous vous donnons ci-dessous des détails-types sur un harenguiier qui, dans notre Association, représente à peu près l'investissement le plus faible que l'on puisse faire:

Investissement dans le bateau et les engins de pêches—\$60,000

Dépenses d'exploitation	\$7,810.36	
Intérêts hypothécaires	4,181.39	\$11,991.75
<hr/>		
Revenus de la pêche	11,750.00	
<hr/>		
Perte nette de la pêche	241.75	
Amortissement	3,957.00	
<hr/>		
Perte durant l'année	\$4,178.75	

Ces chiffres s'appliquent à la dernière année de pêche de ce harenguiier. Pour 1968, où le bateau n'a rien rapporté de la pêche au hareng, une ventilation des chiffres moyens concernant la situation et se rapportant à une douzaine des harenguiers les plus gros, donne les chiffres qui suivent:

Investissement dans le bateau et les engins—\$180,000

Prime d'assurance	\$4,389.00
Intérêt	2,766.00
Dépenses diverses	2,700.00
Amortissement	13,500.00
<hr/>	
Perte nette pour l'année	\$23,355.00

Les primes d'assurance, relativement faibles nous l'admettons dans ce cas-ci, sont attribuables au fait que les primes payées sont celles d'un bateau en chômage ou encore au fait que seuls les risques à quai ont été couverts. Les propriétaires de harenguiers sont dans une situation difficile et nous proposons que l'État fédéral assume le paiement des primes d'assurance, les versements des intérêts et l'amortissement des bateaux qui ne sortent pas pêcher. Il est vrai que ces bateaux pourraient être modifiés pour le chalutage mais cette

000.00 to \$30,000.00. It is also true that some of these vessels could, and indeed one or two have, gone to the East Coast and entered the herring fishery there but the cost of making such a journey is enormous, the future uncertain and today there are insufficient facilities on the East Coast to absorb the catch of large numbers of vessels.

THE SALMON FISHERY

This fishery is the mainstay of the British Columbia fishing industry and to such an extent that we are presenting a separate brief on this subject alone.

THE TRAWL FISHERY

Our members who engage in this fishery are suffering from currently depressed prices and furthermore are unable to compete on grounds where enormous trawlers operated by foreign governments plow up grounds that for years have been exploited only by Canadian and American vessels. The solution to some of their problems appears later in this brief.

THE DOGFISH THREAT

By the late 1940s the dogfish population off the British Columbia Coast had been substantially reduced as a viable fishery existed due to the demand for dogfish livers. Since technological advances have enabled synthetic vitamins to be manufactured, the demand for livers has disappeared and consequently the dogfish, which appears to have no natural enemy and bears its young live, has increased enormously. The dogfish is a voracious feeder on herring and immature salmon and there is a very real fear among experienced fishermen that we have so upset the balance of nature by overfishing the herring, that due to this and the enormous schools of dogfish in the Gulf of Georgia and on the West Coast of Vancouver Island, the herring may never be able to multiply to the stage where a fishery can once again be supported and it seems to us that quite literally the only solution is to carry out a large scale destruction programme by subsidizing the dogfishery to such an extent that a large number of boats will take part and reduce substantially the numbers of these predators that now abound. A small fishery for dogfish flaps has been subsidized from time to time but is of no use whatsoever from the point of view of reducing the numbers of dogfish on the West Coast.

pêche est déjà trop encombrée et les dépenses de modifications seraient de \$20,000 à \$30,000. Il est également vrai que certains de ces bateaux peuvent, et en réalité un ou deux sont déjà partis, aller sur la côte Est et y faire la pêche au hareng dans cette région, mais les frais qu'entraîne ce voyage sont très élevés, l'avenir reste incertain et les installations de la côte Est ne suffiraient pas à la tâche que leur imposeraient les prises de nombreux bateaux de pêche.

LA PÊCHE AU SAUMON

Cette pêche constitue l'épine dorsale de l'industrie de la pêche en Colombie-Britannique et, en raison de son importance, nous présenterons un exposé distinct sur ce sujet.

LA PÊCHE CHALUTÈRE

Les adhérents de notre Association qui s'adonnent à cette pêche souffrent des effets des bas prix. De plus, ils sont incapables de faire concurrence dans les endroits où pêchent les grands chalutiers des gouvernements étrangers qui exploitent des pêcheries où les seuls bateaux actifs durant de nombreuses années étaient ceux du Canada et des États-Unis. La solution à apporter à leurs problèmes figure plus loin dans le présent exposé.

LA MENACE DES CHIENS DE MER

Vers les années 40, les stocks de chiens de mer à proximité de la côte de la Colombie-Britannique avaient été considérablement réduits étant donné qu'il existait une activité rentable par suite de la demande de foies de chien de mer. En raison des progrès techniques qui ont rendu possible la production de concentrés vitaminiques synthétiques Vita-ment, la demande pour les foies a disparu et, par voie de conséquence, les chiens de mer, qui ne semblent pas avoir d'ennemis naturels et qui sont vivipares, ont augmenté beaucoup. Le chien de mer est vorace et se nourrit de harengs et de petits saumons. Il existe parmi les pêcheurs d'expérience une crainte très réelle de rupture de la chaîne alimentaire de la nature en surexploitant les pêcheries de hareng. Par suite de cet état de choses et de l'existence d'immenses bancs de chiens de mer dans le golf de Georgie et dans les eaux de la côte Ouest de l'île de Vancouver, il peut arriver que le hareng ne réussira jamais à se reproduire au point où il sera de nouveau possible de repêcher le hareng. Il nous semble que la solution à apporter serait de mettre en œuvre un vaste programme de destruction en subventionnant la pêche des chiens de mer de façon à employer de nombreux bateaux pour réduire le nombre de ces prédateurs qui se rencontrent en grand nombre actuellement.

Un petit commerce de nageoires pectorales de chiens de mer a fait l'objet de subventions de temps à autre mais il n'est d'aucune utilité si l'on veut réduire le nombre de chiens de mer sur la côte Ouest.

THE COST OF MARINE INSURANCE

This is a matter of concern to almost literally every vessel owner in the country, for while the cost of everything for the fisherman rises rapidly, nothing has risen so quickly or is rising so steadily as the cost to a vessel owner of insuring his vessel against marine perils. The Indemnity Plan operated by the Federal Government is currently limited to 75 per cent of the value of vessels having an appraised value of \$25,000.00 or less and none of our member vessels qualify for this plan where premiums are admittedly low, namely, only 2 per cent. Some of our members are paying premiums as high as 10 per cent of the value of their vessel and one instance in 1968 may suffice to bring to your attention the enormity of the problem. The vessel under consideration had a current value of \$60,000.00, his gross, not net, but gross earnings for that year were \$6,100.00, the insurance premium he paid was \$6,000.00; the following year this same premium was demanded in its entirety before he went fishing and being unable to pay the vessel owner simply stayed at home and did not go out. A Co-Operative Marine insurance company operates on this Coast with considerable success and low rates but the company is highly selective in the risks it chooses and the industry desperately needs a Government sponsored plan to "take up the slack". It is to be noted, of course, that the Department of Fisheries is currently studying the situation with a view to making recommendations for setting up such a plan and/or extending the coverage available under the Indemnity Plan and it is earnestly hoped that something worthwhile will come from this study.

TWELVE MILE LIMIT

It is to be hoped that legislation will be passed in the near future, drawing base lines from headland to headland and establishing a fishing limit outside those base lines, and that by so doing, foreign fleets will be excluded from Hecate Straits and Queen Charlotte Sound. The benefits of this to our trawl fishery are too obvious to enumerate.

LES PRIMES D'ASSURANCE MARITIME

C'est une question qui intéresse à peu près tous les propriétaires de bateaux au pays. Si tout ce dont a besoin le pêcheur augmente rapidement de prix, il n'y a rien qui ait augmenté aussi constamment que le prix que paie un propriétaire de bateau pour l'assurer contre les risques de la mer. Le régime d'indemnité qu'a mis en vigueur l'État fédéral est limité à l'heure actuelle à 75 p. 100 de la valeur des bateaux, dont la valeur estimative est de \$25,000 ou moins, et aucun de nos membres réunissent les conditions pour participer à ce régime dont les primes sont évidemment faibles, soit 2 p. 100. Certains de nos membres paient des primes qui s'élèvent jusqu'à 10 p. 100 de la valeur de leur bateau. Un cas qui s'est produit en 1968 sera suffisant pour attirer votre attention sur l'importance de ce problème. Un pêcheur dont le bateau avait une valeur courante de \$60,000 avait réalisé, cette année-là, des gains bruts, non pas nets mais bruts, de \$6,100 et versé la prime d'assurance de \$6,000. L'année suivante, la prime avait été exigée en totalité avant le départ du bateau pour la pêche. Étant dans l'impossibilité de la verser, le pêcheur a dû rester chez lui et n'a pu prendre la mer. Une coopérative d'assurance maritime fait de très bonnes affaires sur la côte et offre des taux faibles, mais elle choisit ses risques avec beaucoup de soin; l'industrie a donc grand besoin d'un régime gouvernemental pour les cas qui n'intéressent pas cette coopérative. Signalons cependant que le ministère des Pêcheries étudie actuellement la situation en vue de faire des recommandations tendant à l'établissement d'un tel régime et (ou) d'étendre la protection offerte en vertu du Régime d'indemnité. Nous espérons bien sincèrement que cette étude aboutira à quelque chose de concret.

LA LIMITE DES DOUZE MILLES

Nous espérons qu'une loi sera adoptée dans un proche avenir précisant une ligne de démarcation de cap en cap, qu'il sera ainsi établi une zone de pêche interdite aux flottes étrangères, ces dernières étant de ce fait exclues des détroits d'Hécate et de la reine Charlotte. Les avantages que cela comporterait pour notre pêche chalutière sont trop évidents pour que nous les énumérions.

TIE-UP FACILITIES IN THE CITY OF VANCOUVER

While the National Harbours Board has recently implemented a scheme whereby bona fide fishing vessels can preempt space in False Creek Fishermen's terminal, the problem of berthing fishing vessels remains acute and all encouragement should be given to the National Harbours Board to provide more facilities to overcome this difficulty faced by all fishermen. From time to time halibut vessels are forced to sell and unload in ports in the State of Washington due to lack of facilities in Vancouver.

PROMOTION OF GOOD HEALTH

It is common knowledge that fish in almost every form is a healthful food and every section of the fishing industry and in particular the trawl fishery, would benefit as would the health of the Nation if the Federal Government instituted a large scale advertising programme promoting the benefits to be derived from eating fish. It is ironic to think that we managed to deplete the herring resource on the West Coast and that only an infinitesimal part of one percent of that resource went for human consumption. Accordingly we suggest that immediate steps be taken to benefit both the industry and the health of the Nation by encouraging the consumption of fish by Canadians.

It is a sad commentary on our industry and not only the fisherman is to blame for this that not all fish landed is in first class condition. In our highly competitive industry where production seems all important and sometimes takes precedence over quality control, there is little doubt that from time to time the housewife purchases fish that, while perfectly fit for human consumption, and by no means tainted, is not as fresh as it might be. The result of this all too frequently is that the Canadian housewife, generally more accustomed to meat than fish, buys no more fish for a much longer period of time than she might otherwise have done. The only way of overcoming this unfortunate state of affairs is by the Department of Fisheries instituting the most stringent quality control measures possible. While initially the industry itself may suffer we are convinced that in the long run everyone will benefit enormously. We have had preliminary discussions with local representatives of the Department of Fisheries regard-

INSTALLATIONS D'AMARRAGE DANS LA VILLE DE VANCOUVER

Bien que le Conseil des ports nationaux permette, depuis quelque temps, aux bateaux de pêche reconnus de retenir, par préemption, des places pour s'amarrer au terminus des pêcheurs de False Creek, le problème des postes à quai pour les bateaux de pêche reste aigu et tout encouragement devrait être donné au Conseil des ports nationaux pour qu'il mette plus d'installations à la disposition des pêcheurs de façon à résoudre leurs difficultés. De temps à autre, les pêcheurs de fletans sont forcés de vendre leur prise et de la débarquer dans des ports de l'État de Washington en raison de l'insuffisance des installations à Vancouver.

AMÉLIORATION DE L'HYGIÈNE ALIMENTAIRE

Il est bien connu que le poisson, sous presque toutes ses formes, est un aliment sain et tous les secteurs de l'industrie de la pêche, et celle de la pêche chalutière en particulier, en retireraient des avantages, tout comme la santé publique, si l'État fédéral mettait en œuvre un grand programme de publicité faisant ressortir les avantages à retirer de la consommation du poisson. C'est une ironie du sort que nous ayons réussi à diminuer les ressources de harengs sur la côte Ouest et que seule une partie infiniment petite (1 p. 100) de ces ressources ait été affectée à la consommation humaine. Par conséquent, nous proposons que des mesures soient prises incessamment pour stimuler la consommation du poisson au Canada, ce qui se révélerait bénéfique tant pour l'industrie de la pêche que pour la santé nationale.

Il est malheureux que nous ayons à constater que l'industrie, aussi bien que le pêcheur, sont à blâmer parce que tout le poisson pris ne se présente pas dans la meilleure condition. Dans notre industrie où la concurrence est très forte, où la production semble être le souci prédominant, ce qui parfois passe avant le contrôle de la qualité, il n'y a pas de doute que les ménagères achètent parfois du poisson, qui, même s'il est tout à fait bon pour la consommation humaine et ne porte aucune tache, n'est pas aussi frais qu'il pourrait l'être. Il arrive trop souvent que la ménagère au Canada, en général plus habituée à la viande qu'au poisson, n'achète pas de poisson durant une période bien plus longue qu'elle ne devrait par suite de cette situation. Le seul moyen de remédier à cette triste situation serait de voir le ministère des Pêcheries mettre en vigueur des mesures de contrôle de la qualité plus rigoureuses. Si, au début, il arrive que l'industrie elle-même en souffre, nous sommes convaincus qu'à la longue tout

ing this problem and were surprised to discover that the Department was of the opinion that the industry generally would not co-operate if such a programme was instituted. While we cannot, of course, speak for the entire industry there can, however, be no doubt that any such programme would receive the complete support of this organization.

Respectfully submitted

Your very truly,

FISHING VESSEL OWNERS'
ASSOCIATION OF BRITISH
COLUMBIA

Per Timothy P. Cameron

le monde en tirera d'immenses avantages. Nous avons abordé cette question avec les représentants locaux du ministère des Pêcheries et nous avons été étonné d'apprendre que le Ministère croyait que l'industrie en général n'apporterait pas sa collaboration si un tel programme était mis en vigueur. Nous ne sommes pas, évidemment, le porte-parole de l'ensemble de l'industrie, mais nous pouvons dire que notre Association appuierait sans réserve pareil programme.

L'Association des propriétaires de bateaux de pêche de la Colombie-Britannique

Le secrétaire,

(Signature) Timothy P. Cameron

UNION DES PÊCHEURS ET TRAVAILLEURS ASSIMILÉS UNIS SECTIONS SYNDICALES DU FLEUVE FRASER

Comité permanent des Pêches et Forêts
Audience publique—Colombie-Britannique

Du 21 au 28 avril 1969

Messieurs,

Les pêcheurs commerciaux qui tirent leur gagne-pain des eaux du fleuve Fraser, et du versant est du golfe de Georgie, observent

Georgia have noted with serious regard the ever increasing pollution of this area

Our concern is two-fold. First, for the survival of the young salmon on their seaward migration from the spawning grounds, secondly for the health of fishermen who come in contact with domestic and industrial waste discharged into the Fraser River.

If the Fraser River was a one way fast flowing river with no tidal influence, waste material would be subject to destruction through the forces of natural purification.

However, in the lower 20 to 25 miles of the Fraser River tide is an over-riding complicating factor affecting outflow in the lower reaches. The degree to which outflow is affected varies with the range of the tide, river discharge and velocity of south-east winds in the Gulf of Georgia.

Reverse tidal flow, or back up conditions, mean that sewage discharged into the waterway remains in the vicinity of discharge for up to 10 hours in each 24 hour period. Under flow and tidal conditions prevailing during late October to the beginning of April, the daily outflow volume at New Westminster is very little greater than the back flow. Under these conditions almost two complete tidal cycles or two days will be required for water initially in the New Westminster area to clear the mouth of the river. Perhaps up to three or four days flow time may be necessary from Haney and Mission.

Some of the discharged sewage and industrial waste will be carried out with the outflow but much of it settles on the river bottom or washes up on the shoreline and beaches.

Fishermen working the lower Fraser encounter ever increasing amounts of domestic sewage entangled in their gillnets and considerable concern has been expressed for the health of men working in these conditions.

Plans by the Greater Vancouver Sewage and Drainage District are well underway for a combined sewage outfall located on the south arm of the Fraser River in the vicinity of Gilbert Road in Richmond that would not only service Richmond but South Delta and Ladner as well. Addition of this huge new outfall will further heighten the problem of nets being fouled by raw sewage and domestic waste.

Commercial and sports fishermen in Richmond and in other lower mainland communities alike express anxiety regarding the effect of increased pollution on fish stocks, particularly on young salmon migrating seaward from the spawning grounds.

avec appréhension la pollution croissante de cette région.

Notre préoccupation est double. Nous voulons, tout d'abord, assurer la survie des jeunes saumons qui se dirigent vers la mer à partir des frayères et deuxièmement, protéger la santé des pêcheurs qui sont menacés par les déchets domestiques et industriels déchargés dans le fleuve Fraser.

Si ce fleuve était un cours d'eau rapide, affranchi des bouleversements de la marée, les déchets seraient voués à la destruction grâce aux forces de purification naturelle.

Toutefois, dans les 20 à 25 derniers milles en aval, le courant se heurte à un puissant facteur qui modifie son écoulement. La force de cet obstacle dépend de l'ampleur de la marée, du débit du fleuve et de la vitesse des vents sud-est dans le golfe de Georgie.

La marée qui freine le courant arrête les eaux vannes pendant 10 heures sur 24 à proximité de la région où elles sont déchargées dans le cours d'eau. Entre la fin d'octobre et le début d'avril, la marée est telle que le débit quotidien à New Westminster est à peine plus puissant que le reflux. Dans ces conditions, la marée doit accomplir presque deux cycles, ce qui exige deux jours, avant que l'embouchure du fleuve soit libérée de l'eau qui traversait tout d'abord la région de New Westminster. Il faut peut-être trois ou quatre jours à l'eau pour s'écouler entre Haney et Mission.

Une partie des eaux vannes et des déchets industriels sera emportée par le courant, mais une bonne portion va se déposer sur le lit du fleuve, ou se déversent sur les côtes et les plages.

Les pêcheurs installés dans le bas Fraser voient leurs filets maillants absorber une quantité croissante des déchets domestiques et on a exprimé de vives appréhensions à propos de la santé de ceux qui travaillent dans ces conditions.

Le service des égouts du Vancouver métropolitain se consacre activement à l'installation d'un grand égout à décharge situé sur le versant sud du fleuve Fraser à proximité de Gilbert Road à Richmond, égout qui desservira non seulement Richmond, mais South Delta et Ladner. Les filets, à cause de l'installation de cet énorme égout, risqueront encore plus qu'avant d'être embarrassés par les eaux vannes et les déchets domestiques.

Ceux qui se livrent à la pêche commerciale et sportive à Richmond, et dans d'autres localités du Sud du continent ont tous exprimé leur crainte à propos des conséquences de cette pollution croissante sur les réserves du poisson surtout sur les jeunes saumons qui émigrent vers la mer à partir des frayères.

The United Nations Food and Agriculture Organization has emphasized the increasing threat to fish stocks when chlorine is used as an anti-pollutant in waste treatment and municipal water supplies.

"Chlorine, a greenish gas that dissolves to form a potent germicide is commonly used to disinfect water supplies. This is particularly true in areas where growing population has led to increased use of chlorine and other disinfectants to make water safe for drinking.

The amount used presents no problem for human safety—but it is lethal to many species of fish. On contact with chlorinated water, they sicken and die for no apparent reason.

And as chlorination is increasingly used in combatting pollution, more fish will die from apparently mysterious causes."

A bulletin issued by the F.A.O. North American regional office cites research work on chlorination problems conducted by three Polish scientists at Warsaw Agricultural University's fisheries department.

In their experiments the scientists found that even small quantities of chlorine; as little as 0.1 to 0.2 milligrams per litre of water, were death to fish, especially at low temperatures.

The Fraser River is now the largest salmon producing river in North America. The commercial fishery based on the spawning migrations of salmon has developed into a multi-million dollar protein food industry.

The estimated commercial worth of salmon in a normal year would be in the neighbourhood of 80 to 90 million dollars. Perhaps half of the catch could be attributed to fish of Fraser River origin, regardless of where they may be caught in British Columbia.

It has been predicted that by 1984 tourism may replace forestry as B.C.'s leading industry. In 15 years time, it has been suggested, tourism in B.C. will be a \$1.5 billion pillar of our economy. The fame of B.C. salmon is world wide and when tourists are asked why they choose B.C. as a place to spend their holidays, a large number of them express a desire to catch salmon.

We are afraid that unless proper methods are employed in the treatment of domestic and industrial effluent before release into the

L'Organisation des Nations-Unies pour l'alimentation et l'agriculture a fait ressortir que les réserves de poisson sont de plus en plus menacées par le chlore employé dans le traitement des déchets et dans les aqueducs municipaux pour combattre la pollution.

L'utilisation du chlore, gaz jaunâtre qui se dissout pour former un germicide puissant, est très répandu pour la désinfection des aqueducs. On le constate surtout dans des régions où l'essor démographique a entraîné l'usage constant du chlore et d'autres désinfectants, pour rendre l'eau potable.

Le volume utilisé ne menace pas la santé humaine, mais il est meurtrier pour de nombreuses espèces de poisson. Celles-ci, sitôt en contact avec l'eau verdunisée, tombent malades et meurent mystérieusement.

Et au fur et à mesure que la verdunisation sert à combattre la pollution, la destruction mystérieuse des poissons ne fera que s'accroître.

Une brochure publiée par le Bureau régional de la F.A.O. pour l'Amérique du Nord fait état de recherches faites sur la chloruration par trois scientifiques polonais, au département des Pêches de la faculté d'Agriculture de Varsovie.

Ces scientifiques ont constaté, au cours de leurs expériences, que même de faibles quantités de chlore, par exemple de 0.1 ou de 0.2 milligrammes par litre d'eau, entraînaient la mort des poissons, surtout à de basses températures.

Le fleuve Fraser est la plus grosse source de saumon en Amérique du Nord. La pêche commerciale qui dépend des migrations du saumon vers les frayères a permis une production alimentaire riche en protéine qui s'écoule pour des millions de dollars.

On calcule qu'en une année normale, la valeur commerciale du saumon atteint entre 80 et 90 millions de dollars. La moitié des poissons proviennent peut-être du Fraser même s'ils sont capturés dans d'autres régions de la Colombie-Britannique.

On a prédit que vers 1984, le tourisme remplacera les forêts comme principale industrie de la Colombie-Britannique. On prévoit que dans 15 ans le tourisme rapportera un milliard et demi de dollars à notre économie. Le saumon de la Colombie-Britannique est de réputation mondiale et lorsqu'on demande aux touristes pourquoi ils viennent passer leurs vacances dans cette province, il sont nombreux à répondre que c'est le saumon qui les attire.

A moins d'appliquer des méthodes appropriées pour traiter les déchets domestiques et industriels avant qu'ils soient déversés dans

Fraser, the valuable salmon resource of the Fraser is jeopardized.

Of greatest concern at present is the health hazard posed by pollution of the lower Fraser River. Commercial fishermen are gravely concerned for their health as they come in contact with domestic sewage and other effluent caught up in their nets.

Boundary Health Unit points out that no part of the lower Fraser is safe any longer for swimming or aquatic sports.

According to the 1966 Boundary Health Unit report the coliform count on the lower Fraser ranged as high as 1.6 million during certain periods at Annicis Island. At Westham Island near the mouth of the Fraser it was 8000. The lowest count was upriver at Barnston Island where the count was 4000.

From a health standpoint, therefore, the lower Fraser already has been eliminated as a safe area for any recreational purposes. Boundary Health says its findings refute the contention that almost unlimited quantities of untreated sewage can be discharged into the Fraser River. Although there may well be enough oxygen in the water to eventually oxidize the sewage, it points out, in the interim "the water represents a direct health hazard for persons coming in contact with it."

Modern communities can no longer be satisfied with using waterways as a means of disposing of domestic and industrial wastes.

We are particularly pleased to note that the title of this Standing Committee is Forestry and Fisheries.

In recent years the use of huge barges by the forest industries has created a serious pollution problem of another nature to the waters of the Fraser River. Each barge transports many millions of board feet of logs to the Fraser River where they are dumped and held in log sorting areas, then made up into booms until needed by lumber and chipper mills located along the Fraser River.

While this method of transportation greatly facilitates the movement of logs, especially those having poor buoyancy qualities, it brings with it much of the forest debris, such as bark and limbs, formerly lost in the towing of log booms enroute to the river from upcoast logging operations.

This debris is fouling the river bottom in certain areas so badly that boat anchors will not hold on the bottom. Also due to the difference in buoyancy properties of salt and fresh water, low floating logs picked up from

le Fraser, les réserves précieuses de saumon seront compromises.

C'est le risque pour la santé que cause la pollution dans le bas Fraser qui provoque notre plus vive préoccupation à l'heure actuelle. Les pêcheurs commerciaux craignent pour leur santé lorsqu'ils doivent débarrasser leurs filets des déchets domestiques et autres.

Le service sanitaire de Boundary signale qu'aucune zone du bas Fraser, n'est, au point de vue santé, propice à la nage ou aux sports aquatiques.

Ce service, dans le rapport de 1966, signale que le chiffre de la pollution dans le bas Fraser atteignait jusqu'à 1.6 millions de «germes» pendant certaines périodes à l'île Annicis. A l'île Westham près de l'embouchure, le chiffre était de 8,000. Le plus bas chiffre, 4,000, a été enregistré, en aval, à l'île Barnston.

Le bas Fraser a été éliminé comme région de loisir, à cause des risques pour la santé. Le Service sanitaire de Boundary déclare que ses conclusions réfutent la thèse voulant que le Fraser puisse absorber une quantité presque illimitée de déchets non traités. Bien que l'eau puisse contenir assez d'oxygène pour oxygéner à la longue les déchets, on signale que, dans l'intervalle, l'eau menace directement la santé de ceux qui s'y approchent.

Les collectivités modernes ne peuvent plus se contenter de l'utilisation des cours d'eau pour le déversement des déchets domestiques et industriels.

Nous avons été plutôt heureux de remarquer que ce Comité a pour titre «Comité permanent des Pêches et Forêts».

Les industries forestières qui, depuis ces dernières années, utilisent d'énormes chalands ont contribué à polluer sous une autre forme, les eaux du fleuve Fraser. Chaque chaland transporte du bois par millions de pieds-planches, les décharge dans la rivière où les bilots sont retenus dans les zones du triage puis formée en chapelets jusqu'à ce qu'ils soient absorbés par les fabriques de planches et de copeaux situées le long du Fraser.

Bien que ce moyen facilite énormément le transport du bois, surtout lorsque la flottabilité est médiocre, il entraîne un grand nombre de déchets forestiers comme les écorces et les rameaux qui, autrefois, se répandaient lorsqu'on remorquait les chapelets, à partir des zones de coupe du haut de la côte, vers le fleuve.

Le lit du fleuve est souillé à tel point par ces déchets, que, dans certaines régions, les ancres ne peuvent pas s'accrocher. En outre, comme l'eau salée et l'eau douce présentent chacune différents degrés de flottabilité, les

salt water log holding ponds and loaded on barges, soon sink to the bottom of the river and become snags that cause many thousands of dollars damage to fishermen's nets or as they slip out from the booms to become low-lying, barely visible menaces to navigation.

Another danger to navigation is the almost totally submerged log with just its tip visible above water. Commonly known as deadheads, they are transported, unknowingly on board log barges. Today there is hardly a fisherman who has not suffered serious damage to his boat due to striking deadheads. Many pleasure boat owners also have had near fatal accidents from striking these partially submerged logs.

This form of pollution is becoming worse with the increasing use of log dumping barges.

Conclusion:

1. The need is urgent for a comprehensive study of the Lower Fraser River by a research team.

2. The health of the Lower Mainland of B.C. citizens must not be jeopardized by the dumping of any further sewage, whether raw or partially treated, into our waterways.

3. It is imperative that the valuable commercial and sports salmon fisheries not be jeopardized by the dumping of raw or partially treated wastes into the Fraser River.

4. Federal and Provincial Governments must undertake a program of financial aid in the form of grants and long term, low interest loans to municipalities for sewage treatment.

5. Water quality standards must be established immediately to determine the kind of treatment plant required in each given area with at least secondary treatment to be required in the lower Fraser River areas where tidal back-up creates a particularly serious threat of pollution.

6. A pollution control board must be constituted having as its members non-civil servants who are not responsible to any ministry of Federal or Provincial Governments, and who may act independently in enforcement of a Pollution Control Act.

7. Log dumping must be prohibited in the waters of the Fraser River and a suitable site near the mouth of the river in salt water should be constructed to dump and boom logs prior to towing into the river for storage.

billots à basse flottabilité provenant des fosses installés sur la mer et chargés à bord des chalands coulent immédiatement au fond du fleuve et deviennent des écueils qui causent des dommages très onéreux aux filets ou lorsqu'ils s'échappent de la chaîne flottante, ils deviennent des obstacles à peines visibles à la navigation.

Une autre menace à la navigation est causée par les billots presque totalement submergés dont seul le sommet est visible. Appelés communément des «deadheads», on les transporte par mégarde sur des chalands. Rares sont les pêcheurs de nos jours qui n'ont pas vu leurs bateaux sérieusement détériorés par suite d'une collision avec ces obstacles. Nombreux aussi sont les propriétaires de bateaux de plaisance qui ont failli être victimes d'une collision avec ces billots partiellement submergés.

Cette forme de pollution s'aggrave avec l'utilisation croissante de chalands pour décharger des billots.

Conclusion

1) La nécessité de créer une équipe de recherches pour faire une étude urgente et détaillée du bas du fleuve Fraser.

2) La santé des résidents du Sud de la Colombie-Britannique ne doit pas être menacée par le déversement des déchets bruts ou partiellement traités dans nos cours d'eau.

3) Il importe que les précieuses réserves de poisson destinées à la pêche commerciale et sportive ne soient pas compromises par le déversement de déchets bruts ou partiellement traités dans le Fraser.

4) Les gouvernements fédéral et provinciaux doivent entreprendre un programme d'assistance financière sous forme de dons et de prêts à long terme, à faible intérêt, aux municipalités, pour le traitement des déchets.

5) Il faut établir immédiatement des normes de qualité de l'eau pour déterminer le modèle d'usine de traitement approprié à chaque région donnée et installer aussi des usines au moins secondaires dans le bas du fleuve Fraser où le flux de la marée entraîne un risque grave de pollution.

6) Un conseil de contrôle de la pollution doit être constitué de membres choisis hors de la Fonction publique et qui ne soient comptables à aucun ministère des gouvernements fédéral ou provinciaux et qui peuvent en toute indépendance appliquer une loi sur le contrôle de la pollution.

7) Le déversement du bois doit être interdit dans les eaux du Fraser et on doit aménager à l'embouchure du fleuve, en eau salée, un endroit approprié pour recevoir les billots en chapelets avant de les remorquer sur le fleuve pour l'entreposage.

8. Certain species of logs such as hemlock and yellow cedar should be inspected for "conkey" or hollow butts after falling, and that portion of the log that is hollow or "conkey" should be removed before storing in holding ponds at upcoast points.

FRASER RIVER LOCALS AND
FRASER RIVER AND DIST.
COUNCIL UNITED FISHERMEN
AND ALLIED WORKERS' UNION

Per: T. Buck Suzuki

8) Certaines espèces de bois comme le sapin cîgue et le cyprès jaune doivent être inspectées après leur chute afin d'en découvrir les portions creuses et celles-ci doivent être retranchées avant qu'on place le bois dans des fosses à certains points du long de la côte.

En tout respect,

T. Buck Suzuki

1. Gulf and Fraser Fishermen's Credit Union (hereinafter referred to as "Gaff" or the "Credit Union") has as its common bond "commercial fishermen, allied workers and their relatives, as approved by the Board of Directors, residing in British Columbia". While many of its members fish coastwide, the largest part of the membership resides in the southwest part of the Mainland and its office is situate in Vancouver.

2. In 1955, when the B.C. Credit Union League successfully persuaded the Government to include credit unions as approved lenders under the Fisheries Loan Improvement Act, Gaff had total assets of just under one million dollars. At the end of 1968 its total assets were \$6,400,000, and the growth in assets in the 1968 fiscal year alone was approximately \$900,000. (an amount about equal to its total assets in 1955). Gaff, thus, along with the other fishermen's credit unions and co-operative institutions, has demonstrated not only sound management over the years, but also the ability which fishermen have through co-operative effort to help to solve their own problems, once they can accumulate a sufficient pool of capital. Of the \$3,000,000. in new loans made by Gaff in 1968, 40 per cent was lent to fishermen to finance boats and gear. Accordingly, your Committee may recognize that Gaff is a specialized fishermen's co-operative financial institution which has a great deal of experience in the field of lending with which the Fisheries Improvement Loans Act is concerned.

3. After the introduction of the Fisheries Improvement Loans Act in 1955, Gaff became an approved lender and lent approximately 500,000. under the Act between 1956 and 1960. It is an interesting fact that of that amount the Canadian Government was not called upon for one cent on its guarantee. The Credit Union had difficulty in collecting one account for \$235.00—but even that it subsequently recovered. Some of the fishermen, due to the vagaries of the fishing industry, had to have postponements in their payments—but all of them paid up.

4. Aside from the community of interest amongst fishermen which is most effective when they realize they are borrowing the savings of their fellow fishermen, the Credit Union has a sound policy of having a credit committee including fishermen who can weigh the credit worthiness of the borrower,

1. La Coopérative de crédit des pêcheurs du golfe et du Fraser (appelée dans les présentes «Gaff» ou la «coopérative de crédit») groupe «les pêcheurs commerciaux, les travailleurs associés et leurs parents, selon l'approbation du conseil d'administration, qui résident en Colombie-Britannique». Même si bon nombre de ses membres pêchent sur tout le littoral, la majeure partie résident dans la région sud-ouest de la province, et son bureau se trouve à Vancouver.

2. En 1955, lorsque la B.C. Credit Union League réussit à persuader le gouvernement d'inclure les coopératives de crédit comme prêteurs accrédités en vertu de la loi sur les prêts aidant aux opérations de pêche, l'actif de la Gaff n'atteignait pas tout à fait un million de dollars. A la fin de 1968 il était de \$6,400,000 et il avait augmenté en une seule année financière, 1968, d'environ \$900,000 (montant à peu près égal à son actif global de 1955). Donc, comme les autres coopératives de crédit de pêcheurs et institutions coopératives, Gaff au cours des années s'est montrée capable non seulement d'une excellente gestion mais aussi d'aider les pêcheurs grâce à l'action coopérative dont ils bénéficient à résoudre leurs propres problèmes une fois qu'ils ont mis en commun un montant suffisant de capitaux. Sur les \$3,000,000 de nouveaux prêts consentis par Gaff en 1968, 40 p. 100 ont été prêtés à des pêcheurs pour financer leurs bateaux et leur matériel de pêche. Le Comité reconnaîtra donc que Gaff est une institution financière coopérative spécialisée pour pêcheurs qui a accumulé une grande expérience dans le domaine des prêts auxquels s'intéresse la loi sur les prêts aidant aux opérations de pêche.

3. Après l'adoption de la loi sur les prêts aidant aux opérations de pêche en 1955, Gaff est devenue un prêteur accrédité et elle a prêté environ \$500,000 aux termes de la loi entre 1956 et 1960. Fait intéressant, le gouvernement canadien n'a pas été appelé à déboursier un seul cent de ce montant en application de sa garantie. La coopérative de crédit a eu du mal à percevoir le montant d'un compte de \$235—mais elle a même récupéré ce montant par la suite. Certains pêcheurs, par suite des vicissitudes de l'industrie de la pêche ont dû obtenir des sursis de paiement—mais ils ont tous remboursé intégralement.

4. Outre la communauté d'intérêt des pêcheurs qui se révèle extrêmement efficace lorsqu'ils se rendent compte qu'ils empruntent les épargnes de leurs camarades pêcheurs, la coopérative de crédit suit une politique judicieuse: son comité de crédit englobe des pêcheurs qui peuvent évaluer la

and members who do the appraisals who are seasoned fishermen themselves and know fishing vessels and gear inside and out. A man judged by his own peers is usually satisfied. Since its incorporation in 1941, Gaff has lent a total of \$23,700,000. and has only had to write off \$21,500. of those loans.

5. Generally, Gaff's loaning policy is based on three things:

- (a) the ability of the fisherman, as a fisherman, to perform economically;
- (b) his credit worthiness; and
- (c) the value of his unencumbered equity in his boat and/or gear to be charged must be at least 50%.

6. During the time that Gaff made loans under the Act, it was able to help some fishermen by reducing his required equity to 35% (allowing for the 15% guarantee). If it begins again to make loans under the Act, it may, subject to ability and credit worthiness, be able to require an even smaller owner equity, particularly if the loan is for refinancing. However, the interest rate fixed by the 1955 Act, i.e., 5%, plus the cost of life insurance, became so unrealistic and the red tape under the Act so expensive that the Credit Union did not carry on making loans under the Act after 1960.

7. A credit union is not a profit-oriented institution but when its own costs for money (including borrowed money) and cost of overhead exceeded 5% plus the cost of insurance, it could no longer help fishermen under the Act. To do so would have meant that it would have had to subsidize this class of borrower at the expense of the other members (having no profit from which to subsidize them).

8. When Bill C-151 was introduced, giving some relief with respect to the rate of interest chargeable under the Act, Gaff was prepared to re-examine the question of its participation thereunder. Gaff is particularly interested in the possibility of re-establishing its position as an approved lender under the Act in view of certain significant changes which have occurred in the fishing industry in British Columbia since September 1968:

- (a) the announcement of salmon licencing regulations by the Minister of Fisheries in September 1968; and

solvabilité de l'emprunteur, et les membres du comité chargé des évaluations sont eux-mêmes des pêcheurs chevronnés qui connaissent de fond en comble les embarcations et le matériel de pêche. Un jugement par les pairs est d'ordinaire satisfaisant. Depuis sa constitution en corporation en 1941, Gaff a prêté un montant global de \$23,700,000 et elle n'a dû défalquer que \$21,500 de ces prêts.

5. D'une façon générale, la politique de prêt de Gaff est fondée sur trois critères:

- a) l'aptitude du pêcheur, en tant que pêcheur, à rendre son exploitation rentable;
- b) sa solvabilité; et
- c) la valeur de sa part de propriété déchargée de charge à l'égard de son embarcation et ou de son matériel de pêche doit atteindre au moins 50 p. 100.

6. Depuis que Gaff consent des prêts aux termes de la loi, elle a pu venir en aide à certains pêcheurs en réduisant sa part de propriété nécessaire à 35 p. 100 (tenant compte de la garantie de 15 p. 100). Si elle recommence à consentir des prêts aux termes de la loi, elle pourra peut-être, sous réserve des possibilités et de la solvabilité de l'emprunteur exiger une part de propriété encore moindre, surtout si le prêt est destiné au refinancement. Cependant, le taux d'intérêt fixé par la loi de 1955, c'est-à-dire 5 p. 100 plus les frais d'assurance-vie, est devenu si fictif et la paperasserie aux termes de la loi, si coûteuse que la coopérative a cessé de consentir des prêts aux termes de la loi après 1960.

7. Une coopérative de crédit n'est pas une institution à but lucratif mais lorsque le coût de son argent (y compris l'argent emprunté) et ses frais généraux dépassaient 5 p. 100 sans compter les frais d'assurance, elle ne pouvait plus venir en aide aux pêcheurs aux termes de la loi. En le faisant elle aurait dû subventionner cette catégorie d'emprunteurs au détriment des autres membres (n'ayant pas de bénéfice lui permettant de les subventionner).

8. Lorsque le bill C-151 a été présenté, accordant un certain adoucissement en matière du taux d'intérêt exigible aux termes de la loi, Gaff était prête à examiner de nouveau la question de sa participation à ce programme. Gaff s'intéresse en particulier à redevenir éventuellement un prêteur accrédité aux termes de la loi à la suite de certains changements significatifs survenus dans l'industrie de la pêche en Colombie-Britannique depuis septembre 1968:

- a) l'annonce en septembre 1968 par le ministre des Pêcheries de règlements concernant l'octroi de permis de pêche au saumon et

(b) certain consolidations of the fishing companies in recent months whereby the big two of the private sector (i.e., the non-cooperative sector) have acquired substantial control of the private sector, particularly in salmon. (This affects the southern part of the Province particularly where the companies have extensive facilities.)

9. Arising out of these two events, Gaff foresees:

(a) a real danger that the independent boat owner will be forced out of salmon fishing (and the other branches of the fisheries cannot absorb them);

(b) ownership and/or control of salmon boats and licences by the large companies will force the independent fishermen out of fishing.

10. The Minister in speeches is reported to have stated that he intends that the fishing companies should not become significant licence holders and that he favours independent ownership. Notwithstanding these expressions of intention, in any event, with the consolidation amongst fishing companies which has taken place, the question may be academic. As a result of the big two companies directly or indirectly probably now owning or controlling sufficient boats and licences that they can without any additions, but merely by substituting bigger and better equipped vessels and transferring their present licences, assure to themselves a large enough share of the catch, they probably will not have to rely upon the independent fisherman boat owner—or only indifferently.

11. In prior years and for many years the fishing companies on the B.C. Coast have carried out a most extensive policy of financing fishermen with respect to boat and gear to assure to companies a share of the catch which would keep their respective plant and equipment fully employed and to meet their markets. The terms and conditions of these loans have been so geared to competition between the companies for supply of fish that they have become loose although many fishermen who ostensibly own their boats have no real equity. The system of company financing was criticized by Sol Sinclair in his study in 1960, and by others on many other occasions, as wasteful. The fishermen themselves have long suspected that the economic waste which has resulted, as well as the bonuses paid to the owners based on production, have been recouped by the companies, not out of profit,

b) certaines fusions des sociétés de pêche ces derniers mois qui ont permis aux deux plus importantes sociétés du secteur privé (c'est-à-dire le secteur non coopératif) d'acquiescer une mainmise importante sur ce secteur, en particulier pour ce qui est du saumon. (Cette innovation vise la partie méridionale de la province en particulier où les sociétés ont beaucoup d'usines.)

9. A la suite de ces deux événements, Gaff entrevoit:

a) un véritable danger du fait que le propriétaire indépendant d'une embarcation sera forcé d'abandonner la pêche au saumon (et les autres secteurs de la pêche ne peuvent pas le prendre à leur charge);

b) que la propriété et/ou le contrôle des bateaux et des permis de pêche au saumon par les grandes sociétés forcera les pêcheurs indépendants à abandonner la pêche.

10. Dans ses discours le ministre aurait dit qu'il n'avait pas l'intention de voir les entreprises de pêche devenir d'importants détenteurs de permis et qu'il favorisait les pêcheurs propriétaires indépendants. Malgré ces déclarations d'intention, étant donné la fusion des entreprises de pêche, la question est peut-être théorique. Du fait que les deux grandes compagnies qui directement ou indirectement possèdent ou contrôlent probablement à l'heure actuelle un nombre suffisant de bateaux et de permis pour pouvoir, sans en ajouter d'autres mais simplement en les remplaçant par des navires de pêche plus importants et mieux outillés et en effectuant un transfert des permis actuels, s'assurer une tranche suffisamment importante de la prise, elles n'auront probablement plus à compter sur le pêcheur indépendant propriétaire de son embarcation—ou seulement très peu.

11. Depuis bien des années les entreprises de pêche du littoral de la Colombie-Britannique ont financé à une grande échelle les embarcations et le matériel des pêcheurs pour s'assurer une tranche suffisante des prises pour leur permettre d'exploiter à pleine capacité leurs usines et leur matériel respectif et pour approvisionner leurs marchés. Les modalités d'octroi de ces prêts ont été tellement orientées vers la concurrence entre les compagnies pour l'approvisionnement de poisson qu'elles ont perdu leur rigueur bien que nombre de pêcheurs qui en apparence sont propriétaires de leurs embarcations en réalité n'ont aucune mise de fonds. Dans son étude en 1960 Sol Sinclair a jugé ruineux le régime de financement des compagnies et d'autres l'ont critiqué à maintes autres occasions. Les pêcheurs eux-mêmes soupçonnent depuis longtemps que le gaspillage économique con-

but out of the pockets of all fishermen through lower prices.

12. There are signs that this long-time system of company financing is breaking up and many 'independent' fishermen may either lose their boats and gear (and licences) or find themselves on the outside. Our contact with our members indicates that a number of them are finding an aloofness on the part of the companies to making arrangements for them to fish for the coming season—an attitude quite different from past seasons. More fishermen are finding the companies less enthusiastic than previously to extend financing.

13. For this reason we strongly urge that Section 3 of the Act should be amended by adding to paragraph (a) of subsection (1) appropriate wording which would permit loans under the Act for refinancing by a fisherman. It should be kept in mind that there are at least two situations to be covered:

a) a loan for straight re-financing; and

b) a loan for refinancing which includes an additional advance to improve the vessel or the gear. (An appropriate amendment would also be required in paragraph (d) of subsection (1) of Section 3.)

14. The Minister is reported as having said that he has requested the Finance Department to agree to such an amendment but has not been successful to date. In view of the fact that the Government is not advancing any money and judging not only from Gaff's own experience, but the assurances by the Minister of Finance in the House to the Honourable Member from Burnaby-Richmond-Delta as to the overall very limited extent to which the Government has been called upon on its guarantees under the Act, we cannot understand the reluctance or the refusal of the Minister of Finance to approve this amendment. We therefore urge this Committee to relentlessly pursue this proposed amendment with both Ministers and the Government.

15. If this amendment is made and assuming adequate interest rates are permitted—(about which we will have more to say later in this brief), Gaff would be prepared to con-

sécutif à ce régime ainsi que les primes versées aux propriétaires en fonction de la production ont été récupérés par les compagnies non pas sur les bénéfices mais au détriment de tous les pêcheurs par un abaissement des prix.

12. Ce système de financement des compagnies, en vigueur depuis longtemps, donne des signes d'effondrement et bien des pêcheurs «indépendants» perdront peut-être leurs bateaux et leur matériel (et leurs permis) ou se retrouveront sur le pavé. Il ressort de nos entretiens avec nos membres qu'un certain nombre d'entre eux constatent une certaine réserve chez les compagnies à prendre des dispositions pour leur permettre de pêcher pendant la saison à venir—attitude bien différente de celle des saisons antérieures. Les pêcheurs en plus grand nombre dénotent chez les compagnies moins d'enthousiasme qu'auparavant à assurer leur financement.

13. Voilà pourquoi nous recommandons vivement que l'article 3 de la loi soit modifié par l'adjonction à l'alinéa a) du paragraphe (1) du texte approprié qui permettrait l'octroi de prêts en vertu de la loi à un pêcheur, aux fins de refinancement. Il faudrait se rappeler qu'il faut tenir compte au moins de deux situations:

a) un prêt aux fins de refinancement simple; et

b) un prêt destiné à un refinancement qui comprend une autre avance de fonds pour améliorer l'embarcation ou le matériel de pêche. (Une modification appropriée serait aussi nécessaire à l'alinéa d) du paragraphe (1) de l'article 3.)

14. Le ministre aurait dit qu'il avait demandé au ministère des Finances de consentir à l'adoption d'un pareil amendement mais sans résultat jusqu'à ce jour. Comme le gouvernement n'avance aucun fonds et à en juger non seulement par l'expérience de Gaff mais par les assurances données à la Chambre par le ministre des Finances à l'honorable représentant de Burnaby-Richmond-Delta quant au degré global très limité auquel le gouvernement a été appelé à faire honneur à ses garanties aux termes de la loi, nous ne pouvons pas comprendre l'hésitation ou le refus du ministre des Finances d'approuver cet amendement. Nous encourageons donc le Comité à s'employer sans relâche à faire accepter cet amendement proposé par les deux ministres et le gouvernement.

15. Si cet amendement est adopté et que des taux d'intérêt suffisants soient autorisés (nous reviendrons sur ce point plus tard au cours du mémoire), Gaff consentirait à prêter

sider lending at least one million dollars under the Act before the present expiry date of the Act on June 30, 1970. We consider the independence of the individual fisherman-owner arising out of the conditions referred to above (since September 1968) so imperiled that Gaff will divert some of its present funds available for loans and borrow money to meet this commitment. (Note that while the Act is entitled Fisheries Improvement Loans Act, the preamble to the 1955 Act reads "An Act Respecting Loans to Assist Fishermen Engaged in a Primary Fishing Enterprise". Thus the Act could be extended to include refinancing.)

au moins un million de dollars aux termes de la loi avant la date d'expiration actuelle de celle-ci le 30 juin 1970. D'après nous, l'indépendance du pêcheur-proprétaire, étant donné la situation susmentionnée (depuis septembre 1968), est, à nos yeux, si gravement en péril que Gaff affectera une tranche de ses fonds actuellement disponible à consentir des prêts et à emprunter de l'argent pour faire face à cet engagement. (A noter que même si la loi est intitulée «loi sur les prêts aidant aux opérations de pêche», le préambule de la loi de 1955 est ainsi libellé: «Loi sur les prêts destinés à aider les personnes exerçant une entreprise de pêche fondamentale.» Le cadre de la loi pourrait donc être élargi afin d'inclure le refinancement.)

16. We turn now to the question of interest rate. First, we would commend the Government for recognizing that the 5 per cent rate in the Act before the recent amendment was totally inadequate. However, judging from the policy of the Government on Home Improvement Loans and Farm Improvement Loans, we are apprehensive that if the same policy is adopted with respect to the Fisheries Improvement Loans Act, the Act will just be a paper tiger. A recent letter from Ottawa indicates a rate of $7\frac{1}{2}\%$ plus insurance, which is highly inadequate to attract funds.

16. Passons maintenant à la question du taux d'intérêt. D'abord, on doit féliciter le gouvernement d'avoir reconnu que le taux de 5 p. 100, qui figurait dans la loi avant que soit adoptée la modification récente, était tout à fait insuffisant. Cependant, à en juger d'après la politique du gouvernement en matière de prêts pour la réfection de maisons et pour les améliorations agricoles, nous craignons fort que si l'on adopte la même politique à l'égard de la loi sur les prêts aidant aux opérations de pêche, celle-ci ne sera qu'un tigre de papier. Une lettre récente d'Ottawa indique un taux de $7\frac{1}{2}$ p. 100 outre l'assurance, ce qui est un taux très insuffisant pour attirer des fonds.

17. In the explanatory notes to clause 3 of Bill C-151 it is stated:

"The purpose of this amendment is to increase the present limit of liability of the Minister of Finance in respect of loans made by individual lenders to encourage lending by small volume lenders."

17. Dans les notes explicatives de l'article 3 du bill C-151 on dit:

"Cette modification a pour objet d'augmenter le plafond de responsabilité du ministre des Finances pour des prêts répartis entre plusieurs prêteurs en vue d'encourager les prêts par de petits prêteurs."

(We would like to know if any of those types of lenders are prepared to commit funds under the Act at that rate.) We will have further comments as to clause 3. However, we do not hesitate to say now, clearly from our own experience as a non-profit oriented institution vitally interested in fishermen and their problems, unless the rate fixed by the Minister under clause 2 of Bill C-151 is related to the cost of money to the lender, its administration cost and the cost of life insurance, the Act even as amended will attract no new lenders. Having regard to the rates which chartered banks are charging on consumer loans, it is obvious that they will not be very interested in making loans under the Act, particularly if the pressure from the fishing companies on them to do so falls off. In view of the rate which Trust Companies,

(Nous aimerions savoir si l'un de ces prêteurs consentira à engager des fonds aux termes de la loi à ce taux-là.) Nous ferons d'autres observations à propos de l'article 3. Cependant, nous n'hésitons pas à dire maintenant, d'après notre expérience en tant qu'institution à but non lucratif, qui s'intéresse foncièrement aux pêcheurs et à leurs problèmes, qu'à moins que le taux fixé par le ministre en vertu de l'article 2 du bill C-151 soit rattaché au coût de l'argent au prêteur, à ses frais d'administration et ses frais d'assurance-vie, même modifiée la loi n'attirera pas de nouveaux prêteurs. Compte tenu des taux que les banques à charte exigent pour les prêts de consommation, il est évident qu'elles ne seront pas très intéressées à consentir des prêts aux termes de la loi, surtout si les pressions des compagnies de pêche pour les

Loan Companies and Insurance Companies have to pay for funds and the returns they can get elsewhere, we do not think many of them will be attracted.

18. Gaff paid an average rate to its members in 1968 on their savings of 6 per cent on deposits and 5 per cent on shares and the cost of share insurance. Most of this money is now out on loan. Its borrowing rate through B.C. Central Credit Union has been $7\frac{1}{2}\%$ per cent. However, with the recent increase in the banks' prime rates, Central's rate to Gaff has increased accordingly.

19. Frankly, provided that the rate charged by the lending institutions under the Act is not unconscionable, we do not understand the object of the Government in tying the rate to long term Government bonds. The Government is not advancing the money and it doesn't have to borrow any money to make the Act useful. Past experience would indicate that its actual losses on guarantees are negligible.

20. Accordingly, we trust that your Committee will urge the Government to allow a free rate of interest. Whether or not it would attract funds for this type of loan from other institutions, we are quite certain that the large fishermen's credit unions on the west coast will pour in substantially more funds to this type of loan (particularly if it includes refinancing) even if they have to go out to borrow it. This could mean several millions of dollars diverted to the purposes of the Act.

21. While we advocate a freer interest rate, we certainly would not wish to encourage or permit unconscionable rates. You can rest assured the credit unions (being non-profit oriented) will keep the rate low. To prevent others from exploiting the fishermen by excessive rates, it might be reasonable to require approved lenders to file from time to time with the Minister of Finance the rates being charged and how they are justified.

22. While on the subject of rates of interest, there is another feature which we think should be written into the Act, i.e. that the rates may periodically be adjusted on any

exhorter à en consentir, s'apaisent. Étant donné le taux que les compagnies de fiducie, de prêts et d'assurance doivent payer pour obtenir des fonds et le rendement qu'elles peuvent obtenir ailleurs, nous ne pensons pas que bon nombre d'entre elles seront intéressées.

18. Gaff a versé à ses membres en 1968 un taux moyen, sur leurs épargnes, de 6 p. 100 sur les dépôts et de 5 p. 100 sur les actions, et a payé le coût de l'assurance relative aux actions. La majorité de cet argent est actuellement prêté. Son taux d'emprunt à la B.C. Central Credit Union a été de $7\frac{1}{2}$ p. 100. Cependant, à la suite de l'augmentation récente du taux d'escompte des banques, le taux que la Central a exigé de Gaff a augmenté en conséquence.

19. Franchement, pourvu que le taux exigé par les institutions de prêts aux termes de la loi ne soit pas exorbitant, nous ne comprenons pas pourquoi le gouvernement rattache le taux aux obligations à long terme de l'État. Le gouvernement n'avance pas les fonds et il n'a pas à emprunter d'argent pour que la loi s'applique avec succès. Les constatations antérieures sembleraient indiquer que ces pertes réelles au titre des garanties sont négligeables.

20. Nous espérons donc que le Comité encouragera le gouvernement à autoriser un taux d'intérêt libre. Qu'il attire ou non des fonds d'autres institutions pour ce genre de prêts, nous sommes tout à fait certains que les grandes coopératives de crédit de pêcheurs du littoral du Pacifique affecteront un supplément important de fonds destinés à ce genre de prêts (surtout s'il inclut le refinancement) même si elles doivent aller les emprunter. Plusieurs millions de dollars pouraient ainsi être affectés à la réalisation des objectifs de la loi.

21. Même si nous préconisons un taux d'intérêt plus libre, nous ne voudrions certes pas encourager ou tolérer des taux exorbitants. Le Comité peut être assuré que les coopératives de crédit (n'ayant pas de but lucratif) maintiendront le taux à un bas niveau. Pour empêcher les autres d'exploiter les pêcheurs par l'imposition de taux excessifs, il serait peut-être raisonnable d'exiger que les prêteurs accrédités déposent de temps à autre auprès du ministre des Finances les taux d'emprunt exigés accompagnés d'une justification.

22. A propos des taux d'intérêt, selon nous il faudrait insérer dans la loi une autre particularité: les taux devraient pouvoir être ajustés périodiquement relativement à n'im-

loan so that if costs go up significantly so as to justify a rate increase, the lending institution will not be required to subsidize loans made under the Act. On the other hand, for the protection of the fisherman, if costs go down, he would get the benefit of a reduced rate. The Credit Union has this protection for fishermen under its present substantial loans to them.

23. Furthermore, the fisherman should be entitled to repay the loan at any time after the first year or two without notice or bonus—so that if he can refinance at any time after that at a better interest rate he would be free to do so. (In a credit union, by statute, he may repay at any time.) Also the loans should be on the basis that the fisherman will not be under any obligation to deliver his catch to any particular fish buyer or processor unless he is under contract so to do and that contract may be cancelled on one year's notice. This should be provided in such a way as not to prevent the fisherman from pledging the whole or a portion of the proceeds from the share of his sale of the catch to whomsoever he sells or delivers it, as part of the security for the repayment of the loan.

24. We understand the Minister has indicated the intention of the Government to further amend the Act at an early date to increase the size of authorized loan from \$10,000. to \$25,000. We trust that this will be done. Actually \$25,000. may prove to be on the low side having regard to the fact that the cost of even a new small boat can run from \$30,000. to \$40,000. One of the stated objects of the salmon licencing regulations we understand is to upgrade the boats and gear and this is the reason for the transferability of the licence. We would suggest that if the Government is serious in this intention, perhaps the limit should be raised even higher.

25. In proposing the higher limit, the Minister has made no statement about revising clause 3 of Bill C-151. However, we submit that clause 3 ought to be increased as to paragraphs A and B of (a) (ii) proportionately. Otherwise a small number of larger loans could use up the guaranteed amount and the remedial effect of the legislation could be limited to relatively few fishermen.

26. Again we would emphasize with respect to our proposals as to increasing the limit on the amount of the loan and increasing the size

porte quel prêt afin qu'au cas d'une hausse importante des coûts qui justifierait une augmentation du taux, l'institution de prêts ne soit pas obligée de subventionner les prêts consentis aux termes de la loi. D'autre part, pour la protection du pêcheur, si les coûts baissent, il profiterait d'une réduction de taux. La coopérative de crédit accorde cette protection aux pêcheurs lorsqu'elle leur accorde actuellement des prêts importants.

23. En outre, le pêcheur devrait pouvoir rembourser l'emprunt à n'importe quel moment après la première ou les deux premières années, sans avis ou prime—ainsi s'il peut refinancer à n'importe quel moment par la suite à un meilleur taux d'intérêt, il serait libre de le faire. (Les statuts des coopératives de crédit prévoient qu'il peut rembourser à n'importe quel moment.) Les prêts aussi devraient être consentis de manière à ne pas obliger le pêcheur à livrer ses prises à un acheteur ou à un transformateur de poisson particulier à moins qu'il ait passé contrat avec lui pour le faire et ce contrat pourrait être annulé moyennant un préavis d'un an. Cette garantie devrait être accordée de manière à ne pas mettre le pêcheur dans l'impossibilité d'affecter tout le produit ou une partie du produit de la part de sa vente des prises à celui auquel il les livre ou les vend, à titre de garantie du remboursement de l'emprunt.

24. Sauf erreur, le ministre a manifesté l'intention du gouvernement de modifier encore la loi sous peu afin d'augmenter à \$25,000 le montant du prêt autorisé fixé actuellement à \$10,000. Nous espérons que cette intention se concrétisera. A vrai dire le montant de \$25,000 se révélera peut-être faible si l'on tient compte du fait que même une petite embarcation de pêche neuve coûte de \$30,000 à \$40,000. Sauf erreur, l'un des objectifs avoués en matière de règlements relatifs à l'octroi de permis de pêche au saumon, c'est de moderniser les bateaux et le matériel de pêche et c'est ce qui explique la cessibilité du permis. Si le gouvernement est sérieux dans ses intentions, il faudrait peut-être élever encore le plafond.

25. Lorsqu'il a proposé de relever le plafond, le ministre n'a pas parlé de reviser l'article 3 du bill C-151. Cependant, selon nous il faudrait augmenter en proportion les montants qui figurent aux sous-alinéas A et B de a) (ii) de l'article 3. Autrement un petit nombre d'emprunts importants pourraient utiliser entièrement le montant garanti et l'effet correctif de la mesure pourrait être limité à un relativement petit nombre de pêcheurs.

26. Nous signalerons à nouveau, relativement à nos propositions concernant l'augmentation du plafond du prêt et du pourcentage

of the aggregate amounts guaranteed that the Government is not putting up the funds and experience clearly demonstrates that the cost of the guarantee to the Government is negligible. We recognize one problem with respect to refinancing which may be causing the Finance Department to hesitate, i.e. the question of appraisal of the security. This could be overcome by requiring the lender to satisfy the Minister of Finance that it has a satisfactory appraisal system applied in the case of each loan or if it is unable to do so then that security be appraised by an appraiser employed by the Government under the Fishermen's Indemnity Plan. Certainly, judging from our own experience, this is not an insurmountable obstacle.

27. We suggest the Act should be clarified by further amending paragraph (f) of subsection (1) of Section 3 (as amended by clause 2 of Bill C-151) so that the reference to the charge for insurance clearly relates to life insurance on the borrower. When Gaff made loans under the 1955 Act, it was so interpreted by the Department. This should be clarified. The charge for this type of insurance was then allowed at 1%. The benefit to the estate of the borrower (as well as providing further security to the Government against being called on its guarantee) is illustrated by an interesting extract from the book "The Tides of Change", a photostat of which extract is annexed.

28. We note that the present Act under subsection (2) of Section 3 provides that the liability of the Minister of Finance in respect to new guarantees expires on June 30, 1970 (see 1965 amendment). In view of the likely demands for loans because of changes in the fishing industry on this coast, and the excellent experience of the Minister on past guarantees, we fail to understand why the Act should be so limited. (See also Sections 4 and 5.) We would urge that the time limit under subsection (2) of Section 3 be hoisted for at least three years.

29. One very serious criticism which the Credit Union has with respect to the Act, based on its experience when it was an approved lender, is the red tape required by the regulations. This greatly adds to the administrative cost not only of the lender, but if the required forms are seriously checked by the Department of Finance, the Government itself must be put to considerable expense.

30. Surely in view of paragraph (c) of subsection (1) of Section 3 and the provisions of

des montants globaux garantis, que le gouvernement n'avance pas les fonds et, comme le prouve clairement l'expérience antérieure, que le coût de la garantie est pour lui négligeable. Nous reconnaissons l'existence d'un problème en matière de refinancement, qui pourra peut-être faire hésiter le ministère des Finances; la question d'évaluation de la garantie. Ce problème pourrait être surmonté en exigeant que le prêteur prouve à la satisfaction du ministre des Finances qu'il applique un système satisfaisant d'évaluations dans chaque cas de prêt ou, s'il lui est impossible de le faire, que la garantie soit évaluée par un évaluateur de l'État aux termes du régime d'indemnisation des pêcheurs. D'après notre expérience ce n'est assurément pas un obstacle insurmontable.

27. La loi, selon nous, devrait être précisée au moyen d'une autre modification à l'alinéa f) du paragraphe (1) de l'article 3 (modifié à l'article 2 du bill C-151) pour que la mention relative aux frais d'assurance se rattache nettement à l'assurance-vie prise sur l'emprunteur. Lorsque Gaff a consenti des prêts en vertu de la loi de 1957, c'est l'interprétation qu'en a donnée le ministère. Ce point devrait être précisé. On permettait alors d'exiger 1 p. 100 pour ce genre d'assurance. L'avantage pour la succession de l'emprunteur (outre la garantie supplémentaire dont bénéficie le gouvernement en n'étant pas appelé à honorer sa garantie) est indiqué dans un extrait intéressant du volume "The Tides of Change" dont une photocopie est jointe en annexe.

28. Nous notons qu'en vertu de la loi actuelle, aux termes du paragraphe (2) de l'article 3 que la responsabilité du ministre des Finances au sujet des nouvelles garanties, expire le 30 juin 1970 (voir modification de 1965). Étant donné les demandes d'emprunt vraisemblables à cause de l'évolution de l'industrie de la pêche sur notre littoral, et des excellents résultats antérieurs du ministre en matière de garanties, nous n'arrivons pas à comprendre pourquoi la loi devrait être ainsi limitée. (Voir aussi articles 4 et 5). Nous demandons avec insistance que la période fixée en vertu du paragraphe (2) de l'article 3 soit portée au moins à trois ans.

29. La coopérative de crédit, en fonction de son expérience du temps où elle était un prêteur accrédité, a une critique très sérieuse à formuler à propos de la loi: la paperasserie exigée par les règlements. Cette paperasserie augmente énormément les frais administratifs non seulement du prêteur mais aussi et dans une proportion considérable pour le gouvernement si le ministère des Finances doit vérifier sérieusement les formules exigées.

30. Étant donné l'alinéa c) du paragraphe (1) de l'article 3 ainsi que les dispositions de

Section 4, this is unnecessary. Once a lender satisfies the Finance Department that it is following sound practices and taking proper security, this cost and expense is unjustified. Provision for filing regular reports and minimal supervision should protect the public interest. In 1955 when the Act was new, perhaps this was justifiable, but with lenders whose financial soundness and practices are satisfactory enough to become *approved* lenders it is surely wasteful. (The Honourable Mr. Paul Hellyer in public statements has made similar criticism about the administration of the National Housing Act.)

31. The saving on such red tape could more sensibly be expended either on subsidizing the fisherman's rate of interest or making funds available to approved lenders.

32. We have one other suggestion in closing, that is that in view of the tightness of money at this time, funds should be made available to approved lenders, to assist them in making this type of loan. This could be done at little if any expenses to the Government by the Government making *deposits* with approved lenders. The amount of such deposits might match the amount of their own funds which the lender would make done at little if any expense to the Government makes substantial deposits with the chartered banks. It is obvious from Bill C-151 that the Banks are not making a substantial part of their funds available for this type of loan (see the explanatory notes to clause 3 of Bill C-151). Judging from their T.V. advertising, the banks are more interested in the far more lucrative field of consumer loans. Credit Unions, Trust Companies and Loan Companies have to compete even for a share of the money available for borrowing or saving. Surely they should be entitled to a share of Government deposits if they are prepared to make loans under the Act. With the best intentions in the world, such institutions cannot fulfill the purposes of the Act if there is no source from which they can raise or borrow the funds to lend.

Dated at Vancouver, B. C. this 1st day of April, 1969.

Respectfully submitted,

GULF AND FRASER FISHERMEN'S
CREDIT UNION

per:

Secretary Treasurer

l'article 4, cette paperasserie est assurément inutile. Une fois qu'un prêteur a convaincu le ministère des Finances qu'il suit des méthodes sûres et qu'il prend les mesures appropriées de sécurité, ces frais et ces dépenses ne se justifient pas. Des dispositions en vue du dépôt régulier de rapports et un minimum de surveillance devraient protéger l'intérêt du public. En 1955, lorsque la loi était nouvelle, c'était peut-être justifiable, mais avec des prêteurs dont la solidité et les méthodes financières sont satisfaisantes pour lui permettre de devenir un prêteur *accrédité*, c'est assurément du gaspillage. (L'honorable Paul Hellyer a formulé en public des critiques analogues au sujet de l'application de la loi nationale sur le logement.)

31. En supprimant cette paperasserie, on pourrait plus intelligemment dépenser les économies ainsi réalisées en subventionnant le taux d'intérêt des pêcheurs ou en mettant des fonds à la disposition des prêteurs accrédités.

32. En terminant nous voulons faire une autre proposition: étant donné la cherté de l'argent à l'heure actuelle, des fonds devraient être mis à la disposition des prêteurs accrédités pour les aider à consentir ce genre de prêts. Ce serait réalisable à peu ou pas de frais pour le gouvernement si celui-ci faisait des dépôts auprès des prêteurs accrédités. Le montant de ces dépôts pourrait égaler le montant des fonds que le prêteur rendrait disponible. A l'heure actuelle le gouvernement fait des dépôts importants auprès des banques à charte. Il est évident, d'après le bill C-151, que les banques n'affectent pas une tranche importante de leurs fonds à ce genre de prêt (voir notes explicatives de l'article 3 du bill C-151). D'après la réclame qu'elles font à la télévision, les banques s'intéressent bien davantage au domaine plus lucratif des prêts au consommateur. Les coopératives de crédit, les compagnies fiduciaires et les compagnies de prêts doivent se faire la concurrence même pour obtenir une tranche des fonds disponibles pour les emprunts ou les épargnes. Ces prêteurs devraient certes avoir droit à une tranche des dépôts du gouvernement, s'ils sont prêts à consentir des prêts aux termes de la loi. Avec les meilleures intentions au monde, ces institutions ne sauraient réaliser les objectifs de la loi si elles ne disposent d'aucune source leur permettant de recueillir ou d'emprunter les fonds à prêter.

APPENDIX H

UNITED FISHERMEN AND ALLIED
WORKERS' UNION

President: H. (Steve) Stavenes
 Secretary-Treasurer: H. Stevens
 Business Agent: J. H. Nichol
 Headquarters: The Fishermen's Hall, 138 East
 Cordova Street, Vancouver 4, B.C.

April 9, 1969

J. H. Bennett, Clerk,
 Standing Committee on Fisheries
 and Forestry of the House of Commons,
 House of Commons, Ottawa

Dear Sirs:

We would like to raise problems that fall within our jurisdiction as the Fraser River District Council of the United Fishermen and Allied Workers' Union.

First the American interception of salmon at Point Roberts, Washington State. This fishery, working mostly on Fraser River stocks, has been a sore spot for a number of years to the Canadian fishermen. The Americans begin early in the year with a 4 day week on spring salmon and end the year the same way on chums, while we are fishing a 2 day week in the spring and have month long closures in the fall.

The danger from this particular area is that salmon stocks needed for conservation will build up at the mouth of the Fraser River protected by our regulations and under certain weather conditions blow back across the International line. This is recognized by the International Salmon Commission, for in their regulations, they impose closures when this could happen.

This area isn't very large but their fleet there is highly capable of decimating the stocks of fish. The American seiners use power skiffs and have 300 fathom long nets, while no Canadian seine fishery is carried on this side of the Gulf of Georgia. The gillnets likewise are 300 fathoms long, usually 120 meshes deep, which is three times the legal size for Canadians. You can well imagine the catching ability that they have.

APPENDICE H

L'UNITED FISHERMEN AND ALLIED
WORKER'S UNION

Le 9avril 1969

Monsieur J. H. Bennett, secrétaire
 Comité permanent des pêches et forêts
 de la Chambre des communes
 Chambre des communes, Ottawa

Messieurs,

Permettez-nous de soulever des questions qui relèvent de notre compétence au conseil du district du fleuve Fraser, affilié au syndicat dit l'United Fishermen and Allied Workers' Union.

Premièrement, mentionnons la pêche du saumon à la pointe Roberts, dans l'État de Washington. Cette pêche, qui a surtout pour effet d'intercepter les stocks du Fraser, irrite depuis bien des années les pêcheurs canadiens. Pour les Américains, la campagne débute tôt dans l'année par une semaine de quatre jours, en ce qui concerne le saumon quinnat, et se termine de manière identique pour le saumon-chien; les Canadiens, eux, ne disposent que d'une semaine de deux jours au printemps et ne peuvent pêcher pour un mois à l'automne.

Le danger, dans cette région, c'est que les stocks du saumon indispensables à la conservation de l'espèce se rassemblent à l'embouchure du Fraser, territoire protégé par le règlement, mais qu'ils sont parfois repoussés au-delà de la ligne internationale sous l'influence de certaines conditions atmosphériques. C'est un phénomène reconnu par la Commission internationale du saumon, dont le règlement prévoit des périodes de fermeture lorsque la chose se produit.

Même s'il s'agit d'une étendue assez faible, la flottille américaine est largement en mesure de décimer les stocks de poisson. Elle utilise des seiners dotés d'embarcations motorisées et de filets de 300 brasses, alors qu'aucun seigneur canadien n'opère de ce côté du détroit de Géorgie. Le filet maillant américain est aussi de 300 brasses et compte d'ordinaire 120 mailles, soit trois fois plus que les dimensions réglementaires au Canada. On peut s'imaginer le rendement que les pêcheurs américains peuvent ainsi obtenir.

The Minister of Fisheries has furnished us with figures of the 1968 catch of chums by the Americans. They are 62,400 chums for 30 fishing days over the period of September 30 to November 30, compared to the Canadian Fraser River total of 200,000 for 6 fishing days over the same period of time. Our fishing area is hundreds of times larger, likewise our fleet and perhaps the conditions for blow backs did not exist to any degree. We have not been able to ascertain their catch of spring salmon, which once was a source of income during the early part of the year.

The Americans have on occasion restricted their fishery there during the fall, mostly to protect their own Puget Sound chum stocks.

What we have previously proposed to the Department of Fisheries and the Minister is a corridor opposite the Americans and fish day for day, gear for gear; but we ourselves, in all probability would do the same if not more damage to any threatened stocks.

The solution we believe that should be brought about is a no fishing zone opposite this isolated piece of the United States, to remove the threat that could negate all our efforts to rehabilitate a salmon stock.

The other problems that we believe need immediate attention is a reopening of Area 20, east of Sheringham Light in the Strait of Juan de Fuca, which was taken away from the commercial fishermen two years ago.

The survey conducted by the Department of Fisheries over a two year period has not produced any real conclusive finding to warrant continued closure.

During most of July, Area 20 is closed by the International Salmon Commission. In August and early September the main species fished there are pinks and sockeye not the fish the closure was intended for. After the end of August very few sportsmen are fishing this area due to weather and the fact the holiday season is over. The fish of prime concern then are coho and chums.

There is no division of catch on coho and chums and the Americans are in the process of developing a major fishing operation opposite this closed area. The Minister of Fisheries, in a letter dated January 14, 1969, showed where they increased their catch of coho from 8,081 in 1962 to 95,809 in 1968. Canadians still outfish them. Indeed we should, for the major

Le ministre des Pêches nous a fourni les chiffres de 1968 quant aux prises américaines de saumon-chien, soit 62,400 pour 30 jours de pêche du 30 septembre au 30 novembre; au cours de la même période, les prises canadiennes sur le Fraser ont atteint 200,000 poissons pour 6 jours de pêche. Or, notre zone de pêche est plusieurs centaines de fois plus grande que celle des Américains, notre flottille aussi; en outre, les conditions qui favorisent le recul des stocks n'existaient peut-être pas à un degré appréciable. Nous n'avons pu déterminer le chiffre des prises américaines de saumon quinnat, jadis moyen de revenu au cours de la première partie de l'année.

Il est arrivé que les Américains restreignent l'effort de pêche à l'automne, surtout pour protéger leurs propres stocks de saumon-chien dans le détroit de Puget.

Nous avons déjà proposé au ministère des Pêches et à son titulaire qu'on établisse un corridor vis-à-vis la zone américaine, avec jours et engins de pêche identiques; or, il est probable que nous ferions ainsi autant de tort, sinon plus, à nos stocks décimés.

Nous croyons maintenant qu'il faudrait interdire la pêche vis-à-vis cette zone américaine isolée, afin de dissiper la menace qui pourrait annuler tous nos efforts en vue d'accroître les stocks de saumon.

L'autre problème qui mérite une attention immédiate, à notre avis, c'est la réouverture de la zone 20, à l'est du phare Sheringham, dans le détroit Juan de Fuca, zone fermée à la pêche commerciale, il y a deux ans.

L'étude effectuée depuis deux ans par le ministère des Pêches n'a nullement révélé un motif concluant en ce qui a trait à la prolongation de la période de fermeture.

La Commission internationale du saumon interdit la pêche dans la zone 20 pendant la majeure partie de juillet. On y capture, en août et tôt en septembre, surtout le saumon rose et le sockeye, deux espèces non visées par la fermeture. A compter de la fin d'août, peu de sportifs se livrent à la pêche dans cette région, à cause du climat qui règne à cette époque de fin des vacances. Les espèces les plus recherchées alors sont le coho et le saumon-chien.

On ne distingue pas les prises de ces deux espèces, alors que les Américains sont en voie de développer une importante pêche dans le secteur vis-à-vis la zone interdite. Le ministre des Pêches, dans une lettre en date du 14 janvier 1969, a montré que les apports américains de coho ont passé de 8,081 en 1962 à 95,809 en 1968. Selon lui, c'est une situation

portion of these coho are bound for Canadian streams. The Minister voiced concern and said if the increase continued modification of regulations would be considered.

The Deputy Minister of Fisheries, Dr. Needler stated that in 1966, before the closure was imposed, one million mature coho migrated past Victoria, yet the sportsmen were complaining. We contend that these fish are not susceptible to a hook and line fishery, when they reach this area in their spawning migration. Commercial trollers have never operated to any extent in this area, proving this point.

The new licensing program too will have an effect on this fishery. There will be a large increase in fleet size due to the building of replacement "A" category boats and the overall increase in new boats. It is only natural with the high investment and limited fishing prospects for the other major areas of the coast, that these boats will have to fish where the most fishing days will be allowed.

Conditions were such last year that gillnetters had to jog around up to 6 hours to get their place to set their nets in the line ups. The seiners take up positions at 2:30 A.M. so they can start fishing at 6:00 A.M., thereafter wait on 3 or more boats to get a set on the line.

Shipping is another hazard and the Department of Transport is proposing a mile corridor down the International line for shipping, but we will be forced to fish in this area under these intolerable, overcrowded conditions.

For all of these reasons, we strongly urge this Committee to recommend re-opening of the portion of Area 20 lying east of Sheringham Light in time for the coming season. Any benefits gained by sports fishermen from the closure are far out-weighed by the harmful effects it has on the major commercial fishery in the area.

We are extremely concerned about the problem of "fishlegging" that has developed in British Columbia, and particularly on the Fraser River, extending from the Gulf of Georgia to the upper reaches of the Fraser.

While we deal mainly with the Fraser River, we also realize that "fishlegging" is growing throughout the rest of the province, probably to a lesser degree than in the case of

inquiétante qui, si elle s'aggravait, pourrait donner lieu à une modification du règlement.

D'après le sous-ministre des Pêches, M. Needler, avant l'imposition de la fermeture, en 1966, un million de cohos adultes émigraient vers Victoria, ce qui n'empêchait pas les sportifs de se plaindre. Nous soutenons que cette espèce, dans cette région et à ce moment précis de la migration potamotique, ne se prête pas à la pêche à la ligne. On n'y a jamais pêché commercialement à la ligne traînante, chose qui confirme notre assertion.

Le nouveau programme de délivrance des permis aura aussi des suites pour cette pêche. La flottille connaîtra un important essor, vu la construction de bateaux de remplacement dans la catégorie «A» et l'augmentation générale du nombre de bâtiments. Eu égard à ces gros investissements et aux perspectives limitées de pêche dans les autres importantes zones sur la côte, il n'est que tout naturel que ces bateaux s'emploieront là où les jours de pêche sont plus nombreux.

L'an dernier, les conditions étaient telles que les bateaux de pêche aux filets maillants devaient naviguer, çà et là, parfois durant six heures avant de pouvoir se trouver un bon emplacement pour leurs engins. Les seigneurs, pour leur part, se rendaient la nuit aux fonds de pêche, vers deux heures et demie, afin de commencer à travailler vers six heures du matin; ils attendaient l'arrivée de trois autres navires, au moins, avant de mettre les filets à l'eau.

Le trafic maritime est aussi cause de dangers; pour ces navires, le ministère des Transports a proposé la délimitation d'un corridor d'un mille de largeur, le long de la ligne internationale; néanmoins, il nous faudra pêcher dans cette zone encombrée dans des conditions intolérables.

Pour toutes ces raisons, nous incitons le Comité à préconiser la réouverture, avant la prochaine campagne, de la partie de la zone 20 qui se trouve à l'est du phare Sheringham. Tout avantage que la fermeture procure aux pêcheurs sportifs pâlit devant ses répercussions nuisibles sur la principale pêche commerciale de la région.

Nous nous soucions énormément de la pêche illégale qui se pratique en Colombie-Britannique, particulièrement sur le Fraser, soit du détroit de Géorgie jusqu'au cours supérieur du fleuve.

Nous avons surtout parlé du Fraser, mais nous sommes conscients que la pêche illégale se généralise partout ailleurs dans la province, à un degré moindre, peut-être, sans

the Fraser River, but it is still regarded as a very serious problem. With the opening up of roads and highways it will continue to grow.

We wish to make it quite clear that we are in no way suggesting that the historic rights of the Indians to obtain fish for food be taken away or interfered with. However, we do want to bring to your attention that some Native people are using this privilege for their own personal gain under the disguise of Indian food fisheries.

In past years the Federal Department of Fisheries has realized this problem and has attempted to bring in regulations curbing this practise. This meant extra guardians during the fishing season, full closure at certain periods, identification of fish caught for food purposes by marking, etc. This has been a deterrent to protect fish on their migration route to the spawning grounds.

The report of the International Pacific Salmon Commission shows that 110,000 sockeye fish are taken by the Indian Food Fisheries during the summer. At the agreed price this amounts to over \$300,000.00, and by our estimation it would be impossible for the Native population in the area to consume this amount of fish. Therefore, it becomes very accessible for profiteers to move in and exploit these people. Another problem that has been growing with this "fishlegging" is the setting of nets and leaving them unattended for long periods, allowing the fish to die and become unusable. Many fish are wasted; not used either for food or reproduction purposes.

There are many ways that this Committee can assist the Department of Fisheries. Cost factors and lack of funds are not valid reasons for not carrying out a protection and education program at the same time. We are suggesting the following recommendations be seriously considered:

1. Additional fisheries officers must be hired to carry out the protection of the spawning fish that have passed the commercial fisheries on their way to the spawning grounds.

2. An educational program should be carried out on the Indian Reserves and Villages to bring to the attention of these people that with the danger of over-fishing, pollution, waste and improper management, there is a danger of losing this valuable food resource.

3. Severe penalties be imposed on persons found assisting or abetting in the Indian Food Fisheries.

toutefois que le problème perde de son acuité. En outre, l'accessibilité de nouvelles régions par la route ne fait qu'aggraver la situation.

Il faut nettement comprendre que nous ne proposons nullement d'abolir ou de limiter les droits historiques des Indiens en ce qui concerne la pêche de subsistance. Néanmoins, il convient de vous signaler que certains indigènes abusent de ce privilège à des fins personnelles, sous le prétexte de se nourrir.

Ayant pris conscience du problème, ces dernières années, le ministère des Pêches a cherché à éliminer ces abus au moyen de mesures réglementaires: augmentation du nombre de gardes-pêches durant la campagne, interdiction totale au cours de certaines périodes, marquage et identification des prises destinées à la consommation humaine, et ainsi de suite. Ces mesures visent à protéger le poisson au cours de la remontée vers les frayères.

Selon le rapport de la Commission internationale du saumon du Pacifique, les Indiens capturent quelque 110,000 sockeyes lors des campagnes estivales de pêche. Au prix courant, ces apports atteignent en valeur plus de \$300,000; or, selon nos calculs, il est impossible que la population indigène de la région consomme autant de poisson. Par conséquent, de tels abus donnent prise à l'exploitation sans scrupules des Indiens. Un autre problème inhérent à la pêche illégale, c'est la négligence des pêcheurs qui ne viennent vérifier leurs filets que bien longtemps après la mise à l'eau; il s'ensuit une perte et un gaspillage considérables de poissons reproducteurs, devenus impropres à la consommation.

Le Comité pourrait aider le ministère des Pêches de bien des façons. Les coûts et le manque de fonds ne sont pas des motifs valables pour ne pas administrer simultanément des programmes de protection et d'éducation. Nous voudrions qu'on tienne sérieusement compte des propositions suivantes:

1. Embaucher des agents des pêches supplémentaires pour assurer la protection des saumons en route vers les frayères, au sortir des zones de pêche commerciale.

2. Mettre à exécution un programme éducatif dans les réserves et localités indiennes afin de faire comprendre aux indigènes que la surpêche, la pollution, le gaspillage et la mauvaise gestion mettent en péril des ressources qui assurent leur subsistance.

3. Imposer des sanctions sévères à ceux qui encouragent ou incitent les Indiens à enfreindre le règlement.

4. That the Justice Department appoint and train a legal advisor for the Department of Fisheries to handle all cases pertaining to fisheries matters.

5. That the Fisheries Inspectors continue to bring in such legislation as is necessary to curtail and wipe out the problem of "fishlegging".

Trusting the Committee will give serious consideration to these recommendations, we are,

Yours very truly,

FRASER RIVER DISTRICT COUNCIL

Per: Eric Arkko, Secretary

APPENDIX I

BALLOON TRANSPORT LTD.
2060 W. 10th AVE., VANCOUVER 9,
B.C.-TELEPHONE 736-0144
SKYLIFT

A BRIEF TO THE STANDING
COMMITTEE ON FISHERIES AND
FORESTRY OF THE
HOUSE OF COMMONS.

Held in Vancouver Hotel, April 21st, 1969.

Balloon Transport Ltd. is a Vancouver based company which is actively developing a new system of transportation.

The use of captive balloons to move materials and men over difficult terrain is a Canadian invention and development. It is the first major break-through in the transportation of logs since the 1930's, when the logging truck, the bulldozer, and the power saw were put to use in the industry.

"More than 20 million acres of forest land in western North America are considered inaccessible by conventional harvesting methods. Much of this area will become accessible with the development of a new harvesting method—the balloon logging system."—a quo-

APPENDICE "I"

BALLOON TRANSPORT LIMITED

MÉMOIRE PRÉSENTÉ AU
COMITÉ PERMANENT DES PÊCHES
ET FORÊTS DE LA
CHAMBRE DES COMMUNES

à l'hôtel Vancouver, le 21 avril 1969

La Société Balloon Transport Limited, dont le siège est à Vancouver, vise à mettre au point un nouveau mode de transport.

L'emploi de ballons fixes pour le transport de matériaux ou de la main-d'œuvre dans une région accidentée est une innovation d'origine canadienne. Il s'agit de la plus importante percée, en matière de transport des billes, depuis les années 30, alors que le camion à billes, le bulldozer et la scie mécanique firent leur apparition dans l'industrie.

«Dans l'Amérique du Nord occidentale, plus de 20 millions d'acres boisées sont dites inaccessibles, eu égard aux seules méthodes classiques d'exploitation. La majeure partie de ce territoire pourra être mise en valeur, grâce à une nouvelle technique, soit l'exploitation

tation from "Production Analysis of Balloon Logging" by J. A. McIntosh of the Forest Products Laboratory, Vancouver, B.C. Canada.

Although the concept holds large economic advantages for Canada, and particularly British Columbia, none of the local forest industries nor related industries has contributed in any positive way to the development program. The Provincial Forest Service, which stands to gain more than any other single agency from the use of balloon logging, has contributed \$2,100.00 in reduced stumpage on a salvage logging area.

From 1961 to 1967, the entire cost of development of the concept was borne by private business men in Vancouver, an amount exceeding \$300,000.00. In 1967, the Department of Industry in Ottawa recognized the large potential advantages of the system and the need for quick action to help our small company to continue the development in face of what appeared to be overwhelming competition from the United States. Thus, in 1967, our company was successful in arranging a loan from the Department of Industry under its PAIT program (Program for the Advancement of Industrial Technology). Support was also obtained from the Federal Forest Products Laboratory both in Ottawa and the Vancouver Laboratory. Under this program our company was able to design, build, and operate prototype components which are so close to commercial acceptance that our own company plans to operate one unit on a commercial operation close to Vancouver commencing next month.

We cannot speak highly enough of the excellent foresight, co-operation, patience and capable business management of the PAIT program of the Department of Industry. It is estimated that by 1975, the balloon transport business in Canada could be turning over gross sales of \$50,000,000. annually, and exporting saleable systems all over the world. Certainly this is proof of money well spent on research and development.

Dr. O. M. Solandt, Chairman of the Science Council of Canada, in speaking at U.B.C. on Friday, March 14th, 1969, said, "It's fairly safe to say we're not doing enough industrial research in Canada. We're not carrying enough new ideas through to new products and new processes that are saleable. What

forestière au moyen de ballons. Ce passage est tiré d'un article intitulé: *Production Analysis of Balloon Logging*, par J. A. McIntosh, du Laboratoire des produits forestiers à Vancouver (C.-B.), au Canada.

Quoique cette méthode permette théoriquement d'entrevoir une foule d'avantages économiques pour le Canada, et surtout pour la Colombie-Britannique, aucune des industries forestières ou connexes de la région n'a concouru effectivement à sa mise au point. Pour sa part, la province, par l'entremise de ses services forestiers, qui bénéficieraient le plus d'une telle innovation, a contribué \$2,100 sous forme de réduction des droits de coupe dans un secteur de coupe accidentelle.

De 1961 à 1967, toutes les dépenses nécessaires à la concrétisation de ce principe innovateur, soit plus de \$300,000, ont été acquittées par des hommes d'affaires de Vancouver. Le ministère de l'Industrie, à Ottawa, s'est rendu compte, en 1967, des importants avantages que présentait pareille méthode d'exploitation, autant que de la nécessité d'agir rapidement afin de venir au secours d'une société modeste qui menaçait de sombrer sous le poids d'une vive concurrence américaine. Nous avons donc réussi, cette année-là, à obtenir un prêt de la part du ministère susmentionné, au titre du programme pour l'avancement de la technologie (PAT). En outre, le personnel des laboratoires fédéraux des produits forestiers, à Ottawa et à Vancouver, nous a fourni son appui. En conséquence, nous avons pu concevoir, assembler et mettre en service des prototypes qui se rapprochent tellement des exigences de l'industrie que nous envisageons, le mois prochain, de faire commercialement usage d'un appareil dans un secteur situé près de Vancouver.

Nous ne pouvons tarir d'éloges à l'endroit des responsables du programme PAT, au ministère de l'Industrie, pour la clairvoyance, l'esprit de collaboration, la patience et l'aptitude aux affaires qu'ils ont si brillamment manifestés. En 1975, selon les estimations, l'industrie canadienne du transport par ballon atteindrait un chiffre brut de ventes de 50 millions de dollars l'an, outre qu'elle exporterait des appareils complets dans tous les coins de l'univers. En pareil cas, l'utilité des dépenses faites pour la recherche et le perfectionnement se révélerait incontestable.

Lors d'une allocution prononcée le 14 mars 1969, à l'Université de la Colombie-Britannique, le président du Conseil des Sciences du Canada, M. O.M. Solandt, a déclaré: «Peu de gens nieront qu'il ne se fait pas suffisamment de recherches industrielles au Canada. Trop peu souvent, les idées nouvelles se traduisent-

Canada needs is more entrepreneurs willing to take a plunge with new ideas, and willing to maintain local ownership."

We feel that Balloon Transport Ltd. is doing all of these things mentioned by Dr. Solandt but needs financial support to carry out the development. The Department of Industry with its PAIT program is the only agency in all of Canada apparently capable of seeing the opportunity, and capable of backing up its interest with dollars at the right time. This should be encouraged on wider fronts.

The *Financial Post* of November 4th, 1967, explains why the U.S. economy is improving its performance and pulling ahead faster than Canada in this way, "The U.S. spends as much on research and development as it does on fixed capital. In Canada, capital outlays are ten times greater than research spending."

Certainly no natural law exists to limit intelligence, ingenuity, and business acumen to an area south of the 49th Parallel. Then let us loyal Canadians who have faith in our native ability and business capability join hands with the best agencies to expand our economy. From our experience, the best agencies are our Federal Departments of Industry and the Forestry Branch, Canada Department of Fisheries and Forestry, particularly the Forest Management Institute and the Vancouver Forest Products Laboratory.

Yours very truly,

C. R. Matheson, B.A.Sc., B.C.R.F., P.
Eng.
President
BALLOON TRANSPORT LTD.

elles en nouveaux produits ou procédés qu'il soit possible d'écouler. Ce qu'il nous faut, en ce moment, c'est des hommes à l'esprit à la fois inventif et aventurier, prêts à courir tous les risques et à promouvoir le commerce canadien local.»

La société *Balloon Transport Limited* remplit toutes ces conditions, à notre avis, mais elle a besoin d'un appui financier afin de pouvoir poursuivre son activité. Le ministère de l'Industrie, par l'entremise de son programme PAT, est le seul organisme au Canada, semble-t-il, qui veuille profiter d'une telle occasion et manifester son intérêt en lui fournissant des fonds en temps voulu. Il faudrait adopter la même démarche sur d'autres fronts importants.

Dans son numéro du 4 novembre 1967, le *Financial Post* a fait voir pourquoi l'économie américaine progresse et distance tellement celle du Canada. «Les États-Unis», dit-il, «dépendent autant pour la recherche et le perfectionnement que pour les immobilisations, tandis qu'au Canada, les investissements sont dix fois plus élevés que les sommes affectées à la recherche.»

L'intelligence, l'esprit d'invention et le sens des affaires ne sont pas l'apanage exclusif, certes, de nos voisins au sud du 49° parallèle. Alors, nous, loyaux Canadiens, qui avons confiance en nos talents et aptitudes naturels, concertons-nous avec les meilleurs organismes pour donner de l'expansion à notre économie. Pour nous, les meilleurs organismes sont, au gouvernement fédéral, le ministère de l'Industrie, la Direction des forêts du ministère des pêches et Forêts et, en particulier, l'Institut de gestion sylvicole et le Laboratoire des produits forestiers, à Vancouver.

Veillez agréer, Messieurs, l'assurance de notre haute considération.

MINUTES OF PROCEEDINGS

TUESDAY, April 22, 1969.
(22)

The Standing Committee on Fisheries and Forestry met this day in Vancouver at 9:30 a.m., the Chairman, Mr. Crossman presiding.

Members present: Messrs. Beaudoin, Borrie, Comeau, Crossman, Crouse, Cyr, Goode, Hogarth, Lundrigan, McBride, McQuaid, Noble, Perrault, Rose, Smith (*Northumberland-Miramichi*), St-Pierre, Turner (*London East*), Whelan—(18).

Witnesses: From the Council of Forest Industries of British Columbia: Messrs. G. L. Draeseke, President, A. J. McGraw, Manager, Plywood Technical Department, G. L. Ainscough, A. B. Anderson, W. G. Burch, Dr. Creighton and Ken Williams; *From the Society for Pollution and Environmental Control (S.P.E.C.):* Messrs. John L. Hayward, Vice-President, B. Hagell, Secretary and Mrs. D. R. Mallard.

The witnesses gave summaries of their briefs and were questioned by the Committee.

Agreed: That the briefs presented this day be printed as Appendices to today's Minutes of Proceedings and Evidence as follows:

Council of Forest Industries of British Columbia as APPENDIX J

Society for Pollution and Environmental Control (Water Pollution) as APPENDIX K

Society for Pollution and Environmental Control (Federal Responsibility) as APPENDIX K₁

At 12:50 p.m. the Committee adjourned to 2:30 p.m., April 22, 1969.

[Traduction]

PROCÈS-VERBAUX

Le MARDI 22 avril 1969.
(22)

Le Comité permanent des pêches et forêts se réunit ce matin à 9 h. 30, à Vancouver, sous la présidence de M. Guy Crossman.

Présents: MM. Beaudoin, Borrie, Comeau, Crossman, Crouse, Cyr, Goode, Hogarth, Lundrigan, McBride, McQuaid, Noble, Perrault, Rose, Smith (*Northumberland-Miramichi*), St-Pierre, Turner (*London-Est*), Whelan—(18).

Témoins: Du Council of Forest Industries of British Columbia: MM. G. L. Draeseke, président, A. J. McGraw, directeur du Service technique du contre-plaqué, G. L. Ainscough, A. B. Anderson, W. G. Burch, Creighton et Ken Williams; de la *Society for Pollution and Environmental Control (S.P.E.C.):* MM. John L. Hayward, vice-président, B. Hagell, secrétaire, et M^{me} D. R. Mallard.

Les témoins présentent des résumés de leurs mémoires et répondent aux questions des membres du Comité.

*Il est décidé—*Que les mémoires présentés aujourd'hui soient imprimés en appendice aux Procès-verbaux et Témoignages de ce jour dans l'ordre suivant:

Council of Forest Industries of British Columbia comme APPENDICE J

Society for Pollution and Environmental Control (Pollution de l'eau) comme APPENDICE K

Society for Pollution and Environmental Control (Domaine fédéral) comme APPENDICE K₁

A midi 50, le Comité lève la séance pour se réunir de nouveau cet après-midi à 2 h. 30.

AFTERNOON MEETING
(23)

The Committee resumed at 2:30 p.m. this day, the Chairman, Mr. Crossman, presiding.

Members present: Messrs. Beaudoin, Borrie, Comeau, Crossman, Crouse, Cyr, Goode, Hogarth, Howard (*Skeena*), Lundrigan, McBride, McQuaid, Noble, Perrault, Rose, Smith (*Northumberland Miramichi*), St-Pierre, Turner (*London East*), Whelan—(19).

Witnesses: From the *Pacific Coast Fishermen's Mutual Marine Insurance Company*: Mr. H. A. Christenson, Secretary-Manager; From the *United Fishermen and Allied Workers' Union*: Messrs. Homer Stevens, General Secretary Treasurer, H. Stavenes, President and Walter Ironside, Vice-President; From the *Richmond Anti Pollution Association*: Mrs. Lois Boyce, Secretary.

The witnesses presented summaries of their briefs and were questioned thereon.

Agreed: That the briefs presented this day be printed as Appendices to today's Minutes of Proceedings and Evidence as follows:

Pacific Coast Mutual Marine Insurance Company as APPENDIX L

United Fishermen and Allied Workers' Union as APPENDIX M

Richmond Anti Pollution Association as APPENDIX N

After debate thereon, on a motion of Mr. Crouse, it was *Agreed*—That all correspondence between Mr. Homer Stevens and the Chairman be tabled.

At 5:40 p.m., the Vice-President, Mr. Tom Goode assumed the Chair.

On motion of Mr. Hogarth, it was *Agreed*—That a brief of the Richmond

SÉANCE DE L'APRÈS-MIDI
(23)

Le Comité se réunit de nouveau cet après-midi à 2 h. 30, sous la présidence de M. Guy Crossman.

Présents: MM. Beaudoin, Borrie, Comeau, Crossman, Crouse, Cyr, Goode, Hogarth, Howard (*Skeena*), Lundrigan, McBride, McQuaid, Noble, Perrault, Rose, Smith (*Northumberland-Miramichi*), St-Pierre, Turner (*London-Est*), Whelan—(19).

Témoins: De la *Pacific Coast Fishermen's Mutual Marine Insurance Company*: M. H. A. Christenson, secrétaire-gérant; de la *United Fishermen and Allied Workers' Union*: MM. Homer Stevens, secrétaire-trésorier général, H. Stavenes, président, et Walter Ironside, vice-président; de la *Richmond Anti-Pollution Association*: M^{me} Lois Boyce, secrétaire.

Les témoins présentent des résumés de leurs mémoires et répondent à des questions à ce sujet.

Il est décidé—Que les mémoires présentés aujourd'hui soient imprimés en appendice aux Procès-verbaux et Témoignages de ce jour dans l'ordre suivant:

Pacific Coast Mutual Marine Insurance Company comme APPENDICE L

United Fishermen and Allied Workers' Union comme APPENDICE M

Richmond Anti-Pollution Association comme APPENDICE N.

Après débat à ce sujet, sur la proposition de M. Crouse, il est *décidé*—Que l'on dépose toute la correspondance échangée par M. Homer Stevens et le président.

A 5 h. 40 de l'après-midi, le vice-président, M. Tom Goode, prend place au fauteuil présidentiel.

Sur la proposition de M. Hogarth, il est *décidé*—Qu'un mémoire adressé par le

Anti Pollution Association to the Pollution Control Board of British Columbia and a letter of October 26, 1968 to the Minister of Energy, Mines and Resources be tabled.

At 6:50 p.m. the Committee adjourned to Wednesday, April 23 at 9:30 a.m.

Richmond Anti-Pollution Association au Pollution Control Board of British Columbia, ainsi qu'une lettre en date du 26 octobre 1968 adressée au ministre de l'Énergie, des Mines et des Ressources soient déposés.

A 6 h. 50 de l'après-midi, le Comité s'ajourne jusqu'au mercredi 23 avril 1969, à 9 h. 30 du matin.

*Le secrétaire du Comité,
J. H. Bennett,
Clerk of the Committee.*

[Texte]

EVIDENCE

(Recorded by electronic apparatus)

Tuesday, April 22, 1969.

The Chairman: Order. I see a quorum. The first order of business will be the presentation of the brief from the Council of the Forest Industries of British Columbia. I would like to ask Mr. Draeseke to come to the Chair please, and any other representatives that you wish. I will ask Mr. Draeseke to introduce his witnesses and then he will proceed with a summary of the brief.

Mr. G. L. Draeseke (Président, Council of Forest Industries of British Columbia): Thank you Mr. Chairman. My name is Gordon Draeseke, President of the Council of the Forest Industries of British Columbia. On my right is Mr. A. B. Anderson, Manager of Forestry of Rayonier Canada (B.C.) Limited and Chairman of our Forestry Committee of the Council, and on his right is Dr. Creighton of MacMillan, Bloedel and Powell River Limited, Assistant Director of Research.

In addition, in the audience are other members of our Committee who prepared this presentation. They are Mr. G. L. Ainscough of MacMillan, Bloedel and Powell River Limited, Mr. W. G. Burch of British Columbia Forest Products Limited, Mr. Ken Williams of Weldwood of Canada Limited, and Mr. A. J. McGraw of the Council of the Forest Industries of British Columbia, technical department.

Mr. Chairman, this Brief is submitted by the Council of the Forest Industries of B.C. on behalf of its member companies.

The divisions of the Council include: B.C. Loggers Division, B.C. Lumber Manufacturers Division, Plywood Manufacturers Division, Red Cedar Shingle and Shake Division, and the Pulp and Paper Division. The Cariboo Lumber Manufacturers Association is an affiliated member of the Council.

Our members are engaged in logging and in the manufacture of lumber, plywood, shingles and shakes predominantly in the coastal area, and in the manufacture of pulp and paper throughout the whole of B.C. These companies account for 75 per cent of the value of

TÉMOIGNAGES

(Enregistrement électronique)

Le mardi 22 avril 1969

Le président: A l'ordre. Je vois qu'il y a quorum. Le premier article à l'ordre du jour ce matin sera la présentation du mémoire du Conseil des industries forestières de la Colombie-Britannique. J'aimerais demander à M. Draeseke de vouloir s'avancer afin de présenter son mémoire et des autres instances qu'il aimerait présenter. Je vais donc demander à M. Draeseke de présenter ses témoins et un résumé du mémoire.

M. G. L. Draeseke (Président, Conseil des industries forestières de la Colombie-Britannique): Merci, monsieur le président. Je me présente: Gordon Draeseke, président du Conseil des industries forestières de la Colombie-Britannique; à ma droite, M. A. B. Anderson, gérant de *Forestry of Rayonier Canada [B.C.] Ltd* et président de votre Comité des forêts; à sa droite le D^r Creighton, assistant directeur adjoint des recherches à la *MacMillan, Bloedel and Powell River Limited*.

Dans l'auditoire il y a d'autres membres du comité qui ont travaillé le mémoire: M. G. L. Ainscough de la compagnie *MacMillan, Bloedel and Powell River Limited*; M. W. G. Burch de *British Columbia Forest Products Limited*; M. Ken Williams de *Weldwood of Canada Limited* et M. A. J. McGraw du Conseil des industries forestières de la Colombie-Britannique, services techniques.

Le présent mémoire est présenté par le Conseil des industries forestières de la Colombie-Britannique au nom des sociétés qui en font partie.

Le Conseil comprend plusieurs divisions, dont: La Division des exploitants forestiers (C.-B.); la Division des fabricants de bois d'œuvre (C.-B.); la Division des fabricants de contre-plaqués; la Division des bardeaux et des bardeaux de fente de thuya géant; la Division des pâtes et papiers. Membre associé: L'Association des fabricants de bois d'œuvre de Caribou.

Nos membres se livrent à l'exportation forestière et à la fabrication du bois d'œuvre, des contre-plaqués, des bardeaux et des bardeaux de fente notamment dans la région côtière, ainsi qu'à la préparation des pâtes et papiers par toute la province. Ces sociétés ont

[Text]

forest products produced in B.C., totalling an estimated \$1.37 billion in 1968.

Mr. Chairman, I understand the members of the Committee have had this brief since Friday and it will not be necessary or desirable to read the whole brief. I will therefore read the summary of recommendations, the first part of which appears on page 8 of the brief. Our recommendations are as follows.

With respect to the operation of the Federal Regional Forest Laboratory in Victoria, the Council of Forest Industries recommends:

(1) that the Regional Advisory Committee continue in its present form.

(2) that the current shift from basic research to applied research be continued, and recommends as a general policy that the majority of the basic research undertaken be limited to that essential to support and complement applied research.

(3) that the "task force" principle be adopted so as to promote more efficient use of manpower and funds.

(4) that means be considered to permit greater flexibility in the allocation of funds for the contracting out of research where advantageous.

(5) that a cost-benefit approach be used in proportioning any future expansion of Federal Government funds devoted to forest research so as to develop a more equitable distribution of these funds.

In our brief we point out that only 15 per cent of the research expenditure is in British Columbia whereas half of the country's timber is here.

Mr. Chairman, the second section of the recommendations appears on page 15.

With respect to the operation of the Regional Forest Products Laboratories, the Council of the Forest Industries recommends:

(1) that a method be developed to inform the industry of outstanding research results which may have potential commercial benefits.

(2) that a cost-benefit analysis be developed for each new research project.

(3) that existing projects be examined on the same basis as recommendation no. 2.

(4) that a system of priorities be developed.

(5) that the duplication of work which is carried out by the following groups be exam-

[Interpretation]

à leur actif les trois quarts de la valeur de la production forestière globale en Colombie-Britannique, laquelle est estimée à 1.37 milliard de dollars pour 1968.

Les députés ont ce mémoire depuis vendredi et il ne sera pas nécessaire ou opportun d'en donner lecture intégrale. Je compte donc lire le résumé des recommandations. La première partie figure à la page 8 du mémoire. Nos recommandations sont les suivantes:

Pour ce qui est de l'exploitation du Laboratoire forestier régional du gouvernement fédéral à Victoria, le Conseil des industries forestières préconise donc:

1. que le comité consultatif régional conserve ses structures actuelles;

2. que l'effort scientifique continue d'être axé davantage sur la recherche appliquée et que, à titre de politique générale, la recherche fondamentale se limite largement à l'objectif essentiel d'étayer et de compléter la recherche appliquée;

3. que le concept du «groupe d'étude» soit adopté en vue d'un meilleur usage des ressources financières et humaines en disponibilité;

4. que l'on permette une répartition plus élastique des fonds, afin de faciliter, au besoin, l'adjudication des travaux de recherche;

5. qu'il soit tenu compte des coûts et des bénéfices dans toute majoration éventuelle des fonds publics réservés à la recherche sylvicole pour que ceux-ci soient équitablement répartis.

Nous signalons dans notre mémoire que 15 p. 100 seulement des dépenses consacrées aux recherches se font en Colombie-Britannique, alors que la moitié du bois d'œuvre du pays se trouve en Colombie-Britannique.

À la deuxième partie de nos recommandations, monsieur le président qui apparaît à la page 15 de notre mémoire, quant à l'administration des laboratoires régionaux des produits forestiers, le Conseil des industries forestières préconise:

1. la mise au point de méthodes visant à transmettre à l'industrie les données scientifiques qui pourraient se traduire par des avantages commerciaux importants;

2. l'analyse des coûts et des bénéfices relatifs à chaque projet de recherche;

3. l'examen des travaux en cours selon le même principe qu'au numéro 2;

4. l'établissement d'un ordre de priorité;

5. pour éviter le chevauchement des travaux, l'étude de l'activité des groupes sui-

[Texte]

ined: (a) Pulp and Paper Research Institute of Canada, (b) Harvesting Development Task Force, (c) Forest Economics Research Institute.

(6) that liaison with universities be improved.

(7) that Forest Products Laboratories consider closer liaison with other bodies such as Central Mortgage and Housing Corporation and the National Research Council to develop better criteria to be used in building codes.

That concludes our recommendations, Mr. Chairman, and our group here would be pleased to answer any questions or amplify anything that is contained in the written brief.

The Chairman: Thank you, Mr. Draeseke. For the questioning I have Mr. Rose first.

Mr. Rose: The brief that we heard just before the conclusion yesterday afternoon bitterly complained about the lack of research by the forest companies in British Columbia, and it drew some comparisons between the dollar investment in the various industries in Canada—mentioned in particular were the forest industries—and the practice in the United States. What is your comment on that? You are calling for government research and various kinds of applied rather than basic scientific research. What is your comment on that, sir?

Mr. Draeseke: I would like to ask Dr. Creighton, Assistant Director of Research, MacMillan, Bloedel and Powell River, Limited, to answer that question.

Dr. Creighton (Assistant Director of Research, MacMillan, Bloedel and Powell River, Limited): In Canada there is a large amount of research. However, this is centred because of the economies in the larger companies. A good deal of the research being carried out by the forest products laboratory is related to smaller operations which cannot financially support a large research organization. Also, a good deal of the research these companies do is through their associations, through their association with the Council of the Forest Industries of British Columbia which supports the research carried on at the plywood manufacturers laboratory in Vancouver, and through the pulp and paper research institute in Montreal. These companies do support a very large amount of research running into a good many millions of dollars.

[Interprétation]

vants: a) l'Institut de recherches sur les pâtes et papiers du Canada; b) le groupe d'étude sur le développement de l'exploitation; c) l'Institut de recherche en économie forestière;

6. l'amélioration des contacts avec les universités;

7. une liaison étroite entre les laboratoires des produits forestiers et d'autres organismes, tels la Société centrale d'hypothèques et de logement et le Conseil national de recherches, pour perfectionner les critères qui entrent dans les codes du bâtiment.

Voilà qui termine nos recommandations, monsieur le président. Notre groupe se fera un plaisir de répondre à vos questions.

Le président: Merci beaucoup, monsieur Draeseke. Nous pouvons maintenant commencer les questions. J'ai d'abord M. Rose.

M. Rose: Dans le mémoire que nous avons entendu hier après-midi peu avant la fin de la séance, on se plaignait amèrement du manque de recherches de la part des compagnies forestières en Colombie-Britannique et l'on tirait certaines comparaisons entre le dollar d'investissement dans les diverses industries au Canada—on avait notamment mentionné l'industrie forestière—et la pratique suivie aux États-Unis. Quels sont vos commentaires là-dessus? Vous demandez que le gouvernement fasse de la recherche appliquée plutôt que fondamentale. Quels sont vos commentaires là-dessus?

M. Draeseke: J'aimerais demander au Dr. Creighton, directeur adjoint des recherches pour la compagnie MacMillan, Bloedel and Powell River Limited de répondre à cette question.

M. Creighton (Directeur adjoint des recherches, MacMillan, Bloedel and Powell River Limited): Je pense qu'il se fait beaucoup de recherche au Canada. Pour des raisons économiques, la recherche se fait surtout dans les grandes compagnies. La plupart des recherches qui sont faites par les laboratoires de produits forestiers ont trait à de petites exploitations qui ne peuvent financer d'importants services de recherches. D'autre part, ces compagnies font une bonne partie de leurs recherches grâce à leurs contacts avec le Conseil des industries forestières de la Colombie-Britannique qui appuie les recherches effectuées dans les laboratoires de recherches des fabricants de contre-plaqué à Vancouver et à l'Institut de recherches sur les pâtes et papiers à Montréal. Ces compagnies appuient financièrement beaucoup de recherches. Cet appui représente plusieurs millions de dollars.

[Text]

Mr. Rose: Does MacMillan Bloedel have a large research program?

Dr. Creighton: Yes, MacMillan Bloedel has a research program. We have a research staff of more than 120 people, and a research budget of somewhat over \$2 million.

Mr. Rose: What is that in comparison to the investment in the industry?

Dr. Creighton: I think it is very favourable in comparison to the investment of other forest products industries in the United States.

Mr. Rose: It has been suggested by some, including this speaker, that one of the reasons why there is not the basic research being done here—and you have contradicted the allegation of yesterday completely—is that the forest industries in Canada, a large number of which are American-owned, carry out basic research there rather than here.

Dr. Creighton: This is true, where you do have an American-owned company. I think this is true not only in the forest industries but in other industries as well. It is often more economical for the affiliate of an American company to carry out this research in the United States.

Mr. Rose: Are you suggesting then that under the kind of branch plant situation that prevails in many industries, the research is done not in Canada but in the United States if these industries are owned in the United States?

Dr. Creighton: Yes, in many cases, in the more fundamental research. The Canadian affiliates usually carry out a reasonable level of applied research directed to their own operations which are distinct from the American operations.

Mr. Rose: The witness yesterday afternoon also suggested to us that the logging industry was less than enthusiastic about accepting new techniques. What is your comment about that?

Mr. Draeseke: I would like to categorically disagree. I think the logging industry in B.C. has pioneered most of the modern logging methods used in Canada, if not throughout the world. I would also like to talk a little bit about research because there may be some

[Interpretation]

M. Rose: Est-ce que la compagnie MacMillan Bloedel a un vaste programme de recherches?

M. Creighton: Oui, nous avons un vaste programme de recherches et un personnel de chercheurs de plus de 120 personnes. Le budget de recherches représente un peu plus de 2 millions de dollars.

M. Rose: Comment cela se compare-t-il aux investissements dans l'industrie?

M. Creighton: Je crois que cela se compare très bien à ce qui se fait dans les autres industries de produits forestiers aux États-Unis.

M. Rose: Quelques personnes, y compris celui qui vous parle ont dit que les raisons pour lesquelles il ne se fait pas de recherche de base—vous avez contredit ces allégations qui avaient été faites hier—c'est que les industries forestières ici, dont un bon nombre sont de propriété américaine, font leur recherche de base fondamentale aux États-Unis plutôt qu'ici.

M. Creighton: C'est vrai dans les cas où les compagnies sont de propriété américaine. Cela s'applique non seulement aux industries forestières mais aussi à d'autres industries. Il est souvent plus économique pour les filiales de compagnies américaines de faire faire les recherches aux États-Unis.

M. Rose: Dites-vous que, vu le système de filiales qui existe pour un bon nombre d'industries, les recherches sont faites non pas au Canada mais aux États-Unis, si ces industries sont de propriété américaine?

M. Creighton: Oui, il y a des cas où les recherches les plus fondamentales sont faites aux États-Unis. Les filiales canadiennes, notamment, poursuivent des recherches appliquées ayant trait sur leurs propres opérations, qui sont distinctes de celles des compagnies américaines.

M. Rose: L'autre témoin d'hier après-midi nous a dit aussi que l'industrie du bûcheronnage n'était pas intéressée à adopter de nouvelles techniques. Quels sont vos commentaires?

M. Draeseke: Je tiens à m'inscrire en faux contre cette assertion. Et je crois que les méthodes de coupe de bois en Colombie-Britannique sont à peu près les plus modernes qu'on puisse constater au Canada, sinon à travers le monde.

[Texte]

confusion in this regard. I think that forestry research and product research have to be considered. In forestry research there is a fundamental difference between Canada and the United States. In British Columbia 93 per cent of the forest land is government-owned; in the United States the majority of it is owned by the companies. Therefore, if you talk about forestry research, the person who is interested and should be interested in Canada is the government which owns it.

Mr. Rose: Thank you.

The Chairman: Mr. St. Pierre?

Mr. St. Pierre: Thank you, Mr. Chairman. I would like any or all of the witnesses to elaborate on the section of their brief beginning on page 11 in which they speak of duplication of effort in three areas by the Federal Research Department. The first is a duplication of some work being done by the Pulp and Paper Research Institute of Canada, the second is also a duplication that they see with pulp and paper, and the third, Forest Economics Research Institute, a new federal department with a staff of 45 including 15 professional people.

You raise the question, but I detect a criticism as if you perhaps had the answer in your mind and that answer is unfavourable: Is it duplicating the work of other federal government bodies, and is it duplicating the work of similar groups in forestry departments at the provincial level? Each of these three indicates a possibility of wasted effort on the part of the federal government. I would like some comment on this.

Mr. Draeseke: I would ask Dr. Creighton again to respond to that particular question.

Dr. Creighton: Yes, we do feel that there is a growing danger of duplication with regard to the Pulp and Paper Research Institute of Canada because these two bodies appear at this stage in the developing of their programs as if they are beginning to duplicate their work. Our suggestion is that these two groups get together and make sure that they are not duplicating. All we are urging them to do is to make sure that they are not duplicating their work.

[Interprétation]

Je voudrais aussi dire quelques mots au sujet des recherches. Il ya peut-être un certain degré de confusion en l'occurrence. Je crois qu'il faut tenir compte de la recherche forestière et de recherches en produits forestiers. Si vous parlez de recherche forestière, il y a une différence fondamentale entre le Canada et les États-Unis. En Colombie-Britannique, 93 p. 100 des terres forestières appartiennent au gouvernement. Aux États-Unis, la majorité des terres forestières appartiennent aux compagnies. Par conséquent, si vous parlez de recherche forestière, celui qui devrait être intéressé au Canada c'est le gouvernement qui est le propriétaire.

M. Rose: Merci.

Le président: Monsieur St-Pierre?

M. St-Pierre: Merci, monsieur le président. J'aimerais que l'un des témoins ou plusieurs témoins donnent plus de commentaires sur leur déclaration qui commence à la page 11. On y parle, notamment, de dédoublement d'efforts dans trois secteurs de la part du service fédéral de recherche. D'abord, dédoublement du travail accompli par l'Institut canadien de recherches sur la pâte et le papier; dédoublement des recherches également dans le cas de la pâte et du papier; et troisièmement, l'Institut de recherches en économie forestière qui comporte un personnel de 45 personnes, y compris 15 professionnels.

Vous soulevez une question, et je crois comprendre qu'il y a là aussi une critique comme si vous avez peut-être la réponse et que cette réponse est défavorable. Est-ce que cela répète le travail d'autres ministères provinciaux ou fédéraux? Ces trois indiquent la possibilité de gaspillage d'efforts de la part du gouvernement fédéral. Et j'aimerais avoir certains commentaires là-dessus.

M. Draeseke: Je vais demander à M. Creighton de répondre à cette question.

M. Creighton: Eh bien, oui, nous estimons qu'il y a de plus en plus de dangers de chevauchement d'efforts, notamment, en ce qui a trait à l'Institut canadien de recherches sur la pâte et le papier. Ces deux organismes semblent maintenant répéter les mêmes efforts dans la mise au point de leurs programmes, comme s'ils voulaient se faire chevaucher leurs travaux. Nous sommes d'avis que ces deux groupes devraient s'entendre pour s'assurer qu'il n'y a pas de chevauchement d'efforts. Nous voulons simplement qu'ils ne fassent pas exactement la même chose.

[Text]

Mr. St. Pierre: Are you fearful that there is some empire building within the Department?

Mr. Draeseke: I do not know that it is empire building, I think that these programs originally started out maybe of necessity on a regional basis, we now see that there is some overlapping going on and we feel that they should re-examine their programs and the specific objectives of them to ensure that they do not overlap each other and duplicate effort.

Mr. St. Pierre: If there is overlapping there is bound then to be a waste of money either on the part of private industry or the government?

Mr. Draeseke: Yes, and obviously if you are overlapping you are duplicating effort and this is not the most efficient use of research work.

Mr. St. Pierre: Your brief suggests that there should be more research money available for B. C. Do you think perhaps that these are three areas in which the federal government might cut back on their present plans and divert the money to research in British Columbia?

Dr. Creighton: I think that comment is largely regarding the forestry research and maybe Mr. Draeseke would comment a little more on that.

Mr. Draeseke: Maybe Mr. Anderson, the Chairman of our Forestry Committee, could comment on that.

Mr. A. B. Anderson (Forestry Committee, Council of Forest Industries of British Columbia): Would you mind repeating that last question please.

Mr. St. Pierre: I am wondering if your organization feels that the federal government might withdraw funds from these three areas of possible duplication of effort and divert those funds to other lines of research on the west coast. I put the question because you are suggesting that although it is not necessary that there be a large increase in funds allotted to research you would like to see them allocated a little more fairly across Canada?

Mr. Anderson: That is quite true. You are asking a question that is primarily connected with the Forest Products Laboratory. I am competent to answer as far as the Forest Research Laboratory is concerned and, in as far as it is concerned, we do feel that there is a definite underexpenditure, that it would be advisable at this time not to rectify it by

[Interpretation]

M. St-Pierre: Craignez-vous qu'il se bâtisse un certain empire au sein du ministère?

M. Draeseke: J'ignore si c'est le cas. Je sais que ces programmes ont été à l'origine mis sur pied pour répondre aux besoins régionaux. Mais nous constatons maintenant qu'il y a chevauchement. Et, à notre avis, les groupes devraient repenser leurs programmes et les objectifs qui leur sont propres pour assurer qu'il n'y ait pas chevauchement des efforts.

M. St-Pierre: S'il y a chevauchement, il y aura nécessairement gaspillage, soit de la part de l'industrie privée, soit de la part du gouvernement?

M. Draeseke: Oui, et manifestement s'il y a chevauchement des efforts, ce n'est pas la façon d'utiliser le plus efficacement les recherches.

M. St-Pierre: Selon votre mémoire, la Colombie-Britannique devrait avoir plus de fonds disponibles pour la recherche. Pensez-vous que ce soient là trois secteurs où le gouvernement pourra peut-être réduire ses programmes actuels pour consacrer plus d'argent à la Colombie-Britannique?

M. Creighton: Je crois que ce commentaire intéresse surtout les recherches forestières et peut-être que M. Draeseke voudrait commenter un peu plus là-dessus.

M. Draeseke: Peut-être que M. Anderson, président de la gestion forestière, pourrait commenter là-dessus.

M. A. B. Anderson (Comité de l'exploitation forestière, Conseil des industries forestières de la Colombie-Britannique): Voulez-vous, s'il vous plaît, répéter cette dernière question?

M. St-Pierre: Je me demande si votre organisation croit que le gouvernement fédéral pourra peut-être retirer des fonds de ces trois secteurs de chevauchement possible et consacrer les fonds qui seraient ainsi dégagés à d'autres secteurs de recherche sur la côte ouest. Je pose cette question car, vous dites qu'il n'est pas nécessaire d'augmenter largement les fonds de recherche. Vous aimeriez simplement que ces fonds soient répartis de façon plus équitable?

M. Anderson: C'est exact. Vous posez une question qui intéresse avant tout le Laboratoire des produits forestiers. Je puis répondre en ce qui a trait au Laboratoire des produits forestiers. Nous estimons qu'il y a sûrement un manque de dépenses. Il serait opportun de ne pas le rectifier en augmentant les dépenses mais en assurant peut-être une répartition

[Texte]

increasing your expenditures but rather by a more proper distribution of funds that may come in the future. As we pointed out in our brief, something like 50 per cent of the timber supplied in Canada is in British Columbia and yet we only get 15 per cent of the research expenditures in forestry research.

Mr. St. Pierre: That leads me to my final question, Mr. Chairman.

A great part of our cut is in the coastal rain forest, which is a rather unique forest in Canada. Is the research being done in the east frequently of less value to the coastal operators simply because it applies to a quite different type of forest land which covers most of Canada but is not our rain forest.

Mr. Anderson: That is absolutely correct. It covers an entirely different species, different ecological conditions, different soils, and it is neither applicable here or to the interior of British Columbia either.

Mr. St. Pierre: Why is that? I would think that the interior forest would resemble forestry generally in the rest of Canada.

Mr. Anderson: Only as far as the Peace River country is concerned on the other side of the Rockies but not in the Prince George area for instance, which is our principal timber producing area in the interior now. We have different species and different conditions.

Mr. St. Pierre: Thank you.

The Chairman: Mr. McBride?

Mr. McBride: Mr. Chairman, I was very interested in the observation that 93 per cent of the land is government-owned in Canada but not so in the United States. Perhaps this has been made clear but I am still a little confused. You therefore feel, gentlemen, that the responsibility for forestry research is much more that of the government in Canada than it would be in the United States of America?

Mr. Draeseke: I did not say 93 per cent in Canada, I said in British Columbia. I do not know the figure for Canada.

Mr. McBride: But in British Columbia you would see it as thus.

Mr. Draeseke: That is right. It is provincially-owned, and I suppose everybody realizes that when I say "government responsibility".

[Interprétation]

plus équitable des fonds qui pourront être accordés à l'avenir. Comme nous le signalons dans notre mémoire, 50 p. 100 environ du bois d'œuvre canadien est en Colombie-Britannique et nous n'avons que 15 p. 100 de dépenses consacrées aux recherches forestières.

M. St-Pierre: Voilà qui m'amène à ma dernière question, monsieur le président.

Une bonne partie de nos restrictions concerne la forêt tropicale côtière, assez unique au Canada. Les recherches qui se font dans l'est ont-elles moins de valeur pour les exploitants de la côte uniquement parce qu'elles s'appliquent à des forêts différentes qui recouvrent la majeure partie du Canada et non à notre forêt tropicale.

M. Anderson: C'est tout à fait juste. Ce sont des espèces d'arbres différentes, de conditions écologiques différentes, de sols différents. Et cela ne s'applique pas ici, ni à l'intérieur de la Colombie-Britannique.

M. St-Pierre: Pourquoi? Il me semble que la forêt intérieure ressemble à la forêt du reste du Canada.

M. Anderson: Seulement jusqu'au secteur de la Rivière La Paix, de l'autre côté des Rocheuses, mais non pas dans la région de Prince George, par exemple, qui est notre principale région de production de bois d'œuvre. Nous avons diverses espèces et diverses conditions.

M. St-Pierre: Merci.

Le président: Monsieur McBride?

M. McBride: Monsieur le président, j'ai été très intéressé par l'observation qu'on a faite, à l'effet que 93 p. 100 des terres appartiennent au gouvernement du Canada et que ce n'est pas le cas aux États-Unis. Peut-être cela a été clairement exposé mais tout n'est pas très clair pour moi. Vous estimez sans doute que, au Canada bien plus qu'aux États-Unis, la responsabilité des recherches forestières incombe beaucoup plus au gouvernement?

M. Draeseke: J'ai dit 93% en Colombie-Britannique, non pas au Canada. Je ne sais pas quel est le chiffre pour l'ensemble du Canada.

M. McBride: Mais c'est le cas pour la Colombie-Britannique?

M. Draeseke: Oui. C'est de propriété provinciale. Je suppose que tout le monde le sait quand je parle de «responsabilité du gouvernement».

[Text]

Mr. McBride: Yesterday we had very interesting briefs from different people representing the fisheries industry and one of their complaints was the pollution of rivers by loggers. I am sure others will have more specific questions, but are your companies or are you as a Council very concerned about this and, if so, are you taking any steps to prevent bark and debris from accumulating especially in rivers useful for salmon operations and so on? Is this one of your primary research concerns?

Mr. Draeseke: We are concerned about the problem. It is a technical problem on which we maintain liaison with the fisheries officers. I would like to ask one of the technical men on our Committee to complement what I said, if you wish a technical exposition at this time.

Mr. McBride: I am very interested in anything you can say on this subject within limits of course. The problem seems to be that toxins and so on were being released into the waters and that this is a form of pollution and a rather serious one for which the forestry industry was responsible.

Mr. Draeseke: I would like to ask Mr. Grant Ainscough to reply to your question in more detail. He is one of the men listed on our group here.

Mr. G. L. Ainscough (Forestry Committee, Council of Forest Industries of British Columbia): With particular reference to the matter of debris in fish streams the basic approach taken is to identify those streams which are of importance as fisheries streams and then to exert care both in yarding the logs so that they are not yarded across streams, or where material goes into the stream that it is cleaned out again before it accumulates in jams. There is a fair investment in this. In addition to that cost both in controlling the falling and in cleaning the logs and debris out of the streams there is a great deal of special action taken to prevent siltation in road construction. In certain critical areas quite a bit of money has been spent, for example, to haul material away rather than to push it over the bank. Good working relationships have been set up with the fisheries protection officers in the majority of areas and I think it is fair to say that we are beginning to talk one another's language, to understand the problems and work together to minimize them.

[Interpretation]

M. McBride: Hier, nous avons reçu des mémoires très intéressants, de divers groupes représentant l'industrie de la pêche et l'un des griefs que l'on a soulevé portait précisément sur la pollution des rivières et des fleuves par les exploitants forestiers. Je suis sûr que d'autres députés auront des questions plus précises à poser. Est-ce que les compagnies ou le Conseil s'intéressent à ce problème? Est-ce que vous prenez des dispositions pour empêcher les débris et les écorces de s'accumuler dans les rivières et les fleuves qui sont notamment fréquentés par les saumons? Est-ce que c'est là un des objets de votre recherche?

M. Draeseke: Nous nous intéressons à ce problème évidemment. C'est un problème d'ordre technique. A ce sujet, nous tenons en liaison avec les représentants des pêcheries. J'aimerais demander à l'un de nos techniciens d'ajouter à ce que j'ai dit si vous voulez avoir une réponse technique.

M. McBride: J'aimerais fort bien entendre une déclaration là-dessus, dans les limites du mémoire bien entendu. Il semble que des toxines étaient dégagées dans l'eau et causaient une pollution très grave dont l'industrie forestière est responsable.

M. Draeseke: Je vais demander à M. Grant Ainscough de répondre à la question.

Il est un des membres de notre groupe.

M. G. L. Ainscough (Comité de l'exploitation forestière, Conseil des industries forestières de la Colombie-Britannique): En ce qui a trait notamment à la question des débris qui sont dans les cours fréquentés par les poissons, nous repérons d'abord les cours d'eau qui sont importants aux pêcheries et nous faisons ensuite attention pour que les billes ne soient pas envoyées à travers les cours d'eau ou qu'il y ait du moins nettoyage de ces cours d'eau pour qu'il n'y ait pas accumulation de ces débris. On consacre des dépenses considérables à ce programme de nettoyage. En plus du contrôle de l'abattage et du nettoyage des billes et des débris en dehors des cours d'eau, on prend beaucoup de mesures spéciales pour empêcher l'ensablement lors de la construction des routes. On tend plutôt à transporter des débris ou des matériaux plus loin plutôt que de simplement les rejeter par-dessus la rive. Dans la majorité des régions, je trouve qu'on a une excellente liaison avec les agents de la conservation du ministère des Pêches et Forêts. Nous commençons à nous entendre et à comprendre les problèmes, à collaborer afin de minimiser les dégâts.

[Texte]

I see some serious limitations on what can be done as a matter of economics in some areas, so that in cases where the stream is relatively unimportant it may be that you cannot afford to do the things that you can in important areas. I would stress that there is a good working relationship with the Department of Fisheries and the local protection officers.

The Chairman: Mr. Lundrigan is next.

Mr. Lundrigan: Sir, could either of the witnesses give an educated opinion on whether they feel the Department of Fisheries and Forestry should be together or that there should be a separate department for forestry?

Mr. Anderson: I have never really thought of that matter. Off hand I cannot see any reason that the two should not function properly as it is now. The forest resource is a provincial one and the forestry portion of the Department of Fisheries and Forestry is a smaller portion. We were talking just a few moments ago about the government doing research because of ownership in Crown lands. I think that this refers primarily to the amount of research that should be done by provincial governments rather than federal governments. But in view of the fact that the forest is not a federal resource the federal government has taken it upon itself to be active, by and large, in the research field only, and I think that the two would work together.

Mr. Lundrigan: Thank you. Can you take advantage of much of the research done south of the border, in the Scandinavian countries and in various other countries which produce quite a bit of timber?

Mr. Anderson: Only to a limited degree and for the very reason that we cannot take advantage of research done in eastern Canada. You are talking about different trees, different conditions, different soils.

Mr. Lundrigan: So this is your argument for advocating a more equitable distribution of the research dollar, and you do not think there should be a Canadian nationally-oriented research policy in forestry?

Mr. Anderson: Oh, absolutely, but the research for British Columbia has to be done in British Columbia—it cannot be done back east. Our only point is that the research being done in British Columbia is fine, but it is not enough. We have a lot of new problems coming up because we are fairly advanced in our forestry.

[Interprétation]

Il me semble que ce qui peut être fait au point de vue économique est assujéti à de graves limitations économiques dans certaines régions; alors dans les cas où le cours d'eau n'est pas tellement important, on ne peut pas se permettre de faire les mêmes choses que dans les régions importantes. Mais nous avons d'excellentes liaisons de travail avec le ministère des Pêcheries et les agents locaux de la protection.

Le président: Monsieur Lundrigan.

M. Lundrigan: Je voudrais demander à l'un des témoins de nous dire s'il pense que le nouveau département des Pêches et Forêts devrait être unifié ou s'il devrait y avoir un ministère des Forêts indépendant?

M. Anderson: Je n'ai jamais songé à cette question. Je ne vois pas pourquoi les deux ministères ne pourraient pas continuer à travailler comme jusqu'à présent. Les forêts sont des ressources provinciales et le Service des forêts du nouveau ministère est le moins important. Nous disions il y a quelques instants que le gouvernement fait de la recherche uniquement parce que les terres de la Couronne lui appartiennent. Je crois que ceci s'applique surtout pour les recherches qui devraient être faites par les gouvernements provinciaux et non par le fédéral. Mais, étant donné que les forêts ne sont pas une ressource fédérale et que le gouvernement fédéral a fait de la recherche, je crois que, vraiment, les deux ministères peuvent travailler ensemble.

M. Lundrigan: Merci. Pouvez-vous profiter des recherches qui sont faites en Amérique, dans les pays scandinaves et les autres grands producteurs de bois d'œuvre?

M. Anderson: Sûrement, mais les recherches pertinentes à la Colombie-Britannique doivent être faites dans cette province et non dans l'est du Canada. Les arbres, les conditions, les sols, tout est différent.

M. Lundrigan: Donc, vous estimez qu'il faudrait une meilleure distribution des argents que l'on consacre aux recherches. Ne croyez-vous pas qu'il faudrait une politique nationale de recherches forestières?

M. Anderson: Oui, mais les recherches sur la Colombie-Britannique doivent se faire ici, elles ne peuvent pas être faites dans l'Est du pays. Les recherches que l'on fait ici sont excellentes, mais cela ne suffit pas. Nous avons beaucoup de nouveaux problèmes qui se posent parce que nous sommes assez avancés dans le domaine de l'exploitation forestière.

[Text]

Mr. Lundrigan: Thank you. Could you comment briefly on the statement on page 15, Recommendation Number 4—"that a system of priorities be developed." I think I know what you are talking about, but certainly this statement is not very explicit.

Mr. Draeseke: I think Dr. Creighton would be the one who should deal with that.

Dr. Creighton: In any research program you are faced with usually more projects to work on than you have the adequate manpower to handle. As in any other area, you have to sort of cut the cake to suit the situation. We are suggesting that when new projects are submitted for consideration by the Forest Products Laboratories that they look at this in relation to the need of the economy of the country in general and of the industry and that some level of priority be assigned to these projects maintaining the maximum level of effort on those of highest priority and, where necessary, stopping work on those of low priority at least for the time being.

Mr. Lundrigan: This is not being done right now?

Dr. Creighton: We feel it could be improved. I do not want to knock the work that the Forest Products Laboratory have been doing or are doing, however we do feel that there is still room for improvement in the area of establishing priorities for projects on an industry basis. This is being implemented or being improved very much now with the recent introduction of the National Advisory Council and the Research Program Committees which were set up approximately a year and a half or two years ago to assist and advise the staff members of the laboratories on such things as priorities. However, we feel that there is still quite a way to go in the evolution of this process.

Mr. Lundrigan: Thank you. Yesterday we heard quite a bit about hot air, helium and so on. Are your forestry people planning to use what was claimed to be a very progressive means of transporting timber from inaccessible areas, namely the balloon? What is your attitude towards this?

Mr. Draeseke: I would ask Mr. Anderson to respond to that question.

Mr. Anderson: I think the matter of balloon logging is looked upon by everybody with a great deal of interest. I am not a logger, I have not paid too much attention to it personally, but I understand that there is still a lot

[Interpretation]

M. Lundrigan: Merci. Voulez-vous nous donner quelques commentaires au sujet de ce que vous dites à la page 15 du mémoire, où vous recommandez «l'établissement d'un ordre de priorités». Je pense savoir ce que vous voulez dire, mais j'aimerais bien avoir quelques détails.

M. Draeseke: Je pense que le docteur Creighton pourrait faire des commentaires là-dessus.

M. Creighton: Dans tout programme de recherches, il y a en général plus de projets que l'on n'a de personnel disponible. Comme dans tout autre domaine, il faut essayer de répartir le travail de façon équitable. Lorsqu'il y a de nouveaux projets envisagés que l'on soumet au Laboratoire des produits forestiers, nous proposons qu'ils étudient ces projets par rapport aux besoins de l'économie du pays dans son ensemble et à ceux de l'industrie, et qu'ils assignent un niveau de priorité à ces projets, en maintenant un maximum d'efforts pour les projets de la plus haute importance et d'arrêter le travail sur les autres pendant un certain temps si nécessaire.

M. Lundrigan: On ne le fait pas en ce moment?

M. Creighton: Nous estimons qu'on pourrait améliorer les choses. Je ne critique pas le travail du laboratoire des produits forestiers, mais j'estime qu'il y a moyen d'améliorer la situation et d'établir des priorités pour le travail qui se fait, selon les industries concernées. La situation s'est récemment améliorée à la suite de l'établissement du Conseil consultatif national et des Comités des programmes de recherche qu'on a établis il y a à peu près deux ans pour aider le personnel des laboratoires sur des questions comme les priorités. Mais, à notre avis, il y a encore beaucoup de chemin à faire.

M. Lundrigan: Merci. Hier, on nous a parlé de l'air chaud et de l'hélium léger. Est-ce que votre compagnie se propose de se servir de ces nouveaux moyens de transport pour le bois, dans les régions inaccessibles.

M. Draeseke: Je demanderais à M. Anderson de vous répondre.

M. Anderson: Je pense que la question d'exploitation au moyen de ballons est très intéressante. N'étant pas exploitant moi-même, je n'ai pas porté grande attention à ces questions. Mais, d'après ce que je comprends.

[Texte]

of work and study to be done on it yet. People would like to know a little more about the costs. In the balloon logging that has been going on out here a type of balloon has been used which I gather they are not too satisfied with. They have purchased a new one and are trying it out. I think that you still have to consider this as a research project perhaps more than anything else at this stage. Perhaps others would like to comment on this.

Mr. Ainscough: I might say that our company tested the balloon system and were satisfied that it is a workable one for a certain type of ground—that is the very steep areas where your timber volumes are low and your road costs would be extremely high. We have basically put it on the shelf for when we need it. We are logging on ground where the portable spar is most suitable and this is where the majority of our logging is being done today. I think it is fair to say that logging equipment has evolved as the need arose for it. The logger is a pretty ingenious individual and, in partnership with the equipment companies, develops the equipment that he needs to meet the conditions that he is facing in the future.

Mr. Whelan: Could I ask a supplementary. What company do you represent?

Mr. Ainscough: MacMillan Bloedel Ltd.

The Chairman: Mr. Beaudoin?

M. Beaudoin: Vous avez dit que vos opérations forestières sont des plus modernes au monde, et je vous en félicite. Donc, j'en déduis que vous devez nettoyer ou couper plusieurs arbres de nos forêts chaque année. Quelles sont vos méthodes de coupe? Coupez-vous seulement le bois qui est adulte ou mûr, en l'indiquant par des plaques, ou si vous rasez complètement la forêt sans vous préoccuper de sa conservation?

Mr. Draeseke: I am sorry, I only got the last part of that question.

Dr. Creighton: On a very carefully controlled conservation plan we cut on what we call a sustained yield basis, which means that we cut at a rate which does not exceed the growth rate of the forest so that we are not depleting the forest reserves at all. At the same time, we are carrying out research into methods of producing better forests through fertilization and through selective growing of better quality trees, so that the actual volume of wood that we can obtain from a given acre is increasing. Of course, this correspondingly

[Interprétation]

il y a encore beaucoup d'études à faire à cet égard. On aimerait voir combien exactement cela pourrait coûter. Et lors des essais que l'on a faits jusqu'à présent, certains genres de ballons n'ont pas donné de très bons résultats. D'après ce que je comprends, ils ont acheté un nouveau ballon qu'ils mettent à l'essai en ce moment. Et je pense qu'il s'agit toujours d'un projet de recherches plutôt que d'autre chose pour le moment. D'autres auraient peut-être des commentaires à faire sur ce sujet.

M. Ainscough: Notre compagnie a essayé cette méthode et nous estimons que cela pourrait fonctionner pour un certain genre de terrain, dans des régions très élevées, où le volume du bois est faible et les routes coûteraient très cher. Mais pour le moment nous avons mis ceci de côté. Nous travaillons sur des terrains où les espars mobiles conviennent le mieux. Je crois qu'on a mis ce système au point au fur et à mesure que le besoin s'en faisait sentir. Les exploitants sont des gens ingénieux et en collaboration avec les compagnies d'outillage ils mettent au point le matériel dont ils peuvent avoir besoin à l'avenir.

M. Whelan: Puis-je poser une question supplémentaire? Quelle compagnie représentez-vous?

M. Ainscough: MacMillan Bloedel Ltd.

Le président: Monsieur Beaudoin.

Mr. Beaudoin: You said that your logging operations are among the most modern in the world, and I congratulate you. So I take it that you must clean out or cut down a good number of trees in your logging areas each year. What cutting methods do you use? Do you cut only full-grown or mature wood that is indicated by markings, or do you just cut everything without thinking of conservation?

M. Draeseke: Excusez-moi, je n'ai compris que la fin de votre question.

M. Creighton: Non, nous coupons seulement avec beaucoup de soin d'après un plan de conservation sur un rendement maintenu, selon nous, ce qui veut dire que nous ne coupons qu'à un taux qui ne dépasse pas le taux de croissance de la forêt. Donc nous n'épuisons pas les réserves du tout. En même temps, nous faisons des recherches sur les méthodes de produire de meilleures forêts, par la fertilisation et la sélection, pour faire pousser des arbres de meilleure qualité, pour que le volume de bois qu'on obtient d'une

[Text]

allows the cut that we can take to increase and still maintain a constant growth level.

Mr. Beaudoin: I see. Thank you, Mr. Chairman.

The Chairman: Mr. Comeau.

Mr. Comeau: Mr. Chairman, I think Mr. Beaudoin pretty well covered what I wanted to ask. I was certainly interested in finding out if we were depleting our resources or not. As a supplementary question, how do you feel our forest products are holding out? Are the companies involved in protecting the industry in any way? Do you foresee that some day there may be no more forest products? Are we protecting ourselves in this respect in any way?

Mr. Draeseke: No. I will answer your question by saying that the only area of British Columbia which is now being cut to its sustained yield capacity is the southern coast. In other words, there is room for increased cut on a perpetual basis in British Columbia, and the amount of increase is very substantial. Figures on this are being developed in Victoria. In the B.C. forest service a new inventory is now being completed and the present level of cut can perhaps be increased by double and maintained in perpetuity.

Mr. Comeau: Would the same situation apply in Alberta?

Mr. Draeseke: No, we do not represent Alberta. I do not know if anybody else in this group could tell you. I could not answer as to how much they could increase their cut.

Mr. Comeau: Another question, then, Mr. Chairman, with regard to pollution. Yesterday the question of hollow logs being dumped into rivers came up and I think the Fraser River was given as an example. Would you care to comment on that. How do you feel about this? Is this a fact and are you doing anything to prevent this, as much as it is possible, and so on?

Mr. Anderson: I never heard of hollow logs being dumped in a river, to tell you the truth. I do not know who made that statement. Undeniably there is waste in the Fraser River but it is anything but deliberate. It is a type of waste which you might almost call a leakage.

[Interpretation]

superficie donnée augmente. Ceci permet en même temps de couper plus de bois tout en maintenant la poussée des arbres.

M. Beaudoin: Je vois. Merci, monsieur le président.

Le président: Monsieur Comeau.

M. Comeau: Monsieur le président, je crois que ma question reprend celle de M. Beaudoin, plus ou moins. J'aimerais savoir si nous épuisons nos ressources ou non. Comme question supplémentaire, est-ce que vous croyez que nos réserves se maintiennent bien? Est-ce que les compagnies concernées essaient de protéger l'industrie? Est-ce que vous prévoyez qu'un jour il n'y aura plus de produits forestiers? Est-ce que nous prenons des précautions pour maintenir l'industrie?

M. Draeseke: Non. Pour répondre à votre question, je dirais que la seule région de la Colombie-Britannique où l'on coupe à la capacité maximum c'est sur la côte sud. En d'autres termes, il y a moyen d'augmenter la coupe à perpétuité en Colombie-Britannique, et le montant de l'augmentation sera considérable. On en prépare les chiffres présentement à Victoria. Dans le service forestier de la Colombie-Britannique on achève présentement un nouvel inventaire et le présent niveau de la coupe peut peut-être doubler même et à perpétuité.

M. Comeau: Est-ce que la situation serait la même en Alberta?

M. Draeseke: Non, nous ne représentons pas l'Alberta. Je ne sais pas si quelqu'un d'autre ici pourrait vous donner ces renseignements. Jusqu'à quel point on a augmenté la coupe, là je ne peux vraiment pas vous dire.

M. Comeau: Une autre question, en ce qui concerne la pollution. Hier, on nous a parlé des billes creuses que l'on déposait dans les rivières, le Fraser, je crois. Est-ce que vous pouvez nous faire des commentaires à ce sujet? Quel est votre sentiment à ce sujet? Est-ce que c'est vrai, ou est-ce que vous faites quelque chose pour empêcher que cela se passe de cette façon?

M. Anderson: Je n'ai jamais entendu parler, à vrai dire, qu'on déposait des billes creuses dans une rivière. Je ne sais pas qui vous a dit cela. Évidemment, il y a des pertes, des déchets que l'on dépose dans le fleuve Fraser, mais on ne le fait certainement pas à dessein. Ce sont des déchets qui échappent au contrôle, pour ainsi dire.

[Texte]

Mr. Comeau: So you feel, then, that this would be a very small percentage—hardly any, in your estimation—of the timber that is in the Fraser River.

Mr. Anderson: Oh, yes, I should say so. It is definitely very small.

Mr. Comeau: I understood that it was quite substantial and it was creating quite a pollution problem.

Mr. Anderson: Are you talking about dead-heads or sinkers? That particular paragraph refers to upcoast, I do not think it has anything to do with the rivers. I imagine they are referring there to logs that tend to sink, the heavy-butted hemlock. However, going back to the rivers, the mills on the Fraser River, for instance, have a recovery program. They are cleaning up their booming grounds all the time. They are going after these dead-heads. They are using divers and doing everything they can to recover this wood. Relatively speaking, there is now very little waste compared to some years ago. We do not like to waste wood; waste wood is wasted dollars.

Mr. Comeau: Thank you, Mr. Chairman.

The Chairman: Mr. Whelan.

Mr. Whelan: Mr. Chairman, I would first like to say, having visited the area three or four weeks ago and having experienced flying in a float airplane for the first time, speaking about debris, that I noticed many miles of shoreline—this was in the area of Vancouver Island—where there was debris in windrows on the shoreline for miles and miles. Where does this debris come from?

Mr. Anderson: A lot of that is from booms that have been broken up in storms and the logs have washed up on the shore. Some of its trees that have fallen into rivers during flood times in the spring and have drifted down to sea and ended up on the shore. The provincial government has a program of salvaging this and they issue salvage licences to cover these beaches where it is possible to salvage.

There are complications, though, because many of these logs, particularly if they are washed up on a sandy or pebbly beach, get mud and pebbles ground into them and you cannot saw them. It is too dangerous. It ruins our saws. It involves the danger of a broken saw and loss of life and injury in the sawmills. So, there are quite a few problems in connection with the salvage of this, apart

[Interprétation]

M. Comeau: Ce serait donc, à votre avis, un très petit pourcentage, presque pas, du bois qui tomberait dans le fleuve Fraser.

M. Anderson: Oh oui, je dirais cela. C'est définitivement très petit.

M. Comeau: J'avais compris qu'il y avait une quantité assez formidable et que cela causait de la pollution.

M. Anderson: Est-ce que vous parlez de bois mort ou de bois fondrier? Dans ce paragraphe il s'agit du haut de la côte. Il ne s'agit pas, je crois, des rivières et des cours d'eau. J'imagine qu'on parle ici de ce que l'on fait pour les billes de bois lourd qui ont tendance à s'enfoncer dans l'eau, des billes de sapin à gros bout. Mais en ce qui concerne les cours d'eau, dans le fleuve Fraser par exemple, il y a un programme pour récupérer ce bois. Ils nettoient constamment les endroits de flotage. Ils emploient des plongeurs pour faire tout ce qu'ils peuvent pour reprendre, sauver ce bois mort. Il y a très peu de pertes, relativement parlant, comparé à ce qui se passait il y a quelques années. On n'aime pas perdre le bois car après tout c'est de l'argent que l'on perd en même temps.

M. Comeau: Merci, monsieur le président.

Le président: Monsieur Whelan.

M. Whelan: Monsieur le président, tout d'abord, ayant visité la région il y a trois ou quatre semaines et ayant voyagé pour la première fois dans un avion à ponton, quand vous parlez de débris et de déchets, il y a toute une longueur des côtes, c'est sur l'île de Vancouver, mais il y a des déchets en endains sur les côtes pendant des milles et des milles. D'où viennent ces déchets?

M. Anderson: Surtout des radeaux qui ont été brisés par la tempête, et le bois est ramené sur les côtes. Il y a aussi des arbres qui ont été enlevés par les tempêtes et sont tombés dans l'eau. Il y a un programme du gouvernement provincial pour récupérer ce bois et il se donne des permis pour récupérer le bois là où c'est possible de le faire.

Mais il y a des difficultés qui se posent parce que les billes, surtout quand elles arrivent sur une plage sablonneuse, du sable ou des petites pierres s'incruster dans le bois et le bois est difficile à couper. C'est dangereux. Cela brise les scies. Il y a danger d'une mâchoire fracassée, de perte de vie ou de blessures dans les scieries. Donc, il y a des problèmes qui se posent, en plus de celui de

[Text]

from the physical difficulty of getting at some of these beaches.

Mr. Whelan: I think we are all aware of the fact that the prices of many lumber products have gone up tremendously. I am a little confused but I thought the witness told us yesterday that a log that may have contained 1,000 board feet had gone up from \$50 to \$150. I may be wrong on this. However, of this tremendous increase in price do you not think that the industry could put much more into research than they are doing?

Mr. Anderson: You are speaking of the price of lumber?

Mr. Whelan: Yes.

Mr. Anderson: Of course, it went up because of a world-wide shortage. Lumber is a world-wide commodity just like sugar, wheat, cocoa, or anything, except that it has no government support program. Canada produces about 5 per cent of the world's lumber and I think we export about three per cent. There is nothing any person in Canada can do to stop the price from going up or down and although the prices went up, I can tell you that in the last month they have come down again equally quickly.

Mr. Whelan: Not as much as they went up.

Mr. Anderson: Yes.

Mr. Whelan: Have they?

Mr. Anderson: Yes, and I think the amount of money that is spent on research, by our industry is comparable to any other in the same type of business.

Mr. Whelan: In the same type of business?

Mr. Anderson: Yes.

Mr. Whelan: I remember a presentation in Ottawa where it was pointed out by some of the workers that your costs of operation had not nearly gone up to the extent of the increase in the cost of lumber. They pointed out that their contracts had another year and a half or two years to run—I forget the exact length of time—and they were strenuously objecting to the increase in the price of lumber products. I am just referring to the increase in the cost of lumber products, and I do not know whether this is directly connect-

[Interpretation]

recupérer le bois sur les plages.

M. Whelan: Nous nous rendons tous compte que les prix de plusieurs produits forestiers ont augmenté considérablement. Je suis un peu confus mais j'ai cru que le témoin nous a dit hier qu'une bille qui aurait peut-être contenu mille pieds-planche avait augmenté de \$50 à \$150, vous pouvez me corriger. Toutefois, à cause de cette augmentation formidable du prix, ne croyez-vous pas que l'industrie pourrait payer davantage pour des recherches dans ce domaine?

M. Anderson: Vous parlez du prix du bois?

M. Whelan: Oui.

M. Anderson: Oui, évidemment, les prix ont augmenté à cause du manque de bois dans le monde. C'est un produit dont on a besoin dans tous les pays, tout comme le sucre, le cacao, ou autre chose, sauf qu'il n'y a pas de programme d'appui du gouvernement comme pour ces autres produits. Nous produisons au Canada environ 5 p. 100 de la production mondiale de bois, et nous en exportons 3 p. 100, je crois. Il n'y a rien que l'on puisse faire pour empêcher la fluctuation des prix. Les prix ont augmenté rapidement, mais ils ont baissé aussi rapidement le mois dernier.

M. Whelan: Mais pas autant, pas dans la même mesure.

M. Anderson: Oui.

M. Whelan: Est-ce vrai?

M. Anderson: Oui, et je crois que la somme d'argent que l'on dépense pour les recherches se compare dans notre industrie à celle que l'on dépense dans toutes les autres industries du genre.

M. Whelan: Dans le même genre d'industrie?

M. Anderson: Oui.

M. Whelan: J'ai vu un mémoire à Ottawa, je crois, présenté par certains représentants des travailleurs, qui disait que vos frais d'exploitation n'avaient pas augmenté autant que le prix du bois avait augmenté. Ils soulignaient que leurs contrats devaient durer encore un an et demi ou deux, j'oublie, et qu'ils s'opposaient énergiquement à l'augmentation des prix des produits du bois. En ce qui concerne l'augmentation du prix des produits du bois, quand vous parlez de recherche, et il y a beaucoup de genres de recherche, nous

[Texte]

ed to you people or not, but many times we have found that other businesses that are making tremendous profits are not putting their fair share back into research either, and this is why I asked that question.

Mr. Draeseke: May I comment on that statement, please. You say what happens is that when prices go up profits go up. Let us stop a minute analyse what happens when the price of lumber goes up. The first thing that happens is that the stumpage, which is payable under a sliding scale formula to the Crown, goes up in round figures by 60 per cent of that increase. In other words, if the price of lumber goes up a dollar our stumpage goes up 60 cents, and on the remaining 40 cents we pay an effective tax rate of 56 per cent. If you calculate this out you will find that 82½ cents of the dollar increase goes to the government.

Mr. Whelan: Yes. You point out in your brief that 50 per cent of the supply of lumber comes from B.C. but that only a small percentage of government research money is being spent in B.C. I do not pretend to be an expert on this, and I think you can judge that by my line of questioning, but are the problems with respect to disease, and so on, not much greater in the other parts of our nation than they are in B.C.?

Mr. Draeseke: I will ask Mr. Anderson to comment on that.

Mr. Anderson: I was just wondering if one of the other gentlemen would prefer to answer that, Mr. Grant, Mr. Bruch or Mr. Williams.

Mr. Ainscough: I am not sure I completely understand your question.

Mr. Whelan: I meant that the problems of disease, insects, and so on, are greater in the other parts of the nation than they are in B.C. The natural climatic conditions eliminate a certain amount of disease, and so on, in B.C. I think Mr. St. Pierre pointed out that with the rain forests here you do not have the disease and other things that they have in New Brunswick and some of the other parts of Canada.

Mr. Ainscough: I would have to say, as a very general reply, that this is not the case. We have greater values per acre here and any loss on an acre basis would be that much more valuable. We have insect and disease problems here that are of considerable economic importance, and I do not think it would be correct to directly compare an

[Interprétation]

avons constaté ceci dans d'autres industries qui font beaucoup de profits n'investissent pas leur juste part pour les recherches, et c'est pourquoi j'ai demandé la question.

M. Draeseke: Quand vous dites que les prix augmentent vous pensez que les bénéfices augmentent aussi. Mais, voyez quand les prix augmentent, d'abord la somme que l'on paie en droits à la Couronne augmente en proportion. Autrement dit, si le prix du bois augmente d'un dollar, les droits augmentent de 60 cents, et nous payons aussi des impôts sur les 40 cents qui restent au taux de 56 p. 100. Ce qui fait 82½ cents sur l'augmentation du dollar. Et cette somme va au gouvernement.

M. Whelan: Oui. Vous dites dans votre mémoire que la moitié du bois vient de la Colombie-Britannique, et que seulement un petit pourcentage de l'argent consacré aux recherches est dépensé en Colombie-Britannique. Je ne suis pas un spécialiste dans la matière, et vous vous en rendez compte certainement, mais en ce qui concerne la maladie, est-ce que nous n'avons pas beaucoup plus de problèmes ailleurs qu'en Colombie-Britannique?

M. Draeseke: Je vais demander à M. Anderson de répondre à cette question.

M. Anderson: Je me demandais si un des autres messieurs aimerait répondre, monsieur Grant, monsieur Burch, ou monsieur Williams, peut-être.

M. Ainscough: Je ne sais pas si j'ai bien compris votre question.

M. Whelan: Il y a des problèmes de maladies, d'insectes, et ces problèmes sont plus importants ailleurs qu'ici. A cause de votre climat, il y a moins de maladies d'arbres ici, dans les forêts de la Colombie-Britannique. Je crois que M. St-Pierre a souligné qu'avec les forêts de pluie ici, vous n'avez pas de maladies et autres problèmes comme ils en ont au Nouveau-Brunswick et ailleurs au Canada.

M. Ainscough: Je dirais, comme réponse bien générale, que ce n'est pas le cas. Nous avons des valeurs plus importantes par acre, et les pertes sur la base de l'acre sont d'autant plus importantes. Nous avons des problèmes causés par les insectes et les maladies qui ont beaucoup d'importance sur le plan économique, et je ne crois pas qu'il soit juste de

[Text]

emergency infestation here with the perpetual budworm infestation in the Maritimes.

Mr. Whelan: That is what I was referring to.

The Chairman: Order. I would like to ask the co-operation of the Committee in trying to adhere to the five-minute period as closely as possible.

Mr. Whelan: I would like to ask the Chairman to watch his watch closely too.

The Chairman: I am.

Mr. Noble: Mr. Chairman, some of the questions I had in mind have already been asked, but I have a couple I would like to put. Do the fisheries or the conservation people check closely on the logging operations to enforce measures to protect the fisheries, or are measures taken on a voluntary basis by the logging companies?

Mr. Anderson: The fisheries do check very carefully but I think to describe the co-operation that now exists between the forest industry and the federal fisheries people perhaps the best word to use would be ideal. For instance, if we are going to log in a new drainage system, up a valley, the very first thing we do is notify the fisheries people that we are going to log there and we ask them to come with us and inspect the area, study the stream and decide what steps and measures we should take to protect the fishery values there. We get along very well with them. They also take care and watch it very carefully on their own, apart from the co-operative aspects of it.

Mr. Noble: Mr. Chairman, this is quite different from the evidence that we heard yesterday from some of the fisheries people. However, I am glad that this is the case. I would now like to direct another question to Mr. Ainscough. I was intrigued with the enthusiasm displayed yesterday in the presentation of the balloon logging concept. Does the witness feel it is economically sound as a means of logging those areas where it would be perhaps the only means of taking out the timber?

Mr. Ainscough: Again I would have to say yes. It represents a method for logging these areas of very difficult access. It is certainly an attractive prospect for the future. However, I again come back to the point that as we know

[Interpretation]

faire de comparaison entre les infestations d'urgence ici avec l'infestation perpétuelle des pique-boutons dans les Maritimes.

M. Whelan: C'est ce dont je parlais.

Le président: A l'ordre. J'aimerais demander aux membres du comité de bien vouloir essayer de restreindre leurs questions, et d'en rester au cinq minutes.

M. Whelan: J'aimerais aussi demander au président de faire attention à sa montre.

Le président: Je le fais.

M. Noble: Monsieur le président, quelques questions que j'avais à poser ont déjà été posées, mais j'en ai deux que j'aimerais poser. Est-ce que les gens des pêcheries ou de la conservation inspectent les exploitations forestières pour protéger la pêche, ou est-ce que l'on prend des mesures sur une base volontaire par les entreprises d'exploitation forestière?

M. Anderson: Le ministère des Pêcheries fait des inspections soignées mais la collaboration entre l'industrie forestière et les pêcheries, les agents du ministère des pêcheries est idéale, on peut dire. Par exemple, si nous voulons couper du bois dans un nouveau système d'écoulement, au haut d'une vallée, la première chose que nous faisons c'est d'avertir les gens des pêcheries que nous allons travailler là et nous leur demandons de venir voir les lieux avec nous et inspecter la région, étudier le cours d'eau et décider ce que nous pourrions faire pour protéger leurs ressources en poisson dans cet endroit. Nous nous entendons très bien. Et aussi à part du point de vue de la collaboration, ils procèdent seuls dans leurs inspections.

M. Noble: Monsieur le président, ceci est très différent des témoignages que nous avons entendus hier des gens des pêcheries. Toutefois, je suis heureux de l'entendre. Une autre question à poser à monsieur Ainscough. L'enthousiasme qu'on a montré hier, au sujet de l'idée du transport par ballon, m'impressionnait, et je me suis demandé si ce n'était le seul moyen de déplacer le bois dans certaines régions?

M. Ainscough: Oui, je dois vous dire que c'est une méthode qui permet d'exploiter ces régions qui sont très difficiles. C'est une méthode qui offre beaucoup de possibilités pour l'avenir, mais pour le moment, ceci

[Texte]

it now it is a high cost system which is basically still in the development stage.

Mr. Noble: Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Noble, Mr. Perrault.

Mr. Perrault: Mr. Chairman, the continuing theme of this brief is that not enough money is being invested by governments in forestry research, and I am interested in this statement which appears on page 2:

We therefore look to the federal government for support of an aggressive forestry research program and for leadership which will induce the provinces to carry out the most advanced reforestation programs.

In this connection I wonder if either of these gentlemen can tell the Committee how a reforestation program in British Columbia would compare both at the private and public level with one in Oregon or Washington. Are we doing as effective a job perhaps as they are doing in these other jurisdictions.

Mr. Draeseke: I will ask Mr. Gerry Burch to respond to that question.

Mr. W. G. Burch (Plywood Technical Department, Council of the Forest Industries of British Columbia): Mr. Perrault, I believe the last part of your question was relative to our efforts in British Columbia, private and public, versus Oregon and Washington.

Mr. Perrault: Yes. I am interested in the aspect of reforestation. If we are going to make sure that this is a continuing resource and we are going to maintain our competitive position, how are we doing in comparison with competitors in Washington and Oregon, for example? In the matter of reforestation, is the state government of Oregon or the state government of Washington doing better in this publicly-owned domain than we are in Canada?

Mr. Burch: Yes, I would say they are.

Mr. Perrault: Do you have any comparative figures to illustrate this differential?

Mr. Burch: No, I do not have, even off the top of my head.

Mr. Perrault: Would you say it is a substantial difference?

Mr. Burch: There is a substantial difference. Mind you, they also have a substantially

[Interprétation]

revient très cher. Mais nous n'en sommes qu'au premier stade, au point de faire des essais encore.

M. Noble: Merci, monsieur le président.

Le président: Merci, monsieur Noble. Monsieur Perrault.

M. Perrault: Monsieur le président, dans ce mémoire on répète en quelque sorte qu'il n'y a pas assez d'argent affecté aux recherches. À la page 2 vous dites:

nous nous attendons à ce que le gouvernement encouragera les provinces à mettre au point un programme de reforestation.

Maintenant je me demande si ces messieurs pourraient nous dire comment le programme en Colombie-Britannique se compare avec celui de l'Oregon ou de Washington, au niveau public et privé. Est-ce que nous faisons un travail aussi efficace qu'eux?

M. Draeseke: Je demanderais à monsieur Gerry Burch de vous répondre.

M. W. G. Burch (Plywood Technical Department, Council of the Forest Industries of British Columbia): Monsieur Perrault, j'ai entendu la fin de la question en ce qui concerne les efforts privés et publics que nous faisons en Colombie-Britannique, comparés à ce que l'on fait en Oregon et au Washington.

M. Perrault: Oui, c'est surtout pour le reboisement. Je voudrais faire sûr que nous faisons tout notre possible pour maintenir cette ressource. Qu'est-ce que nous faisons à comparer à ce qu'ils font dans ces États d'Oregon et de Washington, par exemple? Est-ce que le gouvernement de Washington ou d'Oregon obtient de meilleurs résultats pour le reboisement qu'ici au Canada?

M. Burch: À mon avis, oui.

M. Perrault: Est-ce que vous avez des comparaisons à nous faire?

M. Burch: Non, je n'ai pas de données.

M. Perrault: Est-ce que vous croyez qu'il y a un gros écart?

M. Burch: Oui, évidemment, leur problème n'est pas le même que le nôtre. Une plus

[Text]

different problem. A smaller portion of the forest land in Oregon and Washington is owned by the government than is the case in British Columbia.

Mr. Perrault: In terms of acreage, for example, replanted last year, how would we compare with Oregon and Washington?

Mr. Burch: I would say that the British Columbia forest service probably planted equal to what they did in Oregon and Washington individually. Of course, they are a much smaller...

Mr. Perrault: But as a percentage figure it would be less?

Mr. Burch: That is right.

Mr. Perrault: Speaking of the value of the forest industry and relating it to what we are doing in reinvesting some of these funds in research, do you have any figures indicating the amount of money we derive, directly and indirectly, from the forest industry in British Columbia?

Mr. Draeseke: I think I mentioned in my introduction that the value of production last year was about \$1.4 billion.

Mr. Perrault: But, indirectly...

Mr. Draeseke: Indirectly, we have calculated that one-half of the economy of British Columbia depends on the forest industry.

Mr. Perrault: What was the extent of export trade last year? It would be dollar-earning?

Mr. Draeseke: That is right. It would be in excess of a billion dollars.

Mr. Perrault: How do our wage scales in British Columbia compare with those in Washington and Oregon and eastern Canada?

Mr. Draeseke: I think we have the highest wages of any area.

Mr. Perrault: Do you mean in comparison with the United States?

Mr. Draeseke: Yes.

Mr. Perrault: These are very interesting figures.

I have further questions, Mr. Chairman, but I will pass now.

The Chairman: You have one minute.

[Interpretation]

petite partie des terres forestières dans ces États appartiennent au gouvernement qu'ici en Colombie-Britannique.

M. Perrault: En termes de superficie, par exemple, reboisée l'année dernière, est-ce que nous comparons avec ces États?

M. Burch: Je crois que le service de la Colombie-Britannique a planté autant d'arbres que dans ces deux États. Mais ils sont beaucoup plus petits...

M. Perrault: Évidemment, au point de vue de pourcentage ce serait moindre.

M. Burch: Oui.

M. Perrault: Je me demande au sujet de la valeur de l'industrie forestière, comparative-ment à ce que nous faisons pour réinvestir des fonds en recherche. Avez-vous des chiffres qui peuvent indiquer les sommes que nous recevons, directement ou indirectement, de l'industrie forestière en Colombie-Britannique?

M. Draeseke: J'ai mentionné, je crois, dans mon introduction que la valeur de la production, l'an dernier, était de 1.4 billion.

M. Perrault: Mais, indirectement...

M. Draeseke: D'après nos calculs, la moitié de l'économie de la Colombie-Britannique est directement tributaire de l'industrie forestière.

M. Perrault: Quelle a été l'ampleur du commerce d'exportation l'an dernier en dollars?

M. Draeseke: Plus d'un billion de dollars.

M. Perrault: Comment notre échelle de salaire, en Colombie-Britannique, peut-elle se comparer à celle de Washington, de l'Orégon et de l'Est du Canada?

M. Draeseke: Je crois que nous avons l'échelle de salaire la plus élevée.

M. Perrault: Voulez-vous dire comparative-ment aux États-Unis?

M. Draeseke: Oui.

M. Perrault: Ce sont là des chiffres très intéressants. J'ai d'autres questions, monsieur le président, mais je vais céder mon tour maintenant.

Le président: Il vous reste une autre minute.

[Texte]

Mr. Perrault: Yes; I am considering further material.

The Chairman: Mr. Hogarth?

Mr. Hogarth: I was somewhat concerned about your remark that the present level could be doubled and that we could still have a perpetual, sustained yield. It concerns me because it dovetails with the petroleum industry in which they say they are producing only 40 per cent of what they could normally produce and preserve the resource. How much of the products are being produced under the forest management licence system in British Columbia?

Mr. Draeseke: Under sustained yield, I presume you mean?

Mr. Hogarth: Yes. The various types of...

Mr. Draeseke: There are TFLs, harvesting licences and the sustained yield units. It is substantial. Have you a figure on that, Mr. Anderson?

Mr. Anderson: I would say that, for all practical purposes, virtually all production in British Columbia is produced on a sustained yield basis now. It is regulated by the government and by the Companies.

Mr. Hogarth: I am referring particularly to those regulated by the companies, which are the forest management licences...

Mr. Anderson: Tree farming licences.

Mr. Hogarth: Tree farming, yes. I heard a complaint from an eastern industrialist to the effect that one of the major problems in the production of lumber in British Columbia is the fact that the companies are not producing from their controlled areas as much as they might. In short, timber is rotting in the stands, and they are not producing it, regardless of reforestation, or anything else; they are just not cutting. Is there truth and substance to those remarks?

Mr. Draeseke: No.

Mr. Hogarth: You think that all the companies are producing as much as is economically possible from the grants that they have been given?

Mr. Draeseke: They are producing as much as is allowed under the regulations promulgated by the B.C. Forest Service. There can be a discussion on whether their regulations are the optimum, but they are very close to it if they are not at it.

Mr. Hogarth: I see. I have just one other comment on Mr. Comeau's questioning. Mr.

[Interprétation]

M. Perrault: Oui...

Le président: Monsieur Hogarth.

M. Hogarth: Monsieur le président, les observations que vous avez faites, à savoir que le niveau actuel pourrait être doublé et que nous pourrions avoir encore un rendement perpétuel soutenu me préoccupe parce qu'on dit que dans l'industrie pétrolière on ne produit que 40 p. 100 de la production normale et qu'on préserve les ressources. Quelle part du rendement de la production est fournie en vertu du système de permis forestier en Colombie-Britannique?

M. Draeseke: Je crois que vous voulez dire pour le rendement soutenu?

M. Hogarth: Oui.

M. Draeseke: Il y a des permis TFLS et les unités de rendement soutenu. Avez-vous des chiffres là-dessus, M. Anderson?

M. Anderson: A toutes fins pratiques, presque toute la production en Colombie-Britannique doit être axée sur le concept du rendement soutenu. Elle est orientée par la compagnie et le gouvernement.

M. Hogarth: Je parle notamment de celle qui est réglementée par les compagnies porteuses de permis.

M. Anderson: Permis de coupe de bois.

M. Hogarth: En effet. J'ai entendu un grief d'un industriel de l'Est, à savoir que l'un des principaux problèmes en ce qui a trait à la production du bois d'œuvre en Colombie-Britannique c'est le fait que les compagnies ne produisent pas dans leurs régions contrôlées comme telles. Indépendamment du reboisement, elles ne font pas la coupe. Est-ce que cela est justifié?

M. Draeseke: Non.

M. Hogarth: Vous pensez que toutes les compagnies produisent autant qu'il est économiquement possible selon les subventions qui leur sont accordées?

M. Draeseke: Elles produisent autant que les règlements promulgués par le service forestier de la Colombie-Britannique leur permettent et on peut se demander si ces règlements sont l'optimum mais ils s'en rapprochent beaucoup s'ils ne le sont pas.

M. Hogarth: Une autre observation par suite de la question de M. Comeau, je crois,

[Text]

Draeseke, you of all people in the room are familiar with the industry along the Fraser River. Mr. Suzuki's brief was not directed to one or two logs. He was suggesting that the new methods of using log barges to bring the logs in vast quantity up to, say, the harbour of New Westminster and dumping them there are putting into the river a great many logs which sink because they have previously been stored in salt water. They are putting into the river logs which sink because they are conks; they are rotten in the butt, and they are creating dead heads. And they are putting into the water a great deal of debris. He suggests that there be a dumping point at the mouth of the river in salt water to prevent that occurring. What is your reaction to that suggestion?

Mr. Draeseke: I am not familiar with the matter of the dumping of barges in the river. In my experience, in the company I used to be with, we dumped in Howe Sound and then towed into the river on flat booms. I presume that some barges are being dumped in the Fraser River. I do not know if anybody here is...

Mr. Hogarth: I have watched them from my office window from time to time. I can assure you that they are.

Do you think that the forest industry might take this up with the fishing industry and rectify it by having salt water dumping ponds at the mouth of the river?

Mr. Draeseke: There would be physical problems, but we could certainly consider it if it is creating the situation described. I just do not know whether it is or not. I have no knowledge of what is being left in these dumping grounds.

Mr. Anderson: Any logs that would sink when they are dumped in the river would also sink when they are being towed up the river from the dumping grounds at the mouth.

Mr. Hogarth: Yes; but the point is that they would not then sink in the river. That is where they cause the appreciable damage to the gillnetters, along with the debris, and so on.

Mr. Anderson: This is the point I was making. They would sink in the river. If they will float in salt water and you dump them in salt water and then flat-raft them up the river the sinkage is going to take place as you go up the river.

Mr. Hogarth: Could they not be sorted out? Would they not be evident in the boom?

[Interpretation]

monsieur Draeseke, vous connaissez peut-être mieux l'industrie le long du Fraser que n'importe qui d'autre et le mémoire de M. Suzuki ne portait pas simplement sur une ou deux billes. Il suggérait que les nouvelles méthodes utilisées, notamment les chalands à billes qui permettent de transporter des quantités de billes au port de New Westminster où on les déverse, ces nouvelles méthodes mettent dans la rivière bon nombre de billes qui s'enfoncent, car jusqu'ici elles étaient dans l'eau salée. Ils mettent dans la rivière des billes qui s'enfoncent, pourrissent et créent de faux batardeaux. Et on suggérerait qu'il y ait à l'embouchure du fleuve un point de déversement pour empêcher cette corruption du bois ou des billes. Quelle est votre réponse à cette proposition?

M. Draeseke: Pour ma part je ne connais pas tellement la question des chalands déversant dans la rivière. Nous avons l'habitude de déverser dans une rade et puis de haler sous forme de plate-forme jusqu'à la rivière. Je suppose qu'il se trouve des chalands qui déversent dans le Fraser. Y a-t-il quelqu'un ici qui puisse nous éclairer là-dessus?

M. Hogarth: De la fenêtre de mon bureau, je surveille les opérations, et je peux vous assurer que c'est le cas. Pensez-vous que l'industrie forestière pourrait consulter l'industrie des pêcheries et corriger cette situation?

M. Draeseke: Il y aurait des problèmes d'ordre matériel mais sûrement nous pourrions songer à cela si les résultats que vous avez décrits existent, mais je l'ignore. J'ignore ce qui reste par suite de ce déversement.

M. Anderson: Les billes qui s'enfoncent lorsqu'elles sont déversées, s'enfonceraient de toute façon.

M. Hogarth: Oui, mais pas dans la rivière et dans le fleuve, c'est là, que ces billes causent beaucoup de dégâts à ceux qui utilisent les filets maillants.

M. Anderson: S'ils flottent en eau salée et qu'on les déverse en eau salée, il ne peut pas y avoir un tri.

M. Hogarth: S'il y avait un tri, ne seraient-ils pas visibles dans le boom?

[Texte]

Mr. Anderson: It is possible.

Mr. Hogarth: I might say that the North Fraser Harbour Commission seems to spend most of its time picking up dead heads that have been dropped into the river from some source. I am most impressed with Mr. Suzuki's brief. I ask that you undertake to look into it, because I think something could be done without too much inconvenience to the industry.

Mr. Draeseke: We certainly will consider it.

Mr. Hogarth: I have nothing further.

Mr. Crouse: In the field of sales and marketing you state on page 14 that:

The use of wood is frequently reduced by inadequate or unrealistic design criteria in building codes or similar regulations.

Why is this so, where do the inadequate or unrealistic designs come from, and who approves them? Is it the federal or the provincial government?

Mr. Draeseke: I would like to ask Mr. McGraw, manager of our technical department, to reply to that question.

Mr. McGraw, would you come forward to one of the microphones, please?

Mr. A. J. McGraw (Manager, Plywood Technical Department, Council of Forest Industries of British Columbia): I believe the problem here is that wood is really a traditional building material and many of the building codes have been developed around misuse. To develop more efficient building systems we need to go to an engineered type of construction—perhaps prefabrication—and getting acceptance of this type of construction in building codes is extremely difficult.

The problem is perhaps greater in the larger cities because universal acceptance of the national building code just does not exist. For example, we have a problem locally in Vancouver. Certain types of building systems, which we have examined at our laboratory and which appear to be efficient and safe, are just not acceptable.

Mr. Crouse: Mr. Chairman—

Mr. Draeseke: Mr. Chairman, may I interject...

[Interprétation]

M. Anderson: Oui, c'est possible.

M. Hogarth: La Commission du port du North Fraser semble passer la plus grande partie de son temps à recueillir les faux batardeaux et le bois mort. J'ai été très impressionné par le mémoire de M. Suzuki et j'aimerais que vous vous occupiez de cette question car je crois qu'il y a quelque chose à faire dans ce domaine.

M. Draeseke: Nous allons sûrement le considérer.

M. Hogarth: Je n'ai rien d'autre à ajouter.

M. Crouse: Dans le domaine de la commercialisation et des ventes vous dites à la page 14:

Que l'utilisation du bois est réduite très souvent par des critères qui ne sont pas appropriés ou réalistes dans le code de construction ou dans des règlements semblables.

Quels sont ces critères qui ne sont pas réalistes? Et qui les approuve, le gouvernement fédéral ou le gouvernement provincial?

M. Draeseke: J'aimerais demander à M. McGraw, directeur de notre service technique de répondre à votre question. Monsieur McGraw, pouvez-vous vous avancer au microphone?

M. A. J. McGraw (directeur, Plywood Technical Department, Council of Forest Industries of British Columbia): Je crois que le problème, c'est que le bois est un matériau de construction traditionnel et la plupart des codes de construction et des codes d'immeuble ont été fondés sur cette utilisation. Pour avoir de meilleurs systèmes d'habitation, nous devons plutôt orienter notre conception vers la technologie, vers le génie peut-être même vers la préfabrication et faire accepter ce genre de construction dans les codes de l'habitation.

Ce problème est peut-être plus considérable dans les grandes villes où l'acceptation universelle du code national n'existe pas. Ainsi, par exemple, nous avons un problème régional à Vancouver où certains systèmes d'habitation, examinés à nos laboratoires, qui semblent être judicieux et sûrs, ne sont pas acceptables.

M. Crouse: Monsieur le président...

M. Draeseke: Monsieur le président, puis-je faire une intervention?

[Text]

The Chairman: You had a further question: which government authority is responsible?

Mr. Crouse: Yes; that is right.

Mr. Draeseke: The municipal problem is, I think, the largest one. Would you not say so, Mr. McGraw?

Mr. McGraw: Yes.

Mr. Draeseke: It is the municipalities that have these building codes.

Mr. Crouse: Are you suggesting to this Committee that the federal government establish by legislation for the construction industry a uniform building code which would be applicable right across Canada?

Mr. Draeseke: It would be wonderful if it could be done, but I do not think it is technically or legally possible. But certainly every encouragement should be given to having a uniform building code.

Mr. Crouse: Are you reforesting your resources on your own initiatives, or are there provincial government regulations requiring you to do this, as well as delimiting the harvesting of the resources?

Mr. Draeseke: Both; it is in the interest of the operator of the licence to do the reforesting because it provides an immediate increase in the allowable cut calculated under the sustained yield principles. So the regulations require it, and I would say the industry is glad to do anything which would allow it to harvest that much more per year.

Mr. Crouse: Mr. Chairman, this is my final comment, or question. Reading your brief, I detect a certain concern by the forestry people over the actions of the National Research Council. You state, for example, that only one out of 50 projects undertaken by the Research Council is concerned with wood.

Do you feel that the Research Council should be made more aware of the contribution that is made by the forestry-based industries to the economy of Canada and that more projects using wood should be undertaken and under study? Or do you feel that they should get out of this altogether and leave the research completely to the industry, thereby saving you tax dollars?

Mr. Draeseke: I would answer the first part of your question by saying yes, they should be more conscious of the importance of our industry. Relative to the type of research we have in mind, perhaps you would like to dis-

[Interpretation]

Le président: Vous aviez une autre question. Qui est l'autorité gouvernementale responsable?

M. Crouse: Oui, c'est exact.

M. Draeseke: C'est le problème municipal, qui, je crois, est le plus grave.

M. McGraw: Oui.

M. Draeseke: Ce sont les municipalités qui appliquent ces codes de construction.

M. Crouse: Dites-vous au comité que le gouvernement fédéral devrait établir, par projet de loi, un code uniforme de construction qui serait applicable à travers tout le Canada.

M. Draeseke: Ce serait magnifique si c'était possible mais je ne pense pas que techniquement et légalement ce soit possible. Mais sûrement il convient de faire tout notre possible pour essayer d'uniformiser le code.

M. Crouse: Est-ce que vous reboisez vos ressources par suite de votre propre initiative ou s'agit-il de règlements provinciaux qui vous obligent à procéder à ce reboisement tout en délimitant la coupe du bois?

M. Draeseke: Les deux. C'est conforme à l'intérêt du propriétaire d'avoir un permis de s'occuper de reboisement car cela assure une augmentation immédiate de la coupe normale calculée selon le principe du rendement soutenu. Les règlements obligent les compagnies et l'industrie fait évidemment tout son possible, ce qui permet d'accroître son rendement.

M. Crouse: Une dernière question, monsieur le président. En lisant votre mémoire, je crois discerner une inquiétude de la part des forestiers quant aux initiatives prises par le Conseil national de recherches. Vous dites, par exemple, qu'un seul des 50 projets entrepris par le Conseil national de recherches s'occupe du bois. Estimez-vous que le Conseil national de recherches devrait être plus au courant des contributions qui sont faites pour l'économie du Canada par les industries forestières et que plus de projets utilisant le bois devraient être entrepris ou, est-ce qu'on devrait simplement sortir de ce domaine et laisser toutes les recherches à l'industrie ce qui vous permettrait d'épargner des dollars fiscaux.

M. Draeseke: Ma première réponse est oui. On devrait être plus conscient de l'importance de notre industrie quant au genre de recherches envisagées. M. Creighton aimerait sûrement faire un commentaire.

[Texte]

cuss it with Dr. Creighton. I am sure he would be pleased to do so.

Dr. Creighton (Plywood Technical Department, Council of Forest Industries of British Columbia): Yes, we feel that they should probably be more oriented in their emphasis towards wood. Once again, we are suggesting that in this area there may be closer co-operation between the Forest Products labs operated under the Department of Forestry and Fisheries and the National Research Council.

Possibly one reason that in the past the National Research Council, which has established a building section, has not become as involved in wood has been that they probably knew that the Forest Products lab was in this area. On the other hand, the Forest Products lab has not been set up to establish building methods, *per se*. They are not involved in building research. They are involved in physical research in wood and wood properties.

Mr. Crouse: Is it fair to assume, then, that in the opinion of the industry there is now insufficient liaison between the federal National Research Council and the industry laboratories and that as a result of this lack of liaison there could well be a duplication of research and development projects? Is this a correct assumption.

Mr. Draeseke: Yes; although in the area of building I would say it has been a lack rather than a duplication. There just has not been anything going on.

Mr. Crouse: Thank you, Mr. Chairman.

M. Cyr: Monsieur le président, j'aimerais appuyer un peu sur le reboisement de la forêt, parce que le 21^e siècle sera certainement le siècle de la pilule et il y a un procédé qui a été inventé, on en parle ici à la page 4, le *container planting*. Pourriez-vous me dire si c'est une invention canadienne ou si c'est une copie d'un procédé américain?

Mr. Anderson: Mr. Burch, would you care to talk about container planting and tell this gentleman whether it is a Canadian invention, or an American invention, or how it came about?

Mr. W. G. Burch (Plywood Technical Department, Council of Forest Industries of British Columbia): Container planting is a method of reforestation which has been experimented with for, I would say, many decades throughout the world under the auspices of packaged seedlings planting. The type of container planting that we now hear

[Interprétation]

M. Creighton (Plywood Technical Department, Council of Forest Industries of British Columbia): Oui, nous estimons qu'on devrait mettre plus d'accent sur les recherches intéressant le bois. Encore une fois, nous estimons qu'il devrait y avoir collaboration plus étroite entre les produits forestiers et les laboratoires sylvicoles relevant du ministère des Pêches et Forêts et le Conseil national de recherches.

Une raison, c'est que dans le passé, le Conseil national de recherches qui a établi un secteur d'habitation, pensait que le laboratoire de recherches pouvait fort bien faire du travail dans ce secteur. D'un autre côté, ce laboratoire n'a pas été institué pour établir des méthodes de construction. On ne s'occupe pas de recherches sur la construction. On s'occupe de recherches sur les propriétés, les caractéristiques du bois.

M. Crouse: Puis-je supposer, monsieur le président, que de l'avis de l'industrie, il y a, à l'heure actuelle, manque de collaboration entre le Conseil national de recherches, organisme fédéral, et les laboratoires de l'industrie et qu'en raison de ce manque de collaboration il y a peut-être dédoublement de projets de recherches.

M. Draeseke: Oui, même si dans le domaine de la construction, il s'agit plutôt d'une pénurie que d'un dédoublement. Il n'y a tout simplement rien eu.

M. Crouse: Merci, monsieur le président.

Mr. Cyr: Mr. Chairman, I would like to come back to reforestation. The 21st century will certainly be that of the pill and there is a procedure which has been invented—mention was made on page 4 of container planting. Could you tell me whether this is a Canadian invention or whether it was copied from an American process?

M. Anderson: Monsieur Burch, aimeriez-vous parler du reboisement en vase clos pour nous faire savoir si c'est là une invention canadienne ou américaine et comment cela s'est produit?

M. W. G. Burch (Plywood Technical Department, Council of Forest Industries of British Columbia): Le reboisement en vase clos est une méthode qui a été mise à l'essai depuis plusieurs décennies à travers le monde, sous les auspices d'ensemencements limités. Le genre de reboisement dont nous parlons ici émane de la Colombie-Britannique

[Text]

about originated here in British Columbia, where a lot of research and development has gone on in reforestation techniques.

It does happen that it has become more widespread where it can be mechanized, particularly in Alberta and in eastern Canada. However, even in British Columbia on the coastal area, where we have rough terrain and have not been able to mechanize it, we are slowly adopting a form of container planting which I think will probably do no more than keep our costs in line rather than substantially reducing them.

M. Cyr: Maintenant, lorsque vous employez le DDT pour détruire les insectes, recevez-vous encore des protestations de la part d'associations sportives de pêche à l'effet que ces insectes, qui sont empoisonnés, nuisent aux poissons? De plus y a-t-il eu une entente, avez-vous rencontré des associations sportives de pêche, afin de discuter de leurs problèmes concernant cette destruction d'insectes par le DDT?

Mr. Anderson: Grant should answer that, should he not?

Mr. Ainscough: I did not hear it.

Mr. Anderson: Of course, if he did not hear it...

Mr. Burch: Grant, the question was whether, in any of the commercial applications of DDT to forest lands, we have met or combined with the fish and game associations?

Mr. Ainscough (Plywood Technical Department): First of all, Mr. Cyr, we do not use DDT for insect control in the industry in British Columbia. Very early in our experience in insect control it was identified as harmful to fish. Being a chlorinated hydrocarbon it has residual effects. So the industry, in co-operation with the Department of Fisheries and with other departments, including the Department of Forestry, has worked quite hard to find safer and more acceptable insecticides. Therefore, we do not use DDT, nor do we subscribe to its use anywhere for insect control.

Mr. Burch: If I may add one comment, as we state on page 4 of our brief the pest control committee of this province deals very closely with the representatives from the federal fisheries department. In most cases we do not deal individually with fish and game clubs; we deal strictly through the representatives of the Fisheries Act, who are the

[Interpretation]

où on a fait beaucoup de recherches sur les techniques sylvicoles.

L'usage est devenu de plus en plus répandu où cela peut être mécanisé, notamment en Alberta et dans l'Est du Canada. Cependant, même en Colombie-Britannique et dans la région de la Côte où nous avons un terrain assez accidenté, nous n'avons pas pu procéder à la mécanisation; nous adoptons peu à peu une forme de «reboisement en vase clos» qui ne fera que maintenir nos coûts tels quels plutôt que de les réduire considérablement.

Mr. Cyr: When you want to use DDT to destroy insects do you still receive protests from the sport fishing groups saying that these poisoned insects cause harm to the fish? Moreover, has there been any agreement, have you met with any of these sport fishing associations to discuss their problems concerning the destruction of insects by the use of DDT?

M. Anderson: Je crois que M. Ainscough pourrait répondre à cette question.

M. Ainscough: Je n'ai pas entendu.

M. Anderson: En effet, il ne l'a pas entendu.

M. Burch: Je répète la question; dans toutes les applications commerciales d'insecticide DDT aux boisés, avons-nous une liaison avec les associations de pêche pour en venir à une entente.

M. Ainscough (Plywood Technical Department): Tout d'abord, monsieur Cyr, nous n'utilisons pas le DDT en Colombie-Britannique, pour détruire les insectes. Très rarement, d'après les expériences que nous avons eues pour détruire les insectes, nous avons constaté que le DDT était un hydrochlorure qui avait des effets nuisibles sur les poissons. Et par conséquent, l'industrie, en collaboration avec le ministère des Pêcheries et avec d'autres ministères y compris le ministère des Forêts, a travaillé d'arrache-pied pour essayer de trouver des insecticides plus sûrs et plus utiles. Nous n'utilisons pas l'insecticide DDT et nous ne souscrivons pas à son utilisation n'importe où pour détruire les insectes.

M. Burch: J'aimerais faire un autre commentaire. C'est que, comme nous le déclarons à la page 4, de notre mémoire, le comité provincial d'insecticides travaille en collaboration très étroite avec le ministère fédéral des pêcheries. Dans la plupart des cas, nous n'avons pas de liaison avec les clubs individuels mais plutôt avec les représentants de la

[Texte]

fisheries wardens and representatives from the regional lab here.

The Chairman: Mr. Goode?

Mr. Goode: Thank you, Mr. Chairman.

First I want to clear up one point. It was mentioned that there was no national building code. Of course, there is one. The only problem is that it is not universally accepted by the municipalities.

In 1967, when the first real national building code came out, many groups, including builders, tried to have it accepted by the municipalities but there was no representation or help from the forest industry. Another building code is being brought out now for 1970, and it is under study. Have you been working with the National Research Council on this new building code?

Mr. Draeseke: Again, I will ask Mr. McGraw to respond to that question. Did you hear that, Mr. McGraw?

Mr. McGraw: The industry does have representatives who sit on various advisory committees of the National Building Code. Of course, the one that we are most concerned with is the section on wood. We participate through the CSA—086 committee on engineering design and timber, and two representatives from the council sit on this committee.

This CSA code is adopted by the National Building Code for the section dealing with wood.

I believe we also have representation on, and are asked to review draft of, sections of the code on residential standards.

But the problem, as Mr. Draeseke pointed out, is a municipal one. We have, in the past, had permission and financial assistance from CMHC to construct certain prototypes of experimentally treated plywood and timber foundations, and permission for these types of construction were not granted by municipalities.

Mr. Goode: Has your organization ever approached municipalities to put on displays or them—perhaps I should say “lobby” them—to accept the National Building Code.

Mr. McGraw: I am not sure if we can do this, to have them accept the National Building Code. We do work closely with the national housebuilders association, participate in annual meetings of societies such as this, and demonstrate our products and techniques and know-how and so on.

[Interprétation]

Loi sur les Pêcheries, qui sont les inspecteurs, les surveillants, les représentants du laboratoire régional ici-même.

Le président: Monsieur Goode?

M. Goode: Merci beaucoup, monsieur le président. Un point tout d'abord. On a mentionné qu'il n'y avait pas de code d'habitation. Il y a un code national d'habitation mais il n'est pas universellement accepté par les municipalités. Voilà le problème.

En 1967, lorsque le premier code national a vraiment été mis au point, de nombreux groupes, y compris les constructeurs, ont essayé de le faire accepter par les municipalités, mais il n'y a pas eu d'instance de la part de l'industrie forestière. Il y a un autre code national d'habitation, prévu pour 1970, qui est à l'étude. Est-ce que vous avez discuté avec le Conseil National des recherches à ce sujet.

M. Draeseke: Je vais demander de nouveau à M. McGraw de répondre à cette question. Avez-vous entendu cette question, monsieur McGraw?

M. McGraw: L'industrie a des représentants qui siègent dans divers comités du code national d'habitation. Le groupe qui nous préoccupe le plus ici, c'est le groupe du Comité CSA86, Comité sur le bois d'œuvre. Il y a deux représentants du conseil qui font partie du comité sur le code national de l'habitation pour la partie qui a trait au bois. Nous avons aussi, je crois, des représentants pour la révision du code traitant des normes domiciliaires. Comme M. Draeseke l'a signalé, le problème est municipal alors que dans le passé nous avons reçu la permission et l'appui financier de la Société centrale d'hypothèque et de logements pour construire certains prototypes en bois d'œuvre et en contre-plaqué. Les municipalités n'ont pas accordé leur permission pour ces constructions.

M. Goode: Est-ce que votre organisme n'a jamais abordé les municipalités pour leur présenter des échantillons ou pour les inciter à accepter le code national d'habitation.

M. McGraw: Je ne suis pas certain que nous pourrions leur faire accepter le code national d'habitation. Nous travaillons en collaboration avec l'Association nationale des constructeurs d'habitations et nous participons à des réunions annuelles de sociétés comme celles-là; nous montrons nos produits, nos techniques et notre savoir-faire.

[Text]

Mr. Goode: I hope you will participate in the active advertising program for the 1970 building code. I do not think the industry can complain unless they participate in asking the municipalities to correct the situation.

Mr. Draeseke: I think that in our trade promotion we have been doing this, and are continuing to do it.

Mr. Goode: Is there any research at this time in British Columbia on trying to alleviate the problems of air and water pollution in the pulp industry. Is there anything being done in British Columbia?

Mr. Draeseke: Are there any efforts? Yes there certainly are.

Mr. Goode: It is being carried on here in British Columbia.

Mr. Draeseke: That is correct.

Mr. Goode: Is this new \$3.5 million unit that MacMillan Bloedel Ltd. is putting in—I take it this is leadership in the industry—totally effective or is it a partial cure of the problem?

Mr. Draeseke: Any control of the type you are talking about cannot be 100 per cent, but it is a matter of reducing it to acceptable levels. Would you like to comment on that, Dr. Creighton?

Dr. Creighton: Yes, we anticipate that this will reduce it to acceptable levels or well below acceptable levels on the basis of the equipment that is going in.

Mr. Goode: My final question then is, would it assist the pulp and paper industry if the federal government took tariffs, excise taxes and sales taxes off this type of equipment? Do you think that more of your industry would put air pollution control units in?

Mr. Draeseke: The answer is yes, this would be helpful. The provincial government has removed the property tax on pollution control installations and this has just been done in January of this year.

Mr. Goode: There is no help from the federal government?

Mr. Draeseke: Not yet, and I certainly agree this would be a helpful step.

Mr. Goode: Thank you, Mr. Chairman.

[Interpretation]

Mr. Goode: J'espère que vous participerez au programme actif d'annonce en faveur du code national de l'habitation de 1970. Je ne pense pas que l'industrie ait à se plaindre à moins qu'elle ne participe activement et ne demande aux municipalités de corriger cette situation.

Mr. Draeseke: Je crois que des efforts ont été faits, à ce sujet, et qu'ils se poursuivent.

Mr. Goode: Y a-t-il des recherches qui sont faites à l'heure actuelle en Colombie-Britannique pour essayer de réduire le problème de la pollution de l'eau et de l'air?

Mr. Draeseke: Si des efforts sont faits? Il y en a sûrement.

Mr. Goode: Et cela se fait ici même en Colombie-Britannique?

Mr. Draeseke: C'est exact.

Mr. Goode: Est-ce que cette unité de 3.5 millions de dollars que la société MacMillan Bloedel Ltd. est à installer, et je suppose que c'est du leadership dans l'industrie, est tout à fait efficace ou n'est-ce qu'un remède très partiel du problème?

Mr. Draeseke: Tout contrôle du genre dont vous parlez ne saurait être absolument satisfaisant. Il s'agit de réduire la pollution à des niveaux acceptables. Voulez-vous faire des commentaires là-dessus, monsieur Creighton?

Mr. Creighton: Oui, nous prévoyons que cela va réduire la pollution à des niveaux acceptables ou en deçà même de niveaux acceptables si l'on se fonde sur le matériel qui est utilisé.

Mr. Goode: Voici ma dernière question. Cela aiderait-il l'industrie des pâtes et papiers si le gouvernement fédéral éliminait les tarifs, les taxes d'accise et les taxes de vente de ce genre de matériel? Est-ce qu'un plus grand nombre d'industries installeraient ces unités de contrôle?

Mr. Draeseke: Oui, cela serait très utile. Le gouvernement provincial a éliminé la taxe sur la propriété pour des installations de contrôle de la pollution depuis janvier dernier.

Mr. Goode: Mais aucune aide encore du gouvernement fédéral?

Mr. Draeseke: Non, et sûrement si le gouvernement fédéral aidait ce serait très utile.

Mr. Goode: Merci, monsieur le président.

[Texte]

The Chairman: Thank you, Mr. Goode. This has apparently completed the first round.

An hon. Member: Mr. Chairman, there is just one question I would like to ask.

The Chairman: This has completed the first round and the first person on the second round is Mr. Whelan.

Mr. Whelan: I just wanted to ask, how many companies took advantage of the federal income tax deduction program for pollution control equipment? Do you know of any of the pulp and paper companies that took advantage of that program?

Mr. Draeseke: I have no personal knowledge, but I am sure most of them did.

Mr. Whelan: According to all the briefs we are getting sir, on the pollution in the waters of British Columbia, it does not appear that very many of them took advantage of it. This is the only unhappy conclusion that I can come to.

In your introduction, you quote:

Action No. 9 said in part:

I imagine by the U.S. construction industry.

Mr. Draeseke: I am sorry, which page are you reading from?

Mr. Whelan: It does not have a number, it says, "A. Introduction". You quote the U.S. construction industry at some length and they refer to it as an untapped resource, an untapped supply.

In an earlier answer to me you said the shortage was one of the reasons for the higher price for lumber, the bidding for it. Then you answered someone else and said you were harvesting all the harvestable lumber. This is what I gathered. This is rather confusing to me. It appears that we are not supplying the market, but the Americans seems to think there is an untapped resource here, that there is a source of lumber that is not being harvested. What are the facts on this?

Mr. Draeseke: Yes, I would be glad to clarify that. When they talk about the untapped resource they are talking about opening up areas which are not now being utilized. This requires a minimum of a two-year operation in an accessible area; by that I mean, one that is tributary to a railway. You have to plan your logging, acquire your

[Interprétation]

Le président: Merci, monsieur Goode. Il semble que cela termine la première période de questions.

Une voix: Monsieur le président, j'aimerais poser une question seulement.

Le président: Voilà qui a terminé la première période et la première personne pour la deuxième période est M. Whelan.

M. Whelan: Je veux simplement demander combien de sociétés ont profité du programme fédéral de déduction d'impôts pour les installations de contrôle de la pollution? Connaissez-vous des industries de pâtes et papiers qui ont profité de ce programme?

M. Draeseke: Je suis sûr que la plupart des compagnies en ont profité, mais je ne suis pas familier avec cette question, personnellement.

M. Whelan: D'après tous les mémoires que nous recevons, monsieur, qui portent sur la pollution des eaux de la Colombie-Britannique, il semble qu'il n'y en ait pas tellement qui en ont profité. C'est la seule conclusion malheureuse que je puisse tirer.

Dans votre introduction, vous citez:

«Nous citerons un passage de la 9^e mesure».

J'imagine qu'il s'agissait de l'industrie américaine de la construction.

M. Draeseke: Je regrette, quelle est la page que vous lisez?

M. Whelan: Il n'y a pas de numéro de page, on y voit: «A. Introduction». Vous citez l'industrie américaine de la construction dans une certaine mesure, et l'on en parle comme d'une ressource inutilisée, d'un approvisionnement inutilisé.

Plus tôt vous m'avez répondu que la pénurie était l'une des raisons qui a fait monter le prix du bois d'œuvre. Puis vous avez dit à un autre témoin que vous coupiez tout le bois d'œuvre qui pouvait être récolté. Voilà qui est plutôt contradictoire. Il me semble que nous n'approvisionnons pas le marché, les Américains semblent croire qu'il y a ici une source de bois d'œuvre qui n'est pas utilisée. Quels sont vraiment les faits?

M. Draeseke: Oui, il me fera plaisir de répondre à votre question. Lorsqu'ils parlent de ressources qui ne sont pas utilisées, ils parlent des régions qui sont maintenant inexploitées. Cela exige une opération de deux ans dans une région accessible, d'une région tributaire de chemin de fer. Il faut préparer les exploitations forestières, acquérir de la

[Text]

machinery, start the logging and acquire a conversion plant. This is to gear up for a steady increased production.

When I was talking about the PFL's and SYU's being used to their capacity, I am speaking of developed areas which are now being cut to their capacity, but there are other areas in the interior of B.C. and on the North coast which are not being cut to their capacity.

As to the shortage, I explained this was a temporary market affair like any other commodity. The price went up rapidly for about six weeks and it has been coming down rapidly for about four weeks. This was caused by a combination of circumstances of a temporary or spot nature. The circumstances were, first, an open winter in the main consuming areas in the U.S. so that house building went on at a good rate. A strike of longshoremen on the east coast which froze a lot of lumber on boats. A very severe winter in the producing area on the West Coast here which interfered with logging; I think it was the worst winter we have on record. The fourth contributing factor was the shortage of boxcars, which is continuing I may say, for the transport of lumber.

These things all combined to create a shortage and a high price was bid up by people anxious to get lumber. As I say, the supply is opening up and the prices are falling equally quickly.

This does not relate to what Senator Sparkman is talking about here, which is the implementation of the omnibus housing bill that passed in the United States last year, whereby they want to increase the rate of house building from approximately \$1.5 million a year to \$2.6 million a year.

This is a huge increase in volume and one of the questions they have been considering is have we the materials to build these houses and the National Homebuilders Association in the U.S. has testified that even with the use of other materials they are going to have to have substantially more lumber. The U.S. Forest Service is concerned that they cannot produce it in the United States so they were getting information on the long-term capability in Canada, which has nothing to do with spot shortages on the marketplace.

Mr. Whelan: In the interior though, there would be probably some timber going to waste that is not being harvested?

[Interpretation]

machinerie, commencer l'abattage et acquérir une usine de transformation, en vue d'augmenter de plus en plus la production.

Lorsque j'ai parlé des concessions forestières protégées et des coupes à rendement continu qui étaient utilisées à pleine capacité, je parlais des régions exploitées à pleine capacité à l'heure actuelle, mais il y a d'autres régions à l'intérieur de la Colombie-Britannique et sur la Côte Nord qui ne sont pas exploitées à pleine capacité.

Quant à la pénurie, j'ai dit que c'était là une question temporaire de marché comme tous les autres produits. Les prix ont augmenté rapidement pour à peu près six semaines et ont descendu rapidement pour quatre semaines. Cela a été causé par un concours de circonstances d'une nature sporadique ou provisoire. Ces circonstances furent, d'abord, l'hiver clément dans les principaux secteurs de consommation des États-Unis qui a permis de poursuivre la construction domiciliaire; une grève des débardeurs le long de la Côte Est qui a immobilisé un lot de bois d'œuvre sur les bateaux; un hiver très rigoureux dans le secteur de production sur la Côte Ouest qui a beaucoup nui à l'abattage et c'est, je crois, le pire hiver que nous ayons jamais connu. Le quatrième facteur fut la pénurie de wagons couverts pour le transport du bois qui se poursuit, soit dit en passant.

Tous ces éléments combinés créent une pénurie et les gens qui voulaient absolument avoir du bois d'œuvre étaient prêts à le payer un prix élevé. Et comme je dis, le marché s'ouvre et les prix tombent tout aussi rapidement.

Cela n'a rien à faire avec ce que le sénateur Sparkman déclare ici notamment, qui est la mise en application du bill Omnibus sur l'habitation passé aux États-Unis l'an dernier pour accroître le taux annuel de la construction domiciliaire de 1.5 million à 2.6 millions de dollars.

C'est là une augmentation très considérable et on s'est demandé si on avait les matériaux pour construire autant de maisons et l'Association nationale des constructeurs d'habitations aux États-Unis a affirmé que même en utilisant d'autres matériaux, il faudra avoir sensiblement plus de bois d'œuvre. Les services forestiers des États-Unis craignent de ne pouvoir en produire autant aux États-Unis. On a obtenu des renseignements sur la capacité à long terme au Canada, ce qui n'a rien à faire avec des pénuries sporadiques sur le marché.

M. Whelan: A l'intérieur cependant il y a du bois d'œuvre qui se perd et qui n'est pas récolté?

[Texte]

Mr. Draeseke: That is right.

Mr. Whelan: Do you not think the high prices that you talk about in your brief cause a switch to other products, plastic products and so on? I saw a recent article in one of the eastern papers where a home builder in Toronto is now switching to building some 200 houses with synthetic materials. Do you not think these high prices, unstable prices, for lumber products will guarantee this type of detour away from lumber products.

Mr. Draeseke: Certainly the higher the price of lumber the more that substitutes will be used.

Mr. Whelan: Yes.

Mr. Draeseke: It is true and this is a concern to us.

Mr. Whelan: I have just one other question, Mr. Chairman, if I may. There was a lot of talk at the beginning about research and our main research laboratories not being in British Columbia. Are not the main research laboratories of the United States in Madison, Wisconsin?

Mr. Draeseke: I would like to ask our forestry people to comment on that.

Dr. Creighton: First of all, as far as the main lab in Wisconsin is concerned, we were referring to the physical wood research, which are equivalent to the Forest Products Laboratories located in Vancouver and Ottawa, but not related to forestry research. I think the particular comment here was with regard to forestry research, and I believe the U.S. government has a wide variety of research stations located throughout the, United States.

Mr. Whelan: The forestry operation comes under what Department in the United States?

The Chairman: You are well over your time, Mr. Whelan, I am sorry. Mr. Perrault?

Mr. Perrault: Mr. Chairman, I would like to ask, Mr. Draeseke, and the other gentlemen here, whether they would favour absolute free trade in forest products between Canada and the United States? Do the majority of your members favour this?

Mr. Draeseke: Yes, I would say in a general way, yes. There are problems of quality

[Interprétation]

M. Draeseke: C'est exact.

M. Whelan: Ne pensez-vous pas que les prix élevés dont vous parlez dans votre mémoire entraînent le choix d'autres produits? J'ai lu récemment un article dans l'un des journaux de l'Ouest où l'on voit qu'un constructeur domiciliaire à Toronto a choisi de construire quelque 200 maisons avec des matériaux synthétiques. Ne pensez-vous pas que ces prix élevés et ces prix instables du bois d'œuvre vont mousser cette dérivation vers les autres sortes?

M. Draeseke: Plus le prix du bois d'œuvre sera élevé, plus on utilisera des produits de remplacement.

M. Whelan: Oui.

M. Draeseke: C'est vrai et cela nous préoccupe beaucoup.

M. Whelan: Une autre question, si vous me le permettez, monsieur le président. On a parlé beaucoup au début de recherche et nos principaux laboratoires de recherche, on dit que ces principaux laboratoires ne sont pas en Colombie-Britannique. Est-ce que les principaux laboratoires de recherche des États-Unis ne sont pas à Madison, Wisconsin?

M. Draeseke: J'aimerais demander à nos exploitants forestiers de faire des commentaires sur cette question.

M. Creighton: En premier lieu, en ce qui concerne le principal laboratoire au Wisconsin, il s'agit de recherche sur les caractéristiques matérielles du bois qui correspond peut-être à nos laboratoires de produits forestiers situés à Vancouver et à Ottawa, qui ne s'occupent pas tellement de recherche d'exploitation forestière comme telle. Il s'agit plutôt dans votre cas de recherche en exploitation forestière et le gouvernement des États-Unis a beaucoup de postes de recherche établis dans tous les États-Unis.

M. Whelan: L'exploitation forestière relève de quel ministère aux États-Unis?

Le président: Votre temps est écoulé depuis longtemps, monsieur Whelan, je regrette. Monsieur Perrault?

M. Perrault: Monsieur le président, j'aimerais demander à M. Draeseke et aux autres témoins s'ils sont en faveur du commerce libre absolu des produits forestiers entre le Canada et les États-Unis? La majorité de vos membres favorise-t-elle la libération du commerce?

M. Draeseke: Oui, de façon générale. Il y a sûrement des problèmes de qualité de contre-

[Text]

in plywood which certainly have to be looked at. We do not produce any non waterproof construction grade plywood in this country.

Mr. Perrault: Do you think it would be a benefit to the Maritime forest industry as well?

Mr. Draeseke: I cannot answer that from personal knowledge, but I think it probably would be.

Mr. Perrault: Yes, I am interested in your observation. You think it would assist in industrial development in the extremities of Canada.

Mr. Draeseke: There is one thing that would have to be tied to it and that would be free entry for productive machinery to be used in the forest industry.

Mr. Perrault: This is one of the difficulties in the Auto Pact.

Mr. Draeseke: At present our capital cost is higher than that in the United States so that the actual cost of production is increased by that extra write off of capital and this should be corrected if we go into free trade.

Mr. Whelan: May I ask a supplementary, Mr. Perrault?

Mr. Perrault: Yes.

Mr. Whelan: Would you be in favour of free trade with Japan on manufactured wood products; plywood, fibreboard, all the different kinds.

Mr. Draeseke: As far as softwood plywood is concerned, certainly.

Mr. Whelan: I did not say that. I said "all".

Mr. Draeseke: All forest products?

Mr. Whelan: Yes.

Mr. Draeseke: I would have to consider that, I do not know.

Mr. Perrault: I think this North American concept is most interesting. Let me ask this question. Do you foresee any reduction in lumber prices over the next six months or year in view of the fact the federal government is, as are many other sectors of the community, attempting to accelerate the house building program? Are lumber prices going to go down in your view?

[Interpretation]

plaqué qui devraient être examinés. Tout le contre-plaqué que nous fabriquons au Canada est de qualité à l'épreuve de l'eau.

M. Perrault: Pensez-vous que cela avantagerait l'industrie forestière dans les Maritimes?

M. Draeseke: Je ne saurais répondre à cette question de prime abord, mais j'ai l'impression que si.

M. Perrault: J'ai été très impressionné par votre observation. Vous croyez que cela aiderait à l'expansion industrielle aux deux extrémités du Canada.

M. Draeseke: Il y a néanmoins une condition qui devrait y être rattachée, ce serait l'entrée libre de la machinerie de production à utiliser dans l'industrie forestière.

M. Perrault: Voilà l'une des difficultés que l'on rencontre dans l'Accord canado-américain sur l'automobile.

M. Draeseke: A l'heure actuelle le coût de nos immobilisations est plus élevé que le coût comparable aux États-Unis, de sorte que le coût réel de la production est augmenté par cet amortissement supplémentaire de capitaux, mais cela pourrait se corriger si nous allions dans le commerce libre.

M. Whelan: Puis-je poser une question complémentaire, monsieur Perrault?

M. Perrault: Oui.

M. Whelan: Est-ce que vous favorisez le libre échange avec le Japon, notamment pour les produits de bois ouvré: contre-plaqué, panneau en fibre, et tous les genres divers.

M. Draeseke: En ce qui a trait au contre-plaqué de bois mou, sûrement.

M. Whelan: J'ai dit tous les produits ouvrés.

M. Draeseke: Tous les produits de la forêt?

M. Whelan: Oui.

M. Draeseke: Il faudrait que j'étudie la question, je l'ignore.

M. Perrault: Mais ce concept nord-américain me semble très intéressant. Laissez-moi vous poser la question suivante. Est-ce que vous envisagez des réductions de prix du bois d'œuvre au cours des six prochains mois, vu que le gouvernement fédéral, à l'instar de bien d'autres secteurs de la société, essaie d'accélérer le programme de construction domiciliaire. Est-ce que les prix du bois d'œuvre vont diminuer, à votre avis?

[Texte]

Mr. Draeseke: I hope not. Nobody can predict the lumber market. I defy anybody to predict it. Just when it is going up most quickly it falls off just as quickly.

Mr. Perrault: It is very disturbing to British Columbia members in eastern Canada when we hear reports about contractors down there installing metal studs instead of B.C. lumber studs in some of their structures. When we read on page 14 that:

The use of wood is frequently reduced by inadequate or unrealistic design criteria in building codes or similar regulations.

the cost of the product is of concern to us as well.

Mr. Draeseke: Yes.

Mr. Perrault: You do not foresee any drastic reduction in lumber prices over the next few months?

Mr. Draeseke: Drastic, I would hope not, but as Mr. Morgan said when asked to prophesize the stock exchange once, "It will fluctuate." I think that is the answer I will give you.

Mr. Perrault: We hope that the homeowners, the people of Canada are going to benefit whatever happens. How much money was invested in research in Canada by the forest industry in British Columbia last year? Do you have the figure?

Mr. Draeseke: Does anyone have that figure?

Mr. Perrault: In British Columbia...

Mr. Anderson: Round figures in British Columbia but not Canada?

Mr. Perrault: In Canada?

Mr. Anderson: I cannot tell you for Canada, but I can give you an idea of British Columbia.

Mr. Perrault: Yes.

Mr. Anderson: About \$350,000 on forest search, that is for forest research proper.

Mr. Perrault: Yes.

Mr. Anderson: Then on forest products search considerably more. Perhaps you

[Interprétation]

M. Draeseke: J'espère que non. Personne ne peut prédire le marché du bois d'œuvre. Je défi quiconque de le faire. Au moment où cela monte le plus rapidement, il peut y avoir baisse tout aussi rapidement.

M. Perrault: C'est très ennuyeux pour les députés de la Colombie-Britannique qui se trouvent dans l'est du Canada lorsque nous entendons dire que des entrepreneurs de leur province posent des montants en métal plutôt que des montants en bois de Colombie dans leurs charpentes. Lorsque nous lisons à la page 14:

Les prescriptions inappropriées ou irréalistes que l'on trouve dans les codes du bâtiment ou dans des règlements analogues limitent souvent l'utilisation du bois.

Le coût du produit nous préoccupe sûrement.

M. Draeseke: Oui.

M. Perrault: Mais vous ne prévoyez pas de réductions radicales des prix de bois d'œuvre au cours des quelques prochains mois.

M. Draeseke: Réduction radicale, j'espère que non. Mais, comme monsieur Morgan l'a dit lorsqu'il a dû prédire la situation de la bourse, «il y aura fluctuation». C'est la réponse que je vais vous donner.

M. Perrault: Nous espérons que les propriétaires, que tous les citoyens du Canada pourront en bénéficier, quoi qu'il arrive. Et combien a été investi dans la recherche au Canada par l'industrie forestière en Colombie-Britannique, l'année dernière. Avez-vous le montant?

M. Draeseke: Quelqu'un a-t-il ce chiffre?

M. Perrault: En Colombie-Britannique...

M. Anderson: En chiffres ronds en Colombie-Britannique, pas au Canada?

M. Perrault: Au Canada?

M. Anderson: Je ne saurais vous dire pour le Canada, mais je peux vous en donner une idée pour la Colombie-Britannique.

M. Perrault: Oui.

M. Anderson: Environ 350 mille dollars pour les recherches forestières, les recherches proprement dites.

M. Perrault: Oui!

M. Anderson: Et ensuite pour la recherche sur les produits de la forêt davantage. Vous

[Text]

could give a better idea on that, Dr. Creighton.

Dr. Creighton: Altogether, including pollution research aspects, talking of industry contributions, I would say they were certainly in excess of \$3 million, but I do not know whether it would be \$3 or \$5 million.

Mr. Perrault: From \$3 million to \$5 million; that is roughly equivalent to the amount spent by the federal government in that area. Do you know the amount of money that the Province of British Columbia invested in research last year? They derive a great deal of wealth from the industry. How much did the provincial government invest? We know the industry figure and the federal figure, how much did the Province of B.C. invest?

Mr. Anderson: The provincial figure is approximately \$390,000.

Mr. Perrault: Compared with \$3 million by industry and \$3 million by the federal government. That seems to be inordinately low in comparison with these two other sectors.

How many acres should be reforested by the provincial government with federal government research assistance and co-operation each year and how many are actually being reforested?

Mr. Anderson: The provincial government has a reforestation program that they have in effect now which will permit them to plant 75 million trees a year by 1975.

Mr. Perrault: How many are they planting at the present time?

Mr. Anderson: It is close to 30 million I think.

Mr. Perrault: Thirty million?

Mr. Anderson: I am not sure of that figure, perhaps it is a little lower. Would you know, Mr. Burch?

Mr. Burch: When we talk about 75 million, Mr. Anderson, that is the number of seedlings being produced by the B.C. Forest Service for both industry and Forest Service. I would say the plan is that probably the Forest Service will plant 50 million of that by 1975. At the present time it is closer to 15 million.

Mr. Perrault: It is closer to 15 million.

Mr. Burch: Yes.

Mr. Perrault: Which is too low in the view of the industry?

[Interpretation]

pourriez peut-être en donner une meilleure idée que moi, monsieur Creighton.

M. Creighton: Je dirais qu'en tout, y compris les éléments de recherche sur la pollution, en parlant des contributions de l'industrie, je dirais plus de 3 millions de dollars certainement, mais je ne sais pas si ce serait 3 ou 5 millions de dollars.

M. Perrault: De 3 à 5 millions de dollars; c'est à peu près égal au montant dépensé par le gouvernement fédéral dans cette région. Savez-vous combien a été investi l'année dernière par le gouvernement de la Colombie-Britannique? Il retire beaucoup de richesses de l'industrie. Combien le gouvernement provincial a-t-il investi? Nous connaissons le montant de l'industrie et celui du fédéral, combien la province de C.-B. a-t-elle investi?

M. Anderson: Le provincial, c'est environ \$390,000.

M. Perrault: Comparé à 3 millions de dollars par l'industrie et à 3 million de dollars par le gouvernement fédéral? Ça semble bien peu comparé à ces deux autres secteurs.

Combien d'acres de forêt le gouvernement provincial devrait-il reboiser avec l'aide à la recherche et la coopération, chaque année, du gouvernement fédéral, et combien d'acres sont, de fait, repeuplés?

M. Anderson: Le gouvernement a un programme de reboisement qui est actuellement en vigueur qui permettra de planter 75 millions d'arbres par année en 1975.

M. Perrault: Et combien sont plantés à l'heure actuelle?

M. Anderson: C'est environ 30 millions, je crois.

M. Perrault: Trente millions?

M. Anderson: Je ne suis pas tout à fait sûr c'est peut-être un petit peu moins que le chiffre que je viens de vous citer. Le sauriez vous, monsieur Burch?

M. Burch: Quand nous parlons de 75 millions, monsieur Anderson, il s'agit du nombre de jeunes brins qui sont produits par le Service des forêts de la Colombie-Britannique pour l'industrie et pour le Service des forêts. Je dirais que le Service des forêts projette de planter 50 millions de jeunes brins vers 1975. En ce moment, c'est environ 15 millions.

M. Perrault: C'est plus près de 15 millions.

M. Burch: Oui.

M. Perrault: Ce qui est trop peu du point de vue de l'industrie.

[Texte]

Mr. Burch: Definitely.**Mr. Perrault:** How high should it be then, twice as many?**Mr. Burch:** Yes, that is right. If they hit the target of 50 million out of 75 million in 1975 they will more or else be on target.**Mr. Perrault:** Mr. Chairman, I was a minute short and may I question for 20 more seconds? Are we undercutting at the present time? Do you think our cutting limits are too low in British Columbia?**Mr. Draeseke:** I would say in the Vancouver district we are not undercutting, but in the rest of the province our cut can be increased.**Mr. Perrault:** You think there is over-aged timber there that should be cut.**Mr. Draeseke:** Yes, that is right.**Mr. Perrault:** Thank you, Mr. Chairman.**Mr. Anderson:** There is just one point I would like to emphasize. This 75 million which will be produced by the provincial government and planted by both the government and industry will be more or less adequate for B.C.'s needs.**Mr. Perrault:** When the program gets under way.**Mr. Anderson:** We cannot do it any faster than by 1975. We can only move ahead so quickly.**Mr. Perrault:** At least the outlook is promising then?**Mr. Anderson:** Promising, yes.**The Chairman:** Gentlemen, it is now 11 o'clock. I still have Messrs. Rose, Noble and St. Pierre on my list. Mr. Rose?**M. Beaudoin:** J'invoque le Règlement, monsieur le président. N'était-il pas compris qu'au deuxième tour, nous n'avions le droit de ne poser que deux questions? Au train où vont les choses, nous allons passer une semaine ici.**The Chairman:** It has been suggested that in the second round we will allow two questions for each questioner. Would that be acceptable?**Mr. Rose:** Is that made retroactive to Mr. Perrault?**The Chairman:** It was just made this minute.**Mr. Rose:** I see.

[Interprétation]

M. Burch: Définitivement.**M. Perrault:** Et combien en faudrait-il? Deux fois autant?**M. Burch:** Oui, si nous arrivons à 50 des 75 millions d'ici 1975, on aura plus ou moins atteint le but.**M. Perrault:** Monsieur le président, voulez-vous m'accorder encore 20 secondes? Est-ce qu'en ce moment nous coupons trop peu de bois? Croyez-vous que nos limites de coupe sont trop peu élevées en Colombie-Britannique?**M. Draeseke:** Dans la région de Vancouver, non, mais dans le reste de la province, on pourrait augmenter la coupe.**M. Perrault:** Vous croyez qu'il y a du vieux bois qu'il faudrait enlever, n'est-ce pas?**M. Draeseke:** Oui, c'est exact.**M. Perrault:** Merci, monsieur le président.**M. Anderson:** Une simple question sur laquelle je voudrais mettre l'accent. Ces 75 millions qui seront produits par le gouvernement provincial et plantés par le gouvernement et l'industrie suffiront plus ou moins aux besoins de la Colombie-Britannique.**M. Perrault:** Lorsque le programme sera mis en application.**M. Anderson:** Nous ne pouvons pas obtenir ce nombre plus tôt qu'en 1975. Nous ne pouvons avancer qu'à une certaine vitesse.**M. Perrault:** Au moins, les perspectives sont bonnes alors?**M. Anderson:** Oui.**Le président:** Messieurs, il est maintenant 11 hres. J'ai encore sur ma liste les noms de MM. Rose, Noble et St-Pierre. Monsieur Rose?**Mr. Beaudoin:** On a point of order, Mr. Chairman. Was it not understood that we would be entitled to ask two questions only, during the second round? At the present rate, we shall spend a week here.**Le président:** On a dit qu'à la deuxième période de questions, nous permettrons deux questions à chaque interlocuteur. Est-ce que ce sera acceptable?**M. Rose:** Est-ce que ceci est rétroactif pour Monsieur Perrault aussi?**Le président:** Cela vient d'être décidé.**M. Rose:** Je vois.

[Text]

The Chairman: The suggestion has just been made.

Mr. Perrault: I only asked one and a half on the first round.

The Chairman: It is up to the Committee. Be as brief as possible then.

Mr. Lundrigan: On that point could we just be as brief as possible on the assumption that all members are prudent and will use their prudence to the best advantage?

The Chairman: Agreed?

Some hon. Members: Agreed.

Some hon. Members: No.

Mr. Whelan: The forest industry is a most important one. It has been stressed in this brief and to shorten the questions that any member has concerning this industry is ridiculous at this time.

Mr. Lundrigan: That is exactly what I said, that we not restrict it to two questions.

The Chairman: Order. I thought we could dispense with some of the preamble before the questions. Yes, Mr. Rose?

Mr. Rose: As the first prudent questioner, Mr. Chairman, I believe the major...

An hon. Member: On division.

Mr. Rose: ...thesis of Mr. Draeseke was that because 93 per cent of the B.C. forest land was Crown land, he implied that the provincial government or all governments, federal and provincial governments should be responsible for a larger share of the research. Is that true?

Mr. Draeseke: Yes.

Mr. Rose: Is it not so that the companies actually do the harvesting here and are involved in the harvesting aspects? I am a little bit disturbed that the companies involved to such a great extent feel that the major portion of the research should be done under public auspices. The public by and large while they get their share through stumpage and other things are not really harvesting the resource and making the money out of it.

Mr. Draeseke: Yes, they are making the money out of it. There is no question about it.

Mr. Rose: The companies are not making any money out of the forests?

[Interpretation]

Le président: La proposition vient d'en être faite.

M. Perrault: J'ai demandé une question et demie seulement, à la première période.

Le président: Ça, c'est au Comité d'en décider. Bien, faites aussi rapidement que possible.

M. Lundrigan: Sur ce point, pouvons-nous faire aussi rapidement que possible, en supposant que tous les membres fassent attention et profitent de leur sagesse le plus possible?

Le président: D'accord?

Des voix: D'accord.

D'autre voix: Non.

M. Whelan: L'industrie forestière est très importante. On a insisté sur le fait que réduire les questions qu'un membre a à poser au sujet de cette industrie serait ridicule en ce moment.

M. Lundrigan: C'est ce que je viens de dire. C'est qu'il ne faudrait pas nous restreindre à deux questions.

Le président: A l'ordre s'il vous plaît. Je croyais que nous pourrions nous dispenser des observations avant les questions. Oui monsieur Rose?

M. Rose: Étant la première personne qui pose des questions prudentes, je crois que...

Une voix: Sur division.

M. Rose: ...la thèse fondamentale de M. Draeseke est qu'étant donné que 93 p. 100 des terres forestières en Colombie-Britannique appartenaient à la Couronne, il a laissé entendre que tous les gouvernements fédéral et Provinciaux devraient se charger d'une plus large mesure des recherches. Est-ce vrai?

M. Draeseke: Oui.

M. Rose: N'est-il pas vrai que les compagnies font effectivement la coupe des arbres ici et s'occupent de tous les aspects de l'exploitation? Ce qui m'inquiète c'est que ces compagnies estiment que la recherche devrait être faite par le gouvernement. Même si le gouvernement recueille les droits de coupe et autres choses, ce n'est pas lui qui exploite les forêts et prend les profits.

M. Draeseke: Oui, ce sont les gouvernements qui font l'argent. Il n'y a aucun doute là-dessus.

M. Rose: Vous voulez dire que ce ne sont pas les compagnies qui font l'argent?

[Texte]

Mr. Draeseke: Yes, they are making the money, but as prices go up the lion's share goes to the timber owner.

Mr. Rose: The lion's share?

Mr. Draeseke: Yes, that is right.

Mr. Rose: Presumably the lamb's share comes to the companies?

Mr. Draeseke: That is right; that is exactly how it works.

Mr. Rose: That is interesting. On the matter of research it was intimated earlier by Dr. Creighton that foreign-based companies have withdrawn their basic research from this province to the home base, wherever their head office happens to be or the research office happens to be and we lost that research in British Columbia. Do you believe that foreign-based companies should be required by law to plough back a certain share of research into the province in which they operate?

Mr. Draeseke: No, I do not think that forcing things like that is going to achieve results. You should look on the fact that research is carried on outside the country by a company controlling operations here as a two-way street. It is not true to say that research has been withdrawn from British Columbia, rather the benefits of research have been put into British Columbia by international companies. I can give you examples if you like.

Mr. Rose: Sir, I have only a short time and hardly time for your examples. Perhaps you can give some other questioner the examples out of his time. It was intimated that you desired more research in British Columbia and you suggested the government should be responsible for this because certain species in the East were not the same as they were here. It seems to me inconsistent and I am a bit confused that on the one hand you want research here dealing specifically with the indigenous varieties and on the other hand you are not concerned about the fact that the foreign-based companies withdraw their research teams.

Mr. Draeseke: I do not understand this withdraw bit. Who withdrew anything?

Mr. Rose: It was suggested by Mr. Creighton earlier, sir, that there have been examples where basic research once done here was withdrawn and I hope I have not...

Dr. Creighton: No, I did not say it had been withdrawn. I said possibly the American and

[Interprétation]

M. Draeseke: Oui, ils font de l'argent, mais à mesure que les prix augmentent, ce sont les propriétaires des forêts qui prennent la part du lion.

M. Rose: La part du lion, vous dites?

M. Draeseke: Oui, c'est ça.

M. Rose: Voulez-vous dire que la part de l'agneau revient aux compagnies?

M. Draeseke: C'est exact. C'est précisément de cette façon que ça fonctionne.

M. Rose: C'est intéressant. En ce qui concerne la recherche, M. Creighton nous a laissé entendre que les compagnies ne s'occupaient plus des recherches dans cette province. N'en font que chez eux, là où ils ont leur bureau principal ou leurs centres de recherches et nous perdons l'avantage de ces recherches. Croyez-vous que les compagnies étrangères devraient être obligées par la loi de consacrer une certaine part des recherches dans la province où ils travaillent?

M. Draeseke: Non, on ne peut pas les obliger à le faire. Cela ne donnera pas de résultats. Il est faux de dire qu'ils ont retiré la recherche de la Colombie-Britannique; c'est que les avantages tirés de la recherche ont été mis à la disposition de la province par les compagnies étrangères. Je peux vous en donner des exemples si vous voulez.

M. Rose: Le temps me manque, monsieur. Vous pourriez peut-être nous donner quelques exemples quand quelqu'un d'autre aura la parole. On a dit également que vous vouliez qu'il y ait plus de recherche en Colombie-Britannique et vous avez laissé entendre que le gouvernement devrait s'en charger parce que certaines espèces dans l'Est ne ressemblaient pas à celles que nous avons ici. Ça me paraît illogique que, d'une part vous vouliez qu'on entreprenne des travaux de recherches sur les variétés locales et que d'autre part vous ne vous préoccupiez pas du fait que les compagnies étrangères retirent leurs équipes de recherches.

M. Draeseke: Que voulez-vous dire par retirer les équipes de recherche? Personne n'a retiré quoi que ce soit.

M. Rose: C'est M. Creighton qui a dit que les recherches fondamentales qui étaient faites ici autrefois ne s'y font plus, et j'espère que je n'ai pas...

M. Creighton: Non, je n'ai pas dit cela. J'ai dit que les compagnies américaines et étran-

[Text]

foreign-based companies do a good deal of their research in their home base areas, but I did not say necessarily that it had been withdrawn.

Mr. Rose: In other words, is it fair to say then that you would like government research based here, but you are not concerned about where industry-based research is?

Mr. Draeseke: I think we are getting all mixed up between forestry research and product research. What we are talking about being done in British Columbia is basic research in forestry which has to do with the forest as such.

This is owned by the government. It has traditionally been done by governments because it applies to everybody operating in the forest area. What we have said is that we have areas here with their own problems which are different from the forest areas in the East, and there should be a little more balance in relation to the expenditures on this basic forestry research, which is done by governments everywhere. Particularly in Canada where you have provincial ownership largely.

Mr. Rose: I believe that certain governments in certain countries require basic research to be done within the area in which the harvesting is done, and I just was interested in your comments on that. You do not feel it is necessary?

Mr. Draeseke: Yes, we do, this is what we are saying, if you are talking about forestry research.

Mr. Rose: But not forest products research?

Mr. Draeseke: Forest products research can be done anywhere.

Mr. Rose: Thank you.

Mr. Anderson: Forestry research is not practical for many companies. I would say there are perhaps a dozen companies in British Columbia that engage in forestry research because they have the resources in both manpower and in money, but there are literally hundreds of companies in British Columbia that are far too small. They could not possibly engage in research.

Mr. Rose: I was thinking of the larger companies.

Mr. Noble: Mr. Chairman, my question has been partly answered but perhaps the wit-

[Interpretation]

gères font peut-être des recherches chez eux, dans leurs propres pays, mais je n'ai pas dit qu'ils retireraient complètement les travaux de recherches.

M. Rose: Autrement dit, vous voulez que le gouvernement se charge d'entreprendre des travaux de recherche ici, mais ça ne vous intéresse pas de savoir où se fera la recherche effectuée par l'industrie?

M. Draeseke: Je crois que nous sommes en train de confondre la recherche forestière avec la recherche sur les produits. Ce qui se fait en Colombie-Britannique c'est surtout des études fondamentales sur les forêts, les arbres.

Ces études ont toujours été faites par les gouvernements, parce que cela intéresse tous les exploitants forestiers. Nous avons simplement dit qu'il y a des régions ici dont les problèmes diffèrent de ceux de l'Est et qu'il faudrait établir un peu plus d'équilibre par rapport aux dépenses sur la recherche forestière que les gouvernements entreprennent un peu partout, et surtout au Canada où les terrains, dans une grande mesure, appartiennent aux provinces.

M. Rose: Je crois que certains gouvernements dans certains pays exigent que les recherches fondamentales soient faites sur les lieux, là où il y a de l'exploitation. Et vous estimez que ce n'est pas nécessaire?

M. Draeseke: Si, c'est ce que nous disons exactement, si vous parlez de recherche forestière.

M. Rose: Recherches forestières, excluant les produits forestiers.

M. Draeseke: Les recherches sur les produits de la forêt peuvent se faire n'importe où.

M. Rose: Merci.

M. Anderson: La recherche sur les forêts n'est pas pratique pour bon nombre de sociétés. Il y en a à peu près une douzaine en Colombie-Britannique qui font des recherches sur les forêts parce qu'ils ont les ressources voulues tant de main-d'œuvre que monétaires mais il y a des centaines de sociétés en Colombie-Britannique qui sont beaucoup trop petites et qui ne pourraient pas se lancer dans des recherches.

M. Rose: Je parlais des grosses entreprises.

M. Noble: Monsieur le président, on a répondu en partie à ma question, mais peut-

[Texte]

nesses might have something to add to this. We hear accusations made in the House of Commons from time to time that lumber companies are taking advantage of the urgent need for building material by inflating prices beyond justification. Would one of the witnesses offer any defence in the interest of the lumber industry, especially when provincial and federal governments may benefit through increased revenues, stumpage, income tax, and the 11 per cent sales tax?

Mr. Draeseke: As I said earlier, Canada produces and sells perhaps 5 per cent of world consumption. Lumber is a free trade item throughout the world, basically. The price fluctuates according to supply and demand. It is a classical free market. So people do not push the price up or push it down. The market force does it for them. When I say, people, I mean people within Canada.

As far as the effect of the revenue to Canada of increased prices is concerned, consider the following factors: First, we export three-quarters of what we make, so as the price goes up of course the amount of foreign exchange that is earned goes up accordingly. Second, as I explained earlier, as prices rise on government-owned timber, which is the majority of our timber, the stumpage paid to the government—that is, the price paid for the raw material by the logger to the government—goes up; under our B.C. system, in round figures, by 60 per cent of the price increase.

Out of the remaining 40 cents we have the highest rate of income tax in the free world. In British Columbia, specifically in the forest industry, we pay a tax rate of 56 per cent. This compares to 52 per cent in the rest of Canada and in our competition in Washington and Oregon an effective rate of near 30 per cent. So, if you apply our tax rate to the remaining 40 cents, say, out of a dollar, this would be 22.4 cents. You have ended up with 82.4 cents going to the state and 17.6 cents going to the operator.

An hon. Member: A supplementary, Mr. Chairman.

The Chairman: I do not think we should allow supplementaries now. You will be in turn. Are you through, Mr. Noble.

Mr. Noble: That finishes my questions, Mr. Chairman.

[Interprétation]

être que le témoin pourrait ajouter quelque chose. On porte parfois des accusations à la Chambre que les entreprises forestières augmentent les prix des matériaux de construction outre-mesure. Est-ce qu'un des témoins pourrait prendre la défense des entreprises forestières, surtout lorsque les gouvernements provinciaux et le gouvernement fédéral bénéficient de revenus accrus, de droits de coupe, d'impôts sur le revenu, et de la taxe de vente de 11 p. 100.

M. Draeseke: Comme je l'ai dit, le Canada produit et vend environ 5 p. 100 de la consommation mondiale. Le bois d'œuvre est un produit vendu sur le marché libre. Le prix monte et baisse selon l'offre et la demande. C'est, par tradition, un marché libre. Personne ne pousse vers le haut ou vers le bas, ce sont les pressions du marché qui agissent. Lorsque je parle de gens, je parle des Canadiens.

En ce qui concerne l'effet sur le revenu du Canada par la majoration des prix, il faut songer tout d'abord que nous exportons les trois quarts de ce que nous produisons, de sorte qu'à mesure que les prix augmentent, les devises étrangères obtenues en échange augmentent en conséquence. Deuxièmement, comme je l'ai dit, à mesure que le prix du bois sur pied qui appartient à la Couronne augmente soit la majeure partie du bois sur pied, les droits de coupe versés à la Couronne et le prix que l'entreprise forestière verse à l'État pour la matière première, augmentent également. D'après le système de la Colombie-Britannique, en chiffres ronds, cela représente 60 p. 100 de l'augmentation des prix.

Et, sur les 40 cents qui restent nous avons le taux le plus élevé d'impôt sur le revenu du monde libre. En Colombie-Britannique, et dans l'industrie forestière, le taux des impôts est de 56 p. 100, à comparer à 52 p. 100 pour le reste du Canada et à 30 p. 100 pour nos concurrents de Washington et de l'Oregon. Alors, si on applique notre taux d'imposition aux 40 cents qui nous restent sur un dollar, cela fait 22.4 cents. C'est donc 82.4 cents qui vont à l'État et 17.6 qui revient à l'entreprise forestière.

Une voix: Une question supplémentaire.

Le président: Je ne pense pas que nous puissions le faire en ce moment. Vous avez terminé, monsieur Noble?

M. Noble: Oui, monsieur le président.

[Text]

[Interpretation]

The Chairman: I will recognize Mr. St. Pierre.

Le président: Monsieur St-Pierre.

Mr. St. Pierre: Thank you, Mr. Chairman. My reason for entering the second round is the figures which were brought out in earlier questioning which seem extraordinary to me. I think the round figures are \$3 million for federal research, \$3 million to \$5 million for private industry research, and \$350,000 for provincial research that we are offering. 93 per cent of our land in British Columbia is owned by the Crown in the right of the province. The province is the prime benefactor both by its added income tax and by the basic stumpage rates which it charges. I would like very much to hear some comments from these witnesses on these figures.

Mr. Anderson: One comment I would like to make is that the provincial expenditure of \$390,000 is for forestry research, not forest products research. If you take the corresponding federal figure, it is about \$2.1 million for forestry research. So it is about five to one. When you add in forest products research and so on you rather complicate matters.

Mr. St. Pierre: The provincial treasury is by far the main benefactor from the B.C. forest industry, is it not?

Mr. Draeseke: Yes.

Mr. St. Pierre: Beneficiary I should say. Yet federal spending on research exceeds that of the province by five to one. Have you complained of this to the provincial government?

Mr. Anderson: We certainly have. We submitted a brief to the provincial government just six weeks ago to the Select Standing Committee on Forestry and Fisheries in Victoria.

Mr. St. Pierre: What is your opinion of the situation?

Mr. Anderson: My personal opinion is I would like to see the provincial government spend more money on forestry research, particularly on the aspects of research to do with reforestation techniques, with improving the growth that we get, and in stand management. I would like to see other aspects of research done by the federal people such as disease and fire protection and so on.

M. St-Pierre: Merci, monsieur le président. Si je pose cette question au deuxième tour, c'est que le chiffre qu'on nous a donné me semble extraordinairement élevé. Je crois que les chiffres ronds qu'on nous a donnés sont de 3 millions de dollars pour la recherche fédérale, de 3 à 5 millions pour les recherches faites par l'industrie privée et 350,000 dollars pour les recherches du gouvernement provincial. 93 p. 100 des terres en Colombie-Britannique appartiennent à la Couronne au nom de la province, de sorte qu'elle est le principal bénéficiaire de tous les impôts plus élevés sur le revenu et les droits de coupe qu'elle applique. J'aimerais bien que les témoins nous fassent quelques commentaires au sujet de ces chiffres.

M. Anderson: Je veux dire, entre autres choses, que les dépenses de \$390,000 du gouvernement provincial sont destinées aux recherches sur les sylvicultures et non pas sur les produits forestiers. Si on prend le chiffre correspondant du gouvernement fédéral, il est de 2.1 millions de dollars, de sorte que le rapport est de cinq contre un. Lorsqu'on ajoute les recherches sur les produits forestiers on complique les choses.

M. St-Pierre: Le trésor provincial bénéficie le plus de l'exploitation forestière de la Colombie-Britannique, n'est-ce pas?

M. Draeseke: Oui.

M. St-Pierre: Toutefois, les dépenses du gouvernement fédéral pour les recherches dépassent celles de la province dans un rapport de cinq à un. Est-ce que vous vous en êtes plaint auprès du gouvernement provincial?

M. Anderson: Mais oui, certainement. Nous avons soumis un mémoire au gouvernement provincial il y a six semaines, au Comité permanent des pêches et forêts à Victoria.

M. St-Pierre: Qu'est-ce que vous pensez de la situation?

M. Anderson: J'aimerais bien que le gouvernement provincial dépense davantage pour les recherches sur les forêts, surtout quand il s'agit des méthodes de reboisement, d'améliorer la croissance des arbres et de la gestion forestière. Je voudrais que le gouvernement fédéral s'occupe d'autres aspects de la recherche qui portent sur les maladies et la protection contre les incendies et ainsi de suite.

[Texte]

However, the provincial government in fairness to them spends more on the management of the forests of British Columbia than the federal government does in the whole of Canada. I think the provincial budget this year is something like \$29 million to be spent by the forest service.

Mr. St. Pierre: This is on management?

Mr. Anderson: This is on management, yes.

Mr. St. Pierre: Which is a provincial responsibility. It would have to be done by the province. It could not be done by the federal government.

Mr. Anderson: That is correct.

Mr. St. Pierre: That completes my questioning, Mr. Chairman.

The Chairman: Mr. Beaudoin.

M. Beaudoin: Vous avez dit tout à l'heure que le gouvernement provincial demande aux compagnies un certain montant pour un droit de coupe qui, à mon sens, est assez minime, étant donné que le bois est de grande qualité. Ces compagnies ne seraient-elles pas obligées par le gouvernement de reboiser les limites qu'elles exploitent, à leur frais?

Mr. Anderson: I am afraid you will have to ask that again.

Mr. Dreaseke: We had a hard time with the translation on that.

M. Beaudoin: Merci. Vous avez dit tout à l'heure que le gouvernement provincial exige un certain montant pour un droit de coupe, qui, à mon sens est très minime, étant donné la qualité du bois. Ce gouvernement vous oblige-il aussi à reboiser les limites que vous exploitez, à vos frais?

Mr. Anderson: Yes, we do plant the areas that we cut where it is necessary. We rely on natural reproduction where possible. Otherwise we plant. The provincial government supplies the planting stock and then we do the planting and bear the labour costs, and so on. This is done by the companies that have tree farm licences. In the public-sustained yield units where, for the most part, there are smaller operators working, the provincial government does the planting.

M. Beaudoin: Combien, en moyenne, estimez-vous que ce reboisement vous coûte à l'acre?

Mr. Anderson: For the cost per acre I would say a good round figure is \$30.

[Interprétation]

Toutefois, en toute justice, le gouvernement provincial dépense plus pour la gestion des forêts de la Colombie-Britannique que le gouvernement fédéral ne le fait pour le reste du pays. Je crois que le budget provincial pour les services forestiers est de 29 millions de dollars.

M. St-Pierre: Pour la gestion?

M. Anderson: Pour la gestion, oui.

M. St-Pierre: Qui relève du gouvernement provincial. Le gouvernement fédéral ne pourrait pas s'en occuper.

M. Anderson: C'est juste.

M. St-Pierre: C'est tout ce que j'ai à demander, monsieur le président.

Le président: Monsieur Beaudoin.

Mr. Beaudoin: You said a moment ago that the provincial government charges the companies a certain amount for the right to cut timber which, in my opinion, is very small, owing to the fact that it is high quality wood. Would these companies not be obliged by the government to reforest at their own cost the areas where they cut timber?

M. Anderson: Il faudrait que vous répétiez votre question.

M. Dreaseke: Malheureusement, nous avons eu de la difficulté avec l'interprétation.

Mr. Beaudoin: Thank you. You said a moment ago that the provincial government charges a certain amount for the right to cut timber which, in my opinion, is very small, because of the quality of the wood. Does that government also oblige you to reforest the area that you cut, at your own expenses?

M. Anderson: Oui, nous reboisons les concessions où nous faisons de l'abattage, si c'est nécessaire. Nous comptons sur la reproduction naturelle quand c'est possible. Autrement, nous reboisons. Le gouvernement provincial nous donne les arbustes que nous nous chargeons de faire planter à nos frais. Ce travail est fait par les entreprises qui ont des permis de pépinière. Dans les concessions publiques à coupe continue qui sont exploitées par de petites entreprises en général, c'est le gouvernement provincial qui s'en charge.

Mr. Beaudoin: How much, on an average, do you think this reforestation costs you, per acre?

M. Anderson: Le coût à l'acre est d'environ \$30, en chiffres ronds.

[Text]

Mr. Beaudoin: Thank you, Mr. Chairman.

Mr. Comeau: I just have one supplementary to Mr. Noble's question, Mr. Chairman. It might have been answered while I was on the telephone. Would you suggest that the 11 per cent sales tax be eliminated?

Mr. Anderson: On pollution control equipment?

Mr. Comeau: No, on building materials.

Mr. Anderson: Yes. I would suggest that any time.

Mr. Comeau: Did you recommend this to the Task Force on Housing? Did you make recommendations to the Task Force on Housing?

Mr. Draeseke: I have only been with the Council for six months. We have not made any since I have been there. However, we did recommend it before that.

Mr. Comeau: Thank you, Mr. Chairman.

Mr. Lundrigan: I have just one supplementary to Mr. Noble's question as well. Can you give us an estimate of the total moneys or total revenue generated by the province as a result of stumpage fees? I am not thinking of all of the indirect revenue, but the very direct revenue as a result of this. There happens to be one other province in Canada where there is absolutely no revenue generated by this particular cost.

Mr. Draeseke: My recollection of the figure is an estimated \$57 million in 1968.

Mr. Lundrigan: \$57 million?

Mr. Draeseke: I think \$57 million, direct stumpage revenue in 1968.

Mr. Lundrigan: How is this calculated, just as a matter of interest? Is it per tree? How is it regulated—per acre of land?

Mr. Draeseke: It is per thousand board feet of lumber cut. The operator is allowed a certain percentage per profit and risk and the residual value, basically, goes to the timber owner—the Crown. There are certain limitations on this figure. I mentioned the 60 per cent. As prices go up the Crown's share is limited to 60 per cent of the increase in price of the product. In other words, the price is set when you make the contract with the government to cut the trees, but it has a sliding scale, so that if the price of your product goes up or down you stumpage fol-

[Interpretation]

M. Beaudoin: Merci, monsieur le président.

M. Comeau: J'ai une question supplémentaire. On y a peut-être répondu pendant que j'étais au téléphone. Croyez-vous qu'il faudrait enlever la taxe de vente de 11 p. 100?

M. Anderson: Sur l'équipement de contrôle de la pollution?

M. Comeau: Non, sur les matériaux de construction.

M. Anderson: Oui, je serais toujours en faveur d'un tel geste.

M. Comeau: Est-ce que vous l'avez proposé à l'équipe spéciale d'étude sur le logement? Est-ce que vous avez fait des recommandations?

M. Draeseke: Non, je ne fais partie du Conseil que depuis six mois. On n'a pas fait de recommandations depuis que j'y suis. Toutefois nous l'avions recommandé avant.

M. Comeau: Merci, monsieur le président.

M. Lundrigan: Une question supplémentaire à la question de M. Noble. Pouvez-vous nous donner une idée du revenu global de la province qui provient des droits de coupe? Je ne pense pas à tous les revenus indirects, mais aux revenus directs. Il y a une province où il n'y a aucun revenu de ce genre.

M. Draeseke: Si je me souviens bien ce chiffre était de 57 millions de dollars, je crois, en 1968.

M. Lundrigan: 57 millions de dollars.

M. Draeseke: 57 millions de dollars en droits directs de coupe en 1968.

M. Lundrigan: Et comment est-ce qu'on a calculé cela, simplement à titre de renseignement? Par arbre ou par acre?

M. Draeseke: Non, c'est par mille pieds planche de bois coupé. L'exploitant a droit à un certain pourcentage pour les bénéfices et les risques, et la valeur résiduelle va au propriétaire, à la Couronne. Ce chiffre présente certaines restrictions. J'ai parlé du 60 p. 100. A mesure que les prix augmentent la portion de la Couronne est limitée à 60 p. 100 de la majoration du prix du produit, autrement dit, le prix est établi quand le contrat est passé avec le gouvernement pour la coupe, mais il y a une base mobile, de sorte que si le prix du produit augmente ou baisse, vos coupes main-

[Texte]

lows on a certain relationship. The technicalities are very complicated, but that roughly is how it works.

Mr. Lundrigan: All right. Have you ever tried to negotiate, or would you think you should try, or is it desirable that private companies own large tracts of land in a province such as British Columbia?

Mr. Draeseke: This is not a subject of debate any more. It was debated 40 years ago and the policy was taken by the provincial government to retain ownership and give cutting rights to the operators.

Mr. Lundrigan: Are you fairly satisfied with this?

Mr. Draeseke: We do not know anything else in this province.

Mr. Turner (London-East): Mr. Chairman, Mr. Anderson, your company is 100 per cent Canadian owned. Is this correct?

Mr. Draeseke: Who are you addressing your question to?

Mr. Turner (London-East): Mr. Anderson.

Mr. Anderson: No.

Mr. Turner (London-East): What percentage is Canadian owned?

Mr. Anderson: I do not think any, other than the fact that Canadians probably own shares in the company.

Mr. Turner (London-East): Did your company export any logs to Japan in 1967?

Mr. Anderson: No.

Mr. Turner (London-East): Did your company export any raw products to Japan?

Mr. Anderson: No.

Mr. Turner (London-East): What percentage of log harvesting does your company do in B.C. compared with the American companies?

Mr. Anderson: Do you mean compared with our American counterpart? Somewhat less than they do in the United States. We are a little bit smaller.

Mr. Turner (London-East): Is the reason your company is not interested in Balloon Transport system because you have all the

[Interprétation]

tiennent un certain rapport. Les modalités sont assez compliquées, mais c'est grosso modo ainsi que le système fonctionne.

M. Lundrigan: D'accord. Est-ce que vous avez essayé de négocier ou est-ce que vous croyez qu'il est souhaitable que les entreprises privées soient propriétaires de vastes terres dans une province comme la Colombie-Britannique?

M. Draeseke: Ce n'est plus une question dont on puisse discuter maintenant. Elle l'a été il y a 40 ans, et le gouvernement provincial a décidé de garder la propriété de ces terrains et de concéder des droits de coupe aux entreprises.

M. Lundrigan: Et vous êtes satisfait?

M. Draeseke: Nous ne connaissons pas d'autres systèmes dans cette province.

M. Turner (London-Est): Monsieur le président, M. Anderson, votre entreprise est une société entière canadienne, n'est-ce pas?

M. Draeseke: A qui posez-vous votre question?

M. Turner (London-Est): A M. Anderson.

M. Anderson: Non.

M. Turner (London-Est): Et quel pourcentage est détenu par des Canadiens?

M. Anderson: Aucun pourcentage, à moins qu'il y ait des actionnaires canadiens.

M. Turner (London-Est): Maintenant, est-ce que votre société a exporté du bois au Japon, en 1967?

M. Anderson: Non.

M. Turner (London-Est): Est-ce que votre société a exporté des matières premières au Japon?

M. Anderson: Non.

M. Turner (London-Est): Quel pourcentage d'abattage votre société fait-elle en Colombie-Britannique, comparé aux sociétés américaines?

M. Anderson: Parlez-vous de nos homologues américains? Un petit peu moins qu'ils ne le font aux États-Unis. Notre société n'est pas aussi importante.

M. Turner (London-Est): Si votre société ne s'intéresse pas au système de transport par ballon fixe, est-ce que ce serait parce que

[Text]

choice timber sites?

Mr. Anderson: No.

Mr. Cyr: I would like to ask a question on the reforestation. You said to Mr. Beaudoin that it cost the company about \$30 an acre. Do you know the cost when the work is done by the provincial government?

Mr. Anderson: No, I cannot tell you what it costs the provincial government, but I imagine it would be very much the same. They employ the same labour that we have to employ and work in the same areas and under the same conditions.

Mr. Cyr: Thank you.

The Chairman: Are there any more questions? Mr. Draeseke and your colleagues, I wish to thank you very much for a very good brief and a very instructive session here. It is too bad that we do not have more time to spend with you, due to the importance of your industry, but I know that the Committee is going away enriched with more knowledge concerning the industry. We wish to thank you very much for your time.

Mr. Draeseke: Thank you very much, Mr. Chairman.

The Chairman: Our next order of business: the Society of Pollution and Environmental Control. I will ask Mr. John Hayward and his associates to come forward. I will ask Mr. Hayward to introduce his associates and to give a summary of the brief he is presenting.

Mr. John L. Hayward (Vice-President, Society for Pollution and Environmental Control): Mr. Chairman, we are here representing the Society for Pollution and Environmental Control. It is a little difficult because it sounds sometimes as if we are for pollution the way the name comes out, but we are not really as you will see. My confreres here are Mrs. Mallard, a director in S.P.E.C., and Mr. Barnie Hagell who is the Secretary of S.P.E.C.

The brief is a fairly synoptic type of brief inasmuch as we had so little time to do it, so in the main I will be reading from it. If you find this too much of a dirge, just tell me and I will try to summarize it.

First let me say it is with pleasure that we welcome you and your Committee to the West Coast. We find this a happy occasion and we

[Interpretation]

vous avez le choix de toutes les meilleures concessions de coupe?

Mr. Anderson: Non.

M. Cyr: J'aimerais poser une question au sujet du reboisement. Vous avez dit à M. Beaudoin, il y a quelques instants, qu'il en coûte environ \$30 l'acre à la société. Est-ce que vous connaissez quel en est le coût quand c'est le gouvernement provincial qui fait le travail?

M. Anderson: Je ne peux vraiment pas vous le dire, mais je pense que ce serait à peu près la même chose. Ils emploient la même main-d'œuvre que nous et ils travaillent dans les mêmes endroits et les mêmes conditions.

M. Cyr: Merci.

Le président: D'autres questions. Monsieur Draeseke, je tiens à vous remercier et vos collègues de votre excellent mémoire. Ce fut une réunion très intéressante. C'est dommage que nous n'ayons pas plus de temps à passer avec vous, vu l'importance de votre industrie, mais je sais que le Comité aura recueilli beaucoup de données intéressantes au sujet de votre industrie. Nous vous remercions beaucoup.

M. Draeseke: Merci beaucoup, monsieur le président.

Le président: Notre prochain mémoire est de la Société pour la suppression de la pollution et l'assainissement du milieu. J'invite les témoins à s'approcher. Je vais demander à M. John Hayward de nous présenter ceux qui l'accompagnent et de nous donner un résumé de leur mémoire.

M. John L. Hayward (vice-président, Société pour la suppression de la pollution et l'assainissement du milieu): Monsieur le président, je représente la Société pour la suppression de la pollution et l'assainissement du milieu. C'est un peu difficile car d'après notre nom, il semble parfois que nous sommes en faveur de la pollution, mais je vous assure que ce n'est pas le cas, comme vous pouvez le voir. Je vous présente M^{me} Mallard, une des directrices de la S.P.E.C. et M. Barnie Hagel, secrétaire de la S.P.E.C.

Le mémoire est très synoptique, nous avons eu très peu de temps pour le préparer, par conséquent, je vais en lire des extraits. Si vous trouvez que c'est trop fastidieux, je vais essayer d'en faire un résumé.

Il nous est agréable de vous souhaiter la bienvenue, à vous et à votre comité, à l'occasion de votre tournée dans l'Ouest. Nous nous

[Texte]

trust that it will be repeated more frequently in the future so that a new feeling of understanding, participation and responsibility may evolve for the benefit of all Canadians.

The executive and members of the Society for Pollution and Environmental Control (S.P.E.C.) wish to apologize to our French speaking fellow Canadians for not presenting to them a French translation of the brief. We are, however, a young organization with a growing membership, but possessing only limited funds, and since we lack members within our ranks who would be capable of translation, may we take this opportunity to point out to you that a translation service provided by the federal government would be of benefit to many groups who are confronted with similar problems. We trust you take cognizance of that.

The work of this organization is done on a voluntary basis. With a rapidly growing membership the Society for Pollution and Environmental Control includes engineers, ecologists, medical doctors, lawyers, psychologists—people of various callings who have dedicated themselves to alerting the public and the various levels of government in Canada to the dangers of pollution and to the need for control of our environment.

Our Society is presently engaged in a campaign to clean up the waters in front of the greater Vancouver area. The pollution in the water of the Port Moody section of Burrard Inlet is so severe that many forms of sea life such as shrimps and crabs are not able to survive because the oxygen level in the area is minimal due to effluents pouring into the inlet.

May I add the fact that due to the type of debris you also cover the floor of the ocean with nearly impregnable layer of one form or other of effluent sedimentation.

Mr. Chairman, knowledge of this public hearing did not come to our attention early enough to allow us sufficient time to do adequate research. Our professional people, attached to the universities, are engaged in preparation and giving of final examinations. We therefore ask the Committee's indulgence and seek their help in finding answers to the problem associated with a burning society which in its unilateral, malicious, ruthless and destructive approach our ecology is wreaking a disaster.

S.P.E.C. at this point in the brief would like congratulate The Royal Bank of Canada for monthly letter of February 1969, captioned "Man and the Balance of Nature". If this

[Interprétation]

réjouissons d'une telle initiative, espérant qu'elle se reproduira fréquemment à l'avenir, afin qu'il se crée un climat d'entendement, de participation et de responsabilité au profit de tous les Canadiens.

Le conseil et les membres de la Société pour la suppression de la pollution et l'assainissement du milieu s'excusent auprès des francophones du Canada de ne pouvoir remettre une version française du présent mémoire. La Société est d'origine récente, quoique son effectif s'accroisse sans cesse, mais elle dispose de peu de fonds et ne compte, parmi ses membres, aucun traducteur digne du nom. A ce propos, permettez-nous de vous signaler que le bureau fédéral de traduction pourrait rendre de grands services aux organismes comme le nôtre qui éprouvent des difficultés semblables. Nous espérons que vous en prendrez note.

La Société se compose entièrement de membres bénévoles, dont le nombre augmente rapidement. Elle réunit des gens de diverses disciplines: ingénieurs, écologistes, médecins, avocats et psychologues qui se sont donné pour tâche de mettre en évidence, aux yeux du grand public et des pouvoirs administratifs, les dangers de la pollution et la nécessité d'assainir notre milieu.

Soulignons que la Société vient de lancer une campagne publicitaire pour l'assainissement du littoral dans la région de Vancouver. Les eaux de l'inlet Burrard, à l'emplacement de Port Moody, sont tellement polluées que bien des organismes marins, tels les crevettes et les crabes, ne peuvent y survivre en raison de la teneur minimale en oxygène de ces eaux contaminées par les déchets déversés dans l'inlet.

Permettez-moi d'ajouter qu'à cause de la nature des déchets, on couvre aussi le lit de l'océan d'une couche presque impénétrable de sédiments d'une forme ou d'une autre.

Nous avons appris votre venue trop tard, monsieur le président, pour être en mesure de faire des recherches poussées, d'autant plus qu'à cette époque des examens de fin d'année, beaucoup de nos membres, étant universitaires, sont retenus par leurs occupations. Nous prions donc le comité de faire preuve d'indulgence à notre égard et de nous aider à résoudre le problème inhérent à une société bourgeonnante qui, par son attitude irresponsable, avide, irréflective et destructive, est en voie d'annihiler notre milieu.

A ce propos, nous tenons à féliciter la Banque Royale du Canada, dont le bulletin mensuel de février 1969 porte sur «L'homme et l'équilibre de la nature». Si cet article n'a

[Text]

monthly letter has not been read into the record of the Committee, S.P.E.C. requests your permission to proceed with some of the outstanding and pertinent points. No serious group of resource administrators could possibly implement policies without first considering the implications of their policies as stressed in the article "Man in the Balance of Nature" See Appendix 1, underlined sections (a) to (i).

Why are people so disturbed about pollution of air and water? It is not simply because they have become more refined and aesthetic, but because they begin to realize that we have reached a critical point in human habitation of the earth.

There was no split of opinion at the UNESCO headquarters in Paris last year when more than two hundred experts from fifty countries met in conference. Within twenty years, they decided, life on our planet will be showing the first signs of succumbing to pollution: the atmosphere will become unbreathable for men and animals; life will cease in rivers and lakes; plants will wither from poisoning.

We already have these examples before us and under discussion.

We are, then, an integral part of our environment. "Nature" embraces all existing things—fields, oceans, mountains, forests, deserts, the wild creatures...and human beings. We are part of it, and we must live in concert with it.

May I say that at this time man is one of the few things that does not live in concert with nature. Man is not symbiotic. He is not mutually parasitical. He is a parasite on this earth and he had better learn not to be so parasitical that he eliminates himself from it. Moving along to (d), Mr. Chairman.

Why should anti-pollution regulations raise objections? Do they restrict our freedom, that word so cherished in democracies? So do traffic laws and signals, which limit the freedom of action of the driver of the automobile. None the less, intelligent drivers gladly obey the regulations, even when there is no policeman at the corner...

I sometimes doubt the veracity of that statement.

[Interpretation]

jamais figuré aux comptes rendus du Comité, la Société aimerait, avec votre permission, en consigner les passages les plus importants et les plus pertinents. Le point que fait ressortir l'article susmentionné, c'est que toute administration sérieuse ne saurait appliquer certaines lignes de conduite sans d'abord envisager les conséquences de telles mesures pour nos ressources (*Voir Appendice i, passage a-i souligné*).

Pourquoi le public est-il si préoccupé par la question de la pollution de l'air et de l'eau? Ce n'est pas simplement parce que les esprits sont devenus plus raffinés ou plus esthètes, mais parce que les hommes commencent à s'apercevoir qu'ils ont atteint un point critique dans l'habitation de la planète par leur espèce.

Mais il n'y eut aucune divergence d'opinions, l'année dernière, à la Conférence de l'Unesco, à Paris, qui réunissait plus de deux cent spécialistes venus de cinquante pays différents. Tous les délégués sans exception se rallièrent à la conclusion qu'avant vingt ans, la vie sur notre planète manifesterait les premiers signes d'extermination par la pollution: l'atmosphère deviendrait irrespirable pour l'homme et les animaux; la vie s'éteindrait dans les cours d'eau et les lacs; les plantes sécheraient sous l'effet de l'empoisonnement.

Nous en avons déjà des exemples sous nos yeux

Nous faisons partie intégrante de notre milieu de vie. La «Nature» embrasse tout ce qui existe; plaines, montagnes, océans, forêts, déserts, bêtes sauvages—et êtres humains. Comme nous sommes l'un des ses rouages, nous devons vivre en accord avec elle.

Je dois ajouter que l'homme est l'un des quelques êtres qui ne vit pas en accord avec la nature. L'homme n'est pas associé en symbiote. L'homme n'est pas un parasite pour l'homme. Il est un parasite de la planète et il ferait bien d'apprendre à ne pas l'être au point où il s'en éliminera. Je passe à la section (d), monsieur le président.

La découverte des lois de la nature n'a pas pour conséquence de nous en rendre esclave. Au contraire, une fois que nous les connaissons, nous pouvons apprendre à coopérer à leur action et, par notre coopération, augmenter notre liberté dans les limites qu'elles nous imposent. Prenons le feu, par exemple; nous avons appris dès le temps les plus reculés que le feu brûle lorsqu'on y touche, non pas par punition, mais parce que telle est la

[Texte]

...because they know that in the absence of such organization of traffic their freedom to move in a chosen direction would be enormously more impeded by traffic jams and accidents.

Moving on to (e), Mr. Chairman.

Water, the most important natural resource, can be the medium for the transmission of germs and toxic substances. The World Health Organization reports that about five million children die every year from intestinal diseases caused by water.

In the Vancouver area—there should have been an appendage here—I had the figures for infectious hepatitis for the last 10 years. They were up in 1957, they waned, and they are now back up in 1968 and are going higher.

Mrs. D. R. Mallard (Society for Pollution and Environmental Control): Excuse me, Mr. Hayward. In 1968 there were 501 cases reported.

Mr. Hayward: Moving along now to (f).

Our lakes are dying. The United States public health service has warned shippers in Lake Erie that water within five miles of the shoreline should not be used for drinking or cooking. This stretch of nearshore water is so polluted that even boiling or chlorination will not remove the contamination. Farther out, pollution has stimulated the growth of vegetation, using up oxygen, so that a large expanse of dead water has developed.

In 1965, Dr. G. B. Langford, F.R.S.C., Director of the Great Lakes Institute, University of Toronto, concluded a report *The Great Lakes and Their Problems* in this way: "Governments in the United States are facing up to the situation much more realistically than are those in Canada. The insignificant support of research in the Great Lakes by the governments of Canada stands in sharp contrast to what our neighbours are doing. An unbiased observer would wonder if we actually share these lakes, for we do not share the responsibility of saving them from the pending disaster."

at a Natural Resources Conference Dr. Welch, who was head of the American delegation to the International Joint Commission, made the points which were valid then and they are valid now. In 1918 they stated

29728—4j

[Interprétation]

nature du feu. Et c'est ainsi que nous en sommes venus à utiliser le feu pour répondre à nos besoins compte tenu de ses lois.

Je passe la section (e), monsieur le président.

L'eau, la plus importante des ressources naturelles, peut servir de véhicule aux microbes et aux substances toxiques. L'Organisation mondiale de la santé nous apprend qu'environ cinq millions d'enfants succombent chaque année à des maladies intestinales transmises par l'eau.

On pourrait parler ici de la région de Vancouver—j'avais les statistiques des cas d'hépatite infectieuse au cours des 10 dernières années. Les chiffres étaient élevés en 1957; ils ont baissé par la suite; en 1968, ils ont remonté et ils continuent d'augmenter.

Mme D. R. Mallard (Société pour la suppression de la pollution et l'assainissement du milieu): Cinq cent un cas ont été rapportés en 1968.

M. Hayward: Je passe à la section (f).

Nos lacs sont à l'agonie. Le service d'hygiène publique des États-Unis a avisé les navires de charge du lac Érié que l'eau puisée à moins de cinq milles du rivage était impropre à la consommation et à la cuisson. L'eau de cette zone est si polluée qu'il est impossible de l'assainir en la faisant bouillir ou en la javellisant. Plus loin, la pollution a activé la croissance de la végétation, ce qui a absorbé tout l'oxygène et provoqué la formation d'une vaste étendue d'eau morte.

En 1965, le docteur G. B. Langford, F.R.S.C., directeur de l'institut des Grands lacs de l'Université de Toronto, concluait, dans son rapport intitulé *The Great Lakes and Their Problems*: «Les gouvernements des États-Unis font face à la situation de façon beaucoup plus réaliste que les gouvernements canadiens. L'appui minime des recherches dans les Grands lacs contribué par le gouvernement du Canada présente un contraste frappant avec ce que font nos voisins du sud. Un observateur impartial pourrait se demander si nous partageons ces lacs, car nous ne partageons pas la responsabilité de les récupérer du désastre qui les menace.»

A une conférence des ressources naturelles, le Dr Welch, qui était à la tête de la délégation américaine, à la Commission mixte internationale, a fait valoir les points qui étaient valables alors et qui le sont toujours. En 1918,

[Text]

unequivocally that the lakes were in a very dangerous position. Since that time nothing was done until 1948 when another study took place. One lake is now dead and the others are at the point of dying. If Lake Michigan should become polluted—as you know, it takes three changes of water to make said lake or any lake become sufficiently oxygenated to support life again, which would mean in the case of Lake Michigan, 600 years. It takes 200 years for a change of water. Lake Superior, 300 years for each change, which is 900 years. It does not pay to ignore the facts of life.

Mr. Whelan: How long would it take to change the water in Lake Erie?

Mr. Hayward: It was estimated at 3 years, sir. This would take 9 years to change the water in Lake Erie. The last point here.

He spread insecticides without examining into whether they would be fatal to birds and beneficial insects and might kill people. He poured millions of pounds of detergents into rivers before learning that they polluted the water. He allowed lakes to die of oxygen starvation. He contributed to the deadliness of smog by floating noxious substances into the air.

I would like to say that we congratulate the Royal Bank of Canada on an excellent paper.

I will now go back to the brief, Mr. Chairman, and finishing with the statement by the Royal Bank of Canada.

What is the paramount thing? To come to nature with clean hands unsoiled by spoilage, destruction and waste. This involves a great deal of governmental wisdom, a lot of scientific research, and a lot of engineering ingenuity. Behind all these must be the pressure of public demand.

That is why we are here, sir.

With reference to the above quotation, let our Society assure you that on no other subject can you achieve such unanimity of opinion with the public as when discussing the immediate needs to prevent future pollution and environmental destruction of our land, water and air. Our nation can no longer accept the precept of unilateral development or exploitation of a resource, regardless of whether that exploitation is being perpetrated by private industry or by the public sector.

[Interpretation]

on avait déclaré sans équivoque que la situation des lacs était très dangereuse. Depuis ce moment, rien n'a été fait jusqu'en 1948 alors qu'une autre étude a été faite. L'un des lacs est maintenant fini et d'autres sont à la veille de le devenir. Si le Michigan devient pollué, comme il faut trois changements complets d'eau pour qu'un lac pollué devienne suffisamment oxygéné pour de nouveau sustenter la vie, ce qui voudrait dire 600 ans dans le cas du Michigan, car il faut deux siècles avant un changement complet d'eau. Pour le lac Supérieur, il faut trois cents ans par changement et donc 900 ans en tout. Voilà ce qu'on récolte lorsqu'on s'entête à ne pas voir les faits.

M. Whelan: Combien de temps faudrait-il pour changer l'eau dans le lac Érié?

M. Hayward: Trois années. Il faudrait neuf années pour changer complètement l'eau dans le lac Érié. Le dernier point ici,

L'homme a répandu des insecticides sans se demander s'ils ne seraient pas mortels pour les oiseaux et les insectes utiles et même pour les humains. Il a déversé des millions de livres de détergents dans les cours d'eau avant de s'apercevoir qu'il pollue les eaux. Il a laissé des lacs mourir par manque d'oxygène. Il a contribué à accroître les effets meurtriers du smog en faisant flotter des substances nuisibles dans l'atmosphère.

Je remercie la Banque Royale du Canada pour cet excellent bulletin.

Je reviens maintenant au mémoire, monsieur le président et j'ai terminé la déclaration de la Banque Royale du Canada.

«Ce qui prime tout, c'est de se présenter devant Dame Nature les mains propres, non souillées par le gaspillage, la destruction ou l'incurie. Mais la sagesse des gouvernements, si grande soit-elle, alliée à la recherche scientifique et à l'ingéniosité technique, ne suffit pas; il lui faut, en outre, la pression exercée par l'opinion publique.»

C'est la raison pour laquelle nous sommes ici.

A cet égard, permettez-nous de vous assurer que jamais ne réussit-on autant à faire l'unanimité parmi un groupe de personnes que lors de discussions portant sur le besoin immédiat d'éliminer les causes de la pollution du sol, de l'eau et de l'air, ainsi que d'éviter la destruction de notre milieu. Le Canada ne peut plus tolérer qu'une ressource fasse l'objet d'une mise en valeur ou d'une exploitation unilatérale, que la responsabilité en soit attribuable à l'industrie privée ou au secteur

[Texte]

In other words, there is no public right to do public damage and no private right to do public damage.

With regard to the authority exercised by the federal government to control pollution, we submit the following questions:

1. What is the formal authority and jurisdiction of your Department?

2. Has the federal Government through departments such as yours the power to promulgate laws to protect one province from unilateral development of a resource by another Province?

An example is the Peace River Dam, the cutting off of the flow of water into the Peace River. I read *Hansard* and I read what happened to Lake Athabaska and the deltas of the Peace River. It intrigues me that conditions such as this can take place without anyone doing anything, including Alberta. Just because they are Social Credit, that should not stop them from protecting their own people. The federal government may be Liberal, but it is the government of Canada, and as such it should participate and protect the welfare of one segment against the other. That is our view as a Society.

3. Are there consultations and correlation of information between the Departments of Fisheries and Forestry and the science disciplines? For example, if logging is to be permitted by the Forestry Department in a specific area, are the fisheries and water resource people consulted? Are plans drawn to protect the streams and rivers and lakes from indiscriminate use of bull-dozers ploughing up creek and river bottoms for gravel for road beds, the bulldozing of sidehills into streams, the debris of forests pushed into water courses, and the pollution of lakes and rivers by log booms and floating debris? Is a hydrological study done to insure adequate forest cover to maintain the watersheds' ability to retain moisture and prevent soil erosion? What action is taken to protect fish and wildlife in areas against the pressures of people and industry? Relating to the above questions, is anything being done by the Federal Government to prevent complete destruction of the ecology by the unilateral development of industry?

I would like to speak to that Mr. Chairman, just to give our feeling. We had log booms

[Interprétation]

public. Autrement dit, il n'y a pas de droits publics ni de droits privés à causer des dégâts publics.

Quant aux pouvoirs exercés par le gouvernement fédéral en matière de la pollution, nous vous posons les questions suivantes:

1. Quelles sont les fonctions et la compétence officielles de votre Ministère?

2. Le gouvernement fédéral peut-il, par l'entremise d'un ministère tel que le vôtre, adopter des mesures législatives visant à protéger une province contre l'exploitation unilatérale d'une ressource par une autre province?

C'est le cas, en ce moment, du barrage de la rivière la Paix qui coupe l'écoulement de l'eau dans la rivière. Je lis le *Hansard* et j'ai lu ce qui est arrivé au Lac Athabaska et au delta de la rivière la Paix. Je suis surpris qu'une situation de ce genre puisse se produire sans que personne fasse quelque chose. Y compris l'Alberta; simplement parce que c'est un gouvernement créditiste, ce n'est pas une raison pour ne pas protéger leur population et leurs ressources. Le Gouvernement fédéral est peut-être libéral, mais c'est le gouvernement du Canada et, à ce titre, il doit protéger le bien-être d'un secteur contre un autre. C'est ainsi que nous concevons la société.

3. Y a-t-il des échanges de vues et des consultations entre le ministère des Pêches et Forêts et les disciplines scientifiques? Par exemple, si la Direction des forêts autorise l'exploitation forestière dans une région donnée, consulte-t-elle au préalable les autorités en matière des pêches et des ressources hydrauliques? Envisage-t-on de protéger nos lacs et cours d'eau contre le dragage irréfléchi des lits pour l'obtention du gravier nécessaire à l'aménagement des routes, contre le déchargement de la terre ou des déchets forestiers dans les étendues d'eau, contre la pollution attribuable aux estacades et aux débris flottants? Est-ce qu'il se fait des études hydrologiques pour conserver la capacité de rétention d'eau du bassin hydrographique et pour empêcher l'érosion des sols, grâce à la suffisance du tapis végétal? Quelles mesures prend-on pour protéger le poisson et la faune contre l'avidité des gens et de l'industrie? Dans le même ordre d'idées, que fait le gouvernement fédéral pour empêcher la destruction totale du milieu par suite de l'expansion unilatérale de l'industrie?

Je voudrais m'arrêter à ce sujet, monsieur le président, pour vous exposer notre opinion.

[Text]

down the Stelako and we will deal with that later. In the Elk Valley there will be tremendous development. Has the federal government any ability to protect the wildlife from the pressures of strip mining in that area. Strip-mining will be enough for the environment without the pressures on the wildlife by the people who come with it. This is one of our greatest wildlife habitats. I would like that thought to stay with you.

4. Are there any licensed logging operations in our National Parks in Canada? If so, is the logging being done by high lead, selective or what method is applied?

I heard one of the gentlemen of the Committee this morning suggest the balloon or sky-hook form of logging. It is more expensive. It is not so destructive of the younger timber. It leaves trees standing. High lead logging is the most destructive and pernicious form of logging prosecuted anywhere in any country, regardless of the statements of the lumber companies. If you have walked over the areas that have been high leaved and seen the destruction—and then after that they burn to clear the land. It is compulsory; it is the law. They burn to clear, and then they lose the soil.

We should realize that one inch of soil under the best of conditions is laid down under forest cover in 1,000 years. On mountains such as ours, if we got an inch in 10,000 years we would be very fortunate. I can tell you frankly that not one inch, but all soil is very frequently eroded from our sidehills under these circumstances. Much of it is dragged off when the high lead pulls in the logs over the land.

There is only one way to appreciate the destruction and that is to see it. There is more timber left on the land at times than there is taken out, because of the undesirable species which are left. I have walked over birch, poplar, and many other species, where you could not go 200 yards in 15 minutes, due to the waste.

I will now move along to number 5, dealing with fishing. You might notice that we bounce around in this Society, but resources cannot be dealt with unilaterally. They have to be dealt with as one thing, all within the ecology

[Interpretation]

Nous avons des escalades de billes sur la rivière Stelako et j'y reviendrai plus tard. Dans la vallée Elk, il y aura une mise en valeur formidable. Est-ce que le Gouvernement fédéral ne peut pas protéger la faune contre l'exploitation minière à ciel ouvert dans cette région. L'exploitation minière à ciel ouvert est déjà assez néfaste pour le milieu sans y ajouter les pressions, pour la faune, que sont les gens qui l'accompagne. Il s'agit d'un de nos meilleurs habitats pour la faune. Je voudrais que vous vous en souveniez.

4. Est-ce qu'on délivre des permis d'exploitation forestière dans les parcs nationaux du Canada? Dans le cas de l'affirmative, permet-on les coupes d'éclaircie par le haut, les coupes de jardinage ou tout autre mode de coupe?

L'un des membres du Comité a parlé, ce matin, d'une méthode d'exploitation par ballon fixe. Cette méthode est plus coûteuse, mais détruit moins de jeunes arbres. Elle laisse les arbres debout. La coupe en tête est la forme la plus pernicieuse et destructrice d'abattement des boisées qui existe, quoi qu'en disent les entreprises forestières.

Si vous avez traversé des régions qui ont été exploitées ainsi et que vous avez vu la destruction qu'on y fait; et ensuite, ils brûlent les déchets pour nettoyer le terrain. C'est obligatoire, c'est la loi. Ils brûlent les déchets pour nettoyer le terrain, et ensuite ils ameublissent le sol.

Si on se rendait compte qu'il faut mille ans, dans des conditions idéales, pour ajouter un pouce au sol dans les forêts. Dans des montagnes comme les nôtres, on pourrait se compter chanceux si on ajoute un pouce tous les 10,000 ans. Je vous dirais franchement que bien souvent, ce n'est pas un pouce, mais tout le sol qui est arraché aux flancs des collines dans de telles conditions. Une grande partie est arrachée lorsqu'on traîne les billes sur le sol.

Il n'y a qu'une façon d'évaluer la destruction, c'est de voir de ses propres yeux. Il y a parfois plus de bois d'œuvre qui jonche le sol qu'il y en a qui est enlevé, parce que les essences de moindre valeur sont abandonnées. J'ai vu des peupliers, des bouleaux et bien d'autres essences d'arbres qui jonchaient le sol de sorte qu'on ne pouvait pas faire deux cents verges en quinze minutes, en raison des déchets.

J'en viens maintenant au numéro 5. Il s'agit ici des pêches. Comme vous le voyez, nous passons d'un domaine à un autre, mais les ressources ne sont pas des domaines qu'on traite séparément. Il faut les traiter comme si

[Texte]

of the nation. That is what we are dealing with.

5. Why is Section 33—"Injury to Fishing Grounds and Pollution of Waters"—of the Fisheries Act, parts 3 and 4, not more stringently enforced in British Columbia? Why are the regulations under Section 34 (A and B) not enforced?

The members of our Society feel that there is ample power incorporated into the Act. Why then, when direct violation of the Act takes place, such as the log drives on the Stelako River, is legislation not enforced? This is a classic case. Much of the population of British Columbia was up in arms over this issue. They were incensed at the selfish and irresponsible approach by the industry and the stupidity of the Provincial Government's Minister of Lands and Forests for permitting the log drive which would cause serious damage to the highly productive spawning beds of the Stelako River. The permitting of these log drives on the Stelako River is tantamount to a criminal act against our natural resources, and the parties responsible for this act should be subject to the full weight of the law.

The average citizen of B. C. never ceases to be amazed at how tough the Department of Fisheries is when dealing with native Indians who net a few salmon to feed themselves and their families or a licensed fisherman who catches fish during a period of closure. These people are taken to court and fines are levied. Yet when dealing with the Provincial Government or industry, the Department of Fisheries is very willing to ignore their contravention of the Act.

That is the feeling of the people of British Columbia, the average people of British Columbia.

Mr. Chairman, S.P.E.C. would like to place before you our position on fisheries:

1. Fisheries in Canada are a public resource. Propagation, regulations and research are paid for by all the people of Canada and the right of all Canadians to participate in this resource should be inviolate.

2. There are pertinent areas requiring departmental study, particularly the waste of fish incidental to drag fishing by B. C. fishermen. Instead of throwing undesirable species of fish and net-caught halibut back into the sea, we ask for research and marketing studies to be made so that all species, including log fish, will be fully utilized. Such waste

[Interprétation]

elles ne formaient qu'un tout au sein de l'écologie de la nation. C'est ce que nous sommes à étudier.

5. Pourquoi les dispositions des paragraphes 3 et 4, article 33 (Détérioration des pêcheries et pollution des eaux) de la Loi sur les pêcheries ne sont-elles pas appliquées sévèrement en Colombie-Britannique? Pourquoi ne met-on pas en vigueur les règlements prévus au titre de l'article 34 (alinéas a) et b))?

Les membres de la Société estiment que la Loi a suffisamment de mordant. Alors, pourquoi ne pas l'invoquer, lorsqu'on enfreint directement ses dispositions, comme dans le cas du flottage des billes sur la rivière Stelako? L'affaire est classique; elle a soulevé l'indignation d'une bonne partie de la province, émue par l'attitude égoïste et irresponsable de l'industrie en cause, mais aussi par la stupidité du ministre provincial des Terres et Forêts, qui n'a pas tenu compte des graves dégâts que les billes causeraient aux frayères très productives de la Stelako. Une telle inconscience équivaut à une atteinte criminelle à nos richesses naturelles; les responsables de cet état de choses devraient être cités en justice.

Les gens de la Colombie-Britannique ne cessent de s'étonner de l'intransigeance qu'affiche le ministère des Pêches envers l'Indien qui capture quelques saumons pour nourrir les siens ou le détenteur d'un permis qui pêche au cours de la période de fermeture. Pour ceux qui sont pris en défaut, c'est la comparution devant les tribunaux et une amende. Pourtant, lorsque c'est le gouvernement provincial ou l'industrie qui est en cause, le même ministère ferme les yeux sur des infractions importantes.

C'est ce que ressentent les gens de la Colombie-Britannique.

Monsieur le président, la Société aimerait vous faire part de son attitude envers les pêches:

1. Au Canada, les pêches tombent dans le domaine public. Tous les Canadiens concourent financièrement à la recherche et aux mesures de conservation; aussi doivent-ils le droit inviolable de jouir de ces ressources.

2. Le Ministère devrait faire enquête sur certaines questions, notamment sur le gaspillage du poisson par les pêcheurs au chalut de la Colombie-Britannique. Pour mettre fin à la pratique de rejeter à la mer les poissons indésirables, dont le flétan, il faudrait faire des recherches et des études du marché en vue de l'utilisation de toutes les espèces, y compris le

[Text]

cannot be justified while two-thirds of the world go to bed hungry.

Mr. Chairman, may I say that over the past years the fishing industry in British Columbia has been profligate in its attitude to the resource. Throughout all of the early years of the salmon fishing industry, for many years only one species of salmon was canned, the Sockeye. The rest were thrown back into the water. How many millions of pounds of Cohoe, Chum, Pink Salmon, Springs were thrown back in, the good Lord himself only knows.

We know that in 1898 when one of the large runs of the salmon took place—if my memory is right on this, and it is in the book *The Salmon People*—over the lower delta of Vancouver and around to Richmond, salmon lay 250 feet deep from the shore out at low tide. They had been caught and thrown back in, because the canneries were so flooded with salmon at that time that they could only take 200 per man, and the rest were thrown back.

That was bad enough in the 1800s, 1898, and it was worse after that. But it is still not justifiable at this time or this point in our history to see fish of any species being thrown back. The halibut, due to a treaty regulation must go back. But if they are not going to live, there has to be a better solution. Seeing the way they are forked back into the sea, there is a very grave doubt in my mind that they will live.

Mr. Whelan: Do you mean 250 feet high or 250 feet wide?

Mr. Hayward: No, 250 feet from the shore to the water, sir. You could walk on them.

Mr. Borrie: Mr. Chairman, I wonder if I might suggest that in fairness to the Committee members and also to the witnesses and in order that we have ample time to ask questions, may I suggest we stick pretty well to the brief. The comments are excellent, and I am not suggesting that they are not.

Mr. Hayward: I am sorry. I have difficulty doing that.

Mr. Borrie: I am thinking of the time limit that we have available, and we would like to put a number of questions to you.

Mr. Hayward: Now moving along to number 3.

3. We request continuous checks on the effluents of coastal and interior pulp mills,

[Interpretation]

chien de mer. Alors que les deux tiers de l'univers souffrent de la faim, un tel gaspillage nous semble intolérable.

Monsieur le président, permettez-moi d'ajouter que, par le passé, l'industrie de la pêche de la Colombie-Britannique a fait preuve de dissipation à l'égard de cette ressource. Au cours des premières années de l'industrie de la pêche du saumon, pendant plusieurs années, une seule espèce de saumon, le Sockeye, était mis en conserve. Le reste était rejeté à la mer. Combien de millions de livres de coho, de saumon-chien, de saumon rose et de saumon guinnat ont été rejetées, Dieu seul le sait.

Nous savons qu'en 1898, lorsqu'une des plus grosses remontées du saumon a eu lieu, si je me souviens bien, et c'est ce qu'on relève dans le livre intitulé *The Salmon People*, près de Vancouver et de Richmond, à la marée basse, il y avait du saumon 250 pieds d'épais le long du rivage. Il avait été pris et rejeté parce que les conserveries étaient tellement remplies de saumons qu'elles ne pouvaient prendre que 200 livres par homme, et tout le reste était rejeté.

C'était déjà mauvais en 1880 et 1898, mais c'était même pire après. Mais cela ne justifie pas que de nos jours on doive rejeter certaines espèces à la mer. L'éperlan doit être rejeté d'après le traité. Mais s'ils vont mourir, il faudrait trouver une meilleure solution. Lorsqu'on voit comment on les rejette à la mer avec une fourche, je doute fort que ces poissons puissent survivre.

M. Whelan: Voulez-vous dire 250 pieds d'épais ou de large?

M. Hayward: Je veux dire 250 pieds du rivage à la mer. On pouvait marcher sur eux.

M. Borrie: Je me demande, monsieur le président, si je peux proposer, en toute justice pour les membres du Comité et pour les témoins, afin que nous ayons tout le temps voulu pour poser des questions, qu'on s'en tienne au mémoire. Vos commentaires sont excellents, je ne dis pas le contraire.

M. Hayward: Je m'excuse. C'est une habitude chez moi.

M. Borrie: Je pense au temps que nous pouvons vous consacrer, et nous avons bon nombre de questions à vous poser.

M. Hayward: Pour passer au paragraphe 3.

3. Il faudrait continuellement analyser les eaux résiduaires émanant de diverses sources

[Texte]

mines, sawmills, plywood plants, booming grounds, industrial plants, hydro reservoirs, and the sewage disposal systems of all population centres. With regard to this, we insist on immediate checks and that the findings be published by the Department of Fisheries to allay public suspicion that indiscriminate pollution of our waterways is being condoned by both the federal and provincial governments. The following areas in particular are in urgent need of checking:

This was sent to us, for your information, by one of our people who is in this line of endeavour. 1. Prince George—Northwood Pulp Mill; this has been...

Mr. Nowlan: Mr. Chairman.

The Chairman: Mr. Nowlan.

Mr. Nowlan: I do not think it is necessary to read all those.

Mr. Hayward: Very well. However, on Okanagan Lakes, agricultural pesticides must be incorporated in this, as well as sewage effluent and the effluent from packing houses and wineries.

1. Thermal Pollution

S.P.E.C. commends the Fisheries Association of B.C. for the article on Thermal Pollution in "Fish and Facts" of March 1969. The article re the B.C. Hydro Thermal plant, situated on Burrard Inlet, confirms our suspicion that thermal pollution has possible adverse effects on salmon runs and fry into and out of Indian Arm and of the water ecology of the area. Because of the harmful effects of thermal pollution on the fish, S.P.E.C. requests the Department of Fisheries to institute laws in Canada making it mandatory to install closed circuit circulating systems with evaporative cooling towers in all thermal generating plants.

2. Burrard Inlet Pollution

We further request the Department of Fisheries to launch a study of pollution in Burrard Inlet either in co-operation with S.P.E.C. or on its own. This area suffers from a multitude of pollution factors such as waste from chemical plants, bulk loading spillage of sulphur, coal and wood chips, oil refineries spillage and effluents, as well as industrial pollution from booming grounds, lumber mills, hip loading, shipping, ship building and numerous port industries and facilities, sewage outfalls; all of which contribute to a

[Interprétation]

sur la côte et dans l'arrière-pays: usines à pâtes, mines, scieries, fabriques de contre-plaques, estacades, établissements industriels, bassins de retenue et conduites d'évacuation des égouts dans tous les centres habités. A ce propos, nous insistons pour que le Ministère pratique immédiatement de tels essais et en publie les résultats, afin de convaincre le grand public que le gouvernement fédéral et la province n'encouragent pas vraiment la pollution irréféchie de nos cours d'eau. Voici une liste d'endroits où pareils essais revêtent un caractère urgent: Cela nous parvient, à titre de renseignement, de l'un de nos gens, qui est spécialiste dans ce domaine. 1—Usines de pâtes de Prince George-Northwood; cela a été...

M. Nowlan: Monsieur le président.

Le président: Monsieur Nowlan.

M. Nowlan: Je ne crois pas qu'il soit nécessaire de lire toute cette nomenclature.

M. Hayward: Très bien. Toutefois, sur les lacs Okanagan, on doit aussi inclure dans cette liste les insecticides utilisés en agriculture ainsi que les eaux usées et l'effluent des abattoirs et des fabriques de vin.

1. Pollution d'origine thermique

La Société tient à féliciter l'Association des pêches de la Colombie-Britannique de l'article sur la pollution d'origine thermique qu'elle a fait paraître dans la revue *Fish and Facts* en mars 1969. Cet article au sujet de la centrale thermique sur l'inlet Burrard (exploitée par la B.C. Hydro) confirme nos soupçons quant aux conséquences défavorables de ces installations pour la montée et les migrations du saumon, ainsi que pour l'écologie des eaux du bras Indian. Vu l'effet nuisible des polluants thermiques sur le poisson, la Société prie le Ministère d'instituer des mesures législatives en vertu desquelles les centrales thermiques au Canada auraient à prévoir des conduites de circulation à circuit fermé, munies d'un système de refroidissement par évaporation.

2. Pollution de l'inlet Burrard

Nous demandons aussi au ministère des Pêches, seul ou de concert avec la Société, d'étudier la pollution de l'inlet Burrard. Ses eaux sont contaminées par une multitude de facteurs: déchets des usines chimiques, pertes de soufre lors du chargement en vrac, copeaux, poussières de charbon, pertes et déchets des raffineries de pétrole, polluants industriels (estacades, fabriques de bois d'œuvre, chargement de navires, trafic maritime, chantiers navals et nombre d'autres industries et installations portuaires), déver-

[Text]

greater or lesser degree to the Inlet's pollution.

With reference to the aforementioned I have before me two letters from the Department of Fisheries dated December 17, 1968 and November 5, 1968. You might wish to read these. They are toxicity letters to fishermen for their information and S.P.E.C. wants to know from your Committee or from the Department the reason for this extended period.

Mr. Chairman, if this is not a natural phenomenon, who or what is causing the toxicity? If it is a sewage or industrial problem due to the discharge of effluent into the water, who are the culprits and why have they not been prosecuted? If the Department has the necessary information but cannot act, let the public have the information so they can take action.

3. Fraser River Pollution

Mr. Chairman and gentlemen, this Society now intends to place before you what we consider to be British Columbia's most serious water pollution problem—the Fraser River system. While I am sure you are familiar with the importance of the River to British Columbia and to Canada let me itemize some of the facts in brief form:

- (a) About one-third of B. C. is drained by the Fraser River system.
- (b) Over two-thirds of our total population lives within the area drained by the Fraser River system.
- (c) It is the greatest salmon fishing and spawning river in North America.

Despite the importance of this River to British Columbia, there has been savage abuse of it by industries, condoned by both provincial and federal governments. (The blasting of rock into the river by the engineers of the Canadian Great Northern Railway while building a bridge across the Fraser in 1913 cost B. C. and Canada an estimated \$1,000,000,000 loss in salmon production between the years 1913 and 1960.) Three large pulp mills have been established at Prince George and one at Kamloops. Others are proposed for Quesnel and Ashcroft. The effluent of all these mills does and will discharge into the Fraser River system. Logging is progressively denuding much of the Fraser River drainage basin, resulting in increased siltation due to heavy erosion. At the Seventeenth B. C. Natural Resource Conference in 1967 on "Water a Fundamental Resource", it was stated that a sediment survey by the Water

[Interpretation]

soirs d'égouts. Tous contribuent dans une mesure variable à la pollution de l'inlet.

A ce propos, j'ai sous les yeux deux lettres du ministère des Pêches en date, l'une du 17 décembre 1968, l'autre du 5 novembre 1968. Vous voudrez peut-être les lire. Ce sont des lettres sur la toxicité adressées aux pêcheurs à titre de renseignement. Ce que la Société veut savoir du Comité ou du ministre, ce sont les raisons de cette prolongation.

Monsieur le président, s'il ne s'agit pas d'un phénomène naturel, quelles sont les causes de la toxicité? Le déversement d'égouts ou de déchets industriels dans les eaux de l'inlet? En ce cas, qui en sont responsables? Pourquoi ne les a-t-on pas traduits en justice? Si le Ministère tient ces renseignements, mais ne peut agir, qu'il les dévoile afin que le grand public puisse prendre les mesures voulues.

3. Pollution du fleuve Fraser

Monsieur le président, messieurs, la Société tient maintenant à vous signaler ce qu'elle considère le plus grave problème en Colombie-Britannique, soit la pollution du bassin du Fraser. Vous êtes conscients, j'en suis sûr, de l'importance qu'a ce cours d'eau pour la province et le pays tout entier; néanmoins, permettez-moi de vous rappeler brièvement certains faits:

- a) Le bassin du Fraser arrose environ le tiers de la province.
- b) Plus des deux tiers des habitants de la province vivent dans le territoire arrosé par ce bassin.
- c) C'est le cours d'eau par excellence, en Amérique du Nord, pour la pêche et la reproduction du saumon.

Malgré l'importance du Fraser pour la Colombie-Britannique, les industries locales se sont livrées à des abus révoltants, sous l'œil indifférent du gouvernement fédéral et de la province. Ainsi, on estime à un milliard de dollars les pertes de saumon, de 1913 à 1960, attribuables au déchargement, dans ce cours d'eau, de la roche dynamitée par les ingénieurs de la Canadian Great Northern Railway, lors de l'aménagement d'un pont sur le Fraser en 1913. Trois grandes usines à pâtes se sont établies à Prince-George, une autre à Kamloops. Il est question d'en aménager d'autres à Quesnel et à Ashcroft. Les déchets de ces usines vont ou iront se perdre dans le bassin du Fraser. Par ailleurs, à cause de l'exploitation forestière intense dans cette région, l'érosion des sols entraîne l'envasement progressif du fleuve. Lors de la 17^e Conférence sur les richesses naturelles de la Colombie-Britannique, qui s'est penchée en

[Texte]

Resources Branch at Mission revealed that up to 500,000 tons of silt a day was being carried by the river. Lumber, plywood, chip production and booming grounds that are heavily concentrated on the Fraser are a continuous source of debris and pollution. Mining in areas such as the Highland Valley where low-grade copper and molybdenum ore will be milled in quantities of over a 100,000 tons per day will require a minimum at the present rate of 200,000 tons of water per day.

S.P.E.C. cannot emphasize too strongly that secondary treatment of sewage should be the minimal requirement on the Fraser River system to assure dissolved oxygen concentrations of five milligrams per litre throughout the urbanized and industrialized mainstream of the river. (It is now recognized that secondary treatment may not be the proper answer to sewage disposal and that a more sophisticated treatment will be necessary. At this time, however, secondary treatment is the method generally recommended.) An oxygen block in the Delta area could seriously delay a salmon run. We know that 10 per cent of the pollution necessary to kill a salmon is all that is needed to prevent it from spawning.

At this point we would like to quote from the August 18, 1967 issue of "The Fisherman"

BACTERIAL COUNT HIGH—FRASER PRESENTS HEALTH HAZARD

The strong health hazard posed by pollution of the Fraser River was again emphasized last week by J. W. Maynard, senior public health official with the Boundary Health Unit, who reports that tests at nine sampling stations operated by the Unit indicate that no part of the lower Fraser is safe any longer for swimming or aquatic sports.

Tests show that the bacterial count at all locations ranges from 4,000 coliforms at Barnston Island to an average of one million coliforms per 100 litres of water at Annacis Island. The coliform is a standard measure used to determine the extent of water pollution.

The Unit's jurisdiction covers the areas of Cloverdale, Ladner, North Surrey, Surrey, and White Rock. Its testing stations send in continuous reports presenting one of the few realistic pictures of

[Interprétation]

1967 sur l'eau, ressource fondamentale, on a dit que le Fraser pouvait charrier jusqu'à 500,000 tonnes de vase par jour, d'après une étude faite à Mission par la Direction des ressources hydrauliques. Les fabriques de bois d'œuvre, de contre-plaqué ou de copeaux, ainsi que les estacades, fort nombreuses sur le fleuve, sont des sources continues de débris et de polluants. Dans des régions telles que la vallée Highland, où l'on extrait chaque jour plus de 100,000 tonnes de minerai de molybdène et de cuivre de basse qualité, l'exploitation minière exigera, au bas mot, quelque 200,000 tonnes d'eau par jour.

La Société ne saurait trop insister pour que s'effectue le traitement secondaire des égouts, au moins, dans la région du bassin, afin d'assurer une teneur en oxygène dissout de cinq milligrammes au litre dans les eaux baignant les centres urbanisés et industrialisés. On sait maintenant que le traitement secondaire offre certaines lacunes et que des méthodes plus rigoureuses s'imposent. Néanmoins, cette mesure se recommande toujours dans la plupart des cas. Une pénurie d'oxygène dans la région du Delta pourrait fortement gêner la montaison du saumon. Il est établi que le dixième de la pollution fatale au saumon suffit à l'empêcher de frayer.

Nous aimerions maintenant citer un article paru le 18 août 1967 dans la revue *The Fisherman*.

LA POLLUTION DU FRASER ATTEINT UN POINT DANGEREUX

La pollution du Fraser pose de graves risques pour la santé. C'est ce qu'a réaffirmé, la semaine dernière, un fonctionnaire supérieur du Bureau de l'hygiène, M. J. W. Maynard, qui a fait état des essais pratiqués par les neuf sections d'échantillonnage du Bureau. Selon lui, aucune partie du cours inférieur du Fraser n'est désormais propice à la natation ou aux sports nautiques.

Au terme des dénombrements bactériens, on a relevé 4,000 coliformes à l'île Barnston et 1,000,000 coliformes par 100 litres d'eau, en moyenne, à l'île Annacis. Le coliforme s'emploie couramment comme étalon pour quantifier la pollution de l'eau.

Le Bureau englobe les régions de Cloverdale, Ladner, North Surrey, Surrey et White Rock. Les rapports que lui transmettent périodiquement ses sections d'échantillonnage donnent une idée exacte,

[Text]

what pollution is doing to rivers and, consequently, to public health standards.

The Unit's bacteria level tests were conducted at:—

Barnston Island (coliform count of 4,000)
 Port Mann (15,000)
 South side of Pattullo Bridge (20—30,000)
 Acorn Lumber (8,000)
 Annacis Island (one million)
 Glenrose Cannery (12,000)
 Dow Chemicals (12,000)
 Pacific Coast Packers (20,000)
 Westham Island (8,000)

Health authorities say that a standard for safe swimming should never exceed 1,000 coliforms and preferably should be considerably lower.

Maynard told "THE FISHERMAN" that water quality standard suggested by the U.S.—Canadian Pacific Northwest Pollution Control Council sets a pollution level of not more than 2,000 coliforms as generally 'safe' for purposes other than swimming.

That a study be engaged by the various federal departments in conjunction with the provincial government to enable the Government of Canada to set standards for water and air pollution and to enact adequate pollution control legislation that will be effective and enforced.

This Society agrees with the statement made by Mr. Jack Davis that he was "pleased the forestry company (MacMillan Bloedel) came up to the Department of Fisheries standards for its Alberni mill". He said that any mill on any body of water will have to meet these standards on two main counts—biological oxygen demand and toxicity.

I trust that that is exactly what you will see is done.

The Chairman: Mr. Hayward, I thank you very much for your presentation and I apologize for restricting the time of the presentation. But as you know, we have a very heavy and almost overloaded schedule that we have to deal with in the time allotted to us. We are trying to get as much information as possible in the little time that we have at hand.

Now we will go to questions.

Mr. Hayward: We have this one on forestry, do you wish that later?

[Interpretation]

chose rare aujourd'hui, des effets de la pollution, eu égard aux normes d'hygiène du secteur public.

Les essais se sont déroulés aux endroits suivants:

Île Barnston (4,000 coliformes)
 Port Mann (15,000)
 Côté sud du pont Pattullo (20,000--30,000)
 Acorn Lumber (8,000)
 Île Annacis (1,000,000)
 Conserverie Glenrose (12,000)
 Dow Chemicals (12,000)
 Pacific Coast Packers (20,000)
 Île Westham (8,000)

Selon les autorités médicales, les eaux réservées à la natation ne doivent jamais renfermer plus de 1,000 coliformes et, de préférence, doivent en contenir beaucoup moins.

M. Maynard a fait remarquer que pour toute autre activité sur l'eau, à part la natation, le Conseil canado-américain de la lutte contre la pollution dans le nord-ouest du Pacifique propose pour norme de sécurité le chiffre maximal de 2,000 coliformes.

Que les divers ministères fédéraux fassent des études, de concert avec la province, afin de permettre au gouvernement du Canada d'établir des normes concernant la pollution de l'air et de l'eau et d'adopter des mesures législatives de suppression qui seront applicables et mises en vigueur.

La Société partage l'avis de M. Jack Davis, lorsque celui-ci s'est déclaré heureux que la société d'exploitation forestière (MacMillan Bloedel) se soit conformée aux exigences du ministère des Pêches pour l'aménagement de son usine d'Alberni. Le ministre a ajouté que tout établissement situé en bordure d'une étendue d'eau devra désormais répondre à ces exigences, principalement sous deux aspects: la demande biologique d'oxygène et la toxicité.

Et, j'espère que c'est bientôt ce qui se fera.

Le président: Je tiens à vous remercier beaucoup pour votre mémoire et je m'excuse de vous avoir imposé certaines restrictions. Mais, comme vous le savez, nous avons un programme surchargé et que nous devons tirer le maximum de renseignements du peu de temps dont nous disposons. Nous allons maintenant passer aux questions.

M. Hayward: Nous avons une question sur les forêts, voulez-vous qu'on la pose plus tard?

[Texte]

The Chairman: Should we hear this one first?

Mr. McBride: Are they all the same thing, Mr. Chairman? Are they on the same subject or are they two different subjects?

Mr. Hayward: That submission was on water and fisheries. This is mainly on forestry.

Mr. McBride: I would suggest, if Mr. Hayward is to proceed, that he proceed immediately.

The Chairman: Mr. Hayward.

Mr. Hayward: Thank you, Mr. Chairman.

Mr. Chairman, Messrs. Commissioners, Ladies and Gentlemen:

It is our understanding that this Committee on Forestry is responsible only for federally controlled forests such as:

1. National Parks
2. E. and N. Railway land on Vancouver Island
3. Territorial forests.

Because the time element is an important factor in determining the quantity and quality of a brief we were unable to research into the matter of federal forestry in a depth study. We are, however, only too grateful to be able to endorse the valuable information contained in Pat Carney's article in the April 16, 1969 issue of "The Vancouver Sun" which you will find attached to your copy.

Literally this is our case. Pat Carney says there that there is a minimal amount of timberland in the Yukon which should be logged. The federal government is allowed four licences; we want to know what research is done on those licences, and what research is being done? How are you correlating it with the rest of the ecology? Why is there only one prester in the whole of the territory withangers for every 10,000 square miles? Why as practically all of the Yukon under the trusteeship of the Government of Canada been burned over in the last 100 years? Why there not more work being done in the Yukon. If we are going to take money out of here and we are going to allow people to use then we must protect it and look after it. There is not going to be any silviculture. There is not going to be any replanting of trees in this area. I ask you, Mr. Chairman, can we condone such conditions under the federal government jurisdiction?

[Interprétation]

Le président: Devrions-nous écouter celle-ci tout d'abord?

M. McBride: Sont-elles toutes sur le même sujet ou sur des sujets différents?

M. Hayward: Ce mémoire était au sujet des eaux et de la pêche. Celle-ci se rapporte principalement à l'exploitation forestière.

M. McBride: A mon avis, commençons tout de suite.

Le président: Monsieur Hayward.

M. Hayward: Merci monsieur le président.

Monsieur le Président, messieurs les Commissaires, mesdames et messieurs,

Que nous sachions, ce Comité des forêts n'est responsable que des forêts administrées par le gouvernement fédéral à savoir:

- 1) les parcs nationaux
- 2) les terrains ferroviaires E et N de l'île de Vancouver
- 3) les forêts territoriales.

Vu que le temps est un facteur important dont dépend le contenu et la qualité d'un mémoire, nous n'avons pas pu faire une étude en profondeur de la question des forêts fédérales. Nous sommes toutefois, trop heureux de pouvoir adhérer aux précieux renseignements contenus dans l'article de Pat Carney publié dans le numéro du 16 avril 1969, du Sun de Vancouver, que vous trouverez jointe à votre exemplaire du mémoire. En fait, c'est exactement notre cas. Pat Carney dit qu'une certaine quantité de bois dans le Yukon devrait être exploitée, que le gouvernement possède quatre permis; nous voulons savoir quelles recherches ont été faites, et quelles recherches sont faites en vertu de ces permis? Comment cela se rattache-t-il aux autres données d'écologie? Pourquoi n'y a-t-il qu'un seul forestier dans tout ce territoire avec des gardes forestiers par 10,000 milles carrés? Pourquoi, presque tout le Territoire du Yukon a-t-il été brûlé au cours des cent dernières années pour l'administration du gouvernement fédéral? Pourquoi n'y a-t-il pas plus de travail de fait dans le Yukon? Si nous voulons l'exploiter et permettre aux gens d'utiliser ses ressources nous devons alors protéger ce territoire et en assurer la surveillance. Il n'y a pas de projet de reboisement ou de sylviculture pour le moment dans cette région. Je vous demande, monsieur le président, la juridiction fédérale nous permet-elle de nous opposer à ce genre d'exploitation?

[Text]

May I now proceed with the brief.

Our Society considers that the Yukon forests are being neglected and exploited by the federal government. We wish to underline certain points made by Miss Carney:

1. No provision for reforestation.
2. No adequate fire control.
3. No adequate forestry staff in relation to the area of 51,968,000 acres.
4. Permission to export logs in an area that has only 7 per cent to 10 per cent of usable lumber.

The Society for Pollution and Environmental Control is unalterably opposed to the export of logs from lands under control of the federal government. This concern is not only felt by members of our Society but also by the majority of the people of British Columbia. We attribute this type of stupid and short-sighted policy to provincial governments but we do expect a much more mature policy in the handling of our forest resources by our federal government.

Canadians must be ashamed of this robber-baron attitude of the federal government in its administration of a territory under its trusteeship.

In closing, Mr. Chairman, S.P.E.C. has this to say to the Commission: "Defer not to tomorrow to be wise for tomorrow's sun may never rise".

Thank you, Mr. Chairman.

The Chairman: Thank you. We will go immediately to the first question. Mr. Borrie.

Mr. Borrie: Mr. Chairman, could the witness tell me when the S.P.E.C. group was formed?

The Chairman: Mr. Hagell.

Mr. Hagell: S.P.E.C. was formed in the month of January and we held the first organizational meeting about the last part of January.

Mr. Borrie: Of this year?

Mr. Hagell: Of this year.

Mr. Borrie: Your membership is comprised of mainly lower mainland people, is this correct?

Mr. Hagell: Our membership is coming in from all over the province.

Mr. Borrie: You do have members in the interior?

[Interpretation]

Je vous présente le mémoire.

Notre Société estime que le gouvernement fédéral exploite sans ménagement les forêts du Yukon. Nous voulons relever certains aspects énoncés par mademoiselle Carney:

- 1) aucun projet de reboisement
- 2) protection insuffisante contre les incendies
- 3) insuffisance de personnel forestier dans une région de 51,968,000 acres.
- 4) on permet l'exploitation du bois.

Notre Société s'oppose catégoriquement à l'exploitation du bois provenant des terres relevant du gouvernement fédéral. Cette attitude n'est pas propre aux membres de notre Société mais elle est partagée par la majorité des résidents de la Colombie-Britannique. C'est aux gouvernements provinciaux que nous attribuons cette politique stupide et à courte vue, mais nous nous attendons de la part du gouvernement fédéral à une politique plus intelligente de gestion des ressources forestières.

C'est une honte pour les Canadiens que le gouvernement fédéral se comporte comme un déprédateur dans l'administration d'un territoire placé sous sa tutelle.

En conclusion, monsieur le président, notre Société déclare à la Commission: «N'attendez pas à demain pour être sage, car ce sera peut-être trop tard.»

Merci, monsieur le président.

Le président: Merci. Nous allons passer immédiatement à la première question.

M. Borrie: Monsieur le président, je me demande si le témoin pourrait nous dire quand la S.P.E.C. a-t-elle été établie.

Le président: M. Hagell.

M. Hagell: Oui, monsieur, la S.P.E.C. a été établie en janvier et nous avons tenu notre première réunion vers la fin du même mois.

M. Borrie: De cette année?

M. Hagell: De cette année.

M. Borrie: Et vos membres résident surtout dans la partie sud de la province.

M. Hagell: Nos membres viennent de tous les coins de la province.

M. Borrie: Vous avez des membres de l'intérieur de la province?

[Texte]

Mr. Hagell: We have members in the interior, we have members on Vancouver Island. We find that there is a very great concern in the province over pollution in general.

Mr. Borrie: You are probably aware that pollution problems come under three departments federally and three people seem to be speaking for it provincially. How would you like to see the placement of pollution controlled? In your brief you ask for co-operation between all levels of government, but who do you think should be the final authority? Should there be one body?

Mr. Hagell: You mean between the federal and provincial government?

Mr. Borrie: And municipal.

Mr. Hagell: I think leadership must come from the federal government.

Let me quote a case in the State of Washington: "We have a pact with the unborn." This case was a matter for the federal government of the United States and was called, "The Pact With The Unborn". A man who owned timberlands in his own right—not under the Crown as in British Columbia, but in his own right—was cutting timber but not replanting. The State of Washington and the federal government told him to replant. He refused. He said it was an added cost and had nothing to do with him. He was not worried about the future.

The case was taken to court and he was told: "You have a pact with the unborn. You will plant trees as prescribed. Nobody in this generation has the right to deny children of the next generation anything excepting the indebtedness of the country."

Mr. Borrie: Yesterday we had a brief suggesting that a pollution committee or commission should be formed which would be non-political and in which civil servants would not be involved. Do you agree with this?

Mr. Hagell: Mr. Chairman, I would have to speak for myself because S.P.E.C. has not given this consideration. Let me say this, that in the final analysis the decision has to be political. We are an anti-pollution organization but we are not just interested in pollution: we are interested in the environment because this involves the total ecology of the nation, and if we do not look at things in this light, as a whole and not in unilateral fashion, no matter what type of set-up we have, we will achieve nothing.

[Interprétation]

M. Hagell: Nous avons des membres de l'intérieur et aussi de l'île de Vancouver. Cette province se préoccupe beaucoup de la pollution en général.

M. Borrie: Vous savez peut-être que le problème de la pollution relève de la compétence de trois ministères au fédéral et de plusieurs personnes dans la province. Comment voulez-vous avoir un contrôle sur la pollution. Vous demandez qu'il y ait une collaboration, entre les divers paliers de gouvernement mais qui, à votre avis, devrait en décider en définitive? Devrait-il y avoir un seul organisme?

M. Hagell: Vous voulez dire entre les gouvernements provinciaux et le gouvernement fédéral.

M. Borrie: Et municipal.

M. Hagell: Je crois que le gouvernement fédéral doit donner les directives. Je vais vous citer un cas qui s'est produit dans l'État de Washington et fait maintenant partie des annales juridiques sous le titre «The Pact With the Unborn». Un homme possédait des forêts en toute propriété non pas des terres de la Couronne comme en Colombie-Britannique. Il abattait les arbres mais ne faisait aucun reboisement. L'État de Washington et le gouvernement lui ont demandé de reboiser. Il a refusé de le faire en prétendant que c'était des frais supplémentaires et que cela ne le regardait pas, qu'il ne se préoccupait pas de l'avenir.

La cause a été soumise au tribunal et on lui a dit: «Vous avez un devoir à remplir, vous êtes responsable devant les générations futures et vous reboiserez comme nous vous l'ordonnons. Personne au monde n'a le droit de priver les générations futures de leur héritage en ne leur laissant que les dettes à payer.»

M. Borrie: Hier, il y a eu une proposition pour que soit établi un comité de pollution qui serait apolitique et où il n'y aurait pas de fonctionnaires impliqués. Seriez-vous d'accord?

M. Hagell: Monsieur le président, je peux parler seulement en mon nom parce que notre organisme n'a pas étudié la question. En dernière analyse, c'est une décision politique. Évidemment, nous combattons la pollution, mais nous ne nous intéressons pas seulement à la pollution mais aussi au milieu ambiant, parce qu'il s'agit de l'écologie générale de la nation, si nous ne voyons pas des choses dans leur ensemble, mais de façon unilatérale, nous n'arriverons jamais à rien quel que soit l'organisation établie.

[Text]

Mr. Borrie: Thank you, Mr. Chairman. My time is up and I will come back on the second round.

The Chairman: Mr. McBride.

Mr. McBride: Mr. Chairman, I want to congratulate these people for their seriousness and concern as citizens of our nation in making themselves heard.

Are you considered a bunch of "kooks" by some people in British Columbia? I am utterly serious when I ask this question.

Mr. Hayward: When I initially became involved in national resources, yes, we were considered "kooks". When I first mentioned the word "pollution" the vast majority of people did not even know what it meant, at least not in the labour field, anyway, where I came from. At that time I was trying to tell them to save water and the stuff was running down the back of their necks every day, like it has been doing in the last few days here, and naturally they were not interested. However, that has passed in British Columbia. I can say to you honestly that in my opinion British Columbia has more, per capita, interested in conservation, not just of a resource but as a way of life, than any other area in Canada.

Mr. McBride: In the briefs yesterday, and again in your brief today which I had the opportunity to read before you presented it, is it suggested that the Fraser River could be described as an open sewer. Would you agree with that?

Mr. Hayward: That is correct, absolutely. To explain that, under our archaic water act in British Columbia, which was introduced in 1886 and amended in the 1930's, recreation and fish have no place in the water ecology of British Columbia: they do not come under the Act at all.

Mr. McBride: Following up on this sewer-like river, a brief yesterday that stated that there was a definite threat to the health of fishermen because of the condition of the water but no threat to the health of the salmon fish, that the fish were not being harmed; but your brief says they are.

Mr. Hayward: Definitely. Anything that reduces the free oxygen content of the water or changes the temperature of water is a definite threat to the salmon.

Mr. McBride: Because of the decay action of the effluent?

Mr. Hayward: That is right. In other words, the biochemical oxygen demand is

[Interpretation]

M. Borrie: Merci, monsieur le président. Mon temps est terminé. Je reprendrai au second tour.

Le président: Monsieur McBride.

M. McBride: Je tiens à féliciter ces messieurs de la façon dont ils se préoccupent de ces questions à titre de citoyens et aussi d'avoir bien voulu comparaître ici. Dites-moi, est-ce que quelques personnes en Colombie-Britannique vous considèrent disons comme un groupe d'originaux? Je suis très sérieux en vous posant cette question.

M. Hayward: Quand j'ai commencé à m'occuper des ressources nationales oui bien sûr. Au début, quand je parlais de pollution, la majorité des gens ne savaient même pas de quoi il s'agissait, tout au moins dans le milieu ouvrier d'où je sors. A ce moment-là j'es-sayais de les convaincre de sauver nos ressources en eau potable mais les gens ne s'y intéressaient guère. Ce moment est passé. Je peux vous dire très sérieusement qu'en Colombie-Britannique il y a plus de gens qui s'intéressent de près à la conservation, non pas seulement comme simple ressource à préserver, mais aussi pour une certaine façon de concevoir la vie, que dans toutes les autres régions du Canada.

M. McBride: Hier, dans le mémoire et encore aujourd'hui dans le vôtre, j'ai lu, on a dit que le Fraser pouvait être décrit comme un égout à ciel ouvert. Qu'en pensez-vous?

M. Hayward: Oui, c'est absolument exact. Pour vous l'expliquer, en vertu de notre loi qui est tout à fait désuète, elle date de 1886, je crois et elle a été modifiée vers les années 1930, les ressources récréatives et la pêche sportive n'entrent pas en ligne de compte dans l'écologie de la Colombie-Britannique. Rien n'est prévu par la loi.

M. McBride: Et pour ce fleuve-égout le mémoire d'hier précisait que la santé des pêcheurs était menacée mais qu'il n'y avait aucune menace pour les saumons, que les poissons n'étaient pas menacés. Mais dans votre mémoire vous réfutez ce point de vue.

M. Hayward: Tout ce qui contribue à diminuer le contenu d'oxygène ou à modifier la température de l'eau affecte adversément les saumons.

M. McBride: A cause des égouts qui se déversent dans le fleuve?

M. Hayward: Oui. Tous ces déchets absorbent l'oxygène disponible. En Oregon, par

[Texte]

such in a polluted river that it absorbs the majority of free oxygen available. An example of this is the Willamette River in Oregon where a complete study was done. At Portland where the Willamette meets the Columbia, the free oxygen available at that time and throughout the summer season is less than 3 milligrams per litre, and at 3 milligrams per litre salmon will not go up a stream.

Mr. McBride: What do you hope to accomplish by appearing before this Committee. Briefly, what is your aim today?

Mr. Hayward: That the next generation of Canadians...

Mr. McBride: No, but what do you want us to do? I am being serious.

Mr. Hayward: In all seriousness, what I want you to do is make sure there is no unilateral development of any resource under your jurisdiction, and that all disciplines are consulted.

Mr. McBride: Thank you, Mr. Chairman.

The Chairman: Mr. Rose.

Mr. Rose: Mr. Chairman, to Mr. Hayward and the other committee members. You ask some questions on page 2 and I know you are aware that this Committee stands here to ask questions rather than answer them, so in a sense, these are really recommendations, are they not? Or rhetorical questions?

Mr. Hayward: Mr. Chairman, unfortunately I started writing this brief last Thursday and had no prior information other than about a week before that of your sitting. This is part of the problem, but not to our organization. We are young, we are all volunteers, so everything has to be done by Joe.

The woman who typed this brief and her husband, who had the facilities to mimeograph it—the machine broke down last night about midnight I understand—had three children sick with asthma, which could have been caused by the pollution factor, but they still did the work. We wanted information. As a society we came here speaking only of territorial force. I sat here and listened to discussions on provincial force and I did not agree with statements made by the industry by any manner or means—and I think I can disprove some of them—but we did not come here with a brief prepared to refute some of that—not that we are not willing to do so.

[Interprétation]

exemple, on a fait une étude très poussée sur l'état des eaux de la Willamette River. Portland où la Willamette rencontre le Columbia et pendant la saison d'été le taux d'oxygène est de moins de trois milligrammes au litre. Quand ce taux-là est atteint le saumon ne remonte pas le fleuve.

M. McBride: Quel est votre objectif en venant témoigner devant nous? Quel est votre objectif en bref? Où voulez-vous en venir?

M. Hayward: Que la génération prochaine de Canadiens...

M. McBride: Oui, mais qu'est-ce que vous voulez que nous fassions en fait?

M. Hayward: Je voudrais que vous vous assuriez qu'il n'y aura pas d'exploitation unilatérale des ressources qui relèvent de votre autorité et nous voudrions qu'il y ait consultation de toutes les parties en cause.

M. McBride: Merci, monsieur le président.

Le président: Monsieur Rose.

M. Rose: Monsieur le président, monsieur Hayward, et messieurs les membres du Comité, vous pouvez poser des questions au sujet de la page 2. Vous savez que le Comité est ici pour poser des questions plutôt que pour y répondre. Il s'agit donc surtout de recommandations, n'est-ce pas? Ou de questions de rhétorique?

M. Hayward: Monsieur le président, malheureusement, je n'ai commencé à préparer ce mémoire que jeudi dernier et nous n'avions pas d'autres renseignements en notre possession avant d'avoir appris une semaine avant que vous deviez vous réunir. Notre organisme a aussi d'autres problèmes. Nous sommes jeunes et tous bénévoles, tout doit être fait par nos membres.

La personne qui a dactylographié le mémoire et son mari qui devait en faire des copies ont eu des ennuis avec l'appareil qui est tombé en panne hier soir. Ses trois enfants sont malades, ils ont de l'asthme. C'est une maladie qui peut provenir de la pollution. Néanmoins, ils ont fait le travail, il nous fallait des renseignements. En tant qu'association nous ne parlons que de la juridiction provinciale. J'ai écouté des discussions sur les juridictions provinciales. Je ne suis pas d'accord avec les déclarations faites par l'industrie. Et bien au contraire, je crois, mais je n'ai pas voulu réfuter ce qu'ils ont dit.

[Text]

Mr. Rose: I think, sir, that the Committee will take some of these things under advisement and consider them when making their recommendations and writing their report. Since two of the members come from Coquitlam—we heard yesterday that Coquitlam along with many other municipalities, Port Moody and New Westminster, do not have any primary treatments available—I am certain at least these two have a personal, if not intimate interest, in effluent going into the Fraser River system. I was wondering if S.P.E.C. had any recommendations regarding how municipalities might be assisted in providing this kind of primary treatment in order to clean up the waters of this open sewer.

Mr. Hayward: Under present British Columbia's pollution control laws we are supposed to have primary treatment plants by 1975. The position that I have always taken and I think that S.P.E.C. will accept is that primary treatment is 20 years late, secondary treatment is absolutely essential at this time, financing must be preferably in the same manner and we have been financing housing for our senior citizens. The municipalities themselves cannot sell bonds—let us be honest about it—to build the plants. Under those circumstances then when the son is in trouble the father does something about it. If he does not he has not a family, he is not a father, he is a delinquent. The federal government is father to this nation and as such must come up with answers and finances so pollution can be controlled.

Mr. Rose: You are suggesting federal aid then for the development of pollution control.

Mr. Hayward: There is federal aid now but we cannot sell our bonds—so we need more than the type of federal aid presently available to activate this program.

Mr. Rose: This forgiveness provision is running out in March 1970.

Mr. Hayward: That eliminates it then.

Mr. Rose: You made quite a point in your brief that the authorities discriminate against small sins, such as fishing out of season, and tend to ignore the larger ones. Do you feel that such authorities as the Federal fisheries authorities should be more zealous in pursuing the powers that it now has.

Mr. Hayward: Definitely. This is the position of our society.

Mr. Rose: Have you any evidence that pulp mills are not being careful enough in their

[Interpretation]

M. Rose: Je crois que le comité va étudier ces questions lorsqu'il fera ses recommandations à la préparation de notre rapport. Je sais que deux des membres viennent de Coquitlam. Hier, nous avons entendu que Coquitlam ainsi que beaucoup d'autres municipalités comme Port Moody et New Westminster ne disposent pas de traitements des eaux. Je sais que deux ont un intérêt tout particulier à un affluent dans le Fraser. Je me demande si le S.P.E.C. a des recommandations à faire concernant la manière dont il peut prêter concours à ces municipalités pour nettoyer les eaux.

M. Hayward: En vertu des mesures de contrôle de la pollution de la Colombie-Britannique nous sommes censés avoir des installations d'ici 1975. J'ai toujours prétendu et le S.P.E.C. l'a accepté que le traitement des eaux est de 20 ans en retard et le traitement secondaire est absolument essentiel maintenant. Le financement doit se faire de la même façon que pour le logement qu'on a pour nos citoyens âgés. Les municipalités elles-mêmes ne peuvent vendre les obligations. Soyons honnêtes pour faire construire les installations de traitement des eaux. Dans ces circonstances quand le fils est en difficulté et bien c'est le père qui s'en occupera. S'il n'a pas de famille, il n'est pas un père, mais un délinquant. Le gouvernement fédéral est le père de cette notion et dans cette qualité, il doit nous donner une réponse et nous accorder une subvention pour contrôler la pollution.

M. Rose: Vous proposez alors de l'aide fédérale pour mettre au point un programme de contrôle de la pollution.

M. Hayward: Il y a de l'aide fédérale mais on ne peut vendre nos obligations. Il nous faut plus que l'aide fédérale pour faire fonctionner ce programme.

M. Rose: Cette disposition prendra fin en mars 1970.

M. Hayward: Cela se terminera alors.

M. Rose: Vous avez déclaré dans votre mémoire que les autorités sont sévères pour la pêche, comme la pêche hors saison et ne le sont pas assez contre les péchés de plus grande importance. Croyez-vous que ces autorités fédérales devraient être plus énergiques en appliquant la loi.

M. Hayward: Certainement. C'est la position de notre société.

M. Rose: Avez-vous des preuves que les moulins à papier ne font pas assez attention

[Texte]

control of waste products from their plants?

Mr. Hayward: Mr. Chairman, this is why we ask for this ecological study on the Fraser River. At the present time where do I get information on Canadian pulp mills? All I can go by is the information that has come forth from the United States on the Willamette River and Puget Sound. In both of these instances the pulp mills and the paper-making plants were the prime cause of all the pollution in the river. There are only, I believe, 7 or 11 plants on the Willamette—that is like playing crap. Anyway, those plants are the cause of 82 per cent of the contamination of the Willamette River. There are over 1 million people in that area so in population equivalence they are nearly five times more potent than people, or any other industry.

Mr. Rose: It has been suggested that the testing programs of the pulp mills are often a sham and an act and that you really can tell by the number of dead fish. You say you cannot get the information. We cannot pursue this matter.

I have one last question. Do you support the idea of the Fisheries and Forestry Departments being together under one ministry, since you have made a suggestion that various natural resources and their management are definitely interrelated.

Mr. Hayward: I think prior to any serious resource development you should have a board of review which has all the natural resources and all the science disciplines represented on it so that you can make an actual assessment of what that damage that you are going to do may have on the rest of the economy.

But prior to leaving that, you asked if we are worried about pulp mills, and have we any proof. Let me say that I believe the sulphate mill puts 50 per cent of the log back into the water—that is waste. If you do not think those lignine particles do not blanket the whole area let me tell you that in Puget Sound even the worms around Bellingham and Low have died—because nothing is living on the sea floor at that point. In these reports they do not fool around—they name the mills responsible.

Mr. Noble: Mr. Chairman, I am wondering if the witness is serious when he says near the bottom of page 3 that in drag fishing in B.C. a lot of the fish they are catching, are wasted because they throw them overboard—and reference is made to halibut and dogfish.

29728—5}

[Interprétation]

dans le contrôle des produits de déchets de leurs installations.

M. Hayward: C'est la raison pour laquelle nous avons demandé qu'on fasse des études écologiques du Fraser. Actuellement, où puis-je obtenir des renseignements sur les usines de pulpe et de papier canadiennes. Tout ce que j'ai sont des renseignements qui viennent des États-Unis de Willamette River et de Puget Sound. Les deux fabriques étaient la cause principale de la pollution de la rivière. Le Willamette par exemple, a je crois, 7 ou 11 usines au bord de la rivière. En tout cas, ces usines causent 82 p. 100 de la pollution de la rivière Willamette. En proportion de la population, il y a un million dans cette région, donc ils sont cinq fois plus puissants.

M. Rose: On dit souvent que les programmes d'essai ne sont pas indicateurs et que le nombre de poissons morts en révèle plus. Vous dites que vous ne pouvez obtenir les renseignements qu'il nous faut. Ma dernière question. Est-ce que vous êtes d'avis que les ministères des pêches et des forêts devraient être amalgamés parce que vous avez proposé que certaines ressources naturelles et leur gestion sont étroitement liées.

M. Hayward: Il faudrait avant l'exploitation des ressources avoir un conseil de révision de toutes les ressources et de toutes les disciplines scientifiques afin de pouvoir évaluer exactement les dégâts et les conséquences sur le reste de l'économie.

Vous m'avez demandé si nous nous préoccupions des usines de pulpe et de papier et s'il y a des preuves. Je dirais qu'environ 50 p. 100 des billots sont versés dans la rivière. Si vous pensez que ces éléments ne salissent pas toute la région, je vous dirais qu'à Puget Sound même les vers près de Bellingham et Toro sont morts parce que rien ne peut exister sur le fond de la mer à ce point-là. Ce n'est pas une blague, le rapport cite les noms des usines responsables.

M. Noble: Monsieur le président, je me demande si le témoin est sérieux quand il dit à la page 3, vers la fin de la page, que la pêche à la drague perd beaucoup de poissons que l'on rejette en Colombie-Britannique: le flétan et le chien de mer. Comme c'est une

[Text]

In view of the fact that there is quite a flourishing mink ranch industry in B.C. such ranches could utilize this food. I am wondering why this food is being wasted. You mentioned human consumption. I might say that in the East we are using fish racks. If we could get fish like this we would be happy. I am wondering if you are giving us the facts here.

Mr. Hayward: These are the facts. You can even see it on a documentary that was shown over CBUT. They will show them throwing the fish back. Hake and all types of fish that are not saleable on our present fresh fish market are being thrown back. I agree with you—we can make fertilizer. We have nearly ruined the herring fishery by making fertilizer out of them—and not just fertilizer but fish meal, chicken feed and things of this nature. Here we are with all this vast resource that we are not tapping at all while, unilaterally, we work on one segment of it to the point where—and let us give credit where credit is due—the fishermen of British Columbia asked for closure, though it meant loss to themselves in money, to protect that fishery—and it took them several months before they got that closure.

Mr. Noble: Mr. Chairman, because of the affluent fisheries here—we have heard evidence of the millions of dollars that they have in deposit in the Credit Union and so on—would it be necessary to subsidize these people so that they could make a reasonable living out of bringing these fish ashore and having them processed?

Mr. Hayward: Well, let us put it this way. This pertains in the same way to the forest industry, which disclaims any responsibility for its industry and some of the research and replanting—and the same goes for many other industries. I would say that on that basis it is a question of doing it by law—and you are going to have to help them. But the small man is not affluent in his fishing, unfortunately—the closures are too frequent. We are trying to eliminate the surplus of boats. This was done in the early days. They had the licences down to something like 600 boats on the Fraser River from many thousand. It does not work in the long run. Your approach is all wrong. You are working from the wrong end of the deal. You are trying to spread a limited resource over so many people whereas you should be developing the resource. But all of the resource should be used, not just salmon.

[Interpretation]

industrie importante en Colombie-Britannique on pourrait se servir de ce poisson pour nourrir le vison. Je me demande pourquoi on gaspille cela.

Vous parlez de consommation des humains mais dans l'Est, nous nous servons des restes de poisson pour nourrir le vison. Si l'on pouvait avoir de tels poissons nous en serions contents. Est-ce que vous nous donnez les faits.

M. Hayward: Ce sont les faits. On le voit même dans un documentaire que l'on a donné au CBVT. On les montre rejetant le poisson dans la mer. Tous les poissons que l'on ne peut pas vendre sur le marché actuellement sont rejetés. Nous pourrions en faire des engrais. Nous avons presque ruiné la pêche au hareng en nous en servant pour en faire des engrais, et de la farine du poisson et de la poudre pour la volaille. Et ici, il y a une masse de ressources dont nous ne nous servons pas. On s'occupe de tel ou tel secteur. Il faut accorder du crédit là où c'est nécessaire. Les pêcheurs de la Colombie-Britannique ont demandé un règlement même si cela a voulu dire une perte nette pour eux afin de protéger la pêche. Il a fallu assez longtemps pour obtenir ce règlement.

M. Noble: Monsieur le président, parce que les pêches sont très riches ici on a entendu parler de millions de dollars en dépôt auprès de l'Union de crédit. Est-il nécessaire de subventionner ces pêcheurs pour qu'ils puissent gagner leur vie convenablement en faisant de la pêche et en faisant conditionner le poisson.

M. Hayward: Eh bien, l'industrie forestière renie toute responsabilité en matière de recherches et de repeuplement comme c'est le cas pour beaucoup d'autres industries. J'estime que cette question doit être réglée au moyen d'une loi. Mais le petit pêcheur n'est pas riche. Les fermetures sont trop fréquentes. Nous essayons d'éliminer le surplus des bateaux. Il y avait environ 600 permis il y a quelques années sur la rivière Fraser. Cela ne donne pas de résultats à la longue. C'est la mauvaise méthode, ce n'est pas la façon pour s'y prendre. Vous êtes payés pour distribuer une ressource limitée parmi tant de milliers de personnes alors qu'il faudrait développer les ressources, toutes les ressources, non seulement le saumon.

[Texte]

As I told you, the sockeye was used—but not even all the sockeye was used in the early days in this area. They would not can the rib part of the fish. It had to be the solid part. The whole darn thing was thrown away. Waste has been profligated in this province because we are endowed with so much.

Mr. Noble: Mr. Chairman, perhaps I have been wrongly informed but in my travels through the burnt-over area of the Yukon Territory where jack pine, which is an inferior type, had been destroyed by the fire, I was informed that another type of pine of much better quality was growing in abundance. In fact, it was so dense that I asked why it had not been spaced—I thought it had been planted artificially. They told me this was a much better type of pine than what was burned. It seemed to me that this burning over was making a real contribution to the economy there. I do not know how long it will take this to mature, but they were getting nothing out of the jack pine. Would you care to comment on that?

Mr. Hayward: Mr. Chairman, having been into the Yukon myself and having looked around, let us not just belabour the Yukon forest fires—after all, I ran through on the Alaska Highway going up to the Laird River, over 100 miles, 80 miles of which was all burnt in one fell swoop. Nothing had been done to stop that fire. It had burned itself out at the tops of the mountains in every direction for nearly 80 miles.

On the question of value of the type of tree that will regrow, unfortunately in British Columbia and from what I saw of the Yukon myself in my observations, where a jack pine was burnt out a jack pine regrew with violence, maybe a little faster. But you must remember that whatever it is, it is a minimal type of tree—it is not going to produce the lumber.

Mr. Noble: Mr. Chairman, I just want to ask the witness one more question. Are you telling us that in these burnt-over areas that you observed it was only jack pine that came up?

Mr. Hayward: The ones that I observed, yes, sir—unless it was an area of spruce that was burnt over and then sometimes the spruce took over in the same area.

Mr. Noble: I might say, Mr. Chairman, that I examined this myself, it was a different kind of a pine coming up, and they told me that it was a much better pine and would make a contribution to the economy maybe in 15, 20 or 25 years.

[Interprétation]

Comme je vous ai dit, on s'est servi du saumon sockeye, même pas tout le sockeye a été utilisé tout au début. Ils ne peuvent pas mettre les arêtes en conserve. Il faut que ce soit la partie ferme. Il fallait disposer des déchets parce qu'il y aurait eu abondance.

M. Noble: J'étais peut-être mal renseigné mais en voyageant dans la région du Yukon après des incendies on m'a dit que les pins ont été complètement détruits par le feu. Il y avait un autre genre de pin qui repoussait de meilleure qualité en abondance. Il y avait même tellement de pins que je me suis demandé pourquoi on ne les avait pas espacés. Je croyais qu'on les avait plantés artificiellement. On nous a dit que c'était une bien meilleure qualité de pin que celui qui a été brûlé. Donc, l'incendie avait fait beaucoup de bien. Je ne sais pas combien de temps cela prendra pour grandir mais l'autre sorte de pin n'a pas donné de bons résultats. Vous avez quelque chose à dire?

M. Hayward: Quand je me suis rendu au Yukon, moi-même, j'ai vu ce qui s'était fait. J'ai fait toute l'autoroute d'Alaska jusqu'à Laird River, plus de 100 milles dont 80 étaient complètement brûlés. Rien n'a été fait pour empêcher cet incendie d'avancer jusque dans les hauteurs.

En ce qui concerne les valeurs des arbres qui vont repousser, malheureusement, en Colombie-Britannique, d'après ce que j'ai vu au Yukon, quant aux pins, ils repoussent violemment. Mais, il faut se souvenir que c'est un arbre qui ne va pas donner le bois dont on pourrait se servir.

M. Noble: Je voudrais demander encore une question au témoin. Est-ce que vous voulez dire que dans les régions incendiées, il n'y avait que le pin «Jack» qui a repoussé?

M. Hayward: D'après ce que j'ai vu, oui. A moins que ce soit des sapins qui ont repoussé.

M. Noble: Je dois dire, monsieur le président, que je l'ai examiné moi-même et que c'est un autre genre d'arbres qui est repoussé. On m'a dit que c'était un arbre de meilleure qualité qui contribuera à l'économie d'ici 15, 20 ou 25 ans.

[Text]

Mr. Hayward: It could be a better specie of the jack pine.

The Chairman: Thank you, Mr. Noble.

Mr. Goode is next.

Mr. Goode: Thank you, Mr. Chairman. The thing that concerns me most of all—I would like to pursue Mr. Noble's questioning—is the charge that the fishermen are actually throwing dead halibut back in. This is what you say on page 3. I think it is absolutely necessary that someone who represents the fishermen here today answer this charge.

Mr. Hayward: Mr. Chairman, through you to Mr. Goode, they are not dead—they are speared and tossed back over. They are not handled by hand. Have you seen halibut that long and that wide drawn up in a dragnet—and have you tried to pick them up?

Mr. Goode: Yes, but you are missing my point.

Mr. Hayward: I do not say it is dead, sir. All I am saying is that there is a good chance it is going to die.

Mr. Goode: Well, you said it in your brief and you either believe it or you do not. Are these fish going to die or are they not going to die?

Mr. Hayward: I suspect they will die.

Mr. Goode: Do you not think then that the fishermen who are here today should answer this charge? This is a very serious charge. With the federal government supporting fisheries as they are it could not possibly support an industry that is making a waste of this type—and this is contrary to the conduct of fishermen that I know.

Mr. Hogarth: Mr. Chairman, on a point of order, I think that you are referring to the beam trawlers catching halibut.

Mr. Hayward: Dragline, yes. It is breaking the regulations of the Treaty. You must catch halibut by a long line.

Mr. Hogarth: That is right. It is the regulations that cause them to throw them back.

Mr. Hayward: That is right. This is why a little discussion may help.

Mr. Goode: I would hope that the gentleman from the fishing industry here later on today would answer this charge. I do not

[Interpretation]

Mr. Hayward: C'est peut-être un meilleur genre de pin «Jack».

Le président: Monsieur Goode est le prochain.

M. Goode: Merci, monsieur le président. Ce qui me préoccupe plus particulièrement, je voudrais poser des questions à la suite des déclarations du D^r Noble. Quelle est la quantité de flétan que l'on rejette dans la mer. C'est ce que vous dites à la page 3. Et je trouve essentiel, que quelqu'un qui représente des pêcheurs aujourd'hui, nous l'explique exactement.

M. Hayward: Non, le poisson n'est pas rejeté mort. Ils sont harponnés et remis dans l'eau. On ne les touche pas avec les mains. Vous avez vu des flétans, vous avez essayé de les attraper.

M. Goode: Oui, mais vous ne comprenez pas ma question.

M. Hayward: Je ne dis pas que le poisson est mort mais qu'il soit fort possible qu'il doive mourir.

M. Goode: Vous l'avez dit dans votre mémoire, ou bien vous y croyez ou bien vous n'y croyez pas. Est-ce que ces poissons meurent ou est-ce qu'il ne meurent pas.

M. Hayward: Je pense qu'ils vont mourrir.

M. Goode: Pensez-vous que les pêcheurs ici présents aujourd'hui doivent répondre à cette accusation qui est très sérieuse. Le gouvernement fédérale qui les appuie de cette façon, les pêcheurs ne peuvent aider l'industrie qui fait un tel gâchis. C'est contraire au comportement que je connais des pêcheurs.

M. Hogarth: Sur un point d'ordre, monsieur le président.

Je crois que vous parlez de certains bateaux qui attrapent le flétan.

M. Hayward: Ils les draguent vivants. C'est contre les règlements de l'accord. Il faut les pêcher au moyen de longues lignes.

M. Hogarth: Ce sont les règlements qui les forcent à les rejeter.

M. Hayward: C'est pourquoi il faudrait expliquer la question.

M. Goode: J'espère que les messieurs de l'industrie de la pêche répondront à cette accusation plus tard aujourd'hui. Je ne veux

[Texte]

want to take up any more time of the Committee on this item now.

The other item that you are very concerned with is the spread of hepatitis. This concerned me when I was Chairman of the Boundary Health Unit. Do you agree that the spread of hepatitis is in areas where there are septic tanks?

Dr. Hayward: This is certainly not a help to the area.

Mr. Goode: This brings up a priority decision that all of us must make. Do we construct sewers to overcome this while we only have primary treatment or do we wait and let this disease spread until we get secondary treatment? Which do you consider your No. 1 priority?

Mr. Hayward: Mr. Goode, primary treatment merely moves your problem onto somebody else's doorstep. If you are going to evacuate and you go to a toilet to do it you do not have any right to then take it and put it on somebody else's verandah. The whole thing is that if you are going to do a job it costs less in the final analysis to have a secondary treatment plant than it will to put in all these primary treatment plants and change them over.

Mr. Goode: I agree but you have not answered my question. Which is your priority—would you put in sewers, as it is now, and take the risk of polluting the Fraser River or would you not put in sewers and allow the disease to spread and wait for secondary treatment?

Dr. Hayward: Under present existing controls that municipalities have on sewage and sewage disposal by septic tank methods I prefer, and so do the majority of the people of Richmond who I have spoken to, and I am sure you know this, to wait until they are not going to pollute the rest of the Fraser—

Mr. Goode: Fine, that answers my question.

You mentioned Mr. Maynard from the Boundary Health Unit, who is a very capable man and has been studying the Fraser River. He also made the 1966 study. Have you in your own mind from these statistics decided which area is the major offender, including the Fraser River?

Dr. Hayward: The major offender?

Mr. Goode: Yes, what area?

Dr. Hayward: Do you mean between industry?

Mr. Goode: No, which area—Delta, Richmond, New Westminster, Burnaby?

[Interprétation]

pas prendre plus de temps du Comité à ce sujet. Une autre question dont je voulais parler, c'est l'hépatite. C'était mon domaine lorsque j'étais président du service d'hygiène de la frontière. Êtes-vous d'accord que ceci se rapporte surtout aux endroits où il se trouve des réservoirs septiques.

M. Hayward: Ceci n'aidera certainement pas à la région.

M. Goode: C'est une décision prioritaire. Faut-il construire des égouts? Ou, est-ce que nous nous attendons à ce que la maladie se répande jusqu'à ce qu'il y ait des installations appropriées? Qu'est-ce qui est le plus important, selon vous?

M. Hayward: Les premiers traitements, ce n'est pas seulement le problème. Si l'on salit quelque chose on n'a pas le droit de le laisser sur les terrains du voisin. Si on fait un travail il coûte certainement moins en définitif d'avoir des installations secondaires au lieu d'y mettre des installations primaires.

M. Goode: Vous n'avez pas répondu à ma question. Qu'est-ce qui est le plus important: aménager des égouts pour diminuer la pollution du Fraser ou bien, est-ce que vous permettriez que la maladie se répande avant qu'il n'y ait d'autres installations?

M. Hayward: Il y a des moyens de contrôle qui existent en ce moment pour les égouts. Je préfère, et les citoyens de Richmond aussi préféreraient s'attendre à ce que l'on ne pollue plus l'eau du Fraser.

M. Goode: Cela répond à ma question. Vous avez parlé de M. Maynard qui est très capable et qui a étudié le problème du Fraser. Il a fait une étude en 1966. Avez-vous décidé quelle est la région qui souffre le plus? Quelle est la région exactement qui est la plus attaquée?

M. Hayward: La plus attaquée?

M. Goode: Oui, quelle région?

M. Hayward: Vous voulez dire pour l'industrie?

M. Goode: Quelle région, Delta, Richmond, New Westminster ou Burnaby.

[Text]

Dr. Hayward: The worst ones are Annacis Island and New Westminster.

Mr. Goode: Have you done anything about it?

Dr. Hayward: As an organization, yes.

Mr. Goode: Have you made representation to Annacis Island and New Westminster?

Dr. Hayward: We will be making representations at every opportunity on this matter.

Mr. Goode: Thank you very much, Mr. Chairman.

Mr. McQuaid: Mr. Chairman, I would like to return the witness for a moment to a reply he gave to a question a few moments ago asked by Mr. Rose wherein he suggested that the Province of British Columbia cannot afford to take adequate measures to overcome this pollution problem, which is primarily concerned with the Fraser River, that this expense should be borne by the federal government. Do I understand you correctly?

Dr. Hayward: Not quite. I did not say "the province." The municipalities cannot sell their bonds. The province can sell bonds, sir, and so can the federal government and I say these are the parents of the municipal governments and they have the responsibility. They pass the legislation. They should see that funds are available. The people pay for it in the final analysis. We are all Canadians. We are all going to pay for it. The people want it done. They want the buckpassing stopped.

Mr. McQuaid: Are you suggesting then that we as a Committee should go back and recommend to the federal government that if the Province of British Columbia and the municipalities fail to meet their responsibilities in this connection then this expense should be borne by all the people of Canada?

Mr. Hayward: Not just in that way, sir, no, I could not agree to that. I am quite willing to pay taxes to make sure that the Great Lakes remain clean, but that is not the way we want it approached. We want the federal government to lay down policies. If you have a power in war to do things for the betterment of this country or the preservation of it then you should surely have the power during peace, or the guts to say this is what is necessary for the welfare of this country, for the protection of its ecology, for its future generations, and you are going to have to do this and we will help you pay for it.

[Interpretation]

M. Hayward: La pire des régions? C'est Annacis Island et New Westminster.

M. Goode: Avez-vous essayé d'y remédier?

M. Hayward: Oui, en tant qu'organisation.

M. Goode: Vous avez présenté des instances à ces deux endroits?

M. Hayward: Oui, nous allons le faire à chaque occasion.

M. Goode: Merci, monsieur le président.

M. McQuaid: Monsieur le président, je voudrais simplement reprendre une réponse que le témoin a donnée à M. Rose, il y a quelques instants.

Vous avez dit que la Colombie-Britannique ne peut pas prendre des mesures adéquates pour combattre la pollution surtout du Fraser et que c'est le gouvernement fédéral qui devrait défrayer ces entreprises. Est-ce correct?

M. Hayward: Non, je n'ai pas dit cela. Je n'ai pas dit que ce serait la province. Les municipalités ne peuvent vendre leurs obligations, mais la province peut, ainsi que le gouvernement fédéral; les deux sont responsables des municipalités. Ils établissent les mesures législatives. Ils doivent procurer les capitaux. Nous payons tous pour ces installations, nous sommes tous des Canadiens et nous payerons tous pour cela. Les gens veulent que la chose se fasse.

M. McQuaid: Donc, en tant que Comité, nous devrions recommander au gouvernement fédéral, que si les divers gouvernements provinciaux ne font pas face à leurs responsabilités, que c'est le Canada tout entier qui devrait assumer cette responsabilité?

M. Hayward: C'est pas comme cela qu'il faudrait le comprendre. Je paie volontiers des impôts pour assurer que les Grands Lacs restent propres, mais ce n'est pas de cette manière que cela se fait.

Nous voulons que le gouvernement fédéral établisse des politiques parce que si le gouvernement fédéral peut agir en temps de guerre, il devrait pouvoir agir en temps de paix. Il devrait du moins avoir le courage de déterminer ce qui est nécessaire pour le bien-être du pays et pour la protection de l'écologie des prochaines générations. Vous devez le faire et nous y prêtons notre concours pour le défrayer.

[Texte]

Mr. McQuaid: Let me get you clear on this then, Mr. Hayward. If we are to make a suggestion or if we decide to make a suggestion to the federal government, all your organization is asking us to do is to suggest to the federal government that the necessary legislation should be passed. Is that right?

Mr. Hayward: That would be the happiest day providing it was obligatory.

Mr. McQuaid: But not commit itself to any obligation to finance?

Mr. Hayward: I think the federal government has to commit itself to financial obligations in the same way that it has to on senior citizens' housing.

Mr. McQuaid: Will you explain the attitude of the people of British Columbia not so very long ago when a very necessary transportation link was suggested between Prince Edward Island and the mainland? Your people here in British Columbia objected very strenuously to the expenditure of that money obviously because of the fact that you thought it was not going to do you very much good.

Mr. Hayward: May I dissociate the people of British Columbia from the government of British Columbia. There is no separatism in British Columbia. When a man tried to set up separatism in British Columbia at the Queen Elizabeth Theatre he did not get 30 people out and he could have sat 5,000.

Mr. McQuaid: Your brief lists on page 4 various sources of pollution. Mr. Hayward, is there any serious pollution from the waste material that must necessarily be discharged from the thousands of pleasure craft that we see anchored in the harbours of Vancouver?

Mr. Hayward: Definitely. They must be controlled, and stringently controlled. As in trailers you must have proper facilities, so in boats there is no longer the right to dump your offal out into the ocean.

Mr. McQuaid: Do I understand that there is no regulation now preventing this in the province?

Mr. Hayward: Yes—I am not all-pervasive. I do not know everything, sir, but it seems to me I have read that there is legislation calling within so many months for the institution of this type of thing.

Mr. McQuaid: Thank you, Mr. Chairman.

The Chairman: Mr. Whelan, for five minutes.

[Interprétation]

M. McQuaid: Je demanderais à M. Hayward de tirer la chose au clair. Si nous devons faire une proposition ou si nous décidons d'en faire une au gouvernement fédéral, tout ce que vous nous demandez c'est que le gouvernement fédéral adopte des mesures législatives nécessaires. Ai-je bien compris?

M. Hayward: Eh bien oui, ce serait vraiment très bien, pourvu que ce ne soit pas obligatoire.

M. McQuaid: Mais on ne s'engagerait pas à quelque obligation financière?

M. Hayward: Je crois que le gouvernement fédéral doit s'engager financièrement de la même façon qu'il s'est engagé envers les problèmes d'habitation des citoyens âgés.

M. McQuaid: Pourriez-vous m'expliquer l'attitude des gens de la Colombie-Britannique, il y a quelque temps, lorsqu'on a suggéré d'établir un moyen de communication important entre l'Île-du-Prince-Édouard et la terre ferme? Ici, en Colombie-Britannique, vous vous êtes opposés fortement à cette dépense, évidemment parce que vous avez pensé que cela ne vous serait pas d'un grand avantage.

M. Hayward: Eh bien les citoyens et le gouvernement de la Colombie-Britannique sont deux choses séparées. Il n'y a pas de séparatisme en Colombie-Britannique. Quand un homme a essayé d'instaurer le séparatisme en Colombie-Britannique il a attiré à peine 30 personnes dans la salle Queen Elisabeth qui peut en contenir 5,000.

M. McQuaid: Une dernière question. Dans votre mémoire à la page 4, vous donnez une liste de différentes sources de pollution. Est-ce qu'il y a beaucoup de pollution provenant des déchets des bateaux de plaisance, qui sont ancrés dans le port de Vancouver?

M. Hayward: Mais oui. Il faut contrôler ces bateaux et d'une façon très stricte. Comme dans les remorques, il faut avoir les installations nécessaires; donc les bateaux n'ont plus le droit de déverser leurs ordures dans l'eau.

M. McQuaid: Est-ce que je comprends qu'il n'y a aucun règlement, présentement, à ce sujet, dans la province?

M. Hayward: Je ne connais pas tout, je n'ai pas la science infuse, mais il me semble avoir lu quelque part qu'il y aura des mesures législatives, d'ici quelques mois, pour demander précisément ce genre de choses.

M. McQuaid: Merci, monsieur le président.

Le président: Monsieur Whelan, vous avez la parole pour cinq minutes.

[Text]

Mr. Whelan: The question I had has already been asked.

The Chairman: Are there any further questions? Mr. Crouse.

Mr. Crouse: On page 4 we read that one of the recommendations is that the federal Department of Fisheries make it

mandatory to install closed circuit circulating systems with evaporative cooling towers in all thermal generating plants.

Is it correct for the Committee to assume that at the present time, the government of British Columbia, through the British Columbia Hydro, are building a thermal plant at Burrard Inlet?

Mr. Hayward: They have a thermal plant on Burrard Inlet. We know the plant is not a closed circuit system so the water, after being used, is pumped back into Burrard Inlet. It is considerably warmer than the normal water and it does have a biological effect on the area. We know that temperature change is one of the things which are most important to salmon and fish.

Mr. Crouse: I agree, having seen the towers in one of the first plants that were built in the United Kingdom. Is it correct for the federal government to assume this responsibility? Certainly the British Columbia government has the prime responsibility to implement this type of cooling towers. Have you made representations to the British Columbia government and, through them, to the British Columbia Hydro thermal people, requesting that in view of the importance of your salmon industry they install these evaporative cooling towers?

Mr. Hayward: I will let Mr. Hagell answer that for you. If it does not, I will see how it turns out. Maybe I will have something to add to that.

Mr. B. Hagell (Vice-President, Society for Pollution and Environmental Control (S.P.E.C.)): Sir, what I think we are most concerned about is the fact that the federal government should show direction to all the provinces of Canada in this problem of pollution. There are three departments in the provincial government in British Columbia that are supposed to look after pollution. It ends up that none of these departments is able to exercise authority in this field. Therefore we,

[Interpretation]

M. Whelan: La question que j'allais poser a déjà été demandée.

Le président: Y a-t-il d'autres questions? Monsieur Crouse.

M. Crouse: A la page 4, nous voyons que l'une des recommandations est que le ministère fédéral des Pêcheries

rende obligatoire l'installation de systèmes de circuits fermés avec des tours de refroidissement par évaporation dans toutes les usines génératrices d'énergie thermique.

A l'heure actuelle le Comité peut-il supposer que le gouvernement de la Colombie-Britannique par l'entremise de l'hydro de la Colombie-Britannique, soit en train de construire une usine thermique à Burrard Inlet?

M. Hayward: Nous avons une usine thermique à Burrard Inlet. Nous savons que l'usine ne fonctionne pas avec un système de circuit fermé de sorte que l'eau après avoir été utilisée, revient dans Burrard Inlet. Elle est beaucoup plus chaude que l'eau normale et elle a des effets biologiques sur la région. Nous savons que les changements de température, sont l'une des choses qui est très importante pour le saumon et les autres poissons.

M. Crouse: Je suis tout à fait d'accord ayant vu les tours dans l'une des premières usines qui a été construite au Royaume-Uni. Ai-je raison de croire que le gouvernement fédéral peut assumer cette responsabilité? Sûrement, le gouvernement de la Colombie-Britannique a la toute première responsabilité de construire ce genre de tours. Est-ce que vous avez présenté des instances au gouvernement de la Colombie-Britannique et par leur entremise, à la Commission hydroélectrique de la Colombie-Britannique recommandant, que vu l'importance de l'industrie du saumon, on installe des tours de refroidissement par évaporation.

M. Hayward: Je vais laisser à monsieur Hagell le soin de vous fournir la réponse. S'il n'est pas en mesure de le faire, j'essaierai de trouver quelque chose à ajouter.

M. Hagell (vice-président, Society for Pollution and Environmental Control—S.P.E.C.): Je crois monsieur que ce qui nous préoccupe le plus c'est que le gouvernement fédéral devrait donner des directives à toutes les provinces du Canada au sujet de la pollution. Il y a trois ministères provinciaux en Colombie-Britannique qui doivent s'occuper de la pollution. Aucun de ces ministères ne peut exercer d'autorité dans ce domaine. Par conséquent, notre société estime que le gouvernement

[Texte]

as a society, feel that the federal government should enact legislation in co-operation with the various provinces so that the federal government would in fact be the central body.

I wonder whether or not the members of this Committee are aware of the seriousness of pollution in regard to the very life on this planet. If so, then should you not at this time be engaging the enemy in exactly the same manner as you would in wartime? Should you not be setting up the necessary national controls to override the provincial jurisdictions so that we can home in on the enemy, which is pollution?

Mr. Crouse: Mr. Chairman, I can assure the witness that we are very well aware of the dangers of pollution throughout Canada. A moment ago you mentioned buck-passing and I would be remiss in my duties if I did not point out that when you are speaking of pollution and its control here in British Columbia, you people are aware of the value of the salmon resource to your province and you are aware, I should think, that the pollution is caused by your municipalities and that this must come under the municipal as well as the provincial authorities; and if the federal government were to pass enabling legislation there would quite likely be some counter-discussions at the next federal-provincial conference about the federal government becoming involved in matters that are strictly under the jurisdiction of the provincial government. I would think that it would be helpful if your society presented a similar brief to provincial authorities alerting them to some of the problems which you have passed on to us today. Thank you, Mr. Chairman.

Mr. Hayward: We agree. However, in our opinion, under the Fisheries Act—I have the Act here but I have to dig it out—fish in any waters are a federal responsibility under the Act. If this is the case then your responsibility is primary and the provinces' and municipalities' secondary, and the lead must come from the federal government.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: I have a very simple statistical question. How do you become a member of your society?

Mr. Hayward: We will give you membership right now, sir, if you like. All you have

[Interprétation]

fédéral devrait promulguer des lois en collaboration avec les diverses provinces pour que le gouvernement fédéral soit l'organisme central.

Je me demande si les membres du comité sont au courant de cette menace sérieuse qu'est la pollution à la vie même de notre planète. Dans le cas de l'affirmative, ne devrait-on pas en ce moment attaquer l'ennemi de la même façon qu'on devrait le faire en cas de guerre? Est-ce qu'on ne devrait pas établir les contrôles nationaux nécessaires pour dominer les gouvernements provinciaux afin que nous puissions nous attaquer à l'ennemi qui est la solution?

M. Crouse: Monsieur le président, je peux assurer au témoin que nous sommes très conscients des dangers de la pollution partout au Canada. Mais il y a un instant vous avez mentionné qu'on se passait la responsabilité et je faillirais à ma tâche si je ne signalais pas que lorsque l'on parle de pollution et du contrôle de la pollution ici en Colombie-Britannique, vous êtes au courant de la valeur des ressources du saumon pour votre province et par conséquent vous savez il me semble, que la pollution causée par vos municipalités et que cela relève des autorités tant municipales que provinciales; et par conséquent si le gouvernement fédéral adopte une loi exécutoire, il est tout probable qu'il y aurait toutes sortes de discussions acerbes à la prochaine conférence fédérale-provinciale au sujet du fait que le gouvernement fédéral s'engage dans des questions qui relèvent strictement de la compétence du gouvernement provincial. Je crois qu'il serait utile que votre société présente des mémoires analogues aux autorités provinciales pour attirer leur attention sur certains des problèmes dont vous nous avez parlés aujourd'hui. Merci beaucoup monsieur le président.

M. Hayward: Nous sommes d'accord. Cependant nous estimons, aux termes de la Loi sur les pêcheries,—j'ai le texte de loi ici mais je dois chercher ce que je veux—que la pêche en tout cours d'eau relève du gouvernement fédéral. Et si c'est le cas, alors la responsabilité en incombe avant tout au gouvernement fédéral, l'autorité des provinces et des municipalités étant secondaire et les premières mesures doivent venir du gouvernement fédéral.

Le président: Monsieur Lundrigan.

M. Lundrigan: Une question d'ordre statistique très simple. Comment devient-on membre de votre société?

M. Hayward: Nous pouvons vous accorder la carte de membre dès maintenant monsieur,

[Text]

to do is to ask any one of the members and pay the secretary.

Mr. Lundrigan: So there is a formal admittance and a formal fee?

Mr. Hayward: That is right.

Mr. Lundrigan: What is the membership of your society?

Mr. Hagell: Approximately 1,000.

Mr. Lundrigan: Thank you, Mr. Chairman.

The Chairman: On the second round now...

Mr. Whelan: I did not ask any questions on the first round, Mr. Chairman.

The Chairman: Excuse me. Mr. Whelan.

Mr. Whelan: Thank you, Mr. Chairman. Are you aware of the federal program that we have for pollution control plants with industry and with the municipalities which has been in force for five or six years?

Mr. Hayward: Well, sir, this is part of the problem—communication. We are the recipients of the pollution. There may be plans, and let me say that as a young organization we have not read all of the pertinent legislation. Otherwise I would have come here prepared to talk about provincial forestry, and I still am, instead of just federal forestry. But on that particular question you have asked, we have not got copies of the Act but neither did we know the jurisdiction that this Committee had when coming before us. This is why our questions. We are trying to establish some form of rapport with your Committee or with any federal, provincial or local government to find out what has to be done to achieve the standards we want; that is, a better way of life for Canadians.

Mr. Whelan: Our area is troubled. I come from central Canada and it is probably even more polluted in the Great Lakes area and a lot of people have been aroused about pollution for a long time. In my own area every municipality will have the pollution control equipment either by lagoons or some type of plant or other. I think by July this year everyone, including the city of Windsor, will have it. It amazes me that most of the

[Interpretation]

si vous le voulez. Tout ce que vous avez à faire est de le demander à n'importe lequel des membres et donner votre cotisation au secrétaire.

M. Lundrigan: Il y a donc une carte de membre officielle et une cotisation officielle?

M. Hayward: En effet.

M. Lundrigan: Combien de membres votre société compte-t-elle à l'heure actuelle?

M. Hagell: Environ 1,000.

M. Lundrigan: Merci, monsieur le président.

Le président: Pour le deuxième tour maintenant...

M. Whelan: Je n'ai pas posé de questions au premier tour, monsieur le président.

Le président: Excusez-moi. Monsieur Whelan.

M. Whelan: Merci, monsieur le président. Êtes-vous au courant du programme fédéral que nous avons pour des usines de contrôle de la pollution qui sont établies de concert avec les industries et les municipalités, programme qui existe depuis cinq ou six ans?

M. Hayward: Eh bien, monsieur, c'est une partie du problème: les communications. Nous sommes les récipiendaires de la pollution. Il se peut qu'il y ait des projets ou des programmes, et en tant que jeune organisme nous n'avons pas encore lu toutes les mesures pertinentes. Autrement je serais venu ici très préparé pour parler de l'exploitation forestière au niveau provincial, non seulement au niveau fédéral. Mais en ce qui a trait particulièrement à la question que vous avez posée, nous n'avons pas d'exemplaire de la loi mais nous ne savions pas non plus quelle était la compétence de ce comité et voilà le pourquoi de nos questions. Nous essayons d'établir une forme de rapport avec votre comité ou avec n'importe quel organisme fédéral, provincial ou local pour savoir ce qu'il faut faire pour en venir aux objectifs que nous visons; c'est là une meilleure façon de vivre pour les Canadiens.

M. Whelan: Il y a des problèmes dans notre région. Je viens du centre du Canada évidemment qui est sans doute plus pollué dans la région des Grands Lacs et bon nombre de gens sont au courant de la pollution depuis longtemps. Dans ma propre région, chaque municipalité aura l'outillage nécessaire pour le contrôle de la pollution dans des usines. Je crois qu'en juillet cette année, toutes les municipalités y compris la ville de Windsor,

[Texte]

municipalities here did not take advantage of this when the cost was lower. I wanted to know what your profession is.

Mr. Hayward: My profession? It has not been termed a profession, sir—not in British Columbia, anyway. I have been driving a bus in Vancouver, for the last 30-odd years. Prior to that I was in the forest industry and in between I have been president of my union, I have been chairman of the Natural Resources Committee for the Federation of Labour...

Mr. Whelan: Many of the unions in our area are very active in the pollution problem.

Mr. Hayward: We have led, if I might say, through labour. But I am not speaking for labour at this meeting.

Mr. Whelan: Did you call the minister in British Columbia—I think the word you used is—stupid?

Mr. Hayward: That is right.

Mr. Whelan: Do you really believe that?

Mr. Hayward: I honestly do. Any man who unilaterally will destroy a resource just for the momentary gain of another—that to me is stupidity. That to our association is stupidity. And it is criminal stupidity. That is why I wanted federal government action—to prosecute him. If he had been incarcerated it would have been his due. That is the way the people felt. We have seen this happen so many times.

Mr. Whelan: You mentioned two political faiths when you mentioned British Columbia and Alberta and said that of course, they are Social Credit and the federal government is Liberal. Do you know of any other government in the past—Saskatchewan, for instance, that ever had an active pollution control system under Tommy Douglas? I do not think he did; not any more than anybody else.

Mr. Hayward: I was not speaking of active pollution control. When I was speaking of Alberta and British Columbia I was talking of a unilateral action by British Columbia in closing off the water in the Peace River, which practically decimated the livelihood of the people on the Athabaska who, according

[Interprétation]

auront cet outillage. Ce qui m'étonne c'est que la plupart des municipalités n'aient pas profité davantage de ce programme alors que le coût en était moins élevé. Je me demande quelle est votre profession?

M. Hayward: Ma profession? Mon travail n'est pas qualifié de professionnel du moins pas en Colombie-Britannique. Je suis conducteur d'autobus depuis trente ans à Vancouver. Auparavant je m'occupais d'industrie forestière et entre-temps j'ai été président de mon syndicat et j'ai été président du comité des ressources naturelles pour la Fédération du Travail...

M. Whelan: Bon nombre de syndicats dans notre région ont été très actifs dans le programme de lutte contre la pollution.

M. Hayward: Mes antécédents intéressent le syndicalisme mais je ne parle pas en tant que syndicaliste à cette réunion.

M. Whelan: Je crois que vous avez parlé du ministre de la Colombie-Britannique en le traitant de...stupide? N'est-ce pas le mot que vous avez utilisé?

M. Hayward: C'est juste.

M. Whelan: Le croyez-vous vraiment?

M. Hayward: Honnêtement je le crois. Tout homme qui veut détruire unilatéralement une ressource pour un bien momentané et provisoire commet un acte stupide. C'est l'avis de notre association. C'est un acte stupide et c'est une stupidité criminelle. Voilà pourquoi j'estime que le gouvernement fédéral devrait agir et le poursuivre. S'il avait été jeté en prison il n'aurait eu que la part qui lui revenait. C'était là le sentiment de la population. Nous avons vu cela se produire tant de fois.

M. Whelan: Vous mentionnez dans votre premier mémoire deux adhésions politiques quand vous parlez de la Colombie-Britannique et de l'Alberta, et vous avez dit, bien entendu que ces provinces sont créditistes et que le gouvernement fédéral est libéral. Êtes-vous au courant de tout autre gouvernement, qui dans le passé, mettons en Saskatchewan, a eu un programme actif de systèmes de contrôle de la pollution, sous Tommy Douglas par exemple? Je ne le pense pas, pas plus que n'importe qui.

M. Hayward: Je ne parlais pas de programmes actifs de lutte contre la pollution. Lorsque je parlais de l'Alberta et de la Colombie-Britannique, je parlais de mesures unilatérales de la Colombie-Britannique qui ont fermé les cours d'eau de la rivière la Paix ce qui a presque décimé les moyens de subsistance des

[Text]

to Hansard, were primarily supported by muskratting, in lowering the level of the lake six feet. That did not do the muskrats any good.

Mr. Hagell: Mr. Chairman, I would like to say that this is not a matter of political parties. I think pollution control is for all.

Mr. Whelan: I hope not. I just wanted that clear because political parties were mentioned at the start, sir.

The Chairman: Now we have on the second round, first Mr. Borrie and then Mr. Noble.

Mr. Borrie: Mr. Chairman, the witness quotes in the brief the bacterial count at various points on the Fraser and this is published in August 1967 in *The Fishermen* bulletin or magazine. Are there any figures that are more up to date than that?

Mr. Hayward: Mr. Chairman, Mr. Borrie, that is our problem. We are trying to do the research ourselves in the Burrard Inlet because we cannot get figures. Nobody is doing the work and if they are they are not publishing it. There is a book on salmon propagation in British Columbia, a complete ecological study of the salmon and its potential, written for the Fisheries Department of British Columbia in 1966. That book is not available to the public and cannot be quoted without prior consultation with the Fisheries people. What good is research and what good is this type of information if it is not disseminated? That is our whole problem.

Mr. Borrie: There is not periodic testing by the medical health officer in the lower mainland?

Mr. Hayward: That is the only one that I have seen published; the only one that has been available to the public in general.

Mr. Borrie: There could have been further testing?

Mr. Hayward: Yes.

Mr. Borrie: Do you have any information which would indicate the urgency of the pollution of the Fraser River? How much time do you think is left? You do not have this information available, do you?

Mr. Hayward: That is why I want to discuss this now, immediately. I do not want to

[Interpretation]

gens de l'Athabaska qui, selon le Hansard, gagnaient leur vie par la chasse au rat musqué, en baissant le niveau de l'eau du lac de six pieds. Cela n'a pas fait de bien aux rats musqués.

M. Hagell: Monsieur le président, ce n'est pas une question je crois de partis politiques. Je crois que le contrôle de la pollution doit intéresser tous et chacun.

M. Whelan: J'espère bien que non. Je tenais simplement à apporter cette précision car on a mentionné les partis politiques au début, monsieur.

Le président: Au deuxième tour, d'abord monsieur Borrie et puis monsieur Noble.

M. Borrie: Monsieur le président, le témoin parle dans son mémoire de la teneur bactériologique à divers points du réseau du Fraser. Cela a été publié en août 1967 dans le bulletin ou la revue «*Fishermen*». Y a-t-il des chiffres plus récents?

M. Hayward: Monsieur le président, monsieur Borrie, c'est là notre problème. Nous essayons de faire nos propres recherches à Burrard Inlet, car nous ne pouvons pas avoir de chiffres. Personne ne fait ce travail et si on le fait les chiffres n'en sont pas publiés. Il existe un ouvrage sur la propagation du saumon en Colombie-Britannique, une étude écologique du saumon et de son potentiel, écrite pour le ministère des Pêcheries de la Colombie-Britannique en 1966. Ce livre ne peut être obtenu par le grand public, et ne peut être cité sans l'approbation préalable du ministère des Pêcheries. À quoi sert ce genre de recherches et de renseignements si cela n'est pas diffusé? Là est tout le problème.

M. Borrie: N'y a-t-il pas une publication périodique de la part des médecins hygiénistes dans le sud de la terre ferme?

M. Hayward: C'est le seul rapport que j'ai vu publié; le seul qui ait été disponible au grand public en général.

M. Borrie: Y a-t-il eu d'autres tests prélevés?

M. Hayward: Oui.

M. Borrie: Avez-vous des renseignements qui puissent indiquer l'urgence du programme de la pollution du fleuve Fraser? Combien de temps pensez-vous qu'il nous reste? Vous n'avez pas ces renseignements n'est-ce pas?

M. Hayward: C'est pourquoi je veux discuter de ce problème ici immédiatement. Je ne

[Texte]

see the loss of the fishery and then the study. It means a terrific rebuilding job for the fishery and it deprives the people of British Columbia of a good portion of their livelihood and living area. This is the most important river in British Columbia.

Mr. Borrie: You said subsequently to the previous brief that you could refute some of the statements that were made by the previous witnesses on forestry.

Mr. Hayward: Definitely.

Mr. Borrie: My question is aimed primarily at pulp mill pollution. Do you think that the anti-pollutant controls that the pulp mills have are effective enough?

Mr. Hayward: At the present time?

Mr. Borrie: At the present time. Particularly for the mills being built right now. There are three in Prince George, as you say. There are two more coming up.

Mr. Hayward: Not in the case of Northwood. I have material here which states that Northwood was warned three times by letter by the provincial minister to bring their effluent into line with the requirements. Up to date it still has not been done. That is one. And the rest of the older pulp mills—no, they are not adequate. On the forestry policy, no. We do not have perpetual yield in British Columbia. You were asking questions of the forestry people and you were getting the run-around. They said that they were planting 75 million trees as an optimum. Do you know what is happening in British Columbia forests at the present time? We have burned more acreage per annum in the last ten years average under the forestry report than we have replanted. We have done nothing to replant the cutting. Forty-six thousand acres was the maximum we replanted according to figures that I have. What has happened last year I have not been able to ascertain.

This is the condition. We do not have perpetual care or yield in this product. It has been sold to the public as something that is there and a viable fact. It is not a viable fact. The forests of British Columbia are being depleted. Most three farm licences and forest management licences are for seven years. Then if nature has not looked after the replanting and reseedling of the area, then

[Interprétation]

veux pas qu'il y ait des pertes pour les pêcheries, et ensuite qu'on fasse des recherches. Ce serait même tout un travail de reconstruction pour les pêcheries et cela enlève à la population de la Colombie-Britannique une bonne partie de leurs moyens de subsistance et de régions d'habitation. C'est là le plus important fleuve en Colombie-Britannique.

M. Borrie: Vous avez dit après la présentation du mémoire précédent que vous pouviez réfuter certaines des déclarations faites par les témoins antérieurs sur l'exploitation forestière.

M. Hayward: Définitivement.

M. Borrie: Ma question vise surtout la pollution causée par les usines de pâtes et papier. Pensez-vous que leurs méthodes de lutte contre la pollution suffisent à l'heure actuelle?

M. Hayward: A l'heure actuelle?

M. Borrie: A l'heure actuelle. Particulièrement, les usines qui sont en train d'être construites maintenant. Il y en a trois à Prince George, comme vous dites. Il y en a deux à venir.

M. Hayward: Pas dans le cas de Northwood. Je vois ici qu'à trois reprises le ministre provincial a averti par lettre, la société Northwood de se conformer aux normes pour l'élimination des déchets et cela n'a pas encore été fait. En voilà une. En ce qui a trait aux usines plus anciennes, ils n'ont pas pris de mesures suffisantes. Quant à la politique en matière de forêts, rien à faire. Nous n'avons pas de rendement perpétuel en Colombie-Britannique. Vous posiez des questions sur les forêts sans obtenir de réponse valable. On a dit qu'on était à planter 75 millions d'arbres comme chiffre optimum. Savez-vous ce qui se passe dans les forêts de la Colombie-Britannique à l'heure actuelle? Nous avons brûlé plus d'arbres par année au cours des dix dernières années, en vertu du rapport du ministère des Forêts que nous n'avons reboisé. Nous n'avons rien fait pour reboiser les terrains exploités. Nous avons reboisé au plus 46,000 acres, selon les chiffres dont je dispose. J'ignore ce qui s'est produit l'an dernier.

Voilà où nous en sommes. Nous n'avons pas de politique de soins ou de rendement perpétuels de ce produit. On a dit au public en général que ce produit existait et que c'était un fait viable. Ce n'est pas un fait viable. Les forêts de la Colombie-Britannique sont en train d'être épuisées. La plupart de ceux qui ont des permis pour la culture des arbres et la gestion des forêts ont un permis de sept

[Text]

they move in. In many areas when they move in they have got a second growth of weed trees...

Mr. Borrie: Coming back to the pollution aspect, I mentioned Northwood. Would you make available to the Committee the figures that you have available and the report that you have available with regard to the pollution at Northwood?

Mr. Hayward: All I have is the speech that was made, I think, by Mr. Woolliams or Mr. Berger in the House and I can give those to you, sir. You will have to go from there because they do not give figures. This is the unfortunate part. We cannot get statistics.

Mr. Borrie: Then this appears to me to be just speculation.

Mr. Hayward: For us it is not speculation. The river stinks for 100 miles. We know it is wrong. But we cannot get figures.

Mr. Borrie: Yes, I agree with you but the point is that we also need some of the facts and something to back up your statements because you just cannot come in and unilaterally state that such and such is the case.

Mr. Hayward: This is a statement by Mr. Berger when he pinned the minister down on this. This has happened. These three letters were there. They must be available in the legislature but they are not available to us.

Mr. Borrie: He pinned the minister down. I am sorry. I guess my time is up. I would like to pursue that a little further. However, I will pass.

The Chairman: Mr. Noble.

Mr. Noble: Mr. Chairman, going back to page 4 on thermal pollution, I could have put it as a supplementary but as we made a ruling on supplementaries I will ask this question. I might tell the witness that about two months ago I put the question to the Minister of Fisheries as to whether there was a possibility of thermal pollution and what was being done about it.

[Interpretation]

ans. Sans tenir compte si la nature a vu au reboisement et à l'ensemencement de la région où ils s'installent. Dans plusieurs régions, quand ils s'installent, ils obtiennent une deuxième croissance d'arbres de mauvaise qualité.

M. Borrie: Si l'on en revient à l'aspect de la pollution j'ai mentionné Northwood. Pourriez-vous présenter au comité, s'il vous plaît, les chiffres que vous avez de disponibles quant à la pollution à Northwood?

M. Hayward: Tout ce que j'ai, c'est le discours qui a été présenté par monsieur Woolliams ou monsieur Berger à la Chambre. Je puis vous les donner, si vous voulez les avoir. Il faudra vous en tenir à cela car ils ne donnent pas de chiffres. C'est là le côté déplorable de la question. Nous ne pouvons pas avoir de statistiques.

M. Borrie: Il me semble que c'est là seulement de la spéculation.

M. Hayward: Pour nous, non ce n'est pas une simple conjecture. La rivière pue sur un parcours de 100 milles. Nous savons fort bien que c'est déplorable. Mais il nous est impossible d'obtenir de statistiques.

M. Borrie: Oui je suis d'accord avec vous, mais ce qui importe c'est que nous avons aussi besoin de certains des faits; nous avons besoin de faits concrets à l'appui de vos déclarations car on ne peut unilatéralement déclarer que telle est la situation.

M. Hayward: C'est la déclaration faite par monsieur Berger lorsqu'il a attaqué le ministre à ce sujet. Ces trois lettres y étaient. Ces lettres doivent pouvoir être obtenues à l'Assemblée législative mais elles ne nous sont pas disponibles.

M. Borrie: Il a obligé le ministre à reconnaître les faits. Je regrette, mais je crois que mon temps est épuisé. J'aurais aimé poursuivre ce débat un peu plus mais je cède la parole au suivant.

Le président: M. Noble.

M. Noble: Monsieur le président, si l'on revient à la page 4, sur la pollution thermique, j'aurais pu poser une question supplémentaire, mais je vais donc poser la question suivante, puisque nous avons établi un règlement quant aux questions supplémentaires. Je pourrais dire au témoin qu'il y a environ deux mois je posais la question au ministre des Pêcheries au sujet de la possibilité de pollution thermique et de ce qu'on faisait à ce sujet.

[Texte]

I did not get an answer but I did get quite a tongue-lashing from the local papers near a thermal plant. They said I was creating anxiety and all that sort of thing. Now you make the statement here and you are commending the Fisheries Association of B.C. for their finding, apparently. Did they do any research to prove definitely there was some harm being done to the fisheries by thermal plants from warm water or hot water—whatever expression you want to use?

Mr. Hayward: I commended them on the article, sir, because that article was both national and international in its scope on what the worry is on the biological change in the water. We applied those statements to the only thermal plant in British Columbia—that is the one on Burrard Inlet—because we have been worried, too. That is why the society included it in here and I am sure in the future it is going to be more and more of a problem.

One thermal plant in the United States uses 317,000 gallons of water per minute for cooling. On a non-closed circuit that makes a tremendous difference. Practically one acre foot of water per minute is being used by that plant and heated. At the "plumes" as they call them, where the heated water comes out, if the fingerlings and the fish hit them they do not have the strength and the power to get away, and they immediately die. Whether you know it or whether you do not, the Puget Sound studies on salmon showed one thing—they do not turn belly up and float. The fingerlings of salmon die and sink to the bottom. Now, that is direct proof in the Puget Sound report. I have it here for you; it shows pictures of it.

Mr. Noble: Thank you, Mr. Chairman.

Mr. Goode: I would like to clear up one point that I made earlier. I referred to New Westminster as being the area that was causing the most trouble in the Fraser River. It is actually the sewers coming from New Westminster and other municipalities in the area. I would like to ask the witness whether he is aware of the new federal anti-pollution laws in the United States and the areas that they set up rather than setting up individual states. Does he believe that this might be a basis for future federal laws in Canada?

Mr. Hayward: I have an article here that intimates the total new government of the United States is pollution activated. They are going after it in a great way. I have had material from the United States years ago;

[Interprétation]

Je n'ai pas reçu de réponse, mais les journaux locaux près d'un centre thermique cependant m'ont malmené. Ils ont dit que je créais un climat d'angoisse, etc. Vous félicitez maintenant l'Association des pêcheries de la Colombie-Britannique de leur découverte apparemment. Ont-ils fait des recherches pour prouver d'une façon définitive que l'on causait du tort aux pêcheries par des usines thermiques utilisant de l'eau tiède ou de l'eau chaude quelle que soit l'expression que vous voulez utiliser?

M. Hayward: Je les ai félicités pour leur article car cet article portant sur leurs préoccupations pour ce qui est des changements biologiques dans l'eau avait une portée nationale et internationale. Nous avons appliqué cette déclaration à la seule usine thermique en Colombie-Britannique, notamment pour celle de Burrard Inlet. Car nous sommes soucieux nous aussi. C'est pourquoi notre société est venue vous en parler et je suis sûr qu'à l'avenir cela va devenir un problème de plus en plus grave.

Une usine thermique, aux États-Unis, utilise 317,000 gallons d'eau par minute pour le refroidissement. Avec un circuit non-fermé, cela fait une différence considérable. Cela équivaut presque à un pied d'eau recouvrant une acre que l'usine utilise et réchauffe à chaque minute. Aux «plumes», comme on les appelle, où l'eau chaude est déversée, si les poissons frappent cette eau chaude, ils n'ont pas la force de s'en éloigner et meurent immédiatement. Que vous le sachiez ou non, les études de Puget Sound sur le saumon montrent une chose, c'est que ces poissons ne flottent pas. Les saumons meurent, puis sombrent. Le rapport de Puget Sound nous en fournit la preuve directe. Je l'ai ici, pour vous. On y voit des photos.

M. Noble: Merci, monsieur le président.

M. Goode: J'aimerais expliciter un point que j'ai soulevé plus tôt. J'ai parlé de New Westminster comme étant la région qui causait le plus de difficultés sur le fleuve Fraser. De fait, les égouts de New Westminster et d'autres municipalités de la région sont en cause. J'aimerais demander au témoin s'il est au courant des nouvelles lois fédérales contre la pollution, aux États-Unis, et qu'elles s'appliquent aux régions plutôt qu'aux États. Est-ce qu'il estime que cela devrait servir de base pour d'autres lois fédérales, au Canada?

M. Hayward: J'ai un article sous les yeux qui laisse entendre que le nouveau gouvernement des États-Unis s'est lancé dans une campagne contre la pollution, une campagne d'envergure. J'ai reçu de la documentation des

[Text]

they are very co-operative. I have copies of the President's report on pollution—this was prior to President Kennedy—and this type of thing. But they are really active, and I trust the federal government will be as pollution oriented in Canada as it is in the United States at the present time.

They have gone too far; they are nearly over the precipice on pollution. Their water tables are away down. They consider now—if you are talking to anybody from Nevada—that Canada's water resources are continental. That is a nice way of saying we can have them any time we want them. I do not propose that Canada should lose its water resources that way. On pollution I think it is the same thing. We have to look after our own problems. Certainly, if they have a good system of pollution abatement we should follow it, but let us lead, not follow.

Mr. Goode: The final point I have, Mr. Chairman, is this. The main theme of your brief—I believe the main point you make—is that you think that an ecological study should be made of the Fraser River. As a member of Parliament who is trying to pursue this vigorously, I find myself a little bit alone and I would encourage you to write all members of Parliament of all parties to encourage them to get behind this campaign.

Mr. Hayward: Thank you, Mr. Goode. We will do that for you.

The Chairman: Are there any more questions I want to thank you, Mr. Hayward, Mr. Hagell and Mrs. Mallard for a very, very good brief. We really appreciate the information you have given us this morning.

Mr. Hayward: Mr. Chairman, I can assure you of one thing. The next brief we present to you will be even better, and it will be just as hard-hitting if not harder, because we will have done more research. We just did not have the time. That brief was written in three days and typed and it is a mess, but next time we will do better, we promise you.

The Chairman: Mr. Hayward, time seems to be a factor with us as well.

Mr. Hayward: I can quite believe it. Thank you for being here. Nothing pleases me more than to see the federal government disperse itself throughout the country. This is one country; it is one ecology—let us keep it that way.

[Interpretation]

États-Unis, il y a quelques années; ils collaboraient beaucoup. J'ai des exemplaires du rapport du président sur la pollution. Il est antérieur à celui du président Kennedy. On est très actif, et j'espère que le gouvernement fédéral s'occupera autant de la pollution au Canada qu'aux États-Unis, à l'heure actuelle.

On est allé trop loin; on arrive au bord du précipice de la pollution. Les niveaux d'eau sont très bas. Au Nevada, on estime que les ressources en eau du Canada sont continentales. C'est une bonne façon de dire que nous pouvons en disposer quand nous voudrons. Je ne pense pas que le Canada doive perdre ses ressources en eau de cette façon. Et la pollution, je crois que c'est la même chose. Il faut que nous nous occupions de nos propres problèmes. S'ils ont un bon système de lutte contre la pollution, nous devrions l'imiter.

M. Goode: Une dernière question que j'aimerais poser, monsieur le président, c'est la suivante: L'idée principale de votre mémoire, c'est qu'une étude écologique devrait être faite pour le fleuve Fraser. Comme j'essaie vraiment d'en arriver à cela, je me sens un peu seul, et je vous encourage à écrire à tous les députés de tous les partis pour leur demander d'appuyer cette campagne.

M. Hayward: Merci, monsieur Goode. Nous allons faire cela pour vous.

Le président: Y a-t-il d'autres questions? Je tiens à vous remercier, messieurs Hayward et Hagell, et madame Mallard, pour l'excellent mémoire que vous nous avez présenté. Nous apprécions beaucoup les renseignements que vous nous avez donnés ce matin.

M. Hayward: Monsieur le président, je peux vous assurer d'une chose. Le prochain rapport que nous allons vous présenter sera encore mieux présenté et plus à point, car nous aurons fait plus de recherches. Nous n'avons pas eu le temps d'en faire avant. Ce mémoire a été rédigé en trois jours et a été dactylographié en vitesse, mais la prochaine fois, je peux vous assurer que nous ferons mieux.

Le président: Monsieur Hayward, le temps semble être un facteur pour nous aussi.

M. Hayward: Je le crois. Merci d'être venu ici. Rien ne me fait plus plaisir que de voir le gouvernement fédéral se disperser à travers le pays. C'est un pays, une écologie, prions-le ainsi.

[Texte]

The Chairman: I would like to have a short meeting of the steering committee immediately.

AFTERNOON SITTING

The Chairman: I see a quorum. I will call Mr. Christenson to the table to give his brief from the Pacific Coast Fishermen's Mutual Marine Insurance Company.

Perhaps, Mr. Christenson, we will ask you to give a summary of your brief.

Mr. H. A. Christenson (Secretary-Manager, Pacific Coast Fishermen's Mutual Marine Insurance Company): Mr. Chairman, gentlemen, there is no delegation as such. The members of our Board of Directors are all busy working, so I am the lone representative present with my assistant.

Mr. Chairman, it is with some degree of hesitation that the Fishermen's Mutual presents a brief to your Committee. On the one hand we have no desire to downgrade the value of the Fishermen's Indemnity Plan, particularly to the owners of smaller-value boats. On the other hand we do not wish to appear to be parading the success of our own venture.

However, in view of the fact that Parliament has before it or in contemplation changes in the Fishermen's Indemnity Act, and the Committee is meeting in Vancouver, we thought we might be in a position to be of some assistance to your Committee by presenting a brief and appearing before it.

The general tenor of our brief is that from our own experience we believe that the Fishermen's Indemnity Plan could be improved and perhaps savings effected in its operation and administration if some changes were made. Our brief deals with the role of fishermen and of the Government with respect to fishermen's vessel insurance and the Fishermen's Indemnity Plan in the following respects:

(1) We suggest that greater opportunities for meaningful involvement and participation by fishermen covered by the Plan in all aspects of its operations and administration would improve its effectiveness;

(2) There is a need for education to encourage fishermen to join together to solve their own problems as far as possible in the important aspect of marine and other allied losses;

(3) There is a need for help by the Government to assist fishermen through

[Interprétation]

Le président: J'aimerais que le comité directeur tienne une brève séance immédiatement.

SÉANCE DE L'APRÈS-MIDI

Le président: Je vois que nous avons quorum, messieurs. Je cède la parole à M. Christenson en l'invitant à soumettre le mémoire de la *Pacific Coast Fishermen's Mutual Marine Insurance Company*.

M. H. A. Christenson (secrétaire-gérant de la Pacific Coast Fishermen's Mutual Marine Insurance Company): Monsieur le président, messieurs, nous n'avons pas de délégation à proprement parler. Les membres du Conseil d'administration sont tous très occupés, de sorte que je suis le seul à représenter l'association.

Monsieur le président, c'est avec une certaine hésitation que la *Fishermen's Mutual* présente son mémoire à votre Comité. D'une part, nous ne voulons pas minimiser la valeur du Plan d'indemnités aux pêcheurs, surtout pour les petits propriétaires de bateaux. Par ailleurs, nous ne voulons pas vous donner l'impression que nous nous vantons du succès de notre entreprise.

Étant donné que le Parlement envisage de modifier la Loi sur l'indemnité aux pêcheurs et que le Comité se réunit à Vancouver, nous avons pensé vous être utiles en présentant un mémoire et en venant témoigner devant vous.

Notre mémoire révèle que notre expérience nous amène à penser que le Plan pourrait être amélioré et qu'on pourrait réaliser des économies dans son administration si on y apportait des modifications. Notre mémoire porte sur le rôle des pêcheurs et le rôle du gouvernement dans l'assurance des navires des pêcheurs, et parle également du Plan d'indemnités.

(1) Nous proposons d'intéresser davantage les pêcheurs à l'administration et à l'application du Plan pour en améliorer l'efficacité;

(2) Il est nécessaire d'éduquer les pêcheurs à s'unir pour résoudre leurs problèmes maritimes et de pertes connexes;

(3) Il est nécessaire que le gouvernement aide les pêcheurs par des efforts de coopéra-

[Text]

mutual and cooperative efforts in the accumulation of that amount of capital which is necessary to fund such a plan or organization and to provide stability over the years;

(4) We feel that consideration should be given to regionalization to permit realistic participation and responsibility by fishermen and hopefully to bring about a reduction of overhead as well as to gear the Plan to meet different needs on the east and west coasts and on inland waters.

We will, therefore, be pleased to answer your questions and be of such assistance to the Committee on the matters referred to in our brief as we are able to be.

The Chairman: Thank you, Mr. Christenson. The first questioner is Mr. St. Pierre.

Mr. St. Pierre: I do not think I was first on the list, Mr. Chairman, as a matter of fact. I will be if you wish though, because the question which naturally comes to mind is what differences do you suggest are necessary on the East and West Coasts and on inland waters? What are the differences of situations to be accommodated?

Mr. Christenson: I am not that familiar with the areas and the conditions that prevail, but I do know that we have had very many requests for assistance in one form or another to provide insurance on the East Coast, particularly since many of our vessels have gone to the East Coast to fish herring. I understand that there is no reasonable rated insurance available to fishermen on the East Coast.

Mr. St. Pierre: The rates here are quite high, are they not?

Mr. Christenson: Yes, I would say they are high now, but they are in our opinion realistic now considering the losses that have been taking effect. The situation on this coast has only recently been resolved so far as rates are concerned. Actually, the rates prevailing in the last four to five years have been unrealistically low and they have been increased now, particularly in the last three years and again this year. I think underwriters are trying to make up for some of the losses as well as getting the rates up to where they are realistic.

Mr. St. Pierre: We had some evidence on this yesterday morning, I believe. It was suggested that there had been heavy losses before and that the rates have now been

[Interpretation]

tion mutuelle en vue de l'accumulation de ce capital pour créer un tel plan ou un organisation et pour assurer une stabilité avec les ans;

(4) Nous estimons qu'il faudrait envisager la régionalisation pour permettre une participation réaliste des pêcheurs et dans l'espoir d'une réduction des dépenses générales et pour que le Plan réponde aux différents besoins des côtes de l'Atlantique et du Pacifique et aux eaux intérieures.

Par conséquent, nous répondrons très volontiers à vos questions et nous espérons aider le Comité dans la mesure du possible.

Le président: Merci, monsieur Christenson. La première personne sur notre liste est Monsieur St-Pierre.

M. St-Pierre: Je ne pense pas être le premier sur la liste. Je le serai, si vous le désirez, parce que la question qui me vient à l'esprit est de savoir quelles différences sont nécessaires entre les côtes de l'Atlantique et du Pacifique et dans les eaux intérieures? Quelles sont les différences de situations auxquelles on doit répondre?

M. Christenson: Je ne suis pas au courant des régions et des conditions qui y règne, mais nous avons différentes demandes d'aide d'une manière ou d'une autre pour assurer sur la côte de l'Atlantique, en particulier depuis que plusieurs de nos navires sont allés y pêcher le hareng. Je crois qu'il n'y a pas d'assurance à un taux raisonnable offerte aux pêcheurs.

M. St-Pierre: Les primes d'assurance sont assez élevées, n'est-ce pas?

M. Christenson: Oui, elles sont très élevées, maintenant, mais d'après nous, elles sont réalistes compte tenu des pertes qui ont été encourues. La situation dans l'Est n'a été résolue que tout récemment en ce qui concerne les taux des primes d'assurance. En fait, les tarifs des quatre ou cinq dernières années ont été beaucoup trop bas et ils ont été augmentés au cours des trois dernières années et cette année aussi. Je crois que les assureurs maritimes cherchent à récupérer une partie des pertes et à augmenter les taux à un niveau approprié.

M. St-Pierre: Nous avons reçu des témoignages à cet effet hier matin, je crois. On a indiqué qu'il y a eu de lourdes pertes jusqu'à maintenant et que les tarifs ont été augmen-

[Texte]

raised to accommodate previous losses, and these have become quite burdensome to many fishermen.

Mr. Christenson: That is correct.

Mr. St. Pierre: I will pass, Mr. Chairman.

The Chairman: Are there any other questions? Mr. Lundrigan.

Mr. Lundrigan: Mr. Chairman, in reading the brief presented and now the summary I noticed a reference made to the need for education to encourage fishermen to join together to solve their own problems. Could you explain in a little more detail what you mean by this statement and also how you would propose that this kind of educative process be brought about?

Mr. Christenson: We are thinking of an organization similar to our own where the fishermen, in effect, are running their own insurance company, and naturally, they are policing themselves, they are checking and supervising indirectly but sometimes directly, and they are participating in the organization. They take an extremely keen interest in it and they have a great deal of respect for it. This makes for a good operation. It helps cut down the cost of overhead, improves the quality of the vessels, the maintenance and operation of them, and therefore, produces a better net rate than would be available otherwise.

Mr. Lundrigan: Are fishermen taking advantage of the Fishermen's Indemnity Plan?

Mr. Christenson: That I would not know. I would judge from the losses they have had and particularly the type of losses that there could be some reason to suspect this. They have had a very great number of total losses.

Mr. Lundrigan: Thank you, Mr. Chairman.

The Chairman: Mr. Comeau.

Mr. Comeau: Thank you, Mr. Chairman. On page 6 of your brief you state there is a need for the Fishermen's Indemnity Plan, particularly with respect to smaller boats. I am under the impression that this exists already. Smaller boats are quite well covered under the Plan. The Plan has to be changed to accommodate larger vessels particularly due to the fact that the insurance rates are quite high. Would you care to comment? Why did you specify particularly the smaller boats?

[Interprétation]

tés pour rembourser les pertes antérieures. Ces primes sont maintenant très fortes à supporter par certains pêcheurs.

M. Christenson: C'est juste.

M. St-Pierre: Je cède la parole, monsieur le président.

Le président: Y a-t-il d'autres questions? Monsieur Lundrigan.

M. Lundrigan: Monsieur le président, en lisant le mémoire présenté et le résumé, je remarque qu'il est question de la nécessité d'encourager les pêcheurs à s'unir pour résoudre leurs propres problèmes. Pourriez-vous préciser ce que vous voulez dire et comment vous envisagez d'éduquer les pêcheurs dans ce sens?

M. Christenson: Nous pensons à un organisme semblable au nôtre où les pêcheurs gèreraient leur propre compagnie d'assurance et l'administrer, vérifier et contrôler indirectement et parfois directement ou indirectement et où ils participeraient. Ils y portent un intérêt très vif et en ont le respect. Ceci permet une bonne exploitation. Cela diminue les frais généraux, améliore la qualité des bateaux, l'entretien et leur exploitation, et par conséquent, favorise un rendement net beaucoup plus élevé qu'autrement.

M. Lundrigan: Est-ce que les pêcheurs tirent partie du Plan d'indemnités aux pêcheurs?

M. Christenson: Je n'en sais rien. A en juger d'après les pertes qu'ils ont eues, surtout du genre de pertes, il me semble qu'on peut en douter. Il y a eu un grand nombre de pertes totales.

M. Lundrigan: Merci, monsieur le président.

Le président: Monsieur Comeau.

M. Comeau: Merci, monsieur le président. A la page 6 de votre mémoire, vous dites qu'il faut un Plan d'indemnités aux pêcheurs, notamment pour les petits bateaux. J'ai le sentiment que cela existe déjà, que les petits bateaux sont déjà bien protégés par le Plan et que le Plan devrait être modifié pour s'occuper de plus gros bateaux surtout compte tenu du fait que les taux d'assurance sont très élevés. Pourriez-vous apporter des commentaires. Pourquoi vous attachez-vous davantage aux petits bateaux?

[Text]

Mr. Christenson: I imagine that you have checked into it and you understand the Plan. It is basically a total loss insurance type of plan. It has coverage for damage repair but there is a very, very high deductible of 15 per cent. When you start to apply this to higher values it becomes unrealistic. It serves the purpose for the smaller vessels because it was designed to take care of them in the extreme and not to cover the incidental or more minor type of accident. It does this sufficiently well.

However, we feel that a plan of this nature could be suitable on the East Coast on smaller-value vessels but not necessarily on this Coast because the quality of the vessels is much better and it is getting better every year. This plan does not suit the needs as well as it should or could on this Coast. I am not familiar with the...

Mr. Comeau: It does not on the East Coast either, and I was wondering how we could remedy that to accommodate these larger vessels if there is a need for this?

Mr. Christenson: There are a number of ways in which it can be done. The mere fact that you increase the total number of dollars insured will not solve the problem. You have to get a type of coverage that may be limited in another manner.

I was suggesting to a fisheries committee recently that if they were going to consider expansion to the plan the first thing they would have to do is to get a realistic deductible. They could even in extreme cases—I am talking in terms of losses by individuals where their loss experience is bad—be rated by deductible; by increasing the deductible from the standard, for example, 3 per cent or 4 per cent up to as high as 5 or 10 per cent if it were warranted. Also they should limit what is insured.

You have to consider it from the point of view of the amount of office work, administration entailed, and so forth. I was thinking in terms of simplification. If they were to cut out entirely engine claims, for example, confine it to hull damage and have a realistic deductible, I think that could be done. Merely increasing the number of dollars does not make any difference; it will not offer anything worthwhile.

Mr. Comeau: Thank you, Mr. Chairman.

Mr. McQuaid: Mr. Christenson, could you tell us what specific area of British Columbia you work within? You call yourself the Pacific Coast Fishermen's Mutual Marine

[Interpretation]

M. Christenson: J'imagine que vous avez examiné le Plan et que vous le comprenez. C'est un Plan d'assurance contre les pertes totales. Il couvre la réparation des dommages, mais il y a une déduction très haute de 15 p. 100. Quand il s'étend à de plus grandes valeurs, il devient irréaliste. Il a été conçu pour les petits navires pour couvrir les risques extrêmes mais ne couvre pas les accidents d'ordre mineur. Il le fait assez bien, mais nous estimons qu'un plan de ce genre pourrait être bon pour les petits bateaux de pêche de la côte de l'Atlantique mais pas nécessairement pour la côte du Pacifique car les bâtiments sont de meilleure qualité et ils s'améliorent d'année en année. Le Plan ne répond pas aux besoins autant qu'il devrait ou pourrait le faire sur notre côte. Je ne suis pas au courant de...

M. Comeau: Ni sur la côte de l'Atlantique. Je me demandais comment nous pourrions y remédier pour les grands bateaux s'il y a lieu...

M. Christenson: On peut le faire de plusieurs façons. Le simple fait d'augmenter le nombre de dollars assurés ne résout pas le problème. Il faut un type de couverture qui puisse être limité d'une autre manière.

Je proposais à un comité des pêches tout récemment que s'ils envisageaient l'expansion du Plan, la première chose à faire c'est d'obtenir un montant déductible réaliste. Dans les cas extrêmes, je veux dire de pertes lourdes pour les individus, les taux pourraient même être fixés par les montants déductibles. En augmentant le montant déductible du taux normal de 3 ou 4 p. 100 par exemple, jusqu'à 5 ou 10 p. 100, si c'était garantie, ils devraient aussi limiter ce qui est assuré. Il faut l'envisager sous l'angle des frais du travail de bureau, de l'administration grevée, etc. Je pensais à cela en vue de la simplification. Si l'on supprimait entièrement l'assurance contre les dommages causés au moteur par exemple, pour assurer les dommages causés à la coque, on arrivera à quelque chose de plus réaliste. Augmenter le nombre de dollars, m'apporte aucune différence et n'offre rien de valable.

M. Comeau: Merci, monsieur le président.

M. McQuaid: Monsieur Christenson, pouvez-vous nous dire dans quelle région particulière de la Colombie-Britannique travaillez-vous? Votre compagnie nomme le Pacifique

[Texte]

Insurance Company. How big an area do you include here within the province?

Mr. Christenson: The Canadian coastline.

Mr. McQuaid: The whole coastline?

Mr. Christenson: Yes. Vancouver to Prince Rupert.

Mr. McQuaid: Could you give us an estimate of how many vessels might be operating within that area?

Mr. Christenson: Our vessels?

Mr. McQuaid: No, the total number.

Mr. Christenson: The total, no. I am not too sure of that. I have read statistics of 7,000 or 8,000.

Mr. McQuaid: I ask because it was suggested yesterday by one of the witnesses that your company is highly selective in the type of risks that it takes. This is apparently borne out by the fact that page 2 of your brief points out that last year you insured only 947 boats. You suggest on page 5 of your brief:

...recognizes that because of the lack of other fishermen's co-operatives or mutual insurance organizations and the inability or unwillingness, or both, of many fishermen to participate...

What exactly do you mean by the inability?

Mr. Christenson: It could be financial. First of all, the total number of boats we have insured may be misleading. We built this company by competing with other companies. We have not had people knocking at our door until this last year or two because it is only in the last few years that our rates have become that much more attractive. We had to establish a policy of selectivity and we did so at the time that the fishermen's idemnity plan went into force in 1954. We had to do it because we operate as a co-operative and every member, every individual who has a boat insured in our company gets the same percentage return.

We do not make differences by classifying as other outside companies do and after the rates according to losses. Therefore, we are selective initially. Our growth has been slower. Our starting rate is high, it has always been 6 per cent, and up until the present time this was a higher rate than individuals paid elsewhere to start insuring their vessels.

[Interprétation]

Coast Fishermen's Mutual Marine Insurance Company. Quelle est l'étendue de votre région?

M. Christenson: Le littoral canadien.

M. McQuaid: Tout le littoral?

M. Christenson: Oui, de Vancouver à Prince-Rupert.

M. McQuaid: Pouvez-vous me dire approximativement le nombre de bateaux qui circulent dans cette région?

M. Christenson: Nos bateaux?

M. McQuaid: Non, le nombre total.

M. Christenson: Je ne suis pas très sûr du nombre total. J'ai lu des chiffres 7,000 ou 8,000.

M. McQuaid: Je vous pose cette question parce qu'hier un témoin nous a dit que votre compagnie est très minutieuse quant au choix des risques à assurer. Ce fait est confirmé par la page 2 de votre mémoire où vous indiquez que l'an dernier vous avez assuré seulement 947 bateaux. Vous proposez à la page 5 de votre mémoire, et je cite:

En l'absence d'autres coopératives ou sociétés mutuelles d'assurance et vu l'incapacité ou le refus, parfois les deux, de bien des pêcheurs à s'y intéresser...

Qu'est-ce que vous voulez dire par «l'incapacité»?

M. Christenson: Cette incapacité peut être financière. D'abord, le nombre total de bateaux que nous avons assurés peut nous induire en erreur. Nous avons formé notre compagnie en faisant concurrence à d'autres entreprises. Personne n'est venu à nous avant ces dernières années car ce n'est que depuis ces quelques dernières années que nos taux sont devenus beaucoup plus attrayants. Nous avons dû choisir avec plus d'attention et c'est ce que nous avons fait au moment où le régime de pension des pêcheurs est entré en vigueur, soit en 1954. Nous avons dû le faire car nous exploitons une coopérative et chaque membre, chaque individu qui possède un bateau assuré retire le même pourcentage en ristourne.

Nous ne faisons aucune ségrégation dans la classification comme le font les autres compagnies en changeant le taux selon les pertes. Alors, nous avons effectué notre choix au début. Notre croissance a été lente, notre taux a toujours été de 6 p. 100 et jusqu'à maintenant c'était un taux plus élevé qu'ailleurs pour l'assurance des bateaux.

[Text]

Mr. McQuaid: That was not what was suggested to us yesterday morning, Mr. Christenson. It was suggested to us that your rates are considerably lower than the ordinary so-called straightline companies, and that you were highly selective in the type of risks you take. You used the word "selective" too, but I understood you to mean it in the sense that you would only take those who wish to become members of your co-operative or are you selective on the type of risks that you take that is, the type of boats and so on.

Mr. Christenson: No, we are selective there is no question about that, both in so far as the operator is concerned and the condition of the vessel and the manner in which it is maintained. Also, our net rate is lower, and has been for a number of years, than the competitive companies, but the starting rate is still 6 per cent and only until recently has that been a starting rate outside of our company. We operate on this basis. We set that rate right at the start and we have maintained it at 6 per cent, and we return every dollar that is left over at the end of the year. So, as the company has grown it has grown much faster than the overhead and other costs, of course, therefore the benefits have been paid out to the membership and the net rate is low.

Mr. McQuaid: I am in complete agreement with the ideals of your cooperative end of your association but I am just wondering if you would not be performing a better service to the fishing vessel owners of your province if, perhaps, you would be inclined to take a few more in; 947 seems to be a very small number for you to insure with so many vessels in the fleet.

Mr. Christenson: We are working as hard as we can to get them in.

Mr. McQuaid: On the other hand, your risks are pretty selective, I think you will agree to that.

Mr. Christenson: I would not say it is that tough, frankly. I think that a man's record has to be very bad or that his previous behaviour has had to be very bad or his boat is in very bad condition or something of that nature. It is not really that tough. I do not think that we turn down for insurance more than, oh, I would say, 10 per cent to 15 per cent of the applicants.

Mr. McQuaid: I would be interested in knowing, Mr. Christenson, if you could tell us with your lower rates the reason more boat owners are not insuring with you?

[Interpretation]

M. McQuaid: Ce n'est pas ce qu'on nous a dit hier matin, monsieur Christenson. On a dit ici hier que vos tarifs sont plus bas que les prétendues compagnies d'assurance et que vous choisissiez minutieusement le genre de risques que vous couvrez. Vous utilisez également le mot «sélectif» mais je comprends que vous choisissiez seulement ceux qui veulent devenir membres de votre coopérative et que vous choisissiez soigneusement les risques que vous couvrez—c'est-à-dire le genre d'embarcations, etc.

M. Christenson: Non, nous faisons un classement sélectif—il n'y a pas de question là-dessus; notre classement est le même en ce qui concerne l'exploitant, l'état du bateau et son entretien. De plus, notre taux net est inférieur depuis un certain nombre d'années à celui des sociétés concurrentes; le taux de départ est toujours de 6 p. 100 et ce n'est que récemment qu'il est le taux de départ des autres sociétés. Voilà notre point de départ. Nous avons fixé ce taux au début à 6 p. 100, nous remboursons tous les dollars qui nous ont été remis à la fin de l'année. Ainsi, au fur et à mesure que notre société s'est développée, elle a crû plus rapidement que les frais généraux et, bien sûr, les bénéfices ont été retournés aux membres et le taux net s'est abaissé de beaucoup.

M. McQuaid: Je suis tout à fait d'accord avec l'idéal de votre coopérative et de votre association mais, je me demande s'il ne serait pas préférable pour les pêcheurs de votre province d'en assurer un plus grand nombre; 947 membres me semble un petit nombre étant donné le grand nombre de bateaux de la flotte de pêche.

M. Christenson: Nous cherchons le plus possible à accroître le nombre.

M. McQuaid: D'autre part, vous effectuez un classement très sélectif des risques que vous couvrez. Vous serez d'accord avec moi là-dessus.

M. Christenson: Je ne dirais pas que notre classement est tellement sévère. Il faut en quelque sorte que le dossier d'une personne soit très mauvais, que sa conduite ait été très mauvaise ou que son bateau soit en bien mauvais état. Nous ne sommes pas si sévères. Je crois que nous refusons d'assurer environ 10 ou 15 p. 100 des personnes qui en font la demande.

M. McQuaid: Je serais intéressé de savoir, monsieur Christenson, si vous le pouvez, pourquoi vous n'avez pas plus de membres étant donné vos taux inférieurs.

[Texte]

The Chairman: Is that your last question?

Mr. McQuaid: Yes.

Mr. Christenson: I do not know all the reasons, it can be anything. First of all it is a co-operative and some people do not like everybody else to know their business and they seem to think that maybe this can happen. Some people do not like co-operatives. Some people just have the idea that they owe something to whoever they are fishing for and they have always been insured there and they continue to be insured in the fishing company fleet. Many of them even yet feel that paying 6 per cent to start with is too much. They are not thinking about the future. However, there are many, many reasons. However, we are very actively soliciting new business constantly and we are growing very rapidly, too.

The Chairman: Mr. Crouse?

Mr. Crouse: Thank you, Mr. Chairman. Your company is a provincial company operating under a provincial charter. Do you insure only boats, Mr. Christenson, or do you also cover the men if they become injured at sea or lose their lives.

Mr. Christenson: Just fish boats.

Mr. Crouse: Who sets your rate, an advisory board or the provincial government?

Mr. Christenson: No, our rate is set by the Board of Directors.

Mr. Crouse: Is it under any control by the provincial government whatever?

Mr. Christenson: No.

Mr. Crouse: However, you do get your charter from the provincial government? Do you insure boats from your mutual or co-operative, as you call it, on the basis of so much per boat on what yardstick or valuation do you use?

Mr. Christenson: We value boats at present day values. After a period of years one does not have any difficulty setting a value on the boat and equipment. We set a value on the entire vessel, boat, machinery, electronic equipment; the total package in one value.

Mr. Crouse: Then you take what percentage of that evaluation?

Mr. Christenson: We carry all of the risk up to the first \$30,000 of value on each vessel and we reinsure the balance.

[Interprétation]

Le président: Est-ce votre dernière question?

M. McQuaid: Oui.

M. Christenson: Je ne sais pas quelles sont toutes les raisons; elles peuvent être diverses. Premièrement c'est une coopérative; certaines personnes n'aiment pas que les autres connaissent leur état financier et croient que c'est ce qui se passe. D'autres n'aiment pas les coopératives. D'autres croient qu'ils doivent quelque chose à ceux pour lesquels ils pêchent, qui les ont toujours assurés et continuent à être assurés par la même société. Un grand nombre croient que payer 6 p. 100 au départ, c'est trop élevé. Ils ne pensent pas à l'avenir. Toutefois, il y a bien des raisons. Mais, nous sollicitons constamment des clients et notre société croît très rapidement.

Le président: Monsieur Crouse?

M. Crouse: Merci, monsieur le président. Votre compagnie est une compagnie provinciale ayant une charte provinciale. Assurez-vous seulement les bateaux, monsieur Christenson, ou assurez-vous également les hommes en cas d'accidents en mer ou de mort?

M. Christenson: Nous assurons que les bateaux de pêche.

M. Crouse: Qui fixe votre taux? Est-ce un comité consultatif ou le gouvernement provincial?

M. Christenson: Non. Un conseil d'administration fixe notre taux.

M. Crouse: Le gouvernement provincial exerce-t-il un certain contrôle?

M. Christenson: Non.

M. Crouse: Toutefois, votre charte a été établie par le gouvernement provincial? Assurez-vous les bateaux en fonction d'une assurance mutuelle ou coopérative ou quelle norme utilisez-vous?

M. Christenson: Nous évaluons les bateaux selon la valeur marchande actuelle. Après un certain nombre d'années, une personne n'a plus de problèmes à évaluer le bateau et l'équipement. Nous évaluons tout le bateau: la coque, l'équipement, le matériel électronique, etc.

M. Crouse: Puis, vous prenez quel pourcentage de cette évaluation?

M. Christenson: Nous couvrons tous les risques jusqu'à \$30,000 sur chaque bateau puis, nous réassurons le reste.

[Text]

Mr. Crouse: Do you restrict the coverage to any specific size of ship or will you take any boat regardless of size?

Mr. Christenson: There is no restriction.

Mr. Crouse: I have one other question. Do you restrict your cover to any particular area of the coast or do you cover the entire Province of British Columbia?

Mr. Christenson: Our boats are permitted to operate at the same rate from the northern California border to 500 miles into the Bering Sea. That is as broad as it can be.

Mr. Crouse: In other words, there is no restriction of the cover on the boats that are in British Columbia or on the area of sea in which they can fish?

Mr. Christenson: That is the restriction: Northern California border to 500 miles into the Bering Sea.

Mr. Crouse: All right, thank you.

The Chairman: Mr. Crouse, are there any further questions? If not, I wish to thank Mr. Christenson for his brief and his very helpful answers.

The next brief is from the United Fishermen and Allied Workers' Union. We have with us today Mr. Homer Stevens, General Secretary Treasurer. This brief has been circulated to the members of the Committee and I will ask Mr. Stevens to give an outline of the brief before we move on questioning. First, I will also ask him to introduce his colleagues.

Mr. Homer Stevens (General Secretary Treasurer, United Fishermen and Allied Workers' Union): Mr. Chairman and members of the Committee, with me today are Mr. Stavenes, our President, on my right Mr. Walter Ironside our Vice-President and some other members of our organization. Mr. Suzuki, I think, was here before on a previous occasion.

We found some difficulty in attempting to summarize what appears more than a brief, it is almost a book, because some of the problems are quite complex and it was not feasible to summarize them in just a few words. I hope that all members of the Committee have read the full text which we submitted for this occasion. I would also like to repeat what is mentioned in the early part of the brief, that we hope this will become an annual event, for the Committee to come out to British Columbia, hear some of the problems that we have and try to find solutions. Also, we would

[Interpretation]

M. Crouse: Vous limitez-vous à des navires d'une certaine grandeur ou assurez-vous tous les bateaux peu importe la grandeur?

M. Christenson: Non, il n'y a aucune limite.

M. Crouse: J'ai une autre question à poser. Vous limitez-vous à une zone particulière de la côte ou vous occupez-vous de toute la Colombie-Britannique?

M. Christenson: Nos bateaux peuvent manœuvrer au même taux de la frontière nord de la Californie jusqu'à 500 milles à l'intérieur de la mer de Béring. C'est aussi étendu que possible.

M. Crouse: Autrement dit, il n'y a pas de limite de couverture sur les bateaux de la Colombie-Britannique et sur la zone de la mer où ils peuvent pêcher.

M. Christenson: Il y a une limite de la frontière nord de la Californie à 500 milles à l'intérieure de la mer de Béring.

M. Crouse: C'est bien, merci.

Le président: Avez-vous d'autres questions, monsieur Crouse? Si non, j'aimerais remercier M. Christenson pour son mémoire et ses réponses utiles.

Nous passons maintenant la parole à la *United Fisherman* et à la *Allied Workers Union*. M. Homer Stevens, secrétaire général trésorier. Les membres du comité ont pu jeter un coup d'œil sur le mémoire mais je demanderais à Monsieur Stevens de nous donner un bref résumé de son mémoire avant qu'on puisse l'interroger. D'abord, j'aimerais qu'il nous présente les membres de sa délégation.

M. Homer Stevens (secrétaire général et trésorier de la United Fishermen et de la Allied Workers Union): Monsieur le président, messieurs les membres du Comité. J'aimerais vous présenter notre président M. Stavenes, à ma droite, M. Walter Ironside, vice-président et les autres membres de notre organisation. Voici M. Suzuki que vous avez déjà eu l'occasion de rencontrer, je crois.

Il m'est difficile de résumer ce qui me semble plus qu'un mémoire, c'est-à-dire presque un livre car certains problèmes sont très complexes et il est très difficile de les résumer en quelques mots. J'espère que tous les membres du Comité ont lu le texte que nous leur avons envoyé en cette occasion. Je voudrais répéter ce que nous avons dit au début du mémoire: nous espérons que le Comité prendra l'habitude de venir annuellement, en Colombie-Britannique pour écouter nos problèmes et y trouver des solutions. Nous aimerions mieux que cette visite ait lieu plus tôt, soit au début

[Texte]

favour an earlier part of the year, if it was going to be in the beginning of the year, prior to the middle of March, or in the latter part of the fall, from late October to the end of the year because it would be more suitable to those actually engaged in the fishery.

The first item in our brief deals with boat licence limitation and we go into some detail in outlining requests that we made to have this matter discussed before the Committee. It seemed that while we were getting general agreement all around, Mr. Chairman, we were at the same time going around in circles. It is some seven months now since we first made the request to be heard.

We also indicate that perhaps it may be an exercise in futility. The Committee may not have any power to act on this particular problem because the Minister in bringing the changes into effect has not introduced legislation. There has been nothing in the way of an Order in Council even passed on it. The Minister has now made public statements to the effect that there will be no further changes until 1970. Any further amendments or changes will be quite arbitrary. So we have a situation where there is regulation almost by press release and with speeches made to a number of groups. I have a pile of them in one of my brief cases, I think they are several inches thick.

We disapprove of those methods and we feel that on matters of this kind of such importance to the fishermen legislation should be introduced. We would like to see an amendment to the Fisheries Act which would provide that regulations limiting the right to fish must first go before Parliament and have the approval of Parliament before they can be imposed on the fishermen.

Leaving aside the matter of methods, our first reaction and what amounts to our continued reaction is that the licence system places the right to fish on a "thing"; a vessel with a Class A or a Class B licence. The Minister himself indicated the owner of the "thing" belongs to a select club. The "thing" can be bought and it can be sold. One of the chief dangers we pointed out at the beginning is the fact that a couple of giant corporations already own hundreds of such "things" and control thousands of others financially, and could extend that control to the point where they would have virtually complete control over the entire group of "things" which are licensed to catch fish.

In effect, we said that property rights are being placed ahead of human rights and that the request of the fishermen over a number of years for a limitation scheme had been either pushed aside or ignored in this pro-

[Interprétation]

de l'année, avant le début de mars ou à la fin de l'automne, soit entre la fin d'octobre et la fin de l'année car ce serait plus commode pour les pêcheurs.

Premièrement, nous parlons de la restriction des permis puis nous examinons de façon détaillée les demandes que vous faites pour que cette question soit débattue par le Comité. Il me semble que pendant que nous en arrivons à un accord général, monsieur le président, nous en arrivons à un cercle vicieux. Il y a déjà 7 mois que nous avons adressé cette demande.

Nous pensons également que c'est peut-être inutile. Le Comité ne peut peut-être pas prendre de décision sur ce problème étant donné que le Ministre en présentant les modifications n'a pas noté de loi. Il n'y a même pas eu de décret à cet effet. Le ministre a déclaré publiquement qu'il n'y aurait pas d'autres changements jusqu'à 1970. Tout autre amendement ou changement serait tout à fait arbitraire. Nous en arrivons ainsi à une situation où le règlement se fait par communiqué de presse ou par déclarations faites devant certains groupes. J'en ai un grand nombre dans ma serviette.

Nous désapprouvons cette façon d'agir et nous croyons que des questions d'une telle importance pour les pêcheurs nécessiteraient l'adoption d'une loi. Nous voudrions que la loi des Pêcheries soit modifiée de façon à ce que les règlements limitant le droit de pêcher soient tout d'abord présentés et approuvés par le gouvernement avant d'être imposés aux pêcheurs.

Laissant de côté la question des méthodes, notre première réaction et en fait, notre réaction actuelle que le système du permis, attribue le droit de pêche aux navires qui ont un permis de Classe A ou de classe B. Le ministre lui-même a indiqué que le propriétaire du navire appartient à un groupe choisi. Un des dangers que nous avons signalés dès le début est que certaines grandes sociétés sont déjà propriétaires d'une centaine de bateaux et exercent un contrôle financier sur des milliers d'autres et peuvent même en arriver au point de régir tous les bateaux qui ont un permis de pêche.

En effet, les droits de propriété prévalent sur les droits de l'homme; on a repoussé ou ignoré la demande que font les pêcheurs depuis un certain nombre d'années. Nous connaissons les raisons fondamentales et la néces-

[Text]

gram. We knew the background reasons and the needs for a limitation program. Over the many years some of the members of this Committee will recall numerous presentations, on the problems of fishermen: too many fishermen and too many boats chasing too few fish, the long closures for conservation purposes, short fishing weeks, rising costs and a mad scramble for what should have been a rising share but was actually a declining share for individuals. Most of the time there were more men in idle boats than those actually in use.

I do not want to read the proposals that we have, but they are listed on pages 9, 10 and 11 of your brief indicating the style of limitation program we propose. This was taken from a previous brief submitted a couple of years ago.

Our concern at that time was that some of the people in the Department seem to be favouring a plan which would work to the benefit of the companies. This is why we said that we were not satisfied with anything that worked to the advantage of the companies and ignored the rights of the fishermen. These were questions of higher licence fees and a fund to retire boats with very little concern to fishermen.

On this point, as late as April 3, this year, there was an announcement by the Minister to the effect that there is a freeze on ownership at the level of company ownership at the present time. Just what that is, we submit, nobody actually knows. The Minister submitted figures to this Committee in November totalling something like 1,558 vessels either owned or under mortgage to the companies. No such figures on mortgages actually existed at the time he made that statement. The Department of Fisheries had no such statistics, nor did they have the method nor procedure to collect them. Since that time there has been a further statement by the Minister dated March 14, that the companies own or control some 2,094 vessels.

We suspect this is information volunteered by the companies.

We are saying in our brief that there has to be a complete investigation of all of the company records and books and, perhaps, going to other financial institutions if this Committee or any other organization, or the general public are to find out exactly the extent of company control and domination in the industry now. We feel that the fishermen's organizations should be allowed to participate in this and to have access to all the raw

[Interpretation]

sité d'avoir un programme de restriction. Les membres de ce Comité se rappelleront les nombreux exposés qui ont été faits sur les problèmes des pêcheurs depuis de nombreuses années. Il y a trop de pêcheurs et trop de bateaux pour si peu de poissons, de longues périodes où la saison n'est pas ouverte pour la conservation du poisson, de courtes semaines de pêche, des frais croissants et une lutte folle pour ce qui devrait être des bénéfices croissants et qui étaient de fait des bénéfices décroissants. La plupart du temps il y avait plus de bateaux inoccupés que de bateaux en service.

Je ne veux pas lire les propositions que nous avons formulées, car vous pouvez les retrouver aux pages 9, 10 et 11 du mémoire où nous indiquons le genre de restrictions que nous proposons. Ceci a été extrait du mémoire antérieur d'il y a environ deux ans.

A ce moment-là, nous nous préoccupons de ce que certains hauts fonctionnaires du Ministère semblaient favoriser un programme dont pourraient bénéficier des entreprises. Voilà pourquoi nous disons que nous n'étions pas d'accord avec tout ce qui favorisait des compagnies au détriment des pêcheurs. Cela est dû aux frais plus élevés des permis, aux fonds alloués pour l'entretien des bateaux, en pensant très peu aux pêcheurs.

A ce sujet, le 3 avril encore, le ministre disait qu'il y avait un blocage de la propriété au niveau des sociétés. De fait personne ne sait ce que cela veut dire. Le Ministre a présenté des chiffres au Comité en novembre, disant qu'il y avait 1,568 navires que les sociétés possédaient ou hypothéquaient. A ce moment-là, il n'y avait pas de tels chiffres au sujet des hypothèques. Le ministère des Pêches et Forêts n'avait pas ces statistiques et n'avait pas également les méthodes voulues pour les obtenir. Depuis lors, le ministre a fait une autre déclaration, le 14 mars, disant que les compagnies possèdent ou contrôlent 2,094 bateaux.

Nous pensons que ces chiffres lui viennent des compagnies.

Nous disons dans ce mémoire qu'il devrait y avoir un examen complet de toute la comptabilité des compagnies et même des autres institutions financières si ce Comité, une autre organisation et même le public en général veulent savoir dans quelle mesure les compagnies contrôlent et dominent maintenant l'industrie. Nous estimons que les organisations de pêcheurs devraient pouvoir y participer et pouvoir accéder à toutes les ma-

[Texte]

material; otherwise, it could be a whitewash job or a matter of simply hoodwinking the public.

We also indicate that we consider even the later figure of 2,094 boats under their control out of, I think, something like 7,000 to be quite low. It has been stated that we are talking about a hypothetical takeover, a figment of somebody's imagination and that this can never be allowed to happen. Looking at that same statement we find that the companies are still being allowed to continue financing vessels. In the Minister's statement of March 14, he said that he felt this was because the companies were out to help the fishermen possess their own boats. We consider that to be quite naive. That is not why the fishing companies are engaged in financing vessels in the past or at the present time. They want control of the raw material. They want control of the source of production.

There was a statement made to us at the convention—which apparently created some excitement later on—indicating that the fishermen should use the federal fisheries loan board more than they have been, that interest rates were going to be better aligned with comparable interest today; the Minister indicated to us that $7\frac{1}{2}$ per cent or $7\frac{3}{4}$ per cent would be the new rate. We find that credit unions, banks and others are not prepared to loan money at $7\frac{1}{2}$ or $7\frac{3}{4}$ per cent which is the present rate, when $9\frac{3}{8}$ per cent is what they could acquire on the average loan.

More important, the loans that are obtainable under the federal Canadian Fisherman's Loan Act, cannot be used to pay off George Weston Ltd. or New England Fish Company. The Minister was questioned about this at our convention and he admitted that this was not possible; he made a statement to the effect that it is not just a matter of change of paper. It cannot be allowed under the present legislation. It is precisely those changes of paper that are of concern to the fisherman who want to get clear of the grip of the big companies.

We propose, in effect, a low rate of interest and a loan board to be established by the federal government; if you can get the provincial government to participate, so much the better; perhaps it would lend the money directly to the credit unions on condition that it is loaned out to fishermen for boats and gear at a rate which will simply cover the credit union's administrative costs. When we speak of what is a low rate of interest, while

[Interprétation]

tières premières sinon, ce sera simplement jeter de la poudre aux yeux.

Nous indiquons également que nous croyons même que le dernier chiffre de 2,094 bateaux sous leur contrôle est très bas car 7,000 le serait. On nous a dit que nous parlions de reprises hypothétiques, de la pure imagination et que cela n'arrivera jamais. En examinant la même déclaration, nous constatons que les compagnies continuent à financer les bateaux.

Selon la déclaration du Ministre du 14 mars, où il disait qu'il pensait qu'il en était ainsi parce que les compagnies aidaient grandement les pêcheurs à être propriétaires de leur propre bateau. Nous croyons que cela est très naïf. Ce n'est pas pourquoi les compagnies de pêches ne se sont pas occupées de financer les bateaux pour les pêcheurs, ni dans le passé, ni maintenant. Elles veulent le contrôle des matières premières. Elles veulent le contrôle des sources de production.

On nous a dit à un congrès qui apparemment a suscité par après un certain intérêt indiquant que les pêcheurs devraient utiliser davantage la caisse d'emprunt aux pêcheurs et que les taux d'intérêt devraient être ramenés à un chiffre plus réaliste, et le ministre nous a même dit que le chiffre de $7\frac{1}{2}$ ou $7\frac{3}{4}$ p. cent serait le nouveau taux. Au regard de $9\frac{3}{8}$ p. 100 qu'ils pourraient obtenir en moyenne de façon normale.

Mais ce qui est plus important c'est que les emprunts qui sont mis à la disposition des pêcheurs en vertu de la Loi sur les prêts aux pêcheurs du Canada ne peuvent pas être utilisés pour payer des comptes à *George Weston Ltd.* ou *New England Fish Company*. Le ministre a été interrogé lors de notre congrès à ce sujet et il a admis que ce n'était pas possible; il a dit que ce n'était pas seulement une question de changement de titres. Cela n'est pas permis maintenant selon le gouvernement actuel. C'est précisément ces changements de titres qui préoccupent le pêcheur qui veut sortir des griffes des grandes compagnies.

Nous proposons, en effet, qu'un taux d'intérêt moins élevé et qu'une caisse d'emprunt soient établis par le gouvernement fédéral ou bien même avec la collaboration provinciale—ce serait mieux; peut-être pourrait-il prêter directement aux coopératives de crédit des pêcheurs à condition que l'argent soit prêté aux pêcheurs pour des bateaux et de l'outillage à un taux qui couvre tout simplement les frais d'administration de ces coopé-

[Text]

it is not defined in the brief, we suggest that a return to the 5 per cent formula would be such a low rate of interest. That is, a 5 per cent rate payable by fishermen; it would then allow the possibility of the fishermen paying off the fishing companies on the loans they have on their boats and gear, and becoming clear of them.

We believe that the federal government, if it is going to control a number of boats, should decide who can have a licence to fish, should tie the right to fish to the boat, and have a major responsibility; it is imperative that it remove the financial control of ownership of the big companies as well. Otherwise, it is simply passing the industry that much more tightly into the hands of those two corporations. There has been some discussion here in Committee on the size of loans. We say that there should not be any limit on the size of an individual loan; otherwise, we would still be taking the position that the fishermen can own the smaller boats; however, when it comes to a larger, more advanced type of vessel which may cost \$300,000 there is a limitation on them; therefore, they have to go back to the same fishing companies or to someone else to finance the vessel.

The Minister wants a suggestion from us, as to how many boats should be in the fisherman's hands. He says that it could possibly be 80 per cent, 90 per cent even 100 per cent. In his statement to fishermen, he said "Do I hear 100 per cent?" We say yes; 100 per cent of a boat should be in the hands of a fisherman. In other words, the government loan board has to be capable either directly or with the assistance and participation of fishermen's credit unions, to legislate the companies out of the area of boat financing altogether.

They have made statements to the effect that they are not interested in maintaining those controls and those connections. Whether or not they mean it, we think that it is now the responsibility of the government to act decisively in that connection.

On fleet reduction, we state in our brief, that there is no reduction in fleet size in 1969. The boats that did not get licences, did not fish any way. We make the claim that there will be more vessels fishing in 1969 for salmon than there were in 1968. This is partly because of certain amendments that have been made to the first announcement on September 5, and partly because the Minister has declared that while there will not be any immediate action taken to change the basic features of the rules of the game, there will

[Interpretation]

ratives. En parlant de ce qui est un taux d'intérêt peu élevé bien que cela ne soit pas défini dans ce mémoire, nous disons que le retour à une formule de 5 p. cent serait ce que nous désirons. C'est-à-dire, un taux d'intérêt de 5 p. cent remboursable par les pêcheurs, ceci permettrait aux pêcheurs de rembourser les emprunts qu'ils ont faits auprès des compagnies sur leurs agrès et leurs bateaux.

Nous croyons que le gouvernement fédéral, s'il veut contrôler un certain nombre de bateaux, devrait décider qui peut avoir le permis de pêcher, devrait attacher le permis au bateau, et en avoir la responsabilité principale; il est important qu'il supprime aussi le contrôle financier des grandes compagnies sur les pêcheurs. Sans cela, ce qui se fait c'est simplement d'assujettir davantage l'industrie au contrôle des grandes sociétés.

Le comité s'est demandé quelle était l'envergure des prêts. Nous avons dit que l'on ne devrait pas placer de limite aux prêts individuels parce que si nous le faisons nous prétendrions que le pêcheur peut continuer à être le propriétaire d'un petit bateau mais lorsque le bateau est très grand il y a une limite qui est imposée, et par conséquent, il doit recourir aux grandes compagnies qui l'aident et finalement le contrôlent.

Le Ministre demandait nos idées sur le nombre de bateaux qui devaient être détenus par les pêcheurs. Il disait que le pourcentage pouvait être de 80 à 90 p. cent même 100 p. cent. Nous sommes d'accord, 100 p. cent des bateaux devraient être la propriété des pêcheurs. Autrement dit, l'Office des prêts aux pêcheurs devrait pouvoir être à même de collaborer avec les coopératives de crédit, d'aider les pêcheurs à devenir propriétaires de leurs bateaux.

Les compagnies prétendent qu'elles ne sont pas intéressées à maintenir ce contrôle. Qu'elles veulent le faire ou non, c'est au gouvernement d'agir dans ce domaine. A propos de la réduction de la flotte, nous l'avons dit, il n'y a pas eu de réduction de la flotte en 1969.

Les bateaux qui n'ont pas obtenu de permis n'ont pas pêché. Nous avons prétendu qu'il y aurait un plus grand nombre de bateaux qui pêcheraient le saumon, en 1969 qu'en 1968, en partie, à cause de certaines exemptions qui ont été faites, des modifications qui ont été faites depuis la première communication le 20 septembre, et surtout parce que le Ministre a déclaré que s'il n'y avait pas immédiatement des mesures prises pour changer les dispositions de la loi, du règlement, il y aurait d'autres mesures arbi-

[Texte]

be further arbitrary actions; these could include increasing the value of the catch that a fisherman has to turn in to retain his licence; his figures of \$2500 to \$5000 compared to the present \$1250 could go higher, or there could be higher licence fees, or there would be a removal of vessels because of safety standards or quality standards or something of this kind.

Some fishermen possibly view this as a threat; others may view it differently. However, of arbitrary measures that can be made, as this one was made, retroactive, based on the fishing that was done in the past, the pressure on the part of any fisherman or owner or part owner or aspiring owner to get out there and fish salmon, is going to be much greater this year.

We have indicated in our submission that there are many things that can happen to a fisherman who is trying to make his livelihood from fishing.

A series of bad breaks under restrictions that set out how many pounds of fish he must catch or what the value of the fish landed is going to be to retain his licence, can mean removal from the industry of a bona fide fisherman who has made his livelihood from fishing all the way through; someone else who may be an absentee owner and has another full time job, may be allowed to remain in the fishery.

In our suggestions, we tried to link the right to fish with what seemed to be reasonable. A percentage of the income of the individual is derived from fishing—and we graduated this from 30 per cent in the first year, to 40 per cent in the second year and 50 per cent in the third year of a five year moratorium period—precisely because we felt that as little hardship as possible should be experienced by the present group of fishermen who are striving to make their living from this industry.

We also suggested that an appeal board be set up, where fishermen would be represented—not simply an appeal board but a review board, and not a board that is set up by the Minister of Fisheries or by someone in his department, composed solely of civil servants, but with fishermen participating—and which would look at the practical problems faced by the fishermen, and to decide whether the rules have to be amended to prevent undue hardship.

To make suggestions for future types of rules to take care of problems that may arise, we have not spelt any out in our briefs to date.

[Interprétation]

traires qui seraient fixées sur l'augmentation de la valeur minimum de la prise du pêcheur pour maintenir son permis ou alors sur l'augmentation des droits de permis ou la suppression de bateaux, à cause des normes de sécurité.

Tout cela est vu comme une menace par les pêcheurs, mais toutes les mesures arbitraires qui peuvent être prises sont rétroactives en fonction de ce que la pêche a été dans le passé. La pression imposée ainsi aux pêcheurs de pêcher du saumon sera encore plus grande que d'habitude. Nous avons dit dans notre mémoire qu'il y avait bien des choses qui pouvaient arriver à un pêcheur qui cherche à tirer son gagne-pain de la pêche, toute une série d'aléas.

Il est dit combien de poissons il doit prendre et débarquer pour maintenir son permis. Ceci peut entraîner la suppression d'un certain nombre de pêcheurs qui ont mal gagné leur vie en faisant la pêche ou alors ouvrir la porte à des personnes qui ont des intérêts dans la pêche sans être eux-mêmes des pêcheurs. Dans notre mémoire nous voulons, nous cherchons à lier le droit de pêcher à ce qui nous semble normal, le pourcentage du gagne-pain de l'individu qu'il retire de la pêche et qui est de 30 pour la première année, 40 p. 100 pour la deuxième année et 50 p. cent pour la troisième année d'une période moratoire de cinq ans. Nous ne voulons pas imposer de vicissitudes au groupe actuel de pêcheurs qui cherchent à gagner leur vie par la pêche.

Et nous proposons aussi une commission d'appel où les pêcheurs seraient représentés. Pas seulement une commission d'appel, mais une commission de revision, de ré-examen, qui ne serait pas formée par le Ministère des Pêcheries ni par ses fonctionnaires mais qui serait composée de pêcheurs qui peuvent examiner de façon objective leur propre travail et les règlements auxquels ils sont assujettis et faire ainsi des propositions concernant les règlements à l'avenir à propos de conditions qui peuvent survenir.

[Text]

On the question of higher fees, to perhaps drive someone out of the industry or to provide funds to buy up old boats, our organization has gone on record as being flatly opposed to that on two basic grounds. First of all, it places an extreme burden on those in the low income group; in other words, if there is going to be any fees or taxes collected, they should be graduated by income or on pounds of fish caught. Secondly, our members in being opposed to the plan as it now stands, are also opposed to the suggestion that they pay higher licence fees in order to buy themselves out of the industry.

On the matter of safety and quality controls, we are concerned about this being established in an arbitrary way or mixed up with the control program on the number of fishermen or number of vessels. We believe it has its place, however, it should be discussed separately and with a view to actually improving the quality of fish landed. Certainly, if it was to be established arbitrarily, new regulations on safety or new regulations on cleanliness of boats or handling of fish, could drive out the small individual who is trying to make his livelihood from fishing and give preference to those boats that are owned or financially controlled by the companies. Therefore, we are opposed to any additional arbitrary measures that simply play into companies hands.

There have been other suggestions that have been made as to the value of one plan as opposed to another. We are in a position where we have to debate with the Minister of Fisheries, not because we want to but because this Committee has not any legislation before it. Nor have we ever seen any legislation. He has indicated that fishermen should favor this because they can look forward to an increased value in retirement in terms of the value of their boats, these inflated prices that have been suggested here. Our answer is, that if there is real concern about the future problems of fishermen, then there are other ways in which this can be looked after: pension plans can be improved and other protection of that kind.

Only after the introduction of a plan, if some real hardship was created by that plan in terms of a loss, then perhaps the question of whether or not there was a loss to be taken, could be looked into by the government and a fund set up. However, there should certainly not be a measure to protect an increased or inflated value.

When speaking of sons of fishermen, the suggestion has been made that under the union's proposal, sons of fishermen would not have the right to inherit a boat.

[Interpretation]

A propos de la question de l'augmentation du permis ou de l'octroi de fonds pour racheter des vieux bateaux, notre organisation s'est toujours opposée à cela, pour deux raisons. Premièrement, parce qu'elle impose une charge énorme à ceux qui gagnent le moins. Autrement dit, s'il y a des droits qui doivent être recouvrés, ce devrait être en fonction de la prise, du nombre de poissons pris et deuxièmement, les pêcheurs qui s'opposent au plan à l'heure actuelle s'opposent aussi à payer davantage pour obtenir leur permis.

A propos de la question de la sécurité, nous ne voulons pas que les normes soient établies de façon arbitraire; sur le nombre de pêcheurs et de bateaux, ces dispositions et normes sont bien fondées mais on devrait les uniformiser. Si ces normes devaient être imposées arbitrairement, par exemple, sur la qualité du bateau, la prise du bateau, les conditions hygiéniques, bien des petits propriétaires peut-être seraient empêchés de continuer leur métier et pour donner la préférence aux grands bateaux qui sont propriétés de compagnies, de sorte que nous nous opposons à d'autres discussions arbitraires concernant les normes de sécurité.

Il y a eu d'autres idées qui ont été formulées à propos de la valeur d'un plan par opposition à un autre. Nous sommes forcés de nous débattre avec le ministre des Pêcheries parce que le comité ne décide d'aucune loi, et nous n'avons aucune loi à proposer. Il est dit que les pêcheurs devraient le favoriser parce qu'ils peuvent s'attendre à une valeur, à la reprise de valeur accrue à la retraite. Notre réponse est que si on se préoccupe vraiment de l'avenir des pêcheurs, il y a une autre façon de résoudre la question. On peut améliorer les plans de pension, ou leur assurer d'autre protection de cet ordre.

Ce n'est qu'après l'introduction d'un plan, si vraiment ce plan a causé une perte, la question de savoir s'il y a une perte devrait être examinée par le gouvernement et par le fond qu'il a créé, on disait qu'en vertu de ce programme les fils de pêcheurs n'auraient pas le droit d'hériter du bateau.

[Texte]

The Chairman: I wonder, Mr. Stevens, if you could adhere to your written statement a little more. During the questioning you will have ample time to bring out a lot of your points. Could you do that, for the sake of saving time.

Mr. Stevens: If I stick to the original statement too closely it will even be longer; that is the trouble.

Mr. Lundrigan: Mr. Chairman, may I make a suggestion? Perhaps the witness could stick to the very good summary which is divided in part to the main brief, or parts of the brief, which I think is an exact summary of that brief. We will get a chance, as we have done, to read it in more detail; these things will be taken into consideration when we do make a report. There are a number of questions and we could, theoretically be here for three or four hours just listening to the brief; that would not be a bad exercise, however, it would preclude a good deal of participation by the members in questioning.

Mr. Stevens: I am in your hands in that respect. I am almost at the point of concluding the remarks on the licence limitation set up.

The Chairman: Carry on.

Mr. Stevens: We believe that the sons of fishermen would have equal protection under our proposals. That is, the sons of fishermen, whether or not they own boats, would have protection. We are opposed to the idea that is created here, that it takes money to buy a licence. Money will talk in future. We submit that the young people can be the hardest hit, if that is to be a condition.

Similarly, with regard to the Indian fishermen, we believe that our suggestions give far more protection than the protection outlined by the plan now put forward. Our suggestions are more vulnerable in terms of selling their licences and therefore selling their rights to fish, which has already been recognized by a statement made by the Indian Affairs and Northern Development Department urging them not to sell that right. How many of them even have that choice is a matter of question at the present moment; they are already heavily indebted to the fishing companies; we do not think that the present Indian assistance program—not that we are knocking it, we think it is a good idea to do this sort of thing—will counteract the danger that is faced by the Indian fishermen of being forced out of the industry.

[Interprétation]

Le président: Je me demande, monsieur Stevens, si vous ne pouvez pas vous tenir plus strictement à votre mémoire pour nous laisser le temps de vous interroger.

M. Stevens: Si je m'en tiens strictement à notre mémoire, cela prendra encore plus de temps.

M. Lundrigan: Le témoin pourrait peut-être s'en tenir au résumé excellent qui nous a été fourni et qui accompagne le mémoire. Quand nous aurons la possibilité de le lire de façon plus détaillée, lorsque nous ferons le rapport, il y a plusieurs questions que nous pourrions poser et nous pourrions passer théoriquement trois ou quatre heures à écouter le mémoire. Ceci diminuerait le temps que nous consacrons à ces questions.

M. Stevens: Je dépends de vous.

Le président: Allez-y. J'allais presque terminer.

M. Stevens: Nous croyons que les fils de pêcheurs auraient une protection égale selon notre programme. Les fils de pêcheurs qui ont un bateau ou non seraient protégés. Nous ne sommes pas d'accord avec l'idée qu'il faut de l'argent pour obtenir un permis. Les jeunes peuvent être les plus durement visés si cela devient une condition.

De même, à propos des pêcheurs indiens, nous croyons que notre proposition leur donne une beaucoup plus grande protection que celle qui est prévue par le plan actuel. Ils sont beaucoup plus vulnérables lorsqu'il s'agit de vendre, de céder leur droit de pêcher ou leur permis, ce qui a déjà été reconnu par le ministère des Affaires indiennes qui leur a demandé de ne pas vendre leur droit. Et combien d'entre eux ont ce choix? C'est une question sans réponse pour le moment. Comme beaucoup sont déjà endettés auprès des compagnies de pêche, ceci ne les protégerait pas suffisamment.

[Text]

We believe that the almighty dollar will rule under the present program. We were criticized when we raised matters of conservation in the past and were proven correct, such as on the Bering Sea halibut or on the loss of a herring. We think that this is bad medicine that is being put forward now. We would like to see the present Davis plan terminated and replaced with the style of plan that was put forward by our organization, with the principle of the right of the individual to retain the licence being the main factor.

On extension of territorial waters...

Mr. Hogarth: May I raise a point of order?

The Chairman: Mr. Hogarth, on a point of order.

Mr. Hogarth: This brief which has been submitted by this organization is admittedly one of the most comprehensive briefs we have received and probably one of the most important. It is divided into many subjects. May I suggest, sir, that we examine the witness on each of the topics as opposed to waiting until the end and then trying to examine him on all the topics. I think that while his remarks are fresh in our minds it would certainly assist the Committee to be able to have our examination confined to the one subject. I know that will take a great deal longer but at the same time I think the matter is of such importance that it should be done that way. That is the first point I wished to raise.

The second point I have to raise is this. The parliamentary secretary to the Minister is here. Have these licensing provisions not been promulgated by the appropriate regulations?

Mr. Whelan: As far as I know, the Minister is acting within his jurisdiction, his authority and...

Mr. Hogarth: I appreciate that but the witness' complaint, if it is substantiated, is justified. Is there not an appropriate document signed by the Minister which sets forth to fishermen exactly what these regulations are?

The Chairman: You heard the first part of the member's suggestion.

Mr. Crouse: Mr. Chairman, a few moments ago you suggested to the witness that he read the excellent resume of the previous reports; in the interest of saving time, I feel that he should do this; upon termination of that reading and, since it is broken down into headings and numbered, each one of us should have an

[Interpretation]

Nous croyons que, en fin de compte, c'est le dollar qui sera la règle en vertu du programme actuel. Nous soulevons aussi la question des méthodes de conservation, par exemple, celle du flétan, du hareng, et il me semble qu'on brandit une menace qui n'existe pas. Nous voudrions qu'on mette fin au plan Davis, et nous voudrions que l'individu puisse garder son permis.

M. Hogarth: J'invoque le règlement.

Le président: Un appel au Règlement, monsieur Hogarth.

M. Hogarth: Ce mémoire qui a été présenté par cette organisation est l'un des mémoires les plus étendus que nous ayons reçu, l'un des plus importants. Il est divisé en un grand nombre de sujets. Pourquoi ne pourrait-on pas examiner, questionner le témoin sur chacun des sujets au lieu d'attendre la fin de son exposé. Ceci nous aiderait à limiter le questionnaire à chacun des sujets soulevés par le témoin. Et la deuxième question que je tiens à soulever, est celle-ci. Le témoin dit quelque chose qui m'a inquiété; est-ce que les dispositions du permis n'ont pas été promulguées par un règlement?

M. Whelan: D'après ce que je sais, le Ministre agit en fonction de son autorité...

M. Hogarth: Je m'en rends compte. Mais les témoins se plaignent à ce sujet. Est-ce qu'il y a une raison? Est-ce qu'il n'y a pas un document approprié signé par le ministre disant aux pêcheurs exactement quels sont ces règlements?

Le président: Vous avez entendu la première partie des propositions du témoin.

M. Crouse: Il y a quelques instants vous avez proposé au témoin de lire le résumé du rapport qui est vraiment très intéressant. J'ai pensé qu'il devrait le faire. Et lorsqu'il aura terminé puisqu'il y a différents paragraphes, alors nous aurions l'occasion de lui poser des questions. J'estime que nous devrions procé-

[Texte]

opportunity to ask him individual questions. I submit that if we continue as we are doing now, with the witness giving us another resume of his resume of his excellent brief, then we shall be here all week. We do not have the time. May I suggest that the witness read the resume and that we then have the meeting opened to questions.

The Chairman: Is that acceptable?

Some hon. Members: Agreed.

Mr. Hogarth: Mr. Chairman, may I speak on a point of order? I feel that we should do it topic by topic; we should ask questions on each topic as it arises because then our minds are fresh on it, rather than have questions ranging over a broad series of topics on which we cannot zero in. Is this acceptable?

The Chairman: I gather, Mr. Hogarth, that the Committee has wished otherwise.

Mr. Hogarth: I would like to add, further, sir, that I think it is unfair; I would like to have far more than five minutes on the first topic, and now I have only five minutes on a multiplicity of topics.

Some hon. Member: That is on the first round.

The Chairman: Yes, on the first round.

Mr. Hogarth: On the second round I will be reduced to two questions.

The Chairman: Gentlemen, I think we are losing valuable time right now. We will continue with the witness.

Mr. Stevens: Thank you, Mr. Chairman. There is the file with all the documents that we have found on that limitation program; none of them contained an order in council or any regulations actually promulgated other than press releases.

Our next point deals with the Extension of Territorial Waters, Baselines and Exclusive Fishery ones. This, incidentally, Mr. Chairman, does not read very well because it was not intended to be read in this fashion; however, I will read it as it is.

Review of the union's proposals over the past 23 years. The Criticism of Bill S-17 and proposed amendments offered by the Union in 1964 were ignored by the Government. The Basic criticism is that Canada has been too slow and too cautious. Canada has been 'weak-kneed and gutless' compared with Iceland, Norway and South American nations. The union proposes that the baseline should enclose Queen Charlotte Sound, Hecate Straits and Dixon Entrance as internal waters of

[Interprétation]

der comme nous l'avons fait jusqu'à présent, au lieu que le témoin nous donne des résumés du mémoire. Nous pourrions y passer la journée. Ce serait très agréable, mais malheureusement nous n'avons pas le temps. Donc je proposerais que le témoin lise son résumé et nous ouvrirons ensuite le débat, nous poserons nos questions.

Le président: Est-ce acceptable?

Des voix: D'accord.

M. Hogarth: J'en appelle au règlement. J'estime que nous devrions prendre les paragraphes les uns après les autres, et poser des questions au sujet de chaque paragraphe, au lieu de poser des questions sur toutes les questions abordées.

Le président: Le comité préférerait procéder d'une autre façon.

M. Hogarth: Je sais que ce n'est pas juste, parce que j'aimerais passer beaucoup plus de temps que cinq minutes sur le premier sujet seulement, et maintenant je n'aurai que cinq minutes à passer pour toutes ces questions.

Des voix: Au premier tour.

Le président: Oui, au premier tour.

M. Hogarth: Au deuxième retour, je ne pourrai poser que deux questions seulement.

Le président: Je crois que nous perdons du temps en ce moment. Nous continuons avec le témoin.

M. Stevens: Alors voici le dossier. Il n'y a aucun ordre en conseil ici, aucun règlement, qui ait été promulgué. Ensuite nous passons à l'extension des eaux territoriales, des lignes de base et des zones de pêche exclusives. Ceci ne se lit pas très bien, monsieur le président, enfin, je vous en donne l'essence.

Récapitulation des propositions, de l'Union depuis 23 ans. Critique du bill S-17; et le gouvernement n'a pas tenu compte de modifications proposées par l'Union en 1964. Nous reprochons, au fond, un excès de timidité au Canada. Le Canada s'est montré faible et indécis comparé à l'Islande, la Norvège et à des nations sud-américaines. L'Union propose que les lignes de base doivent englober le détroit de la reine Charlotte, le détroit d'Hecate et l'entrée Dixon en tant qu'eaux intérieures

[Text]

Canada and the territorial sea should extend a further 12 miles seaward from baseline. Exclusive fishing zones should extend to the edge of continental shelf. The recent announcement by the Minister of Fisheries leaves "gaps" which may affect Canada unfavourably, and Union regards the announcement as "another retreat". Union urges strong and decisive action now, to establish the baseline, and extend territorial waters, without leaving "gaps".

Growth of Foreign Monopoly

An outline of the process of merger and takeover which leaves the Weston empire and New England Fish Co. in virtual control, and which have primarily caused a shutdown of plants, with a loss of about 1,000 jobs. Elimination of competition for fish coupled with the ability to fix prices at consumer level are additional factors. Demands for action to provide alternate employment, necessary retraining and assistance for displaced workers have not been acted upon by companies or the government. The government should either compel action or nationalize these two foreign controlled corporations.

North Pacific Mid-Ocean Fishing By Japan

The union re-states its basic opposition to mid-Pacific salmon fishery. Japan has 1 per cent of the spawning streams, but harvests a major portion of the Pacific salmon and poses a threat to all nations with salmon streams. Canada should pursue this at the Law of the Sea Conferences, at the United Nations, and in direct talks with Japan and other Pacific nations.

If I might be allowed to add something, Mr. Chairman, perhaps the recent statement by Prince Philip may be of some help in this respect. He says that if this problem cannot be resolved, then there is not much hope for the future of mankind.

American Interception of Canadian Salmon

Alaskan fishermen heavily intercept Nass and Skeena pinks and sockeye salmon runs in violation of basic principles agreed upon in a surf line conference in 1957. Canadian-U.S.A. negotiations broke down in 1966, with Canada declaring the right to move outside the surf line to protect Canadian interests. Lack of action by Canada to back up words with deeds leaves Americans in control of the

[Interpretation]

du Canada et que les eaux territoriales doivent s'arrêter à 12 milles au large à partir de la ligne de base. La zone de pêche exclusive doit s'étendre jusqu'au bord du plateau continental. La récente annonce du ministre des Pêcheries, renferme certaines lacunes qui peuvent être défavorables au Canada et, pour l'Union, cette annonce est un autre recul. L'Union réclame des mesures immédiates, énergiques et décisives pour établir la ligne de base et étendre les eaux territoriales et ceci sans lacunes.

Croissance du monopole étranger

Description du processus de fusionnement et d'absorption qui assure un contrôle virtuel de l'industrie à l'empire Weston et la New England Fish Co., ce qui a entraîné la fermeture d'usines et la perte de mille emplois environ. On signale d'autres facteurs, comme l'élimination de la concurrence dans ce secteur ajoutée à la capacité de fixer les prix à la consommation. Nous demandons qu'on assure de nouveaux emplois, le recyclage et l'assistance nécessaire aux ouvriers déplacés qui n'ont pas reçu compensation de la part des compagnies ou du gouvernement. Le gouvernement devrait ou prendre des mesures coercitives contre ces deux compagnies étrangères ou les nationaliser.

Opérations de pêche menées par le Japon dans le milieu du Pacifique nord.

L'Union réaffirme son opposition de principe aux pêches de saumon au milieu du Pacifique. Le Japon possède 1 p. 100 des courants de frai, mais il récolte un portion majeure du saumon du Pacifique et menace tous les pays possédant des bancs de saumon. Le Canada devrait soutenir ce point de vue aux conférences sur le droit maritime aux Nations Unies et dans des conversations directes avec le Japon et d'autres nations du Pacifique.

Si l'on peut me permettre d'ajouter quelque chose, monsieur le président, je dirais que la récente déclaration du Prince Philippe pourrait nous aider. Il a dit que si nous ne pourrions résoudre ce problème, il n'y a plus grand espoir pour l'avenir de l'humanité.

Interception du saumon canadien par les Américains

Les pêcheurs de l'Alaska pratiquent une interception massive des bancs de saumon rose, Nass et Skeena et de saumon sockeye en violation des principes fondamentaux acceptés à une conférence sur la délimitation des pêches des brisants en 1957. Les pourparlers canado-américains ont été rompus en 1966 et le Canada a affirmé son droit de franchir la ligne des brisants pour protéger ses intérêts.

[Texte]

situation. A similar situation exists regarding sharing of salmon bound for the Fraser River. Canada should develop fisheries outside the present surf line to strengthen our hand in negotiations with the Americans.

An All-Inclusive North Pacific Fisheries Treaty

Research is impossible and conservation regulations virtually non-existent in the huge groundfish operations of the North Pacific, due to exclusion of the U.S.S.R. Canada should seek an all-inclusive treaty.

Declining Halibut Resource

Canadian and American halibut catches have declined by 27,000,000 lbs. since 1962, which is about 35 per cent. Entry of Japanese into the Eastern Bering Sea halibut fishery plus a large scale Japanese and Soviet trawl fleets operating through the Northeastern Pacific and Bering Sea have caused the decline. There is an obvious need for an all-inclusive fisheries treaty and regulations to rehabilitate the halibut resource.

The Herring Disaster

The Union warned the Department 12 years in advance of impending disaster and strongly urged more stringent regulations. The fishermen's views were rejected until the decline had reached proportions where the entire fishery had to be closed. The union urges greater control when the fishery is reopened, with special efforts to increase the utilization of herring as food for human consumption, are care that the mistake is not repeated on Canada's East Coast.

Rehabilitation and Expansion of the Salmon Resource

Salmon resources have declined since 1951 and efforts to rehabilitate have not, as yet, counteracted harmful effects of deforestation, gravel removal, log driving, pollution, diversion of water, construction of dams, and other man-made obstacles. The Union urges \$10,000,000 per year for a 10-year period to be allocated for fisheries development, over and above present budgets. We urge the Committee to study a special inner-Department report on the potential value of such measures to improve and expand salmon spawning areas.

[Interprétation]

Le Canada n'ayant pris par la suite aucune mesure concrète, a abandonné le contrôle de la situation aux Américains. Il en est de même pour les saumons se déplaçant vers le fleuve Fraser. Le Canada devrait établir des zones de pêche hors de la présente ligne des brisants pour pouvoir négocier avec les Américains à partir d'une position de force.

Un traité global sur pêches du Pacifique nord

Il est impossible de faire des recherches et de régir comme il convient la conservation de la pêche aux poissons de fond dans le Pacifique nord à cause de l'exclusion de l'Union soviétique du traité. Le Canada devrait plaider en faveur d'un traité global.

Le déclin des ressources de flétan

Les prises de flétan par le Canada et les États-Unis ont baissé de 27,000,000 de livres depuis 1962, soit de 35 p. 100. Cette baisse est due à la pénétration des Japonais dans la pêche au flétan dans la partie est de la mer de Bering et par l'implantation massive de flottes de chalutiers japonais et soviétiques dans le Pacifique nord-est et dans la mer de Bering. Un traité global sur les pêches s'impose de toute évidence ainsi que des règlements pour renouveler les ressources du flétan.

Le marasme de la pêche au hareng.

L'Union a averti le Ministère 12 ans à l'avance de ce marasme imminent et a réclamé énergiquement des règlements plus rigoureux. On a rejeté les opinions des pêcheurs jusqu'à ce que la baisse ait atteint des proportions qui ont entraîné la fermeture complète de la pêche. L'Union réclame une réglementation plus sévère à la réouverture de la pêche; il faut faire des efforts spéciaux pour intensifier la consommation du hareng par l'homme; et il faut veiller à ne pas commettre la même erreur sur la côte est du Canada.

Renouvellement et expansion des ressources de saumon

Les ressources de saumon baissent depuis 1951 et les efforts de renouvellement n'ont pas réussi jusqu'ici à s'opposer aux effets néfastes du déboisement, de l'extraction du gravier, du flottage du bois, de la pollution, du détournement des eaux, de la construction des barrages et des autres obstacles dus à l'homme. L'Union réclame qu'on affecte à l'expansion des pêches, 10,000,000 de dollars en sus du présent budget pendant une période de 10 ans. On demande au Comité d'examiner un rapport spécial interne du Ministère sur l'utilité d'une telle mesure pour améliorer et agrandir les zones de frai du saumon.

[Text]

Incidentally, Mr. Chairman, I asked before this hearing started, since that report was published in 1966, whether I could quote from it in the brief and I am still not at liberty to do so, but I was told I could refer to it here and ask that the Committee members should ask for the B table. It is entitled "Salmon Development Techniques, Their Present Status and The Possible Applications to the British Columbia Salmon Stocks", dated October 1966.

Mr. St. Pierre: A point of information, Mr. Chairman, which report is this?

Mr. Stevens: This is a report that was prepared by various technical people within the Resource Development Service of the Department of Fisheries. It is marked "restricted. For departmental use" and it deals with all the salmon streams from the Queen Charlotte Islands to the Fraser River with the past maximum production and what could be done to bring them back to that level, the cost benefit ratios and things of this kind.

We also urge that stringent measures be enacted to prevent industrial and domestic pollution, with special emphasis on control of pulp mill effluent.

Dogfish Subsidy

A review of previous dogfish control subsidies is given. The union rejects the suggestion by the Minister that the answer is to bring in Japanese fleets to fish dogfish in Canadian waters.

I must digress here, Mr. Chairman, just to point out that the Minister made a statement to our convention, and this is what we are dealing with in our brief and not the recent announcement in the press. In that statement he indicated that we have the Japanese fleet come in and fish off our coast.

Instead we urge negotiations with the Japanese to sell dogfish, even if a Canadian subsidy is needed to enable Canadians to catch the fish. All potential markets should be explored, and a major program of utilization started. The Union doubts that \$2 million per year is required but points out that \$5 million per year is spent on virtually useless programs resulting primarily from NATO and NORAD.

Canadian Deep Sea Fishery Development

Canada has dropped from 6th to 9th place in world production of fish, and now pro-

[Interprétation]

De fait, monsieur le président, j'ai demandé, avant que ne débute cette séance, si je pouvais citer ce mémoire, étant donné que le rapport a été publié en 1966, je n'ai pas encore eu la permission de le faire mais on m'a dit que je pouvais m'en servir et de demander aux membres du Comité d'exiger le Tableau B intitulé: «Techniques pour un meilleur élevage des saumons, leur situation actuelle et l'application possible aux saumons de la Colombie-Britannique» d'octobre 1966.

M. St-Pierre: Une question d'information, monsieur le président; quel est ce rapport?

M. Stevens: Ce rapport fut préparé par diverses personnalités versées dans des domaines techniques et font partie du Service d'expansion de la ressource du ministère des Pêches et Forêts. On a inscrit «réserve», «à l'usage du ministère». Ce rapport traite de tous les cours d'eau où vivent les saumons des îles de la Reine Charlotte au Fraser; on y a inscrit la production maximale, ce qu'il faudrait faire pour y revenir, des études de rentabilité et d'autres choses de ce genre.

Nous demandons également que des mesures plus strictes soient prises pour empêcher la pollution causée par les déchets industriels et domestiques et à enrayer surtout l'écoulement des déchets des papeteries.

Subventions à la pêche à la roussette

Une description des subventions antérieures au contrôle de la pêche à la roussette. Le ministre aux yeux de l'Union, a tort de prétendre que la solution c'est d'inviter les flottes japonaises à pêcher la roussette dans les eaux canadiennes. Je dois maintenant faire une digression, monsieur le président, pour signaler que le ministre a fait cette déclaration lors de notre convention; c'est ce dont nous parlons dans notre mémoire et non pas du récent article de journal. Dans cette déclaration, il a indiqué que la flotte japonaise venait pêcher le long de nos côtes.

Nous réclamons plutôt des négociations avec les Japonais pour vendre la roussette, même s'il faut établir des subventions permettant aux Canadiens de pêcher ce poisson. On devrait explorer toutes les possibilités de ventes et amorcer un programme important d'utilisation. L'Union doute que cet effort exige des millions de dollars par année, mais signale qu'on consacre 5,000,000 de dollars par année à des programmes pratiquement inutiles découlant surtout de l'OTAN et du NORAD.

Création d'une industrie canadienne de pêche hauturière

Le Canada a baissé du 9^e rang au 6^e rang dans la production mondiale de poissons et il

[Texte]

duces only 2 per cent of the total of 60,000,000 tons annually. Canadian subsidies to huge tuna vessels is being wasted, unless the tuna vessels are put back into operation and Canadian crews employed. The Union repeats the recommendation for a mothership fleet, modern factory trawlers and transport vessels to be built and operated by the government as the nucleus of a deep sea operation capable of competing with Japan and the U.S.S.R. Canada's future as a fishing nation depends on early action.

Wharfage Fees

Union objects to excessive and unrealistic fees charged by the Department of Transport and proposes a modest fee for annual or semi-annual permits for commercial fishing vessels. The fishermen would welcome implementation of the Minister of Fisheries' suggestion for removal of all wharfage charges against commercial fishermen. Stress is laid on the importance of maintaining existing facilities, and the need for expansion. We feel the correction of injustice in this respect is long overdue.

Mr. Chairman, I would be only too pleased along with our president, Mr. Ironside, to try and answer questions pertaining to any and all parts of the submission.

The Chairman: Gentlemen, before we commence questioning, I would like to ask for the co-operation of the Committee and the witnesses to adhere as much as possible to short, straight-forward questions and answers. We are here to get as much information as possible within the time that is available to us and if we go into long, explanatory questions and answers we will not accomplish what we are here for. I ask for the co-operation of the Committee and the witnesses. We will start with Mr. St. Pierre.

Mr. St. Pierre: Thank you, Mr. Chairman. I will try to adhere to your instructions. I would, however, like to take a few seconds of my time to compliment the union on this brief. It is extremely comprehensive and very interesting. A great deal of work has gone into it. I have read it once and will be reading portions of it many times in the future. I think it is very valuable to this Committee.

Mr. Stevens, if I appear to lead in these first few questions it is for the purpose of contracting time and not to misrepresent anything you say; it is merely for brevity.

[Interprétation]

ne produit actuellement que 2 p. 100 d'un total de 60,000,000 de tonnes. Nous pratiquons un gaspillage sous forme de subventions à d'énormes bateaux de pêche de thon, à moins qu'on remette ces bateaux en service et qu'on les confie à des équipages canadiens. L'Union renouvelle la recommandation en faveur d'un bateau gigogne, de chalutiers-usines et de bateaux de transport modernes qui seraient construits et exploités par le gouvernement comme noyau d'une flotte hauturière capable de concurrencer le Japon et l'Union Soviétique. L'avenir de notre production piscicole dépend de mesures immédiates.

Droits de quaiage

L'Union s'oppose aux droits abusifs et irréalistes exigés par le ministère des Transports et propose un droit modique pour les permis de pêche commerciale annuels ou semi-annuels. Les pêcheurs se réjouiraient le jour où le ministère des Pêches donnerait suite à sa proposition d'abolir les droits de quaiage imposés aux pêcheurs commerciaux. Nous faisons ressortir l'importance de conserver et la nécessité d'agrandir les installations existantes. Les injustices n'ont que trop duré.

Monsieur le président, monsieur Ironside et moi serions très heureux de répondre aux questions qui se rapportent à toutes les parties de la soumission.

Le président: Avant de commencer la période de questions je voudrais demander la collaboration des membres du Comité et des témoins pour formuler des questions et des réponses courtes et explicites. Nous sommes ici pour obtenir le plus de renseignements possible dans le temps dont nous disposons car si nous posons des questions trop longues ou si nous donnons trop d'explications, nous ne réaliserons pas nos objectifs. Donc, je vous demande votre collaboration. Nous allons commencer par monsieur Saint-Pierre.

M. St-Pierre: Merci, monsieur le président. Je vais essayer de suivre vos directives. Je voudrais prendre quelques instants toutefois pour féliciter le syndicat pour ce mémoire. Il est très complet et très intéressant. On y a consacré beaucoup de temps. Je l'ai lu une fois et je vais certainement en relire certains passages à l'avenir. Je crois que c'est un mémoire qui sera très utile au Comité.

Monsieur Stevens, si je semble poser ces quelques premières questions, c'est pour économiser du temps et non pas pour modifier ce que vous avez dit; c'est simplement pour la brièveté.

[Text]

The union has for a long time agreed that there is too much gear and too many men chasing essentially the same number of fish.

Mr. Stevens: That is correct.

Mr. St. Pierre: The Minister has chosen to impose a limitation by means of boat licenses. Your view is that this is wrong and that it should be limitation of licenses by men.

Mr. Stevens: That is essentially the difference.

Mr. St. Pierre: Your fear is that the fishing companies which are now effectively reduced to two major companies will, under the boat system, obtain control of the fleet and have a dangerously monopolistic power on the B.C. fishing industry.

Mr. Stevens: Yes, and I would say we go further than that, because we start with the fact that there is already a very high degree of ownership and control which has not been fully uncovered or brought to light at the present moment. We cannot give you figures on it. We know it is there.

Mr. St. Pierre: This question is rather important: if this fear did not exist in your union, if you were satisfied that a boat license limitation plan could be imposed without any danger of the companies acquiring control of the ships in the fleet, would you then favour boat license limitation or would you still prefer limitation of licenses of men.

Mr. Stevens: I would have to answer that we would still favour the licensing of individuals unless it could be shown that the licensing of boats had some advantages over the system of licensing men that we have proposed.

Mr. St. Pierre: To pursue a little further your plan of the licensing of men, you suggest a five-year moratorium and during that period there would, of course, be deaths, retirements, the weeding out of the amateurs and the semi-professionals until you had a smaller number of men at the end of your five-year moratorium. Then, presumably, we might expect that more men would be needed in the fishing fleet, if not then later. How are you going to obtain these men?

Mr. Stevens: We felt that it would take longer than the first five years to get to the point where you would really be needing men in any numbers. We suggest, beginning with

[Interpretation]

Le syndicat depuis longtemps a convenu qu'il y avait trop d'équipement et trop d'hommes pour prendre à peu près le même nombre de poissons.

M. Stevens: C'est exact.

M. St-Pierre: Le ministre a voulu imposer une restriction au moyen de permis pour les bateaux. Vous estimez que c'est une erreur et vous croyez en une restriction des permis accordés aux individus.

M. Stevens: Il y a une différence fondamentale.

M. St-Pierre: Vous craignez que les compagnies qui s'occupent du poisson et qui sont de fait au nombre de deux auront une emprise sur la flotte et auront le monopole de l'industrie de la pêche de la Colombie-Britannique.

M. Stevens: Oui et je dirais même plus car il y a déjà une forte emprise des compagnies qui n'a pas encore été mise à jour. Nous ne pouvons pas donner de chiffres là-dessus mais nous savons qu'elle existe.

M. St-Pierre: Cette question est plutôt importante. Si vous n'aviez pas cette crainte, si vous étiez satisfaits qu'une restriction des permis soit mise en vigueur sans que les compagnies puissent contrôler les bateaux de la flotte, seriez-vous d'accord à restreindre les permis ou bateaux ou est-ce que vous préféreriez restreindre les permis aux individus.

M. Stevens: Je dois dire que nous favorisons toujours le fait d'accorder des permis par bateau à moins qu'il n'eût été prouvé qu'il y ait des avantages à offrir les permis aux individus.

M. St-Pierre: Pour poursuivre cette idée d'offrir des permis aux pêcheurs, vous proposez un moratoire quinquennal et au cours de cette période, il y aura des morts, des retraités, l'élimination des amateurs et des semi-professionnels et ainsi, à la fin de cette période, le nombre des individus aura diminué. Alors, nous pouvons nous attendre à ce qu'il faille plus d'hommes pour la flotte de pêche. Si ce n'est pas à ce moment-là, ce sera plus tard. Comment pouvez-vous trouver ces pêcheurs?

M. Stevens: Nous avons pensé qu'il faudrait plus de 5 ans pour en arriver au point où on aurait vraiment besoin d'hommes. Nous proposons de commencer par la première année

[Texte]

the first year of the moratorium, that people who want to enter the industry be asked to go on a waiting list. Our concepts of how they would be chosen would be based to some large extent on the date from which they made application and then continued making their application, as well as some examination of their possible capabilities of actually entering the phase of the industry where they were most needed.

Mr. St-Pierre: In the matter of competence, how is this to be determined? These men may be fishing for fish other than salmon, but if not, since the industry is closed to them, how can they attain competence?

Mr. Stevens: In other words, if the whole industry is closed, how can they learn anything about the industry.

Mr. St-Pierre: Yes.

Mr. Stevens: If necessary, it can be done on the basis of establishing schools for fishermen as has already been undertaken on the east coast, or on special permits that could be issued in advance of the persons actually taking up fishing as a full-time occupation to allow them to engage for three months or three weeks, or whatever is considered necessary, to see whether they could actually go out to sea without getting sea-sick and be able to begin to fill the bill.

In other words these are practical problems that we felt could be best handled by a committee of fishermen together with people from the Department of Fisheries and members of Parliament helping us to work it out in terms of how to find the best way of selection.

Mr. St-Pierre: You will agree, Mr. Stevens, that this is really a pretty serious matter. Whether this is done by boat licence limitation or by limitation of fishermen, probably your union and probably the government feel reluctant to deny Canadians free entry to your industry or any other.

Mr. Stevens: Yes. Essentially, as our brief ends up by suggesting, we would like to see an increasing and expanding and developing fishery where we could be inviting more fishermen in. Of course, if the resource itself could be built up, this also makes that a possibility.

I must say that each and every one of the proposals we have submitted here have been altered or modified, or worked over in the past 20 odd years by fishermen themselves trying to figure out what would be the fairest

[Interprétation]

du moratoire et que les gens qui s'intéressent à l'industrie soient sur la liste d'attente. La façon de les choisir serait fondée sur la date à laquelle ils ont fait leur demande puis ils continueraient à faire une demande comme s'il s'agissait d'un examen pour étudier leurs possibilités à faire partie de cette industrie où l'on a grand besoin d'eux.

M. St-Pierre: Comment pouvez-vous déterminer la compétence? Ces hommes pêchent peut-être d'autres poissons que le saumon mais, sinon, puisque l'industrie ne leur est pas accessible, comment peuvent-ils acquérir cette compétence.

M. Stevens: Autrement dit, si l'industrie leur est fermée, comment peuvent-ils apprendre quelque chose au sujet de cette industrie?

M. St-Pierre: Oui.

M. Stevens: Eh bien, on pourrait le faire au moyen d'écoles pour les pêcheurs, comme on l'a fait dans l'est du pays ou on pourrait aussi donner des permis spéciaux à ceux qui s'adonnent à la pêche à plein temps pour qu'ils puissent, disons pendant 3 mois, ou 3 semaines, aller en mer sans avoir le mal de mer, et commencer à pêcher.

Nous avons pensé qu'un comité de pêcheurs pourrait s'occuper de ces questions avec des représentants du ministère des Pêches et Forêts et des députés qui pourraient nous aider à trouver la meilleure solution.

M. St-Pierre: Vous conviendrez M. Stevens que c'est une question importante. Que cela se fasse en limitant les permis ou le nombre des pêcheurs, le gouvernement et votre syndicat, ne veulent pas empêcher les Canadiens d'entrer dans votre industrie?

M. Stevens: Essentiellement, comme le propose en fin de compte votre mémoire, nous aimerions voir une expansion de l'industrie de la pêche et une augmentation des travailleurs qui en font partie. Si les ressources elles-mêmes pouvaient être développées, cela serait aussi une possibilité.

Il faut dire que toutes les propositions que nous avons faites ici ont été modifiées ou revues depuis 20 ans par les pêcheurs eux-mêmes, pour voir ce qui serait plus juste, non seulement pour eux-mêmes mais aussi pour leurs

[Text]

thing not only to themselves as a group of fishermen, but to their sons and sons of other people in the community who might want to enter that fishery.

Mr. St-Pierre: You are opposed to the selling of licenses?

Mr. Stevens: There have been many abuses in other fields. The other day somebody mentioned the taxicab business: to get hold of a taxicab with a license in the city of Vancouver now takes two people going into partnership with \$11,000 apiece. We do not see why people should have to buy their jobs, so to speak, in the fishing industry. They would not be buying it from a government agency; they would be buying it from some other individual who had already had the benefit of earning his livelihood from fishing, who would then be selling it to them or through a broker or some other third party.

Mr. St-Pierre: I appreciate your concern in this matter. However, to return to your answer to an earlier question. The primary concern of your union is the fear of monopoly control by the companies buying boat ownership.

Mr. Stevens: Yes. It is not the only one though. We go into this idea of the person having to bid for the right to fish to some extent. Even if you eliminated company control altogether, and all the boats were owned by fishermen, you are still placing the right to fish in the hands of the person with the greatest amount of money in his pocket to buy the right to go in there and operate, which we do not think is as fair as drawing up some guidelines, having a waiting list, and having a group of fishermen, government people and university people who would say that this is the way in which they can be allowed to enter.

Mr. St-Pierre: Yes, but, of course, in logging, in farming, in ranching, one must expect to make an investment, particularly in ranching and farming.

Mr. Stevens: If this same plan was introduced in terms of the ranchers that now exist in the interior or any part of British Columbia—and there are not too many of them that are now owned by the small Canadian trying to make a go of it—I think you and I would know where they would end up: they would end up in the hands of the big American corporations. This has been the trend. I do not see that is a benefit to the people of British Columbia in terms of land use, and I do not think what has happened in

[Interpretation]

enfants et les enfants d'autres qui voudraient peut-être faire ce métier.

M. St-Pierre: Alors vous vous opposez à la vente de permis?

M. Stevens: Il y a eu tellement d'abus dans d'autres domaines. Quelqu'un a mentionné ici l'autre jour l'industrie du taxi: à Vancouver, par exemple, pour obtenir un permis de taxis, il faut deux associés qui ont \$11,000 à investir. Nous ne voyons vraiment pas pourquoi les gens devraient acheter leurs emplois dans l'industrie de la pêche. Ils ne l'achèteraient pas d'une agence du gouvernement mais d'une autre personne qui aurait déjà eu le privilège de pêcher, qui aurait gagné sa vie de cette façon et qui revendrait son permis par l'entremise d'un courtier ou d'une autre tierce personne.

M. St-Pierre: Oui, pour en revenir à votre réponse, qu'est-ce que c'est qui préoccupe surtout votre syndicat? Vous craignez le monopole des compagnies qui achèteraient les titres de propriété des bateaux?

M. Stevens: Oui, mais ce n'est pas notre seul souci. Il se peut qu'une personne ait à faire des offres pour obtenir le droit de pêcher. Même si l'on éliminait entièrement le contrôle des compagnies et que tous les bateaux appartenait aux pêcheurs, le droit de pêche serait encore entre les mains de ceux qui ont le plus d'argent pour acheter ces droits, ce qui à notre avis n'est pas juste. Il vaudrait mieux établir certaines directives, ainsi qu'une liste d'attente et avoir des experts qui décideraient comment ces choses peuvent être organisées.

M. St-Pierre: Pour l'élevage et pour les entreprises agricoles, etc., il faut évidemment faire des investissements.

M. Stevens: Oui mais si on le faisait comme pour les ranches à l'intérieur de la Colombie-Britannique il y en a très peu qui appartiennent aux petits éleveurs; ce sont en général de grandes compagnies américaines qui s'en emparent et ce n'est pas un avantage pour les gens de la Colombie-Britannique. Ce qui s'est passé dans l'industrie forestière n'a pas été à l'avantage du petit entrepreneur.

[Texte]

the forest industry has been to the benefit of the small truck logger who has been trying to make a living.

Mr. St-Pierre: You are trying to retain the small independents in the fishing industry. To put a question which follows on this: let us assume that we had your system of the licensing of men. Let us assume it has been in for five years or for ten. The number of men in the industry has been reduced to the proportions which Mr. Sol Sinclair envisaged which would be more reasonable. What is there in that which would prevent the companies from continuing to gain control of all the ships, and if they had at the end of that ten years control of all the ships, would it matter whether or not the entry of men into the fishing industry were concerned if the control of ships rested with the company?

Mr. Stevens: To begin with, Mr. Sol Sinclair was wise enough in his report to indicate that along with the establishment of a moratorium on the number of licenses, there should be steps taken to provide for government loans or a system of financing fishing boats and gear that would take them away from the control of the companies. We had that in our plan too. As we say in our brief, no plan of limitation on the number of fishermen or of vessels will retain that right in the hands of the fishermen unless it does provide for government financing.

Mr. St. Pierre: Your licensing of men is not sufficient to avert that?

Mr. Stevens: Not of itself no. It is a very important part of our own submission that this has to be augmented.

Mr. St. Pierre: I see, Mr. Chairman, that I have run out of time.

The Chairman: Mr. Borrie.

Mr. Borrie: Yes, Mr. Chairman. I want to confine my questioning to the matter I raised yesterday of the utilization of the inactive herring fleet we have on the coast. I understand that you are one of the most knowledgeable persons about fishing around the coast.

Mr. Stevens: I do not want to claim that.

Mr. Borrie: Mr. Buck Suzuki, mentioned this to me this morning.

Mr. Stevens: He is a diplomat.

Mr. Borrie: Yesterday I asked if it was fairly easy to convert a herring boat to one that could be used for dog fishing and I was

[Interprétation]

M. St-Pierre: Vous voulez maintenir de l'indépendance dans l'industrie de la pêche, autrement dit. Bon alors, si nous adoptions votre système, c'est-à-dire les permis accordés aux hommes, et supposons qu'il fonctionne depuis 5 ou 10 ans. Le nombre d'hommes dans l'industrie a été diminué dans des proportions jugées justes par M. Sol Sinclair. Alors qu'est-ce qui empêcherait les compagnies de continuer à acquérir le contrôle de tous les bateaux; ainsi à la fin de dix années, ils auraient encore le contrôle des bateaux. Quelle différence cela pourrait faire en ce qui concerne l'entrée des hommes dans l'industrie?

M. Stevens: Tout d'abord M. Sol Sinclair a dit dans son rapport, qu'à la suite de l'établissement d'un moratorium sur le nombre des permis, il faudrait prévoir des subsides du gouvernement ou un système de financement afin d'enlever les bateaux au contrôle des compagnies. Cela faisait aussi partie de notre programme. Une limitation du nombre de bateaux ou de pêcheurs ne conservera pas ce droit aux mains des pêcheurs à moins qu'il y ait des subsides fournis par le gouvernement.

M. St-Pierre: L'octroi des permis ne peut empêcher cela?

M. Stevens: A lui seul, non.

M. St-Pierre: Je vois que j'ai épuisé mon temps.

M. Borrie: Monsieur le président, je voudrais poser des questions concernant le sujet qui a été abordé hier, soit l'utilisation de la flotte inactive que nous avons sur la côte. Si j'ai bien compris, vous êtes très au courant de la question de la pêche sur nos côtes.

M. Stevens: Je ne veux pas contester cela.

M. Borrie: M. Buck Suzuki me l'a dit ce matin.

M. Stevens: Il est très diplomate.

M. Borrie: Hier, j'ai demandé s'il serait assez facile de transformer un harenguier en un bateau de pêche au chien de mer et on m'a

[Text]

given an encouraging answer. Would you be able to estimate the cost of this?

Mr. Stevens: I am afraid that I can not give you the cost but I can describe the types of conversion. They could be converted fairly readily to long-lining. The expenses involved there are mainly for the equipping of a boat with a girdy and shoot. A dressing table would not be required so it is not an expensive conversion. When the equipment is there the conversion can be done in a matter of 48 hours to 60 hours, if necessary. They can also be converted to trolley which I do not think is more expensive, except for perhaps the winch if they do not have a trawling winch.

Mr. Borrie: Well you do not net dogfish like this.

Mr. Stevens: Yes, you can catch them with the trawlers on the bottom. I pursued that myself on the West Coast during the wartime years when dogfish livers were quite valuable. In fact, in the earlier programs some of these experiments which were conducted by the Department indicated that the trawl was the most effective method of catching dogfish. They can also be caught using sunken nets as well. I think the confusion arose when Mr. Cameron suggested that you might use these herring seine boats. He did not say so, but I think that he was suggesting that they should be used with their normal herring seines which would then be an expensive and unwieldy sort of operation. There is not a great deal of expense involved in the conversion to long-lining or trawling.

Mr. Borrie: In your brief you mentioned that the English and German market had been attempted, but was then dropped by the federal government.

Mr. Stevens: Yes.

Mr. Borrie: Was it due to the lack of acceptability by the...

Mr. Stevens: No, the quality of the product here was quite acceptable in both the West German market, for the belly-flap, and the English market, for the body of the fish. At the moment it was dropped, there seemed to be a feeling that the cost, in terms of the subsidy which had to be paid, was too large when related to the benefit which could be achieved. This was a departmental decision with which we disagreed at the time. We felt that it could be built-up and strengthened, and perhaps eventually become self-sufficient. The prices which were obtained ran as high

[Interpretation]

donné une réponse encourageante. Est-ce que vous pourriez m'en donner un coût estimatif?

Mr. Stevens: Je regrette, mais je ne suis pas capable de vous donner le coût, mais je puis décrire les genres de transformation. Ils pourraient être convertis assez facilement en palangriers. Les dépenses sont surtout celles de l'installation du palangre. On n'a pas besoin d'une table d'apprêt donc cela ne coûterait pas très cher. Et quand on a le matériel on peut le faire en quarante-huit heures ou soixante heures, si nécessaire. On peut aussi convertir les bateaux pour la pêche à la ligne trainante et je ne pense pas que cela coûte plus cher. Sauf peut-être pour le treuil, s'ils n'ont pas de treuil au chalut.

Mr. Borrie: On ne prend pas le chien de mer dans des filets.

Mr. Stevens: Oui, vous pouvez les prendre avec les palangres au fond. Je l'ai fait moi-même sur la côte ouest pendant la guerre alors que le foie de chien de mer avait une grande valeur. Les essais faits par le ministère ont indiqué que c'était la meilleure façon de prendre ce poisson. On peut aussi les prendre avec des filets submergés. Je crois que la confusion découle de ce que M. Cameron a dit que l'on pouvait utiliser ces harenguiers avec des seines. Il n'a pas dit cela, mais je crois qu'il suggérerait qu'ils pourraient être utilisés avec seines à hareng ordinaires, ce qui serait une exploitation coûteuse et incommode. Il n'en coûterait trop cher de convertir à la pêche au palangre ou au chalut.

Mr. Borrie: Dans votre mémoire, vous avez dit que les marchés anglais et allemand avaient été essayés, mais le gouvernement fédéral les avait laissés tomber.

Mr. Stevens: Oui.

Mr. Borrie: Pourquoi? Est-ce que c'est parce que ces poissons n'étaient pas acceptés?

Mr. Stevens: Non. La qualité du produit était très acceptable tant sur le marché de l'Allemagne de l'Est pour le ventre et de l'Angleterre pour le corps du poisson. On l'a laissé tombé parce qu'on trouvait que les frais, les subventions étaient trop importantes par rapport au bénéfice qu'on pourrait réaliser. Il s'agissait d'une décision ministérielle avec laquelle nous n'étions pas d'accord. Nous étions d'avis qu'il y aurait moyen de peu à peu améliorer la situation pour qu'elle devienne rentable. On a obtenu jusqu'à 32 cents la livre pour les ventres, des prix assez

[Texte]

as 32 cents a pound for the belly-flaps, fairly substantial prices, and 16-18 cents, for the body of the fish.

Mr. Borrie: It would not be as high as the price for salmon, would it?

Mr. Stevens: No. It is not as high. Initially, we did not have experienced people here to deal with the processing. Skinning dogfish requires a special knack, so there are some problems related to that. There were attempts made to establish it on a production line system which differs a bit from other systems used. We thought that something was really developing here when suddenly the funds were cut off.

Mr. Borrie: Do you think the industry could get into an active marketing and harvesting of dogfish on the coast?

Mr. Stevens: Yes. I think it is now only a matter of assistance and that eventually it will become a self-supporting fishery. Countries like Sweden and Norway have put out vessels which have delivered dogfish into the British market, and to some extent have supplied the West German market. Vessels that are coming across the Atlantic and taking dogfish. Some dogfish are being harvested by the Japanese off shore now. They are not just throwing them away, but are taking them back. The demand is bound to grow. Perhaps even on the North American continent dogfish will eventually be an acceptable food item. I have eaten it, myself and it is not bad-eating.

Mr. Borrie: Where do you mainly find the dogfish?

Mr. Stevens: Everywhere.

Mr. Borrie: It is everywhere, is it?

Mr. Stevens: It is a complaint of the fishermen that the dogfish interfere with both the commercial and the sports fishing. They are caught by salmon gill-nets, by the herring and salmon seiners, and on long-line gear. They are caught by the sports fraternity.

Mr. Borrie: I have one last and very short question. Mr. Chairman. Do you feel that the industry on our coast could actively pursue the dogfish, without reliance upon Japanese factory ships or a Japanese fleet?

Mr. Stevens: As far as catching them, yes. We proved that by our actual activities during the wartime period, when there was a very high value on vitamin A extracted from dogfish livers. We were taking tremendous quantities of dogfish at that time.

[Interprétation]

élevés, et de 16 à 18 cents la livre pour le corps.

M. Borrie: Il ne serait pas aussi élevé que le prix du saumon, n'est-ce pas?

M. Stevens: Non. Pas aussi élevé. Au début, nous n'avions pas de personnes expérimentées pour le conditionnement. Enlever la peau du chien de mer demande une expérience spéciale. Il y a donc des problèmes. On a essayé de l'établir comme production à la chaîne, ce qui diffère un petit peu des méthodes des autres poissons. Mais il nous a semblé qu'on aurait pu faire quelque chose, non soudainement on nous a coupé les fonds.

M. Borrie: Est-ce que vous croyez que l'industrie pourrait s'introduire activement sur le marché et récolter le chien de mer sur la côte?

M. Stevens: Oui, je crois qu'éventuellement ceci donnerait d'excellents résultats. La Suède et la Norvège par exemple, ont des bateaux qui livrent du chien de mer en Angleterre et en Allemagne et il y a des bateaux qui traversent l'Atlantique pour venir prendre le chien de mer. Les Japonais en prennent au large des côtes. Ils ne les rejettent pas à la mer, ils les gardent. La demande pourrait augmenter. Peut-être même en Amérique du Nord, le chien de mer deviendra un aliment acceptable. J'en ai mangé, ce n'est vraiment pas mauvais.

M. Borrie: Mais où trouve-t-on le chien de mer?

M. Stevens: Partout.

M. Borrie: Il est vraiment partout?

M. Stevens: Les pêcheurs s'en plaignent, ils se plaignent que ce poisson gêne la pêche commerciale et sportive. Ils sont pris par les pêcheurs de saumon au filet maillant, par les pêcheurs de hareng et de saumon à la seine et au palangre. Ils sont pris par les sportifs.

M. Borrie: Une dernière question, monsieur le président. On peut estimer donc que l'industrie ici sur la côte pourrait s'occuper de ce genre de pêche sans attendre après les navires-usines japonais ou la flotte japonaise?

M. Stevens: Oui, en ce qui concerne la prise. Pendant la guerre nous en avons fait l'expérience quand on avait besoin des vitamines A que l'on extrait du foie du chien de mer. Nous prenions des quantités énormes de chiens de mer à cette époque.

[Text]

The Chairman: Mr. Hogarth.

Mr. Hogarth: Mr. Witness, there seems to be inconsistency in a couple of parts of your brief that I would like to ask you to explain. I am sure that you can explain them. First of all, you are diametrically opposed to the vertical integration of the industry insofar as processing companies owning boats is concerned. Is that correct?

Mr. Stevens: Yes.

Mr. Hogarth: Yet I notice that, on page four on the Canadian Deep Sea Fishery Development, you suggest that Canada develop a mothership fleet with

... modern factory trawlers and transport vessels to be built and operated by the government as a nucleus of a deep sea operation...

et cetera, et cetera. Is that not the same concept? The motherships would be owned by fish processing companies, would they not?

Mr. Stevens: You do not get everything you want in one day nor in one type of fishery. It has been our experience, in terms of the development offshore and looking at other experiences as well, that neither the individual Canadian fisherman, nor the individual Canadian company wants, at the moment, to go into deep sea fishery. We believe that it will require all the co-operation that can be developed between the federal government, the existing fishing companies, and the fishermen, that is vessel owners and crew members, in order to get into that operation. In other words, there is a difference in the type of development envisaged and that contradiction is obviously there.

Mr. Hogarth: How many fishermen are members of your Union?

Mr. Stevens: We have a variation in number from year to year ranging between 7,000 and 9,000 in total. Roughly 5,000-6,000 of these are fishermen and the balance are engaged in the ancillary work.

Mr. Hogarth: About 5,000-6,000 active fishermen would be affected by these licensing regulations.

Mr. Stevens: There are actually more than that, in terms of the numbers of fishermen. Those are the fishermen who are members of our Union. In addition to that, there are a number of other organizations, for example the Fishermen's Co-operatives.

[Interpretation]

Le président: Monsieur Hogarth.

M. Hogarth: Messieurs les témoins, il y a deux parties de votre mémoire qui ne semblent pas correspondre. Vous pourrez certainement l'expliquer. D'abord, vous vous opposez à l'intégration verticale de l'industrie en ce qui concerne les compagnies de conditionnement qui sont propriétaires de bateaux. Est-ce exact?

M. Stevens: Oui.

M. Hogarth: Je remarque qu'à la page 4 du mémoire sur le Développement de la pêche hauturière canadienne, vous suggérez que le Canada établisse une flotte de bateaux gigognes comprenant...

...des chalutiers-usines modernes et des navires de transport construits et exploités par le gouvernement, comme commencement d'une exploitation hauturière...

etc., etc. Est-ce que ce n'est pas la même idée? Les bateaux gigognes seraient la propriété des compagnies de conditionnement de poisson, n'est-ce pas?

M. Stevens: Vous n'obtenez pas tout ce que vous voulez dans un jour ou dans un genre de pêche. Nous avons constaté en voyant d'autres exemples, que le pêcheur canadien ou la compagnie canadienne ne veulent pas s'occuper de ce genre de pêche au large, et nous pensons qu'il faudra beaucoup de collaboration entre le gouvernement fédéral et les compagnies de pêche qui existent et les pêcheurs, c'est-à-dire les propriétaires et leurs équipages, afin de la mettre en exploitation. Autrement dit, il y a différence dans le genre de développement que l'on envisage et il y a une contradiction certainement.

M. Hogarth: Combien de pêcheurs sont membres de votre syndicat?

M. Stevens: Cela varie d'une année à l'autre, entre 7,000, et 9,000 en tout, dont environ 5,000 à 6,000 sont des pêcheurs, les autres s'occupent de travaux connexes.

M. Hogarth: Donc, il y a 5,000 à 6,000 pêcheurs qui seraient affectés par ces règlements de permis?

M. Stevens: En réalité, il y en a davantage, en ce qui concerne le nombre des pêcheurs. Il s'agit simplement de ceux qui sont membres de notre syndicat. En plus de cela, il y a un certain nombre d'organisations, par exemple, la *Fishermen's Co-operative*?

[Texte]

Mr. Hogarth: Yes, I just wanted the number of fishermen in your Union who would be actually affected by these regulations.

Mr. Stevens: Yes, there are roughly between 5,000-6,000.

Mr. Hogarth: How many are engaged in these other organizations which you mentioned? What is the total number of people who are engaged in commercial fishing in British Columbia, particularly for the salmon?

Mr. Stevens: Well in terms of numbers, I wish that I had...

Mr. Hogarth: What would you estimate?

Mr. Stevens: I would estimate between 10,000 and 11,000, but these figures have been compiled repeatedly by people in the Department of Fisheries and they vary considerably.

Mr. Hogarth: In so far as the fishermen are concerned would it be fair to say that half the industry is presently under the auspices of the United Fishermen?

Mr. Stevens: Yes, and I think it should be probably explained a little bit further. In the sections such as the salmon-seining and halibut fleet we have a very high percentage of members in the Union. There is a fairly substantial, quite high percentage in the gill-net fleet but we do not have as many in the troll fleet. There are variations of this kind.

Mr. Hogarth: I am not binding you to specific numbers, but dealing as best you can with those that are going to be effected by these regulations, would it be fair to say that half, or over half, are now members of the United Fishermen and Allied Workers' Union.

Mr. Stevens: Yes.

Mr. Hogarth: And is it not so, and you may disagree if you wish, but is not your Union active in expanding its membership among the fishermen, sometimes with some limited success.

Mr. Stevens: I sometimes feel that we are on a treadmill because a few years ago we found that in a period of 15 years, we had signed up over 20,000 new members and yet our membership had not increased by more than about 1,000. We calculated that if we kept on going long enough, we would have signed up the equivalent of every man, woman, and child in British Columbia and would

[Interprétation]

M. Hogarth: Oui. Je voulais simplement savoir le nombre de pêcheurs parmi vos membres qui seraient affectés par ces règlements.

M. Stevens: Oui, environ entre 5,000 ou 6,000.

M. Hogarth: Et combien dans ces autres organisations que vous avez mentionnées? Quel est le nombre global de personnes qui sont dans la pêche commerciale en Colombie-Britannique, surtout la pêche au saumon?

M. Stevens: En nombre, j'aimerais avoir...

M. Hogarth: Quelle serait votre évaluation?

M. Stevens: Mon chiffre estimatif serait de 10,000 à 11,000, mais on a compilé ces chiffres en maintes occasions au ministère des Pêcheries, et ils varient considérablement.

M. Hogarth: En ce qui concerne les pêcheurs, est-ce qu'on peut dire que la moitié de l'industrie en ce moment est comprise dans le United Fishermen?

M. Stevens: Oui, et je crois qu'il faudrait expliquer un peu plus. Dans les sections comme celles des seigneurs au saumon et de la flotte d'harenguiers, nous avons un fort pourcentage qui sont membres du syndicat. Il y a un pourcentage assez considérable, assez haut, dans la flotte de prise au filet maillant, mais il n'y en a pas beaucoup dans la flotte à ligne traînante.

M. Hogarth: Je ne veux pas vous tenir à des chiffres exacts, mais traitant aussi bien que possible avec ceux qui doivent être affectés par les règlements, serait-il juste de dire que la moitié, ou plus que la moitié, sont membres du *United Fishermen and Allied Worker's Union*?

M. Stevens: Oui.

M. Hogarth: Et, vous n'êtes peut-être pas de mon avis, et vous pouvez le disputer, mais votre syndicat n'essaie-t-il pas d'augmenter le nombre de ses membres parmi les pêcheurs et vous ne réussissez peut-être pas toujours très bien?

M. Stevens: Je crois quelquefois que nous sommes sur un manège parce que, il y a quelques années, nous avons vu qu'au cours de 15 ans nous avions enrôlé plus de 20,000 nouveaux membres, mais nous n'avions augmenté le nombre de nos membres que d'un peu plus de 1,000. Nous avons calculé que si nous continuions assez longtemps, nous aurions enrôlé l'équivalent de toutes les fem-

[Text]

still be representing only a percentage of the people in the industry.

Mr. Hogarth: I appreciate that but your ultimate objective is to unionize every boat.

Mr. Stevens: Yes, when we started we had a number of very small organizations in the industry. We found that the companies were able to take advantage of us and play one off against the other. Those of us who had been in unions for any length of time believe the only way to answer the companies is with a good strong union representing all the groups.

Mr. Hogarth: I think we generally agree with that. Nobody is complaining.

The Chairman: Mr. Hogarth, I am sorry but your time is up.

Mr. Hogarth: I have not even started. How can it expire when I have not started?

Some hon. Members: Let him continue with his line of thought.

The Chairman: Does the Committee so agree.

Some hon. Members: Agreed.

Mr. Hogarth: If the Minister were to have accepted the suggestions of the United Fishermen and other fishermen's organizations, and then licenced the people, when it became mandatory that the licenced people be members of a particular union, then would not the union actually have control of who would fish?

Mr. Stevens: If it happened, it would not be a bad thing but at the moment we do not have a closed shop in the industry. If the fishermen decide amongst themselves, under whatever system is in force, that they want to take on the big task of enforcing a closed shop they would be able to do that. In the past we found that the individual owner of a boat is sometimes the most stubborn to be convinced in terms of whether or not he should belong to a union. Some have chosen the co-operative system of operation and say that they do not consider a union as being in their interests. Others have stayed out for other reasons. Do you think that is a red herring, in other words, something that is drawn across the table which says, "Well this

[Interpretation]

mes, les enfants et les hommes de la Colombie-Britannique, et pourtant nous n'aurions représenté qu'un petit pourcentage de gens qui sont dans l'industrie.

M. Hogarth: Et c'est ce que vous voudriez réussir, vous voudriez que tous les pêcheurs soient membres de votre syndicat.

M. Stevens: Oui, lorsque nous avons commencé, nous n'avions qu'un nombre de très petites organisations dans l'industrie. Nous avons constaté que les compagnies pouvaient prendre avantage de nous et nous opposer les uns contre les autres. Ceux de nous qui ont syndiqué depuis assez longtemps croient que la seule façon de nous défendre c'est que nous soyons forts, que notre syndicat soit fort et représente tous les groupes.

M. Hogarth: Je crois qu'en général nous sommes tous d'accord. Personne ne se plaint.

Le président: Monsieur Hogarth, je regrette, mais votre temps est écoulé.

M. Hogarth: Je n'ai pas encore commencé. Comment mon temps peut-il être épuisé alors que je viens de commencer ou que je n'ai même pas commencé.

Des voix: Laissez-le continuer dans ce sens.

Le président: Tout le monde est d'accord de le laisser continuer.

Des voix: D'accord.

M. Hogarth: Si le ministre avait accepté l'idée des United Fishermen et autres associations de pêcheurs, et s'il avait accordé les permis aux gens, lorsqu'il deviendrait obligatoire que les gens licenciés fassent partie d'un syndicat particulier, alors le syndicat aurait le contrôle de qui pêche et qui ne pêche pas?

M. Stevens: Pour le moment nous n'avons pas d'atelier fermé et si les pêcheurs décidaient entre eux, quel que soit leur système, de reprendre la tâche importante d'appliquer les dispositions d'un atelier fermé, ils auraient beaucoup de difficulté à le faire. Nous avons quelquefois constaté que les pêcheurs de petits bateaux sont les plus obstinés, pour faire partie ou ne pas faire partie d'un syndicat. Certains ont décidé que c'est dans leur intérêt de faire partie d'un syndicat, d'autres ne veulent absolument pas s'affilier à un syndicat. L'opinion est très partagée. Voilà pourquoi nous pensons que ceci n'arrivera pas.

[Texte]

would be a bad thing"? You cannot say it is a bad thing if it did happen but it is not any more likely to happen under our system than the other system.

Mr. Hogarth: I am sorry but I have not got time to explore that further. Dealing with the company control, there are some small fish-processing companies in British Columbia that own two or three boats. Is that not so?

Mr. Stevens: Yes.

Mr. Hogarth: They own those boats, they hire the crews, they catch the fish, and they process the fish. In a sense that cuts down on the processing cost of fish. Is that not so, particularly in the fresh fish field?

Mr. Stevens: Yes, these small companies of which I am thinking do not normally own fishing boats with the idea of employing someone to fish aboard those boats for them. They may be involved in the ownership and financing in a limited way, similar to the big companies, in order to assure themselves of a certain supply. If what they say is true—and I do not really know—most of them are staying away from the financing end of it. It is just too much of a burden for them to carry. They cannot compete with the big companies anyway so they compete more on the price of fish.

For example, a company operating out of Port Hardy last year paid 46 cents a pound for sockeye, landed at their dock, and 42-43 cents on the grounds, compared to the minimum price of 37½ cents which we had in our contract. This is one of the reasons why the big companies not only want to control the balance of the fleet, but actually have their own police boats to see that people who are fishing for them, or on boats financed by them, are not going to sell fish to those smaller companies.

Mr. Hogarth: Probably, the principle reason why you are against the vertical integration of the industry is that it has a tendency to cut the price of fish and make the price of fish on the deck, competitive.

Mr. Stevens: It certainly eliminates any competition. I am sure that in the findings of the committee which was set up by the Department of Justice under the Combines Branch some years ago, they found that the jig four at the time, ABC Packing Company, B.C. Packers, Canadian Fishing Co. and Nelson Brothers, Fisheries—which are now the jig two, plus having taken over some others—controlled prices on the grounds as well

[Interprétation]

M. Hogarth: Je n'ai pas le temps d'examiner la question plus avant. A propos du contrôle des compagnies, il y a quelques petites entreprises de transformation du poisson en Colombie-Britannique qui ont deux à trois bateaux.

M. Stevens: Oui. N'est-ce pas vrai?

M. Hogarth: Ils sont propriétaires de bateaux, ils engagent l'équipage, ils pêchent, ils transforment le poisson et ceci abaisse les frais de production. Ce n'est pas vrai? Surtout dans le domaine du poisson frais?

M. Stevens: Ces petites compagnies normalement ne sont pas propriétaires de bateaux dans l'idée d'engager des pêcheurs. Ils sont peut-être co-propriétaires, comme les grandes entreprises le sont sur une grande échelle pour s'assurer une production régulière et sûre, enfin, c'est ce qu'ils disent, et je ne sais pas si c'est vrai, mais ils s'écartent et ne veulent pas financer, ils ne peuvent pas concurrencer avec les grandes entreprises, surtout pas pour financement de la sorte. Là où ils exercent la concurrence, c'est sur le prix du poisson.

Par exemple, une entreprise à Port Hardy paie 46 cents la livre pour le sockeye ou 42-43 cents sur le sol comparativement à un prix maximum de 37½ cents selon notre contrat. C'est la raison pour laquelle les grandes compagnies non seulement veulent avoir le contrôle de la flotte, mais veulent aussi assurer une inspection pour voir que ceux qui pêchent pour eux, dans leurs bateaux ne vendent pas le poisson aux petites compagnies qui paient davantage.

M. Hogarth: Probablement, la meilleure raison d'être contre l'intégration verticale, c'est la tendance de faire baisser les prix du poisson et de les rendre concurrentiels.

M. Stevens: Ceci élimine certainement toute la concurrence. Je suis sûr que les conclusions du comité qui a été constitué par le ministère de la Justice, sous la Direction des coalitions, ils ont trouvé que les quatre gros à cette époque, ABC Packing Company, B.C. Packers, Canadian Fishing Co. et Nelson Brothers, qui sont maintenant les deux grands, ayant absorbé d'autres, contrôlent les prix à terre, aussi bien qu'ils influencent tout le commerce

[Text]

as influenced and directed prices at the wholesale and consumer level. In areas where we did not have a minimum price agreement or a set of negotiations, they moved in and set up their controls.

Mr. Hogarth: Was there not also a finding, at one time, that the fishermen themselves were controlling the price of fish?

Mr. Stevens: It was a mistaken idea by somebody in the government department but finally they dropped it. They decided to play us up as though we were some sort of a big monopoly, even though we represented several thousands of people.

The Chairman: For the Chair's information has the Committee agreed to give limited time?

Mr. Hogarth: I will stop there, Mr. Chairman. I repeat what I said earlier, "I am most disappointed that we cannot get into these things far more extensively."

The Chairman: I would love to have more time. Mr. Comeau.

Mr. Comeau: Most of my questions which I had on the boat licensing limitation were asked by Mr. St. Pierre because these effect the lobster industry on the east coast where a limitations-licensing program has also been imposed.

However, on another topic, I understood what you said with regards to the interest rates on our loan program. Yesterday, another brief which we had said that the interest rates were much too low to be of any interest to the lender. I want to say that while I am against public ownership and certainly in favour of private enterprise, I am concerned and very deeply concerned, about this creeping inflation. Has your Union objected to the government to stop this rising cost-of-living, and rising interest rates. We must all pitch in to stop this inflated balloon from busting.

Mr. Stevens: Perhaps I can answer in this way. This is not the first time we have presented the idea that there should be a low interest improvement board or fishermen's improvement board that would provide loans to fishermen at what would truly be a low interest rate, rather than these inflated rates which are forever inflating themselves again.

Mr. Comeau: Yes, but you are suggesting that this should be controlled, and that the government should lend money to credit unions, et cetera, et cetera, or make loans to

[Interpretation]

au prix de gros et au prix de détail. Dans les domaines où nous n'avions un accord de prix minimum ou un arrangement de négociations, ils ont pris place et établi leur propres contrôles.

M. Hogarth: Est-ce qu'on n'a pas constaté à un moment donné aussi que les pêcheurs contrôlaient le prix du poisson?

M. Stevens: C'était une fausse idée de quel qu'un du ministère fédéral, mais ils ont finalement oublié. Ils ont décidé de coopérer avec nous, même si nous étions une sorte de gros monopole, même si nous représentons plusieurs milliers de personnes.

Le président: Pour la gouverne du président, le Comité a-t-il été d'accord de donner un temps limité?

M. Hogarth: Je m'arrête là, monsieur le président. Je tiens à dire ce que j'ai déjà dit: «Je suis très désappointé que nous ne puissions pas examiner ces choses plus à fond».

Le président: J'aimerais avoir plus de temps. Monsieur Comeau.

M. Comeau: La plupart de mes questions à propos des limitations imposées au licenciement des bateaux ont été posées par M. St-Pierre, parce que ceci touche aussi l'industrie du homard sur la côte est du Canada où le programme de permis restrictifs a été imposé.

Toutefois, à propos d'un autre sujet, ce que vous disiez notamment à propos des taux d'intérêt sur le programme de prêts. Hier nous avons examiné un autre mémoire qui disait que les taux d'intérêt étaient beaucoup trop bas pour intéresser les prêteurs. Je tiens à dire que je suis contre la nationalisation et pour l'entreprise privée, l'inflation croissante m'inquiète, beaucoup. Votre syndicat a-t-il demandé au gouvernement de se préoccuper de ce coût de la vie croissant, et de ces taux d'intérêt croissants. Nous devons tous nous donner la main pour mettre fin à cette inflation.

M. Stevens: Je peux peut-être répondre de cette façon. Ce n'est la première fois que nous avons présenté l'idée qu'il devait y avoir un office de prêts à des taux très bas et non pas à des taux gonflés constamment.

M. Comeau: Oui, mais vous demandez que ceci soit contrôlé par le gouvernement, que le gouvernement devrait prêter de l'argent aux coopératives de crédit ou leur fasse des prêts

[Texte]

these companies so that they can lend money at favourable or low interest rates. This is your plan.

Mr. Stevens: Yes. I think our organization would go further than that, in general, and say that we believe interest rates have gone away out of line. I know that this has come up at past conventions, and in a different sense resolutions have been submitted to people in charge of taxation policy and this sort of thing.

Mr. Comeau: I have another question, Mr. Chairman and it deals with the herring disaster on the West Coast. Do you foresee a policy or planning which could prevent the same thing from happening on the East Coast, which is a quite important industry in our area?

Mr. Stevens: I think the only thing which will prevent it will be, first of all, an awareness on the part of the fishermen of the danger. Secondly, an awareness on the part of people in government at the federal and the provincial level, that fishermen do have something to say, and know something about what is going on in the grounds. You must not simply take the word of people who might have a very fancy title, in front or after their name, and say that, "We know better than the fishermen". This is precisely what happened here on the West Coast. The fishermen were told, "Well you are not experts, you do not really know what you are talking about. There is almost an unlimited fishery that can be achieved here and take the restrictions off, take the quotas off".

Mr. Comeau: Yes, but surely they must now be aware with the situation that happened on the West Coast. Are you aware of any measures to prevent the same thing from happening on the East Coast?

Mr. Stevens: All I have seen has been the occasional statement that they are looking into it, but I have seen no pertinent regulation indicating that they are yet saying: "This is the quota; this is as far as we can go in the Bay of Fundy area", or "This is as far as we can go in the Chaleur Bay area", or somewhere else. Perhaps they have not got the information yet but they have not set any quotas that I know of.

Mr. Comeau: On page 11 of your brief, number 7, you say:

7. Issuance of licenses after the end of the 5 year moratorium to persons who have not held licenses prior to 1966 shall

29728—8½

[Interprétation]

pour qu'elles-mêmes puissent prêter à des taux très bas ou raisonnables. C'est notre plan.

M. Stevens: Oui. Je crois que notre organisation irait plus loin en général, il faut dire que nous croyons que les taux d'intérêt sont excessifs. Des résolutions dans tous nos congrès ont été soumises aux responsables de la politique fiscale et ainsi de suite.

M. Comeau: Une autre question, monsieur le président, qui se rapporte au désastre du hareng sur la côte ouest. Est-ce que vous prévoyez des mesures qui empêcheront que ce désastre se reproduise également dans la côte est? Cette industrie est très importante dans notre région?

M. Stevens: Je crois que la seule chose qui l'empêchera sera que les pêcheurs se rendent compte du danger de trop pêcher. Deuxièmement, que les personnes responsables dans les différents paliers du gouvernement se rendent compte de la situation, que les pêcheurs aient un mot à dire, et connaissent quelque chose de ce qui se passe sur les lieux. Vous ne devez pas simplement prendre la parole de gens qui ne connaissent pas la chose, pas simplement des fonctionnaires qui s'imaginent tout connaître et qui se donnent des titres extraordinaires, et donnent des ordres sans savoir de quoi il s'agit.

M. Comeau: Sûrement les services officiels doivent se rendre compte maintenant de ce qui est arrivé sur la côte ouest, étant donné ce qui s'est passé sur la côte ouest.

Êtes-vous au courant des mesures visant à empêcher la répétition de cette situation sur la côte est?

M. Stevens: Tout ce que j'ai vu, c'est, à l'occasion, une déclaration à l'effet qu'on étudie la question, mais je n'ai pas vu de règlement pertinent qui stipulait: «Voici le contingentement; c'est la limite à laquelle nous pouvons aller dans la région de la Baie de Fundy» ou dans un autre endroit. Peut-être n'ont-ils pas encore les renseignements, mais ils n'ont pas fixé de contingentement, à ma connaissance.

M. Comeau: A la page 11 de votre mémoire, au numéro 7, vous dites:

que la délivrance des permis après la fin du maratoire de 5 ans, à des personnes qui ne détenaient pas de permis avant

[Text]

be from a waiting list of applicants according to rules to be established during this period.

Do you not think the same thing could happen here where you have friends who want to get in and this waiting list could become a sort of a patronage type of deal.

Mr. Stevens: There is that danger and we thought we covered it on the basis of point No. 10 where we proposed that there should be an impartial Board of Review which would represent all the organizations listed therein. Also, the government appointees should be drawn from the administrative, research, and biological staff and from university staff to see that it is handled on a fair and square basis and no patronage.

Mr. Comeau: Thank you, Mr. Chairman.

The Chairman: Mr. Goode.

Mr. Goode: Thank you, Mr. Chairman. Mr. Stevens, you and I have been corresponding back and forth about licensing, but there are a couple of things I still have not got straight in my mind about your position.

I have known and represented a lot of Norwegian and Japanese fishermen who bring up their sons for one purpose and one purpose alone, and that is to become fishermen. It is part of the way they are brought up. It is inside them. It is completely foreign to me and it seems difficult to me that our government would have to say to them that you cannot fish for 10 years or five years. It would be something that would be very unpleasant to me as a member of the government to have to tell these people. What is your feeling on this?

Mr. Stevens: I am also of some mixed stock.

Mr. Goode: We all are.

Mr. Stevens: I do not think the Japanese Canadians or the Norwegian Canadians have any corner on these rights, but I know what you are talking about. In the fishing community there is always the feeling amongst the existing fishermen families that they would like to see their sons grow up and develop into first-class fishermen. Perhaps they have the best running head start because they come from more than one generation of fishermen.

The fact of the matter is that no matter what system you go into some of these people

[Interpretation]

1966, se fera d'après une liste d'attente des candidats suivant des règlements qui seront établis au cours de cette période.

Croyez-vous que la même chose pourrait se produire ici où vous avez des amis qui veulent être admis et que cette liste d'attente pourrait devenir un instrument de favoritisme.

M. Stevens: Ce danger existe et je crois que nous l'avons prévu par l'article 10 où nous avons proposé qu'on nomme un Conseil de revision qui pourrait représenter tous les organismes dont les noms sont mentionnés. Aussi, les nominations du gouvernement devraient aller à des personnes faisant partie du personnel affecté à la recherche et à la biologie et du personnel universitaire afin d'être certain que le choix se fasse en toute justice et équité et qu'il n'y ait pas de favoritisme.

M. Comeau: Merci, monsieur le président.

Le président: Monsieur Goode.

M. Goode: Merci, monsieur le président. Monsieur Stevens, vous et moi avons échangé plusieurs lettres à propos des permis, mais il y a encore des points quant à votre position qui ne sont pas clairs dans mon esprit.

J'ai connu et représenté bon nombre de pêcheurs norvégiens et japonais qui élèvent leurs fils avec une seule intention: en faire des pêcheurs. Ils grandissent avec cet esprit. Il est impensable pour moi et il semble difficile de concevoir que le gouvernement pourrait leur dire qu'ils ne peuvent pas pêcher pendant 10 ans ou 5 ans. Il me serait très désagréable, à titre de représentant du gouvernement, d'avoir à leur dire cela. Qu'en pensez-vous?

M. Stevens: Moi aussi je suis de souches ethniques différentes.

M. Goode: Nous le savons tous.

M. Stevens: Je ne crois pas que les Canadiens de souche japonaise ou norvégienne ont un monopole sur ces droits, mais je sais ce dont vous parlez. Parmi la collectivité des pêcheurs, le sentiment a toujours prévalu au sein des familles de pêcheurs existantes qu'elles aimeraient voir leurs fils devenir des pêcheurs de première classe. Peut-être ont-ils une meilleure chance parce que ce sont des pêcheurs depuis plus d'une génération. Ce qui est certain c'est que peu importe le système qui sera adopté tous les fils de ces familles ne pourront pas entrer dans l'industrie de la

[Texte]

are not going to be able to put their sons all into a limited fishery, and that applies on the whole British Columbia coast. If you take a look at it and examine it you will find that if all the sons of all the fishermen went into it, in addition to those that would still be there, you would not be solving the problem. You would only be creating a greater problem.

I have three sons myself. I have to tell them, "You are going to go on a waiting list." That is just as fair as telling them, "Look, you are going to have to have \$20,000 to buy a licence, and perhaps if somebody else has got \$25,000 he will get the licence first." It is probably a lot fairer.

What we are saying in our brief is if there is a question here that because of social and human problems existing in fishing communities of, say, giving preference to fishermen's sons, then fishermen's sons should be written in as a special category. It should be applicable to all fishermen's sons whether he happened to be a man like Mr. Stavenes or Mr. Ironside, both of whom never did own a boat, or whether he happened to be my son and I did own a boat. They should all have the same opportunity to enter that fishery.

Mr. Goode: The point I was trying to make is that under the present regulations, although it may be unpleasant, nevertheless the family which has a son who wants to go in very badly can get him in anyway. I would like to go on before...

Mr. Stevens: If they have the dollars. Supposing they do not have the dollars, then what happens?

Mr. Goode: I think under this new government plan they are going to be able to get a loan and borrow the greater portion of it. If they are capable fishermen they will be able to go on. May I move on to the next subject or that I do not use up my time?

The other item that concerns me a little bit in your brief is the fact that you suggest in the first year that anyone who does not make 0 per cent of his income in fisheries should be dropped, and then it should go on up to 50 per cent.

There are three problems here which I see as a representative of the government. First, how do we make them prove to us that they are not making these other funds, and what type of funds would be acceptable? Second, and I am referring to investment income, would fishermen who have owned

[Interprétation]

pêche, et cela vaut pour toute la côte de la Colombie-Britannique. Si vous examinez la question de près vous vous rendez compte que si tous les fils de tous les pêcheurs se consacraient à la pêche, en plus de ceux qui sont encore du métier, vous n'auriez pas résolu le problème qui n'en serait que plus grand.

Moi-même, j'ai trois fils. Je dois leur dire: «Vos noms seront sur une liste d'attente». C'est aussi juste que si je leur disais «Voilà, vous aurez \$20,000 pour acheter un permis et peut-être que si quelqu'un a \$25,000 il aura le permis le premier. C'est probablement beaucoup plus juste. Ce que nous disons dans notre mémoire c'est que s'il est ici question qu'à cause de problèmes humains et sociaux qui existent au sein des collectivités de pêcheurs, soit de donner une préférence aux fils de pêcheurs, alors les fils de pêcheurs devraient être inscrits dans une catégorie spéciale. Cela devrait s'appliquer à tous les fils de pêcheurs, que ce soit un homme comme M. Stavenes ou M. Ironside, qui tous les deux n'ont jamais été propriétaires d'un bateau, ou que ce soit mon fils à moi qui posséderait un bateau. Ils devraient tous avoir la même chance d'accès à l'industrie de la pêche.

M. Goode: Le point que je voulais faire ressortir c'est que selon les règlements actuels, bien que ce pourrait être déplaisant, la famille qui a un fils qui désire absolument entrer, peut néanmoins réussir à le faire entrer de toute façon. Je voudrais continuer avant que...

M. Stevens: Si elle a l'argent. Qu'arrive-t-il si elle n'a pas d'argent.

M. Goode: Je pense que grâce au nouveau plan du gouvernement, ils pourront contracter un emprunt et en emprunter la plus grande partie. Si ce sont des pêcheurs compétents, ils pourront réussir. Puis-je passer au sujet suivant pour ne pas laisser écouler tout mon temps.

L'autre sujet qui me préoccupe un peu dans votre mémoire est que vous proposez qu'on devrait laisser tomber dans le cas de la première année, toute personne qui ne tirerait pas 30 p. 100 de son revenu de la pêche et qu'ensuite cette proposition devrait être portée à 50 p. 100.

Il y a trois problèmes qui se posent. D'abord, comment les amène-t-on à nous prouver qu'ils ne réalisent pas ces autres revenus et quelle sorte de revenu serait acceptable? En deuxième lieu, et je me reporte aux revenus de placement, les pêcheurs qui étaient propriétaires de terrains, qui les ont vendus avec

[Text]

land, have sold it, and have been lucky and are receiving interest from the bank be excluded? Third, there are fishermen, particularly as they get older, who tend to be less vigorous. Some fishermen tend to start making less of their income by fishing. Would these people then be excluded? Perhaps you could answer those for me.

Mr. Stevens: In the first place, of how it would be done, it is already being done in Australia. There they started with a restriction that said the person had to earn 25 per cent of his income from fishing in order to retain a licence. I do not know whether they graduated that upward or not. They placed the onus of proof of income on the individual with certain penalties for false declarations of income from other sources.

I cannot answer you about whether or not they did include investment income. We were not thinking of investment income. We were thinking of the situation that now exists where a person may, and he would be able to do this under the restrictions that are now in effect as well as lack of restrictions, have another steady job but takes two months off at the peak of the season to go out and engage in commercial fishing. There are also those that have steady jobs ashore and take off one or two days a week at the best part of the fishing season. We felt that this limitation would get at that group first.

As for the older group, it is not so likely. Our experience has been that the older a person gets, the more difficult a time he has of finding other jobs ashore at the end of the fishing season; that is, a person who is really trying to make a living as a fisherman.

Mr. Goode: I was leading up to one point, if I may just make that point. As you know many fishermen are now on unemployment insurance during the winter time and it is costing the government, I think, about \$1 million in Canada above what they are receiving. Would this not eventually discourage any man from doing any work in the winter time?

Mr. Stevens: I do not think so, certainly not at those percentages. If there was concern about desroying a man's initiative to go out and earn, under our program we are saying he could still earn the same amount from some other employment as he earned from fishing and retain his licence. If you were to change it to a 60-40 relationship there would still be an incentive to go out and get that other 40

[Interpretation]

de la chance et qui touchent des intérêts de la banque seraient-ils exclus? Troisièmement certains pêcheurs, surtout avec l'âge, deviennent moins vigoureux. Certains pêcheurs ont tendance à tirer des revenus plus faibles de la pêche. Ces gens seraient-ils exclus? Peut-être pourriez-vous répondre à ces questions?

M. Stevens: En premier lieu, sur la question de savoir comment le faire, on le fait déjà en Australie. Dans ce pays ils ont commencé par une restriction voulant qu'une personne gagne 25 p. 100 de son revenu de la pêche pour conserver son permis. Je ne sais pas si ce pourcentage a été augmenté ou non. Le fardeau de la preuve de revenu incombe à la personne et certaines sanctions sont prévues dans le cas de fausses déclarations de revenu d'autres sources.

Je ne peux pas vous dire s'ils ont inclu les revenus de placements. Nous ne pensions pas aux revenus de placements. Nous pensions à la situation qui existe présentement alors qu'une personne pourrait, et elle serait capable de le faire avec les restrictions présentement en vigueur aussi bien que si les restrictions faisaient défaut, avoir un autre emploi permanent et prendre deux mois de congé au meilleur de la saison de pêche pour aller travailler à la pêche commerciale. Il y a aussi ceux qui ont un emploi régulier à terre, et prennent un ou deux jours par semaine pour pêcher quand la pêche est à son meilleur. Nous avons cru que cette limitation atteindrait d'abord ce groupe.

Quant au groupe des pêcheurs plus âgés, ce n'est pas probable. D'après notre expérience, plus une personne prend de l'âge plus il lui est difficile de trouver de l'emploi à terre à la fin de la saison de la pêche; nous parlons d'une personne qui veut réellement gagner sa vie comme pêcheur.

M. Goode: Je voulais en arriver à un point s'il m'est seulement permis de l'exposer. Comme vous le savez, les pêcheurs retirent maintenant de l'assurance-chômage en hiver et cela coûte au gouvernement environ \$1 million de plus qu'il ne perçoit, je crois. Est-ce que ceci ne découragerait pas quiconque de vouloir travailler pendant l'hiver?

M. Stevens: Certainement pas; étant donné les pourcentages. Si on avait peur de détruire l'initiative de l'individu, le décourager du travail, en vertu de notre programme, nous disons qu'il pourrait encore gagner le même montant que celui qu'il retire de la pêche et maintenir son droit au permis. Si vous deviez changer cela pour un rapport 60-40 il resterait encore une incitation à aller travailler pour

[Texte]

per cent. Particularly, as his income from fishing rose and became higher because of the decline in the number of fishermen, the problem there would be certainly much less.

The Chairman: Mr. McQuaid:

Mr. McQuaid: Thank you, Mr. Chairman. Mr. Stevens, there is one proposal in your brief with which I have to disagree most violently. It has been touched on by Mr. Goode. Throughout the brief you hold yourself up as a protector of human rights.

You criticize the Minister and the government for placing things before people, yet you suggest that perhaps the basic right of all, the right to do what you like with what you own, cannot be exercised. You say that a man who owns a licence should have no right to dispose of it as he sees fit. How do you straighten out these two things?

Mr. Stevens: The right to make use of a resource where there is a limit on the total number of people should not rest with that individual who happened to be there at the time the rules and regulations were changed. In other words, here is a public resource; the fishing resource. It belongs actually to all the people of Canada.

Mr. McQuaid: The licence does not belong to all the people.

Mr. Stevens: Right now the Minister of Fisheries and Forestry has the power under the Act to tell any fisherman he is not going to get a licence, and he is not answerable to this Committee or to Parliament.

Mr. McQuaid: You are saying that the man who owns the licence is going to be put under the very same restriction. The man who owns the licence is not going to be allowed to do with it as he sees fit. Is this not taking away one of our basic human rights?

Mr. Stevens: The Minister has already taken away some of our basic human rights...

Mr. McQuaid: I am not interested, Mr. Stevens, in what the Minister has done or has not done.

Mr. Stevens: I am.

Mr. McQuaid: I am suggesting to you that when you say a man who owns a licence has no right to do with it as he pleases...

Mr. Stevens: Yes, I think he has no right, any more than any other Canadian, to a spe-

[Interprétation]

gagner cet autre 40 p. 100. En particulier, comme son revenu a augmenté à cause de la baisse du nombre des pêcheurs, le problème serait beaucoup moins grand.

Le président: Monsieur McQuaid.

M. McQuaid: Merci, monsieur le président. Monsieur Stevens, il y a une proposition dans votre mémoire que je conteste très énergiquement. Monsieur Goode en a parlé aussi. Tout au long du mémoire vous vous posez en protecteur des droits de l'homme.

Vous critiquez le ministre et le gouvernement d'avoir exposé leur point de vue au peuple, mais vous dites que peut-être le droit fondamental de tous, le droit de faire ce que vous voulez avec ce que vous possédez, ne peut pas être exercé. Vous dites qu'un homme qui détient un permis ne devrait pas avoir le droit d'en disposer à sa guise. Comment pouvez-vous concilier ces deux théories.

M. Stevens: Le droit d'utiliser une ressource, quand le nombre total des gens qui peuvent le faire est limité, ne devrait pas revenir à la personne qui se trouvait là au moment où les règlements ont été changés. En d'autres termes les ressources de la pêche sont publiques. Elles appartiennent en fait à toute la population du Canada.

M. McQuaid: Le permis n'appartient pas à tout le monde.

M. Stevens: Le ministre a l'autorisation en vertu de la loi de dire à n'importe qui qu'on lui enlève ce permis et il n'aura pas à en rendre compte au Parlement ni au peuple.

M. McQuaid: Vous dites que le pêcheur ne peut pas disposer de sa licence comme il veut? Est-ce qu'on ne lui enlève pas un droit fondamental?

M. Stevens: Le ministre nous a déjà enlevé certains droits fondamentaux.

M. McQuaid: Je ne m'intéresse pas à ce que le ministre a fait ou n'a pas fait.

M. Stevens: Moi, si.

M. McQuaid: Ce que je vous dis, c'est que lorsque vous prétendez que le détenteur du permis ne peut pas en faire ce qu'il veut...

M. Stevens: Oui, j'estime qu'il n'a pas plus de droits que n'importe quel autre Canadien

[Text]

cial right within a restricted limited resource which, in the first place belongs to all of the people. If you have the right to go and fish then I should have the right to go and fish as well, or anybody in the audience or any person in Canada.

Once the government begins to limit those rights, then the question of how it limits its rights becomes very important.

To say that you have the right over me because you own a piece of property and I do not we think is entirely wrong. That is where we differ. If there is a difference, there it is. Just because you happen to have an investment in a boat or money to buy that investment, we do not think you should have a prior right over the man who does not have that investment.

Mr. McQuaid: Would you go so far as to suggest that if I happen to own a boat I have no right to do with it as I please, such as to give it to Mr. Goode or to sell it to Mr. Goode?

Mr. Stevens: No, we are saying that as far as the sale of the boat is concerned you can do with it as you please, but you should not at the same time as you sell the boat be able to sell the right to fish and thereby at the same time perhaps deprive somebody else of the right to fish.

Mr. McQuaid: You say on page 12, Mr. Stevens, that companies already control the finances of the majority of fishermen boat owners. Have you any concrete proof that this is the situation that really exists?

Mr. Stevens: I wish I was able to bring it in, in a statistical way, and say, "Here is exactly the degree of company ownership and control." I will say I have grown up in a fishing community and still live there, and by inquiring amongst the fishermen who live in that community I find that the overwhelming majority are indebted and under the control one way or another of the fishing companies.

I have inquired in other fishing communities from one end of this coast to the other just asking people what the situation is and how many of the boats tied up in Bella Bella or in some other place are owned outright by the fishermen and how many are controlled by the companies. You find that the majority are. We have never been able to get the federal Department of Fisheries, even though we asked them to, or anybody else to make that complete survey.

Mr. McQuaid: We had evidence here yesterday from a boat owner, Mr. Stevens, who suggested that perhaps this might not be the

[Interpretation]

sur des ressources limitées qui appartiennent à tout le monde.

Si vous avez le droit de pêcher, je devrais avoir le droit tout comme n'importe qui dans l'auditoire ou encore, n'importe quel Canadien. Une fois que le gouvernement commence à limiter ces droits, la façon de les limiter est très importante.

Et de vous dire que vous avez le droit parce que vous êtes propriétaire, alors que moi je ne suis pas propriétaire d'un certain emplacement, c'est la différence. Ce n'est pas parce que vous avez un investissement, un placement dans un bateau, que vous devriez avoir plus de droits que quelqu'un qui n'a pas d'investissement.

M. McQuaid: Iriez-vous jusqu'à dire que même si j'avais un bateau, je n'ai pas le droit d'en faire ce que je veux? Que je n'ai pas le droit de le donner ou de le vendre à M. Goode?

M. Stevens: Quant à la vente de votre bateau, vous devriez avoir le droit de faire ce que vous voulez. Mais, en même temps, si vous vendez votre bateau, vous n'avez pas le droit de vendre votre droit de pêche ce qui empêcherait quelqu'un d'autre de pêcher.

M. McQuaid: A la page 12, monsieur Stevens, vous dites que les compagnies contrôlent déjà le financement de la majorité des pêcheurs propriétaires de bateaux. Avez-vous une preuve concrète de cette situation?

M. Stevens: Je voudrais pouvoir vous les donner de façon statistique en vous disant exactement dans quelle mesure les sociétés exercent un contrôle. J'ai grandi dans une collectivité de pêcheurs. J'ai toujours vécu au milieu des pêcheurs. Et j'ai constaté que la grande majorité des pêcheurs ont, d'une façon ou de l'autre, des obligations envers les compagnies de pêche.

Je me suis renseigné un peu partout et j'ai demandé aux gens quelle était la situation et combien de bateaux à Bella Bella ou ailleurs sont la propriété des pêcheurs et combien appartiennent aux compagnies. J'ai constaté que la majorité appartiennent aux compagnies et nous n'avons jamais pu, malgré nos demandes répétées obtenir du ministère des Pêcheries qu'ils fassent une enquête détaillée.

M. McQuaid: Hier, un propriétaire de bateau disait que ce n'était peut-être pas tout à fait le cas en Colombie-Britannique à

[Texte]

situation in British Columbia now. You have made the statement but you have no definite proof that this situation exists. You say:

The companies already control the finances of the majority of fishermen boat owners.

Mr. Stevens: Yes, and we go further and say that what we would like to see is a thorough examination of this by an impartial body that would go right to the root of it and bring all the facts out.

The Chairman: Time seems to fly, Mr. McQuaid. Mr. Noble.

Mr. Noble: Mr. Chairman, I would like to pursue the dogfish problem a little further. Do you consider the dogfish to be a predator, a nuisance fish?

Mr. Stevens: Yes.

Mr. Noble: Would the witness be prepared to make an estimate of the amount of subsidy that would be required to keep dogfish under satisfactory control providing the fishermen were permitted to sell or do whatever they desire to do with the catch?

Mr. Stevens: The biological station in Nanaimo made an estimate on one occasion that we would have to have an average annual take of some 40,000 tons of dogfish to keep the population at a reasonable level; not to wipe it out but to keep it down to bearable limits. If the subsidy required to enable fishermen to go out and harvest that catch was \$25 a ton, then you would have a cost of \$1 million a year. This is more in line with the sort of thinking we had of what it would really cost.

The Minister has made a statement to the effect that the cost may be as high as \$2 million of which we have some doubt. If a subsidy of \$1 million could be established to do this, then we think the time would not be too far away when it could become almost self-sufficient. That amount should decline rather than increase.

Mr. Noble: At the moment there is nothing being done to take these fish out of the water?

Mr. Stevens: Almost nothing. You might say next to nil because the price of dogfish is so low now that fishermen cannot pay for expenses in most cases.

Mr. Noble: Providing the government could find a market for dogfish, how much per pound would we need to be made available to the fishermen so that this program of conservation could pay its own way?

[Interprétation]

l'heure actuelle. Mais vous, vous n'avez pas de preuves. Vous avez fait une déclaration sans preuve. Vous dites que:

«les compagnies contrôlent les finances de la majorité des propriétaires de bateaux».

M. Stevens: Oui. Et nous allons même plus loin pour dire que ce que nous voudrions, c'est une étude approfondie par un organisme impartial qui irait au fond des choses et exposerait tous les faits.

Le président: Monsieur McQuaid, le temps s'écoule rapidement. Monsieur Noble.

M. Noble: Monsieur le président, je voudrais approfondir la question du chien de mer. Considérez-vous le chien de mer comme un prédateur, une nuisance?

M. Stevens: Oui.

M. Noble: Le témoin pourrait-il me dire ce qu'il en coûterait pour limiter le nombre de chiens de mer, à condition que les pêcheurs puisse vendre leurs prises ou en disposer comme ils veulent?

M. Stevens: La station biologique de Nanaimo a dit que nous devrions avoir une prise annuelle de 40,000 tonnes de chiens de mer pour en contrôler le nombre, sans le décimer complètement mais si les subventions nécessaires pour permettre aux pêcheurs de pêcher ce poisson étaient de \$25 la tonne, il en coûterait alors 1 million par année. Ceci correspond plus à nos estimations.

Le ministre disait que ça coûterait peut-être 2 millions de dollars et nous avons des doutes à ce sujet. Si un subside d'un million de dollars pouvait être accordé, nous ne serions pas très loin du moment où la situation serait réglée, ce montant devrait diminuer avec le temps.

M. Noble: Pour le moment, rien n'est fait pour tuer ces prédateurs?

M. Stevens: Presque rien, parce que le prix du foie du chien de mer est si bas, que le pêcheur ne peut même pas payer ces dépenses.

M. Noble: A supposer que le gouvernement trouve des débouchés, combien nous faudrait-il accorder aux pêcheurs par livre de prises pour que ce programme soit rentable?

[Text]

Mr. Stevens: The suggestions which we made and which worked out reasonably satisfactory on one occasion worked out to an average price of about two and one-half cents to three cents a pound; roundly \$50 to \$60 a ton. They were able actually to catch fish at that level and get them to the plant.

Mr. Noble: Mr. Chairman, at this price it seems to me that even your organization could find a market for these fish.

Mr. Stevens: The market actually exists as far as we are given to understand by people from the government who have gone and looked into it. The problem has been in the cost from the time it is brought in and processed and then freight cost to get it to those markets. This has been the thing that has, so far, defeated the efforts of the industry and the fishermen.

I might say that the fishing companies have also advocated along with us that there should be some assistance because at the moment they cannot afford to put it on the market either.

Mr. Noble: Your organization has never made any approach in respect to developing a market?

Mr. Stevens: Do you mean a direct approach? Other than the fact of having visited Britain and Norway myself to look into what other people are doing, we have not had the facilities to go around and talk to companies in other countries. We have not felt really we were that well qualified. If the fishing companies that are here in British Columbia and the fishermen's co-operative who have that experience tell us that they cannot make a go of it, and the government program so far has indicated that they cannot make a go of it without some subsidy, then we did not feel that we should put on a special assessment of the members to go out and try to do something that could not be done that way.

Mr. Noble: Did you ever approach the mink-producing industry of British Columbia to see how many fish they used in their industry?

Mr. Stevens: No, although we have had discussions with them and they, so far, have not indicated too much interest in dogfish. They are basically using other species of ground fish such as flat fish and so on and waste products from the existing fishery operations and seem to be more satisfied with that than the use of dogfish.

Mr. Noble: I would just like to ask the witness one more question, Mr. Chairman.

[Interpretation]

M. Stevens: La proposition que nous avons faite et qui a fonctionné de façon assez raisonnable, s'établissait à 2½ ou 3 cents par livre, soit environ de \$50 à \$60 la tonne. Les pêcheurs ont pu prendre cette quantité et la livrer à l'usine.

M. Noble: Monsieur le président, à ce prix, il me semble que même votre organisation pourrait trouver un débouché pour ce poisson.

M. Stevens: Le débouché existe, en fait, d'après ce que nous avons pu conclure à la suite de la visite des fonctionnaires. Mais, il y a bien des frais: des frais de transformation, des frais de transport, etc. C'est une des choses qui jusqu'à maintenant, a contrecarré les efforts déployés par les pêcheurs et l'industrie.

Des compagnies de pêche ont aussi préconisé de concert avec nous une certaine aide parce que, pour le moment, il en coûte trop cher pour le mettre en marché.

M. Noble: Votre organisation n'a jamais déployé de force pour créer des débouchés?

M. Stevens: Parlez-vous d'approche directe? En plus d'avoir visité la Norvège et l'Angleterre pour voir ce que les autres faisaient, nous n'avons pas pu visiter les différentes compagnies des autres pays. Nous n'avons jamais pensé que nous étions habilités à le faire. Si les compagnies de pêche en Colombie-Britannique ont l'expérience et nous disent qu'ils ne peuvent pas faire quelque chose de rentable et que le gouvernement dise lui-même qu'il ne peut pas le faire sans subsides, nous n'avons pas cru bon d'y envoyer les membres pour essayer de faire quelque chose qui ne pouvait être fait de cette façon.

M. Noble: Est-ce que vous avez pris contact avec les éleveurs de vison pour savoir combien de poisson ils pouvaient utiliser?

M. Stevens: Non. Nous avons eu des entretiens mais, pour le moment, ils ne s'intéressent pas beaucoup aux chiens de mer. Ils utilisent surtout le poisson de fonds, les poissons plats et les déchets, et il semble que cela leur donne satisfaction.

M. Noble: J'ai encore une autre question, monsieur le président.

[Texte]

You mentioned a figure of \$10 million for rehabilitation of the salmon. I am wondering how you would propose to use this \$10 million? I believe you mentioned \$10 million annually.

Mr. Stevens: Yes, basically on stream control. By that I mean water control to prevent flash floods, temperature control to prevent the overheating of stream water, the provision of cold water at the times when it is necessary, the construction of artificial spawning channels, stream clearance where necessary, and the establishment of fish hatcheries.

In the document—which incidentally I have not given to this Committee; I have just loaned it to you to get the title—their indication is that probably even more money than we have suggested could be spent profitably on that type of development.

Mr. Noble: I was going to ask you if you had in mind the installation of hatcheries, and also I was wondering if you had visions of making substantial increases in the present salmon production?

Mr. Stevens: Yes, the indication is that a very large number of salmon streams are now producing at much lower levels than they once produced. We think that the first concentration should be to bring them back up to the maximum levels of past decades and then, using the experience of man, to go even beyond that perhaps to the state where we could double or even triple our present salmon production.

Mr. Noble: Thank you, Mr. Chairman.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: Mr. Chairman, I have two short questions. I wonder if Mr. Stevens could give us an indication of the effort his Union made to have the Committee hear the brief from the body you represent? You indicate in the summary that the Union requested a hearing before the Committee on the subject of vote limitations in October and repeated the requests several times and in the first page of your brief you go into some detail. Could you tell us what response you received?

Mr. Stevens: There was no reply whatever to the first letter of October 18.

Mr. Lundrigan: Dated October 18 to whom?

Mr. Stevens: To the Chairman of the Committee. We made certain other inquiries through members of the Committee about when the Committee would be meeting and

[Interprétation]

Vous avez mentionné un chiffre de 10 millions de dollars pour le rétablissement du stock de saumon. Comment est-ce que vous vous proposez d'utiliser ces dix millions de dollars par année?

M. Stevens: Avant tout, au contrôle des cours d'eau, c'est-à-dire contrôle des eaux pour prévenir les crues subites, contrôle de la température pour prévenir le surchauffage de l'eau, apport d'eau froide si nécessaire, construction de frayères artificielles, nettoyage des cours d'eau si nécessaire et création de piscicultures.

Dans le document qui vous a été prêté et non donné, on indique qu'on pourrait dépenser encore plus d'argent de façon profitable.

M. Noble: J'allais vous demander si vous pensiez à l'installation de piscicultures et je me demandais aussi si vous envisagez des augmentations substantielles de la production actuelle de saumon?

M. Stevens: Oui. Un grand nombre de cours d'eau ont une production de saumon beaucoup moins élevée qu'auparavant. Une première concentration pourrait ramener le niveau de la production à celui des décennies antérieures et ensuite, grâce à l'expérience acquise, nous pourrions doubler, et même tripler la production actuelle de saumon.

M. Noble: Merci, monsieur le président.

Le président: Monsieur Lundrigan.

M. Lundrigan: Monsieur le président, deux brèves questions: d'abord, est-ce que M. Stevens pourrait nous donner une idée de ce qui a été fait pour que le Comité reçoive un mémoire de son groupe. Vous dites, dans votre résumé que le syndicat a demandé que le Comité entende leurs revendications concernant la limitation des votes, en octobre, demande souvent répétée par après, et puis à la première page vous donnez des détails à ce sujet. Pourriez-vous dire la réaction qu'il y a eu?

M. Stevens: Nous n'avons eu aucune réponse à la première lettre du 18 octobre.

M. Lundrigan: A l'intention de qui?

M. Stevens: Du président du Comité.

Nous avons fait faire d'autres enquêtes par l'entremise des membres du Comité. Nous avons demandé quand le comité se réunirait.

[Text]

this sort of thing. We were in touch with the Minister of Fisheries and he indicated to us that at an appropriate time the matter would be coming before the Committee and we would have an opportunity to be heard.

Then in December, we suddenly learned that the Committee had turned in its third and final report for the period I think it was, or the fourth report. So then we wired the Chairman and some members of the Committee and wrote again. It was by this time December 12 or 13. We did not realize that the Committee had packed up its work for the year. We received a reply saying that it would come up in the new year.

Mr. Lundrigan: Who are some of the members of the Committee you wrote? I have been a member of the Committee all year and this is the first time I have heard of it.

Mr. Stevens: We wrote to the British Columbia members.

Mr. Lundrigan: The British Columbia members. Mr. Crouse is a pretty interested and active person and I do not think he has heard of it before either. This is certainly unfortunate and one of the reasons I raised the point earlier about the time limit. We would have been most interested, at least I would have, in hearing some of yours views, in spite of the fact that I do not agree with all your thinking. I do think there is a good bit of merit in many of the points you raise. I would like to be certain that in the future if you do write us you write to the members of the steering committee, so that we can get to the bottom of this thing.

Mr. Chairman, can I raise a point of order and ask why the Committee was not in a position to hear the brief?

The Chairman: I think the Committee had exhausted its terms of reference to sit after it had made its report to the House on the estimates.

Mr. Lundrigan: That was in December, but the witness indicated he made a request in October, before we even had a first meeting. I think with all respect this is certainly not in order, that the Committee was not approached on this matter. I would certainly like to see any representative of any group of fishermen given a chance to present briefs before our Committee.

Mr. Whelan: Mr. Chairman, I think it should be explained that this was brought before the steering committee and was discussed with the steering committee.

[Interpretation]

Nous nous sommes mis en contact avec le ministre des Pêches, qui nous a dit qu'au moment approprié nous aurions l'occasion de comparaître devant le Comité.

Au mois de décembre, on nous a dit soudainement que le Comité avait remis son troisième et dernier rapport pour la période d'étude, et nous avons donc envoyé des télégrammes au président et à quelques membres du Comité, et nous avons écrit de nouveau. Nous étions alors arrivés au 12 ou 13 décembre. Nous ne nous étions pas rendu compte que le Comité avait terminé son travail. On nous a répondu que cette question serait reprise au cours de la nouvelle année.

M. Lundrigan: J'étais membre du comité toute l'année. C'est la première fois que j'entends parler de la question. A quels membres avez-vous écrit?

M. Stevens: Nous avons écrit aux députés de la Colombie-Britannique.

M. Lundrigan: Oui, monsieur Crouse, qui est toujours bien à son affaire, n'a pas été mis au courant de la question. C'est assez regrettable, et c'est pourquoi j'ai fait des observations au sujet de la limite de temps. Il aurait été intéressant d'entendre certaines opinions, bien que je ne sois pas toujours d'accord. Vous avez souvent raison, et à l'avenir si vous nous écrivez, vous écrivez au moins aux membres du comité directeur, pour que nous puissions étudier la question à fond. Monsieur le président, j'en appelle au Règlement. Pourquoi est-ce que le Comité n'a pas pu entendre le mémoire?

Le président: Je crois que le comité avait terminé son mandat. Il avait terminé son rapport à la Chambre sur les prévisions budgétaires.

M. Lundrigan: C'était au mois de décembre, mais le témoin avait fait une demande au mois d'octobre, avant notre première séance. Je crois, en toute déférence, qu'on aurait dû nous en parler. Les représentants des pêcheurs devraient avoir l'occasion de présenter des mémoires au Comité.

M. Whelan: Monsieur le président, je dois vous expliquer qu'on a bien soumis la question au comité directeur.

[Texte]

The Chairman: At what time, Mr. Whelan?

Mr. Whelan: In the fall, I think Mr. Howard brought it before the Committee, and somebody else on the steering committee.

Mr. Hogarth: Towards the end of September.

Mr. Stevens: Yes, I think, Mr. Chairman, the original request was sent in while I was still a guest of Mr. Bonner in September.

Mr. Lundrigan: May I ask the people who made the point of order why the Committee did not sit out here, not the question of his coming to Ottawa to present a brief. It was a question of the Committee coming out here, that is what he is concerned about.

Mr. Hogarth: I think what the witness is complaining of is the fact that the Committee did not sit out here, not the question of his coming to Ottawa to present a brief. It was a question of the Committee coming out here, that is what he is concerned about.

Mr. Stevens: This is only partially correct. When we first asked that the Committee come out here so that all organizations could be heard on this vital subject, we were under the impression that a motion had been passed in this Committee agreeing that they would seek powers to come here and that in a matter of perhaps a month or two we would be seeing the Committee out here in British Columbia. Then we got the impression that this had been delayed and maybe the Committee would not be here until 1969. It was at that stage that we got in touch again and said that we would like to come down and present our brief before this matter goes any further.

Mr. Lundrigan: Mr. Chairman, may I ask my question now?

Mr. McQuaid: Mr. Chairman, just before we go any further on this point of order. To my mind this is a very important matter. Now, do I understand that somebody has taken it upon themselves to refuse permission to this organization to present a brief to our Committee?

The Chairman: Not that we know of. I called the witness in November, I am talking from memory now, after the estimates were reported to the House. I think he will recall that I told him we no longer had terms of reference, or an order of reference from the House to sit at that time, but as soon as we could possibly arrange we would come out and this is the date that it was possible, as you well know.

[Interprétation]

Le président: Quand?

M. Whelan: A l'automne. Il y a monsieur Howard, je crois, et quelqu'un d'autre au comité directeur qui ont fait des démarches.

M. Hogarth: C'était vers la fin du mois de septembre.

M. Stevens: Oui, la demande a été envoyée pendant que j'étais l'invité de M. Bonner, en septembre.

M. Lundrigan: Puis-je demander pourquoi le Comité n'a pas pu entendre le mémoire, même quand les représentations avaient été faites au mois d'octobre?

M. Hogarth: Le témoin ne se plaint pas du fait que lui-même n'ait pas pu venir à Ottawa, mais que le comité ne soit pas venu siéger en Colombie-Britannique.

M. Stevens: C'est juste, mais en partie seulement. Quand nous avons demandé la première fois qu'un comité vienne chez nous pour qu'on puisse entendre tout le monde à ce sujet, nous avions l'impression qu'une motion avait été adoptée par le Comité, que le Comité demanderait l'autorisation de venir siéger en Colombie-Britannique. Ensuite, nous avons eu l'impression qu'il y avait eu un retard et que le comité ne viendrait qu'en 1969. Donc, c'est à ce moment-là que nous nous sommes mis en contact de nouveau et nous avons dit que nous souhaiterions présenter un mémoire sans plus tarder.

M. Lundrigan: Maintenant, puis-je poser ma question.

M. McQuaid: Un instant, s'il vous plaît, avant d'aller plus loin. Au sujet de l'appel au Règlement, à mon avis, c'est une question très importante. Je crois comprendre que quelqu'un a décidé de refuser à l'organisation en question de présenter un mémoire à notre Comité.

Le président: Je me suis mis en contact avec le témoin au mois de novembre, et je lui ai dit que nous n'avions plus le mandat de la Chambre de nous réunir, mais dès que ce serait possible, que nous viendrions en Colombie-Britannique. Ceci est la première date convenable qui s'est présentée.

[Text]

Mr. Stevens: If I might correct you, Mr. Chairman, it was not a telephone call.

The Chairman: I am talking from memory.

Mr. Stevens: It was a telegram received on or about December 15.

The Chairman: That is right.

Mr. Stevens: That was in reply to our second major request.

Mr. McQuaid: Then you feel Mr. Stevens that you have not been particularly aggrieved?

Mr. Stevens: As our brief indicated, the reason we go into this is that here we are seven months after a system of regulations has gone into effect, without stressing all the problems of no legislation and so on, now presenting something which is sort of almost an aftermath. Can this Committee do anything now to change the Minister's mind or to stop the plan in mid-air and change the thing?

Mr. McQuaid: Was there a request received in October from this organization to appear before the Committee?

The Chairman: As far as I can recall it was after we had exhausted our order of reference from the House to sit.

Mr. McQuaid: If that is the situation then I am prepared to accept it, but if it is not the situation I am far from prepared to accept it. October I understand was the date mentioned.

Mr. Lundrigan: Either this brief is presenting false information or the Committee certainly has not been fair to the Union represented in that it has not allowed the Union to make its presentation. We could have had many of these points brought before the Committee long before the decision took root.

Mr. McQuaid: I think that this must be cleared up right away.

The Chairman: I can say that when I became aware of it, as far as I can remember, I immediately answered the witness or was in contact with him.

Mr. Rose: Mr. Chairman, on a point of order.

I am sorry I do not have the minutes here, I have Issue Nos. 1 and 3 but I do not have 2. I think I was sitting on the steering committee in Mr. Howard's absence at the time and I notice that the date on Issue No. 3 is November 1.

[Interpretation]

M. Stevens: Si je puis vous corriger, monsieur le président, il ne s'agissait pas d'un appel téléphonique.

Le président: Je dis ce dont je me souviens.

M. Stevens: C'était un télégramme. Il datait du 15 décembre, à peu près.

Le président: C'est exact.

M. Stevens: C'était en réponse à notre deuxième demande.

M. McQuaid: Vous estimez donc monsieur Stevens, qu'on ne vous a pas vraiment fait de tort.

M. Stevens: Si nous en parlons, c'est parce qu'il y a sept mois déjà que le règlement s'applique, sans vous parler de tous les problèmes qui se posent quand il n'y a pas de législation pour ces questions. Maintenant, c'est comme quelque chose qui est passé. Je ne sais pas s'il y a un moyen de faire quelque chose pour changer l'opinion du Ministre pour arrêter ces choses, monsieur le président.

M. McQuaid: Est-ce qu'on a reçu une demande au moins d'octobre, de ce syndicat?

Le président: Si je me souviens bien, c'est après que nous avions terminé le mandat.

M. McQuaid: Si c'est le cas, moi, je suis prêt à l'accepter. Si ce n'est pas le cas vraiment, je n'accepte rien. J'ai compris qu'il s'agissait du moins d'octobre.

M. Lundrigan: On a l'impression soit que le mémoire donne de faux renseignements, soit que le Comité n'a pas été juste envers le syndicat, et ne lui a pas permis de faire des représentations. Nous aurions pu faire quelque chose avant que la décision finale soit prise.

M. McQuaid: Il faut tirer la chose au clair, à mon avis.

Le président: L'an passé, quand j'en ai eu connaissance, autant que je m'en souviens, j'ai répondu immédiatement au témoin.

M. Rose: J'en appelle au Règlement, monsieur le président. Je n'ai pas tous les procès-verbaux en main, je n'ai que les numéros 1 et 3. J'étais président du comité directeur en l'absence de M. Howard, je crois, et la date du fascicule numéro 3 est le 1^{er} novembre.

[Texte]

Appearing then was Mr. R. I. Nelson, President, Fisheries Council of Canada, at that particular date, and I made the point, either in the steering committee or else it can be found in Issue No. 2 report of the Committee proceedings that I wanted to be assured if the fishing companies were coming to Ottawa to be heard that equal time and consideration should be accorded the Union. I was assured at that time that would be so. I subsequently, I believe, phoned Mr. Suzuki and apparently they had made some representations and were rather anxious to appear, but it was felt at that time that this Committee would be appearing here in the fall. I think that this is one of the reasons this whole thing was rather left up in the air. Nevertheless, I think there have been a number of requests by the Union to appear and I think we can support their contention that this has been delayed far too long.

Mr. Crouse: Mr. Chairman, on the point of order, as a member of the steering committee I have no recollection of your request being brought up before the steering committee. It may well be as the last speaker stated, that he suggested if the hearings were held in Ottawa and representatives appeared before the Committee that you be considered. This may have been, I am not disputing that, but I have no recollection of your request for permission to appear before the Committee being brought up in the steering committee discussions.

The Chairman: If I may, gentlemen, I have here a transcript of the proceedings from the Committee of December 3, 1968.

THE CHAIRMAN: I have here a letter I received from the United Fishermen and Allied Workers' Union dated November 25, 1968. It is short, if I may read it to the committee.

Dear Sir:

Prince Rupert Local No. 37 of the United Fishermen and Allied Workers' Union has noted that the Commons Committee on Fisheries has agreed to request permission to visit different communities in Canada in the study of Department of Fisheries estimates.

Our organization would very much appreciate the opportunity to meet with the Committee to place our views before you. We hope that the House of Commons grants permission for a visit by the Committee to Prince Rupert at an early date.

I have acknowledged that letter. May I have this letter attached as one appendix to today's proceedings?

[Interprétation]

Il y avait le nom de M. R. I. Nelson, président du Conseil des pêches du Canada, et j'ai bien dit que si on permettait aux compagnies de comparaître, il fallait aussi accorder le même temps et la même considération au syndicat. J'étais sûr que ce serait le cas, et pas la suite j'ai téléphoné à M. Suzuki je crois, qui m'a dit qu'il voulait comparaître devant le Comité. A cette époque, on pensait que le Comité viendrait à l'automne. C'est une des raisons pour lesquelles les choses en sont restées là. Le syndicat a souvent demandé de comparaître, et je crois que nous pouvons en convenir qu'il y a eu un retard indu.

M. Crouse: Je ne me souviens pas du tout que votre demande ait été étudiée par le comité directeur. Il se peut que si le Comité avait siégé à Ottawa, vous ayez voulu y témoigner. Je ne me souviens pas d'aucune demande adressée au comité directeur.

Le président: Je lis le compte rendu de la séance du 3 décembre 1968:

«LE PRÉSIDENT: J'ai ici une lettre du Syndicat des pêcheurs unis et des ouvriers connexes datée du 25 novembre 1968. Comme elle est courte, je pourrais peut-être la lire au Comité:

«Monsieur;

La section n° 37 de Prince Rupert du Syndicat des pêcheurs unis et des ouvriers connexes note que le Comité de la pêche, des Communes, a accepté de solliciter la permission de visiter diverses localités du Canada pour son examen des crédits du ministère des Pêcheries.

Notre organisme apprécierait vivement l'occasion de rencontrer le Comité pour lui exposer ses vues. Nous espérons que la Chambre des communes accordera au Comité la permission de visiter prochainement Prince Rupert.»

J'ai accusé réception de la lettre. Pourrais-je faire figurer la lettre en appendice aux délibérations d'aujourd'hui?

[Text]

Mr. Lundrigan: Mr. Chairman, this was December 3 you quoted from right, and this brief talks about October. We met literally a dozen times between October and December 3, so certainly either there is a false impression given here about the treatment of the Union or the representation made by the Union, or our Committee somewhere along the line failed to make the necessary arrangements to have the representatives present either written or orally some of their views on licensing. I want to get this on the record and get it cleared up if at all possible.

Mr. Stevens: Mr. Chairman, would it help any if I table a copy of the letter? I cannot do it right now but I can bring back to the Committee a copy of the letter that was sent on October 18.

Mr. McQuaid: To whom was that letter addressed, Mr. Stevens?

Mr. Stevens: It was addressed to the Chairman of the Committee at that time, I think it was Mr. Crossman. The Committee had just been set up. In fact, if you read our brief you will notice that we took up the possibility of a meeting with the Minister of Fisheries and he said, "As soon as the Committee meets and gets underway you should contact them". The Committee was appointed and set up I think around the middle of October and within a few days our business agents sent that letter off, and I have a copy of it. We referred to it again in our letter of December 13, and reminded him that we had had a request in since October 18.

The Chairman: Well the first letter I received—I am not questioning the witness that he did not send it, I accept that—but the first letter I received I immediately got in contact with the witness.

Mr. Crouse: Mr. Chairman, would it help if the witness were to table with the Committee copies of all the correspondence he forwarded to the Chairman? In this way we would be made aware of what he has done, and we could make a comparison with the dates on his correspondence with his statement in the brief.

Mr. Borrie: Mr. Chairman, I would move that.

Mr. Crouse: I was prepared to move that this be done.

Mr. Borrie: I am sorry, I thought it was just a suggestion.

Mr. Crouse: Well, I was suggesting, then I decided to move the motion. That should clear up the situation.

[Interpretation]

M. Lundrigan: Il s'agit du mois d'octobre, et nous nous sommes réunis au moins une douzaine de fois entre le mois d'octobre et le 3 décembre; soit qu'il y ait une fausse impression au sujet de la façon de traiter le syndicat, ou les représentations du syndicat, ou bien on a manqué de prendre les dispositions nécessaires pour que le syndicat présente ses opinions au sujet des permis d'une façon quelconque, soit oralement ou par écrit. Il faut éclaircir cette situation.

M. Stevens: Est-ce que ça aiderait si je déposais un exemplaire de la lettre au procès-verbal. Je ne puis le faire tout de suite, mais je puis remettre au Comité copie de la lettre expédiée le 18 octobre.

M. McQuaid: A qui était-elle adressée.

M. Stevens: Au président du Comité, M. Crossman. Le comité venait d'être formé. D'ailleurs, dans notre mémoire, vous verrez que nous avons abordé le ministre des Pêches à ce sujet, et il a dit que dès que le comité se réunirait, il faudrait que nous nous mettions en contact avec le Comité. C'était, je crois, vers le milieu d'octobre, mais au bout de quelques jours nous avons envoyé cette lettre dont j'ai une copie. Nous nous y sommes référés dans la lettre du 3 décembre.

Le président: Sans douter de la véracité de ce que dit le témoin, je dois dire que sitôt que j'ai reçu la première lettre, je me suis mis en contact avec le témoin.

M. Crouse: Il serait utile que le témoin dépose des exemplaires de toute la correspondance échangée avec le président. Comme cela, nous pourrions faire une comparaison entre les dates de ces lettres et ce qu'il dit dans son mémoire.

M. Borrie: Je propose qu'on fasse cela.

M. Crouse: Moi aussi j'allais le faire.

M. Borrie: Je pensais que ce n'était qu'une suggestion.

M. Crouse: J'ai fait cette suggestion et je l'ai transformée en motion.

[Texte]

The Chairman: May I say that I at no time intentionally withheld any correspondence that I received.

Mr. Whelan: Mr. Chairman, may I say something? I do not think we want to create the impression here that Committees, no matter whether Fisheries and Forestry, Transport, or what they may be, can just take up and leave at their own whim and fancy from the House of Commons and travel across the country. We are being criticized right now for not giving months notice for the meetings we are holding right now. We talked earlier in the year—I can well remember that at Steering Committee meetings—of holding these meetings before Easter. It was found humanly impossible to try to make the arrangements that far ahead of time.

Mr. Crouse: Mr. Chairman, might I say to the present speaker that is the purpose of asking for tabling. I would like to know if the witness had requested that he appear before the Committee here in Vancouver or if he could appear before the Committee in Ottawa. I agree 100 per cent with you that it was physically impossible to get here any sooner than the present time.

Mr. Whelan: This is what I am telling you, I think from the tone of the proceedings so far you would think that we would go on 24 hours notice. This is humanly impossible for a Committee to make arrangements because only so many members can be absent from the House at any time, et cetera.

Mr. Stevens: We were not that naive, Mr. Chairman. We did not expect that when we wrote on October 18 that the Committee would just take up within five minutes and be out on the West Coast. However, we thought that perhaps within a month or two months we would have that opportunity in view of the fact that at the first meeting or nearly the first meeting the Committee had expressed the desire to come out and hear submissions on this problem. When we found in December that the work of the Committee or the year had been terminated and we still had not had a hearing, we did become quite concerned at that point. In fact I did drop in to the Chairman, Mr. Crossman, on a visit I made passing through Ottawa in January and again expressed concern that we wanted to be heard on this because the regulations and everything were going ahead. A chance of any kind to have any influence on the course of development depended on an early hearing.

The Chairman: Mr. St-Pierre.

[Interprétation]

Le président: Je n'ai certainement jamais retenu la correspondance que je recevais.

M. Whelan: Nous ne voulons pas donner l'impression ici, qu'il s'agisse des comités de transport ou des pêcheries ou autre, que les comités peuvent partir à n'importe quel moment de la Chambre des communes pour se déplacer de par le pays. On nous critique maintenant de ne pas avoir averti des mois à l'avance des réunions que nous tenons en ce moment. Au début de l'année, nous avons parlé de tenir des réunions avant Pâques, mais cela n'a pas été possible. On ne pouvait prévoir si longtemps à l'avance.

M. Crouse: C'est pourquoi nous voulons que les lettres soient déposées. J'aimerais savoir si le témoin a demandé s'il pouvait comparaître devant le comité ici à Vancouver, ou à Ottawa. Je suis tout à fait d'accord avec vous qu'il était absolument impossible pour nous de nous rendre ici plus tôt que maintenant.

M. Whelan: C'est précisément ce que je dis. D'après le ton de la discussion, on a l'impression que nous pouvons nous rendre dans les 24 heures d'un endroit à l'autre. C'est tout à fait impossible, parce que nous ne pouvons pas tous nous absenter de la Chambre en même temps.

M. Stevens: Nous ne nous attendions pas, au mois d'octobre, que le Comité partirait en cinq minutes pour se rendre sur la côte de l'Ouest, mais nous avions pensé qu'au bout de quelques mois, peut-être deux ou trois mois, cela pourrait se faire, puisqu'on nous avait fait savoir que le comité voulait entendre nos représentations. Alors nous avons appris que le comité avait terminé son travail, alors que nous n'avions pas comparu, nous nous sommes beaucoup inquiété. Lorsque je suis passé par Ottawa, j'ai vu monsieur Crossman et je lui ai dit de nouveau que nous voulions être entendus à ce sujet parce que les règlements, allaient être édictés. Si nous voulions exercer une influence quelconque il fallait absolument qu'on nous entende au plus vite.

Le président: Monsieur St-Pierre.

[Text]

Mr. St. Pierre: To clarify one point in this, I am not on the steering committee of this Committee although I was involved in discussions of this matter with you and other members since well back last fall, I do not remember when it started. Would the Union have preferred to have sent a delegation down to Ottawa before Christmas if they had known that it was impossible for us to get away to the West Coast?

Mr. Stevens: Yes, in fact that was stated I think in a special letter and then some series of telegrams that went to members.

Mr. St. Pierre: The telegrams were not until December, and at that time it was too late, but if you had known in November that we could not...

Mr. Stevens: By all means, if we had had any idea in October we would have said: "Now let us go down there and make the representation". Perhaps you people could have influenced the Minister.

Mr. Howard: Mr. Chairman, because of what Mr. Whelan said about the opportunity of any Committee to travel and so on, I think something else perhaps should be entered at this stage of the discussion just in case we want to go any further into it. As we all know, but perhaps it is not generally realized in the public, a Committee cannot travel anywhere unless it gets authority and permission from Parliament.

At our very first meeting, I have forgotten the date, but as Mr. Hogarth said, he moved the initial motion that we seek permission from the House to travel. This was unanimously carried. I have forgotten the date upon which that report was made to Parliament, but I think you will remember, Mr. Chairman, either in the steering committee or in a full meeting of the Committee I raised the question of why the report was made seeking permission from the House to travel, as we had hoped would be the case, but no action was taken actually to move the motion to adopt the report.

In other words, we reported to Parliament and I think with respect, Mr. Chairman, it is your function in carrying out the wishes of the Committee, but you did not for some time take any follow-up steps of actually moving the motion seeking approval by Parliament even though we asked for it. This interfered with the opportunity to travel as well.

Mr. Chairman: I would differ with you in that it interfered because I discussed the matter with the House Leader and I gathered

[Interpretation]

M. St-Pierre: Je ne fais pas partie du comité directeur, bien que j'aie étudié cette question avec vous et avec d'autres membres du comité depuis l'automne. Est-ce que le syndicat aurait préféré envoyer une délégation à Ottawa avant Noël s'il avait su qu'il ne nous était pas possible de venir ici.

M. Stevens: Mais oui. D'ailleurs nous l'avons dit, je crois, dans une lettre, et aussi dans des télégrammes envoyés aux membres du Comité.

M. St-Pierre: Le télégramme, c'était au mois de décembre. A ce moment-là c'était trop tard. Mais si vous aviez su au mois de novembre, par exemple?

M. Stevens: Ah, mais oui, certainement, nous n'avions aucune idée au mois d'octobre, autrement nous nous serions rendus à Ottawa. Peut-être auriez-vous pu influencer le ministre.

M. Howard: Vu ce que monsieur Whelan a dit sur les possibilités qu'ont les comités de se déplacer, je crois qu'il faudrait ajouter ceci maintenant: comme nous savons tous, mais le public ne s'en rend pas compte, un comité ne peut pas voyager à moins d'avoir l'autorisation du Parlement de le faire.

A notre première réunion, j'oublie la date, monsieur Hogarth a proposé qu'on demande la permission de la Chambre de nous déplacer. Cela a été accepté à l'unanimité. Je ne sais pas quelle date nous en avons fait le rapport au Parlement mais vous vous souviendrez que j'ai soulevé la question à une réunion du comité, à savoir pourquoi on avait demandé à la Chambre la permission de voyager si nous n'avions pas fait de motion pour que notre rapport soit adopté.

C'est à vous, monsieur le président, je crois, qu'il appartient de vous conformer au désir du comité, mais vous n'avez pas pris des mesures tout de suite pour obtenir l'approbation, malgré que nous l'ayons demandée. Ceci nous a empêché de voyager.

Le président: J'ai étudié la question avec le Leader à la Chambre, et j'ai vu que ce serait impossible. Je crois que trois semaines après

[Texte]

that it would not be possible. So I asked for concurrence of the House on this your motion, I think it was three weeks following the meeting that you mention. We received concurrence at that time from the House. From then on we had the permission of the House, but we did not have an order of reference from the House to travel. We had permission but not the order of reference.

Mr. Howard: That is exactly what I was saying.

Mr. Borrie: Mr. Chairman, so that we could go on to the questioning of the witness, I wonder if you would give an assurance to the Union that this will be investigated by the Committee.

Mr. Lundrigan: As soon as we get our motion over with, Mr. Chairman, I would be prepared to ask him a question. Mr. Crouse moved a motion, I believe.

The Chairman: Is it agreeable that we continue with Mr. Lundrigan's questioning?

Mr. Lundrigan: No, sir, the motion about tabling. Mr. Chairman, I did not want to get too far off the track and I did not raise the matter to reflect on our capable Chairman.

The Chairman: Would you repeat the motion, please.

Mr. Crouse: The motion was that the correspondence be tabled, the correspondence which had been presented to the Chairman by the witness from the date October through to December. What was the date of the telegram? Through to whatever date the telegram was. Does the witness have those dates?

Mr. Stevens: October 18.

Mr. Crouse: From October 18 to December—what was the date of your telegram?

Mr. Stevens: December 17 was the date of the Chairman's reply.

Mr. Crouse: Yes, well that this correspondence be tabled.

The Chairman: Moved by Mr. Crouse that the correspondence be tabled that had been sent to the witness by the Chairman of the Committee.

Mr. Crouse: Why not make it simple. I move:

That all correspondence between the Union and the Chairman of the Committee from October through to the end of December be tabled.

[Interprétation]

la réunion j'ai demandé l'autorisation à la Chambre, et à partir de ce moment-là, la Chambre nous a donné la permission, mais nous n'avions pas de mandat en ce qui concernait le voyage. Nous avions la permission mais pas le mandat.

M. Howard: C'est précisément ce que je disais.

M. Borrie: Si nous voulons continuer à poser des questions au témoin, nous pourrions peut-être promettre au syndicat de faire enquête.

M. Lundrigan: Je crois que monsieur Crouse a avancé une motion. J'aurais des questions à poser après cela.

Le président: Êtes-vous d'accord que M. Lundrigan poursuive ses questions.

M. Lundrigan: Monsieur le président je ne voulais pas trop m'écarter du sujet, et surtout je ne voulais pas faire d'ombre autour de notre distingué président.

Le président: Voulez-vous répéter la motion, s'il vous plaît.

M. Crouse: La motion était que la correspondance soit déposée, la correspondance présentée au président par le témoin à partir du 1^{er} octobre jusqu'au mois de décembre, la date du télégramme. Est-ce que le témoin a ces dates?

M. Stevens: Le 18 octobre.

M. Crouse: Au 18 octobre au...

M. Stevens: le président a répondu le 17 décembre.

M. Crouse: Alors, que la correspondance soit déposée.

Le président: M. Crouse propose que la correspondance envoyée au témoin par le président du comité soit déposée.

M. Crouse: Pourquoi ne pas simplifier la chose: que toute la correspondance échangée entre le syndicat et le président du comité, du mois d'octobre jusqu'à la fin de décembre, soit déposée. Cela est beaucoup mieux.

[Text]

That is more like it.

Motion agreed to.

Mr. Lundrigan: Mr. Chairman, I think it should go on record that I did not raise the question to reflect in any way on the Committee, but rather to clear up the inference here, be it a reflection on the witnesses brief or the Committee, I do not care who it reflects on, that a request was made and no action taken. One or the other has to take some blame and I could not care less if it is us but I prefer that we have not been guilty of negligence in this respect.

Mr. Chairman, I deduce from the brief that the witness is not satisfied with our relations with the United States in respect to Canadian fishing policy. Can he indicate why he thinks that Canada has not been aggressive enough in its dealings with the United States government? Perhaps I should ask, does he think that we have not been, and if not, why we have not been?

Mr. Stevens: Perhaps the best case is the one that is referred to in the brief dealing with the interception by American fishermen of the salmon bound for the two major rivers in the north, as I have indicated. When the surf line or tree line that was described here by one of the fishermen the other day was laid down in 1957, it was with the understanding that it was a line to prevent salmon net fishing by nationals of either Canada or the United States, which would be, in effect, a high seas fishery, or a fishery capable of taking salmon from more than one run. The Americans never tabled the final draft of their line for the State of Alaska. We had no quarrel with the lines drawn in the south at that particular time, for the States of Washington, Oregon and California. They had no quarrel with the B.C. lines. But the Alaska line was some three miles outside of the headland-to-headland baseline and they were able to intercept our fish. When this was raised with them, they said that they had the historic right, that they had been fishing our fish for quite a while and they refused to give up that right, even though the line is entirely different than the other lines along the coast.

Our criticism then really comes back to Canada, because our negotiating team who had three meetings with the Americans, one in Washington, one in Ottawa, and one in Seattle, said, "All right, if you will not come to terms, we consider ourselves relieved of that obligation and we will move if necessary, further out to sea to get our share of the catch".

[Interpretation]

La motion est convenue.

M. Lundrigan: Je n'ai certainement pas soulevé cette question pour mettre en doute le Comité, mais plutôt pour tirer les choses au clair et disculper le témoin et le Comité, à savoir qu'une demande aurait été refusée. Il faut blâmer quelqu'un, mais j'hésite à accuser le Comité de négligence.

Monsieur le président, je conclus, d'après le mémoire, que le témoin n'est pas satisfait de nos rapports avec les États-Unis en ce qui concerne la politique canadienne de la pêche. Pourquoi pense-t-il que le Canada n'a pas été assez énergique dans ses contacts avec le gouvernement des États-Unis? Peut-être devrais-je lui demander s'il pense que nous n'avons pas vraiment été énergiques et pourquoi nous ne l'avons pas été, si c'est le cas.

M. Stevens: Le cas le plus frappant est celui qui est relaté dans le mémoire: il concerne l'interception, par les pêcheurs américains, des saumons qui remontent vers les deux grandes rivières du Nord. Lorsque la ligne de démarcation, qui a été décrite par un des pêcheurs, a été établie en 1957, il a été convenu que cette limite empêcherait les pêcheurs canadiens ou américains de pêcher au filet, ce qui correspondrait à la pêche en mer ou à une pêche au cours de laquelle on pourrait pêcher plus de saumons qu'il y en a dans une montée. Les Américains n'ont jamais déposé le projet définitif en ce qui concerne la limite de l'Alaska. Nous n'avons rien eu à redire sur les limites fixées au Sud, pour les États de Washington, Oregon et Californie; ils n'ont rien eu à redire sur les limites de la Colombie-Britannique. Mais la limite de l'Alaska était à une distance de 3 milles de la ligne tirée de cap en cap et les habitants pouvaient arrêter nos poissons. Lorsque nous avons soulevé la question, ils ont dit qu'ils possédaient un droit historique et qu'ils pêchaient nos poissons depuis des années et refusaient d'abandonner ces droits même si la ligne est complètement différente des autres lignes de la côte.

Notre critique s'adresse donc au Canada, car notre équipe de négociation, qui s'est réunie trois fois avec les Américains, c'est-à-dire à Washington, Ottawa et Seattle, a dit: «Si vous ne voulez pas en venir à une entente, nous nous considérons relevés de cette obligation et, nous irons, si nécessaire, pêcher en mer pour augmenter nos prises...»

[Texte]

Mr. Lundrigan: Could you be a little bit more specific. I am asking you why, not only on the specific incidents raised, we have not generally been more aggressive. This is a general question, I know, and perhaps you cannot answer it.

Mr. Stevens: I think, if anything, it is perhaps because of too much American investment in Canada. Perhaps it is because of fears of loss of a potential market. It seems to me that there has been a policy, certainly in fisheries, and reflected elsewhere, where Canada seems to play a very poor second fiddle in some cases. Why the governments of the day have done this—I have indicated some of my views and some of the organizations' opinion on it.

Mr. Lundrigan: Thank you, Mr. Chairman.

Mr. Rose: Mr. Chairman, it is difficult to get back to the line that we were following earlier because of this interesting little diversion. I was going to comment briefly on Mr. McQuaid's concern over what a licence actually means. To me it is a permission granted to an individual to harvest in this case a common property resource for the benefit of all people, rather than a thing which can be bought and sold. I believe this is the position that you are taking, is that not so, Mr. Stevens?

Mr. Stevens: That is right.

Mr. Rose: What I was interested in further was that you seem to be, in spite of your background and concern with the unions, fighting the last bastion of free enterprise for the independent vessel in the salmon industry. Has your concern, in this particular instance, been shaped at all by what has happened, for example, in the farming industry?

Mr. Stevens: I do not think it was appreciably shaped by that. I think our members are aware of what has happened in the farming and forest industries as well as the dangers to themselves, but down through the years fishermen have made various efforts to form co-operative organizations to work together in that fashion. They have had visualization of ownership of boats and perhaps at some time of plants and equipment and so on that would be outside the realm of big corporations who at times could not care less about their future.

Mr. Rose: It is not just so much a matter of nothing being there, it is the accessibility of that particular resource of business, or educa-

[Interprétation]

M. Lundrigan: Pourriez-vous être un peu plus précis. Je vous demande, non seulement pour ce cas-ci, mais de façon générale, pourquoi nous n'avons pas été plus énergiques. C'est une question générale, je sais et, peut-être ne pouvez-vous pas y répondre.

M. Stevens: C'est peut-être dû au trop grand nombre d'investissements américains au Canada. Il me semble que le Canada a joué un rôle de deuxième rang, dans le domaine de la pêche. Pourquoi le gouvernement a-t-il adopté cette attitude? J'ai exprimé certaines de mes opinions et celles des organisations à ce sujet.

M. Lundrigan: Merci, monsieur le président.

M. Rose: Il est difficile de revenir au sujet que nous discutons à cause de l'intéressante digression. J'étais sur le point de faire des commentaires sur la signification d'un permis. Selon moi, c'est la permission donnée à un individu d'exploiter une ressource pour le bénéfice d'autrui, au lieu d'une chose qui peut être achetée et vendue. Est-ce que c'est votre point de vue monsieur Stevens?

M. Stevens: Oui.

M. Rose: De plus, en dépit de votre expérience et de votre intérêt pour le syndicat, vous semblez défendre les derniers vestiges de la libre entreprise que représentent les navires indépendants dans l'industrie de la pêche au saumon. Est-ce que vous vous préoccupez de ce point particulier à cause de ce qui s'est passé, par exemple, dans l'industrie de l'agriculture?

M. Stevens: Non, je ne crois pas. Nos membres sont au courant de ce qui s'est passé dans l'industrie de l'agriculture et l'industrie forestière et des dangers éventuels, mais les pêcheurs, au cours des années, ont fait des efforts pour travailler en collaboration, pour s'unir. Ils entrevoient de posséder des bateaux et des équipements, ce qui serait en dehors du domaine des grandes entreprises, qui ne se préoccupent pas parfois, de leur avenir.

M. Rose: Le problème n'est pas dans le fait qu'une chose existe, mais dans l'accès à cette chose, à cette ressource, etc... A mon avis,

[Text]

tion or anything else. It seems to me your concern is that for someone without a large capital investment, the fishing industry is no longer accessible to him other than the fact that he is working for a fish company.

Mr. Stevens: That is right. In answer to your first question about why the fishermen feel this way, they did go through a period here in B.C. when in order to get a salmon licence they had to go to the fish company. This was under a different form of limitation of licences that existed way back prior to the turn of the century. So they have had experience with it. They feel that while there may be limits there, the place they should go to is a government established board with some representation by the people in the industry on it to protect their rights, rather than having to buy their way in or go to a big corporation.

Mr. Rose: You think it is less likely to be prejudiced. It would be fair. How is the freeze and the limitation of an individual owning two boats with "A" licences, as recently announced by the minister, going to affect the balance of company ownership vis-à-vis private operator ownership in the industry?

Mr. Stevens: I am personally at a loss to answer that in terms of what it will mean to company control. We point out in our submission that there is no clarification of the Minister's announcement as to whether this applies only to those that are presently in the name of companies or whether it also extends to those that are under financial obligation, that is, under various forms of mortgage or conditional sales agreements or other contracts. If it does extend to all of them, then a very sizeable chunk of the fleet is going to be left in the hands of the companies, and we object to that.

Mr. Rose: In other words, you are really saying it does not mean a thing.

Mr. Stevens: It certainly has not made a major improvement, except that the best you can say for it is that supposedly it will not allow any further expansion. So to that extent you could say it might be beneficial. On the other hand, any individual can own two boats and there are many ways in which a big corporation with a sizeable fleet now could have individuals who would presumably be the owners of boats, but in reality would be under company control.

Mr. Rose: You mentioned that you have had a great number of people passing through

[Interpretation]

vous êtes préoccupé par le fait que si quelqu'un n'a pas beaucoup de capitaux d'investis, l'industrie de la pêche ne lui est plus accessible; il ne peut être qu'un simple employé d'une usine de traitement de poissons.

M. Stevens: C'est juste. Pour répondre à votre question sur l'attitude des pêcheurs, je vous dirai que ceux-ci, en Colombie-Britannique, ont passé par une période, pendant laquelle, pour obtenir un permis de pêche pour le saumon, ils devaient s'adresser aux conserveries de poissons. Ceci était une autre façon de limiter les permis. Ils en ont eu l'expérience. Il pensent que, alors qu'on limite les permis, ils pourraient s'adresser à un conseil formé par le gouvernement et ayant des représentants de l'industrie qui sauvegarderaient leurs droits, au lieu de s'adresser à une corporation.

M. Rose: Vous pensez qu'il n'y aurait pas lieu d'avoir des préjugés. Ce serait juste. Le ministre a annoncé qu'il empêcherait un individu de posséder 2 bateaux avec un permis de classe A. Comment cela affectera-t-il l'équilibre de la propriété d'une compagnie vis-à-vis la propriété d'un individu travaillant dans l'industrie?

M. Stevens: Je ne peux vous dire comment cela affectera le contrôle des compagnies. Nous disons dans notre mémoire que le ministre n'a pas donné de précisions dans sa déclaration à savoir si ceci s'applique aux bateaux enregistrés au nom de la compagnie ou aux bateaux qui sont sujets à certaines obligations financières, à certaines formes d'hypothèques ou à des contrats de vente sans condition. Si ceci s'applique à tous ces bateaux, une forte partie de la flotte restera entre les mains des compagnies et nous ne sommes pas d'accord.

M. Rose: Autrement dit, ceci ne veut rien dire.

M. Stevens: Ce n'est certainement pas une amélioration et le mieux qu'on puisse dire c'est que ceci ne permettra pas une nouvelle expansion. A ce point-ci, ce peut être bénéfique, mais d'un autre côté, tout individu peut avoir deux bateaux et il y a bien des façons dont les grandes sociétés possédant une flotte importante pourraient avoir à leur solde des particuliers qui seraient propriétaires de bateaux, mais en réalité sous le contrôle de la compagnie.

M. Rose: Vous avez dit, qu'un grand nombre de personnes ont fait partie de votre syn

[Texte]

your union over the years, and yet your total membership does not grow appreciably. I have heard the statement that 1,200 people apply to join your union each year, and you lose about 1,200 a year as well. I would like you to explain what the reason for this is.

Mr. Stevens: The basic reason has been the extreme seasonality of the industry, the low level of returns by comparison with what is normally thought of as a very rich industry. There were some statements made before this Committee indicating that fishermen's incomes were very high. I can assure you there are many fishermen who are at a very low level. So fishermen have come and fishermen have gone. There has been a very big turnover in the shore plants as well, where there is seasonal employment, perhaps in some cases only five or six weeks of employment in a year.

Mr. Rose: You suggested in your brief that an amendment might be made to the statutes which would limit the Minister's power to regulate the industry. Do you feel the Minister has too much power affecting individual fishermen in the industry at the moment?

Mr. Stevens: Yes. We do not believe that Section 7, which does give an exclusive power to grant fishing licences or not to grant them, was ever intended to change the whole operation so drastically. We still think that legislation should be brought forward which can be dealt with by a committee and in Parliament rather than the Minister simply proceeding. He can continue to do this. He can change the rules every month if he so desires.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Stevens, would you like to see a greater consumption of fish in Canada? I am sure you would.

Mr. Stevens: Yes.

Mr. Perrault: Why is it that Canadians eat so little fish? We have reached the point where an eight-ounce tin of salmon costs 69 cents in most parts of Canada. That is about the price that Russian caviar stood at about 20 years ago. We have to think about the consumer, surely. How can the ordinary working man continue to consume salmon and other canned fish on an even greater scale if he has to pay prices of that kind? Why are the costs so high for salmon.

We say there are too many fishermen, so we reduce the number of fishermen. Too few fish, so we improve the fisheries, and we have had a program suggested by you to

[Interprétation]

dicat, et pourtant le nombre de vos adhérents n'augmente pas considérablement. J'ai entendu dire que 1,200 personnes demandent de faire partie de votre syndicat chaque année, et que vous en perdez à peu près 1,200 par année. Je voudrais expliquer la raison de ceci.

M. Stevens: Ceci est dû au fait que l'industrie est extrêmement saisonnière et au bas niveau des revenus en comparaison avec ce qui est considéré comme une industrie très riche. Certains ont déclaré au Comité que les revenus des pêcheurs étaient très élevés. Mais je peux vous assurer que de nombreux pêcheurs ont des revenus très faibles. Des pêcheurs sont venus et d'autres sont partis. Il y a eu également un roulement dans les usines sur la terre ferme où les emplois sont saisonniers: dans certains cas on ne travaille que cinq à six semaines par année.

M. Rose: Vous avez proposé une modification à la Loi, qui limiterait le pouvoir du ministre dans la réglementation de l'industrie. Pensez-vous que le ministre a trop de pouvoirs sur les pêcheurs dans l'industrie?

M. Stevens: Oui! Nous ne croyons pas que l'article 7 qui donne le pouvoir exclusif d'accorder ou de ne pas accorder de permis, a changé le caractère complet de l'industrie. Nous estimons qu'une loi devrait être étudiée par le Comité et au Parlement et non simplement par le ministre. Le ministre peut faire un nouveau règlement tous les mois, s'il le veut.

Le président: Monsieur Perrault.

M. Perrault: M. Stevens, est-ce que vous voudriez que le Canada consomme plus de poissons? J'en suis certain.

M. Stevens: Oui.

M. Perrault: Comment se fait-il que les Canadiens mangent si peu de poisson? Vous savez que nous en sommes à un point où une boîte de saumon de huit onces coûte .69, dans la plupart des régions du Canada. C'est à peu près le prix que coûtait le caviar russe, il y a vingt ans. Pensons aux consommateurs. Comment un simple travailleur peut-il continuer à manger du saumon ou n'importe quel autre poisson en boîte à ce prix? Pourquoi le saumon coûte-t-il si cher?

Nous disons qu'il y a trop de pêcheurs, alors nous diminuons le nombre, trop peu de poissons, alors nous améliorons les pêches et nous avons reçu un programme de vous, con-

[Text]

improve the fisheries. They say there are too many boats, so we reduce the number of boats. But is consumption not the key? What are we going to do about consumption?

Mr. Stevens: First of all, in regard to prices of canned salmon, you have taken the price of fancy canned sockeye in the half pound or 7½ ounce tin, and the reason it is at a level of that kind is certainly not at all attributable to fishermen.

Mr. Perrault: No, I am not blaming the fishermen. I am just asking a general question. When you can buy chicken for 32 cents a pound and you have to pay 69 cents for a little eight ounce tin of salmon, the dollar-conscious consumer is going to make a decision in favour of chicken, surely, hopefully B.C. chicken.

Mr. Stevens: I personally think there is too great a spread between what fishermen are paid for the raw product and what the consumer has to pay.

Mr. Perrault: How much do they get?

Mr. Stevens: Thirty-seven and a half cents minimum, and I would say probably last year a price of around 40 cents would be paid to a large number who were receiving bonuses.

Mr. Perrault: Where does this spread go now?

Mr. Stevens: Part of it is in the profit of the wholesaler, and part of it is in the profit structure of the retail chain outlets. There was a study made by a House committee or commission on the spread in food prices and they indicated some pretty healthy profits in that area, although the manufacturing end was not too thoroughly examined.

Mr. Perrault: Do you think any of the proposals that you have advocated in this brief will serve to improve the use of fish by helping to keep the price down and making industry more efficient?

Mr. Stevens: I think perhaps in terms of production costs, certainly. If the potential rather than the fictional potential could be utilized, it would be possible for a man to make a living, a reasonable comfortable living, without always having to emphasize the price structure. Further than that, there would have to be special steps taken to see that among the people who are processing there is competition, real competition, which pretty well goes out the window when there

[Interpretation]

cernant l'amélioration des pêches. Il y a trop de bateaux, alors nous diminuons le nombre de bateaux. Mais la consommation n'est-elle pas la clé de tout? Que ferons-nous à propos de la consommation?

M. Stevens: Premièrement, à propos des prix du saumon en boîte, vous avez mentionné le prix du Saumon Sokeye en boîte d'une demi-livre ou de 7 onces et 3/4 et, la raison pour laquelle le prix est si élevé n'est aucunement attribuable aux pêcheurs.

M. Perrault: Non, je ne blâme pas les pêcheurs. Je pose seulement la question. On peut acheter un poulet pour 32 cents la livre, mais il faut payer 69 cents pour une boîte de 8 onces de saumon; le consommateur qui est conscient de la valeur du dollar, achètera donc du poulet et sûrement, nous l'espérons, du poulet de la Colombie-Britannique.

M. Stevens: Il y a un trop grand écart entre le prix qu'on paie les pêcheurs pour leur produit brut et le prix que le consommateur doit payer.

M. Perrault: Combien reçoivent les pêcheurs?

M. Stevens: Ils reçoivent un minimum de trente-sept cents et demi; l'an dernier, un grand nombre a reçu quarante cents.

M. Perrault: Où va cette différence?

M. Stevens: Une partie coïncide avec le profit des grossistes et une autre avec le profit des détaillants. Il y a eu une commission de la Chambre, sur l'écart des prix des aliments et on a relevé d'assez bons profits dans ce domaine, même si on n'a pas fait un examen approfondi de ce qui concerne le fabricant.

M. Perrault: Croyez-vous que les propositions qui ont été faites dans votre mémoire serviront à améliorer la consommation du poisson en baissant le prix et en rendant l'industrie plus efficace?

M. Stevens: Peut-être que pour ce qui est des coûts de production, certainement. Si le potentiel plutôt que le potentiel fictif pouvait être utilisé, l'homme pourrait vivre de façon confortable sans avoir à faire ressortir la structure des prix. Mais de plus il faudrait prendre d'autres mesures pour qu'il y ait une terrible concurrence, concurrence qui disparaît complètement, lorsqu'il y a une ou deux grandes entreprises qui dominent l'industrie. On devrait s'en occuper.

[Texte]

are a couple of big corporations operating and dominating the industry. That would have to be taken care of.

Mr. Perrault: Let me ask you a question about the number of fishermen in the industry. Under the union plan, what reduction in number would occur in the first year, the second year, and the third year? That is the first part of the question.

Secondly, how many fishermen should there be in the industry in British Columbia at the present time? What is the ideal figure? You say there are too many. How many should there be?

Mr. Stevens: I cannot answer your first question because it would vary from one year to the next. We estimated at one time that perhaps in the first year, as many as 20 per cent of the fishermen would drop out.

Mr. Perrault: What would that mean in terms of numbers?

Mr. Stevens: At that time it would have meant about 2,000 fishermen.

Mr. Perrault: Two thousand family incomes would go by the board as a result.

Mr. Stevens: Not necessarily 2,000 family incomes. This would be the group who were making less than 30 per cent of their income from fishing anyway, and we thought it would be hitting at more or less the fly-by-night operator.

Mr. Perrault: I want to ask you about that. You attack the Minister and you say that the Minister says the union does not know the score, that he says the medicine he prescribes will do wonders, and you say in bitter terms that the resources of the fishermen will decide who will stay in and who will stay out. Is it not a fact that under the union plan as advanced by you on page 9, you say that they must "show that in either of these years 30 per cent or more of their income for that year was derived from earnings as a commercial fisherman".

Is it not conceivable that a fisherman of limited means does not have the money to buy proper equipment and cannot earn the kind of income he would like in the fishing industry because he is an ordinary working man trying to get a start in the industry? You would lop him off, would you, under the plan?

Mr. Stevens: No. When we advanced this plan we felt we would be getting at those who, in our opinion, were already employed on other jobs ashore. We also said that a com-

[Interprétation]

M. Perrault: Laissez-moi vous poser une question sur le nombre des pêcheurs dans l'industrie. En vertu du programme du syndicat, quelle serait la diminution en nombre, pendant la première et la deuxième et troisième année?

Combien de pêcheurs devrait-il y avoir dans l'industrie de la Colombie-Britannique à l'heure actuelle? Quel est le chiffre idéal? Vous dites qu'il y en a trop. Combien devrait-il y en avoir?

M. Stevens: Je ne peux pas répondre à la première question, car cela varie d'une année à l'autre. Nous avons estimé, à un moment donné, que peut-être la première année, 20 p. cent des pêcheurs abandonneraient.

M. Perrault: Ça correspond à quel nombre?

M. Stevens: A ce moment-là, ça représentait environ 2,000 pêcheurs.

M. Perrault: Deux mille revenus familiaux?

M. Stevens: Pas nécessairement. C'est le groupe qui retire moins de 30 p. cent de son revenu de la pêche. Nous pensions ainsi toucher les pêcheurs amateurs.

M. Perrault: Vous attaquez le ministre et vous dites qu'il affirme que le syndicat n'est pas au courant de ce qui se passe et qu'il prescrit, qu'il affirme que les médicaments feront des merveilles. Mais vous prétendez que les ressources des pêcheurs décideront du nombre qui restera et du nombre qui partira. Mais n'est-ce pas vrai qu'en vertu du programme du syndicat, vous préconisez, à la page 9, qu'ils doivent prouver, pendant l'une de ces années, que 30 p. 100 de leur revenu découlent de la pêche commerciale? Il est inconcevable qu'un pêcheur ayant des moyens réduits, n'ait pas d'argent pour se procurer un équipement convenable et qu'il ne puisse pas avoir le revenu qu'il désire dans l'industrie de la pêche, parce qu'il est un simple travailleur qui essaie de débiter dans l'industrie.

M. Stevens: Lorsque nous avons exposé ce plan, nous pensions nous attaquer à ceux qui, à notre sens, avaient déjà un autre emploi à terre. Nous avons dit aussi qu'un comité d'é-

[Text]

mittee of review should have the right to look at any individual case of hardship, any special problems, and that committee should consist of commercial fishermen. You speak of me. Look at the fishermen who are sitting around tables like this for hours and hours trying to work out a plan that would build up the industry generally.

Mr. Perrault: Who would ultimately make the decision? Would it be a majority vote of the United Fishermen and the co-op and government representatives?

Mr. Stevens: I think there would have to be a balance so that no one single group could dominate.

Mr. Perrault: What would happen to the boats rendered surplus under the union plan? We will say there is a reduction of 20 per cent in the number of fishermen you would allow to be in the industry. What would happen to all those boats and that investment? Would that not spell tragedy for many of the working men in the fishing industry?

Mr. Stevens: It may, if no other efforts were made to look after the individuals who were hurt. Also we know that there is quite a sizeable fleet of boats that are owned by companies, some of which have been in the industry long enough that they have long since paid for themselves, or been paid for. Perhaps those should be the first boats to be removed from the fishery.

Mr. Perrault: My final question, Mr. Stevens. On page 4, paragraph 12, you say:

Canada has dropped from 6th to 9th place in world production of fish, and now produces only 2% of the total of 60,000,000 tons.

Obviously there are many factors contributing to this situation. First I would like to ask, are costs higher in Canada, and if so, why? Are wages higher in Canada, and if so, why? How does our state of unionization in Canada, in British Columbia, for example, compare with that which exists in Iceland and Norway and Sweden and some of the other nations? Are we less efficient?

Mr. Stevens: You have asked a number of questions.

Mr. Perrault: I think it is very important.

Mr. Stevens: Yes, the only thing is have to take time to answer them one at a time. I think they are all important questions.

But first of all, what is the cost structure in Canada? It varies considerably in various parts of the fishery, even in one fishery, for

[Interpretation]

tude devrait avoir le droit d'examiner tous les cas difficiles, les problèmes et que le Comité devait être formé de pêcheurs commerciaux. Regardez les pêcheurs qui font la table ronde depuis des heures, essayant d'établir un programme qui s'intéresserait à l'industrie en général.

M. Perrault: Qui prendrait la décision? Est-ce que ce serait un vote majoritaire des Allied Fishermen, des coopératives et du gouvernement?

M. Stevens: Il devrait y avoir un équilibre afin qu'aucun groupe ne domine les autres.

M. Perrault: Qu'est-ce qui arriverait aux bateaux excédentaires? Disons qu'il y a une diminution de 20 p. cent du nombre des pêcheurs, qu'est-ce qui arriverait avec les autres. Est-ce que ceci n'entraînerait pas un drame pour les nombreux travailleurs de l'industrie de la pêche?

M. Stevens: Peut-être, si on ne faisait pas d'autres efforts pour s'occuper de ces gens. Nous savons également qu'il existe encore une flotte assez nombreuse, propriété des compagnies dont certaines ont travaillé pendant assez longtemps pour avoir supprimé leurs amortissements. Ces bateaux devraient être les premiers supprimés.

M. Perrault: Ma dernière question. A la page 4, paragraphe 12, vous dites que:

Le Canada a passé du sixième au neuvième rang dans la production du poisson, et ne produit maintenant que 2 p. 100 du total de 60 millions de tonnes.

Manifestement, il y a de nombreux facteurs qui contribuent à cette situation. Première ment, est-ce que nos frais de production sont plus élevés, et pourquoi? Est-ce que nos salaires sont plus élevés? S'il en est ainsi pourquoi? Et le syndicalisme en Colombie-Britannique, est-ce qu'il est semblable à celui de l'Irlande, de la Norvège et de la Suède? Est-ce que le syndicalisme est moins efficace?

M. Stevens: Vous posez bien des questions.

M. Perrault: Ce sont toutes des questions très importantes.

M. Stevens: Mais les réponses prennent du temps.

Premièrement, quelle est la structure des prix au Canada? Elle varie beaucoup dans chaque secteur de la pêche, par exemple,

[Texte]

example salmon fishing. The minimum price that is paid for chum salmon is $12\frac{1}{2}$ cents a pound. Pink salmon is roughly about the same $12\frac{1}{2}$ cents. These are not high rates by comparison with the sockeye price to which you referred earlier. There are fishermen working in Canada producing fish now at levels of $4\frac{1}{2}$ cents here on the Pacific Coast in the trawl fishery. We do not think the rates that are paid to our members are high by comparison with other wage rates in British Columbia, and not as high as the wage rates that are paid in Alaska or south of the border in the State of Washington, and so on. I think they are higher than the wage rates the Japanese mother ship paid, for example. What their costs are, though, in terms of all the costs of operating that fleet, the fringe benefits and so on, we have never seen a report. The Department of Fisheries has not produced it and we have not had the wherewithal to go out and get it. I think we are a reasonably efficient industry except for some of the problems that we have referred to here; that is, the overcrowding, the concentration of limited fisheries and not going out to develop the offshore fishery.

I do not think the Icelanders, for example, or the Japanese or the Russians, or any of the other major fishing nations, would be as far advanced as they are if it had not been for their governments taking a real hand and saying, "Let us get in there, let us get our fleet subsidized and in some cases let us subsidize the plants and other facilities".

The Chairman: Thank you very much, Mr. Cyr.

M. Cyr: Monsieur Stevens, dans votre rapport, vous parlez de la situation désastreuse du hareng sur la côte du Pacifique. Et vous mentionnez qu'en 1957, vous avez mis en garde le ministère des Pêches et Forêts à l'effet qu'il était urgent de réglementer la pêche au hareng. A cette époque, le docteur Needler et son personnel technique et biologique vous informaient que la diminution de ce poisson le long de la côte du Pacifique était due à des causes naturelles. Ma question est la suivante: Votre Association a-t-elle fait faire des études au cours des dernières années qui prouvent que les biologistes et les techniciens étaient dans l'erreur en 1957?

Mr. Stevens: We have not asked for a separate study of the studies made by the biologists but we have certainly made it plain to Dr. Needler and the biologists in the Research Department, as well as to the Minister of Fisheries and others, that we believed they were wrong and that in future they should not attempt to engage in these wild flights of

[Interprétation]

pour le saumon, le prix minimum payé pour le saumon-chien est de $12\frac{1}{2}$ cents la livre. Le saumon rouge, environ $12\frac{1}{2}$ cents. Ce ne sont pas des prix élevés par comparaison au prix du sockeye dont on a parlé tout à l'heure. Il y a des pêcheurs qui travaillent au Canada et qui vendent du poisson à $4\frac{1}{2}$ cents sur la côte ouest. Ils pêchent au chalut. Les salaires de nos membres ne sont certainement pas élevés par rapport à certains autres salaires versés en Colombie-Britannique, et pas aussi élevés que les salaires en Alaska ou dans le Washington. Ils sont plus élevés que les salaires versés par la flotte japonaise. Est-ce qu'ils représentent les frais et des flottes, et le reste, nous n'avons pas de chiffres. Le ministère des Pêcheries ne les a pas non plus, et nous n'avons pas les moyens de les obtenir. Je crois que l'industrie est raisonnablement efficace, à part le trop grand nombre de pêcheurs et la concentration sur des pêcheries limitées, sans développer suffisamment la pêche de haute mer.

Par exemple, les Islandais, les Japonais ou les Russes ou n'importe quel autre grand pays qui fait la pêche ne serait pas aussi avancé si leur gouvernement n'avait pas pris les choses en main et subventionné la flotte, dans certains cas, ou les conserveries.

Le président: Merci beaucoup, monsieur Cyr.

Mr. Cyr: Mr. Stevens, in your report you speak about the herring disaster on the west coast, and you say that in 1957 you warned the Department of Fisheries and Forestry saying that it was important to establish fishing regulations on herring. At that time, Dr. Needler and his technical and biological staff informed that the herring decrease along the Pacific coast was due to natural causes. Therefore, here is my question. Has your Association asked for studies to be carried out over the past few years proving that biologists and technicians were wrong in 1957?

M. Stevens: Nous n'avons pas demandé une étude spéciale sur les études faites par les biologistes, mais nous avons dit au docteur Needler et aux biologistes du département de la recherche et du service des pêcheries que nous estimons qu'ils avaient tort et que nous leur demandons de ne pas se lancer dans des conclusions aussi mal fondées. A l'avenir, ils

[Text]

fancy and say, "Let us take off the restrictions and have a more or less unrestricted fishery". That in future they should pay more attention to what fishermen observe on the grounds in terms of their capabilities of catching a volume of fish in a certain area or in the coastal region.

M. Cyr: Donc le ministère des Pêches et Forêts n'a pas confirmé par la suite, soit au cours des années 1966 et 1967, si leur rapport était vraiment réaliste en 1957.

Mr. Stevens: I am sorry, was your question whether they had refused to admit that the truth was on our side, so to speak? No, I think they are finally coming to the point of admitting that they were wrong and that the fishermen and others who warned them were probably more correct, although because of professional pride, I suppose—false pride I think it is—they do not like to really come out and openly say, "Yes, we were wrong, the fishermen were right".

M. Cyr: Maintenant, à la page 42 du rapport, vous mentionnez que:

As and when our fishery revives, we would prefer to see the entire production used for human consumption; rather than for meal and oil.

Ne conviendrez-vous pas avec moi que la protéine que l'on retire du hareng rend de plus grands services au genre humain que si elle était distribuée sous sa forme naturelle? Et je crois que cette affirmation a été faite dans un rapport de l'OAA des Nations unies.

Mr. Stevens: I am sorry, I found myself listening to both French and English at the same time. Your question was whether I had seen the report in the FAO?

Mr. Cyr: Yes. In your report you said that it could be used for human consumption more than for meal and oil. Did you ever read the report from the FAO of the United Nations to the effect that the protein that we extract from the herring can give more service to mankind than if, we sell the herring in those forms?

Mr. Stevens: Yes, we have seen those reports. I believe you are speaking of fish protein concentrate. In our brief we were not really thinking of that so much, although it could be one method, we were thinking of the processing and use of herring in a varied number of forms that could be sold on the world market as well as the Canadian and other North American markets. For example, herring produced and processed in west Germany is

[Interpretation]

devraient faire plus attention à ce que les pêcheurs observent sur place quant à la possibilité de prendre un certain nombre de poissons dans certaines régions de la côte ou ailleurs. Ils ne devraient pas recommander d'enlever les restrictions sans être avisés.

Mr. Cyr: Therefore, the Department of Fisheries and Forestry did not confirm thereafter, i.e. in 1966 and 1967, whether their report was actually realistic in 1957.

M. Stevens: Je n'ai pas compris la question. Est-ce qu'on a refusé d'admettre que vous aviez raison? Non, ils ont finalement admis qu'ils avaient tort et que les pêcheurs et les autres avaient raison quoiqu'ils n'aiment pas, à cause de la fierté professionnelle, reconnaître cela ouvertement.

Mr. Cyr: Now, on page 42 of the report, you mention that:

«Quand les pêcheries seront de nouveau exploitées, nous préférons que toute la production serve à la consommation humaine, plutôt qu'à la nourriture et à l'huile.»

Do you not agree with me that protein from herring is more useful to human beings than if it were distributed in its natural form? And I believe that this statement is to be found in the FAO report of the United Nations.

M. Stevens: Je regrette; j'écoutais la version anglaise et la version française en même temps. Vous avez demandé si j'avais lu le rapport de la FAO.

M. Cyr: Oui; vous avez dit dans votre rapport que ceci pourrait être utilisé pour la consommation humaine plutôt que pour l'huile ou la nourriture. Avez-vous déjà lu le rapport de la FAO des Nations Unies disant que la protéine extraite du hareng peut aider davantage les hommes que si le poisson est vendu sous ces formes.

M. Stevens: Oui, nous avons lu ces rapports. Vous parlez du concentré en protéines du poisson. Nous ne pensions pas à cela dans notre rapport, mais ce serait une méthode. Nous pensions à la transformation et l'utilisation du hareng sous de multiples formes qui pourrait être vendu au Canada, dans l'Amérique du Nord ou dans le monde. Par exemple, le hareng produit en Allemagne ou en Écosse se vend mieux au Canada que le

[Texte]

being brought in and sold in Canada and it is outselling our native herring, as is herring from Scotland and other places. We feel that more effort should be made to try to produce a produce that will sell for table use which is closer to its natural form than the fish protein concentrate, for instance.

M. Cyr: Nous avons une expression en français qui dit que lorsqu'on ne peut pas vendre un produit sous sa forme naturelle, on en change le nom pour le faire manger. Donc, il faudrait presque changer le nom du hareng pour amener les gens à le manger afin de pouvoir le vendre.

Mr. Stevens: Perhaps I might just comment briefly. We attended a federal fisheries conference in Fredericton, New Brunswick, where there was a display of West German herring that would have covered all the tables in this room, and it was very beautifully done. Most of it was in cans and it was packed in sauces and so forth, and we would like to see more experimentation and a better use of it made here.

Mr. Cyr: I want to thank the witness for the interest he showed in the eastern part of Canada. Thank you.

Mr. Whelan: I just want to ask one or two questions. First of all, you pointed out that Canada has slipped in the production of fish. I understand that Peru is one of the countries that has passed Canada. Is that correct?

Mr. Stevens: That is correct.

Mr. Whelan: This is mainly because they catch anchovies and put them into fish meal. Is that right?

Mr. Stevens: That is true.

Mr. Whelan: The fish production in Peru is mainly not for human consumption?

Mr. Stevens: Yes, except that Peru is probably the only example of where there has been a phenomenal rise as a result of concentrating on anchovy. Other nations are steadily forging ahead with the production of other species of fish that lie right on our doorstep. I am thinking of Japan and the Soviet Union, for example.

Mr. Whelan: Is it not also true that in Peru there are probably more idle fishing ships than there are in any other nation?

Mr. Stevens: At times their fish plants and vessels have been idle because they produce so much of this anchovy meal and oil that they simply have not been able to sell it.

[Interprétation]

hareng local. A votre avis, on devrait faire plus d'effort pour mettre au point un produit qui se vendrait pour la consommation et se rapprocherait de sa forme d'origine plutôt que d'être un concentré.

Mr. Cyr: We have a French expression that says that when you cannot sell a product in its natural form you change its name so that people will eat it. Therefore, you would almost have to change the name of herring so that people would eat it, and in order to be able to sell it.

M. Stevens: Nous avons assisté à la conférence sur les pêcheries de Fredericton (Nouveau-Brunswick). Il y avait là, en exposition, du hareng d'Allemagne en très grande quantité, très bien disposé. Cela était en conserve, en sauce et quoi d'autre. Il faudra qu'on fasse des essais de ce genre ici.

M. Cyr: Je voulais simplement remercier le témoin de s'être intéressé à l'est du Canada.

M. Whelan: Je désire poser une ou deux questions. Premièrement, vous dites que le Canada a perdu son rang dans la production; le Pérou a dépassé le Canada, n'est-ce pas?

M. Stevens: C'est juste.

M. Whelan: Est-ce parce qu'ils pêchent l'anchois pour en faire de la nourriture?

M. Stevens: Oui.

M. Whelan: Cette production n'est pas pour la consommation humaine.

M. Stevens: Le Pérou est probablement le seul pays où une grosse augmentation a eu lieu grâce à la production de l'anchois. D'autres pays mettent sur le marché d'autres espèces de poissons qui existent sur nos côtes. Je pense, notamment, au Japon et à la Russie.

M. Whelan: Est-ce vrai que le Pérou a un plus grand nombre de bateaux immobilisés que n'importe quel autre pays?

M. Stevens: A un moment donné, ils avaient des bateaux et des conserveries tout à fait inactifs parce qu'ils ont produit trop d'anchois pour les vendre.

[Text]

Mr. Whelan: I was there in September and as a rough estimate I think there were about 100 ships that had been seized that were bankrupt and sitting idle in the harbour, and the fishing crews were just out of work because the fishing fleet had gone ultra-modern, let me put it that way, with bigger, newer and more modern fishing craft.

Mr. Stevens: I think it is a combination of reasons, though. The phenomenal rise in production at times has also had a tremendous effect on markets for the product.

Mr. Whelan: I remember reading a copy of a speech that the Minister made to your organization, I think it was at your annual meeting, when he pointed out that the so-called dogfish—I think he gave it a different name—is used in fish and chips in England; the Germans smoke the dogfish and sell it in strips in their beer gardens as a delicacy and the Japanese use it in sausages. One of the other members of the Committee more or less intimated that it was a product that could not be used for human consumption, but you say it can be used for human consumption and that it can be a delicacy?

Mr. Stevens: Yes. In fact, I have eaten it and it is quite good.

Mr. Whelan: I have one other question. Do you think salt water sports fishermen should be licenced?

Mr. Stevens: Yes. Our organization went on record and I am personally in favour of having a licence fee. It does not have to be a high fee, but one that would at least correspond to the fee we pay for a sports fishing licence in the interior, which I think is now \$3.

Mr. Whelan: It is \$3.

Mr. Stevens: We also went on record, Mr. Chairman, as being in favour of a much higher licence fee for the Americans who come up to fish our spring salmon in certain selected spots. We also feel there should be a trophy fee, as there is now on deer and moose, which would apply to sportsmen who come up for that.

Mr. Whelan: Are you in favour of derby fishing?

Mr. Stevens: Our position is that we are not against the small derby that is put on by small clubs with the idea of having a get-together, but we did go on record as being opposed to the large commercial derby. If you want my personal opinion, there should not have to be a derby before I can go up and

[Interpretation]

M. Whelan: Je suis allé là-bas en septembre, et je crois qu'on avait saisi environ cent bateaux dont les propriétaires étaient en faillite. Les équipages étaient sans emploi parce que la flotte s'était beaucoup trop modernisée.

M. Stevens: Je crois qu'il s'agit d'un ensemble de facteurs. Il est cependant vrai que l'augmentation phénoménale de la production a eu des conséquences aussi pour les marchés.

M. Whelan: Je me souviens d'avoir lu le texte du discours fait par le ministre à votre association où il était question du chien de mer. Je crois qu'il lui a donné un autre nom. En Angleterre, on l'utilise pour faire des «fish and chips». En Allemagne, on le fait fumer et cela est une friandise dans les auberges. Au Japon, on en fait des saucisses. On a dit que ce produit ne pouvait pas servir à la consommation humaine, et vous dites que oui, et que c'est même un mets recherché.

M. Stevens: Oui, j'en ai mangé et cela est délicieux.

M. Whelan: Une autre question. Pensez-vous que les pêcheurs sportifs d'eau salée devraient avoir un permis pour pêcher?

M. Stevens: Certainement, à mon avis et d'après notre organisation. Le permis ne devrait pas être nécessairement très cher, mais enfin ils devraient payer au moins ce qu'on paie pour le même permis à l'intérieur, soit \$3.00.

M. Whelan: C'est \$3.00?

M. Stevens: Monsieur le président, nous avons aussi décidé de préconiser des permis beaucoup plus chers pour les Américains qui viennent pêcher le saumon de printemps. Nous estimons qu'on devrait leur imposer un droit comme on le fait pour la chasse au chevreuil et à l'orignal.

M. Whelan: Que pensez-vous des Salmon Derby?

M. Stevens: Je ne suis pas contre les petits concours, où un club local veut faire une petite réunion, mais nous avons dit que nous n'étions pas d'accord avec les grands concours commerciaux. Si vous voulez mon opinion personnelle, pourquoi faudrait-il un concours pour donner l'occasion aux sportifs de faire

[Texte]

compete with Paul St. Pierre or some other duck hunter. I do not see why anybody who is a sportsman has to have some special incentive to go and enjoy the fresh air and sunshine, or even a stormy day, to catch a fish.

Mr. Whelan: Are you in favour of our native fishermen having the fishing rights which some of the other nations claim, such as the right of heritage or a sovereign right, and so on? Do you think the native fishermen should be under the same controls as the other fishermen?

Mr. Stevens: No. I think the Indians of British Columbia have a historic claim that has not as yet been dealt with properly and I would certainly be opposed to any attempt to extinguish the vestiges of the rights they once enjoyed. We are trying to put them on a basis where they are treated like anyone else, and in that particular sense there are a lot of other things, that are required first to really grant the Indian equality of opportunity in this country.

Mr. Whelan: I believe that one of your branch locals appeared before the Committee yesterday. They were a group of fishermen and I do not have the correct name in front of me.

Mr. Stevens: The Fraser River District Council.

Mr. Whelan: Yes. Is that a branch of your union?

Mr. Stevens: Yes. It is a council that links together a number of locals on the Fraser.

Mr. Whelan: I could not help but gather that they thought the native people should be under stricter control, that they should not be given any special privileges, that at times they thought the native people wasted fish, they set their nets and did not clean them of fish, and so on, and I gathered they thought they should not be given any of these privileges. Mind you, they did not exactly say that, but...

Mr. Stevens: I think what they were trying to get across, and perhaps in some measure failed, is that certain commercializations are going on in that particular area which involve individual companies perhaps on occasion, small companies perhaps, and the people who are involved in it are not really out to help the Indian people but perhaps, in many cases, to take advantage of them, and they were concerned that this would spread in an uncontrolled way. However, I think their brief so indicated they did not want to take away

[Interprétation]

concurrence? Je ne vois pas pourquoi les sportifs auraient besoin de cette sorte d'initiative pour aller jouir de la nature et du grand air.

M. Whelan: Pensez-vous qu'il serait bon que nos pêcheurs aient les mêmes droits que certains autres pays accordent aux leurs, le droit d'héritage, de souveraineté, et le reste? Pensez-vous que les pêcheurs indigènes devraient être sujets aux mêmes règles que les autres?

M. Stevens: Je crois que les pêcheurs indigènes de Colombie-Britannique ont des droits spéciaux, des droits historiques, et il ne faut certainement pas supprimer ce qui reste de ces droits. On ne peut tout simplement pas les mettre sur le même pied que les autres. En ce sens, il y a beaucoup de choses plus pressantes en ce qui concerne l'égalité des Indiens au Canada.

M. Whelan: Je crois que l'une de vos sections locales à comparu devant nous hier. Je n'ai pas le nom de cette section.

M. Stevens: Le Fraser River District Council.

M. Whelan: C'est une section de votre syndicat?

M. Stevens: Oui, cette section réunit plusieurs unités de la région du Fraser.

M. Whelan: Je n'ai pas pu m'empêcher de penser que ces gens croyaient que les Indiens devraient faire l'objet d'un contrôle plus strict, ne devraient pas avoir de privilèges, puisqu'un grand nombre d'entre eux gaspillaient le poisson. Ils posaient des filets, n'allaient pas enlever le poisson. Ils pensaient qu'un grand nombre d'Indiens ne devaient pas avoir de privilèges. Ils ne le disaient pas exactement, mais...

M. Stevens: Ce qu'ils cherchaient à faire comprendre, et ils n'ont pas réussi, c'est qu'il y a une certaine commercialisation qui se fait dans cette région, à laquelle participent des entreprises indépendantes, de petites compagnies peut-être; ces gens ne sont pas là pour aider les Indiens, mais souvent pour les exploiter, et on s'inquiète du fait que ceci pourrait se propager. Dans son mémoire, ce groupe disait aussi qu'il ne voulait pas du tout qu'on enlève aux Indiens le droit de pêcher pour se nourrir. De toute façon, notre

[Text]

from the Indian the right to the use of that fish as a food and I submit—and I am going to express a personal opinion here because our organization as a whole is not on record one way or the other on this matter—that perhaps there are differences that still need to be ironed out between the members of our union and the Indian fishermen. Because I am part Indian myself I cannot help but say that I can understand their view.

Why should they always be at the tail end of the gate in terms of harvesting a resource that was here before the white man came?

The Chairman: Mr. Whelan, your time has expired. Mr. Crouse is next.

Mr. Whelan: I just have one more question. This is something which has been covered quite thoroughly by many other members of the Committee and I do not quite know how to put it. You are definitely in favour of licensing the commercial fishermen but you are not entirely in favour of the present plan.

Mr. Stevens: As I indicated in the brief, our organization has been fighting for a form of limitation for close on to 25 years.

Mr. Crouse: Many of the questions I wanted to pose have already been raised before the Committee, so I will just ask a few brief questions. I will refer to the resumé and start with item No. 5. What is the basis for your statement that Japanese fishing interests pose a threat to all nations with salmon reserves, and has your union taken any action to protect your salmon resource?

Mr. Stevens: To answer the first part of your question, so long as any one nation can operate on the stocks of all the other nations in the Pacific, while the salmon are out in the middle of the ocean, it serves as a precedent, so if any other nation wanted to come along and increase it, change it or develop it for their own benefit it could end up that there would be enough pressure out there that it would completely destroy the resource in Canada, as it might destroy or hinder the resource in the United States or the Soviet Union.

Mr. Crouse: Is Japan alone doing this, Mr. Chairman, or are Japan and Russia also guilty of taking excessive stocks of salmon in mid-Pacific?

Mr. Stevens: The information we have received from our Department of Fisheries, as well as our own observations, indicates that the only nation that has a mid-ocean salmon fishery at present is Japan. The Americans have the particular advantage we

[Interpretation]

organisation ne s'est pas prononcée pour ou contre en ce domaine, mais il y a peut-être un certain différend entre nos membres et les Indiens. Puisque j'ai moi-même du sang indien, je ne puis m'empêcher de partager leur griefs.

Pourquoi devraient-ils toujours être défavorisés quand il s'agit de ressources qui étaient sur place avant l'arrivée des Blancs?

Le président: Votre temps est fini.

M. Whelan: Encore une question. D'autres ici ont approfondi ce sujet, et je ne sais pas trop comment m'exprimer. Vous êtes en faveur de la vente de permis aux pêcheurs commerciaux, mais pas en faveur du programme actuel.

M. Stevens: Nous disons dans notre mémoire que nous avons préconisé une forme de réglementation depuis 25 ans.

M. Crouse: Plusieurs des questions que je voulais poser ont déjà été posées, donc, j'ai simplement quelques petites questions. Je vais me reporter au sommaire, n° 5. Sur quoi fondez-vous votre déclaration que la pêche par les Japonais est une menace pour tout pays ayant un stock de saumon? Est-ce que votre syndicat a pris des mesures pour protéger vos ressources en saumon?

M. Stevens: Si une nation du Pacifique peut pêcher au milieu de l'océan, à même les stocks d'autres pays, quand le saumon est au large, c'est un précédent. Donc, si d'autres viennent et veulent échanger les stocks d'une manière ou d'une autre, il y aurait peut-être tellement de pêche à cet endroit que cela pourrait affecter les ressources des États-Unis et de l'Union Soviétique.

M. Crouse: Est-ce que c'est seulement le Japon? Est-ce que les Russes aussi sont coupables?

M. Stevens: D'après nos renseignements, obtenus du ministère des Pêches, le seul pays qui pêche au large, c'est le Japon. Les Américains ont un avantage dont nous avons parlé, au large de la péninsule de l'Alaska, mais c'est peu de choses à comparer à ce que font

[Texte]

mentioned up off the Alaska panhandle, but that is still small when compared, let us say, with the Japanese operation. There has been some indication here and there that the Russians may be doing some experimentation but I think it is pretty well agreed by all concerned, fishermen and fishery administrators, that their commercial fishery is done adjacent to their streams.

Mr. Crouse: Referring to item No. 8, have you expressed your concern to the federal government over the declining halibut resource and what response have you received?

Mr. Stevens: Our main representations have been made to the International Halibut Commission. They are very concerned about this and they recently expressed their concern in a memorandum that was published by the federal Department of Fisheries about the effect of trawling by the Japanese and the Russians in particular. We have expressed this same concern, that it was going to happen, in past briefs to the federal government. So far, while there seems to be acknowledgement of the danger and the concern expressed, in our opinion steps have not yet been taken to correct it.

Mr. Crouse: Mr. Chairman, when halibut are caught by groundfish operators operating out of British Columbia they must be thrown back into the sea. Are you and your union members in agreement with this practice?

Mr. Stevens: The majority agree, yes. There is a minority group, namely, the members of our union who are employed on trawl vessels, that is not in agreement. They would like to be able to harvest the fish they catch, but the majority believe this fishery could be destroyed by the greater development of trawling. If trawlers were permitted to retain halibut they would not only harm the halibut stock that is close to our shores where our trawlers now operate, but it would also destroy the argument we are presently having internationally with the Japanese and the Russians that they should curb or control their trawl fishery. It is not that they are doing it alone, but at least we can advance the argument that our trawlers are releasing the halibut, and the Americans can say the same.

Mr. Crouse: I have one final question, Mr. Chairman. I am very much concerned with the fishing industry on the East Coast, and under item 12 you have recommended the construction of:

[Interprétation]

les Japonais. Apparemment, les Russes font certaines expériences, mais je crois que tous les pays s'entendent pour pêcher le poisson qui provient de leurs rivières.

M. Crouse: Je parle du numéro 8. Est-ce que vous faites des représentations auprès du gouvernement fédéral au sujet du flétan qui diminue? Quelle réponse avez-vous eue?

M. Stevens: Nous avons fait des représentations, surtout à la Commission internationale du flétan. Cette commission se préoccupe beaucoup de cette question. Il y a eu un mémoire publié par le ministère des Pêches, au sujet de la pêche au chalut par les Japonais et les Russes. Nous avons exprimé les mêmes inquiétudes. On semble reconnaître qu'il y a un danger, mais rien n'y a été fait jusqu'à maintenant pour remédier à la situation, à votre avis.

M. Crouse: Quand le flétan est pris par des pêcheurs de poisson de fond, il faut les rejeter à la mer. Est-ce que vous et les membres de votre syndicat êtes d'accord à ce sujet?

M. Stevens: La plupart, oui. Mais il y a un petit groupe, ceux qui travaillent sur des chalutiers, qui voudrait garder les poissons qu'ils prennent. La majorité est d'accord, qu'on pourrait détruire cette ressource en pêchant au chalut. Si les chalutiers pouvaient garder le flétan, non seulement cela entamerait les stocks de flétan, mais cela mettrait fin à l'argument qui existe au niveau international, avec les Japonais et les Russes, soit que ces pays devraient exercer un contrôle sur la pêche au chalut. Au moins, les Canadiens et Américains rejettent le flétan à l'eau.

M. Crouse: Au n° 12, il est question de l'industrie des pêches dans l'est. Vous avez proposé qu'on construise des bateaux nouveaux qui serviraient de base pour une flotte qui pourrait faire concurrence au Japon et

[Text]

a mothership fleet, modern factory trawlers and transport vessels to be built and operated by the government as the nucleus of a deep sea operation capable of competing with Japan and the U.S.S.R.

As you know, Japan and the U.S.S.R. fish for food while we fish for profit. Do you and the members of your union feel that existing export markets for fish justify this type of state-controlled and -owned fishing operation, and, if so, what evidence do you have to back it up?

Mr. Stevens: Frequently we read about the sale of fish and fish products between big nations such as Japan and the Soviet Union. We also read about the Icelandic people selling fish blocks and products into the soviet Union and parts of Eastern Europe and other nations. And we know that there has been a tremendous development in recent years in the variant uses of fish. Therefore, we think that to freeze ourselves, in, by saying there is not a market just because at the moment we are not selling in a particular market, is wrong. We should be looking at all of the potential markets.

Perhaps our brief does not stress it enough, but we have stressed to the government on many occasions that coincidental with the development of a freeze special efforts would have to be made to seek out every possible potential market.

To use another example, if Canadian wheat had been somewhere where it disappeared—was under the water somewhere and could not be seen—instead of piling up in the graineries we would probably still be saying we could not sell Canadian wheat. But when it piles up in the graineries and on the ground, and the political atmosphere becomes strong enough, then governments go out to sell it. If we had fish and brought them to the Parliament Buildings and put them on the steps somebody would get out and find a way to sell them.

An hon. Member: Fresh or frozen?

The Chairman: Relative to Mr. Crouse's second last question, about some of the halibut being thrown back in some fisheries, do they always survive, or are they injured in such a way that their survival is doubtful?

Mr. Stevens: There are injuries, and I have seen reports indicating that the mortality rate ranges anywhere between 16 per cent and as high as 43 or 44 per cent. I am sure of this, because with trawls, it depends on the length of the tow, the amount of other fish caught

[Interpretation]

aux Russes. Comme vous savez, ces pays pêchent pour l'alimentation, et nous pour le profit. Est-ce que vous croyez, de même que les membres de votre syndicat, que les marchés d'exportation actuels, pour le poisson, justifient ce genre de contrôle de l'État, et si oui, quelle preuve avez-vous pour appuyer cela?

M. Stevens: Souvent, on peut lire des articles au sujet de la vente du poisson et des produits du poisson entre de grands pays tels que le Japon et l'Union soviétique. On peut lire aussi des articles sur les Islandais vendant du poisson congelé en Union soviétique, dans certaines parties de l'Europe orientale et dans d'autres pays. Et nous savons que l'emploi du poisson s'est développé ces dernières années. Donc, si nous disons qu'il n'y a pas de marché tout simplement parce que, pour le moment, nous ne vendons pas dans un marché particulier, il me semble que c'est erroné. Nous devrions voir toutes les possibilités.

Nous n'avons peut-être pas assez insisté sur la question dans le mémoire, mais nous avons rappelé au gouvernement, à maintes reprises, qu'un gel devrait s'accompagner de tous les efforts voulus, pour trouver de nouveaux marchés.

Pour employer un autre exemple, si le blé canadien était trouvé, mettons, sous l'eau, à un endroit où on ne pourrait pas le voir, au lieu de le stocker dans des entrepôts, nous dirions peut-être toujours que nous ne pouvons pas vendre le blé canadien, mais lorsque le blé s'accumule dans les entrepôts et dans les champs, et que le climat politique s'en ressent, alors, les gouvernements s'empres-sent de le vendre. Si nous pouvions apporter le poisson sur la colline parlementaire et le laisser là, quelqu'un s'occuperait sûrement d'aller le vendre.

Une voix: Frais ou congelé?

Le président: Pour ce qui est de la dernière question de M. Crouse, au sujet des flétans que l'on rejette, dans certaines pêcheries, est-ce que les flétans restent vivants, ou sont-ils blessés de telle sorte que leur survie est incertaine?

M. Stevens: Ils sont blessés, et j'ai vu des rapports qui indiquent que le taux de mortalité du poisson se situe entre 16 et 43 ou 44 p. 100. Je suis certain de cela, car avec les chaluts, cela dépend de la longueur de la ligne, du nombre d'autres poissons pris et du soin

[Texte]

and the care that is used by the fishermen in getting the fish back over the side as quickly as possible.

Mr. Crouse: But the throwing back of these fish is utter waste, Mr. Chairman. I have operated ships of my own for 20 years in Nova Scotia, and I know that once they have been towed for a half an hour or more and are brought up on deck the chances of survival are very limited when you throw them back into the sea.

Mr. Stevens: This is correct. I think probably halibut have a slightly better chance than some others, but what you say is still true. A lot of them do die.

The only other thing I would like to say is that, on the other side of the ledger, if you were to open it up to trawling you could still have that problem, particularly with immature halibut.

One of the terrific problems in the Bering Sea is that these big trawl fleets are sometimes fishing in areas where the very small, immature—halibut are mixed in with other ground fish. This causes tremendous destruction.

M. Beaudoin: Merci, monsieur le président. Monsieur Stevens disait tantôt qu'il préconisait moins de latitude pour le ministre des Pêches et Forêts, en ce qui a trait à l'administration de la Loi sur les pêcheries. Qui, selon lui, devrait rédiger ou voir à l'application de ces lois?

Mr. Stevens: Are you speaking of the regulations about boats and limitations, and so forth.

Mr. Beaudoin: Yes.

Mr. Stevens: Our main consideration is that Parliament, the supreme governing body, should have more to say about the type of program that is going to be used when the rights of individuals are affected. We felt that this Committee and Parliament really have been stripped of all opportunity to influence, let alone direct, what the Minister might do.

M. Beaudoin: Voulez-vous dire par là que vous désireriez avoir une commission formée de gens dont le métier est la pêche ou autre chose?

Mr. Stevens: We feel that we should have the right and the opportunity to express our opinions very thoroughly before a Parliamentary committee, and thus before Parliament, as to the type of legislation; and that within the legislation there should be this board of

[Interprétation]

que prennent les pêcheurs pour ramener le poisson aussi vite que possible.

M. Crouse: Mais c'est une perte totale, monsieur le président, quand on rejette le poisson. J'ai eu moi-même des bateaux pendant vingt ans, en Nouvelle-Écosse, et je sais que quand on a tiré le poisson pendant une demi-heure ou plus, ses chances de survie sont très minces quand on le rejette à la mer.

M. Stevens: En effet. Les flétans durent un petit peu plus longtemps, mais, comme vous dites, il y en a beaucoup qui meurent. Ce que je voudrais ajouter, c'est que si vous fassiez la pêche au chalutier, il y aurait toujours le même problème pour le flétan qui n'est pas suffisamment développé.

Le même problème se pose dans la mer de Béring quand les chalutiers pêchent dans des régions où le flétan, trop jeune, se mêle à d'autres poissons de fond. Cela cause beaucoup de destruction.

Mr. Beaudoin: Thank you, Mr. Chairman. Mr. Stevens said a moment ago that he advocated less latitude for the Minister of Fisheries and Forestry with regard to administering the Fisheries Act. Who does he think should draft or see to the application of these acts?

M. Stevens: Quand vous parlez de règlements, c'est qu'il s'agit des règlements sur les bateaux et les restrictions?

M. Beaudoin: Oui.

M. Stevens: Nous estimons surtout que c'est le parlement qui devrait avoir d'avantage à dire quant au genre de programme à appliquer ici, car les droits des individus sont affectés. Nous avons trouvé que votre Comité et le parlement n'ont vraiment pas eu l'occasion ou la possibilité d'influencer ce que le ministre pourrait faire.

M. Beaudoin: Do you mean then that you would like to have a commission set up that would consist of people whose trade is fishing or something else?

M. Stevens: Nous estimons que nous devrions avoir le droit et l'occasion d'exprimer notre opinion très clairement devant un comité parlementaire, donc, devant le Parlement, sur le genre de législation qu'il faudrait; et puis, dans la loi même, il faudrait

[Text]

review which would not just look at individual cases but have an influence on the future policies that would have to be devised.

We do not think that any program of this kind can be entirely blueprinted in advance. It has to be changed and made to fit the problems that come up, and the fishermen themselves, as well as others in administrative and educational facilities, should have something to say, in addition to the legislators, on what is going to happen.

Mr. Beaudoin: Thank you.

The Chairman: I have exhausted the first round. First on the second round is Mr. Goode.

Mr. Goode: Thank you, Mr. Chairman. I will be very brief. I know that two more briefs have to come before us, and I do not want them to wait too long.

The Committee is going to be charged with the obligation of dealing with the Fisheries Improvement loan again—we believe in the near future—and it has been suggested that the amount of the Fisheries Improvement loan be \$25,000. You mention in your brief that you do not feel that this is adequate, but you do not give us a figure. What would you say is an adequate figure?

Mr. Stevens: There is none. There should be no top limit on an individual loan unless the government first of all decides that fishermen should only be allowed to own a boat up to a certain category. For example, I know of modern combination salmon-herring-halibut vessels that have exceeded \$350,000 in terms of the cost related to building in B.C. Some of that has been provided by a 50 per cent subsidy. That happened in the past. Why place a limit?

Mr. Goode: Of the 5,000 owners and fishermen who are in your union, what would be the average value of their boats at the moment?

Mr. Stevens: I have never tried to calculate an average. Ownership, in our union, in terms of crew members, extends only perhaps to the occasional part-owner. Most of our members own smaller gill-netters and trawlers, which would vary within a range of, say, \$4,000 or \$5,000 up to \$20,000 or \$30,000.

[Interpretation]

qu'on prévoit un conseil de révision, d'étude, qui étudierait non seulement les cas particuliers, mais qui influencerait sur la politique à venir, à mettre au point.

Nous ne pensons pas qu'on puisse déterminer les programmes à l'avance. Il faut pouvoir faire des modifications pour adapter la politique aux problèmes qui se présentent, pour que les pêcheurs eux-mêmes, de même que d'autres dans les domaines de l'instruction et de l'administration, aient quelque chose à dire, en plus des législateurs, sur ce qui doit se passer.

M. Beaudoin: Merci.

Le président: Et bien, la première ronde des questions est terminée. Et maintenant, il y a M. Goode pour commencer le deuxième tour.

M. Goode: Merci, monsieur le président. Je ne vais pas m'étendre, parce que je sais qu'il y a encore deux mémoires qui doivent être présentés, et je ne veux pas les retarder.

Le Comité devra s'occuper des prêts aidant aux opérations de pêche, dans un proche avenir, croyons-nous et on a proposé que le montant de ces prêts soit porté à \$25,000. Dans votre mémoire, vous dites que vous n'estimez pas que ce soit suffisant, mais vous ne citez pas de chiffres. D'après vous, qu'est-ce qu'il faudrait comme montant?

M. Stevens: Il n'y en a aucun. Il ne vaudrait pas qu'il y ait de limite pour les prêts, à moins que le gouvernement ne décide d'abord que les pêcheurs ne devraient être propriétaires que d'une certaine catégorie de bateaux. Par exemple, je sais qu'il y a un bateau pour la prise de flétan, de hareng et de saumon et qu'il dépasse les \$350,000 quand il s'agit de le construire en Colombie-Britannique. Il y a eu une subvention de 50 p. 100 accordée dans ce cas. Cela est arrivé par le passé. Pourquoi établir une limite?

M. Goode: Sur les 5,000 propriétaires et pêcheurs qui font partie de votre syndicat, quelle est actuellement la valeur moyenne de leurs bateaux?

M. Stevens: Je n'ai jamais essayé de calculer une moyenne. Les membres qui sont propriétaires de bateaux, surtout des membres de l'équipage, ne sont peut-être parfois que des propriétaires conjoints. La plupart de nos membres sont propriétaires de petits bateaux de pêche au filet maillant et de chalutiers, dont le prix varie entre 4 ou \$5,000 et 20 ou \$30,000.

[Texte]

Mr. Goode: Therefore, for the people you represent the \$25,000 will almost be adequate?

Mr. Stevens: In terms of the gill-netter or trawler the cost of competing, so to speak, has now risen, so that some of those trawlers will be wanting or to go in for a \$40,000 or \$50,000 vessel. But we are also thinking of those who have gone into the ownership of larger vessels. There is no reason that they should not be able to get a loan from the government in order to move into it and get away from the company restrictions.

Mr. Goode: The new loan interest rate is 1 per cent above the long-term borrowing of the government and the credit unions. Gulf and Fraser and Richmond, for instance, the big ones, are concerned that they are not going to be able to lend money under the plan at this interest rate because of the problems of what they pay their depositors.

The ideal situation would be for the federal government to lend them money at cheap interest rates, but knowing the practical problems involved we are not going to get that.

The other solution would be to free the interest rates, and this was put to us by the credit unions. The freeing of the interest rates would mean that the interest rates would be around 9 to 9½ per cent. Would you favour this move so that your people would have money available to them even though the interest rate would be a little higher?

Mr. Stevens: I do not like the idea, or the suggestion, you make that it is impossible to do something else. I think this is perhaps how the credit unions, to some extent, have got boxed in. Here they are, set up as organizations to try to reduce interest costs; to try to prevent people from having to pay these exorbitant rates, not just for loans to make a living, but to own a home or to meet everyday living costs, and so on; and they are being forced to chase this fantastic rise in interest rates. Unless instructed by the organization I am just not going to depart from our demand that it is up to the responsible people in government to bring those interest rates down; and in the case of the Fishermen's Loan Board that is where it should be pegged—down near 5 per cent, not up at 9½ per cent.

Mr. Goode: One possibility of long-term cheap money by the federal government could be by having deposits placed in credit unions, by the federal government instead of

[Interprétation]

M. Goode: Donc, en ce qui concerne les gens que vous représentez, ce montant de \$25,000 serait suffisant?

M. Stevens: En ce qui concerne les bateaux de pêche au filet maillant ou les chalutiers, le coût, quand il s'agit de concurrencer, pour ainsi dire, le coût augmente, de sorte que certains de ces chalutiers coûtent maintenant de 40 à \$50,000. Mais nous songeons aussi aux propriétaires de gros bateaux. Il n'y a pas de raison pour qu'ils ne puissent pas emprunter de l'argent au gouvernement pour éviter le contrôle des compagnies.

M. Goode: Le nouveau taux d'intérêt des prêts est supérieur de 1 p. 100 aux emprunts à long terme du gouvernement et des coopératives de crédit. La Gulf and Fraser and Richmond, par exemple, s'inquiète du fait qu'elle ne pourra pas prêter de l'argent à ce taux d'intérêt à cause de ce qu'elle paie aux dépositaires. L'idéal, ce serait que le gouvernement fédéral leur prête de l'argent à des taux d'intérêt très bas; mais comme nous connaissons le problème, ce ne sera pas possible. L'autre solution, c'est de détaxer les taux d'intérêt, ce que nous ont proposé les coopératives de crédit. Ce qui voudrait dire que les taux d'intérêt seraient d'environ 9 ou 9½ p. 100. Est-ce que vous seriez d'accord que vos gens puissent avoir de l'argent, même si le taux d'intérêt était un peu plus élevé?

M. Stevens: Je n'aime pas beaucoup vous entendre dire qu'il est impossible de faire autre chose. Je crois que c'est là où les coopératives de crédit, jusqu'à un certain point, ont été empêchées de faire quelque chose. Ce sont des organisations qui essaient de réduire les taux d'intérêt, d'éviter que les gens aient à payer des taux aussi élevés pour des emprunts, non seulement pour gagner leur vie, mais pour acheter leur maison, vivre, etc.; et ils sont obligés de suivre cette montée des taux d'intérêt. Et nous estimons que c'est aux gens responsables du gouvernement de faire baisser ces taux d'intérêt. Dans le cas de l'Office de prêt aux pêcheurs, il faudrait que le taux d'intérêt soit d'environ 5 p. 100, et non pas de 9½ p. 100.

M. Goode: Les prêts à long terme et à taux d'intérêt modiques seraient possibles si le gouvernement faisait des dépôts dans les coopératives de crédit et non dans les banques.

[Text]

all in banks. Some of us are working to that end, but I do not think it will happen for the next year or two.

Thank you, Mr. Stevens.

Mr. Hogarth: I want to discuss the recommendation you have made on the extension of territorial waters. This is a subject about which we have been extremely active for the last two months.

Are you aware of the Minister's recent pronouncement about the creation of Canadian fishing zones?

Mr. Stevens: Yes; in fact we comment on it in the brief.

Mr. Hogarth: Pardon my lack of reference to the particular point, but what is your general view about that as opposed to the drawing of baselines?

Mr. Stevens: We do not think the position is as strong as it was to go ahead and declare those waters to be the internal waters of Canada. For example, the main body of water that would be affected, according to the Minister's announcement, is Queen Charlotte Sound. In our opinion, if Queen Charlotte Sound is not enclosed by the normal headland-to-headland baseline that we are talking about this indicates that we are saying to the world that Queen Charlotte Sound remains part of the high seas. So immediately we are transforming it from internal waters, as it should be, to high seas.

Then there is the question of negotiation with other states in terms of fisheries rights, and it may affect other rights as well. That will become more complicated rather than less complicated, because Japan and the Soviet Union have both fished in there, in addition to the Americans. They will say, "This is not your internal waters. It is not even your territorial waters. On what basis are you claiming the right to extend your jurisdiction over an exclusive fishing zone?" Therefore, I do not think we are out of the woods on that score at all. We feel it would have been better for Canada to enclose those bodies.

Mr. Hogarth: Has your union received any legal opinions on the side effects of such a baseline?

Mr. Stevens: We have heard the opinion expressed by people within the Department, who are legal experts, on this so to speak and they have consulted other legal experts—that one of the things we might be up against is

[Interpretation]

Certains d'entre nous travaillent à cette fin, mais je ne crois pas que nous allons y arriver d'ici un an ou deux, Merci, monsieur Stevens.

M. Hogarth: Je voulais vous parler des recommandations que vous avez faites en ce qui concerne l'extension des eaux territoriales. C'est un sujet qui nous préoccupe beaucoup depuis deux mois.

Est-ce que vous êtes au courant de ce que le ministre a dit dernièrement en ce qui concerne l'établissement de zones de pêche par le Canada?

M. Stevens: Oui, il en est question dans notre mémoire.

M. Hogarth: Quelle est votre opinion à ce sujet, par opposition à l'établissement de limites?

M. Stevens: Nous ne pensons pas que ce serait une position aussi solide que si l'on disait que ces eaux sont des eaux internes du Canada. Par exemple, d'après le ministre, la principale pièce d'eau touchée ce serait surtout le détroit de la reine Charlotte. A notre avis, si le détroit de la reine Charlotte n'est pas enfermé par la limite normale tracée de cap en cap, cela indique que nous disons que cette zone reste ouverte à tout le monde. Immédiatement, ces eaux internes deviennent la haute mer.

Ensuite, il y a la question des négociations avec d'autres pays, en ce qui concerne les droits de pêche, et elles deviennent plus compliquées parce que le Japon et l'Union Soviétique ont pêché à cet endroit et les Américains aussi. Ils diront: «il ne s'agit pas de vos eaux internes. Ce n'est même pas vos eaux territoriales. Donc, pourquoi prétendez-vous avoir le droit d'étendre votre juridiction sur une zone exclusive de pêche?» Donc, nous estimons qu'il aurait mieux fallu que le Canada déclare que la limite comprendrait ces deux étendues d'eau.

M. Hogarth: Est-ce que votre syndicat a consulté des avocats sur les répercussions que pourrait entraîner l'établissement de cette limite?

M. Stevens: Nous avons eu l'opinion des avocats du ministère qui sont des experts; ils ont consulté d'autres avocats. L'origine des difficultés serait peut-être le règlement des 44 milles qu'on a établi quand la Norvège a

[Texte]

the 44-mile rule that was established as a result of Norway's extension of her waters.

Our answer to that is that Norway had to break new ground and that it is about time Canada said, "All right; if the line has to run 96 miles let us break the new ground". Let us make that declaration and let the others challenge it.

Mr. Hogarth: I would like your comment on the suggestion that has been put to some of us, that if we draw such a baseline everything landward of the baseline will come underwater mineral resources?

Mr. Stevens: We are not going to try to solve the hassle between Premier Bennett and Ottawa over mineral rights, but I think that is a case in point. Is it not better to have an argument within Canada about whether these are under provincial or federal jurisdiction than to be involved in an argument with other states who come along and say, "By your own declaration it is part of the high seas, and neither of you have any real rights over it. It is high seas".

Mr. Hogarth: Is my suggestion to you now the first time you have heard that position taken?

Mr. Stevens: It is the first time it has been put in quite that way. I have heard that that is perhaps a factor, but I never heard that it had anything to do with the actual extension of our waters. I always thought it was the Americans who did not like its effect on some of the rights of navigation of their military craft.

Mr. Hogarth: That may be another factor. But what about our rights to fish in the Bering Sea? If we exclude foreign fishermen from Queen Charlotte Sound what would your position be if the Americans and Russians decided they would do it to the Canadians in the Bering Sea?

Mr. Stevens: I think both the Americans and the Russians will draw headland-to-headland baselines as broadly as they can. In fact, in their charts there is now one that goes across Bristol Bay, and that runs a lot further than the one that would go from the top of Vancouver Island to Cape St. James. But even then, outside of that, there is still a lot of territory that can be fished by the Canadians or anyone else that would be high seas.

Mr. Hogarth: Is it not possible that this sort of act in international baselines can eventually act to the detriment of Canadian

[Interprétation]

étendu ses eaux territoriales. Notre réponse à cela, c'est que la Norvège a dû faire quelque chose de tout à fait nouveau à cet égard et qu'il est à peu près temps que le Canada dise: «Bien, si la limite doit s'étendre sur 96 milles, n'hésitons pas». Faisons cette déclaration et laissons les autres la contester.

M. Hogarth: On nous a dit que si nous établissons cette limite, tout ce qui est du côté terre relèverait de la province en ce qui concerne les droits miniers sous-marins, qu'en pensez-vous?

M. Stevens: Nous n'allons pas essayer de résoudre la dispute entre le premier ministre Bennett et Ottawa au sujet des droits miniers, mais je crois qu'il s'agit d'un cas à l'étude. Ne vaut-il pas mieux avoir une discussion au Canada pour voir s'il s'agit de domaines provinciaux ou fédéraux au lieu d'en discuter avec d'autres pays qui viennent nous dire: d'après votre déclaration, c'est une partie de la haute mer, et personne n'y a de véritables droits. Il s'agit de la haute mer.»

M. Hogarth: Est-ce que c'est la première fois qu'on aborde la question sous cet angle?

M. Stevens: C'est la première fois qu'on en a parlé de cette façon. J'avais entendu dire que c'est peut-être là un facteur, mais je n'ai jamais su que cela avait quelque chose à voir avec l'extension de nos eaux. J'ai toujours pensé que c'était les Américains qui n'aimaient pas que cela touche les droits de navigation de leurs bâtiments de guerre.

M. Hogarth: C'est peut-être un autre facteur. Et nos droits de pêche dans la mer de Béring? Si nous excluons les pêcheurs étrangers du détroit de la reine Charlotte, quelle serait alors votre position si les Américains et les Russes décidaient d'interdire la mer de Béring aux Canadiens?

M. Stevens: Je crois que les Américains et les Russes vont tracer une limite de cap en cap aussi large que possible. En fait, sur leurs cartes il y a déjà une limite qui traverse la Baie de Bristol et qui passe beaucoup plus loin que celle qui irait de l'extrémité de l'île Vancouver au cap St. James. Même alors, il reste un vaste territoire où les Canadiens peuvent pêcher, ou n'importe qui d'autres, en haute mer.

M. Hogarth: Est-ce que ce jeu qui se fait autour des limites internationales pourrait, éventuellement, être au détriment des

[Text]

fishermen, if we expand our fisheries into international waters?

Mr. Stevens: I do not really think that the long-term effect would be to deprive Canadians of the opportunity of developing an off-shore fishery for bottom fish, or tuna, or other species.

I think our interest is still best preserved by obtaining as broad an extension of our territorial waters as is possible and, as we have suggested, to go to the edge of our continental shelf with exclusive fishing rights. That would mean that in some cases we would be working out reciprocal agreements with, say, the Americans in that area from the edge of our territorial waters to the edge of the continental shelf.

Mr. Hogarth: Thank you.

Mr. St. Pierre. I am glad Mr. Hogarth dealt with the 12-mile limit. I, too, have been very interested in that subject and did not want the day to pass without some discussion of it. I will, however, be able to skip that Mr. Chairman.

I really have just a few points for clarification. What is the average age of fishermen, Mr. Stevens?

Mr. Stevens: I am afraid I do not know. It appears to me that in some aspects it has been increasing, but on the other hand I see other groups. I could not give you any figures. I do not think there are any available, to my knowledge.

Mr. St. Pierre: I now move to an entirely different subject. I do not want to open it up to discussion, because I know how limited our time is. It is again a matter of clarification, relative to wharfage fees. I have read your complete brief on this. I know what your position is. One thing seems to me to be missing and if it is I would like you to confirm it.

The present regulations on charges for DOT marinas in this area are quite a hodge-podge. There are great discrepancies. In some cases there are no charges and in others the fees are high. Is this correct?

Mr. Stevens: That is right. In some cases the Department of Transport, or authorities granted by the Department of Transport, are charging the full side wharfage of 40 cents a foot per month, running to \$16 or \$18 per month for vessels; in others it is free; and in other places there is a much more reasonable charge.

Mr. St. Pierre: I merely sought confirmation of that because I did not find it in your brief.

[Interpretation]

pêcheurs canadiens, si nous étendons nos pêcheries aux eaux internationales?

M. Stevens: Je ne crois pas qu'à la longue les Canadiens seraient privés de la possibilité de faire des pêcheries, au large des côtes, pour le poisson de fond, le thon, ou d'autres espèces.

Je crois que nos intérêts seraient encore mieux protégés si nous pouvions réussir à étendre le plus possible nos eaux territoriales et, comme je l'ai dit, d'avoir des droits de pêche exclusifs sur les bords de notre plateau continental. Ainsi, dans certains cas, nous aurions des ententes réciproques avec, disons, les Américains, dans cette région, de la limite de nos eaux territoriales à la limite du plateau continental.

M. Hogarth: Merci.

M. St-Pierre: Je suis très content que M. Hogarth ait étudié cette question de la limite des douze milles. Ce sujet m'intéresse beaucoup et je ne voudrais pas qu'on le laisse de côté. Mais j'ai un ou deux points à tirer au clair. Quel est l'âge moyen de pêcheurs, monsieur Stevens?

M. Stevens: Je n'en suis pas tout à fait sûr, vraiment. Il me semble que l'âge a augmenté, à certains égards, mais, d'autre part, je vois d'autres groupes. Je ne pourrais vous donner des chiffres à ce sujet. Je ne crois pas qu'il y en ait, à ma connaissance.

M. St-Pierre: Je passe à un autre sujet. Je ne veux pas ouvrir une discussion là-dessus, car je sais que le temps nous manque. Il s'agit encore de clarifier la question des droits d'amarrage. J'ai lu votre mémoire à ce sujet. Je connais votre position. Il y a quelque chose qui manque, à mon avis, et, si oui, j'aimerais que vous le confirmiez.

Les règlements actuels relatifs aux frais des marinas du ministère des Transports sont très variés. Il y a des endroits où ça coûte très cher, et d'autres, rien du tout, n'est-ce pas?

M. Stevens: En effet. Dans certains cas, le ministère des Transports, ou les autorités reconnues par le ministère, exige le plein tarif mensuel de 40 cents le pied, soit de \$16 à \$18 par mois par navire; dans d'autres endroits, c'est gratuit; et ailleurs, le tarif est beaucoup moins élevé.

M. St-Pierre: Je voulais simplement le faire confirmer, parce qu'il n'y est pas question dans votre mémoire.

[Texte]

I have one other point on which I would like to get clarification. In your original set of 10 proposals on how you would prefer fishermen licensed, I find, rather disturbing. No. 8. What you propose there is:

Regulations established for the purpose of licence limitation shall be designed to maintain the present percentage of Native fishermen amongst licence holders.

As I read that—and I cannot read it any other way—what you are suggesting is that a certain group of people, solely by reason of the fact that they are Indians, shall be restricted and held indefinitely to a certain percentage of the men in the fleet.

Mr. Stevens: First of all, perhaps I should clarify it. To make clearer what our meaning is we should have used the words “as a minimum”. In other words, that their numbers in relation to the percentage of the total should not be allowed to decline below the present ratio. We think this is necessary to try to protect.

Mr. St. Pierre: You were not suggesting that there should be...

Mr. Stevens: We were not suggesting a maximum.

Mr. St. Pierre: Thank you.

The Chairman: Thank you, Mr. St. Pierre. If there are no further questions, I will on behalf of the Committee, thank Mr. Stevens and his delegation. The fact that we have kept him here for so many hours proves that he has been answering our questions very capably. The brief showed great understanding of the problems of fisheries. I thank him on behalf of the Committee.

Mr. Stevens: Thank you very much, Mr. Chairman.

The Chairman: I will now call the Richmond Anti-Pollution Association.

Mr. Hogarth: It was mentioned that we have another brief after this to hear.

The Chairman: There has been some indication that there is one more brief but I do not know if the gentleman is here now.

Mr. Hogarth: I have not been supplied with a copy.

The Chairman: Mr. Hogarth, I understand the gentleman will not be appearing. So this will be our last brief.

Mr. Hogarth: Fine, thank you.

[Interprétation]

Il y a un autre point que je voudrais faire clarifier. Dans vos dix propositions sur les permis accordés aux pêcheurs, il y a quelque chose qui m'ennuie, c'est le numéro 8, où vous proposez que:

Les règlements établis pour limiter les permis doivent maintenir le pourcentage actuel de pêcheurs indigènes, parmi les détenteurs de permis.

Si je comprends bien, vous proposez qu'un certain groupe, simplement parce qu'il s'agit d'Indiens, ne pourra jamais dépasser un certain pourcentage des membres de la flotte.

M. Stevens: Peut-être devrais-je d'abord clarifier la chose. Pour bien l'expliquer, nous aurions dû employer les mots: «comme minimum». Autrement dit, que leur nombre, par rapport au pourcentage du total, ne devrait pas diminuer au-dessous du chiffre actuel. Nous estimons que c'est nécessaire pour protéger...

M. St-Pierre: Vous ne proposez donc pas que...

M. Stevens: Nous ne proposons pas un maximum.

M. St-Pierre: Merci.

Le président: Merci, monsieur St-Pierre. Si c'est tout, je vais remercier M. Stevens et sa délégation, au nom du Comité. Le fait que nous l'avons gardé ici tant d'heures prouve qu'il a très bien répondu à nos questions. Le mémoire démontre qu'il comprend bien les problèmes de la pêche. Je le remercie au nom du Comité.

M. Stevens: Merci beaucoup, monsieur le président.

Le président: Je donne maintenant la parole à la Richmond Anti-Pollution Association.

M. Hogarth: On a indiqué que nous allons l'entendre.

Le président: On l'a annoncé en effet, mais je ne sais pas si ce monsieur est ici.

M. Hogarth: Je n'ai pas reçu de copie.

Le président: Je vois que la personne en question ne témoignera pas.

M. Hogarth: Ce sera donc notre dernier mémoire. Bien merci.

[Text]

The Chairman: At this time I would like to introduce to you Mrs. Lois Boyce, who will read a short brief to you.

Mrs. Lois Boyce (Secretary of the Richmond Anti Pollution Association): First I would like to apologize for our president's absence; he is in the midst of arbitration so I am pinch-hitting for him.

Also I should like to apologize to the French members of this committee for not having adequate accommodation for translation.

Gentlemen, Richmond Anti Pollution Association appreciates this opportunity of appearing before you and your willingness to make extraordinary arrangements to hear our views concerning pollution of the Lower Fraser River.

Richmond Anti Pollution Association (R.A.P.A.) is made up of concerned Ratepayers of the Municipality of Richmond, as well as affiliated organizations—Richmond Rod and Gun Club; B.C. Federation of Labour; Richmond Local Unions of the International Association of Machinists and Aero Space Workers; United Fishermen and Allied Workers (both offshore and onshore); the Pacific Salmon Society (representing commercial and sports fishermen, as well as marina and motel operators); West Richmond Ratepayers Association and South Arm Ratepayers Association.

R.A.P.A. was formed because of concern of further pollution of the Fraser when a permit was granted to the Municipality of Richmond to install a sewer system and pour up to 8 million gallons per day of virtually raw domestic sewage and industrial waste into the South Arm of the Fraser River, with the proposed outfall to be at Gilbert Road Beach, one-half mile up stream from the Salmon canneries at Steveston.

After presentation of our first brief to Richmond Municipal Council, we were accused of being "emotional". It is true, we were and are emotional, and make no apologies. We note that industrialists become very emotional about matters that affect their financial position—but by some strange reasoning this is considered to be an acceptable form of emotionalism.

R.A.P.A. is dedicated to the control and abatement of pollution in our area and we

[Interpretation]

Le président: J'aimerais donc vous présenter, madame Lois Boyce qui vous donnera lecture d'un bref mémoire.

Mme Lois Boyce (secrétaire de la Richmond Anti-Pollution Association): J'aimerais tout d'abord excuser le présence de notre président qui est en plein arbitrage et qui m'a demandé de le remplacer.

Je m'excuse, en outre, auprès des députés canadiens-français du Comité de ne pas avoir eu la possibilité de faire traduire notre mémoire.

Messieurs,

Au nom de la *Richmond Anti-Pollution Association*, nous nous félicitons de l'occasion qui nous est offerte de nous présenter devant vous et sommes sensibles à la bonne volonté dont vous avez fait preuve en prenant des dispositions extraordinaires pour entendre notre point de vue sur la pollution du cours inférieur du fleuve Fraser.

La *Richmond Anti-Pollution Association* (R.A.P.A.) se compose des contribuables intéressés de la municipalité de Richmond, ainsi que de groupes affiliés (la *Richmond Rod and Gun Club*; la *B.C. Federation of Labour*; les syndicats locaux de Richmond de l'Association internationale des machinistes et des travailleurs aérospatiaux; la *United Fishermen and Allied Workers* (personnel en mer aussi bien que personnel à terre); la *Pacific Salmon Society* (association de pêcheurs professionnels et amateurs et de gérants de ports de plaisance et de motels); la *West Richmond Ratepayers Association* et la *South Arm Ratepayers Association*).

La création de la R.A.P.A. provient de la crainte de voir le Fraser encore plus pollué, ressentie lors de l'octroi à la municipalité de Richmond d'un permis de construire un réseau d'égouts et de déverser jusqu'à huit millions de gallons par jour d'eaux usées domestiques et de déchets industriels pratiquement non traités dans le bras sud du Fraser, en un point en principe situé près de la plage de la route Gilbert, à un demi-mille en amont des conserveries de saumon de Steveston.

Lorsque nous eûmes présenté notre premier mémoire au conseil municipal de Richmond, on nous accusa d'être «émotifs». C'est vrai, nous l'avons été et le sommes encore, et nous ne nous en excusons pas. Nous remarquons seulement que les industriels deviennent très émotifs quand il s'agit de leur situation financière, mais, en vertu de quelque étrange raisonnement, on considère cette attitude comme une forme acceptable d'émotivité.

La R.A.P.A. se consacre à la limitation et à la réduction de la pollution dans notre région

[Texte]

have never wavered from our original stand—pollution of the Fraser must not continue.

Federal, Provincial and Municipal Governments must face up to their responsibilities and decree that industrial and domestic waste must cease despoiling our waters. British Columbia's water resources, and indeed Canada's water resources, has become our greatest asset—financially, industrially, recreationally and for the health and well-being of our people.

The areas of R.A.P.A.'s concern are as follows:

1. The recommendations of the Greater Vancouver Sewerage and Drainage District contained in the interim up-dating of the Rawn Report in January 1969, calls for the construction of three primary treatment plants on the South Arm of the Fraser River. These three plants, together with Iona Sewage Treatment Plant now in operation, will make the Lower Fraser a sewage dumping area for the entire Lower Mainland.

2. The present and potential health hazards of working and living in a Municipality completely surrounded by a polluted river.

3. The delay in declaration of water quality standards.

4. The sweeping powers enjoyed by the Greater Vancouver Sewerage & Drainage District—the only involvement of a member municipality seems to be in the paying of the bills.

5. If G.V.S. & D.D. recommendations are carried out, Richmond will be an Island Municipality, surrounded by rivers of effluent. The recommendations completely disregard Richmond's potential as a recreational area and tourist attraction.

6. If G.V.S. & D.D. recommendations are adhered to, our multi-million dollar fishing industry will be in greater jeopardy than present. The loss of our fishing industry and the health of the fishermen will be further endangered.

R.A.P.A. RECOMMENDATIONS

1. All sewage intended for the three primary plants on the South Arm of the Fraser—that is within a 10 to 12 mile distance on the South Arm, and these are to be very large plants—be diverted to a sewage treatment plant which could be constructed at the Roberts Bank Superport.

[Interprétation]

et ne s'est jamais écartée de sa position initiale: la pollution du Fraser doit cesser.

Les autorités fédérales, provinciales et municipales doivent prendre leurs responsabilités et arrêter qu'il ne faut plus laisser les déchets industriels et domestiques souiller nos eaux. Les ressources en eaux de la Colombie-Britannique et celles de tout le Canada sont devenues notre plus grand avoir, aussi bien sur le plan financier, industriel que récréatif, et ce, dans l'intérêt même de la santé et du bien-être de la population.

Les sujets de préoccupation de la R.A.P.A. sont les suivants:

1. Les recommandations du *Greater Vancouver Sewerage and Drainage District*, formulées dans la mise à jour provisoire du rapport Rawn en janvier 1969, portent sur la construction de trois usines de traitement primaire sur le bras sud du Fraser. Ces trois usines, ajoutées à l'usine de traitement des eaux d'égout d'Iona actuellement en fonctionnement, vont transformer le cours inférieur du Fraser en une zone d'épandage pour toute la basse région continentale.

2. Le fait de travailler et de vivre dans une commune entourée de toute part par un fleuve pollué constitue un danger permanent pour la santé.

3. Les lenteurs mises à énoncer des normes de qualité pour l'eau.

4. Les pouvoirs discrétionnaires dont jouit le *Greater Vancouver Sewerage and Drainage District*, la seule participation des administrés ne semblant consister que dans le paiement de la note.

5. Si les recommandations de la G.V.S. et D.D. sont appliquées, Richmond deviendra une commune insulaire, entourée par des effluents comme par des rivières. Ces recommandations méconnaissent complètement la possibilité pour Richmond de constituer une zone récréative et un centre d'attraction touristique.

6. Si ces mêmes recommandations l'emportent, notre industrie de la pêche, dont la valeur est de plusieurs millions de dollars, sera encore plus compromise qu'aujourd'hui. Les pertes qu'elle subira seront encore plus grandes et les risques pour la santé des pêcheurs encore supérieurs.

R.A.P.A.

1. Que tout le réseau d'égouts prévu pour les trois usines primaires du bras sud du Fraser soit détourné vers une usine de traitement des eaux usées que l'on pourrait construire au *Roberts Bank Superport*.

[Text]

2. The quality of treatment at Iona Sewage Treatment Plant must be upgraded to prevent further degradation of our beach and allow for development as a park of the more than 100 acres on the Island. The present area of degradation created by the Iona Island Plant must be cleaned up.

3. National water quality standards be set, in order that one area or one province not pollute another, and to prevent discrimination in the establishment of new industries.

4. The lower Fraser be considered under the International Joint Commission and that representations be made to the Minister of External Affairs to this end, in order that comprehensive research of the Lower Fraser be undertaken.

5. We also urge studies be made of the impact of the Roberts Bank Superport, and proposed extension of runways at the Vancouver International Airport and the effect these developments will have on pollution of the river, migration and well-being of fish and wild fowl, flood control, etc. If this area cannot be considered under the I.J.C., a comprehensive study of the many problems of the Lower Fraser be undertaken, as requested in our letter of October 1968, to Mr. J. Greene, Department of Mines, Energy and Water Resources.

6. Richmond be developed as a recreational area.

7. The fishing industry and health of the fishermen must be protected. Steps must be taken to clean up the Fraser, and it must not be used as a sewage dumping area. The Fraser with its beginnings in glaciers, must not become a flowing sewer.

CONCLUSION

Our Association is quite aware of the fact that the tidal portion of the Fraser River is the responsibility of everyone and all levels of Government. This responsibility would seem to indicate the urgency for establishment of a Department of Environmental Control, with powers to get the job done.

In the lower 20 to 25 miles of the Fraser River reverse tidal flow conditions trap sewage discharged into the River, up to 10 hours in each 24 hour period. With the continual flow of sewage and the back-up conditions of the tidal actions, it is not difficult to visualize

[Interpretation]

2. Il faut améliorer la qualité de fonctionnement de l'usine de traitement des eaux usées d'Iona pour empêcher qu'il soit davantage porté atteinte à notre plage et permettre l'aménagement en parc des quelque cent acres et plus de l'île. Les dégradations causées par le fonctionnement de cette usine doivent être corrigées.

3. Fixation de normes de qualité des eaux nationales, de façon à empêcher la pollution d'une région ou d'une province à une autre ainsi que la discrimination dans la création de nouvelles entreprises industrielles.

4. Que le cas du cours inférieur du Fraser soit examiné par la Commission mixte internationale et que des demandes soient faites au ministre des Affaires extérieures à cette fin, de façon à faire entreprendre des études approfondies sur cette question.

5. Nous recommandons fortement, en outre, la mise en œuvre d'études sur les conséquences de l'aménagement du *Roberts Bank Superport* et du projet d'agrandissement des pistes de l'aéroport international de Vancouver ainsi que sur l'effet de ces réalisations sur la pollution du fleuve, la migration et la vie des poissons et du gibier d'eau, la lutte contre les inondations, etc. Au cas où cette question ne puisse être prise en considération par la Commission mixte internationale, que l'on entreprenne une étude approfondie des nombreux problèmes ayant trait au cours inférieur du Fraser, conformément à la demande formulée dans notre lettre d'octobre 1968, adressée à M. J. Greene, ministre des Mines, de l'Énergie et des Ressources en eau.

6. Que Richmond soit aménagée en zone récréative.

7. Il faut protéger l'industrie de la pêche et la santé du pêcheur. Il faut prendre des mesures pour nettoyer le Fraser et éviter de l'utiliser comme zone d'épandage. Le Fraser, qui prend sa source dans les glaciers, ne doit pas devenir un fleuve-égout.

Conclusion

Notre association est parfaitement consciente du fait que chacun, à tous les niveaux du gouvernement, est responsable de la partie du Fraser soumise à marée. Il semble donc urgent de créer un Ministère de la protection du milieu, doté des pouvoirs nécessaires pour lui permettre d'accomplir sa tâche.

Dans les derniers vingt à vingt-cinq milles du cours du Fraser, la marée montante empêche l'écoulement des eaux usées déversées dans le fleuve, et ce jusqu'à dix heures par période de vingt-quatre heures. Compte tenu de l'écoulement continu des eaux usées et de

[Texte]

worsening condition of the already polluted river, in the very near future.

Without going into detail, we can best sum up our views on pollution of the Fraser River by advising we fully endorse the submission made to you, gentlemen, yesterday, April 21 by Mr. Buck Suzuki, and this Association wishes to be placed on record at this hearing to that effect.

The Chairman: Thank you, Mrs. Boyce. I realize that questioning of Mrs. Boyce may be limited as the earlier briefs, S.P.E.C. for one, The United Fishermen and Allied Workers' Union, Mr. Homer Stevens and the Fraser River District covered some of this.

Mr. Howard, would you proceed.

Mr. Howard (Skeena): Mr. Chairman, I think probably all the Committee wishes, as we said yesterday to Mr. Suzuki, to congratulate the association and Mrs. Boyce for touching on a very vital problem.

I would like clarification on a couple of matters. Does the Greater Vancouver Sewerage and Drainage District embrace all the municipalities in the lower mainland?

Mrs. Boyce: For the purpose up-dating the Rawn Report a number of non-member communities were included. They are not all members of the Greater Vancouver Sewerage and Drainage District but I might say that by the act that incorporates this district they can force them to become members.

Mr. Howard (Skeena): And the prospect then is that this may occur, knowing the way government operates.

Mrs. Boyce: When we went to the Parliamentary Library and got copies of the act of incorporation of this district and all the amendments through the years that have given it still more power I might say that our municipality, among others, made strong objection to the great powers of expropriating that were given to this district at the time of its incorporation. Nevertheless, it was incorporated—and it has been given still more powers.

Mr. Howard (Skeena): Could I ask you what the Greater Vancouver Sewerage and Drainage District has done in response to the protestations about pollution of the area?

[Interprétation]

la situation créée par la marée montante, il n'est pas difficile de prévoir pour un avenir très proche que les conditions actuelles de la pollution de la rivière ne feront qu'empirer.

Sans entrer dans les détails, nous pouvons résumer au mieux notre point de vue sur la pollution du Fraser en portant à votre connaissance, Messieurs, que nous appuyons pleinement l'opinion exprimée dans le rapport qui vous a été présenté hier, 21 avril, par Monsieur Buck Suzuki, et notre association exprime le vœu de voir à cette fin le présent rapport consigné au procès-verbal.

Le président: Merci, madame Boyce je me rends compte que les questions qu'on pourra poser à M^{me} Boyce seront limitées de la même façon que pour les mémoires précédents dont celui de la S.P.E.C. M. Homer Stevens, de la section de Fraser River de la *United Fishermen and Allied Workers' Union*, ont couvert certaines de ces questions.

Monsieur Howard, voulez-vous commencer?

M. Howard (Skeena): Monsieur le président, nous voulons tous vous féliciter comme nous avons félicité, hier, M. Suzuki. Nous tenons à féliciter votre association et M^{me} Boyce de s'attaquer à un problème aussi critique.

Je voudrais tout simplement demander quelques précisions sur un ou deux sujets. Est-ce que le *Greater Vancouver Sewerage and Drainage District* comprend toute les municipalités du bas Fraser?

Mme Boyce: Dans le but de mettre à jour le rapport Rawn, on a inclus un certain nombre de municipalités n'en faisant pas partie. Ce ne sont pas tous des membres du district, mais en vertu de la loi qui a établi officiellement ce district, ces municipalités peuvent être forcées d'en faire partie.

M. Howard (Skeena): Et connaissant la façon d'agir du gouvernement, il est fort probable que cela se produira.

Mme Boyce: Lorsque nous nous sommes adressés à la Bibliothèque du Parlement et nous avons obtenu des exemplaires de la loi sur l'incorporation de ce district et des modifications apportées au cours des années qui lui ont donné plus de pouvoir qu'il avait, notre municipalité, entre autres, s'est opposée au grand pouvoir d'expropriation accordé au district au moment de son incorporation. Néanmoins, il a été incorporé et a obtenu encore plus de pouvoirs.

M. Howard (Skeena): Qu'est-ce que ce district a fait pour répondre aux protestations à propos de la pollution de la région.

[Text]

Mrs. Boyce: I can speak with very recent information on this because Mr. Bunnell, the Commissioner, and Mr. McKay, the chief engineer, were at a sort of open and closed meeting of our Council last night. It was open to the public but not for participation. I want to say a word on the Gilbert Beach project. Steveston is in the Municipality of Richmond. Richmond is an island municipality made up of Lulu Island, Sea Island and Iona Island. It was planned to build a primary treatment plant, the outfall from which would be approximately half a mile upstream from the canneries at Steveston, which these gentlemen in the fisheries are representing.

Mr. Garfield Weston is very much involved in this at the moment and sometimes we wonder if we beat on his chest we would get through a bit more. But this outfall was installed in spite of our protest. There was an extension to this outfall, I believe at the Department of Fisheries insistence, and they increased it from 400 to 800 feet. But the fishermen have checked this outfall and it does not reach the main stream of the Fraser, which was the intent of the outfall. Furthermore, the outfall is close to the end and there are five protrusions that are forced up. As a matter of fact only two of them are operative at the moment. We learned last night that these are rather semi-stiff rubber and the top sort of flops over on them.

But this is at the 24 foot level in the river, it does not reach the main stream of the Fraser, and they are reasoning that we will not be bothered with effluent on the shores because, bear in mind, the treatment plant will not be operating until the end of 1972 and raw sewage is going to be poured out of that outfall in the meantime and they figured that there is no danger because the protrusion nearest to the shore is as far out as Steveston Island. I have been to the tidal school and I am informed that when the tide changes the first action is a curving one towards the shore. So this would seem to be not at all significant.

They were questioned by members of our Council very carefully last night on studies made and they were asked on what basis they thought we were not going to have a tremendous pollution problem here, even more than we have at Iona, where they assured us we would have none. They said, "Well, really that is up to the Fisheries Department, you know"—and this is the whole thing. Steveston Island is just off the canneries and there is a channel in there. Biologists made five three-

[Interpretation]

Mme Boyce: J'ai des renseignements tout récents à ce sujet parce que M. Bunnell, le commissaire, et M. McKay, l'ingénieur en chef, ont assisté à une sorte de réunion publique et privée de notre conseil hier. La réunion a été ouverte au public, mais pas en vue de sa participation. Je voudrais dire un mot au sujet du projet de Gilbert Beach. Steveston fait partie de la municipalité de Richmond. Richmond est une municipalité insulaire comprenant les îles Lulu, Sea et Iona. On projetait de construire une usine de traitement primaire dont l'égout de décharge serait à environ un demi-mille des conserveries à Steveston, que ces messieurs des Pêches représentent.

M. Garfield Weston est très intéressé par le projet à l'heure actuelle et nous nous demandons si nous arriverions à quelque chose en le harcelant. Mais cet égout de décharge a été installé en dépit de nos protestations. On a même prolongé cet égout. Je crois que, à l'insistance du ministère des Pêches, ils l'ont augmenté de 400 à 800 pieds. Mais les pêcheurs ont vérifié cet égout de décharge et il n'atteint pas le courant principal du Fraser comme on l'avait projeté. De plus, l'égout de décharge est presque terminé et il a cinq sorties qui sont surélevées. De fait, seulement deux sont en service à l'heure actuelle. Nous avons appris hier qu'elles sont en caoutchouc semi-rigide et que le couvercle se rabat sur elles.

Mais cela se fait au niveau de 24 pieds dans le fleuve de sorte que ce déversement n'atteint pas le courant principal du Fraser, et ils prétendent que nous ne serons pas ennuyés par des effluents d'eaux d'égout sur les rives parce que, ne l'oublions pas, l'usine de traitement n'entrera pas en service avant la fin de 1972 et le déversement des égouts non traités se fera dans l'intervalle et ils estiment qu'il n'y a pas de danger parce que la sortie la plus rapprochée de la rive est aussi éloignée que l'île Steveston. J'ai fréquenté l'école des marées et je sais que lorsque la marée change, le premier mouvement est un mouvement tournant vers la rive. Ainsi, cela semblerait n'être pas du tout significatif.

Ils furent interrogés hier très soigneusement par les membres de notre conseil, hier soir, sur les études qui ont été faites et on leur a demandé sur quoi ils fondaient leur pensée que nous n'aurions pas ici ce terrible problème de la pollution, même plus que nous l'avons à Iona, où l'on nous avait assurés que nous n'en aurions pas. On nous a dit que toute la question relevait du ministère des Pêches et c'est là toute l'affaire. L'île Steveston est juste au large des conserveries et il

[Texte]

part comprehensive tests in the Steveston channel and all were positive. It is rather an unfunny joke that if the Simon Fraser University wants to do laboratory work on pollution they come to the Fraser River at Richmond, and they do right now—and this was before the installation of these plants.

We are trying to get secondary treatment and this is where we are having our problems. Our wishes do not seem to be heard. Our people had two candidates for council on a pollution stand and they headed the poll last year. So this is between governments and the Greater Vancouver Sewerage & Drainage District. The people cannot seem to be heard at all.

Mr. Howard (Skeena): Mrs. Boyce, you mentioned a letter that you had written to Mr. Greene when he was Minister of Mines, Energy and Water Resources. Could I ask you what response you got? Perhaps to make it easier in terms of time, could the correspondence be made available to the Committee.

Mrs. Boyce: I cannot imagine how we missed you, Mr. Howard. I think we sent out 24 copies of that letter so we would be very happy to send one to you.

Some hon. Member: Do you have a copy with you now, Mrs. Boyce?

Mrs. Boyce: I am sorry, I do not. We asked that a comprehensive research study be made of the Lower Fraser. Might I say that we have drawn on the academic facilities of the British Columbia Research Council on fisheries, Dr. Walter Hopkins, Nanaimo, and both universities. All are in agreement that this is one thing that it is extremely important to be done. You in the East heard today that there is a very large oil slick out of the Detroit River that they expect will be several miles long. Now this Superport is going to be a real menace to the Fraser. I thought you would be interested in that, Mr. Whelan. This was a bad accident; they are very sorry it happened and I think we all are. We are all very fearful of what can happen here.

The Chairman: Your time is just about over, Mr. Howard, but I think you have one more.

[Interprétation]

existe un canal. Des biologistes ont fait cinq essais d'ensemble en trois parties dans le canal Steveston et ils furent tous positifs. C'est plutôt une farce de mauvais goût de dire que l'Université Fraser, si elle veut faire des études de laboratoire sur la pollution, vient au fleuve Fraser à Richmond pour faire des prélèvements. C'est l'état de choses qui règne à présent et cela se faisait avant l'installation de ces usines.

Nous essayons d'obtenir un traitement secondaire et c'est là que nous rencontrons des problèmes. Nos demandes restent sans réponse. Nos gens ont deux candidats, un conseil sur la pollution et ils ont mené le poll l'an dernier. C'est donc entre les gouvernements et le *Greater Vancouver Sewerage and Drainage District*. Il semble qu'on n'écoute pas du tout les gens.

M. Howard (Skeena): Madame Boyce, vous avez mentionné une lettre que vous avez envoyée à M. Green, lorsqu'il était ministre de l'Énergie, des Mines et des Ressources. Quelle est la réponse que vous avez reçue ou disons, pour éviter tout délai, pouvez-vous mettre cette correspondance à la disposition du Comité?

Mme Boyce: Je ne peux imaginer comment nous vous avons oublié, monsieur Howard. Nous avons envoyé 24 copies de cette lettre et nous serons heureux de vous en faire parvenir une.

Une voix: Avez-vous une copie avec vous ici, madame Boyce?

Mme Boyce: Non. Je regrette. Nous avons demandé qu'une étude de recherche soit faite du bas Fraser. Je puis dire que nous avons profité des installations académiques du Conseil de recherche de la Colombie-Britannique sur les pêches, du Dr. Walter Hopkins, de Nanaimo, et des deux universités. Tout le monde convient que c'est une question extrêmement importante à faire. Vous, de l'Est, avez entendu dire, aujourd'hui, qu'au large de la rivière de Detroit se trouve une énorme tache d'huile longue de plusieurs milles. Ce grand port à eau profonde constituera une menace terrible pour le Fraser. J'ai pensé que cela vous intéresserait, monsieur Whelan. C'était un grave accident; ils regrettent beaucoup ce qui est arrivé, et je crois que nous le regrettons tous. Nous avons tous peur de ce qui pourrait arriver ici.

Le président: Votre temps est presque écoulé, monsieur Howard, mais je pense que vous avez une autre question.

[Text]

Mr. Howard (Skeena): I wonder if I could just ask a very brief question then.

You mentioned in point no. 4 about bringing this under the International Joint Commission. Has your organization made any representations to this effect, because I note you say that representations be made, or are you anticipating that the Committee might do that.

Mrs. Boyce: We have inquired of our local member, Dr. Anthony Scott, who is a member of the International Joint Commission. He is at the University of British Columbia. He advises me that we must route this through our Member of Parliament, through the Department of Mines, Energy and Water Resources to the Department of External Affairs.

Some hon. Members: You will get lost doing that.

Mrs. Boyce: Apparently.

Mr. Perrault: A supplementary, Mr. Chairman?

The Chairman: Mr. Perrault?

Mr. Perrault: The Fraser River certainly does not cross an international boundary. Is there not a problem there? If it were the Columbia River it would be infinitely easier for the I.J.C. to act on this matter. It is a deplorable situation but you cannot merely say that it is a federal responsibility and the I.J.C. has to look after it. Under the legal framework available to the I.J.C. it does not appear to me that the odds favor its consideration.

Mrs. Boyce: Mr. Perrault, we feel that there are several international connotations to the tidal portion of the Fraser. I am not speaking of the whole Fraser River, I am talking of the tidal portion of the Fraser up to Fort Langley where this reverse tide is in effect. The United States is opposed to Point Roberts becoming a part of Canada because this would cut them out of about \$2 million per year involvement in the salmon industry, for one thing, and we feel this is international. We feel that when the tide flows both ways through a superport it can contaminate both shores, and I believe this is against international law and could well be international.

Mr. Perrault: The provincial government granted this permit to the municipality?

The Chairman: Perhaps I could put you down on the list.

[Interpretation]

M. Howard (Skeena): Seulement une brève question. Vous mentionnez dans le quatrième point de votre lettre de saisir la Commission mixte internationale de cette question. Est-ce que votre organisation a fait des représentations dans ce sens, parce que je note que vous dites que des observations ont été formulées ou est-ce que vous vous attendez à ce que le Comité fasse quelque chose?

Mme Boyce: Nous avons demandé à un membre local, M. Anthony Scott, qui est membre de la Commission mixte internationale, ce qu'il fallait faire. Il est à l'Université de la Colombie-Britannique. Il nous a conseillé de passer par notre député, par le ministère de l'Énergie, des Mines et des Ressources et par le ministère des Affaires extérieures.

Une voix: Vous allez vous perdre en faisant cela.

Mme Boyce: Il me semble.

M. Perrault: Une question supplémentaire, monsieur le président.

Le président: Monsieur Perrault?

M. Perrault: Le Fraser ne traverse pas de frontière internationale. N'y a-t-il pas un problème ici?

Si c'était le Columbia, il serait plus facile pour la C.M.I. d'agir. C'est une situation déplorable, mais on ne peut simplement dire que c'est une question relevant du gouvernement fédéral et que la C.M.I. doit s'en occuper. Dans le cadre juridique dont dispose la chance d'être étudiée.

Mme Boyce: Monsieur Perrault, nous estimons qu'il y a plusieurs aspects internationaux du Fraser. Je ne parle pas de tout le Fraser, je parle de la partie du Fraser qui subit l'effet des marées jusqu'au Fort Langley où cette marée contraire se produit. Les États-Unis ne veulent pas à ce que Point Roberts fasse partie du Canada, parce que ceci leur enlèverait annuellement environ 2 millions de dollars dans l'industrie du saumon, entre autres, et nous croyons que c'est international. Nous estimons que lorsque la marée va dans les deux sens dans un port en eau profonde, cela peut contaminer les deux rives, et je crois que cela va à l'encontre de la loi internationale et peut être fort bien une question internationale.

M. Perrault: Le gouvernement provincial a accordé ce permis à la municipalité?

Le président: Peut-être puis-je vous mettre au bas de la liste.

[Texte]

Mr. Howard (Skeena): Mr. Chairman, I did not quite get the answer to my question. Have you made any representations in this regard?

Mrs. Boyce: No, we have not. We have battered the ear of our Member of Parliament here now and we are living in hopes. This is what we understand.

Mr. Howard (Skeena): Who is your Member of Parliament? I ask the question so we can make representations to him.

Mrs. Boyce: The Chairman.

Mr. Howard (Skeena): So we can make representations to the member from Richmond.

Mrs. Boyce: Also, Mr. Whelan comes from my home area. This is all amongst friends.

The Chairman: Mr. Hogarth?

Mr. Hogarth: Mrs. Boyce, I get a common strain through all these petitions and briefs about pollution...

Mrs. Boyce: It is your guilty conscience, Mr. Hogarth, and the place that you come from.

Mr. Hogarth: That is unfair. I could go into that but I am limited in time, you are not.

Mrs. Boyce: I will see you later.

Mr. Hogarth: Mrs. Boyce, just as a matter of interest the thing that worries me is that everybody is extremely concerned about the problem, and I think you must understand we are too, but there does not seem to be any concerted effort to produce some practical answers.

I take it that in item 1 of your Recommendations you are suggesting that there be a sewage treatment plant at the Roberts Bank superport?

Mrs. Boyce: Yes. I should like, if I could, Mr. Chairman, to table some copies of a brief that we presented earlier this month to the provincial government in which this is gone into in a bit more detail.

Mr. Hogarth: What was the estimated cost?

Mrs. Boyce: There is no estimated cost.

Mr. Hogarth: But is it not 20 miles as the crow flies from the City of New Westminster

[Interprétation]

M. Hogarth (Skeena): Monsieur le président, je n'ai pas très bien saisi la réponse à ma question. Avez-vous présenté des observations à ce sujet?

Mme Boyce: Non, nous n'en avons pas faites. Nous avons harcelé notre député ici présent et nous vivons d'espérance. C'est ce que nous croyons comprendre.

M. Howard (Skeena): Qui est votre représentant au parlement fédéral? Je pose la question pour que nous puissions lui présenter des observations.

Mme Boyce: C'est le président.

M. Howard (Skeena): Nous pouvons donc présenter des observations au député de Richmond.

Mme Boyce: M. Whelan vient également de ma région. Nous sommes tous entre amis.

Le président: Monsieur Hogarth?

M. Hogarth: Je subis une tension régulière, à cause de toutes ces pétitions et ces mémoires que je reçois concernant la pollution.

Mme Boyce: Ce n'est pas étonnant monsieur Hogarth. C'est dû à votre conscience coupable et à la région d'où vous venez.

M. Hogarth: Ce n'est pas juste. Je pourrais approfondir, mais je n'ai que peu de temps et vous n'êtes pas limitée.

Mme Boyce: Je vous verrai plus tard.

M. Hogarth: Madame Boyce, simplement à titre d'intérêt, ce qui me préoccupe est que ce problème inquiète tout le monde, et nous aussi, je pense que vous devez le comprendre, mais on ne semble pas s'unir pour arriver à une solution pratique.

Je crois comprendre que, dans l'article I de vos recommandations, vous proposez la construction d'une usine de traitement des égouts au port en eau profonde à Roberts Bank?

Mme Boyce: Oui. Si je le puis, monsieur le président, je voudrais déposer quelques exemplaires du mémoire que nous avons présenté au début du mois au gouvernement provincial, où nous donnons plus de détails à ce sujet.

M. Hogarth: Quel est le coût estimatif?

Mme Boyce: Nous n'en avons pas prévu les frais.

M. Hogarth: Mais est-ce qu'il n'y a pas au moins vingt milles, à vol d'oiseau, de la Cité

[Text]

to the Roberts Bank Superport, give or take a mile or two?

Mrs. Boyce: Mr. Hogarth, I should like to tell you that it is at least 20 miles as the crow flies from where they are bringing the sewage from the north slope of Burnaby that now goes into the Burrard Inlet to the Iona Sewage Treatment Plant on the shores of Richmond.

Mr. Hogarth: I appreciate that but what would the estimated cost of a sewer line be to carry the required capacity from the City of New Westminster to the Superport in Point Roberts?

Mrs. Boyce: The recommendation is that it be not just New Westminster but Langley, Richmond, Delta. You see, the Greater Vancouver Sewerage and Drainage Board had recommended that all the sewage from South Delta and the Ladner be pumped up to Richmond and also poured in the South Arm of the Fraser.

Mr. Hogarth: Sewering all those areas on this basis would run into the hundreds of millions of dollars, would it not?

Mrs. Boyce: I do not think so, sir, because I think the original plan of the Greater Vancouver Sewerage and Drainage District was for eight separate plants, and now they are concentrating all of them into one plant on Annacis Island in order to save money. This concentration and having a large plant is the basis of their reasoning—they have this in their brief—until the cost of trucking overlaps it. However, there is the rerouting of a train there and we feel that the trunk could go down the railway corridor. There is a causeway all right, and this would put effluent into this salt water as opposed to the fresh water of the Fraser.

B.C. Research is very interested in this. We had a long conversation with Dr. MacKenzie, who is a member of the Pollution Control Board, after our hearing and he felt this was an excellent suggestion.

Mr. Hogarth: Was not the reason for putting it into Iona Island the fact that Iona Island was established to take it out of English Bay?

[Interpretation]

de New Westminster au port en eau profonde de Roberts Bank, à un ou deux milles près.

Mme Boyce: Monsieur Hogarth, j'aimerais vous dire qu'il y a au moins 20 milles, à vol d'oiseau, de l'endroit où on amène les égouts de la pente nord de Burnaby, qui se dirigent dans le Burrard Inlet jusqu'à l'usine de traitement des égouts d'Iona, sur les rives de Richmond.

M. Hogarth: Je me rends compte de cela, mais quel serait le prix estimatif d'une canalisation d'égouts pour répondre à la capacité requise de la cité de New Westminster jusqu'au port en eau profonde Point Roberts?

Mme Boyce: La recommandation est que ce ne soit pas seulement New Westminster, mais Langley, Richmond, Delta. Voyez-vous, le Conseil de direction du *Greater Vancouver Sewerage and Drainage* a recommandé que tous les égouts de South Delta et de Ladner soient pompés dans le port du Fraser.

On a recommandé que tous les égouts du South Delta et de Ladner soient pompés jusqu'à Richmond et déversés dans l'embranchement sud du Fraser.

M. Hogarth: Mais d'épurer tous les égouts et les eaux d'égouts par ce moyen coûterait des centaines de millions de dollars, n'est-ce pas?

Mme Boyce: Je ne le crois pas monsieur, parce que le plan original du système d'égouts du District du Grand Vancouver prévoyait la construction de huit usines de traitement des eaux d'égouts, et à présent, ils les concentrent toutes en une seule grande usine sur l'île Annacis, par mesure d'économie. Leur raisonnement, qui se trouve indiqué dans le mémoire qu'ils ont présenté est celui de concentrer ces usines en une seule grande usine jusqu'à ce que le coût du camionnage atteigne un niveau où ce système ne soit plus rentable. Toutefois il y a là le déroutement d'un train et nous croyons que le tronçon pourrait suivre le corridor du chemin de fer. Il existe effectivement une canalisation grâce à laquelle les eaux iraient se jeter dans cette eau salée au lieu de se déverser dans le Fraser. La B.C. Research s'intéresse beaucoup à ce projet. Nous en avons parlé longuement avec M. MacKenzie qui est membre du *Pollution Control Board*, après la réunion et a trouvé l'idée excellente.

M. Hogarth: La raison pour laquelle on a construit cette usine à Iona Island n'est-ce pas le fait que Iona Island a été établie pour transférer l'usine d'English Bay?

[Texte]

Mrs. Boyce: The reason they put it into Iona Island, I suggest to you sir, is that it was cheaper to pollute Richmond's beach than to spend Vancouver's money.

Mr. Hogarth: Let us not get into that aspect of it. The reason why Iona Sewage Treatment Plant was built, Mrs. Boyce, was to take this sewage from the outfall in English Bay. Burrard Inlet was to take this sewage from there and theoretically—and I will admit it, it appears now to be merely theoretical—to process it at Iona. Is that not what...

Mrs. Boyce: I believe there was a tidal flow. They erected a jetty at Iona to protect Vancouver's beaches from Iona and also from pollution from the Middle Arm.

Mr. Hogarth: And now Richmond people want it sent down to Roberts Bank.

Mrs. Boyce: We are not talking about the Iona plant, sir. We are asking that the quality of treatment be improved there and this slime and degradation eliminated. You should be interested in this if you are interested in tourists. This is a slimy, stinking beach that they have caused there. In the transcript it said that, no, there was no danger of this happening; these white sands have washed clean for untold generations and undoubtedly they will continue to do so.

It would be worth a trip when you are going to the airport to take a little side trip and see what has happened to the white sand. They merely pour it out; they did not even put an outfall because it was cheaper and this is in the transcript.

Mr. Hogarth: What does the Greater Vancouver Sewage and Drainage District say about your proposal to go down to Roberts Bank?

Mrs. Boyce: They have not commented on it. They were not present at the Pollution Control Board meeting which we had expected they would be. This was in Victoria, you understand, at the Deputy Minister level.

The Chairman: Are you finished, Mr. Hogarth? Mr. McQuaid.

Mr. McQuaid: I just have one question for the witness.

Mrs. Boyce: you suggest the establishment of a department of environmental control. Do you envisage this as a provincial or federal department of government?

[Interprétation]

Mme Boyce: La raison, c'est qu'il était meilleur marché de polluer la plage de Richmond que de dépenser les fonds de Vancouver.

M. Hogarth: Ne touchons pas cet aspect de la question. Madame Boyce, la raison pour laquelle l'usine de traitement d'Iona a été construite, était d'éviter que la décharge se fasse à English Bay. De là, Burrard Inlet était supposé se charger des décharges et théoriquement les traiter à Iona. N'est-ce pas ce que...

Mme Boyce: Je crois qu'ils ont construit une jetée pour protéger les plages de Vancouver contre les eaux provenant d'Iona par suite de la marée, et contre les eaux polluées du Middle Arm.

M. Hogarth: Et à présent les gens de Richmond veulent que l'usine soit transférée à Roberts Bank.

Mme Boyce: Il ne s'agit pas de l'usine d'Iona, monsieur. Nous demandons que la qualité du traitement soit améliorée et que soient éliminées ces substances gluantes et cette situation dégoûtante. Si vous vous intéressez à attirer les touristes, vous devriez vous occuper de cette question. Ils ont rendu cette plage gluante et l'ont empestée. Dans le document ils ont dit que cela ne se produirait pas, et que ces sables blancs ont été balayés et lavés par les vagues pendant des générations et ils continueront sans doute ainsi.

En vous rendant à l'aéroport, allez donc voir ce qui est advenu au sable blanc. Ils ne font que déverser les eaux d'égouts; ils n'ont même pas installé un déversoir, c'est meilleur marché ainsi, et c'est ce que le document dit.

M. Hogarth: Que dit le *Greater Vancouver Sewer and Drainage District* à propos de votre suggestion de transférer l'usine à Roberts Bank?

Mme Boyce: Ils ne l'ont pas commentée. Nous nous attendions à les voir assister à la réunion du *Pollution Control Board* mais ils n'y étaient pas. Cela se passait à Victoria au niveau du sous-ministre.

Le président: Avez-vous fini monsieur Hogarth? Monsieur McQuaid.

M. McQuaid: J'aimerais poser une question au témoin. Madame Boyce, vous suggérez la création d'un ministère pour le contrôle des conditions du milieu. Est-ce que vous envisagez ce ministère à l'échelle provinciale ou fédérale?

[Text]

Mrs. Boyce: Our Association is envisaging something so that when we want to write about a pollution problem we are not forced to send out 24 copies of a letter to get it to everyone we think is involved. Everyone is concerned, as Mr. Hogarth says, about pollution. We feel that the whole country is concerned about it. We have people calling us in their utter frustration who say this is so wrong and we just have to do more than join an organization. We must do something about it. I feel this is not an isolated condition.

Today on one of these hot lines, that perhaps you do not have in the East but we do, they were concerned with people on skid row, how they were drinking to excess and immediately one turned and said, "I do not blame them, look at the pollution. Nobody is doing anything about it and our whole civilization is on the brink of crisis and no ones does anything about it."

Mr. McQuaid: I did not get an answer to my question yet.

Mrs. Boyce: No. Maybe I would be a good politician. We have made this recommendation provincially, now we hope we are making it federally.

Mr. McQuaid: That is all, Mr. Chairman.

The Chairman: Thank you, Mr. McQuaid. I have Mr. Whelan and then Mr. Perrault; that is all we have. Mr. Whelan.

Mr. Whelan: I just wanted to quote the last part of your brief where you sum up and say:

...we fully endorse the submission made to you, gentlemen, yesterday, April 21st by Mr. Buck Suzuki...

I may be saying his name wrong, but yesterday I thought that he was presenting your brief that I had seen before.

Mrs. Boyce: Did you?

Mr. Whelan: It had a lot of similarities.

Mrs. Boyce: We are all beating the same drum, you know, but we are very pleased that Buck is a member of our Association. He has been a tremendous help to the members of our delegation on different things.

Mr. Whelan: I am a little concerned about one thing. I have asked some of the other people that have appeared before the Committee, because we have heard several briefs along the same line, and we have all come

[Interpretation]

Mme Boyce: Notre association veut agir de telle sorte qu'elle ne soit pas obligée d'envoyer une multitude de copies de lettres à toutes les personnes que nous croyons avoir affaire aux problèmes de la pollution. Comme M. Hogarth l'a dit, c'est l'affaire de tout le monde. Nous sommes d'avis que tout le pays doit s'y intéresser. Il y a des gens qui, en désespoir de cause, nous appellent et nous disent qu'il ne suffit pas de se joindre à un organisme. Nous nous devons d'y remédier. J'estime que ce n'est pas une situation isolée.

Aujourd'hui, au cours d'une de ces émissions «tribune téléphonique», les gens discutaient de la débauche et des buveurs et voilà que soudain quelqu'un se tourne et dit: «Je les comprends bien, voyez donc le problème de la pollution. Personne ne s'en occupe, toute notre civilisation est au bord de la crise et personne ne pose un geste».

M. McQuaid: Mais cela ne répond pas à ma question.

Mme Boyce: Nous avons formulé cette recommandation au gouvernement provincial, nous espérons maintenant qu'elle sera entendue par le fédéral.

M. McQuaid: C'est tout, monsieur le président.

Le président: Merci monsieur McQuaid. La parole est à M. Whelan puis à M. Perrault; monsieur Whelan.

M. Whelan: Je voulais simplement citer la dernière partie de votre mémoire où vous disiez:

Messieurs, nous approuvons entièrement l'idée qui vous a été formulée hier le 21 avril par monsieur Buck Suzuki...

Je prononce mal son nom mais j'avais l'impression qu'il présentait votre mémoire que j'avais vu déjà hier.

Mme Boyce: Vraiment?

M. Whelan: Il y avait beaucoup de choses en commun.

Mme Boyce: Vous savez, nous avons tous la même opinion, mais nous sommes heureux d'avoir Buck comme membre de notre association. Il nous a été très utile à bien des égards.

M. Whelan: Il y a une chose qui m'inquiète un peu. J'ai questionné d'autres témoins que nous avons eus au Comité car nous avons eu plusieurs mémoires qui traitaient de la même question, et nous avons tous déduit qu'il y a

[Texte]

to the same conclusion, I think, that there is an awful lot of sewage out here.

Mrs. Boyce: Lake Erie is not exactly free of it either.

Mr. Whelan: Coming from an area where there is a lot of sewage, all I can say is that it seems to me that there would be more unified action on this. I agree everybody should be concerned about pollution. In Lake Erie we are about 20 years late, but we are a much older area than British Columbia as far as development is concerned. It seems that in our federal programs to aid municipalities since late 1963 and early 1964 there was not much action here. Was nobody concerned at all then about pollution five years ago?

Mrs. Boyce: The Rand Report came out and said that you could pour sewage into the river for 40 years. "The solution to pollution is dilution". That is the motto of some of our groups.

Mr. Whelan: Coming from the area near Lake Erie you could have told them different, because I think we have had that problem for quite some number of years, but all of our municipalities will have sewage control in there to a certain degree. But the one that you mention shocks me because my source of water for our home is the Detroit River and their intake there will be in jeopardy if there is oil in the Detroit River.

Mrs. Boyce: It will not be long until it is in Lake Erie. I think, Mr. Whelan, we must admit that the city of Detroit was looking more at the municipal tax dollar from the Ford Motor Company, and Wyandotte was taking money out of Wyandotte Chemicals Corporation, rather than thinking about what was going into the water.

Mr. Whelan: Is this oil coming from Detroit or Windsor?

Mrs. Boyce: From the Chrysler Corporation.

Mr. Whelan: Chrysler Corporation, but Windsor or Detroit.

Mrs. Boyce: Detroit, I understand.

Mr. Whelan: They have treatment for all their sewage that goes into the Detroit River within that area and we know that it has killed many species of our fish. The sports fishing in that area has practically...

[Interprétation]

ici de grosses quantités d'eaux d'égouts.

Mme Boyce: Le lac Erié est tout aussi pollué.

M. Whelan: Venant d'une région où il y a énormément d'égouts, tout ce que je puis dire, c'est qu'il me semble qu'il devrait y avoir une action plus concertée à ce sujet. Je sais que la pollution doit être l'affaire de tout le monde. Nous sommes en retard de 20 ans dans la région du lac Erié mais c'est une région beaucoup plus vieille que la Colombie-Britannique pour ce qui est du développement. Ceci me donne l'impression que nos programmes d'aide fédérale aux municipalités depuis fin 1963 et début 1964 n'ont pas fait grand-chose à ce sujet. Comment se fait-il que la pollution ne vous préoccupait pas outre mesure voici cinq années?

Mme Boyce: Le rapport Rand disait qu'on pouvait déverser les égouts dans les eaux pendant 40 ans encore. Quelques-uns de nos groupes avaient pour devise: «La solution à la pollution, c'est la dilution».

M. Whelan: Venant d'une région proche du lac Erié vous auriez pu leur dire autre chose, mais je pense que nous avons eu ce problème depuis bien des années et toutes nos municipalités auront une épuration des eaux à faire dans une certaine mesure. Le cas que vous avez mentionné me choque parce que nous tirons notre provision d'eau de la rivière Détroit et s'ils trouvent du pétrole dans cette rivière, c'est leur approvisionnement qui sera en danger.

Mme Boyce: Il ne faudra pas longtemps avant que tout ne soit déversé dans le lac Erié. Nous devons admettre, monsieur Whelan, que cette ville s'intéressait à percevoir des taxes municipales de la Société Ford, et que Wyandotte s'occupait plus à tirer des profits de la Wyandotte Chemical Corporation que de voir ce qui se déverse dans la rivière.

M. Whelan: Cet huile provient-elle de Détroit ou de Windsor?

Mme Boyce: De la Société Chrysler.

M. Whelan: Oui Chrysler, mais de Windsor ou de Détroit?

Mme Boyce: De Détroit, je pense.

M. Whelan: Ils traitent toutes les eaux qui se déversent dans la rivière Détroit dans cette région-là, et nous savons que cela a détruit plusieurs espèces de poisson. La pêche sportive dans cette région a pratiquement...

[Text]

Mrs. Boyce: Apparently this is quite a sizeable one. The oil slick would be several miles long according to the newscast I heard.

Mr. Whelan: I think if so many different associations could unify on this, certainly they could bring some action. I am sure the Committee here will want to do everything it can so far as the Fisheries and Forestry Committee is concerned, and the powers that we have federally will certainly consider this brief.

The Chairman: Thank you, Mr. Whelan. If you are finished I will go to the last questioner, Mr. Perrault.

Mr. Perrault: Mr. Chairman, very briefly I think this is a good brief and I thought the brief brought here by Mr. Suzuki yesterday was excellent as well.

You say in the third paragraph:

...a permit was granted to the Municipality of Richmond to install a sewer system and pour up to 8 million gallons per day of virtually raw domestic sewage and industrial waste into the South Arm of the Fraser River...

Was this a provincial permit?

Mrs. Boyce: A provincial permit.

Mr. Perrault: That is what I thought. It is an incredible decision to allow that kind of raw sewage to be dumped in any water system anywhere in Canada, to my mind. It brings me to this question. Do you think the time has arrived in Canada when we should bar the dumping of raw sewage into any waterway where there are any numbers of people situated along that waterway?

Mrs. Boyce: I am sorry, sir, I did not qualify it to that point. I would say raw sewage should never be dumped into a waterway. I think we must say that the Fraser must not be polluted and then work to that end.

Mr. Perrault: You would extend this concept to other waterways in British Columbia and the rest of the country as well, though?

Mrs. Boyce: Definitely.

Mr. Perrault: In addition to Richmond?

Mrs. Boyce: That is right.

Mr. Perrault: I do not blame you for being thoroughly incensed about this situation. I agree with what you have had to say.

[Interpretation]

Mme Boyce: Cette situation est vraiment sérieuse. Selon les informations qui me sont parvenues la trainée s'étendrait sur plusieurs milles.

M. Whelan: Je pense que si toutes ces différentes associations pouvaient s'unir, elles pourraient certainement forcer les autorités à agir. Je suis certain que notre Comité voudra faire tout en son pouvoir en ce qui concerne les pêches et forêts, et les pouvoirs que nous détenons sur le plan fédéral examineront certainement ce mémoire.

Le président: Merci monsieur Whelan. Si vous avez fini je passe la parole à M. Perrault.

M. Perrault: Monsieur le président, ce mémoire est très intéressant et je tiens à dire que celui que M. Suzuki a préparé est également très intéressant. Maintenant, dans le troisième paragraphe, vous dites:

...de l'octroi à la municipalité de Richmond d'un permis de construire un réseau d'égouts et de déverser jusqu'à huit millions de gallons, par jour, d'eaux ménagères et de déchets industriels pratiquement non traités dans le bras sud du Fraser...

S'agit-il d'un permis provincial?

Mme Boyce: Oui, c'est un permis provincial.

M. Perrault: C'est ce que je pensais. A mon avis, cette décision de permettre le déchargement d'ordures et d'eaux d'égouts non traitées, dans n'importe quelle voie d'eau au Canada est incroyable. Ceci me porte à vous poser cette question. Croyez-vous que le moment soit venu de prohiber le déchargement de ces eaux non traitées dans toute voie d'eau qui traverse un secteur urbain?

Mme Boyce: Je regrette, monsieur, ce n'était pas dans mes intentions d'aller si loin. Je dirais plutôt que les détritiques ne devraient jamais être déversés dans une voie d'eau. Nous devons nous dire qu'il faut éviter la pollution du Fraser, et puis agir dans ce sens.

M. Perrault: Donc, vous étendriez cette idée à d'autres cours d'eau en Colombie-Britannique et dans d'autres régions.

Mme Boyce: Certainement.

M. Perrault: En plus de Richmond?

Mme Boyce: C'est exact.

M. Perrault: Je comprends que vous soyez absolument furieuse de cette situation. Je suis tout à fait d'accord avec ce que vous avez dit.

[Texte]

Mrs. Boyce: Mr. Perrault, you will realize, knowing our location, that we are going to be completely surrounded by effluents. This is nothing small, this is an urban area and I have maps here. I know it is late and I do not wish to take an undue amount of your time, but we have been told by Cabinet ministers in the provincial government that all this area around the Roberts Bank Superport will house an urban population within 10 years.

Mr. Perrault: Do you think anything can be done to convert this sewage into Milorganite or some other material which will help the crops?

Mrs. Boyce: I should like to leave some copies of this brief. I do not have enough of the one that we did submit for everyone. Our suggestion was that a large treatment plant be put at the Roberts Bank Superport where the effluent would go into salt water or could be used beneficially on the pastures and lands in that area; that the dried waste be sold to Kaiser Coal Corporation for use in the reclamation and loaded on the empty coal cars going back to the mines. The disposal of waste is a problem when you have a very large plant, and this is a very large plant.

Mr. Perrault: So your thinking has gone to the area at what could be done, then.

Mrs. Boyce: Yes, we did a little bit.

Mr. Perrault: That is all I have to ask, Mr. Chairman.

The Chairman: Thank you, Mr. Perrault. I understand Mr. Howard wishes to ask another question.

Mr. Howard (Skeena): If there is no one else, Mr. Chairman.

The Chairman: No.

Mr. Howard (Skeena): My question relates to the aspect that was being explored by Mr. Hogarth and I want to follow it up. I want to put this to you as a proposition to see if you agree with it. I think what you are getting at is that our concern should be with the "ounce of prevention is worth a pound of cure" concept rather than the immediate cost. If we do not do something about pollution now, costly it might be, it will be impossible or much more costly to deal with later on. Do you agree with that?

[Interprétation]

Mme Boyce: M. Perrault, vous vous rendez compte certainement, sachant où nous nous trouvons que nous allons être complètement entourés par des eaux polluées. Cette situation n'est pas banale, il s'agit d'un secteur urbain et j'ai des cartes ici. Je sais qu'il est tard et je ne veux pas prendre trop de votre temps mais les ministres du gouvernement provincial nous ont dit que toute la région aux environs du superport de Roberts Bank sera transformée en centre urbain d'ici 10 ans.

M. Perrault: Croyez-vous qu'il y a moyen de transformer ces détritiques en engrais pour améliorer les récoltes?

Mme Boyce: J'aimerais laisser quelques exemplaires de ce mémoire. Je n'en ai pas suffisamment pour chacun. Nous avons proposé qu'une station de traitement devrait être installée à Roberts Bank où les eaux d'égouts seraient déchargées dans l'eau de mer ou pourraient servir d'engrais pour les pâturages et les terres de la région; nous avons proposé aussi que les détritiques desséchés soient vendus à la Kaiser Coal Corporation pour qu'ils soient utilisés aux travaux de réaménagement des terrains; ces détritiques peuvent être chargés dans les wagons qui retournent aux mines. Comme vous le savez, il est très difficile de se débarrasser des déchets d'une grande usine.

M. Perrault: Donc, vous avez songé à ce qui pourrait être fait?

Mme Boyce: Oui, nous y avons pensé quelque peu.

M. Perrault: C'est tout ce que j'avais à demander, monsieur le président.

Le président: Merci monsieur Perrault. Je crois que M. Howard avait une question à demander.

M. Howard (Skeena): S'il n'y a personne d'autre monsieur le président.

Le président: Non.

M. Howard (Skeena): Oui, c'est une question au sujet de ce que M. Hogarth a dit. Je voudrais simplement faire suite à ce qu'il a dit, et vous présenter ma question sous forme de proposition pour voir ce que vous en pensez. Vous voulez dire que nous devrions avoir comme devise: «Mieux vaut prévenir que guérir», plutôt que de nous soucier du coût immédiat. Si nous n'essayons pas d'enrayer la pollution tout de suite, quelqu'en soit le coût, il sera peut-être impossible ou bien trop cher pour s'en occuper plus tard. Partagez-vous ce point de vue?

[Text]

Mrs. Boyce: Yes; we were warned to make our brief brief, so we made it brief, but our whole basis is that surely with what we have seen in Lake Erie we realize this is going to be an extremely expensive thing. We get material from the Ontario Water Resources Commission; they help us. Surely with that experience in Ontario we would not fall into the same trap.

In the States we have evidence on this western coast south of the line of how extremely expensive reclamation work is. Ten times the cost has been a conservative estimate. We believe that this just simply must not happen. The Fraser River is the drainage for our entire province and we feel that when you talk about the cost of sewage treatment you must think about the number of cases of hepatitis—something like 90-some cases in North Vancouver is the figure that was published recently.

This involves lengthy hospitalization and treatment and that must be charged to it. You must think of the wastage of our recreational area. We have a tremendous potential for tourism in Richmond, easily accessible to the urban population of the entire lower mainland. Are we going to use this shoreline as a sewage dumping area or are we going to use it for the development of hotels? This plan has been under way for some time.

Off the Richmond shoreline are the Sturgeon Banks which extend for two and a half miles where it has been planned to put hotels—it is right opposite the airport—and marinas, but instead of that we are going to have sewage over the whole thing.

The Chairman: Thank you, Mrs. Boyce. May I have a motion to table this report.

Mr. Hogarth: I so move.

Motion agreed to.

The Chairman: You have a second one, Mrs. Boyce?

Mrs. Boyce: Yes, we have a newsletter that was put out. We thought it would cost so much to mail to our members that we did not mail it, so I have some extra copies of it.

Mr. Hogarth: How did it cost you money to mail it to your member?

Mrs. Boyce: How does it cost us money?

Mr. Hogarth: Yes.

[Interpretation]

Mme Boyce: Oui; on nous a averti d'abrégé notre mémoire, par conséquent nous l'avons abrégé, mais nous estimons qu'après tout ce que nous avons vu au lac Érié, nous réalisons que cette entreprise sera extrêmement coûteuse. Nous recevons de la documentation de la Commission des ressources hydrographiques de l'Ontario; avec tout ce qui se passe en Ontario, nous ne tomberons certainement pas dans le même piège.

Aux États-Unis, nous savons que les travaux de réaménagement du sol, sur la côte ouest au sud de nos frontières, peuvent être extrêmement coûteux. C'est dix fois le coût, au bas mot. C'est pourquoi nous estimons que cela ne doit pas nous arriver. Le Fraser sert d'écoulement pour toute la province et quand nous parlons du coût du traitement, il faut songer au nombre de cas d'hépatite, quelque chose comme 90 cas dans Vancouver-Nord.

Ces cas entraînent des frais d'hospitalisation et de soins médicaux. Il faut songer au gaspillage des secteurs récréatifs. Nous avons un énorme potentiel de tourisme dans Richmond qui est facilement accessible à la population urbaine des régions plus au sud. Allons-nous utiliser ces plages comme déversoirs d'égouts ou allons-nous y construire des hôtels? Ce projet est à l'étude depuis quelque temps.

Le long de la côte au delà de Richmond se trouve Sturgeon Banks, une terre qui s'étend sur deux milles et demi et où l'on avait projeté de construire des hôtels, des marinas, (ce secteur se trouve en face de l'aéroport), mais au lieu de cela, on y déchargera les détritiques et les eaux d'égouts.

Le président: Merci madame Boyce. Voulez-vous proposer que l'on dépose ce rapport?

M. Hogarth: Je le propose.

La motion est adoptée.

Le président: Avez-vous un autre document, madame Boyce?

Mme Boyce: Oui, nous avons un communiqué. Nous ne les avons pas fait parvenir à nos membres, car la distribution aurait coûté cher. Par conséquent nous disposons de quelques exemplaires supplémentaires.

M. Hogarth: Comment cela vous aurait-il coûté de les expédier à vos membres?

Mme Boyce: Comment cela nous coûte-t-il?

M. Hogarth: Oui.

[Texte]

Mrs. Boyce: Just to put it in the mail—I mean, to members of our Association.

Mr. Hogarth: I beg your pardon.

The Chairman: May I then have a motion to table this report?

Mr. Perrault: I so move.

Motion agreed to.

The Chairman: To bring this to a close, then, on behalf of the Committee I would like to thank Mrs. Boyce. She has certainly been the most attractive witness we have had and very, very competent. I would like to thank you on behalf of the Committee. The meeting is adjourned until 9.30 tomorrow morning.

[Interprétation]

Mme Boyce: En les remettant à la poste pour les expédier aux membres de notre association.

M. Hogarth: Je vous demande pardon.

Le président: Voulez-vous proposer qu'on dépose ce rapport aussi?

M. Perrault: Je le propose.

La motion est adoptée.

Le président: Pour terminer, au nom du Comité, je tiens à remercier madame Boyce. C'est certainement le témoin le plus attrayant que nous avons eu, et extrêmement compétent. Permettez de vous remercier au nom du Comité.

La séance est ajournée jusqu'à 9.30 demain matin.

APPENDIX J

COUNCIL OF THE FOREST
INDUSTRIES OF BRITISH COLUMBIA
1477 WEST PENDER ST.,
VANCOUVER 5, B.C. • TEL. 684-0211

REF. FILE

BRIEF TO THE
STANDING COMMITTEE ON
FISHERIES AND FORESTRY
SUBMITTED ON BEHALF OF THE
MEMBER COMPANIES OF
THE COUNCIL OF THE FOREST
INDUSTRIES OF BRITISH COLUMBIA

April 22, 1969

This Brief is submitted by the Council of the Forest Industries of B.C. on behalf of its member companies.

The divisions of the Council include: B.C. Loggers Division; B.C. Lumber Manufacturers Division; Plywood Manufacturers Division; Red Cedar Shingle and Shake Division Pulp and Paper Division; Cariboo Lumber Manufacturers Association is an affiliated member of the Council.

Our members are engaged in logging and in the manufacture of lumber, plywood, shingles and shakes predominantly in the coastal area and in the manufacture of pulp and paper through the whole of B.C. These companies account for 75 per cent of the value of forest products produced in B.C., totalling an estimated \$1.37 billion in 1968.

A. Introduction

We understand terms of reference for the Standing Committee on Fisheries and Forestry were established in late February 1969 and we congratulate the members for holding public meetings at an early date.

Our principal motivation in developing this brief has been the desire to ensure that Canada obtains maximum value for dollars spent by the federal government on forestry and on fisheries.

Earlier this month a shortage of lumber in the United States market became the subject of hearings in both houses of the U.S. Congress.

APPENDICE «J»

Conseil des industries forestières
de la Colombie-Britannique

MÉMOIRE PRÉSENTÉ AU
COMITÉ PERMANENT DES PÊCHES
ET FORÊTS AU NOM DES SOCIÉTÉS
MEMBRES DU CONSEIL DES
INDUSTRIES FORESTIÈRES DE LA
COLOMBIE-BRITANNIQUE

Le 22 avril 1969

Le présent mémoire est présenté par le Conseil des industries forestières de la Colombie-Britannique au nom des sociétés qui en font partie.

Le Conseil comprend plusieurs divisions, dont: La Division des exploitants forestiers (C.-B.); la Division des fabricants de bois d'œuvre (C.-B.); La Division des fabricants de contre-plaqué; La Division des bardeaux et des bardeaux de fente de thuya géant; la Division des pâtes et papiers.

Membre associé: L'Association des fabricants de bois d'œuvre de Caribou.

Nos membres se livrent à l'exploitation forestière et à la fabrication du bois d'œuvre, des contre-plaqué, des bardeaux et des bardeaux de fente notamment dans la région côtière, ainsi qu'à la préparation des pâtes et papiers par toute la province. Ces sociétés ont à leur actif les trois quarts de la valeur de la production forestière globale en Colombie-Britannique, laquelle est estimée à 1.37 milliard de dollars pour 1968.

Introduction

Nous savons que le comité permanent des pêches et forêts a reçu ses attributions vers la fin de février 1969; aussi le félicitons-nous de tenir des séances publiques à une date si hâtive.

Si nous avons rédigé le présent mémoire, c'est surtout parce que nous voulons faire en sorte que le Canada obtienne le maximum de rendement des sommes investies par le gouvernement fédéral dans les secteurs de l'exploitation forestière et des pêches.

Plus tôt ce mois-ci, la pénurie de bois d'œuvre sur les marchés américains a fait l'objet de discussions aux deux chambres du Congrès des États-Unis.

In this connection Senator John J. Sparkman proposed ten "actions" designed to improve the supply of wood products to the U.S. construction industry.

Action No. 9 said in part:

"We should examine the import of lumber from Canada which, in 1968, amounted to 5.8 billion board feet. Considering the great potential untapped supply from our neighbor to the North, there is no reason why this could not be substantially increased".

The Sparkman proposals serve to emphasize a growing demand on the total forest resource of North America.

They demonstrate to both our provincial and federal governments the need of forestry research programmes which will ensure maximum timber growth per acre on all forest lands in Canada

We therefore look to the federal government for support of an aggressive forestry research programme and for leadership which will induce the provinces to carry out the most advanced reforestation programmes.

B. Federal Regional Forest Laboratory Victoria

The forest industry and the intensity of forest management in British Columbia has expanded rapidly, particularly in the last two decades.

About 86 million acres, or about 65 per cent of the productive forest lands in this province, are now under sustained yield management. Within these managed units the allowable cut is determined by the amount of growing stock and the growth added to the new forest.

Forest practices which increase this growth are immediately reflected by increased allowable cuts, and thereby add to the raw material supply available to the industry.

Such forest practices are being rapidly intensified in British Columbia, particularly in the coastal region. As a result many forest management and technical problems are appearing which need early attention.

This need has been met in part in recent years by two important currently developing trends. Firstly, the Regional Forest Laboratory in Victoria has been expanded to provide for silvicultural research in addition to the additional responsibilities in research, survey and advisory services related to forest insect and disease problems. Secondly, and more

A ce propos, le sénateur John J. Sparkman a proposé dix mesures visant à accroître la disponibilité des produits du bois au profit de l'industrie américaine de la construction.

Nous citerons un passage de la 9^e mesure:

«Nous devrions tenir compte des quantités de bois d'œuvre importé du Canada, soit 5,800,000,000 p.m.p. en 1968. Vu les immenses ressources inexploitées dont disposent nos voisins au nord, rien ne nous empêche d'accroître sensiblement le chiffre de nos importations à cet égard.»

Les propositions de M. Sparkman mettent en lumière la demande croissante pour l'ensemble des ressources forestières de l'Amérique du Nord.

Elles manifestent aussi au gouvernement fédéral et à la province la nécessité d'entreprendre des recherches sylvicoles afin d'optimiser la croissance du bois à l'acre dans toutes les régions boisées du Canada.

C'est pourquoi nous escomptons que le gouvernement fédéral appuiera un programme dynamique de recherches sylvicoles et prêchera par l'exemple afin de convaincre les provinces à exécuter des travaux de reboisement des plus modernes.

B. Le laboratoire forestier régional du gouvernement fédéral à Victoria

L'industrie forestière, de même que la gestion sylvicole, ont pris énormément d'expansion en Colombie-Britannique, surtout au cours des deux dernières décennies.

A l'heure actuelle, quelque 86 millions d'acres, ou 65 p. 100 des sols forestiers productifs de la province, font l'objet d'une gestion rentable soutenue. Dans le territoire géré, la coupe admissible est établie selon le chiffre des peuplements en croissance et le nombre de nouveaux arbres.

Les pratiques forestières qui favorisent la croissance se traduisent immédiatement par une majoration des coupes admissibles, ce qui accroît la quantité de matière première dont dispose l'industrie.

Pareilles pratiques s'intensifient rapidement en Colombie-Britannique, notamment dans la région côtière. Il en découle des problèmes de gestion sylvicole et des difficultés d'ordre technique qui nécessitent une attention immédiate.

Le problème a perdu un peu de son acuité, ces dernières années, grâce à deux importantes mesures. Premièrement, le Laboratoire forestier régional, à Victoria, s'est doté d'installations pour la recherche sylvicole, laquelle vient compléter les autres services (recherches, inventaires et consultation) qu'il fournit pour protéger la forêt contre les insectes et

recently, there has been an attempt to shift the emphasis from so called basic research to applied research, and thereby to apply more of the department's resources directly towards solving the forest managers' immediate problems.

Further, a Regional Advisory Committee, comprised of representatives of the British Columbia Forest Service, University of British Columbia, and coast and interior industry, has assisted the Regional Laboratory in identifying problems which warrant research, and in assignment of priorities. While relatively new in British Columbia, the Advisory Committee has proved to be workable, and in addition to the main purpose of providing valuable liaison between the Regional Laboratory and forest managers, has also provided some informal co-ordination of the work of others engaged in research in related fields.

In addition, a Pest Control Committee, organized under the Council of the Forest Industries, has served successfully to co-ordinate the interests of industry, the Regional Laboratory and other provincial and federal government departments in entomological research and control projects for the past twelve years. The forest industry has been concerned with the development of insecticides which are safe for fish and other forms of wildlife in order to ensure that acceptable means are available to control insects which pose serious threats to forest values. In this respect it is worth noting that the Regional Fisheries Branch has actively co-operated in testing new insecticides and in supervision of control projects in order to assure the protection of both fishery and forestry values.

On both committees co-operation has been excellent and important programmes have been established to attack a very wide range of problems: for example, container planting, genetically improved seed, controlled slash burning, fertilizers, growth measurements, protection against root rots and a number of insects which pose a serious threat to British Columbia's forest, such as the balsam woolly aphid and bark beetles. Many projects are established on a co-operative basis with industry and the Provincial Forest Service.

In the past the role of the Department of Fisheries and Forestry has been heavily oriented toward basic research. This has encouraged scientists to concentrate their interest in relatively narrow fields which has

les maladies. Deuxièmement, chose plus récente encore, il semble qu'on laisse un peu de côté la recherche dite fondamentale au profit de la recherche appliquée, de sorte que maintenant le Ministère s'efforce davantage de résoudre les problèmes immédiats des administrateurs forestiers.

De plus, le comité consultatif régional, qui comprend des spécialistes du Service forestier de la Colombie-Britannique et de l'Université de la Colombie-Britannique, ainsi que des représentants des industries de la côte et de l'intérieur, collabore avec le Laboratoire régional à l'identification des domaines où la recherche s'impose et à l'établissement d'un ordre de priorité. Quoique d'origine récente dans la province, ce comité a déjà fait ses preuves: outre sa fonction principale, qui est d'assurer des contacts utiles entre le Laboratoire régional et les administrateurs forestiers, il assure officiellement la coordination de la recherche dans des disciplines connexes.

En outre, le comité de répression des insectes nuisibles, formé sous l'égide du Conseil des industries forestières, s'occupe avec succès depuis douze ans à coordonner l'effort de l'industrie, du Laboratoire régional et des autres services provinciaux et fédéraux en matière de répression des insectes et de recherches entomologiques. L'industrie forestière s'est intéressée à la mise au point d'insecticides qui ne mettent pas en danger la vie du poisson et de la faune, car elle tient à disposer de moyens acceptables pour lutter contre les insectes qui font peser une grave menace sur les ressources forestières. A ce propos, à noter que la Direction régionale des pêches a collaboré effectivement à la mise à l'essai de nouveaux insecticides et à la surveillance des mesures de répression, afin de protéger le poisson et la forêt.

Un excellent esprit de collaboration règne au sein de ces deux comités; on a mis en œuvre d'importants programmes pour résoudre un vaste éventail de problèmes, dont le plantage en cadres spéciaux, l'amélioration génétique des semences, le brûlage régularisé des abatis, les engrais chimiques, la mesure des stades de croissance, les mesures préventives contre la carie des racines ou contre un certain nombre d'insectes, tels les scolytes et le puceron lanigère du sapin baumier, qui constituent un grave danger pour les forêts de la Colombie-Britannique. Une foule de travaux sont entrepris conjointement avec l'industrie et le Service forestier de la province.

Dans le passé, le rôle du ministère des Pêches et Forêts était fortement axé sur la recherche fondamentale, ce qui encourageait les scientifiques à se concentrer sur des domaines relativement étroits et à se spécialiser

led to a very high degree of individual specialization. Often, in emergency situations, this has seriously limited the flexibility of staff re-assignments and has tended to perpetuate projects that were no longer providing practical results. The shift in emphasis towards a proper balance between basic and applied research, and emphasis on correlation of the two, increases the opportunity to employ the "task force" approach in which teams of scientists are assigned to solve the larger immediate problems. This "task force approach" is commonly employed in other agencies engaged primarily in applied research. It provides the advantages of better continuity and co-ordination of effort and tends to make more efficient use of limited numbers of scientists.

It is apparent that greater flexibility is needed in allocation of departmental resources to meet emergency situations. The Department should have more authority to arrange research contracts with universities, other research agencies, and individuals, in order to obtain the services of specialists or facilities required only on a short term basis.

Expenditures on forest research by the Federal Department of Fisheries and Forestry, then the Department of Forestry and Rural Development, in the 1967-68 fiscal year were \$20.9 millions, of which approximately \$3.2 millions, or 15 percent, was spent in British Columbia to operate the Regional Laboratory in Victoria and the Forest Products Laboratory in Vancouver. The latter is responsible for Forest Products research in Western Canada and hence a portion of the cost is applicable to Alberta and the Yukon. A small additional amount could be added to allow for a share of the costs of administration and operation of several research institutes located in Ontario.

In net total, this expenditure still amounts to approximately 15 percent of the total Departmental expenditures in Canada; whereas British Columbia forests contain 22 percent of the productive forest land, 50 percent of the merchantable timber volume, and in 1965 provided 44 percent of the total cut in Canada.* It is important to realize that the average acre in British Columbia can produce more than double the yield of the average acre East of the Rockies.

There has been a good foundation laid for the forest research programme in British

à l'extrême. Dans les cas d'urgence, il est arrivé souvent qu'une telle façon d'agir diminue l'élasticité des mutations de personnel et contribue à perpétuer des travaux ne fournissant plus de données pratiques. Grâce à un meilleur équilibre entre la recherche fondamentale et la recherche appliquée, ainsi qu'à la mise en corrélation de ces deux formes d'activité, il est maintenant plus facile de recourir à des «groupes d'étude», c'est-à-dire des équipes de scientifiques qui se mesurent à des problèmes immédiats de grande portée. Pareille démarche s'emploie couramment dans d'autres organismes qui mettent l'accent sur la recherche appliquée. Elle offre comme avantage une meilleure solution de continuité, une coordination de l'effort et l'utilisation efficace du personnel scientifique, soit-il limité.

Il appert que plus d'élasticité s'impose pour l'affectation des ressources du Ministère en cas d'urgence. Ce dernier devrait jouir de pouvoirs élargis afin de passer des contrats de recherche avec les universités, d'autres organismes particuliers, pour être en mesure de disposer, à brève échéance, d'un personnel spécialisé ou des installations voulues.

Au cours de l'exercice financier de 1967-1968, les dépenses faites en matière de recherches sylvicoles par le ministère des Pêches et Forêts (le ministère des Forêts et du Développement rural à l'époque), se sont élevées à 20.9 millions de dollars, dont quelque 3.2 millions (15 p. 100) pour la Colombie-Britannique, soit pour l'administration du Laboratoire régional à Victoria et du Laboratoire des produits forestiers à Vancouver. Étant donné que ce dernier s'occupe de la recherche sur les produits forestiers dans l'ouest du Canada, une certaine proportion de cette dépense s'applique donc à l'Alberta et au Yukon. On pourrait y inclure une partie des frais d'administration et d'exploitation des divers instituts de recherche situés en Ontario, mais ce n'est qu'un faible pourcentage de la dépense globale.

Somme toute, le pourcentage net des dépenses du Ministère en Colombie-Britannique, par rapport à l'ensemble du pays, n'est que de 15 p. 100, alors même que cette province renferme 22 p. 100 des sols forestiers productifs du Canada, assure 50 p. 100 du volume canadien de bois marchand et a fourni, en 1965, 44 p. 100 de la coupe globale dans le pays. Il importe de se rendre compte que l'acre moyenne en Colombie-Britannique rapporte deux fois plus, et même davantage, que l'acre moyenne à l'est des montagnes Rocheuses.

On a jeté sur des bases solides le programme de recherches sylvicoles en Colom-

* 1.5 billion cubic feet in 1965; 1.7 billion cubic feet in 1968.

Columbia. While recognizing the need for Government to control expenditures it should be stressed that existing programmes are just barely meeting immediate priorities. These must not be curtailed by reductions in staff or in funds for travel or equipment which would reduce the efficiency of the present staff. We understand that travel and equipment funds, have in fact, been reduced for the 1969-70 fiscal year and will result in the curtailment of a number of important projects.

While it is clear that forest research expenditures in British Columbia are not in proportion to the contribution and potential of the forest resource no large increase in expenditure is advocated at this time. Rather it is believed, on the basis of cost-benefit analysis, that a large proportion of any future expansion in government funds devoted to forest research must of necessity be justifiably allocated to the British Columbia region to result in a more realistic distribution.

Recommendations

With respect to the operation of the Federal Regional Forest Laboratory in Victoria the Council of Forest Industries recommends:

1. that the Regional Advisory Committee continue in its present form.
2. that the current shift from basic research to applied research be continued, and recommends as a general policy that the majority of the basic research undertaken be limited to that essential to support and complement applied research.
3. that the "task force" principal be adopted so as to promote more efficient use of manpower and funds.
4. that means be considered to permit greater flexibility in the allocation of funds for the contracting out of research where advantageous.
5. that a cost-benefit approach be used in proportioning any future expansion of Federal Government funds devoted to forest research so as to develop a more equitable distribution of these funds.

C. Forest Products Laboratories

Communication between industry and the two laboratory organizations has been greatly improved over the past two years. Industry involvement at the two levels, the National

bie-Britannique. Tout en admettant que la dépense gouvernementale doit faire l'objet d'un certain contrôle, il convient de signaler que les programmes actuels réussissent à peine à répondre aux besoins immédiats. Il ne faudrait pas les comprimer en réduisant le personnel ou les fonds nécessaires au déplacements ou à l'achat du matériel, car il y aurait risque de gêner l'activité des effectifs actuels. Nous croyons comprendre, néanmoins, que moins de fonds ont été réservés aux déplacements et au matériel pour 1969-1970; en conséquence, il faudra mettre au rancart un certain nombre de projets importants.

S'il est clair que la quote-part de la Colombie-Britannique pour la recherche sylvicole n'est pas en fonction de ses apports et de ses perspectives dans le secteur des forêts, nous ne préconisons pas, toutefois, qu'elle soit immédiatement majorée. Nous fondant sur l'analyse des coûts et des bénéfices, nous estimons cependant que toute augmentation future des fonds publics destinés à la recherche sylvicole devrait être, de nécessité, largement transmise à la Colombie-Britannique, afin d'en arriver à une répartition réaliste de tels crédits.

Préconisation

Pour ce qui est de l'exploitation du Laboratoire forestier régional du gouvernement fédéral à Victoria, le Conseil des industries forestières préconise donc:

1. que le comité consultatif régional conserve ses structures actuelles;
2. que l'effort scientifique continue d'être axé davantage sur la recherche appliquée et que, à titre de politique générale, la recherche fondamentale se limite largement à l'objectif essentiel d'étayer et de compléter la recherche appliquée;
3. que le concept du «groupe d'étude» soit adopté en vue d'un meilleur usage des ressources financières et humaines en disponibilité;
4. que l'on permette une répartition plus élastique des fonds, afin de faciliter, au besoin, l'adjudication des travaux de recherche;
5. qu'il soit tenu compte des coûts et des bénéfices dans toute majoration éventuelle des fonds publics réservés à la recherche sylvicole pour que ceux-ci soient équitablement répartis.

C. Les laboratoires des produits forestiers

Ces deux dernières années, les communications entre l'industrie et les deux laboratoires se sont améliorées sensiblement. Depuis que le comité consultatif national et le comité du

Advisory Committee and the Research Programme Committee, now provides our members the opportunity to participate in both the policy making and the programme management.

One line of communication still requires attention. It is well known that research laboratories produce knowledge and technology, but this technology is of no value to Canada unless it is used by industry. In other words, research cannot be turned into commerce, exports, profits and taxes, until it is exploited and commercialized by the forest industry.

One other point in this connection is that liaison must be with the right people in industry. In companies which have research laboratories, the research people should be regarded as the liaison media between the Forest Products Laboratories and their companies. In the case of companies with no technical personnel, contact should be with the marketing people. If this liaison can be improved, results of the research will be of more value to Canada.

It is recommended that methods be developed by the Forest Products Laboratories to inform industry of outstanding research results which may have potential commercial benefit. This can be done by seminars and visits to various parts of Canada.

We recommend that the Forest Products Research Administration develop a cost-benefit analysis for each research project. This kind of analysis should be made on every suggested new project so that a correct decision can be made regarding acceptance or rejection and also priority rating.

We recommend the same procedure for those projects now underway in the laboratories. A critical examination may well show that many should be dropped.

We observe the need for a more exacting system of priorities within the Forest Products Laboratories. It is important that projects be listed by priorities based on certain criteria such as economics of the project and value to the forest industry.

Lack of a system here creates a tendency in the Forest Products Laboratories to increase

programme de recherches comptent des représentants de l'industrie, nos membres ont pu concourir à l'élaboration des politiques et à l'administration des programmes.

Néanmoins, il reste encore une lacune à combler dans le domaine des communications. Les laboratoires de recherche reculent les limites du savoir et de la technologie, c'est incontestable, mais ces données n'ont aucune valeur pour le Canada, si elles ne sont pas transmises à l'industrie. En d'autres termes, la recherche ne peut se transformer en activité commerciale, exportations, bénéfices et impôts, à moins d'être mise en valeur et commercialisée par l'industrie forestière.

A cet égard, notons aussi que les contacts avec l'industrie doivent s'établir au niveau des autorités compétentes. Au sein des sociétés qui disposent d'installations de recherche, les scientifiques industriels doivent eux-mêmes s'entendre comme agents de liaison avec le personnel des laboratoires des produits forestiers. Dans le cas des sociétés ne comptant pas d'effectif scientifique, les contacts devraient se faire avec les spécialistes des techniques marchandes. S'il se révèle possible d'améliorer la situation, les données de la recherche acquerront alors beaucoup plus de valeur pour le Canada.

Nous estimons que les laboratoires des produits forestiers devraient trouver le moyen de mettre l'industrie au courant des données scientifiques qui pourraient se traduire par des avantages commerciaux importants. On pourrait diffuser de tels renseignements lors de colloques conjoints ou de tournées dans diverses régions du pays.

Les administrateurs de la recherche sur les produits forestiers devraient, à notre avis, faire l'analyse des coûts et des bénéfices escomptés pour chaque projet de recherche. Un tel examen devrait précéder toute proposition de ce genre, ce qui permettrait de prendre une décision judicieuse quant à l'opportunité de tel ou tel programme, ainsi que d'établir un ordre de priorité.

Il nous semble qu'il faudrait agir de même pour ce qui est des travaux en cours. Vues sous cet angle critique, un bon nombre d'entreprises pourraient fort bien se révéler superflues.

A nos yeux, une sélection serrée des programmes essentiels s'impose au sein des laboratoires des produits forestiers. Il importe que leurs travaux suivent un ordre de priorité qui se fonde sur certains critères, tels que l'aspect économique d'un programme et son importance pour l'industrie forestière.

En l'absence de telles pratiques, les laboratoires en cause ont tendance à vouloir accroître

staff when new research projects are suggested. We urge delay or termination of the less important projects and realignment of staff as first considerations when new projects are approved.

D. Duplication of effort

In the past we have been concerned that some Forest Product Laboratory projects have duplicated work done elsewhere. Some of this problem has been corrected by improved communication between our laboratories and the U.S. Forest Products Laboratory in Madison, Wisconsin.

There are still three areas, however, which we suggest require correction.

First, there is some duplication by the Forest Products Laboratory and the Pulp and Paper Research Institute of Canada on work concerning pulp and paper. This should be thoroughly investigated and projects sorted out to eliminate the duplication and reduce cost.

The second area concerns the newly formed Harvesting Development Task Force of the Canada Department of Fisheries and Forestry and the Woodland Section of the Canadian Pulp and Paper Association.

The stated objectives of this new federally sponsored task force are:

- Data collection related to the engineering characteristics of trees.
- Evaluation studies of existing machines and systems.
- Development of new tree harvesting concepts and logging systems.
- Transportation studies.
- Technical and liaison services.
- Silvicultural and ecological implications of mechanized harvesting.

Government cost of supporting this new group will be high and it is not at all clear what benefits will come to industry as a result of its programmes and efforts. It is suggested that qualified industry experts from the various forest areas of Canada be involved in an examination of the structure, budget, objectives and performance of this new group for the purpose of assessing the real need for it.

tre leur personnel scientifique, chaque fois qu'il est question d'entreprendre un nouveau programme de recherche. Lorsqu'un projet est approuvé, il faudrait tout d'abord, à notre sens, envisager de reporter ou d'interrompre les travaux les moins importants et de réaffecter le personnel visé à d'autres tâches.

D. Chevauchement des travaux

Nous avons remarqué dans le passé que les laboratoires des produits forestiers faisaient parfois double emploi avec ce qui s'accomplissait ailleurs. Le problème s'est résolu en partie grâce à l'amélioration des contacts entre les scientifiques canadiens et la direction du Laboratoire des produits forestiers à Madison, au Wisconsin.

Nous estimons qu'il faudrait encore rectifier la situation à trois autres points de vue.

Premièrement, le Laboratoire des produits forestiers et l'Institut de recherches sur les pâtes et papiers du Canada exécutent parfois des travaux analogues. Il importe d'examiner la situation de près et de faire une sélection des travaux, afin d'éliminer le double emploi et de réduire les frais.

Le même problème se pose à l'égard de l'organisme nouvellement formé au ministère des Pêches et Forêts, soit le groupe d'étude sur le développement de l'exploitation, par rapport à la Section forestière de l'Association des pâtes et papiers du Canada.

Le groupe d'étude en question s'est donné pour objectifs:

- de recueillir des données au sujet des caractéristiques techniques des arbres;
- d'évaluer l'outillage et les procédés actuels;
- d'innover et de mettre au point des pratiques et procédés pour la coupe des arbres et l'exploitation forestière;
- d'effectuer des études concernant les transports;
- d'assurer des services techniques et de liaison;
- d'étudier les incidences de la mécanisation des travaux sur les plans écologique et sylvicole.

Le gouvernement fédéral devra fournir un appui financier important à cet organisme or, il n'est pas sûr que les programmes et l'effort envisagés procureront quelque avantage à l'industrie. Des représentants compétents de l'industrie, choisis dans diverses régions forestières du Canada, devraient concourir à l'examen des structures, du budget, des objectifs et des réalisations du nouveau groupe d'étude, afin d'établir si un tel organisme s'impose.

And thirdly, there exists in the Department of Fisheries and Forestry a group called "Forest Economics Research Institute". This group will have a staff of 45, including approximately 15 professional people by the end of 1970.

Existence of this group raises the questions:

- Is it duplicating work of other groups in the Federal Government such as the Economics Group of the Department of Trade and Commerce and the Economic Council of Canada?
- Is it duplicating work of similar groups in the Forestry Departments at the provincial level?

E. Universities

There is untapped ability in the universities of Canada which can be utilized to better advantage if we improve the liaison between the Fisheries and Forest Laboratories and universities. This could be done by the Forest Products Laboratories handing over to various universities in Canada a fair proportion of their basic research work. In giving these projects to the universities, care must be taken *not* to increase the Forestry or Fisheries budgets. Instead, the mission-oriented government laboratories should tend to emphasize applied research work which can benefit industry in a relatively short period of time.

F. Competitors of the Forest Products Industry

We observe that plastics, metals and concrete are replacing wood in many of the new building systems. The Division of Building Research of the National Research Council has only one out of 50 projects concerned with wood.

We believe the future of wood as a building material does not rest entirely in the production and sale of basic products such as lumber, shingles, plywood and particleboard. Use of these materials in special building systems involving a combination of materials will become more important and more necessary.

We would be very interested in the opinions of the Department of Fisheries and Forestry on how our industry might initiate studies within the National Research Council to determine how more of our wood products can be used in new building systems.

En troisième lieu, le ministère des Pêches et Forêts compte également un institut de recherche en économie forestière, lequel est appelé, d'ici 1970, à comprendre 45 employés, dont quelque 15 spécialistes.

L'existence de cet institut soulève plusieurs questions:

- Est-ce qu'il reprendra à son compte l'activité d'autres organismes fédéraux, tels le Groupe de l'économie (ministère du Commerce) et le Conseil économique du Canada?
- Est-ce qu'il fera double emploi avec des organismes analogues au sein des ministères provinciaux intéressés aux forêts?

E. Les Universités

Les universités canadiennes sont le siège de compétences oubliées dont il serait possible de tirer grand profit en améliorant la liaison entre les universitaires et le personnel scientifique du ministère des Pêches et Forêts. À ce propos, les laboratoires des produits forestiers pourraient octroyer à différentes universités au Canada une certaine partie de leurs travaux de recherche fondamentale, mais en prenant bien soin de ne *pas* augmenter le budget de dépenses de l'une ou l'autre des deux directions générales (Pêches-Forêts). D'autre part, les laboratoires à mission déterminée devraient chercher à mettre l'accent sur la recherche appliquée dont l'industrie pourrait bénéficier dans un avenir proche.

F. L'industrie des produits forestiers et la concurrence

Nous constatons que les matières plastiques, les métaux et le béton se substituent fréquemment au bois dans les nouvelles constructions. Ainsi, un seul des cinquante projets envisagés par la Division de la recherche sur la construction, au Conseil national de recherches, comporte l'usage du bois.

L'avenir du bois en tant que matériau de construction, à notre sens, ne repose pas entièrement sur la fabrication et la vente de produits tels que le bois d'œuvre, les bardeaux, les contreplaqués et les lamelles. L'emploi de ces produits dans les constructions particulières où il entre divers matériaux ne cessera de prendre de l'importance et de s'imposer.

Nous aimerions bien entendre les vues du ministère des Pêches et Forêts quant à nous permettre d'effectuer des études au sein du Conseil national de recherches, afin d'établir dans quelle mesure les produits du bois pourraient s'employer davantage dans les nouvelles constructions.

G. Building Design Criteria

This point is related to the previous one. It refers to the development of efficient and economic uses for wood in housing and similar light-framed construction. The use of wood is frequently reduced by inadequate or unrealistic design criteria in building codes or similar regulations. This is preventing the widespread adoption of mechanical stress grading as a grading device for building materials. Therefore, it is recommended that the Forest Products Laboratories should consider closer liaison with bodies such as The Central Mortgage and Housing Corporation, as well as the Division of Building Research of the National Research Council, in order to identify some of these inadequate and unrealistic designs and through research develop better criteria to be used in our building codes. In fact, a uniform building code across Canada would benefit our industry and the construction industry.

Recommendations:

With respect to the operation of the Regional Forest Products Laboratories, the Council of the Forest Industries recommends:

1. That a method be developed to inform the industry of outstanding research results which may have potential commercial benefits.
2. That a cost-benefit analysis be developed for each new research project.
3. That existing projects be examined on the same basis as recommendation no. 2.
4. That a system of priorities be developed.
5. That the duplication of work which is carried on by the following groups be examined:
 - (a) Pulp and Paper Research Institute of Canada.
 - (b) Harvesting Development Task Force.
 - (c) Forest Economics Research Institute.
6. That liaison with universities be improved.
7. That Forest Products Laboratories consider closer liaison with other bodies such as Central Mortgage and Housing Corporation, and the National Research Council to develop better criteria to be used in building codes.

G. Les critères régissant la construction

Cette question se rattache à la précédente, car elle porte sur les nouveaux usages économiques et pratiques du bois dans la construction des maisons et d'autres structures à charpente légère. Les prescriptions inappropriées ou irréalistes que l'on trouve dans les codes du bâtiment ou dans des règlements analogues limitent souvent l'utilisation du bois. En conséquence, il se révèle impossible de généraliser le recours à l'effort mécanique pour déterminer la qualité des matériaux de construction. C'est pourquoi nous estimons que les laboratoires des produits forestiers devraient établir des contacts étroits avec des organismes comme la Société centrale d'hypothèques et de logement, par exemple, ou encore la Division de la recherche sur la construction, au Conseil national de recherches, afin d'améliorer les codes du bâtiment actuels par le retranchement de certaines prescriptions inacceptables et la mise au point de nouveaux critères à l'aide des données de la recherche. En fait, l'uniformisation des codes du bâtiment par tout le Canada profiterait aux deux industries, la nôtre et celle de la construction.

Préconisations

Quant à l'administration des laboratoires régionaux des produits forestiers, le Conseil des industries forestières préconise:

1. La mise au point de méthodes visant à transmettre à l'industrie les données scientifiques qui pourraient se traduire par des avantages commerciaux importants;
2. l'analyse des coûts et des bénéfices relatifs à chaque projet de recherche;
3. l'examen des travaux en cours selon le même principe qu'au numéro 2;
4. l'établissement d'un ordre de priorité;
5. pour éviter le chevauchement des travaux, l'étude de l'activité des groupes suivants:
 - a) l'Institut de recherches sur les pâtes et papiers du Canada;
 - b) le groupe d'étude sur le développement de l'exploitation;
 - c) l'Institut de recherche en économie forestière;
6. l'amélioration des contacts avec les universités
7. une liaison étroite entre les laboratoires des produits forestiers et d'autres organismes, tels la Société centrale d'hypothèques et de logement et le Conseil national de recherches, pour perfectionner les critères qui entrent dans les codes du bâtiment.

APPENDIX K

SUBMISSION BY THE
SOCIETY FOR POLLUTION AND
ENVIRONMENTAL CONTROL
(S. P. E. C.)
TO
PUBLIC HEARING
ON
FISHERIES
SUBJECT: WATER POLLUTION

Mr. Chairman, Messrs. Commissioners, Ladies and Gentlemen:

It is with pleasure that we welcome you and your Commission to the West Coast. We find this a happy occasion and we trust that it will be repeated more frequently in the future so that a new feeling of understanding, participation and responsibility may evolve for the benefit of all Canadians.

The executive and members of the Society for Pollution and Environmental Control (S.P.E.C.) wish to apologize to our French speaking fellow Canadians for not presenting to them a French translation of the brief. We are, however, a young organization with a growing membership, but possessing only limited funds, and since we lack members within our ranks who would be capable of translation, may we take this opportunity to point out to you that a translation service provided by the federal government would be of benefit to many groups who are confronted with a similar problem.

The work for this organization is done on a voluntary basis. With a rapidly growing membership the Society for Pollution and Environmental Control includes engineers, ecologists, medical doctors, lawyers, psychologists—people of various callings who have dedicated themselves to alerting the public and the various levels of government in Canada to the dangers of pollution and to the need for control of our environment.

Our Society is presently engaged in a campaign to clean up the water front of the greater Vancouver area. The pollution in the water of the Port Moody section of Burrard Inlet is so severe that many forms of sea life such as shrimps and crabs are not able to survive because the oxygen level in some areas is minimal due to effluents pouring into the Inlet.

Mr. Chairman, knowledge of this public hearing did not come to our attention early

APPENDICE «K»

MÉMOIRE DE LA SOCIÉTÉ POUR
LA SUPPRESSION DE LA POLLUTION
ET
L'ASSAINISSEMENT DU MILIEU
PRÉSENTÉ LORS DE LA
SÉANCE PUBLIQUE
SUR LES
PÊCHES
OBJET: LA POLLUTION DE L'EAU

Monsieur le président, membres du comité, mesdames et messieurs

Il nous est agréable de vous souhaiter la bienvenue, à vous et à votre comité, à l'occasion de votre tournée dans l'Ouest. Nous nous réjouissons d'une telle initiative, espérant qu'elle se reproduira fréquemment à l'avenir, afin qu'il se crée un climat d'entendement, de participation et de responsabilité au profit de tous les Canadiens.

Le conseil et les membres de la Société pour la suppression de la pollution et l'assainissement du milieu s'excusent auprès des francophones du Canada de ne pouvoir remettre une version française du présent mémoire. La Société est d'origine récente, quoique son effectif s'accroisse sans cesse, mais elle dispose de peu de fonds et ne compte, parmi ses membres, aucun traducteur digne du nom. A ce propos, permettez-nous de vous signaler que le bureau fédéral de traduction pourrait rendre de grands services aux organismes comme le nôtre qui éprouvent des difficultés semblables.

La Société se compose entièrement de membres bénévoles, dont le nombre augmente rapidement. Elle réunit des gens de diverses disciplines: ingénieurs, écologistes, médecins, avocats et psychologues qui se sont donnés pour tâche de mettre en évidence, aux yeux du grand public et des pouvoirs administratifs, les dangers de la pollution et la nécessité d'assainir notre milieu.

Soulignons que la Société vient de lancer une campagne publicitaire pour l'assainissement du littoral dans la région de Vancouver. Les eaux de l'inlet Burrard, à l'emplacement de Port Moody, sont tellement polluées que bien des organismes marins, tels les crevettes et les crabes, ne peuvent y survivre en raison de la teneur minimale en oxygène de ces eaux contaminées par les déchets déversés dans l'inlet.

Nous avons appris votre venue trop tard, monsieur le président, pour être en mesure

enough to allow us sufficient time to do adequate research. Our professional people, attached to the universities, are engaged in the preparation and giving of final examinations to the students. We therefore ask the Commissioners' indulgence and seek their help in finding answers to the problems associated with a burgeoning society which in its unilateral, avaricious, ruthless and destructive approach to our ecology is wreaking disaster.

S.P.E.C. at this point in the brief would like to congratulate The Royal Bank of Canada for its monthly letter of February 1969, captioned "Man and the Balance of Nature". If this monthly letter has not been read into the record of this Commission, S.P.E.C. requests your permission to proceed with some of the outstanding and pertinent points. No serious group of resource administrators could possibly implement policies without first considering the implications of their policies as stressed in the article "Man in the Balance of Nature" (see Appendix i. underlined sections a-i).

"What is the paramount thing? To come to nature with clean hands unsoiled by spoilage, destruction and waste. This involves a great deal of governmental wisdom, a lot of scientific research, and a lot of engineering ingenuity. Behind all these must be the pressure of public demand."

With reference to the above quotation let our Society assure you that on no other subject can you achieve such unanimity of opinion with the public as when discussing the immediate needs to prevent future pollution and environmental destruction of our land, water and air. Our nation can no longer accept the precept of unilateral development or exploitation of a resource regardless of whether that exploitation is being perpetrated by private industry or by the public sector.

With regard to the authority exercised by the federal government to control pollution we submit the following questions:

1. What is the formal authority and jurisdiction of your Department?
2. Has the Federal Government through departments such as yours the power to promulgate laws to protect one province from unilateral development of a resource by another Province?
3. Are there consultations and correlation of information between the Departments of Fisheries and Forestry and the science disciplines? For example, if logging is to be per-

de faire des recherches poussées, d'autant plus qu'à cette époque des examens de fin d'année, beaucoup de nos membres, étant universitaires, sont retenus par leurs occupations. Nous prions donc le comité de faire preuve d'indulgence à notre égard et de nous aider à résoudre les problèmes inhérents à une société bourgeonnante qui, par son attitude irresponsable, avide, irréfléchie et destructive, est en voie d'annihiler notre milieu.

A ce propos, nous tenons à féliciter la Banque Royale du Canada, dont le bulletin mensuel de février 1969 porte sur «L'homme et l'équilibre de la nature». Si cet article n'a jamais figuré aux comptes rendus du Comité, la Société aimerait, avec votre permission, en consigner les passages les plus importants et les plus pertinents. Le point que fait ressortir l'article susmentionné, c'est que toute administration sérieuse ne saurait appliquer certaines lignes de conduite sans d'abord envisager les conséquences de telles mesures pour nos ressources (voir Appendice i, passages a-i soulignés).

«Ce qui prime tout, c'est de se présenter devant Dame Nature les mains propres, non souillées par le gaspillage, la destruction ou l'incurie. Mais la sagesse des gouvernements, si grande soit-elle, alliée à la recherche scientifique et à l'ingéniosité technique, ne suffit pas; il lui faut, en outre, la pression exercée par l'opinion publique.»

A cet égard, permettez-nous de vous assurer que jamais ne réussit-on autant à faire l'unanimité parmi un groupe de personnes que lors de discussions portant sur le besoin immédiat d'éliminer les causes de la pollution du sol, de l'eau et de l'air, ainsi que d'éviter la destruction de notre milieu. Le Canada ne peut plus tolérer qu'une ressource fasse l'objet d'une mise en valeur ou d'une exploitation unilatérale, que la responsabilité en soit attribuable à l'industrie privée ou au secteur public.

Quant aux pouvoirs exercés par le gouvernement fédéral en matière de la pollution, nous vous posons les questions suivantes:

1. Quelles sont les fonctions et la compétence officielles de votre Ministère?
2. Le gouvernement fédéral peut-il par l'entremise d'un ministère tel que le vôtre, adopter des mesures législatives visant à protéger une province contre l'exploitation unilatérale d'une ressource par une autre province?
3. Y a-t-il des échanges de vues et des consultations entre le ministère des Pêches et Forêts et les disciplines scientifiques? Par exemple, si la Direction des forêts autorise

mitted by the Forestry Department in a specific area, are the fisheries and water resource people consulted? Are plans drawn to protect the streams and rivers and lakes from indiscriminate use of bulldozers ploughing up creek and river bottoms for gravel for road beds, the bulldozing of sidehills into streams, the debris of forests pushed into water sources, the pollution of lakes and rivers by log booms and floating debris? Is a hydrological study done to insure adequate forest cover to maintain the watersheds' ability to retain moisture and prevent soil erosion? What action is taken to protect fish and wildlife in areas against the pressures of people and industry? Relating to the above questions, is anything being done by the Federal Government to prevent complete destruction of the ecology by the unilateral development of industry?

4. Are there any licensed logging operations in our National Parks in Canada? If so, is the logging being done by high lead, selective or what method is applied?

5. Why is Section 33—"Injury to Fishing Grounds and Pollution of Waters" of the Fisheries Act parts 3 and 4 not more stringently enforced in British Columbia? Why are the regulations under Section 34 (A and B) not enforced?

The members of our Society feel that there is ample power incorporated into the Act. Why then, when direct violation of the Act takes place, such as the log drives on the Stelako River, is legislation not enforced? This is a classic case. Much of the population of British Columbia was up in arms over this issue. They were incensed at the selfish and irresponsible approach by an industry and the stupidity of the Provincial Government's Minister of Lands and Forests for permitting the log drive which would cause serious damage to the highly productive spawning bed of the Stelako River. The permitting of these log drives on the Stelako River is tantamount to a criminal act against our natural resources, and the parties responsible for this act should be subject to the full weight of the law. The average citizen of B.C. never ceases to be amazed at how tough the Department of Fisheries is when dealing with native Indians who net a few salmon to feed themselves and their families or a licensed fisherman who catches fish during a period of closure. These people are taken to court and fines are levied. Yet when dealing with the Provincial Government or industry, the

l'exploitation forestière dans une région donnée, consulte-t-elle au préalable les autorités en matière des pêches et des ressources hydrauliques? Envisage-t-on de protéger nos lacs et cours d'eau contre le dragage irréfléchi des lits pour l'obtention du gravier nécessaire à l'aménagement des routes, contre le déchargement de la terre ou des déchets forestiers dans les étendues d'eau, contre la pollution attribuable aux estacades et aux débris flottants? Est-ce qu'il se fait des études hydrologiques pour conserver la capacité de rétention d'eau du bassin hydrographique et pour empêcher l'érosion des sols, grâce à la suffisance du tapis végétal? Quelles mesures prend-t-on pour protéger le poisson et la faune contre l'avidité des gens et de l'industrie? Dans le même ordre d'idées, que fait le gouvernement fédéral pour empêcher la destruction totale du milieu par suite de l'expansion unilatérale de l'industrie?

4. Est-ce qu'on délivre des permis d'exploitation forestière dans les parcs nationaux du Canada? Dans le cas de l'affirmative, permet-on les coupes d'éclaircie par le haut, les coupes de jardinage ou tout autre mode de coupe?

5. Pourquoi les dispositions des paragraphes 3 et 4, article 33 (Détérioration des pêcheries et pollution des eaux) de la Loi sur les pêcheries ne sont-elles pas appliquées sévèrement en Colombie-Britannique? Pourquoi ne met-on pas en vigueur les règlements prévus au titre de l'article 34 (alinéas a) et b))?

Les membres de la Société estiment que la Loi a suffisamment de mordant. Alors, pourquoi ne pas l'invoquer, lorsqu'on enfreint directement ses dispositions, comme dans le cas du flottage des billes sur la rivière Stelako? L'affaire est classique; elle a soulevé l'indignation d'une bonne partie de la province, émue par l'attitude égoïste et irresponsable de l'industrie en cause, mais aussi par la stupidité du ministre provincial des Terres et Forêts, qui n'a pas tenu compte des graves dégâts que les billes causeraient aux frayères très productives de la Stelako. Une telle inconscience équivaut à une atteinte criminelle à nos richesses naturelles; les responsables de cet état de choses devraient être cités en justice. Les gens de la Colombie-Britannique ne cessent de s'étonner de l'intransigeance qu'affiche le ministère des Pêches envers l'Indien qui capture quelques saumons pour nourrir les siens ou le détenteur d'un permis qui pêche au cours de la période de fermeture. Pour ceux qui sont pris en défaut, c'est la comparaison devant les tribunaux et une amende. Pourtant, lorsque c'est le gouvernement provincial ou l'industrie qui est en cause, le même ministère ferme les yeux sur

Department of Fisheries is very willing to ignore their contravention of the Act.

Mr. Chairman, S.P.E.C. would like to place before you our position on fisheries:

1. Fisheries in Canada are a public resource. Propagation regulations and research are paid for by all the people of Canada and the right of all Canadians to participate in this resource should be inviolate.

2. There are pertinent areas requiring departmental study, particularly the waste of fish incidental to drag fishing by B.C. fishermen. Instead of throwing undesirable species of fish and net caught halibut back into the sea, we ask for research and marketing studies to be made so that all species, including dog fish, will be fully utilized. Such waste cannot be justified while two-thirds of the world go to bed hungry.

3. We request continuous checks on the effluents of coastal and interior pulp mills, mines, sawmills, plywood plants, booming grounds, industrial plants, hydro reservoirs, and the sewage disposal systems of all population centres.

With regard to 3 above, we insist on immediate checks and the findings published by the Department of Fisheries to allay public suspicion that indiscriminate pollution of our waterways is being condoned by both the federal and provincial governments. The following areas in particular are in urgent need of checking:

1. Prince George—Northwood Pulp Mill
2. Ashcroft—proposed pulp mill
3. Cape Race to Cape Mudge—logging operation and pulpmill
4. Jarvis Inlet and Vanguard Bay—pulp mill and booming grounds for Crown Zellerbach and others
5. Bella Coola—logging operations
6. Granville Channel—logging operations
7. Kitimat Cleo Bay—booming grounds
8. Namu—B.C. Packers Cannery
9. Cumberland Canal—Hooker Chemicals

10. Okanagan Lakes—agricultural pesticides
Mr. Chairman, the Department of Fisheries may have these matters well in hand; if so, we would appreciate hearing the details of their actions.

May we also draw your attention to other pollutants:

1. Thermal Pollution

S.P.E.C. commends the Fisheries Association of B.C. for the article on Thermal Pollu-

des infractions importantes.

Monsieur le président, la Société aimerait vous faire part de son attitude envers les pêches:

1. Au Canada, les pêches tombent dans le domaine public. Tous les Canadiens concourent financièrement à la recherche et aux mesures de conservation; aussi doivent-ils le droit inviolable de jouir de ces ressources.

2. Le Ministère devrait faire enquête sur certaines questions, notamment sur le gaspillage du poisson par les pêcheurs au chalut de la Colombie-Britannique. Pour mettre fin à la pratique de rejeter à la mer les poissons indésirables, dont le flétan, il faudrait faire des recherches et des études du marché en vue de l'utilisation de toutes les espèces, y compris le chien de mer. Alors que les deux tiers de l'univers souffrent de la faim, un tel gaspillage nous semble intolérable.

3. Il faudrait continuellement analyser les eaux résiduaires émanant de diverses sources sur la côte et dans l'arrière-pays: usines à pâtes, mines, scieries, fabriques de contre-plaques, estacades, établissements industriels, bassins de retenue et conduite d'évacuation des égouts dans tous les centres habités. A ce propos, nous insistons pour que le Ministère pratique immédiatement de tels essais et en publie les résultats, afin de convaincre le grand public que le gouvernement fédéral et la province n'encouragent pas vraiment la pollution irréfléchie de nos cours d'eau. Voici une liste d'endroits où pareils essais revêtent un caractère urgent:

1. Prince-George: usine à pâtes Northwood
2. Ashcroft: projet d'usines à pâtes
3. Cap Race-Cap Mudge: exploitation forestière et usine à pâtes
4. Inlet Jarvis et baie Vanguard: usine à pâtes et estacades de la Crown Zellerbach et d'autres sociétés
5. Bella Coola: exploitation forestière
6. Détroit Granville: exploitation forestière
7. Kitimat (baie Cléo): estacades
8. Namu: conserverie de la B.C. Packers
9. Canal Cumberland: produits chimiques Hooker
10. Lacs Okanagan: pesticides agricoles

Il se peut, monsieur le président, que le ministère des Pêches ait déjà agi en l'occurrence; dans ce cas, nous aimerions connaître le détail des mesures qu'il a prises.

Permettez-nous, en outre, de vous signaler les faits suivants:

1. Pollution d'origine thermique

La Société tient à féliciter l'Association des pêches de la Colombie-Britannique de l'article

tion in "Fish and Facts" of March 1969. The article re the B.C. Hydro Thermal plant, situated on Burrard Inlet, confirms our suspicion that thermal pollution has possible adverse effects on salmon runs and fry into and out of Indian Arm and of the water ecology of the area. Because of the harmful effects of thermal pollution on the fish, S.P.E.C. requests the Department of Fisheries to institute laws in Canada making it mandatory to install closed circuit circulating systems with evaporative cooling towers in all thermal generating plants.

2. Burrard Inlet Pollution

We further request the Department of Fisheries to launch a study of pollution in Burrard Inlet either in co-operation with S.P.E.C. or on its own. This area suffers from a multitude of pollution factors such as waste from chemical plants, bulk loading spillage of sulphur, coal and wood chips, oil refineries spillage and effluents, as well as industrial pollution from booming grounds, lumber mills, ship loading, shipping, ship building and numerous port industries and facilities, sewage outfalls; all of which contribute to a greater or lesser degree to the inlet's pollution.

With reference to the aforementioned I have before me two letters from the Department of Fisheries dated December 17, 1968 and November 5, 1968

DEPARTMENT OF FISHERIES

December 17, 1968.

Dear Sir:

RE: *Closure to Clam Fishing—Areas 1 to 8 inclusive and Area 15.*

Attached hereto will be found mimeographed copy of a Ministerial Order dated December 5, 1968, signed by the Honourable Jack Davis, Minister of Fisheries, closing Areas 1 to 8 inclusive and Area 15 to all clam fishing other than for razor clams for toxicity reasons until further notice.

It will be noted the Ministerial Order updates and supersedes the Public Notice dated October 28, 1965, which previously closed the above areas to all clam fishing other than for razor clams.

Your very truly,
"W. R. Hourston"
Director, Pacific Region."

sur la pollution d'origine thermique qu'elle a fait paraître dans la revue *Fish and Facts* en mars 1969. Cet article au sujet de la centrale thermique sur l'inlet Burrard (exploitée par la B.C. Hydro) confirme nos soupçons quant aux conséquences défavorables de ces installations pour la montée et les migrations du saumon, ainsi que pour l'écologie des eaux du bras Indian. Vu l'effet nuisible des polluants thermiques sur le poisson, la Société prie le Ministère d'instituer des mesures législatives en vertu desquelles les centrales thermiques au Canada auraient à prévoir des conduites de circulation à circuit fermé, munies d'un système de refroidissement par évaporation.

2. Pollution de l'inlet Burrard

Nous demandons aussi au ministère des Pêches, seul ou de concert avec la Société, d'étudier la pollution de l'inlet Burrard. Ses eaux sont contaminées par une multitude de facteurs: déchets des usines chimiques, pertes de soufre lors du chargement en vrac, copeaux, poussières de charbon, pertes et déchets des raffineries de pétrole, polluants industriels (estacades, fabriques de bois d'œuvre, chargement de navires, trafic maritime, chantiers navals et nombre d'autres industries et installations portuaires), déversoirs d'égouts. Tous contribuent dans une mesure variable à la pollution de l'inlet.

A ce propos, j'ai sous les yeux deux lettres du ministère des Pêches en date, l'une du 17 décembre 1968, l'autre du 5 novembre 1968.

MINISTÈRE DES PÊCHES

Le 17 décembre 1968

Monsieur,

Objet: *Fermeture de la pêche aux clams—Zones 1 à 8 inclusivement et zone 15.*

Vous trouverez ci-joint une photocopie d'une ordonnance ministérielle en date du 5 décembre 1968, signée par le ministre des Pêches, l'honorable Jack Davis, selon laquelle la pêche aux clams (sauf le couteau) est interdite, jusqu'à nouvel ordre, pour des motifs de toxicité, dans les zones 1 à 8 inclusivement et dans la zone 15.

A noter que cette ordonnance annule et remplace l'avis public en date du 28 octobre 1965, lequel interdisait la pêche aux clams (sauf le couteau) dans les zones susmentionnées.

Veuillez agréer, Monsieur, l'assurance de mes meilleurs sentiments.

Le directeur de la région du Pacifique,
W. R. Hourston

Re the Toxicity Closure, S.P.E.C. finds it difficult to understand the continuing of this closure, apparently in effect since October 28, 1965. Has the Department conducted any studies on the causes of this toxic condition? Is it not paralytic shellfish poison or what is commonly known as "Red Tide" as the staff letter of the Department dated November 5, 1968 states.

"RE: Temporary Suspension of Shellfish Sampling Program for Paralytic Shellfish Poison for the period November 1, 1968 to March 31, 1969

Fishery Officers are advised that effective immediately the Shellfish Sampling Program for Paralytic Shellfish Poison is being discontinued for the period November 1, 1968 to March 31, 1969.

This action is being taken with the approval of the Pacific Coast Shellfish Committee, since there is ample evidence to indicate that Paralytic Shellfish Poison is not likely to develop during the above months and therefore sampling is now serving no useful purpose.

Clam sampling of all official sampling locations for shellfish toxicity is to recommence April 1, 1969, and continue until further notice.

"W. R. Hourston"

Director, Pacific Region.

Mr. Chairman, if this is not a natural phenomenon, who or what is causing the toxicity? If it is a sewage or industrial problem due to the discharge of effluent into the waters, who are the culprits and why have they not been prosecuted? If the Department has the necessary information but cannot act, let the public have the information so they can take action.

3. Fraser River Pollution

Mr. Chairman and gentlemen, this Society now intends to place before you what we consider to be British Columbia's most serious water pollution problem—the Fraser River system. While I am sure you are familiar with the importance of the River to British Columbia and Canada let me itemize some of the facts in brief form:

- (a) About one-third of B.C. is drained by the Fraser River system.
- (b) Over two-thirds of our total population lives within the area drained by the Fraser River system.

En l'occurrence, la Société comprend mal pourquoi l'on a prolongé cette interdiction en vigueur, apparemment, depuis le 28 octobre 1965. Le Ministère a-t-il fait des études au sujet des causes de la toxicité des clams? S'agirait-il de la paralysie toxique des mollusques et crustacés (communément appelée «Red Tide» en anglais), dont il est fait mention dans une communication interne du Ministère portant la date du 5 novembre 1968?

Objet: Arrêt provisoire du programme d'échantillonnage des mollusques et crustacés aux fins de la détection de la paralysie toxique, du 1^{er} novembre 1968 au 31 mars 1969

Les agents des pêches sont priés de noter immédiatement que le programme d'échantillonnage des mollusques et crustacés aux fins de la détection de la paralysie toxique est interrompu du 1^{er} novembre 1968 au 31 mars 1969.

Cette mesure a reçu l'approbation du Comité des mollusques et crustacés de la côte du Pacifique, car il est bien évident que l'affection susmentionnée a peu de chances de se propager au cours des mois susdits, de sorte que l'échantillonnage ne sert alors aucune fin utile.

L'échantillonnage des clams à des fins toxiques reprendra le 1^{er} avril 1969 aux endroits désignés officiellement et se poursuivra jusqu'à nouvel ordre.

Le directeur de la région du Pacifique,

W. R. Hourston

Monsieur le président, s'il ne s'agit pas d'un phénomène naturel, quelles sont les causes de la toxicité? Le déversement d'égouts ou de déchets industriels dans les eaux de l'inlet? En ce cas, qui en sont responsables? Pourquoi ne les a-t-on pas traduits en justice? Si le Ministère tient ces renseignements, mais ne peut agir, qu'il les dévoile afin que le grand public puisse prendre les mesures voulues.

3. Pollution du fleuve Fraser

Monsieur le président, messieurs, la Société tient maintenant à vous signaler ce qu'elle considère le plus grave problème en Colombie-Britannique, soit la pollution du bassin du Fraser. Vous êtes conscients, j'en suis sûr, de l'importance qu'a ce cours d'eau pour la province et le pays tout entier; néanmoins, permettez-moi de vous rappeler brièvement certains faits:

- a) Le bassin du Fraser arrose environ le tiers de la province.
- b) Plus des deux tiers des habitants de la province vivent dans le territoire arrosé par ce bassin.

(c) It is the greatest salmon fishing and spawning river in North America.

Despite the importance of this River to British Columbians, there has been savage abuse of it by industries, condoned by both provincial and federal governments. (The blasting of rock into the river by the engineers of the Canadian Great Northern Railway while building a bridge across the Fraser in 1913 cost B.C. and Canada an estimated \$1,000,000,-000 loss in salmon production between the years 1913 and 1960.) Three large pulp mills have been established at Prince George and one at Kamloops. Others are proposed for Quesnel and also Ashcroft. The effluent of all these mills does and will discharge into the Fraser River system. Logging is progressively denuding much of the Fraser River drainage basin, resulting in increased siltation due to heavy erosion. At the Seventeenth B.C. Natural Resource Conference in 1967 on "Water a Fundamental Resource", it was stated that a sediment survey by the Water Resources Branch at Mission revealed that up to 500,000 tons of silt a day was being carried by the River. Lumber, plywood, chip production and booming grounds that are heavily concentrated on the Fraser are a continuous source of debris and pollution. Mining in areas such as the Highland Valley where low-grade copper and molybdenum ore will be milled in quantities of over 100,000 tons per day will require a minimum of 200,000 tons of water per day.

S.P.E.C. cannot emphasize too strongly that secondary treatment of sewage should be the minimal required on the Fraser River system to assure a dissolved oxygen concentration of five milligrams per litre throughout the urbanized and industrialized mainstream of the river. It is now recognized that secondary treatment may not be the proper answer to sewage disposal and that a more sophisticated treatment will be necessary. (At this time, however, secondary treatment is the method generally recommended.) An oxygen block in the Delta area could seriously delay a salmon run. We know that ten percent of the pollution necessary to kill a salmon is all that is needed to prevent it from spawning.

At this point we would like to quote from the August 18, 1967 issue of "The Fisherman":

c) C'est le cours d'eau par excellence, en Amérique du Nord, pour la pêche et la reproduction du saumon.

Malgré l'importance du Fraser pour la Colombie-Britannique, les industries locales se sont livrées à des abus révoltants, sous l'œil indifférent du gouvernement fédéral et de la province. Ainsi, on estime à un milliard de dollars les pertes de saumon, de 1913 à 1920, attribuables au déchargement, dans ce cours d'eau, de la roche dynamitée par les ingénieurs de la Canadian Great Northern Railway, lors de l'aménagement d'un pont sur le Fraser en 1913. Trois grandes usines à pâtes se sont établies à Prince-George, une autre à Kamloops. Il est question d'en aménager d'autres à Quesnel et à Ashcroft. Les déchets de ces usines vont ou iront se perdre dans le bassin du Fraser. Par ailleurs, à cause de l'exploitation forestière intense dans cette région, l'érosion des sols entraîne l'envasement progressif du fleuve. Lors de la 17^e Conférence sur les richesses naturelles de la Colombie-Britannique, qui s'est penchée en 1967 sur l'eau, ressource fondamentale, on a dit que le Fraser pouvait charrier jusqu'à 500,000 tonnes de vase par jour d'après une étude faite à Mission par la Direction des ressources hydrauliques. Les fabriques de bois d'œuvre, de contre-plaqués ou de copeaux, ainsi que les estacades, fort nombreuses sur le fleuve, sont des sources continues de débris et de polluants. Dans des régions telles que la vallée Highland, où l'on extraira chaque jour plus de 100,000 tonnes de minerai de molybdène et de cuivre de basse qualité, l'exploitation minière exigera, au bas mot, quelque 200,000 tonnes d'eau par jour.

La Société ne saurait trop insister pour que s'effectue le traitement secondaire des égouts, au moins, dans la région du bassin afin d'assurer une teneur en oxygène dissous de cinq milligrammes au litre dans les eaux baignant les centres urbanisés et industrialisés. On sait maintenant que le traitement secondaire offre certaines lacunes et que des méthodes plus rigoureuses s'imposent. Néanmoins, cette mesure se recommande toujours dans la plupart des cas. Une pénurie d'oxygène dans la région du Delta pourrait fortement gêner la montaison du saumon. Il est établi que le dixième de la pollution fatale au saumon suffit à l'empêcher de frayer.

Nous aimerions maintenant citer un article paru le 18 août 1967 dans la revue *The Fisherman*:

BACTERIAL COUNT HIGH—FRASER PRESENTS HEALTH HAZARD

The strong health hazard posed by pollution of the Fraser River was again emphasized last week by J. W. Maynard, senior public health official with the Boundary Health Unit, who reports that tests at nine sampling stations operated by the Unit indicate that no part of the lower Fraser is safe any longer for swimming or aquatic sports. Tests show that the bacterial count at all locations ranges from 4,000 coliforms at Barnston Island to an average of one million coliforms per 100 litres of water at Annacis Island. The coliform is a standard measure used to determine the extent of water pollution.

The Unit's jurisdiction covers the areas of Cloverdale, Ladner, North Surrey, Surrey, and White Rock. Its testing stations send in continuous reports presenting one of the few realistic pictures of what pollution is doing to rivers and, consequently, to public health standards.

The Unit's bacteria level tests were conducted at:—

Barnston Island (coliform count of 4,000)
 Port Mann (15,000)
 South side of Pattullo Bridge (20-30,000)
 Acorn Lumber (8,000)
 Annacis Island (one million)
 Glenrose Cannery (12,000)
 Dow Chemicals (12,000)
 Pacific Coast Packers (20,000)
 Westham Island (8,000)

Health authorities say that a standard for safe swimming should never exceed 1,000 coliforms and preferably should be considerably lower.

Maynard told "THE FISHERMAN" that water quality standard suggested by the U.S.-Canadian Pacific Northwest Pollution Control Council sets a pollution level of not more than 2,000 coliforms as generally 'safe' for purposes other than swimming.

Mr. Chairman, considering the importance of the river to British Columbia, our Society recommends the Minister of Fisheries and your Commission request that the federal government initiate a comprehensive study of the ecology of the Fraser River system.

That this study be made in co-operation with all Provincial and Federal Resource Management Departments and disciplines.

LA POLLUTION DU FRASER ATTEINT UN POINT DANGEREUX

La pollution du Fraser pose de graves risques pour la santé. C'est ce qu'a réaffirmé, la semaine dernière, un fonctionnaire supérieur du Bureau de l'hygiène, M. J. W. Maynard, qui a fait état des essais pratiqués par les neuf sections d'échantillonnage du Bureau. Selon lui, aucune partie du cours inférieur du Fraser n'est désormais propice à la natation ou aux sports nautiques.

Au terme des dénombrements bactériens, on a relevé 4,000 coliformes à l'île Barnston et 1,000,000 de coliformes par 100 litres d'eau, en moyenne, à l'île Annacis. Le coliforme s'emploie couramment comme étalon pour quantifier la pollution de l'eau.

Le Bureau englobe les régions de Cloverdale, Ladner, North Surrey, Surrey et White Rock. Les rapports que lui transmettent périodiquement ses sections d'échantillonnage donnent une idée exacte, chose rare aujourd'hui, des effets de la pollution, eu égard aux normes d'hygiène du secteur public.

Les essais se sont déroulés aux endroits suivants:

Île Barnston (4,000 coliformes)
 Port Mann (15,000)
 Côté sud du pont Pattullo (20,000-30,000)
 Acorn Lumber (8,000)
 Île Annacis (1,000,000)
 Conserverie Glenrose (12,000)
 Dow Chemicals (12,000)
 Pacific Coast Packers (20,000)
 Île Westham (8,000)

Selon les autorités médicales, les eaux réservées à la natation ne doivent jamais renfermer plus de 1,000 coliformes et, de préférence, doivent en contenir beaucoup moins.

M. Maynard a fait remarquer que pour toute autre activité sur l'eau, à part la natation, le Conseil canado-américain de la lutte contre la pollution dans le nord-ouest du Pacifique propose pour norme de sécurité le chiffre maximal de 2,000 coliformes.

Monsieur le président, vu l'importance du Fraser pour la Colombie-Britannique, la Société recommande au ministère des Pêches et à ce comité de prier le gouvernement fédéral d'entreprendre une étude complète de l'écologie du bassin de ce cours d'eau.

Que cette étude se fasse en collaboration avec les disciplines et les services de gestion des ressources au sein des administrations fédérale et provinciale.

That the objective be to obtain the optimum use of the river for the benefit of the people of British Columbia and Canada within the ecological potential of this mighty river.

That the study and report be comprehensive, similar to the one prepared by the U.S. Federal Water Control Administration—Willamette River Basin and the Puget Sound.

That a study be engaged by the various federal departments in conjunction with the provincial government to enable the Government of Canada to set standards for water and air pollution and to enact adequate pollution control legislation that will be effective and enforced.

This Society agrees with the statement made by Mr. Jack Davis "that he was pleased the forestry company (MacMillan Bloedel) came up to the Department of Fisheries standards for its Alberni mill". He said that any mill on any body of water will have to meet these standards on two main counts—biological oxygen demand and toxicity.

Respectfully submitted by
Society for Pollution and
Environmental Control.

Qu'elle se donne pour objectif d'optimiser l'emploi du Fraser, suivant les possibilités écologiques de ce puissant cours d'eau, au profit des habitants de la Colombie-Britannique et du pays tout entier.

Que cette étude et le rapport en découlant se comparent favorablement avec les travaux réalisés aux États-Unis par la Régie fédérale des eaux à l'égard du bassin de la rivière Willamette et de la baie Puget.

Que les divers ministères fédéraux fassent des études, de concert avec la province, afin de permettre au gouvernement du Canada d'établir des normes concernant la pollution de l'air et de l'eau et d'adopter des mesures législatives de suppression qui seront applicables et mises en vigueur.

La Société partage l'avis de M. Jack Davis, lorsque celui-ci s'est déclaré heureux que la société d'exploitation forestière (MacMillan Bloedel) se soit conformée aux exigences du ministère des Pêches pour l'aménagement de son usine d'Alberni. Le ministre a ajouté que tout établissement situé en bordure d'une étendue d'eau devra désormais répondre à ces exigences, principalement sous deux aspects: la demande biologique d'oxygène et la toxicité.

Veuillez agréer, Messieurs, l'assurance de notre haute considération.

La Société pour la suppression de la pollution et l'assainissement du milieu

APPENDIX K1

SUBMISSION BY THE
SOCIETY FOR POLLUTION AND
ENVIRONMENTAL CONTROL
(S. P. E. C.)

TO
PUBLIC HEARING
ON
FORESTRY

SUBJECT: FEDERAL RESPONSIBILITY

Mr. Chairman, Messrs. Commissioners,
Ladies and Gentlemen:

It is our understanding that this Committee on Forestry is responsible only for federally controlled forests such as:

1. National Parks
2. E and N Railway land on Vancouver Island
3. Territorial forests

Because the time element is an important factor in determining the quantity and quality of a brief we were unable to research into the matter of forestry in a depth study. We are, however, only too grateful to be able to endorse the valuable information contained in Pat Carney's article in the April 16, 1969 issue of "The Vancouver Sun".

See Appendix A

Our Society considers that the Yukon forests are being neglected and exploited by the Federal Government. We wish to underline certain points made by Miss Carney:

1. No provision for reforestation.
2. No adequate fire control.
3. No adequate forestry staff in relation to the area of 51,968,000 acres.
4. Permission to export logs.

The Society for Pollution and Environmental Control is unalterably opposed to the export of logs from lands under control of the Federal Government. This concern is not only felt by members of our Society but also by the majority of people in British Columbia. We attribute this type of stupid, short-sighted policy to Provincial governments but we do expect a much more mature policy re the handling of our forest resources by our Federal Government.

Canadians must be ashamed of this robber-baron attitude of the Federal Govern-

APPENDICE K1

DÉPOSÉ PAR LA SOCIÉTÉ POUR LA LUTTE
À LA POLLUTION ET POUR LA PRÉ-
SERVATION DU MILIEU
(S.P.E.C.)

À L'AUDIENCE PUBLIQUE SUR LES
FORÊTS

SUJET: LA RESPONSABILITÉ FÉDÉRALE

M. le Président, messieurs les commissaires,
mesdames et messieurs,

Que nous sachions, ce Comité des forêts n'est responsable que des forêts administrées par le gouvernement fédéral à savoir:

- 1) les parcs nationaux
- 2) les terrains ferroviaires E et N de l'île de Vancouver
- 3) les forêts territoriales.

Vu que le temps est un facteur important dont dépend le contenu et la qualité d'un mémoire, nous n'avons pas pu faire une étude en profondeur de la question des forêts. Nous sommes toutefois trop heureux de pouvoir adhérer aux précieux renseignements contenus dans l'article de Pat Carney publié dans le numéro du 16 avril 1969 du *Sun* de Vancouver.

Voir annexe A

Notre Société estime que le gouvernement fédéral exploite sans ménagement les forêts du Yukon. Nous voulons relever certains aspects énoncés par M^{lle} Carney:

- 1) aucun projet de reboisement
- 2) protection insuffisante contre les incendies
- 3) insuffisance de personnel forestier dans une région de 51,968,000 acres
- 4) on permet l'exportation du bois.

Notre Société s'oppose catégoriquement à l'exportation du bois provenant des terres relevant du gouvernement fédéral. Cette attitude n'est pas propre aux membres de notre Société mais elle est partagée par la majorité des résidents de la Colombie-Britannique. C'est aux gouvernements provinciaux que nous attribuons cette politique stupide et à courte vue, mais nous nous attendons de la part du gouvernement fédéral à une politique plus intelligente de gestion des ressources forestières.

C'est une honte pour les Canadiens que le gouvernement fédéral se comporte comme un

ment in its administration of a territory under its trusteeship.

In closing, Mr. Chairman, S.P.E.C. has this to say to the Commission: "Defer not to tomorrow to be wise for tomorrow's sun may never rise".

Thank you Mr. Chairman and gentlemen of the Commission for your attention.

Respectfully submitted by
Society for Pollution and Environmental Control.

APPENDIX L

PACIFIC COAST FISHERMEN'S
MUTUAL MARINE INSURANCE
COMPANY
BRIEF TO
THE PARLIAMENTARY COMMITTEE ON
FISHERIES AND FORESTRY
April 1969

INDEX

	Page	Para.
1. History of Development of a successful Marine Insurance Company by fishermen	1-3	1-12
2. Fundamental principles of its operation	3-5	13
3. Comparison with Fishermen's Indemnity Plan .	5	14
4. Recommendations	5-7	15
5. The proven value of co-operative effort	7	16-18
6. The role of Government	7-8	19

1. Pacific Coast Fishermen's Mutual Marine Insurance Company was brought into being in 1945 by a relatively small number of fishermen on the west coast who took the risk that co-operatively they could insure themselves at reasonable rates. They were satisfied that the large marine insurance companies were charging excessive rates, mainly because the big insurance companies did not separately appraise and realize the real needs of small fishermen on this coast. These fishermen believed they could do this job for themselves, relying upon their own experience.

2. From the outset they proved to be right. By sound organization and management and relying upon their own interdependence and knowledge of vessels and fishing, they have built a substantial insurance company and

déprédateur dans l'administration d'un territoire placé sous sa tutelle.

En conclusion, monsieur le Président, notre Société déclare à la Commission: «N'attendez pas à demain pour être sage, car ce sera peut-être trop tard.

Nous vous remercions, monsieur le Président et messieurs les Commissaires de votre attention.

En tout respect,
La Société pour la lutte à la pollution et pour la préservation du milieu.

APPENDICE L

PACIFIC COAST FISHERMEN'S
MUTUAL MARINE INSURANCE
COMPANY MÉMOIRE PRÉSENTÉ AU
COMITÉ PARLEMENTAIRE
DES PÊCHES ET FORÊTS
Avril 1969

TABLE DES MATIÈRES

	Pages	Para-graphes
1. Historique et développement spectaculaire d'une société d'assurance maritime fondée par des pêcheurs	1-3	1-12
2. Principes fondamentaux de l'entreprise	3-5	13
3. La société et le Plan d'indemnités aux pêcheurs .	5	14
4. Avis	5-7	15
5. L'importance avérée de l'action coopérative	7	16-18
6. Le rôle du gouvernement	7-8	19

1. La société Pacific Coast Fishermen's Mutual Marine Insurance Company prit naissance en 1945, alors qu'une poignée de pêcheurs de la côte de l'Ouest décidèrent qu'ensemble, ils pourraient s'assurer contre certains risques à des taux raisonnables. Ils étaient désormais convaincus que les principales sociétés d'assurance maritime leur comptaient des taux excessifs, surtout parce qu'elles ne cherchaient pas à se rendre compte des véritables besoins des petits pêcheurs dans la région. Les fondateurs estimèrent que l'expérience qu'ils avaient acquise leur permettrait de résoudre eux-mêmes ce problème.

2. Le temps eut tôt fait de leur donner raison. Grâce à une organisation et à une administration de premier ordre, appuyées par leur esprit de solidarité et leur connaissance des bateaux et de la pêche, les pêcheurs

have provided insurance at cost which has proved to be a great saving to those who have participated.

3. The Company was incorporated by the fishermen by Private Bill of the Legislature in 1945. The Company went into operation shortly after its incorporation. It established what appeared to be a fair premium in relation to rates being charged at the time and provided several classes of insurance, being variations of total loss and restrictive full form insurance to enable the small owner to participate to the best of his ability.

4. Surpluses have occurred each year which have been credited back to participating fishermen after providing statutory reserves. As experience has justified it, the rates have been reduced from time to time. By 1955 the Mutual had received net premiums (after deductions of re-insurance) in aggregate exceeding \$1,000,000 in its first ten years of operation and had returned to policyholders \$295,370. The average coverage per boat then was only \$8,500.

5. In 1968 *alone*, the Mutual insured 947 boats and the insurance in force was \$23,000,000. The rebate for 1968 *alone* exceeded 50 per cent of net premium (gross premium less lay-up credit), i.e. approximately \$500,000 (although our rate is as good as fleet insurance rates of private companies and in fact is better because we have no deductible and also provide a lay-up refund).

6. In or about 1953 the Federal Government set up the Fishermen's Indemnity Fund, instituting a small boat insurance scheme on a limited basis. This scheme offered minimum protection for the small boat class. It naturally attracted many of the Mutual Company's members. The Company, having been created to meet the interests of these as well as other fishermen, not only cooperated in establishing the scheme but was quite prepared to have many members transfer to it. The average value of vessels transferring from the Company to the Government's scheme was approximately \$3,700 each.

7. While this event reduced the Company's membership by about 40 per cent, it enabled the Mutual to revise the type of coverage which it offered and also ultimately to review its re-insurance program.

8. When the Company was first established, it re-insured all risks over \$4,000. By 1957 it had increased its own risk on each vessel insured to \$8,000. After obtaining an amendment to its Private Bill in 1957, the Company

ont établi une importante société d'assurance maritime dont les taux permettent aux assurés de réaliser de grandes économies.

3. La société se constitua légalement en 1945 au titre d'un bill d'intérêt privé adopté par l'Assemblée législative provinciale; peu après, elle se lançait en affaires. On a établi ce qui semblait être des primes équitables par rapport aux taux comptés à l'époque, de même que diverses catégories d'assurance, allant de la garantie contre la perte totale à la garantie intégrale restrictive, pour permettre aux petits propriétaires d'y souscrire dans toute la mesure du possible.

4. Chaque année, on a enregistré un surplus dont les pêcheurs assurés ont bénéficié, après déduction d'un certain montant destiné aux réserves statutaires. Les taux ont baissé de temps à autre, pour autant que les circonstances le permettaient. En 1955, dix ans après sa fondation, la société avait déjà perçu plus d'un million de dollars en primes nettes (contrats de réassurance exclus) et versé \$295,370 aux titulaires de polices. La garantie moyenne par bateau ne s'établissait alors qu'à \$8,500.

5. En la *seule* année de 1968, la société a assuré 947 bateaux, les contrats d'assurance en vigueur atteignant 23 millions de dollars. Pour 1968 *seulement*, le chiffre des ristournes dépasse la moitié des primes nettes (primes brutes moins le crédit accumulé), soit environ \$500,000 (quoique nos taux correspondent aux taux d'assurance collective dans le secteur privé; ils sont même plus avantageux, en l'absence de toute retenue, outre que nous prévoyons un remboursement accumulé).

6. Vers 1963, le gouvernement fédéral a institué le Plan d'indemnités aux pêcheurs, régime d'assurance limitée qui s'applique aux petits bateaux, mais en n'offrant qu'un minimum de garantie. Bien entendu, un bon nombre des membres de la société s'en sont prévalus. Ayant à cœur l'intérêt de tous les pêcheurs, fussent-ils associés ou non, la société a collaboré à l'implantation du nouveau régime et même consenti à lui céder un grand nombre de contrats d'assurance. La *valus*. Ayant à cœur l'intérêt de tous les contrats cédés s'établissait à \$3,700, environ.

7. En conséquence, l'effectif de la société a baissé de 40 p. 100, mais celle-ci en a profité pour réviser les garanties qu'elle offrait et pour remettre à l'étude son programme de réassurance.

8. A l'origine, la société réassurait contre tous les risques au delà de \$4,000. En 1957, le montant de la réassurance pour chaque bateau a été porté à \$8,000. Après avoir fait modifier, en 1957, le bill qui l'avait constitué,

gradually reduced its re-insurance and its present policy is only to re-insure on risks in excess of \$30,000.

9. Subsequent to the establishment of the Fishermen's Indemnity Plan, costs and technological changes in the fishing industry on the west coast had resulted in many fishermen, alone or collectively, acquiring much more expensive boats and gear, with respect to which the Fishermen's Indemnity Plan provided insufficient insurance coverage. By the end of 1957 the average value of boats insured by the Company had risen to \$15,000 and now it is close to \$25,000.

10. Since 1965 the Company has acquired as a subsidiary and operates its own repair shop.

11. The annexed extract from the Annual Report for the 1968 fiscal year containing a graph of the 23 years' growth of the Company will give you some idea of the success of its operations.

12. While the growth and financial stability of the Mutual are of great gratification to the fishermen, the significant aspect of the Mutual which we thought would be of interest to your Committee is the method of operation which in our opinion has made a fundamental contribution to the success of the Mutual.

13. Basically, we think the fundamental principles embodied in the By-laws and in the operations of the Mutual can be summarized as follows:

(a) Every policyholder is a member and entitled on payment of his premium to all the benefits of his policy and participation in the overall business of the Company.

(b) We have the broadest type of full form marine coverage for all our policyholders.

(c) Each policyholder has one vote and has the opportunity to participate in the Mutual at regular annual and district meetings.

(d) Policy is made by a representative board of twenty-one fishermen participants and is subject to review by the membership and much of it is incorporated in the By-laws which can only be amended by special resolution of the membership.

(e) Lower rates are charged when a boat is laid up between fishing periods when it is not subject to the perils of the sea.

(f) Each member pays the rate fixed by the directors for full form marine insurance which is, as stated, competitive or

la société a progressivement diminué ses garanties, de sorte qu'elle ne réassure maintenant qu'en sus de \$30,000.

9. Au cours des années qui suivirent l'établissement du Plan d'indemnités aux pêcheurs, l'industrie de la pêche sur la côte de l'Ouest ne cessa d'évoluer sur les plans économique et technologique, à telle enseigne que bien des pêcheurs, seuls ou avec d'autres, se procurèrent des bateaux et des engins de pêche assez coûteux, pour lesquels le Plan accordait une protection insuffisante. Vers la fin de 1957, la valeur moyenne des bateaux assurés par la société s'établissait à \$15,000; aujourd'hui, elle atteint près de \$25,000.

10. Depuis 1965, la société compte une filiale et un atelier de réparations.

11. On trouvera en annexe un graphique tiré du rapport annuel de la société pour l'exercice financier de 1968; il fait ressortir le développement de la société depuis sa fondation, il y a 23 ans, et donne une idée de son expansion spectaculaire.

12. Bien que le développement et la stabilité financière de la société soient de nature à réjouir les pêcheurs, l'aspect important de notre entreprise, celui qui intéressera le Comité, croyons-nous, c'est notre mode d'exploitation qui a contribué essentiellement, à notre avis, au succès de la société.

13. Somme toute, les principes fondamentaux qui sous-tendent notre régie interne et nos opérations pourraient se résumer comme il suit:

a) Tout titulaire d'une police, en tant qu'associé, est admissible, sur versement de sa prime, à tous les avantages inhérents à la police, outre qu'il participe à l'activité globale de la société.

b) Nous offrons à tous nos assurés le plus grand éventail de garanties dans le contrat d'assurance maritime intégrale.

c) Tout assuré a droit de vote et peut s'en prévaloir lors de l'assemblée générale et des réunions de district tenues périodiquement par la société.

d) La politique, établie par un conseil représentatif composé de 21 pêcheurs assurés, est proposée à l'examen de l'effectif, puis s'intègre dans le règlement interne, lequel ne peut être modifié que par suite d'un vœu particulier de l'effectif.

e) Les taux baissent à l'égard des bateaux inutilisés hors de la campagne de pêche, alors que les risques en mer sont inexistantes.

f) Chaque associé est assuré au taux fixé par les directeurs relativement à l'assurance maritime intégrale, taux, nous le

better, but at the end of the year, that portion of the premiums not required to pay costs, claims and provide statutory reserves are credited to him based on pooling and the use by him of the Mutual. These credits include lay-up credits and may be applied on the next year's premium. The average refund in the past eight years (after lay-up credit) has been 50% of net premium. The By-laws provide that up to 20% of the refunds may be retained in a revolving reserve fund to the credit of each policyholder in accordance with his contribution.

(g) The By-laws provide that in the event of liquidation, any surplus (which likely would accrue by reason of statutory reserves) will be divided on a patronage basis over the last five years.

(h) A small participation in the capital of the Mutual is required to be undertaken by each policy older, \$10 each. This is refundable upon application at the discretion of the directors.

(i) The active participation of the members and their stake in the success of the Company, based on co-operative principles, has resulted in full knowledge and responsibility of the policyholders in and about the Company's activities. As a result they are proud of the accomplishments of their Mutual and are prepared to take on responsibilities which greatly assist in its administration.

(j) The members realize and appreciate that the Mutual is their own Company and, accordingly, they take an interest in its day to day operation. Because of this, the Company has a fund of information from which it can properly set values and adjust claims. The By-laws provide for an appeal by way of informal or formal arbitration. The Company has satisfactorily adjusted over 3,500 claims since its incorporation without any request for such arbitration.

14. Relating this experience to the Fishermen's Indemnity Plan, we note the following differences which may be of interest to your Committee:

(a) Insured members voluntarily participate in all aspects of the operation of the Mutual—financing, sharing of risk on a pooled or mutual basis, the fixing of rates, the accumulation of capital, the appraisals of vessels and the adjudication of damages arising out of losses.

(b) Any loss in costs and claims and over-

répétons, toujours abordable, sinon économique; à la fin de l'année, *toutefois*, après acquit des frais et des réclamations et constitution des réserves statutaires, il lui est remis une partie des primes prises globalement, selon son apport à la société. Cette remise, qui comprend les crédits accumulés, peut s'appliquer à la prime pour l'année suivante. Ces huit dernières années, le remboursement moyen (compte tenu du crédit accumulé) s'est chiffré à la moitié de la prime nette. Selon le règlement interne, au plus 20 p. 100 de la remise peut être déposée dans un fonds de réserve renouvelable et créditée à chaque titulaire de police en fonction de son apport.

g) D'après le règlement, en cas de liquidation, tout surplus (l'existence de réserves statutaires rend la chose probable) serait réparti suivant l'apport des assurés au cours des cinq années précédentes.

h) Chaque titulaire de police doit verser la faible somme de \$10 au capital de la société; il s'agit d'un montant remboursable sur demande, à la discrétion des directeurs.

i) Vu leur participation active et leur intérêt aux affaires de la société, selon le principe de la coopération, les assurés ont pleinement conscience de l'activité de la société et en assumant volontiers toute la responsabilité. En conséquence, ils s'enorgueillissent des réalisations de la société et acceptent volontiers d'acquitter des tâches administratives pour le compte de celle-ci.

j) Les associés ont conscience que la société leur appartient; aussi s'intéressent-ils à son activité quotidienne. Pour cette raison, la société dispose toujours de renseignements qui lui permettent de déterminer équitablement le montant des primes et des réclamations. Le règlement prévoit des modalités d'appel et d'arbitrage par voie officielle ou à l'amiable, mais jamais la société, depuis sa fondation, n'a-t-elle dû recourir à l'arbitrage pour une seule des 3,500 réclamations, au moins, qui lui ont été soumises.

14. Comparé au Plan d'indemnités aux pêcheurs, notre régime offre certaines divergences que le Comité sera peut-être intéressé à connaître:

a) Les assurés participent de leur plein gré à tous les aspects de l'activité de la société: financement, partage mutuel ou collectif des risques, établissement des taux, accumulation du capital, estimation des bateaux et expertise des dommages résultant des pertes.

b) Toute perte (coûts, réclamations, frais

head is the responsibility of all and all participate in it. On the other hand, any saving is likewise shared.

(c) The fisherman is more fully protected by the amount of insurance according to the value of his investment in his vessel and gear and the exposure to risk.

(d) Administration costs are kept to a minimum. At the present time the staff consists of four persons in the office including the manager and two surveyors.

15. The Mutual recognizes that because of the lack of other fishermen's co-operative or mutual insurance organizations and the inability or unwillingness, or both, of many fishermen to participate, there is a need for the Fishermen's Indemnity Plan, particularly with respect to smaller boats. In many ways the Plan fills a need we can't fulfill without our policyholders subsidizing the smaller value vessels. In our view these deserve some subsidy in the public interest. However, we would recommend to the Committee:

(a) That the Government consider providing guarantees or seed capital along with an educational program to start more fishermen's mutual insurance companies in Canada. We believe we have proved that a co-operative, properly managed and supervised by the insured, can do a far better job in the field of marine insurance than any other method of organization.

(b) That the Plan itself be democratized to permit fishermen to take a responsible part in its administration, policy making, appraisal for insurance and adjudication of losses with a view not only to using their experience but also to reducing administration costs and red tape.

(c) That gradually the fishermen be given a stake in the Plan so that they will benefit (by rate or premium credit) in its efficient operation.

(d) Every insured be required to have a small investment in the capital of the Plan.

(e) That it be regionalized so that it become more personal and not just regarded as an impersonal, nation-wide government plan in which the participant has no part except to pay a premium and, therefore, may be tempted to use it for personal benefit only and not regard it as the fishermen's own responsibility. In other words, so it becomes "us" and not "them" who make the rules, police

généraux) est la responsabilité de tous les associés et est assumée par eux. D'autre part, toute économie est répartie selon le même principe.

c) Le pêcheur reçoit de meilleures garanties pour un montant d'assurance fixé d'avance la valeur de ses investissements (bateaux et engins) et les risques auxquels il est exposé.

d) Les frais d'administration sont réduits le plus possible. A l'heure actuelle, l'effectif se compose de quatre employés, dont le directeur et deux experts.

15. En l'absence d'autres coopératives ou sociétés mutuelles d'assurance et vu l'incapacité ou le refus, parfois les deux, de bien des pêcheurs à s'y intéresser, la société admet la nécessité du Plan d'indemnités aux pêcheurs, notamment pour les petits bateaux. Ce régime comble diverses lacunes, faute de quoi ce sont nos assurés qui auraient à subventionner les petits propriétaires, lesquels y ont droit, à notre sens, dans l'intérêt public. Quoi qu'il en soit, voici les avis que nous formulons auprès du Comité:

a) Le gouvernement devrait songer à fournir des garanties ou des capitaux d'investissement, outre un programme éducatif, afin de lancer d'autres sociétés mutuelles d'assurance pour les pêcheurs au Canada. Nous avons fait la preuve, à notre avis, qu'une coopérative bien gérée et administrée par ses associés, se révèle de beaucoup supérieure à tout autre mode d'organisation dans le secteur de l'assurance maritime.

b) On devrait démocratiser le Plan lui-même, afin de permettre aux pêcheurs d'y jouer un rôle sérieux dans l'administration, l'élaboration des lignes de conduite, l'estimation de l'assurance et l'expertise des dégâts; on aurait ainsi recours à leur vaste fonds d'expérience, tout en diminuant les frais d'administration et la paperasserie.

c) On devrait peu à peu accroître la participation des pêcheurs au Plan pour qu'ils bénéficient (au chapitre des taux ou des crédits de prime) de toute amélioration du régime.

d) Chaque assuré devrait être tenu de faire un petit placement dans le Plan.

e) Le Plan devrait être régionalisé, donc, plus individualisé; en ce moment, il est envisagé comme un régime administratif national, mais aussi impersonnel, dans lequel l'associé n'a rien d'autre à faire que de verser sa prime. Il a donc tendance à s'en prévaloir uniquement à son profit personnel, sans y voir la part de responsabilité qu'il a. Autrement dit, c'est nous, les pêcheurs, et non «eux», qui

them and determine when and to what extent benefits are payable.

(f) That the Committee consider the possibility of requesting Pacific Coast Fishermen's Mutual Marine Insurance Company to administer a pool for the small boat owners on the west coast under the Fishermen's Indemnity Plan. The real differences between the development of fisheries on the east and west coasts must be recognized.

16. We believe the Department has produced some able administrators and appraisers over the years—but the fisherman is still not policed or judged by his peers. Fishermen, if they have a stake in the Plan and a genuine opportunity for participation are capable to make practical judgments and are generally willing to accept their responsibilities.

17. We welcome any questions from the Committee about our operation and are prepared to share our experience with it with respect to their review of the Fishermen's Indemnity Act.

18. We believe that through the fishermen's Co-operatives, the fishermen's Credit Unions and the fishermen's Mutual Insurance Company on this coast, fishermen have demonstrated that if they wish to, they can in many respects improve their lot with a minimum of government interference. While there are many aspects of the management of the fisheries, as a public asset, which require the expenditure of government funds to safeguard and develop that asset, greater participation by the fishermen themselves is both possible and desirable.

19. The long number of years which it has taken these co-operative types of institutions on the west coast to grow to their present stature indicates the need for the Government to expedite the growth of similar institutions in underdeveloped parts of the fishery by:

- (a) Educational programs;
- (b) Creating greater opportunities for meaningful participation by the fishermen themselves; and
- (c) Help by the Government in the accumulation of capital which has become so essential with the increased costs and the developing technology which have taken place in the fishing industry.

DATED at Vancouver, B.C. this 3rd day of April 1969.

PACIFIC COAST FISHERMEN'S MUTUAL MARINE INSURANCE COMPANY

President (M. Berg)

devraient formuler le règlement, l'appliquer, ainsi que déterminer le mode de répartition des bénéfices.

f) Le Comité pourrait songer à permettre à notre société d'administrer un fonds collectif, au titre du Plan d'indemnités aux pêcheurs, pour les petits propriétaires de bateaux de la côte ouest. Les pêches de l'Ouest et de l'Est ont évolué bien différemment, chose dont il faut tenir compte.

16. Le ministère, au fil des ans, a été bien servi par des administrateurs et des experts compétents, mais il nous semble que le pêcheur n'ait jamais été dirigé ou jugé par ses pairs. En général, s'ils ont des intérêts dans le Plan et peuvent vraiment y prendre une part active, les pêcheurs seront aptes à exercer un jugement pratique et prêts à assumer leurs responsabilités.

17. Nous sommes disposés à répondre à toute question du Comité au sujet de notre activité et à lui faire connaître nos vues sur la révision du Plan d'indemnités aux pêcheurs.

18. Au sein de leurs coopératives, associations de crédit et sociétés mutuelles d'assurance, les pêcheurs de la côte ouest ont démontré, selon nous, qu'ils pouvaient améliorer leur sort, s'ils le voulaient, avec le minimum d'intervention gouvernementale. S'il est vrai que bien des aspects du secteur des pêches, en tant que domaine public, nécessitent l'apport financier de l'État aux fins de protection et de mise en valeur, il est toujours à la fois possible et souhaitable que les pêcheurs eux-mêmes y collaborent sans cesse de plus en plus.

19. Les diverses institutions coopératives sur la côte ouest ont mis beaucoup de temps à atteindre leur développement actuel, ce qui fait ressortir l'opportunité pour le gouvernement de favoriser la croissance d'institutions analogues dans les secteurs sous-développés des pêches, au moyen des initiatives suivantes:

- a) élaborer des programmes éducatifs;
- b) créer un climat favorable à la participation active des pêcheurs; et
- c) aider à l'accumulation du capital, aujourd'hui chose essentielle, vu l'escalade des coûts et l'évolution de la technologie dans l'industrie de la pêche.

- 51-53 Droits de quayage.
- 53 Conclusion.

SUMMARY OF PROBLEMS RAISED AND RECOMMENDATIONS CONTAINED IN THE SUBMISSION OF THE UNITED FISHERMEN AND ALLIED WORKERS' UNION TO THE STANDING COMMITTEE ON FISHERIES AND FORESTRY—APRIL 21-28/69

RÉSUMÉ DES PROBLÈMES EXPOSÉS ET DES RECOMMANDATIONS CONTENUES DANS LES MÉMOIRES DE L'UNION DES PÊCHEURS ET TRAVAILLEURS ASSIMILÉS UNIS AU COMITÉ PERMANENT DES PÊCHES ET FORÊTS—21 AU 28 AVRIL 1969

1. *Introduction and Comment on Timing of the Hearing:*

(Page 1-2)

A large percentage of fishermen are either engaged in fishing or in last minute preparations by mid-April. In future earlier dates for public hearings should be selected.

1. *Exposé et commentaires sur la date des audiences*

(Pages 1 et 2)

Vers la mi-avril, un grand nombre de pêcheurs se livrent déjà à la pêche ou prennent leurs dernières dispositions à cette fin. Il faudrait à l'avenir avancer la date des audiences publiques.

2. *Boat License Limitation in the Salmon Fishery in B.C. and the Union's Opposition to the Davis Plan.*

(Page 2-27)

The Union requested a hearing before the Committee on the subject of Boat Limitation in October, 1968 and repeated the request several times. Meanwhile the Minister has proceeded with the new plan and with amendments; by press release. Can the Committee change any aspect of the Minister's plan? No legislation on it exists and Parliament has not been asked to deal with any legislation. The Minister is using wide powers in the Act to introduce a plan affecting basic rights of all citizens. The Union recommends an amendment to the Fisheries Act to curb the power of the Minister and require approval by Parliament of regulations limiting rights to fish.

2). *Restriction du nombre de permis de bateau de pêche de saumon en Colombie-Britannique et l'opposition de l'Union au plan Davis.*

(Pages 2 à 27)

En octobre 1968, l'Union a demandé au Comité la permission de se faire entendre sur la question de la réduction du nombre des bateaux et il a renouvelé plusieurs fois cette demande. Entretemps, le ministre a appliqué le nouveau plan et des modifications par voie de communiqués de presse.

Le Comité peut-il modifier certains aspects du plan du ministre? Ce plan n'est régi par aucune mesure législative et on n'en a pas soumis au Parlement. Le ministre profite des pouvoirs étendus prévus par la Loi pour appliquer un plan menaçant les droits fondamentaux de tous les citoyens. L'Union recommande une modification à la Loi des pêcheries afin de réduire l'autorité du ministre et d'exiger que le Parlement approuve les règlements limitant le droit de pêche.

(Page 2-5)

Union opposed to placing property rights ahead of human rights. Danger of Davis Plan is that two giant corporations, which already dominate the industry, will extend financial control to encompass the vast majority of boat fishing licenses. Fishermen's proposals ignored by the Minister when he introduced plan approved by the big fishing companies.

(Pages 2 à 5)

L'Union s'oppose à ce qu'on fasse primer les droits de propriété sur les droits humains. Le plan Davis risque de permettre à deux entreprises géantes qui dominent déjà l'industrie d'élargir leur mainmise financière et d'absorber la majeure partie du commerce des permis de pêche. Le ministre n'a pas tenu compte des propositions des pêcheurs en appliquant son plans avec l'approbation des grosses compagnies de pêche.

(Page 5-6)

Union well aware of the over-crowding and over-capitalization, and had submitted numerous resolutions and briefs to government from 1943 to 1968. Reference made to Report of Professor Sol Sinclair in 1961 and Union's endorsement of a 5 year moratorium on issuance of new licenses and an impartial Board of Review to safeguard citizen's rights. Union opposed to higher license fees and auction system suggested by Dr. Sinclair on grounds

(Pages 5 à 6)

L'Union est consciente du nombre excessif de pêcheurs et a soumis au gouvernement, de 1943 à 1968, un grand nombre de résolutions et de mémoires. Mention est faite du rapport du professeur Sol Sinclair en 1961 et de l'appui de l'Union au moratoire de 5 ans sur l'émission de nouveau permis et à la constitution d'un conseil de révision impartial pour garantir les droits du citoyen. L'Union s'oppose à l'augmentation des droits de licence et

companies would gain complete control. Union fully agreed with Sinclair that government should discourage financing of boats and gear by companies. Union also opposed to earlier steps to slip in higher fees as a control measure.

(Page 6-9)

The Union's plan for limitation of licenses is described and arguments presented in 1964 are outlined. Main criterion for renewal of licenses would be that a substantial portion of an individual's income came from fishing. Company control would be removed by government policy to replace the financing of boats and gear by fishing companies with other methods. A five year moratorium on issuance of licenses, to newcomers, with a Board of Review to include fishermen to prevent injustices and to influence future policy. Fishermen demand a plan acceptable to fishermen and will not accept a substitute which increases company control.

(Page 9-13)

Reference to press release of April 3rd and speech of March 14th when Minister of Fisheries states steps are being or will be taken to prevent control by George Weston Ltd. and the New England Fish Company. Failure of Minister to carry through with necessary amendments to the Federal Fisheries Loan Act to enable fishermen to get clear of the big monopoly financial grip. Union urges Government take steps to ensure 100 per cent of the salmon fleet is owned by the fishermen and all financing of vessels, gear and equipment is available from a Government loan board. Minister may be prepared to accept B.C. Packers President's word that they do not control, but Union demands government action to eliminate monopoly control.

(Page 13-18)

Davis plan has not reduced fleet. Larger fleet than ever will fish salmon in 1969. Union opposed to arbitrary measures suggested by Davis which may be introduced by the Minister in 1970 or later. Union deals with Davis' distortion regarding a Board of Review and condemns his exclusion of fishermen from Appeal Committee. Demands release of

et au système d'enchères proposé par le docteur Sinclair, car elle estime que les compagnies accapareraient totalement l'industrie. L'Union est, à l'instar de M. Sinclair, d'avis que le gouvernement devrait décourager le financement des bateaux et des attirails pour les compagnies. L'Union s'est aussi opposée auparavant à des tentatives surnoises pour augmenter les droits comme mesure de contrôle.

(Pages 6 à 9)

Description du plan proposé par l'Union pour restreindre les licences et exposé des arguments présentés en 1964. Le critère fondamental justifiant le renouvellement des licences serait qu'une tranche importante du revenu du particulier provient de la pêche. Le gouvernement en choisissant d'autres méthodes pour financer les bateaux et les attirails ferait ainsi échec à la mainmise des compagnies. Un moratoire de 5 ans sur l'émission des licences aux nouveaux pêcheurs, la constitution d'un conseil de révision qui comprendrait des pêcheurs et dont le rôle serait d'empêcher les injustices et d'influencer la politique future. Le pêcheurs réclament un programme qui leur soit acceptable et nous rejeterons toute autre solution visant à accroître le monopole des compagnies.

(Pages 9 à 13)

Mention est faite du communiqué du 3 avril et du discours du 14 mars dans lequel le ministre des Pêches déclare que des mesures sont prises ou seront prises pour freiner toute tentative de contrôle de la part de George Weston Ltd. et de la New England Fish Company. Le ministre n'a pas fait adopter les modifications nécessaires à la Loi fédérale sur les prêts aux pêches ce qui aurait permis aux pêcheurs d'échapper à l'emprise financière des gros monopoles. L'Union demande que le gouvernement fasse en sorte que les pêcheurs deviennent propriétaires exclusifs de la flotte de pêche au saumon et que seul un organisme public de prêts puisse financer les bateaux, l'attirail et le matériel. Le ministre est peut-être disposé à croire sur parole le président de B.C. Packers, lequel nie qu'il exerce un contrôle, mais l'Union demande que le gouvernement fasse tout pour éliminer le monopole.

(Pages 13 à 18)

Le plan Davis n'a pas réduit la flotte. Une flotte plus nombreuse que jamais pêchera le saumon en 1969. L'Union s'oppose aux mesures arbitraires proposées par Davis et que ce dernier présentera peut-être en 1970 au plus tard. L'Union décrit comment Davis a déformé les faits à propos d'un conseil de révision et le blâme d'avoir exclu les

all information on appeals to prevent abuse of power.

Rights of Indians, young people, new entrants, sons of fishermen, as well as seniority of ageing fishermen are best protected under Union proposals. Davis plan can result in the small people being squeezed out because access to the almighty dollar decides who will fish. Union warned against loss of Bering Sea halibut and B.C. herring but fishermen were ignored, even though experts later proven wrong. Minister of Fisheries making speeches to convince all and sundry that fishermen don't know the score and the medicine he prescribes will do wonders. Fishermen will suffer if it robs them of their birthright. Union urges Committee to have the Davis plan terminated and replaced by a limitation system acceptable to fishermen.

(Page 19-27)

3. Extension of Territorial Waters, Baselines and Exclusive Fishery Zones

Review of Union's proposals over past 23 years. Criticism of Bill S-17 and proposed amendments offered by the Union in 1964 were ignored by Government. Basic criticism is that Canada has been too slow and too cautious. Canada has been "weak-kneed and gutless" compared with Iceland, Norway and South American nations.

Union proposes baseline should enclose Queen Charlotte Sound, Hecate Straits and Dixon Entrance as internal waters of Canada and territorial sea should extend further 12 miles seaward from baseline. Exclusive fishing zone should extend to edge of continental shelf. The recent announcement by the Minister of Fisheries leaves "gaps" which may affect Canada unfavourably, and Union regards the announcement as "another retreat". Union urges strong and decisive action now, to establish the baseline, and extend territorial waters, without leaving "gaps".

(Page 27-31)

4. Growth of Foreign Monopoly

Outline of the process of merger and take-over which leave Weston empire and New England Fish Co. in virtual control, and which have primarily caused shutdown of plants, with loss of about 1,000 jobs. Elimination of competition for fish coupled with ability to fix prices at consumer level additional factors. Demands for action to provide alter-

pêcheurs du Comité d'appel. Nous demandons, pour empêcher tout abus de pouvoir, qu'on publie tous les détails à propos des appels.

Les propositions de l'Union protège mieux les droits des Indiens, des jeunes, des débutants, des fils des pêcheurs ainsi que le droit à l'ancienneté des vieux pêcheurs. Le plan Davis entraînera la faillite des gagne-petits parce que seul l'argent accordera le droit de pêche. L'Union avait mis en garde contre la disparition du flétan de la mer de Bering et du hareng de la Colombie-Britannique mais on n'a pas tenu compte de cet avertissement, même si l'opinion des spécialistes s'est révélée fausse. Le ministre des Pêches tente par ses discours de convaincre tous les secteurs que les pêcheurs ignorent la situation et que ses solutions feront des merveilles. Les pêcheurs en seront victimes s'ils finissent par perdre leur droit à leur gagne-pain. L'Union demande au Comité de suspendre le plan Davis et de le remplacer par une formule de restriction de permis acceptable aux pêcheurs.

(Pages 19 à 27)

3. Extension des eaux territoriales, des lignes de base et des zones de pêche exclusives

Récapitulation des propositions de l'Union depuis 23 ans. Critique du bill S-17; le gouvernement n'a pas tenu compte des modifications proposées par l'Union en 1964. Nous reprochons, au fond, un excès de timidité au Canada. Le Canada s'est montré faible et indécis comparé à l'Islande, la Norvège et à des nations sud-américaines.

L'Union propose que les lignes de base doivent englober le détroit de la reine Charlotte, le détroit d'Hecate et l'entrée Dixon en tant qu'eaux intérieures du Canada et que les eaux territoriales doivent s'arrêter à 12 milles au large à partir de la ligne de base. La zone de pêche exclusive doit s'étendre jusqu'au bord du plateau continental. La récente annonce du ministre des Pêcheries, renferme certaines lacunes qui peuvent être défavorables au Canada et, pour l'Union, cette annonce est un autre recul. L'Union réclame des mesures immédiates énergiques et décisives pour établir la ligne de base et étendre les eaux territoriales et ceci sans lacunes.

(Pages 27 à 31)

4. Croissance du monopole étranger

Description du processus de fusionnement et d'absorption qui assure un contrôle virtuel de l'industrie à l'empire Weston et la New England Fish Co., ce qui a entraîné la fermeture d'usines et la perte de mille emplois environ. On signale d'autres facteurs, comme l'élimination de la concurrence dans ce secteur ajoutée à la capacité de fixer les prix à

nate employment, necessary retraining and assistance for displaced workers not acted upon by companies or government. Government should either compel action or nationalize these two foreign controlled corporations.

(Pages 31-34)

5. North Pacific Mid-Ocean Fishing By Japan

Union re-states basic opposition to mid-Pacific salmon fishery. Japan has 1% of the spawning streams, but harvests a major portion of the Pacific salmon and poses a threat to all nations with salmon streams. Canada should pursue this at the Law of the Sea Conferences, at the United Nations, and in direct talks with Japan and other Pacific nations.

(Pages 34-35)

6. American Interception of Canadian Salmon

Alaskan fishermen heavily intercept Nass and Skeena pinks and sockeye salmon runs in violation of basic principles agreed upon in a surf line conference in 1957. Canadian U.S.A. negotiations broke down in 1966, with Canada declaring right to move outside surf line to protect Canadian interests. Lack of action by Canada to back up words with deeds leaves Americans in control of situation. Similar situation regarding sharing of salmon bound for the Fraser River. Canada should develop fisheries outside the present surf line to strengthen our hand in negotiations with the Americans.

(Pages 36-37)

7. An All-Inclusive North Pacific Fisheries Treaty

Research is impossible and conservation regulations virtually non-existent in the huge groundfish operation of the North Pacific, due to exclusion of the U.S.S.R. Canada should seek an all-inclusive treaty.

(Pages 37-38)

8. Declining Halibut Resource

Canadians and American halibut catches have declined by 27,000,000 lbs. since 1962, about 35%. Entry of Japanese into Eastern Bering Sea halibut fishery plus large scale Japanese and Soviet trawl fleets operating through the Northeastern Pacific and Bering Sea have caused the decline. Obvious need

la consommation. Nous demandons qu'on assure de nouveaux emplois, le recyclage et l'assistance nécessaire aux ouvriers déplacés qui n'ont pas reçu compensation de la part des compagnies ou du gouvernement. Le gouvernement devrait, ou prendre des mesures coercitives contre ces deux compagnies étrangères ou les nationaliser.

(Pages 31 à 34)

5. Opérations de pêche menées par le Japon dans le milieu du Pacifique nord

L'Union réaffirme son opposition de principe aux pêches de saumon au milieu du Pacifique. Le Japon possède 1 p. 100 des courants de frai, mais il récolte une portion majeure du saumon du Pacifique et menace tous les pays possédant des bancs de saumon. Le Canada devrait soutenir ce point de vue aux conférences sur le droit maritime, aux Nations-Unies et dans des conversations directes avec le Japon et d'autres nations du Pacifique.

(Pages 34 à 35)

6. Interception du saumon canadien par les Américains

Les pêcheurs de l'Alaska pratiquent une interception massive des bancs de saumon rose, Nass et Skeena et de saumon sockeye en violation des principes fondamentaux acceptés à une conférence sur la délimitation des pêches des brisants en 1957. Les pourparlers canado-américains ont été rompus en 1966 et le Canada a affirmé son droit de franchir la ligne des brisants pour protéger ses intérêts. Le Canada n'ayant pris par la suite aucune mesure concrète, a abandonné le contrôle de la situation aux Américains. Il en est de même pour les saumons se déplaçant vers le fleuve Fraser. Le Canada devrait établir des zones de pêche hors de la présente ligne des brisants pour pouvoir négocier avec les Américains à partir d'une position de force.

(Pages 36 à 37)

7. Un traité global sur pêches du Pacifique nord

Il est impossible de faire des recherches et de régir comme il convient la conservation de la pêche aux poissons de fond dans le Pacifique nord à cause de l'exclusion de l'Union soviétique du traité. Le Canada devrait plaider en faveur d'un traité global.

(Pages 37 à 38)

8. Le déclin des ressources de flétan

Les prises de flétan par le Canada et les États-Unis ont baissé de 27,000,000 de livres depuis 1962, soit de 35 p. 100. Cette baisse est due à la pénétration des Japonais dans la pêche au flétan dans la partie est de la mer de Bering et par l'implantation massive de flottes de chalutiers japonais et soviétiques dans le

for all-inclusive fisheries treaty and regulations to re-habilitate halibut resource.

(Pages 39-40)

9. The Herring Disaster

Union warned Department 12 years in advance of impending disaster and strongly urged more stringent regulations. Fishermen's views rejected until decline had reached proportions where entire fishery had to be closed. Union urges greater control when fishery re-opened; special efforts to increase utilization of herring as food for human consumption; and care that the mistake is not repeated on Canada's East Coast.

(Pages 40-42)

10. Rehabilitation and Expansion of the Salmon Resource

Salmon resources declined since 1951 and efforts to rehabilitate have not, as yet, counteracted harmful effects of deforestation, gravel removal, log driving, pollution, diversion of water, construction of dams, and other man-made obstacles. Union urges \$10,000,000 per year for a 10 year period to be allocated for fisheries development, over and above present budgets. Urges Committee to study a special inner-Department Report on the potential value of such measures to improve and expand salmon spawning areas. Also urges stringent measures to prevent industrial and domestic pollution, with special emphasis on control of pulp mill effluent.

(Pages 42-46)

11. Dogfish Subsidy

A review of previous dogfish control subsidies. Union rejects suggestion by Minister that answer is to bring in Japanese fleets to fish dogfish in Canadian waters. Instead we urge negotiations with Japanese to sell dogfish, even if a Canadian subsidy needed to enable Canadians to catch the fish. All potential markets should be explored and major program of utilization started. Union doubts \$2,000,000 per year required, but points out that \$5,000,000 per year is spent on virtually useless programs resulting primarily from Nato and Norad.

(Pages 46-48)

Pacifique nord-est et dans la mer de Bering. Un traité global sur les pêches s'impose de toute évidence ainsi que des règlements pour renouveler les ressources de flétan.

(Pages 39 à 40)

9. Le marasme de la pêche au hareng

L'Union a averti le Ministère 12 ans à l'avance de ce marasme imminent et a réclamé énergiquement des règlements plus rigoureux. On a rejeté les opinions des pêcheurs jusqu'à ce que la baisse ait atteint des proportions qui ont entraîné la fermeture complète de la pêche. L'Union réclame une réglementation plus sévère à la réouverture de la pêche; il faut faire des efforts spéciaux pour intensifier la consommation du hareng par l'homme; et il faut veiller à ne pas commettre la même erreur sur la côte est du Canada.

(Pages 40 à 42)

10. Renouvellement et expansion des ressources de saumon

Les ressources de saumon baissent depuis 1951 et les efforts de renouvellement n'ont pas réussi jusqu'ici à s'opposer aux effets néfastes du déboisement, de l'extraction du gravier, du flottage du bois, de la pollution, du détournement des eaux, de la construction des barrages et des autres obstacles dus à l'homme. L'Union réclame qu'on affecte à l'expansion des pêches, 10,000,000 de dollars en sus du présent budget pendant une période de 10 ans. On demande au Comité d'examiner un rapport spécial interne du Ministère sur l'utilité d'une telle mesure pour améliorer et agrandir les zones de frai du saumon. On demandera aussi des mesures rigoureuses pour empêcher la pollution causée par les déchets industriels et domestiques et à enrayer surtout l'écoulement des déchets des papeteries.

(Pages 42 à 46)

11. Subventions à la pêche à la roussette

Une description des subventions antérieures au contrôle de la pêche à la roussette. Le ministre, aux yeux de l'Union, a tort de prétendre que la solution c'est d'inviter les flottes japonaises à pêcher la roussette dans les eaux canadiennes. Nous réclamons plutôt des négociations avec les Japonais pour vendre la roussette, même s'il faut établir des subventions permettant aux Canadiens de pêcher ce poisson. On devrait explorer toutes les possibilités de ventes et amorcer un programme important d'utilisation. L'Union doute que cet effort exige des millions de dollars par année, mais signale qu'on consacre 5,000,000 de dollars par année à des programmes pratiquement inutiles découlant surtout de l'OTAN et du Norad.

(Pages 46 à 48)

12. *Canadian Deep Sea Fishery Development*

Canada has dropped from 6th to 9th place in world production of fish, and now produces only 2% of the total of 60,000,000 tons. Canadian subsidies to huge tuna vessels is being wasted, unless the tuna vessels are put back into operation and Canadian crews employed. Union repeats recommendation for a mothership fleet, modern factory trawlers and transport vessels to be built and operated by the government as the nucleus of a deep sea operation capable of competing with Japan and the U.S.S.R. Canada's future as a fishing nation depends on early action.

(Pages 49-50)

12. *Création d'une industrie canadienne de pêche hauturière*

Le Canada a baissé du 9^e rang au 6^e rang dans la production mondiale de poisson et il ne produit actuellement que 2 p. 100 d'un total de 60,000,000 de tonnes. Nous pratiquons un gaspillage sous forme de subventions à d'énormes bateaux de pêche de thon, à moins qu'on remette ces bateaux en service et qu'on les confie à des équipages canadiens. L'Union renouvelle la recommandation en faveur d'un bateau gigogne, de chalutiers-usines et de bateaux de transport modernes qui seraient construits et exploités par le gouvernement comme noyau d'une flotte hauturière capable de concurrencer le Japon et l'Union Soviétique. L'avenir de notre production piscicole dépend de mesures immédiates.

(Pages 49-50)

13. *Wharfage Fees*

Union objects to excessive and unrealistic fees charged by Department of Transport and proposes a modest fee for annual or semi-annual permits for commercial fishing vessels. Fishermen would welcome implementation of the Ministry of Fisheries suggestion for removal of all wharfage charges against commercial fishermen. Stress laid on importance of maintaining existing facilities, and need for expansion. Correction of injustices is long overdue.

(Page 51-52)

13. *Droits de quayage*

L'Union s'oppose aux droits abusifs et irréalistes exigés par le ministère des Transports et propose un droit modique pour les permis de pêche commerciale annuels ou semi-annuels. Les pêcheurs se réjouiraient le jour où le ministère des Pêches donnerait suite à sa proposition d'abolir les droits de quayage imposés aux pêcheurs commerciaux. Nous faisons ressortir l'importance de conserver et la nécessité d'agrandir les installations existantes. Les injustices n'ont que trop duré.

Standing Committee on Fisheries and
Forestry
Public Hearings—British Columbia

April 21-28, 1959

Comité permanent des pêches et des forêts
Audience publique-Colombie-Britannique

du 21 au 28 avril 1969

Mr. Chairman and Gentlemen:—

Welcome to the Province of British Columbia! We hope you will enjoy your visit and this first series of public hearings on problems of the B.C. fishing industry will assist in finding the necessary solutions. If the end result is a solution to all the problems, then the hearings will not only be classed as an outstanding success, but will need no repetition.

Considering the possibility of some problems remaining and new problems arising, we take this opportunity of expressing ourselves in favour of this becoming an annual arrangement. Organizations of fishermen find trips to

Monsieur le président, Messieurs,

Soyez les bienvenus en Colombie-Britannique. Nous vous souhaitons un séjour agréable et nous espérons que cette première série d'audiences publiques vous aidera à trouver les solutions nécessaires aux problèmes de l'industrie de la pêche de la Colombie-Britannique. Si vos réunions aboutissent à une solution à tous les problèmes, non seulement faudra-t-il y voir une réussite éclatante, mais encore il sera inutile de les répéter.

Mais comme il est possible que certains problèmes restent sans solution et que de nouvelles difficultés surgissent, nous saisissons l'occasion pour formuler le vœu que ces audiences aient lieu tous les ans. Les voyages

Ottawa very expensive. On many occasions our Union has sent representatives to present briefs to the Committee, only to learn that other groups were unable to be represented. On other occasions, we have been compelled to forgo representation because of the expense involved. In our opinion, it should be no more expensive for fishermen of our province to be heard, than for the residents of Ontario.

The time of year for such public hearings is quite important. Between the latter part of October and the middle of March, would be preferable to the present dates. With the opening of halibut fishing in late March; the opening of salmon trolling on April 15th and limited openings of salmon net fishing in March, a large percentage of fishermen are either engaged in fishing or in last minute preparations. We therefore urge that in future an earlier date be chosen.

Boat License Limitation in the Salmon Fishery in B.C.

British Columbia Members of this Committee will recall that on September 11, 1968 our Union expressed severe criticism of the new boat license restrictions which had been announced by the Minister of Fisheries in a press release dated September 5th. Our letter urged that the new measures be placed before this Committee to enable commercial fishermen, through their organizations, to present their views on this crucial issue.

We have several replies in our files, in which members expressed agreement with our contentions that these measures should be dealt with by the Committee and that the fishermen should be given an opportunity to be heard. One of the replies was from the Minister of Fisheries, dated October 9th, 1968. Regarding our request, he said: "I heartily agree. As the Minister of Fisheries and Forestry for Canada, together with my departmental officials, I stand ready and willing to appear before this Committee at any time or in any place it may direct.

"As I have already informed your Union officials, however, this particular Committee of the House of Commons, like all other Committees of Parliament, is its own master. It can call anyone to appear before it and it can schedule the discussion of any subject whatsoever. I suggest that you make application to the Chairman of this new Committee as soon as he is appointed with a view to giving top priority to its review of this matter of license restriction on commercial salmon fishing vessels on the West Coast in the hope that we

à Ottawa sont très coûteux pour les organismes de pêcheurs. Plus d'une fois notre syndicat a envoyé des délégués présenter un mémoire au Comité et a constaté que d'autres groupes étaient dans l'impossibilité de se faire représenter. En d'autres occasions, nous avons dû nous passer du représentant parce que les frais auraient été trop élevés. A notre avis, il ne devrait pas en coûter plus cher à nos pêcheurs qu'aux résidents de l'Ontario pour se faire entendre.

L'époque de l'année de ces audiences publiques est très importante. Il serait préférable que les audiences aient lieu entre la fin d'octobre et le milieu de mars. Avec l'ouverture de la pêche au flétan à la fin de mars, l'ouverture de la pêche au saumon à la ligne traînant le 15 avril et l'ouverture, dans certains cas, de la pêche au saumon au filet en mars, une bonne part des pêcheurs ont déjà commencé la pêche ou en sont aux derniers préparatifs. Nous vous prions donc de choisir à l'avenir une date plus rapprochée.

Limitation des licences de bateaux de pêche au saumon en Colombie-Britannique

Les députés de Colombie-Britannique qui font partie du Comité se souviendront que, le 11 septembre 1968, notre syndicat a ouvertement critiqué les nouvelles restrictions relatives aux licences de bateau qu'avait annoncées le ministre des Pêcheries dans un communiqué du 5 septembre. Nous réclamions dans notre lettre que le Comité soit saisi des nouvelles mesures, de manière que les pêcheurs commerciaux puissent, par la voix de leurs organismes, faire connaître leurs vues sur cette question cruciale.

Nous avons en main plusieurs réponses de députés qui croyaient comme nous que le Comité devrait étudier ces mesures et qu'il fallait donner aux pêcheurs l'occasion de se faire entendre. Une des réponses venait du ministre des Pêcheries. Dans une lettre du 9 octobre 1968, il disait au sujet de notre demande: «Je suis absolument d'accord. A titre de ministre des Pêches et Forêts du Canada, je suis prêt et disposé à comparaître devant le Comité, avec les fonctionnaires de mon ministère, en tout temps ou en tout lieu qu'il pourra fixer.

Mais, je l'ai déjà expliqué aux représentants de votre syndicat, ce Comité de la Chambre des communes, comme tous les autres comités du Parlement, est son propre maître. Il peut convoquer devant lui n'importe qui et étudier n'importe quelle question. Je vous recommanderais de demander au président de ce nouveau Comité, dès sa nomination, d'accorder la première priorité à l'étude des restrictions sur les licences des bateaux de pêche commerciale au saumon sur le littoral occidental, dans l'espoir que nous ayons

will have an early discussion of this very important matter."

Accordingly, on October 18th, we wrote your newly elected chairman, expressing the urgency of the issue, and our desire to place a full submission before the Committee. We expressed our approval of the Committee's decision to obtain permission to travel and urged meetings be held in key B.C. fishing centres.

When Mr. Mather raised this matter in the Committee on November 5th, the Minister of Fisheries reiterated his approval of the idea that fishermen should be heard. (Page 41-42. Nov. 5/68)

On December 13th, we wrote again to the Chairman of the Committee requesting an opportunity to present a brief on the subject. He informed us by telegram on December 17th, that the Committee had presented its third report on December 4th, "exhausting present terms of reference." He added that our "letter will be brought to the attention of the Committee when new orders of reference are received from the House."

We noted in the minutes of the Committee of December 3rd, Mr. Howard raised the issue of public hearings again, and that the Minister of Fisheries not only said the Committee would be reconvened early in the New Year, but also referred to the "commitment, or a near commitment" which he had made that we would be heard.

On February 27th, 1969, we wrote again to all B.C. Members of Parliament urging that we be allowed to state our case to the Committee. We indicated we felt we had been going round in circles, without getting an opportunity to express our views on this vital subject, despite the earlier comments and promises by the Minister, and despite the stated intentions of the Committee to visit B.C. and to hear our submission.

In a reply dated March 19th, the Minister of Fisheries said: "You still appear to be under some misapprehension insofar as the role of our House of Commons Committees is concerned. These Committees, which are made up of representatives from all political parties, are very jealous of their own prerogative. They look into matters according to their own priorities and tend to resent any direction or interference from the Minister in question. We have, of course, dealt with the matter of license limitation in the salmon fishery in B.C. on earlier occasions. However, I am sure that the Committee, when it visits B.C. will want to go into this matter thoroughly."

sans tarder une discussion de cette question de grande importance."

Par conséquent, le 18 octobre, nous avons écrit à votre nouveau président, pour lui expliquer l'urgence de la question et notre désir de présenter notre point de vue en long et en large au Comité. Nous nous disions heureux de la décision du Comité de demander l'autorisation de se déplacer et nous avons demandé la tenue de séances dans les grands centres de pêche de la Colombie-Britannique.

Quand M. Mather a soulevé la question au Comité le 5 novembre, le ministre des Pêches s'est dit d'avis une fois de plus que les pêcheurs devraient se faire entendre. (Pages 41-42, 5 novembre 1968)

Le 13 décembre, nous avons récrit au président du Comité pour lui demander l'occasion de présenter un mémoire sur le sujet. Il nous informait par télégramme du 17 décembre que le Comité allait présenter son troisième rapport le 4 décembre et qu'il avait «terminé son mandat actuel». Il ajoutait que notre lettre serait portée à l'attention du Comité dès que ce dernier recevrait un nouveau mandat de la Chambre.

D'après le procès-verbal du Comité du 3 décembre, M. Howard a soulevé une fois de plus la question des audiences publiques et le ministre des Pêches a non seulement déclaré que le Comité serait convoqué de nouveau au début de la nouvelle année, mais encore il a fait mention de l'«engagement ou du quasi engagement» qu'il avait pris de nous faire entendre.

Le 27 février 1969 nous avons récrit à tous les députés de la Colombie-Britannique pour réclamer la permission d'exposer notre cas au Comité. Comme nous l'indiquions, nous avions l'impression de tourner en rond, sans pouvoir faire valoir notre point de vue sur cette question primordiale, malgré les remarques et les promesses antérieures du ministre et malgré l'intention déclarée du Comité de visiter la Colombie-Britannique et de recevoir notre mémoire.

Dans une réponse du 19 mars, le ministre des Pêches disait: «Vous semblez encore mal comprendre le rôle des comités de la Chambre des communes. Ces comités, formés de représentants de tous les partis politiques, sont très jaloux de leurs prérogatives. Ils ont leur propre échelle de priorités et n'aiment pas beaucoup que le ministre intéressé leur donne des directives ou s'ingère dans leurs affaires. Nous avons naturellement traité en d'autres occasions de la limitation des licences de pêche au saumon en Colombie-Britannique. Toutefois, j'en suis sûr, le Comité voudra aller au fond de la question quand il visitera la Colombie-Britannique.»

We have gone into considerable detail on the subject of a hearing, because we are most dissatisfied with the procedure followed in respect to this new limitation scheme. Over seven months have elapsed since the Minister first announced it and since our Union requested an opportunity to state our views to this Committee. It appears almost an exercise in futility, at this late date, to make a submission on the subject.

We wonder what powers, if any, this Committee may have to change any aspect of the Minister's boat license scheme. On January 27th, in Nanaimo, he informed the press that "the new fishing licensing brought in by my department recently, will not be reviewed until 1970, at which time there will be only minor modifications made." If the Minister makes any modifications he will make them "arbitrarily". At least, he indicated this in his answers to questions when he spoke to this Committee on December 3rd. (p. 137)

The original announcement of the Minister's license controls was by press release on September 5th. Modifications were made by further press releases on November 21st, 1968 and April 2nd and 3rd, 1969. The Minister has published two sets of questions and answers, dated October, 1968 and December 1968, respectively, explaining his plan. In addition he has made numerous speeches to public meetings and to various organizations, including our Annual Convention, dealing with the theory of the plan and some of his intentions and hopes.

Nowhere is there any legislation or any order-in-council or even a set of specific regulations on the "Davis plan" as it is now referred to by many fishermen. These far-reaching rules, affecting the rights of all commercial fishermen have been dictated by the Minister, and put into effect by Departmental officials, without any approval by Parliament.

Our Union, has therefore condemned the methods by which the Davis plan was instituted. We urge this Committee to express disapproval of those methods and to recommend to Parliament that this entire issue be subject to introduction of legislation. Further, that when such legislation is introduced it be placed before this Committee for consideration, and that all interested parties have full opportunity to be heard.

Our understanding is that the Minister has been using wide powers in Section 7 of the Fisheries Act to grant or to withhold fishing licenses. We do not believe those wide powers were granted by Parliament to enable the Minister to make drastic changes affecting the

Nous nous sommes étendus longuement sur la question de l'audience, car nous sommes très mécontents de la procédure suivie à l'égard de ce nouveau régime de limitation. Il y a plus de sept mois que le ministre l'a annoncé et que notre syndicat a demandé l'occasion d'exposer son point de vue au Comité. Il semblerait qu'il est bien futile maintenant de revenir sur la question à une date aussi tardive.

Nous nous demandons si le Comité a le pouvoir pour modifier un point quelconque du programme de licences de bateau décrété par le ministre. Le 27 janvier, à Nanaimo, le ministre déclarait aux journalistes: «Le nouveau régime de licences de pêche que mon ministère a annoncé récemment ne sera pas révisé avant 1970 et ne subira alors que de légères modifications». Si le ministre fait quelque modification, il les fera «arbitrairement». C'est du moins ce qu'il a dit en réponse aux questions des membres du Comité le 3 décembre. (p. 137)

Le ministre a annoncé son programme initial de réglementation des licences le 5 septembre au moyen d'un communiqué. Des communiqués du 21 novembre 1968 et des 2 et 3 avril 1969 annonçaient d'autres modifications. Le ministre a publié deux ensembles de questions et réponses, soit en octobre 1968 et en décembre 1968, pour expliquer son régime. En outre, il a prononcé de nombreux discours lors de réunions publiques et devant divers organismes, dont notre Congrès annuel, sur l'aspect théorique du régime et sur certains de ses projets et de ses espoirs.

Il n'existe nulle part de loi ou de décret du conseil ni même de règlement précis sur le «régime Davis», comme disent maintenant un grand nombre de pêcheurs. Ce régime de grande portée qui touche les droits de tous les pêcheurs commerciaux a été dicté par le ministre et mis en vigueur par les fonctionnaires du ministère, sans l'approbation du Parlement.

Par conséquent, notre syndicat a condamné les méthodes de la mise en œuvre du régime Davis. Nous demandons instamment au Comité de dénoncer ces méthodes et de recommander au Parlement que toute la question fasse l'objet d'une mesure législative. En outre, nous demandons que le Comité soit saisi de cette mesure législative et que tous les intéressés aient pleinement l'occasion de se faire entendre.

Nous croyons savoir que le ministre a employé les immenses pouvoirs que lui accorde l'article 7 de la loi sur les pêcheries pour accorder ou refuser des licences de pêche. A notre avis, l'intention du Parlement, lorsqu'il a prévu ces immenses pouvoirs n'é-

rights of all individuals to fish, without any further reference to Parliament. We have always believed it was to enable the Minister to deal effectively with extreme violations of fishery regulations. We suggest that one of the steps which may be necessary to prevent further misuse of these wide powers would be to define, by amendments to the Fisheries Act, those conditions whereby the Minister may withhold the right to fish. The necessary amendment could specify that regulations limiting the right to fish must be first approved by Parliament.

The Union's Opposition to the Davis Plan:

Our opposition to the Davis Plan stems from the fact that the right to fish salmon commercially has now been placed on the vessels. The "thing" has a right to fish.

The owners of these "things" now belong to what the Minister calls a "select club". The "thing" can be bought and sold. A couple of giant corporations already own hundreds of these "things" and hold financial control over thousands of them. These corporations may extend their financial control to encompass the vast majority of fishing licences. Property rights have been placed ahead of human rights. The proposals of organized fishermen have been ignored by the Minister, as he introduced a plan which has won the applause of the fishing companies.

Having thus outlined, in capsule form our major reasons for opposition, we believe it is necessary to relate some additional background. We will also indicate the alternatives which are preferable to the fishermen.

During the period from 1943 to 1968, our Union strongly advocated limitation of licenses. One of the earliest resolutions set out the "guiding principles" as the "need for protecting living standards of fishermen and their families dependent on the fishery and of re-establishing veterans under "conditions that will enable them to earn a decent livelihood." In a lengthy Memorandum to the Minister of Fisheries in 1954 we urged immediate practical steps, plus further studies necessary to implement a well-rounded system of limitation.

In these early briefs, as well as those put forward more recently, we outlined the need for limitation. The fact that too many fishermen in too many boats were chasing a limited volume of salmon was emphasized. We drew

tait pas de permettre au ministre de faire des changements radicaux mettant en cause le droit de pêcher, sans même en saisir le Parlement. Nous avons toujours eu l'impression que ces pouvoirs étaient destinés à permettre au ministre de réprimer rapidement les violations flagrantes du règlement de la pêche. Selon nous, un des moyens auxquels il faudra peut-être recourir pour empêcher d'autres abus de pouvoir serait de définir, par une modification à la loi sur les pêcheries, les conditions où le ministre peut refuser le droit de pêcher. La modification nécessaire pourrait préciser qu'il faut d'abord soumettre à l'approbation du Parlement tout règlement limitant le droit de pêche.

L'opposition du syndicat au régime Davis:

Notre opposition au régime Davis naît du fait que le droit de faire la pêche commerciale du saumon est maintenant réservé aux bateaux. C'est une «chose» qui a le droit de pêcher.

Les propriétaires de ces «choses» appartiennent maintenant à un club que le ministre appelle un «club sélect». Cette «chose» peut s'acheter et se vendre. Quelques sociétés géantes possèdent déjà des centaines de ces «chose» et ont la mainmise financière sur des milliers d'autres. Ces sociétés peuvent étendre leur mainmise financière à la vaste majorité des licences de pêche. Les droits de propriété sont placés au-dessus des droits de l'homme. Le ministre n'a pas tenu compte des propositions des pêcheurs syndiqués lorsqu'il a mis en œuvre un régime qui lui a valu les applaudissements des sociétés de pêche.

Après ce résumé des principales raisons de notre opposition, nous jugeons nécessaire d'y rattacher certaines autres données. Nous indiquerons également les autres solutions que nous jugeons préférables pour les pêcheurs.

Entre 1943 et 1968, notre syndicat a fortement préconisé la limitation des licences. Une de nos premières résolutions disait que les «principes directeurs» étaient axés sur la «nécessité de protéger le niveau de vie des pêcheurs et de leur famille vivant de la pêche et de redonner aux anciens combattants des conditions qui leur permettent de gagner honorablement leur vie». Dans un long mémoire au ministre des Pêcheries en 1954, nous réclamions des mesures pratiques immédiates, ainsi que d'autres études nécessaires pour mettre en œuvre un régime de limitation bien organisé.

Dans ces premiers mémoires, tout comme dans ceux de date plus récente, nous exposions la nécessité d'une limitation. Nous insistions sur le fait que trop de pêcheurs et trop d'embarcations étaient à la poursuite d'une

attention to the shorter fishing weeks, and the long closures in mid-season, as well as earlier termination dates. We pointed to extremely heavy, and rapidly rising costs of boats and equipment in the mad scramble for a share of the allowable catch. Major problems of conservation of the resource, required prohibition of greater efficiency in several instances. Men and equipment were idle more than they were operative for the largest portion of ever shorter salmon seasons.

In a paper submitted to the Resources for Tomorrow Conference in October of 1961, we stated "it would be difficult to find more irrational uses of capital and labour than exist today in the fishing industry." We asked the Conference to support our recommendations for immediate government action to control the numbers of commercial fishermen in the major existing fishing operations in B.C."

Our campaign for a limitation program did bring some earlier results. Professor Sol Sinclair was appointed to study the problem and a lengthy report was published in 1960. In May of 1961 we submitted a brief to the Federal Minister of Fisheries dealing with the major recommendations of the Sinclair Report, and elaborating, in considerable detail, the plan which we favoured. On January 20, 1964 we presented our views to a Federal-Provincial Conference on Fisheries Development and re-iterated these recommendations in a brief to the Federal and Provincial Governments in February, 1966. We will quote directly from that brief to indicate our reaction to the Sol Sinclair report.

The following is an extract from a Policy Statement by the United Fishermen & Allied Workers Union entitled: Crisis in the B.C. Fishing Industry, dated February 20, 1966:

"His recommendations included a moratorium against the issuance of new licences over a five year period. Only those fishermen who could "show evidence of having fished commercially at least during the last two years, should be eligible for licensing". He proposed further research during the 5 year period to "determine the required fishing capacity necessary to catch the fish on an extended season and at an economic level". Dr. Sinclair also proposed the establishment of an impar-

quantité limitée de saumon. Nous attirions l'attention sur le raccourcissement de la semaine de pêche, sur la longue période de fermeture à la mi-saison ainsi que sur le rapprochement des dates de fermeture. Nous signalions le coût prohibitif et de plus en plus fort des bateaux et de l'équipement nécessaires dans la course folle pour avoir une part de la prise permise. De grands problèmes de conservation de cette ressource s'opposaient à un accroissement de l'efficacité dans plusieurs cas. Les hommes et le matériel étaient plus inactifs que productifs pendant la majeure partie d'une saison de pêche au saumon de plus en plus brève.

Dans un texte présenté à la Conférence sur nos ressources et notre avenir en octobre 1961, nous déclarâmes: «Il serait difficile de trouver une utilisation plus irrationnelle du capital et de la main-d'œuvre que dans l'industrie de la pêche d'aujourd'hui». Nous demandâmes à la Conférence d'appuyer nos recommandations tendant à la restriction immédiate du nombre de pêcheurs commerciaux dans les grandes exploitations de pêche de la Colombie-Britannique.

Notre campagne en faveur d'un programme de limitation n'a pas été sans porter fruit. On a confié au professeur Sol Sinclair la tâche d'étudier le problème et un long rapport est paru en 1960. En mai 1961, nous présentâmes un mémoire au ministre fédéral des Pêcheries au sujet des principales recommandations du rapport Sinclair; nous y exposâmes aussi de façon très détaillée le régime que nous favorisons. Le 20 janvier 1964, nous avons présenté nos vues à la Conférence fédérale-provinciale sur l'expansion des pêches, mais nous avons de nouveau fait nôtres ces recommandations dans un mémoire présenté aux gouvernements fédéral et provinciaux en février 1966. Nous citons au texte ce mémoire pour indiquer quelle était notre réaction au rapport Sol Sinclair.

Voici un extrait d'un exposé de principe du Syndicat des pêcheurs et des travailleurs assimilés unis, qui s'intitule «Crisis dans l'industrie de la pêche de la Colombie-Britannique» et qui porte la date du 20 février 1966:

Il recommandait entre autres choses un moratoire sur la délivrance de nouvelles licences pour une période de cinq ans. Seuls les pêcheurs qui pourraient «prouver qu'ils ont fait la pêche commerciale depuis au moins deux ans devraient être admissibles à une licence». Il proposait d'autres recherches pour la période de cinq ans en vue de «déterminer la capacité de pêche qui permettrait d'étendre la saison et de le faire économiquement». M. Sinclair proposait également la création d'une

tial "Board of Review" to safeguard the "rights of citizens in the matter of rights to fish". These recommendations were approved by our Union as steps in the right direction.

On the other hand, we stated strong opposition to "higher license fees" and an "auction system" suggested by Dr. Sinclair. We considered these measures would only lead to greater control by private fishing companies. The big operators have already established a high degree of vertical integration which should be eliminated, not expanded.

Dr. Sinclair's report also recommended government action to discourage companies "from financing of boat purchases or major items of gear". He went on to say that "such credit be provided by a specialized agency". Our Union agrees with the removal of company financial control as being imperative to a fair and just system of license limitation.

In the five years since this report was published, the Federal Department of Fisheries has not adopted any limitation program. Any suggestion that higher license fees will resolve the problem is not only farcical but also constitutes a subterfuge for a real solution.

The announcement on January 25, 1966 of a \$10.00 registration fee for each vessel, plus \$5.00 for each commercial fisherman plus another \$5.00 for a salmon licence simply means that each salmon fisherman will pay either \$10.00 or \$20.00 for the right to fish salmon. It does not, in any way, restrict the number of salmon fishermen. It fails to prevent an influx of new fishermen. It does nothing to prevent the fishing companies from using their financial power to maintain or increase the number of vessels in an overcrowded fishery.

The Department's press release says "this year, the salmon licence fee will not be based on the size of a vessel as proposed earlier". This indicates the possible intention of a graduated system of fees being introduced in 1967 or future years. We condemned the earlier proposals as failing to provide any solution. We strongly condemn any effort to slip in such a system in stages.

The Union has brought forward the following proposals for a license limitation program:

«Commission de revision» impartiale dont le rôle serait de protéger les «droits des citoyens en matière de droits de pêche». Ces recommandations ont reçu l'approbation de notre syndicat, qui y voyait un pas dans la bonne direction.

Par ailleurs, nous nous sommes vivement opposés à «l'augmentation des droits de licence» et au «système d'enchères» que proposait M. Sinclair. Nous jugions que ces mesures conduiraient fatalement à une mainmise accrue des sociétés de pêche privées. Les grands exploitants ont déjà réalisé une intégration verticale poussée, qu'il faut éliminer plutôt que favoriser.

Le rapport de M. Sinclair recommandait aussi des mesures gouvernementales pour décourager les sociétés de «financer l'achat de bateaux ou de pièces importantes d'équipement». Il ajoutait que «pareil crédit doit être accordé par une agence spécialisée». Notre syndicat convient que l'élimination de la mainmise financière d'une société est indispensable si l'on veut un système juste de limitation des licences.

Au cours des cinq années qui se sont écoulées depuis la publication de ce rapport, le ministère fédéral des Pêcheries n'a pas adopté de programme de limitation. Quant à l'augmentation des droits de licence, il est non seulement ridicule de soutenir que c'est la solution du problème, mais cela constitue en outre un subterfuge.

L'annonce, le 25 janvier 1966, d'un droit d'enregistrement de \$10 par bateau plus \$5 par pêcheur commercial plus \$5 pour la licence de saumon signifie tout simplement que chaque pêcheur de saumon paiera \$10 ou \$20 pour le droit de pêcher. Cela ne restreint nullement le nombre de pêcheurs. Cela n'empêche pas l'afflux de nouveaux pêcheurs. Cela ne fait rien pour empêcher les sociétés de pêche d'utiliser leur pouvoir financier pour maintenir ou accroître le nombre de navires dans une pêcherie déjà surexploitée.

Le communiqué du ministère dit que «cette année le droit de licence de pêche au saumon ne sera pas fondé sur la taille du navire, comme on le proposait plus tôt». Il faut peut-être voir là l'intention d'introduire un système gradué de droits en 1967 ou plus tard. Nous avons condamné les propositions antérieures, qui, selon nous, ne constituaient pas la solution. Nous condamnons vivement toute tentative d'appliquer graduellement pareil système.

Le syndicat a formulé les propositions suivantes au sujet d'un programme de limitation des licences.

1. The institution of a five year moratorium period (1966-1971) during which time, subject to such exceptions as may be established by regulation, fishing licenses will be granted only to persons who held fishing licenses in 1964 or 1965 and who can show that in either of these years 30 per cent or more of their income for that year was derived from earnings as a commercial fisherman.
2. It should be a clearly established condition for the issuance of a fishing licence in all future years that the holder intends to use it as a primary means of earning his livelihood and that failure to use fishing licences in this way will lead to the non-renewal of the license. For renewal of licences in 1966, proof that the license holder derived 30 per cent of his income for the previous year from commercial fishing should be required. This percentage to be increased to 40 per cent for renewal of licenses in 1967 and to 50 per cent in 1968 and subsequent years.
3. Persons holding fishing licenses may accept other employment in the fishing industry not requiring such licences (e.g. employment in processing plants, net work, on packers, or in offices of any organization in the fishing industry including the Department of Fisheries, a Union organization, a co-operative or a fishing company). Persons engaged in such employment in the fishing industry shall not forfeit entitlement to receive or renew a fishing license if otherwise qualified.
4. Persons refused issuance or renewal of a fishing license solely on the grounds that he did not derive a sufficient percentage of his income in the previous year from commercial fishing shall have the right to appeal such refusal to a Board of Review and the Board shall have the right to renew the license if it is shown that there were special circumstances (such as illness or accidents) that prevented fulfillment of this condition notwithstanding the intent to abide by it.
5. Each licensed fisherman shall be issued a numbered Licensed Fisherman's Book and this number will be retained for all licenses issued to such fisherman. Fisherman's License Book fee to be \$10.00 and the annual license fee \$1.00.
6. No fishing license to be either transferable or saleable by the person to whom it is issued.
7. Issuance of licenses after the end of the 5 year moratorium to persons who have not
1. L'institution d'un moratoire de cinq ans (1966-1971) pendant lequel, sous réserve des exceptions prévues par règlement, les licences de pêche seront réservées aux personnes qui en détenaient en 1964 ou en 1965 et qui peuvent établir que, dans l'une ou l'autre de ces deux années, elles ont tiré de la pêche commerciale 30 p. 100 ou plus de leur revenu.
2. Il faut établir clairement que, pour obtenir une licence de pêche à l'avenir, le détenteur doit avoir l'intention de s'en servir comme principal moyen de subsistance, faute de quoi il se verra refuser le renouvellement de la licence. Pour renouveler les permis en 1966, on devrait exiger la preuve que le détenteur du permis a tiré de la pêche commerciale 30 p. 100 de son revenu de l'année précédente. Ce pourcentage serait porté à 40 p. 100 lorsque viendrait le temps de renouveler les permis en 1967, et à 50 p. 100 en 1968 et les années suivantes.
3. Les détenteurs de permis peuvent prendre dans l'industrie de la pêche un autre emploi qui n'exige pas un tel permis (par exemple un emploi dans une usine de transformation, dans la fabrication ou la réparation des filets, dans une conserverie, ou dans le bureau d'un organisme relié à l'industrie de la pêche, y compris le ministère de la Pêche, un syndicat, une coopérative ou une compagnie de pêche). Les personnes travaillant ainsi dans l'industrie de la pêche ne perdront pas leur droit de recevoir ou de renouveler un permis de pêche si elles ont par ailleurs les qualités voulues.
4. Ceux à qui on refusera de donner ou de renouveler un permis de pêche uniquement parce qu'ils n'ont pas tiré de la pêche commerciale, durant l'année précédente, un pourcentage suffisant de leur revenu, auront le droit d'en appeler de ce refus devant un Conseil de révision, et ce conseil aura le droit de renouveler le permis s'il est démontré que des circonstances spéciales, comme la maladie ou un accident, ont empêché l'intéressé de se conformer à cette condition, malgré son désir de le faire.
5. Chaque pêcheur doté d'un permis recevra un livret numéroté appelé Carnet de permis de pêche, et toutes les licences qui lui seront délivrées en porteront le numéro. Le Carnet de permis de pêche coûtera \$10, et le coût du permis annuel sera de \$1.
6. La personne à qui on délivrera un permis de pêche ne pourra ni le céder ni le vendre.
7. Après le moratoire de 5 ans, la délivrance des permis aux personnes qui n'a-

held licenses prior to 1966 shall be from a waiting list of applicants according to rules to be established during this period.

8. Regulations established for the purpose of license limitation shall be designed to maintain the present percentage of Native fishermen amongst license holders.

9. The Government should institute policies to replace the financing of boats and gear for fishermen by fishing companies by other channels.

10. Establish an impartial Board of Review which will include representatives of the United Fishermen and Allied Workers' Union; the Deep Sea Fishermen's Union of Prince Rupert; The Prince Rupert Fishermen's Co-operative Association; The Native Brotherhood of B.C.; and the Fishing Vessel Owners Association of Vancouver and Prince Rupert. The organizations to have the right to replacement of their representatives, annually, where desired. Other Board Members would include Government Appointees drawn from the administrative, research and biological staff of the Federal Department of Fisheries and University personnel.

The union's proposals have been ignored even though they make higher license fees to ally unnecessary and would constitute a decisive move towards reducing the overcrowding in the industry. The main criterion for renewal of licenses would be whether a substantial part of a person's income had been derived from commercial fishing. The dangers of company control would be eliminated by removal of company financing. New applicants would go on a waiting list and rules worked out during the five year period would decide when newcomers would be admitted and in what order. Organized fishermen groups would have an opportunity through the Board of Review to correct any injustices and to influence future policy. Native fishermen would be entitled to a reasonable share of the licenses issued until such time as equal opportunity becomes a reality for Native peoples who have relied heavily on fishing for their livelihood.

vaient pas de permis avant 1966 se fera d'après une liste d'attente et selon les règles que l'on établira durant cette période.

8. Les règles à établir pour limiter le nombre des permis seront conçues de manière à préserver le pourcentage de pêcheurs indiens que l'on compte actuellement parmi les détenteurs de permis.

9. Le gouvernement devrait lancer un programme qui permettrait aux pêcheurs de financer leurs bateaux et leurs engins de pêche par d'autres moyens qu'en s'adressant aux compagnies de pêche.

10. Il devrait instituer un Conseil de révision impartial qui comprendrait des représentants de la *United Fishermen and Allied Workers' Union* (Syndicat des pêcheurs unis et des employés des secteurs connexes), de la *Deep Sea Fishermen's Union of Prince Rupert* (Syndicat des pêcheurs en haute mer de Prince Rupert), de la *Prince Rupert Fishermen's Co-operative Association* (Association coopérative des pêcheurs de Prince Rupert), de la *Native Brotherhood of B.C.* (Fraternité des pêcheurs indiens de la C.-B.), et de la *Fishing Vessel Owners Association of Vancouver and Prince Rupert* (Association des propriétaires de bateaux de pêche de Vancouver et de Prince Rupert). Ces associations auraient le droit de changer leurs représentants chaque année, si elles le désirent. Le Conseil comprendrait également des personnes nommées par le gouvernement et recrutées au sein du personnel de l'administration, de la recherche et de la section de biologie du ministère fédéral de la pêche, et dans les universités.

On n'a pas tenu compte des propositions du syndicat, même si elles rendent totalement inutile une majoration de la taxe du permis, et qu'elles constitueraient une mesure nettement propre à réduire l'encombrement qui règne dans l'industrie. Le renouvellement du permis serait basé d'abord et avant tout sur le fait que l'intéressé aurait tiré de la pêche commerciale une part importante de son revenu. L'élimination du financement par les compagnies supprimerait le danger d'une mainmise des compagnies. Les nouveaux requérants seraient inscrits sur une liste d'attente et des règles élaborées au cours de la période de 5 ans détermineraient le moment et le rang d'admission des nouveaux venus. Les associations de pêcheurs auraient l'occasion de corriger les injustices éventuelles par l'entremise du Conseil de révision, et d'influencer les nouvelles politiques. Les pêcheurs indiens auraient droit à une portion raisonnable des permis délivrés jusqu'à ce que l'égalité des chances devienne une réalité pour les Indiens qui comptent énormément sur la pêche pour gagner leur vie.

The Fisheries Association, representing the Companies, for many years expressed opposition, to a system of license limitation on grounds that it interfered with personal freedom. Recently, they have indicated support of a system of higher license fees to be used to create a fund to be used to purchase boats and retire them from industry. They compliment the Department as having "made a first step for arriving at equitable means of decreasing the excessive amount of salmon gear".

As explained by the Association in a recent bulletin, one of the main aims must be to "provide the fisherman the right to leave the industry with the value of his asset". They favour leaving "the choice of whether to stay in or leave the fishing industry to the individual".

The Association does not show how a higher license fee will prevent new entries into the industry. The uneconomic structure of the industry forces hundreds of fishermen out each year and their places are taken by newcomers. Higher license fees may force a few more fishermen to leave but there is nothing to prevent the companies from financing replacements. The companies already control the finances of the majority of fishermen boat owners. Thus, their beautiful sentiments about "fishermen's rights" and "individual choice" are only a smokescreen behind which the Association plans to extend company control over the individual.

Obviously, there is a basic conflict between the views expressed by the organized fishermen and those put forward by the Association. We object to the tendency of the Department of Fisheries to endorse only those steps which are approved by the companies. The Department has a greater responsibility than protecting company investment in boats. The responsibility to several thousand fishermen who are striving to earn a living in this industry is much greater. To date, the Department has not accepted this responsibility. We believe every Member of Parliament has the right, as well as the duty, to find out why the Department refuses to accept recommendations put forward by the fishermen.

"In conclusion of this section of our statement, we wish to reiterate our demand for Government action on a program of license limitation acceptable to the fishermen. We have put forward a program! We will not

Les associations de pêche, qui représentent les compagnies, s'opposent depuis plusieurs années à un régime de limitation du nombre des permis sous prétexte qu'il porterait atteinte à la liberté personnelle. Dernièrement, ils ont donné leur appui à une majoration de la taxe des permis qui servirait à la création d'une caisse permettant d'acheter des bateaux et de les retirer de l'industrie. Ils félicitent le Ministère d'avoir «fait un premier pas en vue d'arriver à un moyen équitable de réduire la quantité excessive d'outillage servant à la pêche du saumon».

Ainsi que l'explique l'Association dans un récent bulletin, l'un des premiers objectifs à poursuivre doit être de «donner au pêcheur le droit de quitter l'industrie en emportant la valeur de son actif». Elle est pour qu'on laisse «à l'individu le choix de décider s'il doit rester dans l'industrie de la pêche ou la quitter».

L'Association ne montre pas comment une majoration de la taxe du permis empêchera des nouveaux venus d'entrer dans l'industrie. La façon non économique dont est organisée l'industrie force des centaines de pêcheurs à s'en aller chaque année et des nouveaux venus prennent leur place. Une majoration de la taxe du permis pourra forcer quelques pêcheurs de plus à quitter l'industrie, mais rien n'empêchera les compagnies de financer des remplaçants. Les compagnies ont déjà la haute main sur les finances de la majorité des propriétaires de bateaux de pêche. Par conséquent, les beaux sentiments qu'elles expriment à propos des «droits des pêcheurs» et du «choix de l'individu» ne sont qu'une façade derrière laquelle l'Association cache son intention d'amplifier la mainmise des compagnies sur l'individu.

Il est manifeste qu'il y a une contradiction fondamentale entre les opinions des pêcheurs organisés et celles que l'Association avance. Nous nous opposons à cet tendance qu'a le ministère de la Pêche de n'endosser que les mesures approuvées par les compagnies. Le Ministère a mieux à faire que de protéger les fonds que les compagnies ont investis dans les bateaux. L'obligation qu'il a envers plusieurs milliers de pêcheurs qui luttent pour gagner leur vie dans cette industrie est beaucoup plus importante. Jusqu'à présent, le Ministère n'a pas admis cette obligation. A notre avis, tout député a le droit, de même que le devoir, de trouver pourquoi le Ministère refuse d'accepter les recommandations des pêcheurs.

«Pour conclure cette partie de notre mémoire, nous voulons répéter que nous exigeons du gouvernement qu'il adopte un programme de limitation du nombre des permis qui convienne aux pêcheurs. Nous avons pro-

accept any substitute which increases company control (end of quote 1966 Statement)

The latest press release by the Minister of Fisheries of April 3, 1969 states there will be a "freeze on company ownership of Class A salmon fish boats". It states the freeze "will prevent the fish packing companies from acquiring more Class A vessels". Any new companies will not be allowed more than two Class A vessels and individual ownership by new fishermen is limited to two vessels.

In a speech in Burnaby on March 14th, the Minister indicated that two big companies, B.C. Packers and the Canadian Fishing Company own 600 Class A salmon fishing boats. Appended to his speech were figures showing that 743 fishing vessels were company owned, 18 under construction for company ownership, 736 under conditional sales agreements, 565 under mortgage, and 32 financed in some other way, for a total of 2,094 fishing vessels owned and financed by the major fishing companies.

On November 5th he informed the Committee that the fishing companies owned 869 vessels and the companies hold mortgages on 689. That would make a total of 1,558. The discrepancies in figures require explanation by the Minister.

We must point out that until recently the Department of Fisheries had not tried to obtain exact information on company financing of fishing vessels. We were told by the Minister that perhaps the companies would volunteer the information. We believe that neither the 1,558 nor the 2,094 total is correct. The latter is most likely the information volunteered by the fishing companies, after we exposed the fact that the Minister had given mis-information to this Committee.

In our opinion, there is need for a thorough investigation of existing company ownership and financial control. This must include a complete search of all company books and records, and records of other finance organizations to check the extent of company influence or effective control over loans. Fishermen's organizations must be allowed to participate in the investigation, and to study the data collected. Otherwise, the public, the

posé un programme! Nous n'accepterons pas un substitut qui accroîtrait la mainmise des compagnies! (fin de la citation tirée du mémoire de 1966)

Le plus récent communiqué de presse du ministère de la Pêche, qui date du 3 avril 1969, déclare qu'on «gèlera le nombre des bateaux de pêche au saumon de catégorie A dont les compagnies sont propriétaires». Le communiqué ajoute que cette mesure «empêchera les compagnies de conservation du poisson d'acquérir d'autres bateaux de catégorie A». Toute nouvelle compagnie n'aura droit qu'à deux bateaux de catégorie A et les nouveaux pêcheurs ne peuvent être propriétaires de plus de deux bateaux chacun.

Dans un discours qu'il prononçait à Burnaby le 14 mars, le ministre déclarait que deux grosses compagnies, la B.C. Packers et la Canadian Fishing Company possèdent 600 bateaux de pêche au saumon de catégorie A. Des chiffres figurant en appendice à son discours montraient que 743 bateaux de pêche étaient la propriété des compagnies, 18 étaient en construction pour des compagnies, 738 étaient l'objet d'un contrat de vente conditionnelle, 565 étaient hypothéqués, et 32 étaient financés d'une autre façon, ce qui donnait un total de 2,094 bateaux de pêche possédés et financés par les grandes compagnies de pêche.

Le 5 novembre, il informait le Comité que les compagnies de pêche possédaient 889 bateaux et qu'elles détenaient une hypothèque sur 689 autres. Cela donne un total de 1,558. Le non-concordance de ces chiffres exige une explication de la part du ministre.

Nous devons souligner le fait que ce n'est que dernièrement que le ministère de la Pêche a essayé d'obtenir des données exactes sur le financement des bateaux de pêche par les compagnies. Le ministre nous a dit que peut-être les compagnies consentiraient à donner ces renseignements. A notre avis, ni le chiffre de 1,558 bateaux ni celui de 2,094 ne sont justes. Le dernier chiffre est probablement le chiffre qu'ont consenti à donner les compagnies de pêche, après que nous eûmes montré que le ministre avait mal informé le Comité.

A notre avis, il y a lieu de procéder à une enquête approfondie sur la mainmise actuelle des compagnies en ce qui concerne la propriété et le financement. Cette enquête doit comprendre un examen complet de tous les livres et dossiers de la compagnie et des dossiers d'autres organismes de financement, afin qu'on puisse vérifier à quel point les compagnies influencent et dirigent effectivement les opérations de prêts. Il faut que les associa-

fishermen, and this Committee may easily be misled on the real extent of company financial control.

It is by no means clear, from the Minister's latest announcement whether company ownership is frozen at the level of outright ownership, or whether it includes vessels on which they hold financial control through conditional sales agreements and mortgages. Presumably, if these financial arrangements are not included, then the companies could not re-possess any vessels, where individual fishermen are unable or even unwilling to meet their payments or to live up to the terms which compel them to deliver all their production to the fishing companies.

We've heard no great howl from the fishing companies so we strongly suspect the freeze will not preclude foreclosures by these companies. If our assumption is correct, then at very minimum the latest freeze allows the major companies to control 2,094 boats. As we've indicated, we believe that figure is extremely low.

The Minister in his March 14th speech asked how he could "sit idly by while firms, which are largely owned and controlled by George Weston Ltd. and the New England Fish Company run our unique salmon industry?" He claimed "this hypothetical takeover" was a "figment of someone's imagination"—and "can never be allowed to happen". It is a fact these two giants have bought up A.B.C. Packing Co. Ltd., J. H. Todd Sons Ltd., Nelson Bros. Fisheries Ltd., Johnston Fishing & Packing Co. Ltd. and the Great West Packing Co. Ltd. plus a number of smaller companies. They hold effective control in the processing end of the fishing industry, and also have very large holdings at the producer level. Nothing has yet been done to loosen their grip in either sector of the industry.

The Minister has stated these companies can continue to "help to finance Canadians as individual fishermen. They can help them to own their own boats." These companies are not engaged in financing fishermen to help them to own their own boats. Their major

tions de pêcheurs soient autorisées à participer à l'enquête et à étudier les données recueillies. Autrement, le public, les pêcheurs, et le Comité pourront facilement être trompés sur l'ampleur réelle de la mainmise financière des compagnies.

Le dernier communiqué du ministre ne dit nullement d'une façon claire si le gel du nombre des bateaux des compagnies s'applique aux bateaux dont elles ont la propriété complète ou s'il inclut les bateaux sur lesquels elles ont la haute main, financièrement, par l'entremise d'hypothèques ou de contrats de vente conditionnelle. Si la mesure ne touche pas ces dispositions financières, on peut présumer que les compagnies ne pourraient pas reprendre possession d'un bateau lorsque les pêcheurs sont incapables de, ou même, ne veulent pas faire leurs versements ou se conformer aux clauses qui les obligent à livrer toute leur production aux compagnies de pêche.

Nous n'avons pas tellement entendu les compagnies de pêche pousser les hauts cris, de sorte que nous craignons fort que le gel n'empêchera pas ces compagnies de procéder à des saisies. Si notre hypothèse est juste, il s'ensuit que ce gel permet aux grosses compagnies d'avoir la haute main sur 2,094 bateaux, et c'est un strict minimum. Nous le répétons, à notre avis, ce chiffre est extrêmement conservateur.

Dans son discours du 14 mars, le ministre a demandé comment il pourrait «rester sans bouger quand des compagnies, qui sont en grande partie possédées et dominées par George Weston Ltd. et la New England Fish Company, dirigent une industrie unique en son genre, notre industrie du saumon». Il a prétendu que «cette prise de possession hypothétique» était une «fiction sortie de l'imagination de quelqu'un» et qu'on «ne saurait jamais la permettre». C'est pourtant un fait que ces deux géants ont acheté l'A.B.C. Packing Co. Ltd., J. H. Todd & Sons Ltd., Nelson Bros. Fisheries Ltd., la Johnston Fishing and Packing Co. Ltd. et la Great West Packing Co. Ltd., ainsi qu'un certain nombre de compagnies moins importantes. Ils dominent effectivement le secteur de transformation de l'industrie de la pêche, et possèdent également des intérêts considérables dans le secteur de la production. On n'a rien fait jusqu'ici pour desserrer la mainmise qu'ils ont sur l'un et l'autre secteur de l'industrie.

Le ministre a déclaré que ces compagnies peuvent continuer à «aider à financer les pêcheurs canadiens, en tant qu'individus. Elles peuvent les aider à posséder leurs propres bateaux». Ces compagnies ne financent pas les pêcheurs pour les aider à posséder leurs pro-

purpose in providing finances is to assure the company concerned of control over the raw materials, essential to their ability to make a profit.

The Minister, at our annual Convention, on February 1st and again on March 14th, urged fishermen to finance their boats through the Federal Fisheries Improvement Loans. He told our Convention the interest rate would be $7\frac{1}{2}$ percent in a few weeks time. It is now $7\frac{3}{4}$ percent. He said the "Act which has recently been updated, is geared to finance loans of up to \$25,000." We later learned the maximum is still \$10,000 and a new bill must yet be presented to Parliament. He went on to say "you can borrow up to \$25,000 from any bank or credit union or insurance company..." What he failed to state is that almost without exceptions, none of these institutions are willing to loan money out at $7\frac{3}{4}$ percent when they can get $9\frac{3}{4}$ percent or more.

In our opinion the government must, if it is seriously interested in helping fishermen to finance their boats without going to the fishing companies, make money available at lower rates of interest, and not subject to the discretion or ability of the financial institutions. The Government must establish a loan board which can provide loans directly to the fishermen, or provide money to the credit unions at a low rate of interest solely on condition that it can be loaned out to fishermen for the financing of boats and equipment. In the latter alternative the interest rate chargeable by the credit union should be no more than necessary to cover expenses incurred by the credit union in carrying such loan.

Even more important is an amendment to the terms of the Federal Fisheries Improvement Loans Act, to permit fishermen to borrow money to pay off loans to a fishing company. The Minister told our Convention that such a "change of paper" was not permissible. Yet it is precisely such "changes of paper" which are vital to enable fishermen to get clear of the companies. Public statements have been made by fishing company officers that they would prefer not to be involved in the financing of boats and gear. They surely could not object to action by the Government which enables fishermen to borrow money at

pres bateaux. En avançant les fonds, leur objectif premier est de s'assurer une mainmise sur les matières premières, essentielle à leur capacité de faire des bénéfices.

Lors de notre Congrès annuel, le 1^{er} février, et de nouveau le 14 mars, le ministre a incité les pêcheurs à financer leurs bateaux par des prêts consentis en vertu de la Loi sur les prêts aidant aux opérations de pêche. Il a déclaré aux participants de notre Congrès que le taux d'intérêt serait de $7\frac{1}{2}$ p. 100 dans quelques semaines; il est présentement de $7\frac{3}{4}$ p. 100. Le ministre a ajouté que «la Loi, que l'on a récemment modernisée, permet de financer des prêts pouvant atteindre jusqu'à \$25,000». Nous avons appris par la suite que le maximum est toujours de \$10,000 et qu'un nouveau projet de loi reste encore à être présenté au Parlement. Le ministre a poursuivi en disant: «Vous pouvez emprunter jusqu'à \$25,000 de toute banque, coopérative de crédit, ou compagnie d'assurance...». Il a oublié de dire qu'à peu d'exceptions près, aucune de ces institutions financières ne désire prêter de l'argent à 7 p. 100 alors qu'elles peuvent obtenir 9 p. 100 ou plus.

A notre avis, si le gouvernement est vraiment intéressé à aider les pêcheurs à financer leurs bateaux sans passer par les compagnies de pêche, il faut qu'il mette de l'argent à la disposition des pêcheurs à un taux d'intérêt moins élevé et sans que cet argent soit soumis à l'arbitraire ou à la capacité des institutions financières. Il faut que le gouvernement institue un office de prêts qui prêterait directement aux pêcheurs, ou qu'il avance des fonds aux coopératives de crédit à faible taux d'intérêt à la condition expresse que ces fonds soient prêtés aux pêcheurs pour le financement de leurs bateaux et de leurs engins de pêche. Dans ce dernier cas, le taux d'intérêt que pourraient demander les coopératives de crédit ne devrait pas dépasser le niveau nécessaire pour compenser les frais que ces coopératives encouraient dans l'opération.

Il serait encore plus important de modifier la loi fédérale sur les prêts aidant aux opérations de pêche pour permettre aux pêcheurs d'emprunter en vue de rembourser l'argent qu'ils ont emprunté aux compagnies de pêche. Le ministre a dit aux participants de notre congrès que pareil «transfert de documents» n'était pas admissible. Cependant, ce sont précisément des «transferts de documents» de ce genre qui sont essentiels aux pêcheurs pour leur permettre de se libérer des compagnies. Des porte-parole des compagnies de pêche ont déclaré en public que leurs entreprises préféreraient ne pas être mêlées au

low interest to pay off mortgages or conditional sales agreements to companies.

Even if they object, the Government should not hesitate to act. The growth of monopoly and the process of vertical integration cannot be halted except by decisive Government policy. In a situation where the Government adopts measures to control the number of fishing vessels, and indicates more steps are forthcoming to reduce the total number, it is absolutely imperative that the financial controls and ownership of vessels be taken out of the hands of the companies. Otherwise, the two giant corporations will inevitably move to tighten their grip on the fishing fleet.

The Fisheries Improvement Loans Act not only has limits on the size of individual loans, but also the aggregate amount of loans which can be guaranteed. Moreover, the Government's liability on new guarantees expires on June 30, 1970. In our opinion the limits on individual loans, the aggregate limitations and time limits should be removed. Fishermen should be able to obtain low interest loans for large, modern seiners, as well as for the latest type of gillnet and troll vessels. The new limit of \$25,000 proposed by the Minister would still be inadequate, leaving the larger and more productive vessels in the hands of the big fishing companies.

The provision of adequate funds at low interest rates, would mean that the Government would be loaning money to fishermen at less than the cost of borrowing and to that extent could be attacked as a form of subsidy. We should point out that the federal subsidy to one corporation in New Brunswick (i.e. Canadian Tuna Fishing Ltd., a subsidiary of Atlantic Sugar) to build five tuna seiners was \$6,130,647. Many more millions of dollars have gone into direct subsidies for the construction of large fishing vessels. Surely, the net cost of providing low interest loans to fishermen, is a more worthwhile expenditure.

We believe that if any system of limitation is to work for the benefit of the fishermen, and not to enhance the monopoly control by one or two big companies, the Government must provide adequate financing. This is why we included this in our briefs many years before the boat licence scheme was announced. We still favour licensing of individual fishermen, instead of licensing the boats, as a means of limitation. Under either

financement des bateaux et des engins de pêche. Ces compagnies ne s'opposeraient certainement pas aux mesures que le gouvernement prendrait pour permettre aux pêcheurs d'emprunter de l'argent à faible taux d'intérêt en vue de rembourser aux compagnies les hypothèques et les sommes avancées sous forme de contrats de vente conditionnelle.

Même si elles s'y opposaient, le gouvernement ne devrait pas hésiter à agir. Seule une politique arrêtée du gouvernement peut freiner la croissance des monopoles et le processus de l'intégration verticale. Dans un contexte où le gouvernement adopte des mesures tendant à limiter le nombre des bateaux de pêche, et où il laisse entendre que d'autres mesures suivront pour réduire ce nombre, il est absolument nécessaire que l'on retire des mains des compagnies la propriété des bateaux et la domination financière qu'elles exercent à leur égard. Autrement, les deux sociétés géantes chercheront inévitablement à resserrer leur emprise sur la flotte de pêche.

La loi sur les prêts aidant aux opérations de pêche limite non seulement le montant de chaque prêt, mais également le montant global des prêts qui peuvent être garantis. En outre, la caution du gouvernement pour de nouveaux prêts prend fin le 30 juin 1970. A notre avis, on devrait éliminer le plafond imposé aux prêts individuels, le plafond qui limite l'ensemble des prêts, ainsi que les délais-limites. Le pêcheur devrait pouvoir emprunter à faible taux d'intérêt pour se procurer aussi bien un grand bateau moderne pour la pêche à la seine que le dernier modèle de bateau pour la pêche au manet ou à la cuiller.

Le nouveau plafond de \$25,000 que propose le ministre sera encore insuffisant; il laissera les bateaux plus grands et plus productifs aux mains des grandes compagnies de pêche.

Si le gouvernement mettait à la disposition des pêcheurs des crédits suffisants empruntables à faible taux d'intérêt, cela voudrait dire qu'il prêterait de l'argent à un taux moindre que le coût normal d'un emprunt et à cet égard, on pourrait s'y opposer en affirmant que c'est une forme de subvention. Mais nous aimerions rappeler que le gouvernement fédéral a versé à une seule société du Nouveau-Brunswick (nommément la *Canadian Tuna Fishing Ltd.*, une filiale de l'*Atlantic Sugar*) une subvention de \$6,130,647 pour la construction de cinq seiniers pour la pêche du thon. De nombreux autres millions de dollars ont été versés en subventions directes pour la construction de grands bateaux de pêche. Ce qu'il en coûterait pour prêter à faible taux d'intérêt aux pêcheurs constituerait certainement de l'argent mieux placé.

system the ownership and financial control of the fishing fleet by big companies is a major danger. It is a far greater danger under the boat license system because the right to fish salmon is attached to boat ownership instead of to the fishermen themselves.

In his speech of March 14th, the Minister admits "that unless the big companies begin to sell off boats in the early 1970's, their influence in the fishing end of the industry will become more important as time goes by." He says they "will score a heavy capital gain" because their vessels will continue to be tickets of entry into a more selective and more profitable club. He says he favours ownership of fish boats should rest with Canadians and looks forward "to the time when most, if not all of our salmon fishing vessels, are owned by independent fishermen."

He proceeds to raise the question of whether the companies will "go along, voluntarily, with a boat disposal program". He says he thinks they will because of a statement by the President of B.C. Packers to the effect that his "personal feeling is that, in the long run it is better to have the boats owned by independent fishermen. From a psychological aspect, people can always operate something they own themselves more effectively than something which is owned by other people."

The Minister not only agrees with Mr. Nelson's statement, but he seems to take for granted that the companies will voluntarily get out. He asked the fishermen, rhetorically, whether the companies should "get out to the extent that upwards of 80 percent of the boats are firmly in fishermen's hands? Do I hear 90 percent or even 100 percent?" (March 14, 1969, Burnaby, B.C.)

Our answer is that the Government should take all the necessary steps to ensure that 100 percent of the salmon fishing vessels are

A notre avis, pour qu'un régime de limitation soit à l'avantage des pêcheurs au lieu d'accroître le contrôle monopolisateur d'une ou deux grosses compagnies, le gouvernement doit fournir un financement suffisant. Voilà pourquoi nous en avons parlé dans nos mémoires nombre d'années avant qu'on annonce l'instauration d'un régime de permis attachés aux bateaux. Nous sommes encore pour la méthode limitative qui consiste à délivrer un permis à chaque pêcheur, au lieu d'attacher le permis au bateau. Sous l'un ou l'autre de ces régimes, la possibilité que les grosses compagnies possèdent et dominent financièrement la flotte de pêche constitue un grand danger. Le danger est encore plus grand si le permis est attaché au bateau, car le droit de pêcher le saumon accompagne alors la propriété du bateau au lieu de suivre le pêcheur lui-même.

Dans son discours du 14 mars, le ministre admet «qu'à moins que les grosses compagnies ne commencent à liquider des bateaux au début des années 1970, l'influence qu'elles exercent dans l'industrie sur le secteur de la pêche deviendra toujours plus importante». Il ajoute qu'elles connaîtront un gain de capital considérable parce que leurs bateaux continueront à servir de billet d'entrée dans un club plus fermé où les profits seront plus élevés. Il dit qu'à son avis la propriété des bateaux de pêche devrait rester aux Canadiens et qu'il a hâte de voir «le jour où la plupart sinon la totalité de nos bateaux de pêche au saumon seront la propriété de pêcheurs indépendants».

Il poursuit en se demandant si les compagnies «accepteront de collaborer volontairement à un programme de liquidation des bateaux». Il pense que oui à cause d'une déclaration du président de B.C. Packers qui se dit personnellement d'avis «qu'à la longue, il vaut mieux que les bateaux soient la propriété de pêcheurs indépendants. Du point de vue psychologique, les gens exploitent toujours plus efficacement une chose qui leur appartient qu'une chose qui appartient à un autre».

Le ministre non seulement est d'accord avec la déclaration de M. Nelson, mais il semble assuré que les compagnies vont se retirer de leur plein gré. Il a demandé aux pêcheurs, avec emphase, si les compagnies devraient «se retirer jusqu'à ce que plus de 80 p. 100 des bateaux soient fermement la propriété des pêcheurs. Est-ce que j'entends 90 p. 100 ou même 100 p. 100?» (14 mars 1969, Burnaby, C.-B.)

Nous répondons que le gouvernement devrait adopter toutes les mesures nécessaires pour que 100 p. 100 des bateaux de pêche au

owned by the fishermen and that all financing of fishing vessels, equipment, gear, etc. is available from a Government loan board, or through fishermen's credit unions, or a combination of both. We are not prepared to accept the public statements of a fishing company president as a signal they will voluntarily give up their existing ownership or control. We believe it is vitally necessary that this Committee presses for implementation, by legislation, for the end results portrayed by the Minister to the fishermen students on March 14th, 1969.

As he said then, "Monopolies are intolerable in most circumstances. They are unthinkable in a 'common resource industry' like the salmon industry." Where the Minister calls on the companies to "phase themselves out of the fishing end of the industry" we call for definite government action to phase them out.

Fleet Reduction:

The Minister has freely admitted before this Committee that in 1969 there will not be any appreciable decline in the number of salmon fishing vessels. Since making that admission the Minister has altered regulations to permit several categories of fishing vessels plus some individually owned packer vessels to obtain salmon licences. The small boat-yards are busy with new construction of fishing vessels, some of which will replace existing licensed vessels and others which were started or contracted prior to the September 5th deadline.

Our estimation is that in 1969 the salmon fleet will likely be larger than in 1968. Also it will be a more effective, or potentially effective, fleet. The actual productivity per vessel, and per fisherman, will be lower, not higher. This will be true, not only because the run of salmon is expected to be much smaller, but also because the pressure to catch a reasonable volume of salmon will be greater. The Minister has already hinted at further arbitrary measures which may be taken to reduce the fleet. These include:

- (1) An increase to \$2,500 or even \$5,000 in the amount of salmon caught to retain a Class A license.

saumon soient la propriété des pêcheurs et qu'il soit possible d'obtenir d'un office de prêt de l'État, des coopératives de crédit des pêcheurs, ou d'un organisme combinant les deux, toutes les sommes nécessaires pour financer un bateau de pêche, son équipement, les engins de pêche, etc. Nous ne sommes pas prêts à considérer les propos publics du président d'une compagnie de pêche comme étant l'annonce que les compagnies vont abandonner volontairement leur droit de propriété et leur domination actuels. A notre avis, il est absolument nécessaire que le Comité insiste pour qu'on en arrive, par voie législative, aux résultats que le ministre décrivait aux étudiants pêcheurs le 14 mars 1969.

Il disait alors: «Les monopoles sont intolérables la plupart du temps. Il est impensable qu'ils existent dans une «industrie exploitant un patrimoine commun» comme l'industrie du saumon». Alors que le ministre demande aux compagnies de «se retirer graduellement du secteur de la pêche proprement dite», nous réclamons du gouvernement qu'il prenne des mesures bien arrêtées pour qu'elles se retirent graduellement de ce secteur.

La réduction de la flotte:

Le ministre a volontiers admis devant le Comité que l'année 1969 ne sera pas témoin d'une diminution appréciable du nombre des bateaux de pêche au saumon. Depuis qu'il a fait cet aveu, le ministre a modifié le règlement pour permettre à plusieurs catégories de bateaux de pêche, et à quelques bateaux de conditionnement possédés par des particuliers, d'obtenir un permis pour la pêche au saumon. Les petits chantiers maritimes sont fébrilement occupés à construire de nouveaux bateaux de pêche, dont certains remplaceront des bateaux actuellement dotés d'un permis, tandis que d'autres ont été mis en chantier ou commandés avant le délai-limite du 5 septembre.

Nous prévoyons qu'en 1969, la flotte de pêche au saumon sera probablement plus nombreuse qu'en 1968. Ce sera également une flotte plus efficace, du moins en puissance. Mais la productivité effective par bateau et par pêcheur sera moindre, et non supérieure, et ce non seulement parce qu'on prévoit que la remonte des saumons sera beaucoup moins considérable, mais encore parce que la pression poussant les pêcheurs à prendre une quantité raisonnable de saumon sera plus considérable. Le ministre a déjà mentionné d'autres mesures arbitraires qu'on pourrait prendre pour réduire la flotte. Il y aurait entre autres:

- (1) le fait de porter à \$2,500 ou même à \$5,000 la valeur des prises de saumon qui permettrait de conserver un permis de catégorie A,

(2) Higher license fees, with part of the funds used to buy up vessels whose owners wish to sell out and retire.

(3) Removal of vessels which do not measure up to "our" standards of safety, cleanliness and quality control. What "our" standards are is a complete mystery to us, but perhaps in some future speech or press release the Minister may explain.

Because the Minister moved "arbitrarily" and without prior notice, to introduce his boat license scheme, and because each amendment has been done in the same "arbitrary" fashion and because he has indicated further measures to reduce the fleet may be "arbitrary", the pressure upon each owner to see that all licensed vessels engage in the salmon fishery is extremely heavy. Perhaps the minimum volume of salmon caught will have no bearing whatever in future licensing, but the fishermen remain in the dark.

If a higher catch limit is arbitrarily set, it may mean that a fisherman, whose major means of livelihood comes from fishing, can lose the right to continue fishing with his vessel, while company vessels, vessels owned by moonlighters or even by non-fishermen continue to enjoy that right. Success in the fishing industry requires skill and hard work. But it also includes a number of factors, commonly referred to as "luck". These may include an unforeseeable engine failure, loss of gear through shark damage, or illness during the peak of a season, or choices of areas to fish during the season. A combination of such factors may easily produce a below average season for a regular commercial fisherman.

The Union, in its proposals, started with a limitation on new entries for a five year period. Secondly, we proposed that in the first of the five years, licences be issued to all fishermen whose incomes from fishing during either of the two previous years were at least 30 per cent of their total income. This low percentage, in either of the two preceding years, recognized two facts. First, that due to overcrowding many fishermen had been compelled to seek additional work in other industries. Secondly, that the unforeseeable factors

(2) Une majoration de la taxe du permis, une partie des fonds devant servir à acheter en masse les bateaux dont les propriétaires veulent se défaire et qu'ils veulent retirer de l'industrie,

(3) suppression des bateaux qui ne sont pas à la hauteur de «nos» normes de sécurité, de propreté et de contrôle de la qualité. Qu'est-ce que le ministre entend par «nos» normes? C'est là un mystère total pour nous, mais peut-être qu'un jour, dans un discours ou dans un communiqué de presse, le ministre l'expliquera.

Parce que le ministre a agi «arbitrairement» et sans avis préalable en introduisant son régime de permis attachés aux bateaux, et parce que toutes les modifications ont été apportées de la même façon «arbitraire», et parce qu'il a laissé entendre que les nouvelles mesures en vue de réduire la flotte seront peut-être «arbitraires», les propriétaires subissent une pression très forte les incitant à lancer tous les bateaux autorisés dans la pêche au saumon. Peut-être que la quantité minimum de saumon capturé n'entrera pas en ligne de compte pour la délivrance des permis futurs, mais les pêcheurs demeurent dans l'incertitude.

Si l'on fixe arbitrairement un plafond plus élevé pour la prise, il pourrait s'ensuivre qu'un pêcheur, dont le gagne-pain principal est la pêche, pourrait perdre le droit de continuer à pêcher avec son bateau, tandis que les bateaux des compagnies, bateaux qui sont la propriété de personnes cumulant deux emplois ou même de non-pêcheurs, continueraient à avoir ce droit. Dans l'industrie de la pêche, le succès exige habileté et travail ardu. Mais il suppose également un certain nombre de facteurs que l'on attribue d'ordinaire à la «chance». Ce peut être une panne imprévue du moteur, la perte d'un engin de pêche attribuable à un requin, ou la maladie au plus fort de la saison, ou bien les zones de pêche que l'on choisit durant la saison. Un concours de plusieurs de ces facteurs peut facilement valoir à un pêcheur de profession une saison inférieure à la moyenne.

Le syndicat a proposé d'abord qu'on limite le nombre des nouveaux venus pour une période de cinq ans. Deuxièmement, nous avons proposé que pour la première de ces cinq années, on délivre le permis à tous les pêcheurs ayant tiré de la pêche, au cours de l'une et l'autre des deux années précédentes, au moins 30 p. 100 de leur revenu total. Ce faible pourcentage, s'appliquant à l'une et l'autre des deux années précédentes, reconnaissait deux faits: d'abord, qu'à cause de l'encombrement, nombre de pêcheurs ont dû

could work hardships on individuals. We went further and proposed that the Board of Review, with representation from fishermen's organizations, could consider extenuating circumstances.

We recommended the minimum percentage of income to be derived from commercial fishing should be increased to 40 per cent in the second year of the moratorium and 50 percent in the third year, as a condition of retaining a commercial license. Thus the individual would make a choice, either to make fishing his primary occupation or to leave the industry. We had in mind that further steps could be taken during the five year moratorium period, or at its conclusion, to increase the percentage. It would depend on the experience of the regular fishermen in terms of increased earnings due to the reduction in numbers which occurred in the moratorium period.

The Board of Review, as we proposed its functions would not only adjudicate appeals on insurance or renewals of licences. It would be given major responsibility for reviewing special problems which may arise during the first five year period and to render decisions or recommendations for changes in the program.

We wanted all fishermen's organizations represented on the Board of Review, as well as representatives of the Department of Fisheries and the universities. This is in sharp contrast to the Appeal Committee established by the Minister. In one of his speeches, the Minister distorted our recommendations by claiming that our Union was out to establish a "closed shop" in which "new entrants would have to be screened by the Union itself". He referred to "all powerful" officials who would be "little dictators". His own exclusion of all fishermen's representatives from any meaningful role in dealing with the main features of his plan or of the appeals, speaks louder than words.

Our Union has gone on record calling for release of all information pertaining to appeals. We have heard that up to the 1st of February, some 500 appeals have been filed. What grounds are used to grant or refuse licenses to appellants is not immediately discernible. The potential abuses of power inherent in a closed committee of civil servants, operating on the basis of press releases issued

chercher du travail supplémentaire dans d'autres industries; deuxièmement, que les imprévus peuvent soumettre l'individu à rude épreuve. Nous sommes allés plus loin, en disant que le Conseil de révision, sur les instances des associations de pêcheur pourraient prendre en considération les circonstances atténuantes.

Nous avons recommandé qu'on porte à 40 p. 100, la deuxième année du moratoire, et à 50 p. 100 la troisième année, le pourcentage minimum de revenu que le pêcheur doit tirer de la pêche commerciale pour garder son permis d'exploitation. De cette façon, l'individu aurait à choisir entre faire de la pêche sa principale occupation ou quitter l'industrie. Nous envisageons qu'on pourrait prendre d'autres mesures durant le moratoire de cinq ans ou à la fin de celui-ci pour augmenter le pourcentage. Tout dépendrait des résultats qu'auraient atteint les pêcheurs professionnels en termes de hausse de revenus attribuable à la baisse de leur nombre qui serait survenue durant la période du moratoire.

Les fonctions du Conseil de révision, telle que nous les avons proposées, ne consisteraient pas seulement à entendre les appels relatifs à la délivrance ou au renouvellement des permis. On lui confierait une fonction importante, celle d'étudier les problèmes spéciaux qui pourraient se poser durant cette période de cinq ans et de rendre des jugements ou de formuler des recommandations relativement aux changements à apporter au programme.

Nous voulions que toutes les associations de pêcheurs soient représentées au Conseil de révision, de même que le ministère de la Pêche et les universités. C'est tout à l'opposé de la Commission d'appel que le ministre a instituée. Dans l'un de ses discours, le ministre a déformé nos recommandations en prétendant que notre syndicat cherchait à établir un «atelier fermé» où «les nouveaux venus seraient passés au crible par le syndicat lui-même». Il a parlé de dirigeants «tout puissants» qui seraient de «petits dictateurs». Mais le fait qu'il ait refusé aux représentants des pêcheurs tout rôle significatif, en ce qui concerne la mise en œuvre des principaux aspects de son programme ou des appels, en dit plus long que les paroles.

Notre syndicat a réclamé publiquement la publication de toutes les données relatives aux appels. Nous avons entendu dire qu'à la date du 1^{er} février, on avait présenté quelque 500 appels. On ne distingue pas bien à première vue les critères dont on se sert pour délivrer ou refuser un permis à un requérant. Les possibilités d'abus de pouvoir qui peuvent se commettre au sein d'une commission fer-

by the Minister of Fisheries, are numerous. We surmise that, as of this year, the Committee is being very lenient, because very few individuals have raised protests with our organization.

When arbitrary measures to reduce the salmon fleet are enforced, in 1970 or later, there inevitably will be injustices to bonafide fishermen. The boat either continues or is forced out of the industry. The fishermen, whose rights to fish salmon will be directly affected by Committee decisions, have no representation on the Committee.

We have stated our opposition to higher minimum catches as a means of limitation or elimination. We are also opposed to higher license fees or safety or quality regulations as limitation measures.

Higher license fees would tax some boats out of the industry, presumably because their owners could not afford the price of the license. In our view, the fishermen who are striving to be independent of the fishing companies could well be the first victims of such a rule. Secondly, a flat tax, with no relationship to production or earnings is most unfair because it amounts to a heavy burden on those in a low income group, and means very little to those with high incomes.

We have heard the argument that higher fees should be set by the government for the privilege of harvesting this resource. We have pointed out that income tax on a graduated scale where ability to pay is a major factor, is a method already in use. Fishermen consider they already pay plenty of taxes. If more money is needed, for a program within the industry, the additional taxation should be based on ability to pay. It should either be graduated according to income, or according to the volume of fish landed. Our members have gone on record as being opposed to paying higher taxes to buy themselves out of the industry.

The Union's chief opposition to the mixing of fleet limitation with safety and quality control regulations is that the bonafide fishermen may be the first to be panalized. We believe there is a need for both safety and quality regulations. But these rules should be discussed separately, between the fishermen and

mée de fonctionnaires de l'État agissant d'après des communiqués de presse émis par le ministère de la Pêche, sont nombreuses. Nous soupçonnons la Commission d'être très indulgente cette année, car très peu de particuliers sont venus nous voir pour protester.

Lorsque les mesures arbitraires destinées à réduire la flotte de pêche au saumon seront en vigueur, en 1970 ou après, les pêcheurs professionnels subiront inévitablement des injustices. Ou bien le bateau continuera à servir ou bien on sera forcé de le retirer de l'industrie. Les pêcheurs, dont les droits de pêcher le saumon seront directement atteints par les décisions de la Commission, n'ont aucun représentant à cette Commission.

Nous avons dit que nous nous opposons à ce qu'on fasse d'un relèvement de la quantité minimum de la prise une méthode de limitation ou d'élimination. Nous nous opposons également à ce qu'on fasse de la majoration de la taxe du permis ou de la réglementation de la sécurité ou de la qualité des mesures de limitation.

Une majoration de la taxe du permis éliminerait probablement certains bateaux de l'industrie parce que leurs propriétaires ne pourraient pas se permettre de payer le permis. A notre avis, les pêcheurs qui essaient d'être indépendants des compagnies de pêche pourraient bien être les premières victimes d'une telle règle. Deuxièmement, une taxe uniforme, sans rapport avec la production ou les revenus, est des plus injuste car elle devient un lourd fardeau pour ceux qui ont un faible revenu tandis qu'elle touche très peu ceux dont les revenus sont élevés.

Nous avons entendu la thèse selon laquelle le gouvernement devrait taxer davantage le privilège d'exploiter cette ressource. Nous avons fait observer que l'impôt progressif, où la capacité de payer est un facteur primordial, est une méthode déjà en usage. Les pêcheurs considèrent qu'ils payent déjà beaucoup de taxes. S'il faut encore de l'argent pour instituer un programme au sein de l'industrie, on devrait baser les charges fiscales supplémentaires sur la capacité de payer. Ce devrait être un impôt progressif calculé soit en fonction du revenu, soit d'après la quantité de poissons capturés. Nos membres ont dit publiquement qu'ils s'opposaient à payer des impôts plus élevés par lesquels ils achèteraient leur retrait de l'industrie.

Si le syndicat s'oppose à ce qu'on mêle limitation de la flotte et réglementation de la sécurité et du contrôle de la qualité, c'est d'abord et avant tout parce que les pêcheurs professionnels seraient peut-être les premiers à subir les sanctions. Nous croyons qu'il y a lieu d'instituer une réglementation tant en ce

the responsible government authorities. Gradual introduction may be necessary in order to enable the fishermen to make the necessary repairs and/or replacement.

Arbitrary imposition of safety or quality regulations, as a means of driving boats out of the industry, would likely favour the fishing companies with the financial ability to protect their investments. It would also strengthen their financial control over more fishermen who would be forced to go deeper in debt to the companies to maintain their boats.

The Minister has put forward the concept of boats being worth more in future because they would be tickets of entry into a select club. He has fostered the idea that fishermen who now own their vessels will have something to look forward to in their retirement through selling their boats and licences. Or, if desirable, they may pass their boats and licenses on to their sons. On the other side of the ledger he has portrayed the Union's plan as making the boat worthless and denying the sons of fishermen the right of fish.

If the government desires to look after fishermen in their retirement it can be done by means other than giving some individuals the opportunity to sell the right to work to others. We have advocated an adequate Pension Plan. An immediate step which can be taken would be to require the companies to pay at least half of the Canada Pension Plan, instead of forcing all fishermen to pay the full 3.6 per cent contribution. Secondly, the government could adopt further legislation establishing a fishermen's pension fund to be paid by an assessment on the value of all fish landed for commercial use. Such measures would be of benefit to all fishermen, not just to those who may have a boat and a ticket of entry to sell.

Under the Union's proposed plan the retiring fisherman would not be able to sell his license. Thus, the value of a boat would not be increased beyond its normal market value. If the Union's plan adversely affected sales prices, then, and only then, should consideration be given to the establishment of a government fund to protect the fishermen owners against losses. In our opinion the vessels, would not be worthless. They would repre-

qui concerne la sécurité que la qualité. Mais cette réglementation devrait faire l'objet d'une discussion distincte entre les pêcheurs et les autorités gouvernementales intéressées. Il sera peut-être nécessaire d'introduire ces règles graduellement afin de permettre aux pêcheurs de procéder aux réparations et/ou aux substitutions voulues.

L'imposition arbitraire de règles de sécurité ou de qualité comme moyen de faire sortir des bateaux de l'industrie favoriserait probablement les compagnies de pêche ayant la possibilité financière de protéger leurs placements. Cela renforcerait également leur mainmise financière sur un plus grand nombre de pêcheurs qui seraient forcés de s'endetter davantage auprès des compagnies pour entretenir leurs bateaux.

Le ministre a avancé l'idée que les bateaux vaudront davantage à l'avenir parce qu'ils serviront de billet d'entrée dans un club select. Il favorise l'idée que les pêcheurs actuellement propriétaires de leurs bateaux auront quelque chose à espérer, au moment de prendre leur retraite, en vendant leurs bateaux et leurs permis. Ou bien, si la chose est souhaitable, ils pourront transmettre leurs bateaux et leurs permis à leurs fils. Mais d'un autre côté, il a dit que le programme du syndicat rend le bateau sans valeur et dénie aux fils de pêcheurs le droit de pêcher.

Si le gouvernement veut s'occuper des pêcheurs qui prennent leur retraite, il peut le faire autrement qu'en donnant à certaines personnes l'occasion de vendre à d'autres le droit de travailler. Nous avons demandé qu'on institue un régime de retraite satisfaisant. On pourrait dès maintenant, en guise de premier pas, obliger les compagnies à payer au moins la moitié de la cotisation du Régime de pension du Canada, au lieu de forcer tous les pêcheurs à payer la pleine cotisation de 3.6 p. 100. Deuxièmement, le gouvernement pourrait adopter une nouvelle loi qui instituerait une caisse de retraite des pêcheurs; cette caisse serait alimentée par une cotisation calculée d'après la valeur de tout le poisson capturé à des fins commerciales. Pareilles mesures seraient à l'avantage de tous les pêcheurs, et non pas seulement de ceux qui ont un bateau et un billet d'entrée à vendre.

D'après le régime que propose le syndicat, le pêcheur qui prend sa retraite ne pourrait pas vendre son permis. Ainsi, la valeur d'un bateau ne monterait pas au-delà de sa valeur marchande normale. Si le programme du syndicat avait un effet négatif sur le prix de vente, alors, et alors seulement, devrait-on envisager l'établissement d'une caisse gouvernementale destinée à protéger les pêcheurs propriétaires des pertes éventuelles. A notre

sent replacements for vessels remaining in the fishing fleet. In some cases they would be bought by fishermen within the industry because they would represent an up-grading from the boats already in use. Some could be sold and used as pleasure craft or in the sports fishery. The net cost to the government would be the difference between actual market values and market values prior to introduction of the limitation plan. There would be no extra cost based on the "ticket of entry" concept.

The Union's plan did not prevent a fisherman from passing his fishing vessel on to his son. If the son had not yet obtained a license to fish, it may have meant he would not be able, immediately to begin fishing personally. We did not preclude special consideration to the sons of fishermen in a license limitation program but we felt this should be considered during the first few years of the moratorium against new entries. Certainly, if the sons of fishermen are to be favoured, in terms of entry into a limited fishery, this should be applied to those whose fathers do not own vessels as much as to those whose fathers are already owners.

The Minister has also criticized the Union's plan as having a tendency to protect an "aging labour force"; that "fishermen with seniority would be in a preferred group" and "new entrants, in the sense of young people or those who had never before been engaged in the fishery, would be few and far between."

We make no apologies for wanting to protect the seniority of the bonafide fishermen. The aging process occurs in either type of plan. Under the Minister's scheme, if the aging fisherman owns his own vessel without financial control by the company, presumably he could keep on fishing as long as he wants. If, on the other hand, he does not own his vessel, or is in some other way dependent on the big companies, then age can make him obsolete.

We consider, subject to the establishment of an adequate pension that aging fishermen should not be driven out of the industry solely to make room for newcomers who have

avis, les bateaux ne seraient pas sans valeur. Ils fourniraient des pièces de rechange aux bateaux encore membres de la flotte de pêche. En certains cas, des pêcheurs de l'industrie les achèteraient parce qu'ils constitueraient une amélioration par rapport à leurs propres bateaux. Certains pourraient être vendus comme bateaux de plaisance ou comme bateaux destinés à la pêche sportive. Le coût net que le gouvernement aurait à assumer serait la différence entre la valeur marchande réelle et la valeur marchande qu'avait le bateau avant l'introduction du régime de limitation. Il n'y aurait pas de coût supplémentaire dérivant de la notion du «billet d'entrée».

Le programme du syndicat n'empêchait pas un pêcheur de transmettre son bateau de pêche à son fils. Si le fils n'a pas encore obtenu son permis de pêche, cela aurait pu signifier qu'il n'aurait pas pu immédiatement commencer à pêcher personnellement. Nous n'écarterions pas l'idée qu'un programme de limitation des permis porte une attention spéciale aux fils de pêcheurs, mais nous étions d'avis que cette mesure devait s'appliquer durant les premières années du moratoire visant à limiter le nombre des nouveaux venus. Il est certain que si l'on veut favoriser les fils de pêcheurs en ce qui concerne leur entrée dans une industrie de la pêche à expansion limitée, les mesures à prendre pour y arriver doivent s'appliquer tout autant à ceux dont le père n'est pas propriétaire qu'à ceux dont le père est propriétaire d'un bateau.

Le ministre a également critiqué le projet du syndicat en disant qu'il tendait à protéger une «main-d'œuvre prenant de l'âge», que «les pêcheurs ayant de l'ancienneté seraient dans un groupe privilégié» et que «les arrivées de nouveaux éléments, jeunes gens ou personnes n'ayant jamais fait la pêche auparavant, seraient rares et espacées».

Nous ne nous excusons pas de vouloir protéger l'ancienneté des pêcheurs professionnels. Le processus de vieillissement se présente dans l'un et l'autre projet. Selon le projet du ministre, si le pêcheur prenant de l'âge possède son propre bateau sans être sous le contrôle financier de la compagnie, il pourra probablement continuer à pêcher aussi longtemps qu'il le voudra. D'autre part, s'il ne possède pas son propre bateau, ou qu'il dépend d'une autre façon des grosses compagnies, il se peut alors que son âge le place dans la catégorie des gens trop vieux.

Nous considérons qu'à moins qu'on instaure un régime de pension satisfaisant, on ne devrait pas faire sortir de l'industrie les pêcheurs qui prennent de l'âge uniquement

never fished before. Young people, who sincerely want to enter the fishing industry, would, under our plan, put their names on a waiting list. A Board of Review, composed of fishermen, as well as government representatives, would see they got a fair and equal chance to enter the salmon fishery when new people are being admitted. As previously stated, if the sons of fishermen were to be shown any preference it should be applied equally to all sons of fishermen.

Under the present "Davis plan" the young people, the sons of fishermen and other new entrants (except those who may inherit a license) can "get into the club by buying a licensed boat from someone else". All they have to have is the money. This type of 'equality' is farcical. If boat prices are inflated, as the Minister has indicated he expects, the aspiring new entrants will only gain the right to fish by having more money than others seeking entry. Money will talk and equality of opportunity will be as dead as the dodo.

Regarding protection of the rights of Native Indians, the Minister has suggested this will be accomplished through the Indian Fishermen's Assistance Program. This is because new vessels financed through the program may be in addition to the existing licensed fleet. We do not believe this provides adequate protection.

Our Union proposed that, as a minimum condition of any license limitation program, the ratio of Indians to non-Indians engaged in commercial fishing must not be allowed to decline. This would mean, in practise, that in applying rules regarding a minimum percentage earnings from fishing, as well as licensing new applicants, the Indian fishermen would be given special consideration.

The Davis plan does not prevent removal of Indians either through the sale of licensed vessels, or by the present owners, inclusive of companies and other non-Indian owners, of vessels just not re-employing the Indians. The Department of Indian Affairs in Vancouver has issued a warning to Indians "not to sell their boats" because they would be selling their rights to fish salmon". Boats built and financed under the Indian Fishermen's Assistance Program cannot be sold for six years, except in extenuating circumstances. But this

pour faire de la place aux nouveaux venus qui n'ont jamais pêché auparavant. Les jeunes gens qui désirent sincèrement entrer dans l'industrie de la pêche s'inscriraient, selon notre projet, sur une liste d'attente. Un Conseil de révision, composé tant de pêcheurs que de représentants du gouvernement, veillerait à ce qu'ils aient une chance juste et égale d'entrer dans l'industrie de la pêche au saumon lorsqu'on y admettrait de nouvelles recrues. Nous le répétons, si les fils de pêcheurs doivent faire l'objet d'une quelconque préférence, que la chose s'applique également à tous les fils de pêcheurs.

Selon le «plan Davis» actuel, les jeunes gens, les fils de pêcheurs et les autres nouveaux venus (sauf ceux qui héritent d'un permis) peuvent «entrer dans le club en achetant d'un autre un bateau doté d'un permis». Tout ce qu'il leur faut, c'est l'argent. Ce genre «d'égalité» tient de la farce. Si le prix des bateaux est gonflé, ainsi que le ministre a dit le prévoir, un aspirant ne gagnera le droit de pêcher que s'il a plus d'argent que les autres. C'est l'argent qui décidera, et l'égalité des chances ne sera plus qu'un souvenir.

En ce qui concerne la protection des droits des Indiens, le ministre a soutenu que le Programme d'assistance aux pêcheurs indiens y pourvoirait, et ce parce que les nouveaux bateaux financés en vertu du programme peuvent s'ajouter à la flotte actuelle des bateaux autorisés. Nous ne croyons pas que ce système donne une protection satisfaisante.

Notre syndicat a proposé, comme condition minimale de tout programme de limitation du nombre des permis, qu'on ne permette pas une diminution du rapport entre Indiens et non-Indiens s'adonnant à la pêche commerciale. En pratique, cela signifierait que lorsque viendrait le temps d'appliquer le règlement concernant le pourcentage minimal de revenus tirés de la pêche, et de délivrer les permis aux nouveaux requérants, les pêcheurs indiens seraient l'objet d'une attention spéciale.

Le plan Davis ne prévient pas le départ des Indiens, soit que ce départ se fasse par la vente de bateaux autorisés, soit que les propriétaires actuels de bateaux, y compris les compagnies ou d'autres propriétaires non-indiens, ne réengagent pas les Indiens tout simplement. A Vancouver, le ministère des Affaires indiennes a averti les Indiens «de ne pas vendre leurs bateaux» parce qu'ils vendraient par le fait même leur droit de pêcher le saumon. Les bateaux construits et financés en vertu du Programme d'assistance aux

does not apply to any other fishing vessels owned or operated by Indians, and they far out-number the new boats which will be built under the Program.

We have, in this very lengthy section, tried to deal with all of the objections to the Davis plan; to counter pose our own plan, and to answer the claims and criticisms of the Minister. We have been compelled to conduct a type of debate with the Minister, because, instead of bringing forward legislation, he has chosen to issue proclamations by press release, and to justify his actions by speeches on his scheme, as well as to criticize and very often, distort our views and our original proposals.

In our opinion, all forms of limitation have some weaknesses. Our major criticism of the Davis plan is that it puts property rights ahead of human rights. The small man can be squeezed out by the big corporations. The almighty dollar decides who will or will not be allowed to fish commercially. The bait of inflated boat values is used to entice some of the fishermen owners into swallowing the hook.

Our proposals protect the rights of the individual fishermen. Control by the big companies would be removed. Representatives of fishermen's organizations, subject to recall, would work out solutions to all problems, on the basis of being fair to fishermen with seniority, and providing equal treatment of new applicants.

We have this final observation to make. When we warned the experts in the Federal Department of Fisheries, some 12 years ago that herring would be depleted by over-fishing we were practically told that, as fishermen, we knew nothing. When we warned of the decline of halibut resources when the Eastern Bering Sea was opened to the Japanese, our protests were ignored. The experts were wrong. The fishermen have had to suffer the consequences of loss of a herring fishery and a tremendous decline of halibut.

Now, as the salmon fleet is being limited, the Minister is doing his utmost to convince everyone that we don't know the score. The medicine he prescribes is supposed to do wonders for the fishermen. But, it is the

pêcheurs indiens ne peuvent être vendus pendant six ans, sauf circonstances atténuantes.

Mais cela ne s'applique pas aux autres bateaux de pêche qui appartiennent aux Indiens, ou qui sont sous équipage indien. Ces bateaux sont beaucoup plus nombreux que ceux qui doivent être construits en vertu du Programme.

Dans cette partie assez longue, nous nous sommes efforcés de traiter de toutes les objections suscitées par le plan Davis, de présenter nos contre-propositions, et de réfuter les prétentions et les critiques du Ministre. Nous nous sommes vu forcés d'engager avec lui une sorte de débat, étant donné qu'aux mesures législatives il préfère les déclarations à la presse et les discours, et que même il critique, et très souvent déforme nos vues et nos propositions originales.

A notre avis, toute forme de restriction porte en elle des faiblesses. Ce que nous reprochons le plus au plan Davis, c'est de placer les droits de propriété au-dessus des droits de la personne. Les petites entreprises sont à la merci des grosses compagnies. C'est le dollar tout-puissant qui décide qui aura le droit de faire de la pêche commerciale. On essaie de leurrer les propriétaires de pêcheurs par les valeurs enflées des bateaux.

Au contraire nos propositions ont pour objet la protection des droits individuels des pêcheurs. Elles enlèveraient le contrôle aux grosses compagnies. Les représentants des organisations de pêcheurs, nantis de mandats provisoires, s'efforceraient de résoudre tous les problèmes, en tenant compte de l'ancienneté des pêcheurs et traitant également les nouvelles demandes.

Encore une dernière remarque. Il y a douze ans environ, nous avions prévenu les experts du ministère fédéral des Pêcheries que le hareng serait épuisé par des pêches excessives. Nous nous sommes fait répondre que nous ne connaissions rien. De même, quand nous avons averti que l'entrée des Japonais dans la mer de Bering orientale allait provoquer le déclin des pêches de flétan, nos remarques sont restées lettre morte. Pourtant, ce sont les experts qui ont eu tort et les pêcheurs ont eu à subir les conséquences de la perte des pêches de hareng et de la baisse formidable des ressources de flétan.

Et maintenant que la pêche du saumon est restreinte, le Ministre essaie de convaincre tout le monde que nous ne savons pas ce qui se passe. Les remèdes qu'il prescrit sont censés devoir faire merveille pour les pêcheurs,

fishermen who must suffer if it robs them of their birthright.

We urge this Committee to take whatever action may be open to you, to have the Davis plan terminated and replaced by a system of limitation based on the principles we have outlined.

Extension of Territorial Waters, Baselines and Exclusive Fishery Zones:

This is the third occasion on which we have presented our views on the extension of Canada's territorial waters to a Standing Committee of the House of Commons. The first occasion was in May of 1952 and the second in June of 1964. Over the past 23 years our Union has also made several submissions to Provincial and Federal Governments.

As long ago as 1956 we were informed by a Minister of Fisheries who addressed our Convention that Canada intended to establish a 12 mile limit outside a headland to headland baseline. In 1964 Bill S-17 was introduced and adopted, giving the cabinet power to establish a baseline from headland to headland along the Canadian coastline to enclose the waters inside the baseline as the internal waters of Canada. Our territorial sea would extend three miles outside the baseline, and a further nine miles would be classified as an exclusive Canadian fishing zone. By this time the Government had also indicated that American claims to fishing rights would continue to be respected and that Canada would negotiate with Britain and France, as well as other nations over historic and traditional fishing rights which may be affected.

We were very critical of Bill S-17 and urged amendments which would have:

1. Firmly establish the baseline on the West Coast to include Queen Charlotte Sound, Hecate Straits and Dixon Entrance as internal waters of Canada. On the east coast, although we did not propose a list of geographical co-ordinates as we did for B.C., we proposed the baseline should enclose the Bay of Fundy, Gulf of St. Lawrence and Strait of Belle Isle as internal waters.

2. That our territorial sea should extend 12 miles seaward from the baselines.

3. That the internal waters and territorial seas of Canada be considered

mais si le remède prive les pêcheurs de leur droit d'ainesse, ce sont eux qui auront à en souffrir.

Nous demandons instamment au Comité de prendre les mesures qui s'offrent à lui, de mettre fin au plan Davis et de le remplacer par un système de restrictions basé sur les principes que nous avons énoncés.

Extension des eaux territoriales, des lignes de base et des zones de pêche réservée

C'est la troisième fois que nous présentons nos idées sur l'extension des eaux territoriales canadiennes au Comité permanent de la Chambre des communes. La première fois fut en mai 1952 et la seconde en juin 1964. Au cours des 23 dernières années, notre Union a fait de multiples représentations aux gouvernements provinciaux et fédéral.

En 1956 déjà, un ministre des Pêcheries annonçait à notre congrès que le Canada avait l'intention d'établir une zone de 12 milles au-delà d'une ligne de base s'étendant d'un promontoire à l'autre. En 1964, on présentait et adoptait le projet de loi S-17 qui habilitait le Cabinet à instaurer une ligne de base entre les promontoires du littoral canadien, et à désigner la zone située en deçà de la ligne comme eaux intérieures du Canada. Notre mer territoriale devait s'étendre à trois milles au-delà de la ligne de base et une bande supplémentaire de neuf milles serait considérée comme zone de pêche exclusive. A cette époque, le Gouvernement avait laissé entendre que l'on continuerait à respecter les droits de pêche des Américains, et que le Canada entreprendrait des négociations avec la Grande-Bretagne, la France et d'autres pays sur les droits de pêche historiques et traditionnels qui se trouveraient affectés.

Nous entretenons de forte réserves au sujet du projet de loi S-17 et nous avons demandé les amendements suivants:

1. Délimiter clairement la ligne de base sur la côte ouest de façon à faire entrer le détroit de la Reine Charlotte, le détroit de Hecate et l'entrée Dixon dans les eaux intérieures du Canada. Sur la côte de l'est, nous n'avons pas proposé de coordonnées comme pour la Colombie-Britannique, mais nous avons suggéré que la ligne de base englobe la baie de Fundy, le golfe du Saint-Laurent et le détroit de Belle Isle dans les eaux intérieures.

2. Que notre mer territoriale s'étende à douze milles de la ligne de base.

3. Que les eaux intérieures et les mers territoriales du Canada soit considérées

Canadian sovereign territory from the date of adoption of the legislation by Parliament.

4. That from January 1, 1965 the Government of Canada should prohibit fishing operations by foreign vessels or nationals in Canadian internal or territorial waters, except for such operations as may be allowed by special decision of Parliament.

5. That all nations claiming "historic" or "territorial" fishing rights in these extended Canadian waters be clearly informed that all such rights are terminated as of January 1st, 1965, unless, by mutual agreement, satisfactory to the Parliament of Canada, a later date of such termination is established.

6. That Canada move to abrogate treaties with the United States and France, which permit their nationals to fish in Canadian waters. These special privileges to be terminated on January 1st, 1966, unless, a later date is fixed, by approval of Parliament.

Unfortunately, none of the decisive moves we advocated won approval in the Committee or the House of Commons. Bill S-17 was adopted, and from time to time over the past 5 years we have been told Canada is still negotiating the matter of baselines. Every few months either a Minister of Fisheries or Minister for External Affairs has announced that very soon the geographical co-ordinates setting out a baseline would be proclaimed. The only ones published were along the coast of Labrador and around the east and south coast of Newfoundland.

Our criticism of the Government is that it has been extremely slow and exceedingly cautious in dealing with the issue of extension of Canada's territorial waters. Other nations, like Iceland and Norway have had the intestinal fortitude to break new ground, even where it required a challenge to a supervisor naval force or in an international tribunal. Many other nations, including several in South America have had the courage to act decisively. Canada's stance has been weak-kneed and gutless by comparison.

A recent F.A.O. survey indicates 31 countries claim a 12 mile territorial sea. 40 others claim a lesser territorial sea, but have exclusive fishing zones usually up to 12 miles off their coasts. 6 nations claim a full 200 miles as territorial sea or exclusive fishing zones. Only 28 countries still adhere to the old concept of a 3 mile limit. The world trend is

territoire canadien, à compter de l'adoption par le Parlement d'une législation à cet effet.

4. Que, à partir du 1^{er} janvier 1965, le Gouvernement canadien interdise la pêche dans les eaux intérieures ou territoriales du Canada par les bateaux étrangers, sauf par autorisation spéciale du Parlement.

5. Que toutes les nations qui revendiquent des droits de pêche historiques ou territoriaux dans ces nouvelles zones élargies soient clairement avisées que ces droits prendront fin à compter du 1^{er} janvier 1965, à moins que par accord mutuel, on fixe une date ultérieure pour leur révocation.

6. Que le Canada entreprenne des démarches pour révoquer les traités avec les États-Unis et la France autorisant leurs ressortissants à pêcher dans les eaux canadiennes. Que ces privilèges spéciaux soient retirés à partir du 1^{er} janvier 1966, ou à une date ultérieure approuvée par le Parlement.

Malheureusement, aucune des mesures décisives que nous préconisions ne fut approuvées par le Comité de la Chambre des Communes. Le projet de loi S-17 fut adopté, et de temps en temps au cours des cinq dernières années, on nous annonce que les négociations sur les lignes de base se poursuivent encore. Périodiquement, le ministre des Pêcheries ou le ministre des Affaires extérieures annonce que très bientôt on établira les coordonnées géographiques des lignes de base. Les seules à avoir été publiées jusqu'à présent sont celles de la côte du Labrador et des côtes est et sud de Terre-Neuve.

Nous reprochons surtout au Gouvernement la lenteur et les précautions extrêmes avec lesquelles il aborde la question de l'extension des eaux territoriales canadiennes. D'autres nations comme la Norvège et l'Islande ont eu le courage de prendre l'initiative, même au risque d'affronter des forces navales supérieures ou un tribunal international. Bien d'autres nations, dont plusieurs en Amérique du Sud, ont eu le courage d'agir. Par comparaison, l'attitude du Canada fait preuve de manque de caractère et de courage.

Selon un relevé récent de la F.A.O., 31 pays revendiquent une mer territoriale de 12 milles. Quarante autres revendiquent une zone moins large mais, par contre, détiennent une zone de pêche exclusive s'étendant d'ordinaire jusqu'à 12 milles de la côte. Six nations se réclament d'une zone de 200 milles de mer territoriale ou de zone de pêche réservée.

very obviously toward extension of territorial waters and exclusive fishing zones. Canada should be prepared to take the lead in some aspects of this trend.

One of these is the distance between geographical co-ordinates. We do not accept the 44 mile rule as won by Norway to be a permanent fixture in drawing baselines. If it requires a 96 mile line to enclose Queen Charlotte Sound as Canadian waters, then Canada must take the initiative.

Only very recently the Minister of Fisheries announced that new legislation will be presented to Parliament to amend the Territorial Sea and Fishing Zones Act. His press release said the amendments will "provide added flexibility" so that the Cabinet can draw "fisheries closing lines" in certain coastal areas "without affecting the limits of Canada's internal waters or territorial sea". It is intended to deal with "several important gaps" which will remain along Canada's east and west coasts after geographical co-ordinates of our baseline enclosing Canada's internal waters are issued.

These important gaps include Queen Charlotte Sound and the Gulf of St. Lawrence, and perhaps other waters not specifically mentioned by the Minister. We must point out that American, Soviet and Japanese fishing fleets have all found lucrative fishing in Queen Charlotte Sound. It is an area of vital importance to our west coast fishery.

We disagree with the Government's decision to allow any such gaps to remain in the drawing of the baselines which enclose our internal waters. By leaving the gap, it appears to us that Canada is giving way to those nations which contend that Queen Charlotte Sound is part of the "high seas". While our government representatives are not very frank on this subject, we believe the major contention on this score comes from the United States. Japan, as a distant water fishing nation and a booster of 3 mile limits, will likely follow that lead. It is not impossible, if Canada appears to concede that Queen Charlotte Sound is not part of our internal waters and territorial sea, that both Japan and the U.S.S.R. will claim traditional or historic fishing rights in the area.

Seuls 28 pays s'en tiennent encore à la vieille limite de 3 milles. La tendance dans le monde est donc de plus en plus à l'élargissement des eaux territoriales et des zones de pêche exclusive. Le Canada devrait prendre l'initiative dans certains aspects de cette tendance.

Un de ces aspects se rapporte à la distance entre les coordonnées géographiques. Nous ne considérons pas comme critère immuable la base de 44 milles obtenue par la Norvège dans la délimitation de ses lignes de base. S'il faut une zone de 96 milles pour englober le détroit de la Reine-Charlotte dans les eaux canadiennes, eh bien le Canada devrait être prêt à la revendiquer.

Tout dernièrement, le ministre des Pêcheries annonçait la présentation prochaine au Parlement d'amendements à la Loi sur la mer territoriale et les zones de pêche. Son communiqué de presse disait que les amendements rendront la loi «plus souple» et permettront au Cabinet de délimiter des «lignes de fermeture de pêche» dans certaines régions côtières, «sans changer les bornes des eaux intérieures ou de la mer territoriale du Canada». Les modifications ont aussi pour objet de s'occuper de «plusieurs trouées importantes» qui subsisteront sur les côtes est et ouest du Canada après la promulgation des coordonnées des lignes de base.

Parmi ces trouées importantes, il y a le détroit de la Reine-Charlotte et le golfe du Saint-Laurent, et peut-être aussi d'autres zones côtières que le Ministre n'a pas mentionnées spécifiquement. Il est à remarquer que les flottes de pêche américaines, soviétiques et japonaises ont toutes trouvé dans le détroit de la Reine-Charlotte un territoire de pêche très profitable. C'est une région d'importance essentielle pour nos pêcheries de la côte ouest.

Nous nous inscrivons en faux sur la décision du Gouvernement de permettre le maintien de ces trouées dans les lignes de base de nos eaux intérieures. En laissant ces trouées, le Canada semble donner raison aux nations qui considèrent le détroit de la Reine-Charlotte comme partie de la «haute mer». Bien que nos gouvernants n'osent pas se prononcer sur le sujet, il nous semble que ce sont les États-Unis qui exercent les plus fortes prétentions à cet égard. Le Japon, qui s'adonne à la pêche en eaux lointaines et qui défend le vieux concept de la limite de trois milles, suivra très probablement l'exemple des États-Unis. Si le Canada semble admettre que le détroit de la Reine-Charlotte n'appartient pas à nos eaux intérieures ou à notre mer territoriale, il ne serait pas surprenant que le Japon et l'U.R.S.S. finissent par y revendiquer des droits de pêche traditionnels ou historiques.

Canada, by acting decisively, can claim all fishery, mineral or other resources to be our exclusive property, inside a baseline which encloses our internal waters. Action to terminate any claims of an historic or traditional nature, or even treaty rights, can be much more readily taken. Reciprocal agreements with the United States, involving exclusive fishing zones, would not include Queen Charlotte Sound, provided it is part of our internal waters.

In our opinion there is need for a distinction between baselines which enclose our internal waters as well as indicate the inner line of our territorial waters and the Canadian exclusive fishing zones. We would propose that our exclusive fishing zones should be measured seaward from our territorial seas to the edge of the Continental Shelf. Canada's exclusive fishing zones, in that case, could be opened to foreign nationals for certain fisheries where it may be of mutual benefit, without encroachment on our territorial seas or internal waters.

We considered the 3 mile territorial sea plus a nine mile exclusive fishery zone a retreat from the full position of a 12 mile territorial sea. We so stated in our brief of 1963 and 1964. We considered Bill S-17 left too much flexibility in the hands of the Cabinet. Today, we believe the announcement which indicates gaps in the baseline, and the drawing of exclusive fisheries closing lines to be another retreat.

We are also very disturbed at all the delays, during which our offshore fisheries are being exploited by foreign fleets, and traditional or historic fishing claims are being strengthened. When we first campaigned for extension of our territorial waters our only concern, here in B.C., was the extent of American fishing effort along our coast. Since then the Japanese and Soviet mothership fleets have arrived.

Therefore, we urge this Committee to press for strong and decisive action, now, without leaving any "gaps" to perpetuate foreign harvests in waters which rightfully are part of Canada.

Growth of Foreign Monopoly and Loss of Employment:

When, in 1966, the House of Commons-Senate Committee investigating rising living

Par une action résolue, le Canada peut revendiquer comme propriété exclusive toutes les ressources halieutiques, minérales ou autres, comprises en deça des lignes de base de nos eaux intérieures. Il sera encore plus facile de révoquer tous les droits historiques ou traditionnels, ou même ceux acquis par traité. Les accords réciproques entre les États-Unis et le Canada sur les zones de pêche exclusive ne porteraient pas sur le détroit de la Reine-Charlotte, si nous le considérons comme faisant partie de nos eaux intérieures.

Nous sommes persuadés qu'il faut distinguer entre des lignes de base qui délimitent nos eaux intérieures et nos eaux territoriales et les zones de pêche exclusive au Canada. Nous serions en faveur d'étendre nos zones de pêche exclusive au large de nos mers territoriales jusqu'au bord de la Plate-forme continentale. Dans ce cas, les zones de pêche exclusive pourraient être ouvertes aux ressortissants étrangers pour certaines pêches d'intérêt mutuel, sans empiétement sur nos eaux intérieures ou nos mers territoriales.

A notre avis, l'adoption d'une mer territoriale de trois milles, complétée par une zone de pêche exclusive de pêche de neuf milles a été un recul sur notre revendication originale d'une pleine zone de 12 milles pour la mer territoriale. Nous l'avions déjà affirmé dans nos mémoires de 1963 et 1964. Nous estimions que le projet de loi S-17 laissait trop de latitude au Cabinet. Aujourd'hui, nous estimons que la déclaration relative à l'existence de trouées dans la ligne de base et la délimitation de lignes de fermeture de pêche constituent un autre recul.

Nous sommes en outre vivement préoccupés par la lenteur des négociations, qui permet aux flottes étrangères de continuer l'exploitation des pêches au large de nos côtes et de renforcer leurs revendications traditionnelles ou historiques. Quand nous avons commencé notre campagne en faveur de l'élargissement de nos eaux territoriales, c'était surtout à cause de l'inquiétude que nous inspirait, ici en Colombie-Britannique, l'importance des pêches américaines le long de nos côtes. Depuis ce temps-là, les flottes japonaises et soviétiques se sont ajoutées aux flottes américaines.

Pour ces raisons, nous demandons instamment au Comité qu'il réclame des mesures énergiques, décisives, et immédiates, qui élimineront toutes ces trouées qui permettent aux pêcheurs étrangers d'exploiter des eaux qui appartiennent de droit au Canada.

Croissance des monopoles étrangers et perte d'emploi

Lorsque, en 1966, le Comité mixte de la Chambre des Communes et du Sénat sur la

costs, brought out the fact that the Garfield Weston empire included 69 percent of stock of B.C. Packers Ltd., it came as a surprise to the fishing industry. The Weston interests extended to several other fishing companies, mainly through B.C. Packers. However, the secret that Nelson Bros. Fisheries Ltd. had been owned outright by B.C. Packers since 1960 was not disclosed until January, 1969.

Earlier in January, A.B.C. Packing Co. Ltd. disclosed it had sold its B.C. holdings to the Canadian Fishing Co. Ltd. and to the B.C. Packers-Nelson Bros. combine. As long ago as 1954 J. H. Todd and Sons Ltd. had been purchased by the B.C. Packers Ltd and Canadian Fishing Co. Ltd. on a 50-50 basis. In 1969 the big two also announced liquidation of that company.

All these announcements have created more than a slight shock wave in B.C. Fishermen and allied workers have witnessed increasing monopoly control as smaller companies like Johnston Fishing and Packing Co. Ltd., Colonial Packers Ltd., North Shore Packing Co., and Tulloch Fisheries were either bought up or forced out of business.

However, the recent disclosures indicate a very close connection between the Weston empire and the New England empire, which owns the Canadian Fishing Co. Ltd. Their close collaboration in operation of the J. H. Todd company, and their sharing of the A.B.C. holdings, indicate the very real possibility that only one large company controls 90 percent of the canned salmon industry, and possibly over 80 percent of the entire fishery trade in B.C.

We believe it is high time that a thorough investigation of the extent of monopoly control was undertaken. This could be done by the Combines Investigation Branch or by a special Committee of the House of Commons. In either instance special care should be taken to prevent these two giants from hiding any part of their holdings or the extent to which they control the B.C. fishing industry.

The effect of these mergers and the take-over by these two foreign monopolies has been to:

(a) Largely eliminate competition between fishing companies in prices paid to fishermen. This is particularly noticeable in the salmon fishery. Union contracts

hausse du coût de la vie dévoila que l'empire de Garfield Weston détenait 69 p. 100 des actions de la B.C. Packers Ltd., la nouvelle tomba comme une surprise pour l'industrie de la pêche. Le contrôle de Weston s'étendait à plusieurs autres entreprises de pêche, principalement par l'intermédiaire de la B.C. Packers. Toutefois, ce n'est qu'en janvier 1969 qu'on divulgua le secret que la Nelson Bros. Fisheries Ltd. appartenait à B.C. Packers depuis 1960.

Au début de janvier, la A.B.C. Packing Co. Ltd. faisait savoir qu'elle avait vendu ses succursales de Colombie-Britannique à la Canadian Fishing Co. Ltd et à un cartel formé par B.C. Packers et Nelson Brothers. En 1954, la J. H. Todd & Sons Ltd avait été achetée à part égale par B.C. Packers et Canadian Fishing Co. Ltd. En 1969, ces deux grosses entreprises annonçaient la liquidation de la compagnie.

Toutes ces révélations ont provoqué de violents remous en Colombie-Britannique. Les pêcheurs et les industries connexes assistent à l'emprise toujours croissante des monopoles sur les petites entreprises. Ainsi, la Johnston Fishing and Packing Co. Ltd., la Colonial Packers Ltd, la North Shore Packing Co. et la Tulloch Fisheries ont été ou bien achetées ou acculées à la faillite.

Les révélations de ces derniers temps laissent soupçonner une relation très étroite entre l'empire Weston et l'empire de la Nouvelle-Angleterre qui détient la Canadian Fishing Co. Ltd. Leur étroite collaboration dans la gestion de la compagnie J. H. Todd et leur partage des possessions de la A.B.C., tout cela laisse de très fortes craintes qu'une seule grosse compagnie contrôle à elle seule 90 p. 100 de l'industrie du saumon en conserve et peut-être même plus de 80 p. 100 des pêcheries de la Colombie-Britannique.

Nous sommes persuadés qu'il est grand temps de mener une enquête approfondie sur l'importance acquise par les monopoles. L'enquête pourrait être dirigée par la Direction des enquêtes sur les coalitions ou par un comité spécial de la Chambre des Communes. De toute façon, il faudra être bien sûr que les deux géants ne dissimulent quoi que ce soit des intérêts ou du contrôle qu'ils détiennent sur l'industrie de la pêche de la Colombie-Britannique.

Voici quels ont été les effets des fusions et de l'absorption des petites entreprises par les deux monopoles étrangers:

a) L'élimination, à toute fin pratique, de toute concurrence entre les compagnies dans les prix payés aux pêcheurs, particulièrement en ce qui regarde la pêche au

have set minimum prices, which tend to now become maximums except for season end bonuses. These bonuses also now tend to be pre-set by consultation between companies. An ever larger percentage of facilities required by fishermen, such as net racks, floats, net sheds, waterfront property, ice supplies, are now controlled by the two big companies. As the trend continues fishermen can find their right to fish under the practical control of these companies entirely apart from their ownership and financial control of fishing vessels.

(b) Reduce the number of operating fish plants and further consolidate the fish packing operations used to transport fish to the remaining plants. Complete closures announced this year as a result of the mergers are Sunnyside and North Pacific canneries on the Skeena, Klemtu, and the Phoenix plant on the Fraser. The closure of the Great Northern plant by Francis Millerd and Sons, and the shutdown of Millbanke Industries cannery at Shearwater will also reduce employment in 1969.

Our estimate is that approximately 1,000 jobs in shore plants will disappear in 1969. A large percentage of the workers affected are Natives. Villages at Klemtu, Hartley Bay, and in the Skeena and Nass valleys are particularly hard hit.

(c) Strengthen the ability of the companies to fix prices of canned salmon in both the domestic and export markets. Evidence has existed of price fixing prior to the mergers, and the companies were able, several years ago, to obtain government clearance for price setting practises in the export of canned salmon. At one time the companies did speak of competitive marketing practises, but they now only refer to price competition with other types of food domestically, or with other countries in the export field.

Our Annual Convention noted that neither the Provincial nor Federal Governments had taken any action to protect the working people who built up the industry against loss of employment resulting from mergers and centralization. We were instructed to urge the

saumon. Les contrats passés avec le Syndicat ont fixé des prix minimums, mais ces prix, de plus en plus, deviennent des maximums, sauf pour les primes de fin de saison. Et même ces primes sont fixées d'avance par les compagnies. Une proportion toujours croissante de l'équipement des pêcheurs: séchoirs à filets, flotteurs, remises à filets, installations de quai, approvisionnement en glace, est contrôlée par les deux grosses compagnies. Si cette tendance s'accroît, les pêcheurs risquent de voir leurs droits de pêche virtuellement contrôlés par ces compagnies. Il ne leur restera plus que la propriété de leurs bateaux de pêche.

b) La réduction du nombre d'usines de conditionnement du poisson et la concentration des entreprises qui s'occupent du transport du poisson aux usines survivantes. Cette année, les conserveries Sunnyside et North Pacific sur la Skeena, celle de Klemtu et celles de Phoenix sur le Fraser ont dû fermer leurs portes pour de bon par suite des fusions mentionnées plus haut. La fermeture de l'usine de la Great Northern de Francis Millerd and Sons, et celle de la conserverie de la Millbanks Industries à Shearwater diminueront davantage les possibilités d'emploi en 1969.

Nous évaluons à mille environ le nombre d'emplois à terre qui disparaîtront en 1969. Une forte proportion des employés qui seront mis à pied sont des Indiens. Parmi les villages le plus durement atteints, mentionnons ceux de Klemtu, Hartley Bay, et ceux des vallées de la Skeena et de la Nass.

c) Renforcement de la capacité pour les compagnies d'imposer les prix du saumon en boîte tant sur le marché intérieur que celui de l'exportation. On sait qu'il y a eu des cas de fixation de prix même avant les amalgamations. Ainsi les compagnies réussirent, il y a plusieurs années, à obtenir du gouvernement l'autorisation d'établir le prix du saumon en boîte destiné à l'exportation. A l'époque, les compagnies invoquaient des raisons de concurrence, mais de nos jours, elles parlent seulement de la concurrence par rapport à d'autres denrées alimentaires sur le marché intérieur ou de la concurrence des autres pays sur le plan de l'exportation.

A notre congrès annuel, il a été constaté que ni le gouvernement provincial ni le gouvernement fédéral n'avaient pris des mesures pour protéger les ouvriers qui ont contribué au développement de l'industrie de la pêche contre la perte d'emploi résultant des amalga-

Minister of Fisheries, Manpower and Indian Affairs to take steps to require the two big monopolies (i.e. Weston and New England) to either provide alternate employment or the necessary retraining and assistance until alternate employment is feasible. Our Convention urged that if the alternate employment, retraining and assistance programs are not achieved by co-operation of these companies, then they should be nationalized.

We have sought a meeting with the three Ministers, but so far with no results other than the beginnings of a research under the auspices of Manpower, with participation by Indian Affairs. In our opinion a research study is a very minor step, and cannot resolve the problem faced by the displaced workers this year. We do not accept that study as an alternative to more decisive action by the Government.

The basic attitude of the two big fishing companies is that they are not responsible for the workers whose jobs are eliminated by the growth of monopoly and resultant centralization of processing operations. A request for a meeting with the heads of the companies has been shelved by their Association. No doubt, unless forced by government action they can callously ignore the tremendous human problems created by their ruthless drive for profit.

We urge this Committee, in its study of the problems of the B.C. fishing industry to seriously consider those faced by displaced workers. We are convinced the government has a major responsibility to either compel action by these two foreign controlled corporations or to nationalize them.

North Pacific Mid-Ocean Salmon Fishing by Japan:

Ever since 1952, when Japan began to build up a massive fleet of ocean-going gillnet vessels and motherships, our Union has been urging action by our government to prohibit high seas net fishing and longlining for salmon. Our contentions are that:

mations et de la centralisation des entreprises. Nous avons reçu mandat de demander instamment aux ministres des Pêcheries, de la Main-d'œuvre et des Affaires indiennes de prendre les mesures nécessaires, pour obliger les deux grands monopoles (celui de Weston et celui de Nouvelle-Angleterre) à fournir des emplois de remplacement, ou une formation technique et de l'aide financière aux employés mis à pied en attendant la création d'emplois de remplacement. Notre congrès avait également insisté sur la nécessité de nationaliser ces compagnies, au cas où elles refuseraient de collaborer à des programmes de remplacement, de formation technique et d'assistance financière. Nous avons essayé d'obtenir une réunion avec les trois Ministres, mais jusqu'à présent nous n'avons pas eu d'autres résultats concrets qu'un début de travail de recherche dirigé par le ministère de la Main-d'œuvre avec l'aide du ministère des Affaires indiennes. A notre avis, un travail de recherche est bien peu de chose quand il s'agit de résoudre les problèmes soulevés par la mise à pied des employés cette année. Nous n'acceptons pas cette étude comme alternative valable à une action plus concrète de la part du Gouvernement.

L'attitude fondamentale des deux grosses compagnies de pêche est qu'elles ne sont pas responsables du sort des employés, dont l'emploi s'est trouvé éliminé par suite de l'expansion des monopoles et de la concentration des opérations de transformation qui en est résulté. Les compagnies ont enterré et remis à plus tard notre demande de discuter avec leurs directeurs. Il est certain qu'à moins d'y être forcées par le Gouvernement, elles pourront continuer à ignorer impitoyablement les problèmes humains formidables qu'a provoqués leur recherche sans merci du profit.

Nous demandons instamment au Comité qu'il considère sérieusement, dans son enquête sur les problèmes des pêcheries de la Colombie-Britannique, la situation précaire des employés mis à pied. Nous croyons que le Gouvernement a la responsabilité de forcer ces deux compagnies sous contrôle étranger à prendre les mesures nécessaires, ou alors de les nationaliser.

Pêche du saumon en haute mer par le Japon dans le Pacifique nord

Dès 1952, date à laquelle le Japon commença à monter une flotte considérable de bateaux-usines et de bateaux de pêche océaniques, notre syndicat n'a pas cessé de presser le Gouvernement pour qu'il obtienne l'interdiction de la pêche au filet et à la palangre pour le saumon. Nos arguments à cet effet sont que:

(1) A mid-ocean salmon fishery is contrary to sound conservation principles because selective fishing of strong runs and conservation of weaker runs is virtually impossible on the high seas where salmon are intermingled:

(2) Immature salmon are harvested in large numbers on the high seas. There is also some evidence of a high rate of loss through fish dropping out of gillnets on the high seas.

(3) Maintenance of salmon runs require expensive and elaborate conservation and rehabilitation measures by the nations which own the spawning rivers and streams. This includes restrictions on fishermen, curtailment of alternate uses of waters for electrical power production and irrigation; plus the construction of fish ways, artificial spawning channels and hatcheries. The prior right to utilization of the salmon resources therefore belong to the nations in whose streams the salmon are spawned.

Japan's salmon catch in 1967 totalled 331,456,000 lbs, compared to Canada's 138,730,000 lbs. and the United States catch of 217,136,000 lbs. Thus, despite the fact that Japan has about 1 per cent of the spawning streams, she harvests a major portion of the salmon resources of the North Pacific. We do not have access to recent statistics on Soviet salmon catches. The U.S.S.R. has major spawning streams in Siberia, and harvests her salmon close inshore.

As matters now stand Japan is the only nation which engages in a mid-ocean commercial salmon harvest utilizing motherships and a fleet of catcher vessels. However, her continued exploitation of other nations' salmon stocks will inevitably lead to similar predation by fleets of other nations.

It has been argued that Canada's salmon fisheries have not been heavily affected or even appreciably affected by Japanese fisheries. We do not agree with that thesis. The drastic decline of Canadian chum salmon runs coincided too closely with the phenomenal increase in Japanese catches in the middle and late fifties. There has never been any adequate explanation of the drastic Canadian decline, which almost eliminated the fall chum fishery for over a decade.

1) La pêche du saumon en haute mer est contraire à tous les principes de conservation, du fait qu'il est virtuellement impossible d'exercer un choix entre les remontes fortes et faibles de saumon en pleine mer, étant donné que toutes les catégories de saumon s'y trouvent mêlées.

2) La pêche en haute mer capture de grandes quantités de saumons encore trop jeunes. Il semble aussi qu'un grand nombre de poissons périssent après s'être échappés des filets.

3) L'entretien des remontes de saumon exige des mesures de conservation et de reconstitution coûteuses et compliquées de la part des nations qui détiennent les cours d'eau de frai. Parmi ces mesures, mentionnons les restrictions pour la pêche, les restrictions sur les autres emplois de l'eau, soit pour la production hydro-électrique ou l'irrigation. Il y a aussi la construction d'échelles à poissons, de chenaux artificiels pour le frai et d'alvinières. Le premier droit d'exploitation des pêches de saumon revient donc d'abord aux nations dans les cours d'eau desquelles le saumon fraie et se reproduit.

En 1967, la prise totale de saumon par le Japon s'est chiffrée par 331,456,000 livres, par comparaison à 138,730,000 livres pour le Canada et 217,136,000 pour les États-Unis. Ainsi, bien que le Japon ne possède à peine que 1 p. 100 des cours d'eau de frai, il récolte néanmoins la plus forte portion des ressources en saumon du Pacifique nord. Nous ne sommes pas au courant des chiffres récents relatifs aux prises de saumon par les pêcheurs soviétiques. L'U.R.S.S. a d'importants cours d'eau de frai en Sibérie et elle récolte son saumon à proximité de ses côtes.

A l'heure actuelle, le Japon est la seule nation qui s'adonne à la pêche commerciale du saumon en haute mer à l'aide de bateaux-usines et de flotilles de bateaux de pêche. Toutefois, il est inévitable que si elle poursuit l'exploitation des ressources de saumon des autres nations, son exemple finira par être suivi par les flottes d'autres pays.

On a prétendu que les pêches japonaises n'avaient pas affecté gravement ni même sensiblement les ressources de saumon du Canada. Nous nous inscrivons en faux sur cette prétention. En effet, la diminution brutale des bancs de saumon-chien au Canada a coïncidé de trop près avec la phénoménale expansion des prises japonaises dans le milieu et la fin des années cinquante. On n'a jamais pu expliquer de façon satisfaisante cette baisse abrupte qui a abouti à l'élimination virtuelle de la pêche d'automne du saumon-chien pendant plus de dix ans.

Whether we were right or wrong regarding Japanese interception of Canadian salmon, the very existence of such a fishery poses a threat to the future of our salmon resource. We believe Canada should press for international regulations which will effectively prohibit high seas exploitation of salmon. This should be pursued at the Law of the Sea Conferences, at the United Nations, and in direct talks with Japan and the other fishing nations in the North Pacific.

American Interception of Canadian Salmon:

In 1957 Canada and the United States agreed to prohibit high seas salmon net fishing by their own nationals. Each country agreed to draw "surf lines" along its own coast beyond which its salmon net fishing fleet would not operate. The "surf line" along the B.C. coast, as well as along the Washington, Oregon and California shoreline, was drawn in, as its name implies, right on the beach. However, Alaska, which did not present definite maps at the Seattle Conference in 1957, later adopted a surf line which was 3 miles outside a headland to headland baseline.

This offshore line has permitted heavy exploitation of Canadian salmon bound for the Nass and Skeena Rivers, by American fishermen, particularly off Noyes Island. Proof of this interception was published in a joint U.S.-Canadian committee report in 1965, based upon a tagging program conducted by the Americans in 1957 and 1958. In 1957 alone the Americans caught almost 2,000,000 Canadian pink salmon and 159,500 Canadian sockeye.

Negotiations between Canada and the United States on this issue occurred in 1966. The American representatives, unable to deny the fact that they are catching Canadian salmon, based their case on a claim they had an historic right to continue the practise.

When negotiations broke down Canada reserved its right to extend our fisheries seaward in order to achieve an equitable solution of the dispute. Neither country is bound by the 1957 surf line agreement, due to the break-down of talks.

Our Union recommended decisive steps to mount a Canadian net fishery on salmon bound for the Alaskan fishery. We suggested it be pursued in a corridor in Dixon

Sans vouloir juger le bien-fondé de nos craintes sur l'interception du saumon canadien par les Japonais, il n'en reste pas moins que la présence même des flottes japonaises constitue une grave menace pour l'avenir de nos ressources de saumon. Nous sommes persuadés que le Canada doit réclamer l'institution de règlements internationaux interdisant, par des mesures concrètes, la pêche du saumon en haute mer. Il pourrait adresser ces demandes aux Conférences sur les lois de la mer, aux Nations Unies, ou par des négociations directes avec le Japon et les autres nations qui pêchent dans le Pacifique nord.

Interception du saumon canadien par les Américains

En 1957, le Canada et les États-Unis signèrent un accord interdisant la pêche du saumon au filet en haute mer par leurs ressortissants. Chaque pays convint de tracer le long de son littoral des «zones de déferlement» au large desquelles la pêche au filet maillant serait interdite. Comme le terme le suggère, la zone de déferlement le long des côtes de la Colombie-Britannique, du Washington, de l'Orégon et de la Californie fut tracée sur la plage même. Toutefois, l'Alaska qui n'avait pas présenté de cartes définitives à la conférence de Seattle en 1957, adopta par la suite une zone de déferlement s'étendant à 3 milles au large des lignes de base.

Grâce à cette ligne tracée en haute mer, les pêcheurs américains peuvent s'adonner à une exploitation intensive du saumon canadien se dirigeant vers les rivières Nass et Skeena, surtout au large de l'île Noyes. Les preuves de cette interception furent publiées dans un rapport mixte canado-américain en 1965 basé sur un programme de baguage effectué par les Américains en 1957 et 1958. Rien qu'en 1957, les Américains avaient pêché près de deux millions de saumons roses canadiens et 159,000 saumons sockeye canadiens.

Des négociations à ce sujet eurent lieu en 1966 entre les États-Unis et le Canada. Incapables de nier le fait qu'ils capturaient du saumon canadien, les délégués américains prétendirent qu'ils avaient un droit historique de poursuivre leurs activités.

À la rupture des négociations, le Canada se réserva le droit d'étendre nos pêcheries plus au large de manière à régler le différend sur une base plus équitable. Aucun des deux pays n'est lié par l'accord de 1957 sur les zones de déferlement, par suite de la rupture des négociations.

Notre Syndicat préconisa des mesures concrètes pour l'établissement de pêcheries canadiennes pour le saumon se rendant aux pêcheries de l'Alaska. Nos activités se

Entrance, south of the international boundary, and in offshore waters from Cape Muzon to Cape Spencer.

The Canadian Government refused such action, presumably because of pressures brought to bear by our External Affairs Department. A very limited experimental fishery was conducted in Dixon Entrance in 1966 to obtain information on the potential interception of Alaskan-bound salmon. Pressure from Washington kept the Canadian research boats three miles south of the boundary laid down by the Alaska Tribunal. Canada's position was not strong enough to even enforce our border, let alone bring the Americans back to the bargaining table in a reasonable mood.

Three salmon seasons have gone by since the negotiations collapsed. Canada's failure to back up the statement of our negotiating team leaves the Americans in control of the situation. They are still able to intercept Canadian salmon with an offshore fishery while our fleet remains bottled up with a surf line.

During the same negotiations in 1966 the United States also proposed changes in the Fraser River Pink and Sockeye Salmon Treaty. The effect of these adjustments would be to increase the catches of Fraser River pink salmon by the United States and also to remove a portion of the Canadian salmon net fishing area in Juan De Fuca Straits, to the detriment of the Canadian fishermen. Canada's reply indicated we were not satisfied with the present sharing of Fraser River salmon. Since it is a Canadian river the Canadian share of salmon bound for it should be much higher than that of the Americans.

Such statements are admirable, but unless there is some action to back them up they become rather hollow. We therefore strongly recommend Canadian action to develop offshore salmon net fisheries, beyond our present surf line, to the extent necessary to achieve more equitable terms with the Americans. Our goal should be to hold to a very minimum, any harvesting of Canadian salmon by the American fishermen. Likewise, our long term position should include a willingness to minimize any interception, by Canadians, of salmon bound for American rivers.

seraient déroulées dans un corridor à l'Entrée Dixon, au sud de la frontière et en haute mer entre le cap Muzon et le cap Spencer.

Le Gouvernement canadien refusa nos propositions, vraisemblablement à la suite de pressions exercées par notre ministère des Affaires extérieures. Une pêcherie expérimentale, très limitée, fut organisée à l'Entrée Dixon en 1966 pour recueillir des renseignements sur l'interception du saumon en route pour l'Alaska. Par suite de pressions exercées par Washington, nos bateaux durent rester à trois milles au sud de la ligne fixée par la Cour de l'Alaska. La position du Canada n'était même pas assez forte pour faire respecter nos frontières, encore moins pour ramener les Américains à des dispositions raisonnables pour négocier.

Depuis la rupture des négociations, trois campagnes de pêche au saumon se sont écoulées. Le fait que le Canada n'a pas voulu appuyer les revendications de notre équipe de négociateurs laisse les Américains maîtres de la situation. Ils peuvent continuer à intercepter le saumon canadien en haute mer pendant que notre flotte de pêche reste emprisonnée derrière la zone de déferlement.

Au cours de ces mêmes négociations de 1966, les États-Unis proposèrent des modifications au Traité sur le saumon rose et le sockeye du Fraser. Les amendements proposés auraient eu pour effet d'augmenter les prises de saumon rose du Fraser par les Américains, tout en enlevant au Canada une partie de la zone de pêche au saumon dans le détroit de Juan de Fuca et causant par là un dommage considérable aux pêcheurs canadiens. La réponse du Canada laissa savoir que nous n'étions pas satisfaits du présent partage de la pêche au saumon sur le Fraser. Étant donné que c'est un fleuve canadien, la part canadienne du saumon en route pour ses eaux devrait être beaucoup plus forte que celle des Américains.

Toutes ces déclarations sont merveilleuses, mais à moins d'être appuyées par des mesures concrètes, elles sonnent pas mal creux. Nous demandons donc instamment au Gouvernement canadien de prendre les mesures nécessaires pour le développement de nos pêches du saumon en haute mer, au large de la zone de déferlement, de façon à obtenir des conditions de pêche plus équitables par rapport aux Américains. Nous devons viser à réduire au minimum la capture du saumon canadien par les pêcheurs américains. De notre côté, notre attitude constante devra être de minimiser l'interception par les Canadiens du saumon en route pour les rivières américaines.

An All-Inclusive North Pacific Fisheries Treaty:

The existing Tri-Partite Fisheries Treaty between Japan, Canada and the U.S.A. has been in effect for over 15 years. Before it was ratified by Canada we pointed to its major weaknesses, namely, that it excludes one of the major fishing nations. As each year goes by the weakness becomes more apparent.

The International North Pacific Fisheries Commission, established under this Treaty is charged with studying the need for conservation measures and recommending measures to ensure maximum sustained productivity of the fishery resources. This task becomes almost impossible without participation of the U.S.S.R. in required research.

For example, it is estimated that in 1968 the Bering Sea catch by Japanese mothership fleet and independent trawlers totalled 1,644,857,827 lbs., an increase of 232,063,962 lbs. over 1967. The Japanese catch in the north-eastern Pacific Ocean totalled 236,182,100 lbs. in 1967, for an increase of 49,554,800 lbs. These are tremendous catches, with huge increases occurring annually. The obvious question arises as to whether the resources can continue to stand the pressure.

It is also reported by the Commission that large fleets of Soviet fishing vessels are operating in the Bering Sea and in the Northeastern Pacific. But, when it comes to statistical information on Soviet catches, we find the research committees stating their regrets over lack of such data and urging the Commission to continue requests for records of the Soviet trawl fishery. Conservation regulations are virtually non-existent, which is not surprising in the absence of adequate research.

Canadian trawlers landed only 34,000,000 lbs. in 1968, which is obviously only a tiny drop in the bucket, compared to Japanese and Soviet operations. Nevertheless, the future development of the Canadian trawl fleet depends on maintenance of the entire North Pacific resource. This is one of the reasons why we continue to urge action by the Government of Canada to seek an all-inclusive fisheries treaty in the North Pacific Ocean.

Nécessité d'un traité global de la pêche dans le Pacifique nord

Le Traité tripartite actuel de la pêche signé par le Japon, le Canada et les États-Unis est en vigueur depuis plus de 15 ans. Avant de le ratifier, le Canada avait signalé ses faiblesses principales et notamment le fait qu'il ignorait une des grandes nations maritimes du Pacifique. Cette faiblesse se fait sentir de plus en plus chaque année.

La Commission internationale des pêches du Pacifique nord, instituée aux termes du traité, a pour charge d'examiner les besoins en matière de mesures de conservation et de recommander les mesures qui assureront le maintien à son maximum de la productivité des ressources halieutiques. L'exercice de cette fonction est pratiquement impossible sans la participation de l'U.R.S.S. aux recherches.

Ainsi, on estime qu'en 1968 les prises de pêche réalisées par les Japonais, (flotte de bateaux-usines ou chalutiers indépendants) dans la mer de Bering se sont chiffrées par 1,644,857,827 livres, soit une augmentation de 232,063,962 livres par rapport à 1967. Les prises japonaises dans le nord-est de l'océan Pacifique étaient de 236,182,100 livres en 1967, soit une hausse de 49,554,800 livres. Ce sont là des prises fantastiques, qui en plus enregistrent des augmentations annuelles énormes. On peut tout naturellement se demander jusqu'à quand on pourra continuer une exploitation à un tel rythme.

La commission signale en outre que des flotilles considérables de bateaux de pêche soviétiques opèrent dans la mer de Bering et le nord-est du Pacifique. Cependant, quand on veut savoir des chiffres sur les prises soviétiques, les comités de recherches doivent se contenter de déplorer l'absence de ces renseignements, et de réitérer leurs représentations auprès de la Commission pour qu'elle poursuive ses demandes de renseignements sur les activités des chalutiers soviétiques. Les règlements portant sur la conservation sont pratiquement inexistantes, ce qui n'a rien de surprenant en l'absence de recherches satisfaisantes.

En 1968, la capture des chalutiers canadiens n'a été que de 34 millions de livres, ce qui n'est qu'une petite goutte d'eau si on la compare aux prises japonaises et soviétiques. Néanmoins, l'avenir de la flotte canadienne de pêche au chalut repose sur la conservation des ressources de l'ensemble du Pacifique nord. C'est une des raisons pour lesquelles nous continuons de demander au Gouvernement canadien d'obtenir le règlement d'un traité global de la pêche dans le Pacifique nord.

Another important reason is the need to conserve salmon, through prohibition of a high seas fishery. We believe this will not occur in the absence of an all-inclusive fishery treaty.

The Declining Halibut Resource:

Perhaps the clearest example of the effects of outside interference on attempts to conserve the resource is shown in the decline of Pacific halibut. By joint research and regulation, under a bilateral treaty, Canada and the United States gradually increased the combined catch from a low of 44,000,000 lbs. in 1931 to 75,000,000 lbs. in 1962.

In 1963 the Japanese were permitted to enter the Eastern Bering Sea halibut fisheries, over the vociferous objections of Canadian and American fishermen. Within 5 years the combined Canadian and American catches in this area had dropped from 8,000,000 lbs. to 1,300,000 lbs. The Japanese catches in the Eastern Bering Sea, starting with 4,600,000 lbs. in 1963, dropped to almost zero within 2 years.

In the Western Bering Sea Japanese vessels caught 2,000,000 lbs. of halibut in 1958 and by 1963 had increased their catches to 17,000,000 lbs. Their catches have since declined in that area to about 2,000,000 lbs. Incidentally, the Japanese have resisted every effort by Canada and the United States to adopt joint regulations for the Western Bering Sea.

Halibut catches in the northeastern Pacific have also declined by 20,000,000 lbs. since 1962. The combined Canadian and American catch from all areas was only 48,000,000 lbs. in 1968, a drop of 27,000,000 lbs. from the peak year of 1962. The U.S.-Canadian Commission is recommending a further reduction of catch limits of 3,000,000 lbs. in 1969 because the decline has not yet been arrested.

Conservation efforts by two nations, over a period of more than thirty years, have been nullified in five years by the expansion of trawling by the other two nations. The Halibut Commission has drawn the attention of our government to the effect of trawling on a large population of immature halibut in the Bering Sea. Some minor progress has been made in getting the Japanese to refrain from trawling in some areas, to release halibut in others and to place a minimum size limit in others. However, there is little doubt in the minds of Canadian halibut fishermen that Japanese fleets are still catching halibut with

Une autre raison importante est la nécessité de préserver le saumon par l'interdiction de la pêche en haute mer, mesure qui ne pourra se réaliser sans un traité global de la pêche.

Baisse des ressources de flétan

Un des exemples les plus frappants de l'influence de tierces parties sur les tentatives de préservation des ressources de la mer est celui du déclin du flétan du Pacifique. Grâce à leurs recherches et leurs règlements concertés par traité bilatéral, le Canada et les États-Unis avaient réussi à porter graduellement leurs prises combinées d'un minimum de 44 millions de livres en 1931 à 75 millions en 1962.

En 1963, malgré les protestations véhémentes des pêcheurs canadiens et américains, le Japon obtint l'autorisation de pêcher le flétan dans la mer de Bering orientale. En moins de cinq ans, les prises réunies des Canadiens et des Américains dans la région étaient tombées de 8 millions de livres à 1,300,000 de livres. Les prises japonaises, parties de 4,600,000 livres en 1963, tombaient à zéro ou presque en l'espace de deux ans.

Dans la mer de Bering occidentale, les Japonais pêchaient 2 millions de livres de flétan en 1958. En 1963, ils avaient porté leur prise à 17 millions de livres. Depuis, leur capture dans cette région est tombée à près de 2 millions de livres. Détail à signaler, les Japonais ont toujours refusé d'adopter, conjointement avec le Canada et les États-Unis, des règlements sur la pêche dans la mer de Bering occidentale.

Dans le nord-est du Pacifique, les prises de flétan ont baissé de 20 millions de livres depuis 1962. La prise combinée des Canadiens et des Américains dans toutes les régions n'était que de 48 millions de livres en 1968, soit une chute de 27 millions de livres par rapport à l'année record de 1962. La Commission mixte canado-américaine préconise une réduction de 3 millions de livres dans les prises autorisées en 1969, vu que la baisse n'a pas encore été enrayée.

Les initiatives et les mesures de préservation prises par deux nations au cours de plus de 30 ans ont été réduites à néant en l'espace de cinq ans par l'expansion des flottes de pêche des deux autres nations. La Commission du flétan a signalé à notre Gouvernement les conséquences de la pêche de vastes populations de flétan encore trop jeune dans la mer de Bering. On a réussi à persuader les Japonais à restreindre la pêche au chalut dans certaines régions, à imposer une dimension limite des poissons dans d'autres régions, ou encore de relâcher du flétan. En dépit de ces légers progrès, les pêcheurs de flétan

trawls, a practise which has long been prohibited by Canada and the United States. The Soviet trawl fleet must also be catching halibut in several areas.

Halibut is incidental to the major efforts of the Japanese and Soviet fleets. Nevertheless, unless their operations are brought under a joint conservation program they not only interfere with the scientific management of the resource but threaten its very existence. Again we stress the need for an all-inclusive North Pacific Fisheries Treaty, as a major and vital step towards the adoption of international regulations which will preserve the halibut resource.

The Herring Disaster:

Herring fishing, for reduction purposes, was closed on October 29, 1967, re-opened between January 14th and February 11th, 1968, and has remained closed for conservation purposes to date. The Department of Fisheries indicated it is not likely there will be a fishery in 1968-70, nor is there any assurance of a fishery in 1970-71. No relief can be foreseen before 1970-71 or possibly later in event interspecific competition and predation interfere with recovery.

How did this fishery, which employed well over 1,000 fishermen and allied workers, and produced over 200,000 tons of fish per year, get so badly depleted? Was it under scientific management and regulation? Was it overfished by Canadians or by foreign fleets? In our opinion it was overfished, by Canadian fleets, with a management policy which was not scientific, as it ignored several obvious factors.

Our Annual Convention, in March of 1957 adopted a series of resolutions, which were presented to the Minister of Fisheries the following September. We urged: (1) Prohibition of pit lamping for herring; (2) Quotas to be established to limit the amount of herring caught in all areas, including the west coast of Vancouver Island and the Queen Charlottes; (3) No extension of quotas during the season; (4) No quota changes from year to year unless fully discussed with all sections of the industry; (5) Setting up of an advisory board on herring management with representation from the fishermen.

canadiens savent parfaitement bien que les Japonais continuent de prendre le flétan au chalut, pratique depuis longtemps interdite par le Canada et les États-Unis. Il semble bien aussi que les chalutiers soviétiques pêchent le flétan dans plusieurs régions de la mer de Bering.

Le flétan n'occupe qu'une importance accessoire dans l'effort de pêche des Japonais et des Soviétiques. Néanmoins, tant que leurs activités ne seront pas soumises à un programme conjoint de conservation, non seulement elles nuisent à l'aménagement scientifique des ressources mais elles menacent leur existence même. Encore une fois, nous insistons sur la nécessité d'un traité global des pêcheries dans le Pacifique nord, car c'est une étape essentielle vers l'adoption d'une réglementation internationale pour la conservation des ressources de flétan.

Le désastre du hareng

Afin de limiter les prises, la pêche au hareng fut fermée le 20 octobre 1967, pour rouvrir temporairement du 14 janvier au 11 février 1968. Depuis, pour des raisons de préservation, elle est restée fermée. Le ministère des Pêcheries fait savoir qu'il n'y aura vraisemblablement pas de campagne de pêche en 1969-1970, et peut-être même pas en 1970-1971. La situation ne pourra guère s'améliorer avant 1970-1971 ou même plus tard, si l'on tient compte des déprédations résultant de la pêche des autres espèces de haute mer.

Comment se fait-il que cette pêche, qui fournissait plus de 1,000 emplois et produisait plus de 200 mille tonnes de poisson par année, en soit arrivée à l'état actuel d'épuisement? Est-ce à cause d'aménagement et de règlements scientifiques, ou bien plutôt à cause d'exploitation excessive par les flottes canadiennes ou étrangères? A notre avis, la pêche du hareng a été victime à la fois d'une exploitation excessive par le Canada et d'un aménagement qui était loin d'être scientifique et qui ignorait plusieurs éléments pourtant évidents.

En mars 1957, à notre congrès annuel, nous avions adopté une série de résolutions qui furent présentées en septembre au ministre des Pêcheries. Nous demandions notamment: 1) L'interdiction de la pêche à la lumière pour le hareng; 2) l'imposition de contingents sur les prises de harengs dans toutes les régions, y compris la côte occidentale de l'île de Vancouver et les Îles de la Reine-Charlotte; 3) Aucune extension des contingents au cours d'une même saison; 4) Aucun changement dans les contingents d'une année à l'autre sans consultation avec tous les secteurs de l'industrie; 5) mise en place d'un office consultatif pour l'aménagement du hareng et comprenant des délégués des pêcheurs.

Subsequently, an industry advisory committee was established. From the outset the biological and technical staff, headed by Dr. A. W. H. Needler, who was at that time Director of the Nanaimo Biological Station, set out to convince the committee that quotas were unnecessary; that the previously noticed declines in abundance were due to natural factors which had nothing to do with the commercial fishery, and that if anything, they would favour unrestricted fishing. The fishermen remained unconvinced by these theories and our Union continued to press for stricter conservation measures.

The Department ignored the views of the fishermen. Herring quotas were either removed or adjusted upwards. Catches rose to 265,000 tons in 1962-63 and 262,000 tons in 1963-64, followed by a slight decline to 240,000 tons in 1964-65. A further drop to 180,000 tons occurred in 1965-66. Our Annual Convention in 1966 adopted a series of quite drastic conservation proposals put forward by the herring fishermen in March of that year. These were presented to the Herring Management Committee in April, at which time due to the reduced catches, some of the fishermen's proposals were acted upon.

Unfortunately it was a case of too little and too late. The catch dropped to 133,000 tons in 1966-67 and, as indicated already, the fishery had to be closed for most of the 1967-68 season, with only 18,000 tons caught for the time fishing was allowed. Our 1968 Convention condemned the policies of the Department which had virtually destroyed a valuable resource and at the same time urged a complete closure of all herring fishing for reduction purposes until rehabilitation is assured. Further, that when herring fishing is resumed it be regulated closely to ensure sustained yields at high levels in future.

Our proposals, as revised in 1966 go beyond prohibition of lights and strict use of quotas. We favour regulations to prevent the taking of immature herring, including confiscation of catches; enforcement of regulation on length of nets and on minimum mesh sizes; temporary closures of areas as required; constant patrols to enforce regulations and to determine the need for closures with properly trained personnel aboard the patrol vessels. Close liaison between the fishermen and the

Par la suite, un comité consultatif de l'industrie de la pêche du hareng fut institué. Dès le début, le personnel chargé des aspects biologiques et techniques, et qui était dirigé par M. A. W. H. Needler, à l'époque directeur de la Station de recherches biologiques de Nanaimo, fit tout pour convaincre le comité que le contingentement n'était pas nécessaire, que la baisse constatée dans les ressources de hareng était due à des phénomènes naturels indépendants de la pêche commerciale, et qu'ils étaient en faveur d'une exploitation sans aucune restriction. Les pêcheurs demeurèrent insensibles à de telles théories et notre Syndicat continua de demander des mesures de conservation plus strictes.

Le Ministère n'a pas tenu compte des arguments des pêcheurs. Les contingents sur la pêche de hareng furent ou bien supprimés ou élargis. Les prises s'élevèrent à 265,000 tonnes en 1962-1963 et à 262,000 en 1963-1964. Après cela vint une légère baisse en 1964-1965, (240,000) et une nouvelle chute à 180,000 tonnes en 1965-1966. En 1966, notre congrès annuel adopta une série de propositions très sévères relatives à la conservation, propositions soumises par les pêcheurs de hareng en mars de la même année. En avril, elles furent présentées au Comité pour l'aménagement du hareng, et vu la baisse des prises à cette époque, des mesures concrètes furent prises pour certaines des propositions.

Malheureusement, c'était à la fois trop peu et trop tard. Les prises tombaient à 133,000 tonnes en 1966-1967, et comme on l'a dit plus haut la pêche a dû être fermée durant la majeure partie de la campagne 1967-1968, la prise durant la période ouverte se limitant à 18,000 tonnes. A notre Congrès de 1968, nous avons condamné le Ministère, qui par ses politiques a laissé détruire des ressources précieuses. En même temps nous avons demandé instamment la fermeture complète de toutes les pêches de hareng jusqu'à ce que les stocks soient reformés. Enfin, nous avons demandé qu'à sa reprise la pêche soit réglementée strictement de façon à maintenir un niveau élevé de productivité dans les années à venir.

Nos propositions vont plus loin que celles de 1966 qui se limitaient à l'interdiction de la pêche à la lumière et à l'application stricte des contingents. Nous sommes en faveur de règlements interdisant la capture de hareng trop jeune, et même au besoin de recourir à la confiscation des prises; nous préconisons l'application de règlements sur la longueur des filets et la dimension minimum des mailles, la fermeture temporaire de certaines régions, des patrouilles constantes par du per-

Department is also needed to prevent further disasters of this kind.

Our 1969 Convention has also urged the Government to seek alternate markets for herring. As and when our fishery revives, we would prefer to see the entire production used for human consumption, rather than for meal and oil. The economic benefit to the industry and to the whole economy would be multiplied several times if this could be achieved.

Last but not least, we recommend that caution be used on Canada's East Coast to prevent a similar disaster in the expanding herring fishery.

Rehabilitation and Expansion of the Salmon Resource

Salmon has always been our major fishery. With the decline in halibut and herring fisheries it is more vital to our industry than ever to ensure full protection of this resource.

1968 was a relatively good year, with a production of 182,000,000 lbs. Predictions for 1969, however, indicate a very poor season, especially in the northern and central areas. Three important areas, namely 6, 7 and 8, will be closed for a full month in mid-season for conservation of pink salmon. In most other areas fishing weeks will be very short. The total catch may be only half of last year's.

The following comparisons of 5 year periods give some indication of trends since 1951, which was the 1st year the Department began its new system of recording fish landings.

	Total lbs.	Annual Average lbs.
1951-55	860,080,000	172,016,000
1956-60	625,140,000	125,028,000
1961-65	640,880,000	128,176,000
*1966-69	*582,000,000	145,500,000

*This four year period includes an estimate of 91,000,000 lbs. for 1969.

In 1955, in presenting our brief to the Royal Commission on Canada's Economic Prospects we stated that within a period of 12 to 20

sonnel qualifié pour faire appliquer les règlements et décider de la nécessité de la fermeture de la pêche. Il faut également établir des relations étroites aussi entre les pêcheurs et le Ministère pour éviter d'autres désastres de cette nature.

Notre Congrès de 1969 a exhorté aussi le gouvernement à rechercher d'autres marchés pour le hareng. A mesure que cette pêche se rétablira, nous préférierions que la production entière serve à l'alimentation humaine, plutôt qu'à la préparation de farine et d'huile. L'industrie de la pêche et l'économie en général en retireraient plusieurs fois plus d'avantages, si cette utilisation était possible.

En dernier lieu, mais non le moindre, nous recommandons d'exercer une grande prudence sur la côte de l'est du Canada pour prévenir à l'égard de la pêche du hareng en pleine période d'expansion un désastre analogue.

Remise en valeur et expansion des ressources en saumon

Le saumon est de tout temps notre principale pêche. Avec la diminution de la pêche du flétan et du hareng, la protection de nos ressources fiscales prend une importance plus vitale que jamais.

La pêche a été relativement bonne en 1968, avec la prise de 182 millions de livres. Néanmoins, les prévisions pour 1969 sont très mauvaises, principalement dans les pêcheries du nord et du centre. Trois régions importantes, les régions 6, 7 et 8, seront fermées tout un mois de temps à la mi-été pour conserver le saumon rose. Dans la plupart des autres régions, les semaines ouvertes à la pêche seront très courtes. La prise globale pourrait n'être que la moitié de celle de l'an dernier.

Le tableau comparatif des périodes quinquennales indique sommairement la tendance générale depuis 1951, la première année de la mise en application par le Ministère de la nouvelle méthode statistique relative aux prises.

Période	Prise totale livres	Moyenne annuelle livres
1951-1955	860,080,000	172,016,000
1956-1960	625,140,000	125,028,000
1961-1965	640,880,000	128,176,000
*1966-1969	*582,000,000	145,500,000

*Cette période quadriennale comprend une prise estimative de 91 millions de livres en 1969.

En 1955, notre mémoire présenté à la Commission royale d'enquête sur les prévisions économiques du Canada affirmait qu'en l'es-

years, salmon production could be doubled or even tripled. We urged the allocation of more money for research, for equipment and for salmon development projects to achieve this goal. At the same hearing the Fisheries Association expressed confidence that the catch could be doubled if ample funds were made available.

Instead of progressing toward that goal, the following 10 years witnessed a rather drastic decline. Although some improvement has been noted during the past three years, it is obvious our average annual salmon production remains well below the level of the early fifties.

We have mentioned external factors which may affect the Canadian harvest, such as interception of Canadian salmon by foreign fishermen. However, we believe the environmental changes have had much to do with the decline, and the slow pace of rehabilitation. These include: (1) Deforestation of watersheds, gravel removal from river beds for road construction, log driving and other problems caused by the forest industry. (2) Pollution of rivers by pulp effluent, forestry debris, mining industry discharges, industrial and chemical waste, domestic sewage and pesticides. (3) Diversion of water and/or construction of dams for hydro-electric power, irrigation, flood control and waste disposal. (4) Landslides, both man-made and natural, urban development, agricultural development, over a long term period.

The Resource Development Branch of the Department of Fisheries has been trying to protect the salmon resource from these harmful developments. At the same time it has undertaken several projects designed to improve and expand the resource, such as the Babine Lake-Fulton River-Pinkut Creek project, the Big Qualicum project and the Meziadin fishway. These, together with a number of other stream maintenance and improvement projects, are an effort to offset the decline and begin the process of rehabilitation.

In our opinion the biologists, engineers and administrators now have sufficient knowledge of the potential values of artificially controlled spawning channels, fishways and hatchery systems to make much greater progress. More funds are the greatest problem. Eight years ago we urged the Government to institute a

pace of douze à vingt ans, il était possible de doubler, voire tripler la production de saumon. Nous insistions sur l'augmentation de l'affectation de fonds à la recherche, à l'équipement et aux travaux d'aménagement de la pêche du saumon pour atteindre cet objectif. A la même audience, l'Association des pêcheurs exprimait sa confiance que la prise pourrait être doublée si les fonds nécessaires étaient affectés à cette industrie.

Malheureusement, au lieu de tendre vers cet objectif, la pêche a régressé lamentablement au cours des dix années qui ont suivi. Malgré un certain relèvement constaté ces trois dernières années, il est évident que la prise annuelle de saumon est nettement inférieure à celle des premières années 1950.

Nous avons signalé certains facteurs extérieurs qui peuvent restreindre la prise chez nous, comme l'interception du saumon canadien par les pêcheurs étrangers. Néanmoins nous soutenons que les changements d'ordre écologique ont eu beaucoup à faire avec la baisse des réserves et la lenteur de leur rétablissement. Nous incrimons: 1) le déboisement des bassins hydrographiques, l'enlèvement du gravier du lit des rivières pour la construction de routes, le flottage du bois et d'autres pratiques en usage dans l'industrie forestière; 2) la pollution des rivières par les déchets de papeterie, les débris forestiers, les déblais miniers, les rebuts industriels et chimiques, les eaux usées domestiques et les antiparasitaires; 3) le détournement des cours d'eau, la construction de barrages pour fins de génération d'énergie hydroélectrique, d'irrigation, de réglementation des crues et de disposition des ordures; 4) les glissements de terrains provoqués ou naturels, le développement urbain, l'expansion de l'agriculture, sur une longue période.

La Direction de l'aménagement des ressources piscicoles du ministère des Pêcheries tente de protéger les ressources en saumon contre ces effets nocifs. Il a entrepris simultanément plusieurs travaux conçus pour améliorer et enrichir les ressources, dont ceux du lac Babine—rivière Fulton—ruisseau Pinkut, du Grand Qualicum et de la voie de frai Méziadin. Ces travaux et plusieurs autres destinés à la conservation et à l'amélioration des cours d'eau, tendant à enrayer l'appauvrissement des ressources et à amorcer le processus de la remise en valeur.

A notre avis, les biologistes, les ingénieurs et les administrateurs connaissent maintenant suffisamment les possibilités de la régie artificielle des cours de frai, des voies qu'empruntent le poisson et de la pisciculture pour leur permettre de réaliser beaucoup plus de progrès. La principale difficulté réside dans le

ten year program involving an expenditure of \$10,000,000 per year over and above the normal budget for fisheries development projects. We repeated this recommendation to the Federal-Provincial Fisheries Conference in 1964. We urged that a scientific estimate be made of the finances required, as well as the potential benefits of a major new program designed to restore our salmon resources to the highest levels of its recorded history.

In October of 1966, the Resource Development Branch published a 200 page report entitled "Salmon Development Techniques, Their Present Status, and Their Possible Applications To The British Columbia Salmon Stocks". Although we received two copies, they were marked as "Restricted for Departmental Use Only" and in the accompanying letter we were instructed that no part of the report can be "quoted or reproduced". We find special interest in the appendix to the report which lists hundreds of rivers and streams where a potential increase in annual catches, and the estimated values of the increases are projected. Estimated costs of additional spawning ground requirements are babled along with estimated annual benefits to the fishery.

Unable to quote the document, we can say that although the estimates of costs greatly exceed the \$100,000,000 outlay we suggested, it also bears out our contention that the potential benefits from a larger resource will more than compensate for the expenditure. We strongly urge this Committee to obtain copies of this report, to study it thoroughly, and to recommend appropriate action to realize the full potential of our salmon resource.

We are aware of the various economy measures' under-taken by the present government. Without doubt they will restrict, rather than advance the required salmon development program. We consider it is false economy to pare down the funds needed to overcome past deterioration of the spawning

manque de fonds. Il y a déjà huit ans, nous priions le gouvernement d'instituer un programme de dix ans comportant une dépense de 10 millions de dollars par an, en plus du budget normal affecté aux travaux d'aménagement des pêcheries. Nous y sommes revenus en 1964, lors de la Conférence fédérale-provinciale des pêcheries. Nous avons prié instamment les autorités de procéder à une estimation des fonds nécessaires et des bénéfices éventuels d'un nouveau programme d'envergure destinés à replacer nos ressources en saumon au niveau le plus élevé dont fasse mention la statistique.

En octobre 1966, la Direction de l'aménagement des ressources publiait un rapport de 200 pages intitulé *Salmon Development Techniques, their Present Status, and their Possible Application to the British Columbia Salmon Stocks* (Nouvelles techniques de la pêche du saumon, leur application actuelle, et leur possibilité d'emploi pour la pêche du saumon en Colombie-Britannique). Nous en avons reçu deux exemplaires libellés: *pour usage stricte du Ministère*. La lettre de présentation nous interdisait de citer ni de reproduire aucune partie du rapport. L'annexe du rapport est des plus intéressants. Il énumère des centaines de rivières et de cours avec la projection des possibilités d'augmenter les prises annuelles et l'établissement de la valeur estimative de l'augmentation. Les tableaux présentent le coût estimatif de l'aménagement des lieux de frai nécessaires et les bénéfices estimatifs qu'en tirera l'industrie de la pêche.

Nous ne pouvons citer ce document. Néanmoins, nous pouvons dire ceci: il établit à bien plus que les 100 millions de dollars que nous proposons le coût estimatif des travaux, mais il confirme nos prétentions voulant que les possibilités de bénéfices à tirer de ressources aggrandies compenseront plus que largement les dépenses. Nous priions instamment le Comité de se procurer le rapport, de l'examiner à fond et de recommander que l'on mette en œuvre les mesures nécessaires pour assurer que nos ressources en saumon rendent selon toutes leurs possibilités.

Nous connaissons les diverses mesures d'économie que le gouvernement actuel a prises. Elles généreront sans doute, plutôt que de favoriser le programme nécessaire à l'aménagement des ressources en saumon. A notre avis, c'est pratiquer une fausse économie que de rogner le budget nécessaire pour corriger les

grounds as well as to lift them to their full potential by improvements on nature.

With each passing year, the lack of a full scale program of rehabilitation robs our economy of many millions of dollars. The future costs of construction of fish ways, hatcheries and controlled spawning channels are not likely to be lower. The impact of man-made obstructions, pollution and alternate water use is continuing. In short, the problem is not diminishing, and the sooner adequate funds are allocated for its solution the better the results. \$10,000,000 per year for 10 years is not too much to spend. Perhaps we are being too conservative if we are to judge this proposal by the estimates contained in the above mentioned report.

Spending money for rehabilitation is not the only requirement, of course. Decisive action must be taken to eliminate industrial and domestic pollution. In our view, far too much reliance on dilution and dispersal effects of fresh water or on tidal movements of salt water, has been evident in the past few years. The destruction of fish in Northumberland Channel by the Hooker Chemical-Harmac discharge of deadly sodium hypochlorite in March is an example. The Federal Department tend to exonerate the company and blame "poor sea water dilution" for the damage. In our opinion, the discharge of such deadly chemicals into coastal waters must cease.

We can also agree with the recent remarks of the Minister of Fisheries, complimenting MacMillan-Bloedel Ltd. for announcing plans of a \$3,500,000 water pollution abatement program at its Port Alberni pulp mill. He said there "must be more of these, especially in confined marine areas".

But we must point out that many organizations have been protesting the pollution of Alberni Inlet for several years. Moreover, most of the pulp mills are on our coast and many of them have no pollution control facilities. The older mills are the worst offenders. We see no valid reason why they should be exempted. Therefore we sincerely hope the Minister will use every means at his disposal to force all pulp mills at tidewater, as well as

torts faits aux frayères et pour les rétablir entièrement dans leur état primitif de rendement, en aidant la nature.

Chaque année de retard dans la mise en pratique d'un programme intégral de remise en valeur, emporte avec elle des millions de dollars en pure perte pour notre économie. Les frais de construction de voies pour le poisson, de centres piscicoles et de régie des chenaux de frai ne seront probablement pas moins onéreux à l'avenir. Les méfaits de l'homme, de la pollution et de l'usage des eaux à des fins artificielles continuent de faire sentir leurs effets. En somme, le problème ne diminue pas de gravité et le plus tôt seront affectés les fonds nécessaires à sa solution, meilleurs seront les résultats. Ce n'est pas trop que d'affecter annuellement 10 millions de dollars durant une période de dix ans. Le montant est peut-être même insuffisant, à en juger par les estimations que contient le rapport susmentionné.

L'affectation de fonds à la remise en valeur n'est sûrement pas le seul besoin. Il faut en plus prendre des mesures énergiques contre la pollution imputable aux déchets industriels et ménagers. A notre avis, on s'en est remis beaucoup trop, en ces dernières années, à l'action de dissolution et de dispersion de l'eau de mer. A preuve, la destruction massive du poisson dans la passe de Northumberland, destruction imputable à la vidange mortelle en mars d'hypochlorite de sodium par la compagnie Hooker Chemical-Harmac. Le gouvernement semble exonorer la compagnie et attribuer le dommage à la médiocre propriété de l'eau de mer comme agent de dissolution. Nous soutenons que doit cesser la vidange de ces mortels produits chimiques dans nos eaux côtières.

Nous sommes d'accord avec le ministre des Pêcheries qui louait la compagnie MacMillan-Bloedel Limitée à l'annonce de son programme de 3.5 millions de dollars pour combattre la pollution de l'eau à sa papeterie de Port-Alberni. Il souhaitait la mise en route de plus de ces programmes, principalement dans les régions maritimes resserrées.

Mais nous devons vous signaler que plusieurs organisations s'élevaient depuis plusieurs années contre la pollution des eaux de l'anse Alberni. Il reste aussi que la plupart de nos papeteries sont situées sur le littoral et que plusieurs d'entre elles n'ont aucune installation de protection contre la pollution de l'eau. A cet égard, les anciennes sont les plus nuisibles. Nous ne voyons aucune raison de faire exception en leur faveur. Nous espérons

in the interior, to install the most advanced equipment for treatment of effluent.

Since our locals in the north will be dealing with the Naas River log drives and our Fraser Locals with pollution of the Fraser, we will not repeat their remarks. We must point out, however, that our entire membership is affected by the damage done to any section of the resource. We are sure our entire organization supports the demands raised in these separate briefs for action to protect our salmon.

Dogfish Subsidy

Our Union, together with other interested fishery groups, has been campaigning for a dogfish control program for at least fifteen years. During this period various programs were announced by the government, some of which failed utterly, while others achieved some results.

In 1956-57 a \$10.00 per ton subsidy was announced, which was immediately taken over by the Companies. The result was that only 220 tons were processed, at an expenditure of \$2,200 out of an allocation of \$300,000.

Later, in the period 1958-1962 various bounties were paid on dogfish livers with the following results:

		Tons.
1958-59	\$ 66,734 in subsidy to catch	2,436
1959-60	\$145,867 in subsidy to catch	7,293
1960-61	\$118,820 in subsidy to catch	4,950
1961-62	\$144,825 in subsidy to catch	6,034

From the foregoing it can be seen that aside from the first couple of years it required an average bounty of \$25.00 per ton to remove dogfish from our coastal waters. Since it was estimated that it would require an annual kill of some 40,000 tons to control the population within reasonable bounds it appeared as though an annual bounty of \$1,000,000 would be required, and the program was terminated.

In early 1966 an experimental program was introduced to produce, process and market dogfish for human consumption in Germany and England. Approximately \$10,800 was spent in handling 160 tons of fish. However, it was estimated that by concentrating on production of dogfish belly-flaps, the subsidy cost

donc que le ministre fera appel à tous les moyens à sa disposition pour contreindire toutes les papeteries de la côte, comme celles sises à l'intérieur des terres, à installer le matériel le plus perfectionné pour le traitement des déchets.

Puisque nos filiales du nord exposeront la question du flottage sur la rivière Naas et que celles de la vallée du Fraser étudieront la pollution de ce fleuve, nous leur laissons la parole. Signalons, néanmoins, que tous nos membres se ressentent du mal fait à un secteur quelconque des ressources. Nous sommes assurés que l'organisation entière appuie les demandes que contiennent les mémoires distincts en faveur de la protection du saumon.

Subvention à l'égard du chien de mer

Notre Union, de concert avec d'autres groupes de pêcheurs, fait campagne depuis au moins une quinzaine d'année en faveur d'un programme de répression du chien de mer. Durant ce temps le gouvernement a annoncé divers programmes; les uns ont failli complètement, d'autres ont remporté certains succès.

En 1956-1957, on annonçait une subvention de \$10 la tonne; les compagnies l'ont immédiatement accaparée, avec le résultat que 220 tonnes seulement ont été conditionnées au coût de \$2,200 à même une allocation de \$300,000.

Par la suite, de 1958 à 1962, diverses primes ont été payées pour le foie de chien de mer. Voici les résultats qu'a donnés ce programme:

		Subvention de	Pour la prise de
1958-1959	...	\$ 66,743	2,436 tonnes
1959-1960	...	\$145,867	7,293 tonnes
1960-1961	...	\$118,820	4,950 tonnes
1961-1962	...	\$144,825	6,034 tonnes

Ainsi, on constate qu'à part les premiers temps, il en coûtait en primes \$25 la tonne pour débarasser les eaux côtières du chien de mer. D'après les estimations, il aurait fallu en détruire annuellement environ 40,000 tonnes pour décimer raisonnablement l'espèce, ce qui aurait demandé des subventions de l'ordre d'un million de dollars par année: le programme a été discontinué.

Au commencement de 1966 un programme expérimental a été mis en route pour la prise, le conditionnement et la vente du chien de mer comme aliment de consommation humaine en Allemagne et en Angleterre. Une somme de \$10,800 environ a été affectée à la manutention de 160 tonnes de poisson. On a

could be reduced to about \$25.00 per ton. Further allocation of funds were made in late 1966 and in 1967, the latter being \$24,000 to permit production of 200,000 pounds of dogfish flaps.

Since then, the Minister of Fisheries has claimed that it would require a subsidy of \$2,000,000 per year to put a dogfish industry in shape to sell dogfish on the Japanese and European markets. As an alternative he proposed that we allow Japanese fishing fleets to come in and harvest the fish. He suggested to our Convention that we would not only be saving money for Canadian taxpayers, but we would be getting the Japanese to admit that Canada alone has sole authority to conserve, manage and control fisheries along our shores.

Our Annual Convention rejected this suggestion. We doubt very much if the Japanese would admit to any Canadian authority, except in waters where they are already prohibited from fishing other species of fish, solely to fish dogfish. They are not so naive as is suggested. On the other hand our members consider it would be setting a dangerous precedent to permit the Japanese fleet to move into territorial waters or exclusive fishing zones. Especially at a time when our greatest need is to protect our fishery resources against growing foreign encroachment.

Instead we recommended that during his visit to Japan, the Minister should seek negotiations with the Japanese government or the fishing companies on the sale of dogfish. If a subsidy is required to provide prices to the Canadian fishermen high enough to permit an economical operation it should be authorized. In this event, the sales may be made to Japanese freezer ships, without any processing in Canada.

The potential markets in Germany, Britain and France should all be re-explored. We believe the expenditure of funds to put a fully processed product on these markets would be well worthwhile.

First, we would be reducing the population of a predator which affects our salmon and herring resources and at the same time creates considerable damage to commercial

constaté qu'en concentrant les opérations sur la production d'ailerons abdominaux de chien de mer, il serait possible de diminuer la subvention à environ \$25 la tonne. De nouvelles allocations ont été accordées vers la fin de 1966 et \$24,000 en 1967 pour la production de 200,000 livres d'ailerons de chien de mer.

Néanmoins, le ministre des Pêcheries a prétendu qu'il ne faudrait pas moins de 2 millions de dollars par année pour l'implantation de l'industrie du conditionnement du chien de mer en vue de la vente du produit sur les marchés japonais et européens. Comme solution de rechange, il a proposé que l'on permette à la flotte de pêche des Japonais de venir dans les eaux canadiennes faire la pêche du poisson. Il a prétendu, lors de notre congrès, que cette solution épargnerait non seulement l'argent des contribuables canadiens, mais encore qu'elle amènerait les Japonais à reconnaître l'autorité exclusive du Canada en matière de conservation, de régie et de contrôle des pêcheries le long de nos côtes.

La convention a rejeté la proposition. Nous doutons fort que les Japonais admettent l'autorité canadienne, sauf sur les eaux où la pêche d'autres espèces leur est déjà interdite, et qu'ils s'adonneraient uniquement à la pêche du chien de mer. Ils ne sont pas naïfs à ce point. Nos membres pensent que ce serait créer un dangereux précédent que de permettre à la flotte japonaise de pénétrer dans nos eaux territoriales ou dans nos pêcheries exclusivement canadiennes, tout particulièrement dans un temps où nos ressources piscicoles ont le plus besoin de protection contre leur empiétement de plus en plus fréquent par les puissances étrangères.

Comme solution de rechange nous avons recommandé qu'au cours de sa visite au Japon, le ministre cherche à négocier la vente du chien de mer avec le gouvernement japonais ou avec les poissonniers. S'il était nécessaire d'accorder une subvention pour assurer aux pêcheurs canadiens un prix leur permettant d'exploiter économiquement les ressources il faudrait l'autoriser. Dans cette éventualité, il serait possible de vendre le poisson aux exploitants des bateaux frigorifiques sans le conditionner au Canada.

D'autre part, il faudrait explorer tous les marchés éventuels de l'Allemagne, de la Grande-Bretagne et de la France. Nous pensons que l'affectation des fonds nécessaires au placement d'un produit fini sur ces marchés serait entièrement justifiée.

Premièrement, nous diminuerions le nombre de cette espèce pillarde du saumon et du hareng, espèce qui fait aussi grand tort au matériel de pêche commerciale, sans mention-

fishing gear not to mention its nuisance factor in the sports fishery.

Secondly, we would be providing valuable off-season employment for fishermen and shoreworkers. The expenditure of funds would be partially offset by the reduced expenditures on welfare and unemployment insurance.

Thirdly, we would be building up a potential future market, which would eventually become self sustaining.

We have serious doubts that a program costing \$2,000,000 per year is necessary. We are inclined to believe that half that figure would probably suffice. In any event we are not prepared to see the whole thing dropped because the cost is in either bracket. Canada spends almost \$5,000,000 every day in virtually useless programs, primarily as a result of our Nato and Norad commitments. A sound program to provide work for Canadians, food for other nations, and to build up future potential markets as well as to protect existing resources is far more valuable. We are sure there are many other subsidies in other phases of the Canadian economy, as well as within the fishing industry. We strongly request the support of all members of the Committee for action on this request.

Canadian Deep Sea Fishery Development:

Fifteen years ago Canada was in 6th place in world fish production. We are now in 9th place with a catch of 1,289,000 tons or about just over 2 per cent of the 1967 total of 60,000,000 tons. In fact, Canada's production has remained almost static, while other nations have forged ahead, doubling the world catch since 1956.

Our fishery in B.C. is plagued with seasonality, dependent as it is on our limited in-shore resources and the declining stocks of halibut. Our trawl and tuna fleets are unable to compete with the huge modern vessels and motherships operated by the Japanese and Soviet industries. We note that only recently the United States launched two large factory trawlers, heavily subsidized by the government, in an effort to get into the race.

Canadian subsidies in the Atlantic tuna fleet have been criticized by our Union because they were not coupled with regula-

ner le dommage qu'elle cause à la pêche sportive.

Deuxièmement, nous assurerions du travail rémunérateur durant la saison creuse aux pêcheurs et aux ouvriers de la côte. La dépense serait partiellement contrebalancée par la diminution des frais d'assistance sociale et des prestations de chômage.

Troisièmement, nous ouvririons un éventuel marché qui, à la longue, finirait par se suffire.

Nous doutons fort qu'il soit nécessaire de prévoir un programme annuel de 2 millions de dollars. Nous inclinons à croire que la moitié seulement suffirait. Quoi qu'il en soit, nous ne sommes pas disposés à laisser abandonner le projet, quelle que soit l'importance de la dépense. Le Canada consacre quotidiennement près de 5 millions de dollars à des programmes virtuellement inutiles, principalement par suite de nos engagements envers l'OTAN et le NORAD. Un programme logique de travail pour les Canadiens, de ravitaillement pour les autres nations, de conquête de nouveaux marchés, tout en protégeant nos ressources, vaut beaucoup plus. Nous savons qu'il existe beaucoup d'autres genres de subventions à l'avantage d'autres secteurs de l'économie canadienne, et même de l'industrie de la pêche. Nous prions instamment les membres du Comité d'appuyer notre demande d'action en ce domaine.

Aménagement de la pêche canadienne en haute mer

Il y a une quinzaine d'années, la pêche canadienne occupait le sixième rang en importance mondiale. De nos jours, elle ne tient que le neuvième rang, avec une prise de 1,289,000 tonnes, soit à peine 2 p. 100 de plus que les 60 millions de tonnes en 1967. Effectivement, la production au Canada est demeurée presque stationnaire, alors que les autres pays ont poussé de l'avant, si bien qu'ils ont doublé la prise mondiale par rapport à 1956.

La pêche en Colombie-Britannique est désavantagée par son caractère saisonnier. Au surplus, elle dépend des ressources limitées à l'intérieur des terres et se ressent de la baisse des réserves de flétan. Nos chalutiers et nos flottes de pêche du thon ne peuvent rivaliser avec les immenses vaisseaux modernes et les bateaux cigognes qu'exploitent les industries japonaises et soviétiques. Notons que tout récemment même, les États-Unis ont lancé deux gros chalutiers-usines, largement subventionnés par le gouvernement, dans un effort pour placer le pays dans la course.

L'Union a critiqué le subventionnement par le gouvernement canadien de la flotte de pêche du thon de l'Atlantique parce qu'il ne

tions requiring employment of Canadian crews. Only recently we protested the fact that several of these vessels were lying tied up in Eastern Canadian ports. In our opinion the government should assume responsibility to get them back into operation, with Canadian crews, and land their production for processing in Canadian ports. We believe the millions of tax dollars expended in these ventures must not be wasted. Action now can make the tuna fishing venture a permanent asset to the Canadian economy.

Canadian fishermen lack sufficient capital to build modern factory-type trawlers, tuna seiners or motherships. The foreign monopolies which dominate our industry in B.C. have shown little or no interest in moving into the huge Pacific fisheries which are being harvested by Japan and the U.S.S.R., as well as by the U.S.A., in the case of tuna. One of the complaints of west coast tuna fishermen, when they do manage to land some tuna, is that companies like B.C. Packers are not interested in buying. They have already purchased their tuna in frozen form from Japan. Recently we heard of Japanese caught black cod being imported, thus lowering the price to Canadian vessels in Vancouver.

Canadian development of a deep sea fleet would provide year round employment for thousands of fishermen and allied workers. It would strengthen our entire economy and encourage our young people to enter the industry with confidence in its future.

The Federal government, with participation of the Provincial government, in our opinion, have to assume full responsibility for operation of a deep sea fleet and for the marketing of its production. Research would be required on potential markets all over the world.

Adequate training programs to enable Canadian fishermen to keep abreast of all new developments in technology must be instituted. A fisheries college in B.C. is required and special assistance through living allowances are needed to enable fishermen to participate.

Markets and training programs require a fleet of modern vessels. We believe the minimum requirement to enter the world fishery on our doorstep is for at least one mothership

s'accompagnait pas de règlements ordonnant l'emploi d'équipages canadiens. Nous avons logé tout récemment des protestations parce que plusieurs de ces vaisseaux restaient amarrés dans les ports de l'est du Canada. A notre avis, le gouvernement devrait prendre sur lui de les remettre au travail avec des équipages canadiens, et voir à ce qu'ils déchargent leurs prises pour le conditionnement dans les ports canadiens. Nous soutenons qu'il ne faut pas permettre que se perdent les millions de dollars des contribuables qui ont été risqués dans cette entreprise. Les mesures prises maintenant peuvent écarter le risque que comporte la pêche du thon et en faire une source permanente de revenu pour l'économie canadienne.

Les pêcheurs canadiens n'ont pas le capital suffisant pour construire des chalutiers du type usine, des senneurs de thon, ni des bateaux cigognes. Les monopoles étrangers qui exercent leur empire sur notre industrie en Colombie-Britannique, se désintéressent, ou peu s'en faut, des vastes pêcheries du Pacifique qu'exploitent le Japon et l'U.R.S.S., et les États-Unis en ce qui concerne le thon. Les pêcheurs de thon de la côte de l'Ouest se plaignent du fait que lorsqu'ils réussissent à en prendre, les compagnies comme la B.C. Packers ne veulent pas l'acheter. Elles achètent le thon gelé du Japon. Nous avons appris récemment que nous importons de la morue charbonnière prise par les Japonais, ce qui en a vilifié le prix à bord des vaisseaux à Vancouver.

L'aménagement d'une flotte canadienne de pêche en haute mer procurerait de l'emploi à des milliers de pêcheurs et d'ouvriers des industries connexes. Toute notre économie en serait renforcée et nos jeunes seraient incités à embrasser la carrière avec confiance en l'avenir.

Au gouvernement fédéral, avec la participation du gouvernement provincial, il incombe, à notre avis, de prendre l'entière responsabilité de l'exploitation d'une flotte de haute mer et de la vente de la prise. Il faudrait étudier les possibilités qu'offrent tous les marchés du monde.

Il importe d'appliquer des programmes de formation qui permettront aux pêcheurs canadiens de suivre les progrès de la technologie. L'institution d'un collège d'enseignement de la pêche s'impose en Colombie-Britannique, ainsi qu'un régime d'allocations spéciales de subsistance permettant aux pêcheurs de suivre les cours.

La création d'une flotte moderne s'impose pour tirer avantage des marchés et pour réussir les programmes de formation. A notre avis, les exigences minimales pour participer

of 20,000 tons; three modern factory trawlers in the 300 foot, 3,500 ton category and 6 vessels in the 180 foot class capable of alternating as trawlers or tuna seiners. In addition there would be a need for transport and supply vessels. Public ownership of this nucleus may be necessary, although private owners should be encouraged to participate.

We made this same recommendation to the Federal-Provincial Conference in Ottawa 5 years ago. It was repeated in more recent briefs to both levels of government in Ottawa and Victoria. Perhaps we are wasting our efforts trying to encourage such a major development while so many other fishery problems remain unresolved. However, the future of Canada as a fishing nation, as well as the future of the coming generation of fishermen is at stake. To ignore the problem is no solution. We therefore strongly request your support for a program of Canadian deep sea development which will enable us to regain our place in the community of world fishing nations.

Wharfage Fees:

On February 20, 1966 a Union delegation presented a brief to the Minister of Transport on the subject of side wharfage fees charged to fishermen. The schedule of fees were described as "excessive and unrealistic". The Union, after describing some of the anomalies in the existing policy, proposed:

1. All side wharfage at Government floats to be free of charge to commercial fishermen, except as indicated in (3) below.
2. The Government shall designate those wharves or floats as winter mooring where commercial fishermen will have priority.
3. Where facilities, such as light, water, etc. are provided, a watchman shall be employed and his wages paid by the Government. A nominal fee of two or three dollars per month shall be paid by the fishermen towards the cost of administration.

A year later the Minister of Transport requested Dr. T. G. How to inquire into the administration of small boat harbours and to make recommendations for the future. Dr. How's report was made available to our Union in May of 1968. As it arrived during

à l'industrie mondiale de la pêche, dont de vastes ressources sont à nos portes, sont pour le moins un bateau cigogne de 20,000 tonnes; trois chalutiers-usines modernes d'environ 300 pieds, catégorie des 3,500 tonnes; six chalutiers de la classe de 180 pieds, aménageables au besoin en senneurs de thon. En plus, il faudrait fournir des vaisseaux de transport et d'approvisionnement. La formule de propriété publique de ce noyau est peut-être nécessaire, mais il faudrait encourager la copropriété des particuliers.

Nous avons fait la même recommandation à la Conférence fédérale-provinciale tenue à Ottawa, il y a cinq ans. Nous l'avons réitérée plus récemment dans des mémoires présentés aux deux niveaux gouvernementaux, à Ottawa et à Victoria. Peut-être perdons-nous notre peine en cherchant à mettre en mouvement un aussi vaste plan d'aménagement, alors que tant de problèmes de la pêche restent en souffrance. Néanmoins, l'avenir piscicole du Canada et celui de la génération de la relève sont en jeu. Ignorer le problème ne le résout pas. Nous vous prions donc instamment d'appuyer un programme canadien d'aménagement de la pêche en haute mer qui nous permettra de reprendre notre place parmi les pays pêcheurs du monde.

Quayage

Le 20 février 1966, une délégation de l'Union a présenté un mémoire au ministre des Transports au sujet des droits de quayage exigés des pêcheurs. Le barème des droits y était décrit comme étant *excessif et irréaliste*. Après avoir signalé certaines anomalies de la politique actuelle, l'Union a avancé les propositions suivantes:

1. Que l'usage des quais flottants du gouvernement par les pêcheurs commerciaux soit exempt de droits, sauf les cas prévus à l'article 3 ci-après;
2. Que le gouvernement désigne les quais à demeure et les quais flottants où les pêcheurs commerciaux bénéficieront du mouillage prioritaire;
3. Dans les cas d'installations d'éclairage, d'eau, etc., que le gouvernement y emploie un gardien et lui paie son salaire, et que les pêcheurs paient un droit nominal de deux ou trois dollars par mois à titre de contribution au coût d'administration.

L'année suivante, le ministre des Transports a chargé M. T. G. How de faire une enquête sur l'administration des ports de petits bateaux et de faire ses recommandations pour l'avenir. Le rapport de M. How a été remis à notre Union en mai 1968. Comme

the fishing season most of our Locals, as well as our committee members were unable to deal with it until November, and it wasn't until March 12th of this year that we presented our views to the Regional Director of the Department of Transport.

1. The How report indicated strong opposition to free wharfage for commercial fishermen, even though admitting fishermen have had this privilege in the past. Our Union took the position that a system of mooring permits be instituted and the cost of the permits be no more than \$10.00 for 6 months or \$20.00 per annum for the commercial fishing vessels. These permits would cover side wharfage at all Department of Transport installations along the coast.

2. Where other services, such as light, power, water, gear lockers, toilets, and watchmen are supplied a minimum charge for such services may be instituted.

3. Wharves and floats that were built mainly for commercial fishing boats should be designated as primarily for use by fishermen, by specific legislation.

Agreement between the fishermen and the Transport officials has not yet been reached. On the one hand the Transport Department is determined that all users of the wharves and floats must pay a proportionate share of the cost of the facilities, services and administration. The fishermen, on the other hand, consider they are entitled to either free wharfage or a very minimum scale of fees, bearing in mind past practices, as well as other subsidies presently in existence.

On March 31st the Powell River Town Crier carried a news item headed 'Wharfage System Called "Unjust"'. It quoted the Minister of Fisheries as describing the present policy as antiquated and unjust. He also called it, "illogical, discriminatory, unpopular and well-nigh unworkable". He favoured a system where pleasure craft would pay, but fishermen and Indians would be exempt. He suggests that for fishermen the Department of Fisheries should supply the floats and other services and the Indian Affairs Department do the same for the Indians.

Our members would certainly welcome complete removal of all wharfage fees. No doubt they would gladly endorse the Minister's suggestion that the Department of Fisheries assume the cost of maintaining the necessary services. We would stress, however, the

c'était la saison de la pêche, la plupart de nos filiales, comme les membres de notre comité d'ailleurs, n'ont pu l'étudier avant le mois de novembre. Ce ne fut que le 12 mars de cette année que nous ayons pu faire connaître nos vues sur le sujet au directeur régional du ministère des Transports.

1. Le rapport How s'oppose énergiquement à l'exemption des droits de quayage des pêcheurs commerciaux, tout en admettant qu'ils avaient eu ce privilège dans le passé. Notre Union a préconisé l'institution d'un régime de permis de mouillage dont le coût n'excéderait pas \$10 pour six mois, ou \$20 par année pour les vaisseaux de pêche commerciale. Ces permis seraient valides pour le quayage à toutes les installations du ministère des Transports le long de la côte.

2. Dans les cas d'installations fournissant les services d'éclairage, d'énergie, d'eau, de cases à clef pour l'attirail, de toilettes et de surveillant, il serait loisible d'exiger de minimes droits.

3. Les quais à demeure et les quais flottants qui ont été construits en premier lieu pour les bateaux de pêche devraient être désignés par une loi expresse comme quais à l'usage prioritaire des pêcheurs.

Les pêcheurs et les hauts fonctionnaires du ministère des Transports n'en sont pas encore venus à un accord. De son côté, le Ministère tient à ce que les usagers des quais à demeure et des quais flottants paient des droits proportionnels au coût des installations, des services et de l'administration. D'autre part, les pêcheurs prétendent à l'exemption des droits de quayage quant à la coutume et à certaines autres subventions qui sont actuellement accordées.

Le 31 mars, le journal *Powell River Town Crier* coiffait une nouvelle du titre *Régime du quayage qualifié d'injuste*. Il citait le ministre des Pêcheries qui présentait la politique actuelle comme étant périmée et injuste, ajoutant qu'elle était *illogique, discriminatoire, impopulaire et manifestement dénuée de sens pratique*. Il se prononçait en faveur d'un régime imposant des droits aux bateaux de plaisance et en exemptant les pêcheurs et les Indiens. Il propose que le ministère des Pêcheries fournisse les quais flottants à l'usage des pêcheurs et que le ministère des Affaires indiennes fasse de même pour les Indiens.

Nos membres feraient sûrement un excellent accueil à l'abolition de tous les droits de quayage. Ils appuieraient avec plaisir la proposition du ministre à l'effet que le Ministère des Pêcheries se charge du coût d'entretien des services nécessaires. On ignore jusqu'ici

importance of maintaining adequate facilities. Our requests for expansion of wharves, floats and breakwaters have not yet been met. As indicated, we are prepared to recommend payment of a reasonable schedule of fees. Most of all we urge early action to correct the injustices which presently exist.

Conclusion:

This has been a very long submission covering a large number of issues. Brevity, while desirable, is most difficult when dealing with complex problems. We sincerely hope our efforts will result in action by this Committee and by Parliament which will be of benefit to the men and women who produce and process the fishery resources of British Columbia.

Respectfully submitted,

UNITED FISHERMEN AND ALLIED
WORKERS' UNION

Per: H. Stevens, Secretary-Treasurer

nos demandes de multiplier les installations de quais à demeure, de quais flottants et de brise-lames. Rappelons que nous sommes disposés à recommander la mise en pratique d'un barème de droits raisonnables. Mais surtout, nous demandons que l'on prenne sans délai les mesures nécessaires pour corriger la situation injuste qui règne actuellement.

Conclusion

Nous vous avons présenté un très long mémoire en abordant de multiples questions. La brièveté, si désirable soit-elle, devient fort difficile lorsque l'on traite de questions complexes. Nous espérons sincèrement que nos efforts auront pour résultat d'amorcer l'action combinée de ce Comité et du parlement à l'avantage des hommes et des femmes qui exploitent les ressources piscicoles de la Colombie-Britannique et qui conditionnent ses fruits de mer.

Veuillez agréer, Messieurs, nos respectueuses salutations.

Les Pêcheurs unis et l'Union
des Travailleurs alliés

Par H. Stevens, secrétaire-trésorier

APPENDIX N

SUBMISSION
TO
STANDING COMMITTEE ON
FISHERIES AND FORESTRY
PUBLIC HEARINGS
BRITISH COLUMBIA
BY
RICHMOND ANTI POLLUTION
ASSOCIATION
RICHMOND, B.C.

Hotel Vancouver

April 22, 1969
2:30 p.m.

Mr. Chairman and Members,
Standing Committee on Fisheries and
Forestry
Public Hearings, British Columbia.

Gentlemen:

Richmond Anti Pollution Association appreciates this opportunity of appearing before you and your willingness to make extraordinary arrangements to hear our views concerning pollution of the Lower Fraser River.

Richmond Anti Pollution Association (R.A.P.A.) is made up of concerned Ratepayers of the Municipality of Richmond, as well as affiliated organizations—(Richmond Rod and Gun Club; B.C. Federation of Labour; Richmond Local Unions of the International Association of Machinists and Aero Space Workers; United Fishermen and Allied Workers (both offshore and onshore); the Pacific Salmon Society (representing commercial and sports fishermen, as well as marina and motel operators); West Richmond Ratepayers Association and South Arm Ratepayers Association).

R.A.P.A. was formed because of concern of further pollution of the Fraser when a permit was granted to the Municipality of Richmond to install a sewer system and pour up to 8 million gallons per day of virtually raw domestic sewage and industrial waste into the South Arm of the Fraser River, with the proposed outfall to be at Gilbert Road Beach,

APPENDICE N

Vancouver

Monsieur le président et les membres du
Comité permanent des pêches et des forêts,
Audiences publiques, Colombie-Britannique.

Messieurs,

Au nom de la *Richmond Anti Pollution Association*, nous nous félicitons de l'occasion qui nous est offerte de nous présenter devant vous et sommes sensibles à la bonne volonté dont vous avez fait preuve en prenant des dispositions extraordinaires pour entendre notre point de vue sur la pollution du cours inférieur du fleuve Fraser.

La *Richmond Anti Pollution Association* (R.A.P.A.) se compose des contribuables intéressés de la municipalité de Richmond, ainsi que de groupes affiliés (la *Richmond Rod and Gun Club*; la *B.C. Federation of Labour*; les syndicats locaux de Richmond de l'Association internationale des machinistes et des travailleurs aérospatiaux; la *United Fishermen and Allied Workers* (personnel en mer aussi bien que personnel à terre); la *Pacific Salmon Society* (association de pêcheurs professionnels et amateurs et de gérants de ports de plaisance et de motels); la *West Richmond Ratepayers Association* et la *South Arm Ratepayers Association*).

La création de la R.A.P.A. provient de la crainte de voir le Fraser encore plus pollué, ressentie lors de l'octroi à la municipalité de Richmond d'un permis de construire un réseau d'égouts et de déverser jusqu'à huit millions de gallons par jour d'eaux usées domestiques et de déchets industriels pratiquement non traités dans le bras sud du Fra-

one-half mile up stream from the Salmon canneries at Steveston.

After presentation of our first brief to Richmond Municipal Council, we were accused of being "emotional". It is true, we were and are emotional, and make no apologies. We note that industrialists become very emotional about matters that affect their financial position—but by some strange reasoning this is considered to be an acceptable form of emotionalism.

R.A.P.A. is dedicated to the control and abatement of pollution in our area and we have never wavered from our original stand—pollution of the Fraser must not continue.

Federal, Provincial and Municipal Governments must face up to their responsibilities and decree that industrial and domestic waste must cease despoiling our waters. British Columbia's water resources, and indeed Canada's water resources, has become our greatest asset—financially, industrially, recreationally and for the health and well-being of our people.

The areas of R.A.P.A.'s concern are as follows:

1. The recommendations of the Greater Vancouver Sewerage and Drainage District contained in the interim up-dating of the Rawn Report in January 1969, calls for the construction of three primary treatment plants on the South Arm of the Fraser River. These three plants, together with Iona Sewage Treatment Plant now in operation, will make the Lower Fraser a sewage dumping area for the entire Lower Mainland.

2. The present and potential health hazards of working and living in a Municipality completely surrounded by a polluted river.

3. The delay in declaration of water quality standards.

4. The sweeping powers enjoyed by the Greater Vancouver Sewerage & Drainage District—the only involvement of a member municipality seems to be in the paying of the bills.

5. If G.V.S. & D.D. recommendations are carried out, Richmond will be an Island Municipality, surrounded by rivers of effluent. The recommendations completely disregard Richmond's potential as a recreational area and tourist attraction.

ser, en un point en principe situé près de la plage de la route Gilbert, à un demi-mille en amont des conserveries de saumon de Steveston.

Lorsque nous eûmes présenté notre premier mémoire au conseil municipal de Richmond, on nous accusa d'être «émotifs». C'est vrai, nous l'avons été et le sommes encore, et nous ne nous en excusons pas. Nous remarquons seulement que les industriels deviennent très émotifs quand il s'agit de leur situation financière, mais, en vertu de quelque étrange raisonnement, on considère cette attitude comme une forme acceptable d'émotivité.

La R.A.P.A. se consacre à la limitation et à la réduction de la pollution dans notre région et ne s'est jamais écartée de sa position initiale: la pollution du Fraser doit cesser.

Les autorités fédérales, provinciales et municipales doivent prendre leurs responsabilités et arrêter qu'il ne faut plus laisser les déchets industriels et domestiques souiller nos eaux. Les ressources en eaux de la Colombie-Britannique et celles de tout le Canada sont devenues notre plus grand avoir, aussi bien sur le plan financier, industriel que récréatif, et ce, dans l'intérêt même de la santé et du bien-être de la population.

Les sujets de préoccupation de la R.A.P.A. sont les suivants:

1. Les recommandations du *Greater Vancouver Sewerage and Drainage District*, formulées dans la mise à jour provisoire du rapport Rawn en janvier 1969, portent sur la construction de trois usines de traitement primaire sur le bras sud du Fraser. Ces trois usines, ajoutées à l'usine de traitement des eaux d'égout d'Iona actuellement en fonctionnement, vont transformer le cours inférieur du Fraser en une zone d'épandage pour toute la basse région continentale.

2. Le fait de travailler et de vivre dans une commune entourée de toute part par un fleuve pollué constitue un danger permanent pour la santé.

3. Les lenteurs mises à énoncer des normes de qualité pour l'eau.

4. Les pouvoirs discrétionnaires dont jouit le *Greater Vancouver Sewerage and Drainage District*, la seule participation des administrés ne semblant consister que dans le paiement de la note.

5. Si les recommandations de la G.V.S. et D.D. sont appliquées, Richmond deviendra une commune insulaire, entourée par des affluents comme par des rivières. Ces recommandations méconnaissent complètement la possibilité pour Richmond de constituer une zone récréative et un centre d'attraction touristique.

6. If G.V.S. & D.D. recommendations are adhered to, our multi-million dollar fishing industry will be in greater jeopardy than present. The loss of our fishing industry and the health of the fishermen will be further endangered.

R.A.P.A. Recommendations

1. All sewage intended for the three primary plants on the South Arm of the Fraser be diverted to a sewage treatment plant which could be constructed at the Roberts Bank Superport.

2. The quality of treatment at Iona Sewage Treatment Plant must be upgraded to prevent further degradation of our beach and allow for development as a park of the more than 100 acres on the Island. The present area of degradation created by the Iona Island Plant must be cleaned up.

3. *National* water quality standards be set, in order that one area or one province not pollute another, and to prevent discrimination in the establishment of new industries.

4. The Lower Fraser be considered under the International Joint Commission and that representations be made to the Minister of External Affairs to this end, in order that comprehensive research of the Lower Fraser be undertaken.

5. We also urge studies be made of the impact of the Roberts Bank Superport, and proposed extension of runways at the Vancouver International Airport and the effect these developments will have on pollution of the river, migration and well-being of fish and wild fowl, flood control, etc. If this area cannot be considered under the I.J.C., a comprehensive study of the many problems of the Lower Fraser be undertaken, as requested in our letter of October 1968, to Mr. J. Greene, Department of Mines, Energy and Water Resources.

6. Richmond be developed as a recreational area.

7. The fishing industry and health of the fishermen must be protected. Steps must be taken to clean up the Fraser, and it must not be used as a sewage dumping area. The Fraser with its beginnings in glaciers, must not become a flowing sewer.

6. Si ces mêmes recommandations l'emportent, notre industrie de la pêche, dont la valeur est de plusieurs millions de dollars, sera encore plus compromise qu'aujourd'hui. Les pertes qu'elle subira seront encore plus grandes et les risques pour la santé des pêcheurs encore supérieurs.

Recommandations de la R.A.P.A.

1. Que tout le réseau d'égouts prévu pour les trois usines primaires du bras sud du Fraser soit détourné vers une usine de traitement des eaux usées que l'on pourrait construire au *Roberts Bank Superport*.

2. Il faut améliorer la qualité de fonctionnement de l'usine de traitement des eaux usées d'Iona pour empêcher qu'il soit davantage porté atteinte à notre plage et permettre l'aménagement en parc de quelque cent acres et plus de l'île. Les dégradations causées par le fonctionnement de cette usine doivent être corrigées.

3. Fixation de normes de qualité des eaux *nationales*, de façon à empêcher la pollution d'une région ou d'une province par une autre ainsi que la discrimination dans la création de nouvelles entreprises industrielles.

4. Que le cas du cours inférieur du Fraser soit examiné par la Commission mixte internationale et que des demandes soient faites au ministre des Affaires extérieures à cette fin, de façon à faire entreprendre des études approfondies sur cette question.

5. Nous recommandons fortement, en outre, la mise en œuvre d'études sur les conséquences de l'aménagement du *Roberts Bank Superport* et du projet d'agrandissement des pistes de l'aéroport international de Vancouver ainsi que sur l'effet de ces réalisations sur la pollution du fleuve, la migration et la vie des poissons et du gibier d'eau, la lutte contre les inondations, etc. Au cas où cette question ne puisse être prise en considération par la Commission mixte internationale, que l'on entreprenne une étude approfondie des nombreux problèmes ayant trait au cours inférieur du Fraser, conformément à la demande formulée dans notre lettre d'octobre 1968, adressée à M. J. Greene, ministre des Mines, de l'Énergie et des Ressources en eau.

6. Que Richmond soit aménagée en zone récréative.

7. Il faut protéger l'industrie de la pêche et la santé du pêcheur. Il faut prendre des mesures pour nettoyer le Fraser et éviter de l'utiliser comme zone d'épandage. Le Fraser, qui prend sa source dans les glaciers, ne doit pas devenir un fleuve-égout.

Conclusion

Our Association is quite aware of the fact that the tidal portion of the Fraser River is the responsibility of everyone and all levels of Government. This responsibility would seem to indicate the urgency for establishment of a Department of Environmental Control, with powers to get the job done.

In the lower 20 to 25 miles of the Fraser River reverse tidal flow conditions trap sewage discharged into the River, up to 10 hours in each 24 hour period. With the continual flow of sewage and the back-up conditions of the tidal actions, it is not difficult to visualize worsening condition of the already polluted river, in the very near future.

Without going into detail, we can best sum up our views on pollution of the Fraser River by advising we fully endorse the submission made to you, gentlemen, yesterday, April 21st by Mr. Buck Suzuki and this Association wishes to be placed on record at this hearing to that effect.

All of which is respectfully submitted,
For and on behalf of the

RICHMOND ANTI POLLUTION
ASSOCIATION,

Louis Boyce, Secretary.
T.C. Gooderham, President.

Conclusion

Notre association est parfaitement consciente du fait que chacun, à tous les niveaux du gouvernement, est responsable de la partie du Fraser soumise à marée. Il semble donc urgent de créer un Ministère de protection du milieu, doté des pouvoirs nécessaires pour lui permettre d'accomplir sa tâche.

Dans les derniers vingt à vingt-cinq milles du cours du Fraser, la marée montante empêche l'écoulement des eaux usées déversées dans le fleuve, et ce jusqu'à dix heures par période de vingt-quatre heures. Compte tenu de l'écoulement continu des eaux usées et de la situation créée par la marée montante, il n'est pas difficile de prévoir pour un avenir très proche que les conditions actuelles de pollution de la rivière ne feront qu'empirer.

Sans entrer dans les détails, nous pouvons résumer au mieux notre point de vue sur la pollution du Fraser en portant à votre connaissance, Messieurs, que nous appuyons pleinement l'opinion exprimée dans le rapport qui vous a été présenté hier, 21 avril, par Monsieur Buck Suzuki, et notre association exprime le vœu de voir à cette fin le présent rapport consigné au procès-verbal.

Rapport présenté pour la

RICHMOND ANTI POLLUTION
ASSOCIATION,
et en son nom,

par
Lois Boyce, secrétaire,
T.C. Gooderham, président.
